		Workshop – Cowichan Nation Alliance 10-Nov-2015, Meeting with Cowichan Nation Alliance 18-Apr-2017, Chief & Council Meeting - Cowichan Nation Alliance	opportunity to identify jobs and to look at long-term opportunities around employment. Committed to prepare a written response regarding job opportunities, skills, and training. **17-Jun-2014, Workshop:** Stated that skills and training requirements will be considered under the proposed labour market VC, and the VFPA is interested in discussing this in more detail. A discussion is needed on the importance of flagging training relevant to upcoming Project-related jobs. The VFPA is aware of the importance of giving communities time to prepare for employment opportunities. **03-Jul-2014, Workshop:** Stated that the VFPA is trying to access the historical data, in relation to Indigenous versus non-Indigenous employment related to port activities. Stated that the VFPA does have data on what we call labour force characteristics (age, educational level, skill training level, in what particular industries the Indigenous workforce is working). This helps us profile the Indigenous population generally within our study area, which is the area that we are concerned about. Stated that ultimately the goal is to be able to present what we call benefit enhancement recommendations, that is linked integrally to the labour market strategy that will be put forward through the Project, that not only talks quantitatively about how many jobs, but also how, and what sort of target initiatives could be put forward to enable certain segments of the population to take advantage. **11-Dec-2014, Workshop:** Asked for information on the benefits and opportunities the Cowichan Nation Alliance may be interested and noted that discussions are just beginning. **10-Nov-2015, Meeting:** Recorded comment for consideration by Project team. **12-May-2016, Letter from the VFPA to Stz'uminus First Nation:** Enclosed an Information Sheet specific to Employment. Stated that the VFPA would like to meet to discuss employment opportunities related to the Project.	• 6,264 person-years of indirect employment, with wages of $374 million; and • 2,305 person-years of induced employment, with wages of $129 million. Of the Project's direct spending on materials, goods, and services for construction, approximately $862 million, or an average of $157 million per year, would be spent on materials, goods, and services in B.C. An additional $482 million would be spent on production inputs to make or provide the direct materials, goods, and services. The total gross revenues for businesses in B.C. supplying materials, goods, and services for Project construction is estimated as $1.3 billion, with $837 million of this revenue accruing to businesses in Metro Vancouver. During the operation phase, Project activities on the marine terminal, widened causeway, and expanded tug basin would generate an annual total of 1,553 person-years of direct, indirect, and induced employment, and total wages of approximately $185 million: • 928 person-years of direct employment connected to terminal operations, with wages of approximately $153 million; and • 625 person-years of indirect and induced employment to support terminal operations, with wages of approximately $32 million. During the operation phase, the annual average goods and services revenues for B.C. due to terminal operations spending are estimated at $23.3 million with an additional $10.0 million in goods and services revenues for upstream supply industries. The total gross revenues for businesses supplying B.C. materials, goods, and services for terminal operations are estimated as $33.3 million annually. Approximately $31 million of this revenue would accrue to businesses in Metro Vancouver. The VFPA proposes to assist Semiahmoo First Nation, Tsleil-Waututh Nation, Stz'uminus First Nation, Cowichan Tribes, Halalt First Nation, Lake Cowichan First Nation, Lyackson First Nation, Penelakut Tribes, Hwlitsum, and Métis Nation British Columbia in accessing potential economic opportunities resulting from the Project, including contracting opportunities as well as construction employment opportunities. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs. To support the development and implementation of plans to facilitate access to such Project-related benefits, the VFPA will continue engagement, initiated in December 2014. Opportunities for Indigenous training	Lands and Resources for Traditional Purposes 32.3.3 Mitigation Measures 34.0 Benefits to Canadians 34.2 Benefits of the Project 35.0 Effects Assessment Summaries Table 35-2 Proposed Mitigation Measures and Commitments

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				and employment opportunities related to the Project are described in EIS Section 32.3.3. **Addressed in EIS Appendix 7.2-B (#112):** As accommodation for any potential effects to specified Indigenous groups' ability to exercise their Aboriginal rights, the VFPA proposes to assist these Indigenous groups in accessing opportunities resulting from the Project. In addition to making contracting opportunities available to specified Indigenous groups, the VFPA will ensure that construction employment opportunities are also made available. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs. Through ongoing engagement, the VFPA will seek input from these Indigenous communities with respect to plans to ensure access to Project-related benefits. **Additional information provided by the VFPA:** Stz'uminus, Halalt First Nation, and Cowichan Tribes have agreed to negotiate a Mutual Benefits Agreement collectively. Penelakut Tribe is negotiating with the VFPA separately. Discussions include opportunities for skills, training, employment and contracting.	

Table 27: Surficial Geology and Marine Sediment – Intermediate Component

#	Interest / Concern Raised	Date(s) / Methods Raised	Response	Additional Information	Document and Section providing Additional Information
STZ-27.1	Asked about the effects of truck traffic on sediment along the causeway with respect to contaminants.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA to Stz'uminus First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#202):** There is not anticipated to be a Project interaction between air emissions from truck traffic on the causeway, and uptake of contaminants in soils, plants, or species relying on soils and plants. Rationale for this conclusion is included in EIS Appendix 27-A.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 27.0 Human Health Appendix 27-A Air Quality HHRA Technical Report
STZ-27.2	Asked about potential heavy metals, PCBs, hydrocarbons, contaminants, and pollutants in sediment along the causeway and around the Project area. Asked which contaminants the sediment samples tested for and for the baseline results. Asked if the conclusions of the assessment are based on the averages of those samples. Concerned about the potential effects on clams and other shellfish.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** There were approximately 57 different metals the samples were tested for, and stated that the full list will be in noted in the EIS. Slide 10 says the assessment is focused on areas where there will be disturbance. The results have not been rolled into an average. The EIS will include a detailed table that shows results for each of the data points. There were no PCBs or hydrocarbons present in the areas that were surface sampled. Sampling at the actual terminal site was of a higher intensity because that is where the greatest disturbance is expected, because of disposal at sea (DAS) and dredging activities. **01-Apr-2015, Letter from the VFPA to Stz'uminus First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#55):** As described in the EIS, the physical and chemical characteristics of sediments that will be affected by construction activities, including sediments that will be re-suspended during dredging activities, were investigated and results were compared to recommended quality guidelines and regulatory criteria. Baseline levels of heavy metals and other contaminants along the causeway are included in EIS Section 9.6. Specific listings of studied contaminants—and how the analyses were completed—are available in EIS Appendix 9.6-A. Overall, sediment quality within the study area is within the range of levels expected in an estuarine environment and without local contamination sources. Outcomes from the marine water quality assessment regarding total suspended sediment concentrations associated with dredging and dumping activities informed the assessment of marine vegetation, marine invertebrates, marine fish, marine mammals, coastal birds, ongoing productivity of commercial, recreational, and Aboriginal fisheries, and outdoor recreation. The shellfish consumption human health risk assessment in EIS Appendix 27-C addresses this scenario by examining tissue contaminant concentrations in existing areas of Roberts Bank with higher concentrations of coal dust contaminants. Any construction-related sediment re-suspension will result in sediment contaminant concentrations that are lower than the assessed existing conditions since (i) once re-suspended, the re-settled sediments will be a mixture of the historical deposits and new sediment contributions from Fraser River outflows; and (ii) there is no plausible mechanism for the geochemical focusing of the contaminants of potential concern as a result of the re-suspension scenario. **Addressed in EIS Section 12.6.2.1:** While contaminants are present at Roberts Bank, they are closely associated with fine sediment and have therefore accumulated in locations outside those that will be disturbed by Project activities, such as the upper intertidal zone north of the causeway. No appreciable sediment contamination was observed in Project areas. Because sediments that will be re-suspended and deposited as a result of construction phase activities are not contaminated, changes in contaminant concentrations bioavailable to the food chain are not anticipated. Overall, contaminant re-suspension is not considered to affect marine invertebrate productivity because: (i) there are no Project-related inputs of contaminants in the LAA; (ii) no appreciable sediment contamination was observed in Project areas; and (iii) where contaminants are present, concentrations are either below applicable thresholds in sediments or below consumption thresholds in bivalve shellfish and Dungeness crab tissue based on rigorous human health risk assessment (EIS Sections 12.5.2.5 and 12.5.3.5). Project-related contamination is therefore unlikely to occur.	**EIS** 9.6 Physical Setting, Surficial Geology and Marine Sediment Appendix 9.6-A Sediment and Water Quality Characterization Studies 12.5.2 Bivalve Shellfish 12.5.3 Dungeness Crabs 12.6.2.1 Changes in Water Quality Appendix 27-C Human Health Risk Assessment

Stz'uminus First Nation

#	Interest / Concern Raised	Date(s) / Methods Raised	Response	Additional Information	Document and Section providing Additional Information
STZ-27.3	Concerned with the potential effects of disposal at sea on the sea bed.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Explained that the DAS would occur at 3 locations along the -45 m contour line directly off the berth face of the planned terminal. Stated that the VFPA is working on that matter and it will be included in the EIS. **01-Apr-2015, Letter from the VFPA to Stz'uminus First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#55):** Dredging and DAS-related activities are described in the EIS and considered in the assessment of potential effects on marine physical and biophysical components. As described in the EIS, the physical and chemical characteristics of sediments that will be affected by construction activities, including sediments that will be re-suspended during dredging activities, were investigated and results were compared to recommended quality guidelines and regulatory criteria. DAS activities will occur subject to Environment Canada's DAS permit requirements under the *Canadian Environmental Protection Act, 1999*. Outcomes from the marine water quality assessment regarding total suspended sediment concentrations associated with dredging and dumping activities informed the assessment of marine vegetation, marine invertebrates, marine fish, marine mammals, coastal birds, ongoing productivity of commercial, recreational, and Aboriginal fisheries, and outdoor recreation. See EIS Section 9.6.8 and EIS Appendix 9.6-C for more information. **Addressed in Information Request Package 3 Preamble in Support of Responses to IR3-25 to IR3-40:** As noted in in Information Request Package 3 Preamble in Support of Responses to IR3-25 to IR3-40, based on information provided by ECCC (CEAR Document #564), discharge of supernatant containing unsettled fines from the containment dykes during filling is not expected to be subject to DAS permitting. **Addressed in PCU:** As requested by the Review Panel, the VFPA submitted the PCU on June 12, 2018, providing: • Detailed revised Project description, including a revised construction schedule; • Revised Project interaction matrix; • Preliminary details pertaining to the management and timing of dredging activities and the discharge of sediment-laden water; and • Revised assessment of environmental effects as required by the Project modifications. PCU Sections 1.0 and 2.0 describe the changes to the EIS, including updates to specific construction activities, the construction schedule, and relevant Project Description figures and appendices. In PCU Section 3.0, changes or effects resulting from the construction updates on ICs and VCs are described. Overall, these changes to the environmental assessment resulting from construction updates can generally be summarised as follows: • Reductions in potential adverse changes or effects on ICs, biophysical VCs, social VCs, and Current Use; and • Increases in positive interactions with socio-economic VCs. These beneficial changes to ICs and VCs occur at the level of interactions or potential effects, and in most cases are slight changes, and thus do not affect the overall conclusions made in the EIS, including proposed mitigation, residual effect characterisations, significance determinations, or cumulative effects, as applicable, with one exception. The only component predicted to have a change to residual effects is land and water use, with a reduction of a residual effect on access to Tsawwassen First Nation community lease lands from a measurable non-significant residual effect to a negligible residual effect, due to elimination of the ITP and associated activities.	**EIS** 4.0 Project Description 4.4.1 Project Activities, Construction Phase Activities Table 4-5 Source and Quantities of Material Requiring Disposal at Sea Figure 4-21 Intermediate Transfer Pit and Disposal at Sea Candidate Locations Appendix 7.2-B Aboriginal Groups Interests and Issues Table 8.0 Effects Assessment Methods Table 8-1 Intermediate Component and Valued Component Linkages 9.0 Physical Setting 9.6 Physical Setting, Surficial Geology and Marine Sediment 9.6.5 Methods 9.6.6 Surficial Geology and Marine Sediment, Existing Conditions 9.6.8 Future Conditions with the Project Appendix 9.6-C Roberts Bank Terminal 2 Technical Report, Dredging Studies – Dispersion Modelling 9.7 Physical Setting, Marine Water Quality **Information Requests** Information Request Package 3 Preamble in Support of Responses to IR3-25 to IR3-40 – General and Disposal at Sea-related Project Construction Update (CEAR Document #928) **PCU (CEAR Document #1210)**

Table 28: Underwater Noise – Intermediate Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
STZ-28.1	Asked if above-ground noise is transmitted under water.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Above ground noise is not anticipated to propagate into the water to result in behavioural effects to marine mammals and was determined to be a negligible effect.		
STZ-28.2	Stated that different species experience different perceptions of noise. Asked how much is known about the different ways species perceive noise. Asked about the effect of impulsive noise events on fish and other marine species.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1 12-Nov-2014 Cowichan Nation Alliance EIS Workshop #2	**22-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. **12-Nov-2014, Workshop:** This topic was discussed during a presentation on underwater noise and vibration. The presentation summarised: • Human generated underwater noise can affect fish and marine mammals (assessed separately as VCs) with representative species for each VC that may experience noise differently; • The VFPA conducted extensive state-of-art field and modeling studies for RBT2, using most up to date science on how different species hear and respond to underwater noise, conducted new studies on what levels of underwater noise may affect southern resident killer whales; • Existing underwater noise conditions relatively high, primarily due to commercial vessel traffic, including ferry traffic; • RBT2 will produce underwater noise (construction and operations); no impulsive noise is planned during construction (i.e., impact piling not anticipated, only vibratory piling); and • Preliminary results of studies indicate RBT2 noise levels will be minor to moderate.	**Addressed in EIS Appendix 7.2-B (#61):** The scope and methods of the underwater noise study are summarised in the EIS section, and detailed in the supporting appendix. Underwater noise considers the level of underwater sound in the marine environment. An assessment was undertaken to determine potential changes in underwater noise as a result of the Project and focused on construction and operation activities that would produce underwater noise. Modelling was undertaken to predict future underwater noise as a result of construction activities, such as dredging, pile driving, vibro-densification, and operation activities, such as movements of container ships and tug boats associated with terminal approach and departure, and berthing and unberthing. The assessment concludes that: • Underwater noise levels during construction are predicted to be comparable on average to existing levels measured at Roberts Bank, with the exception of some periods when certain activities, such as dredging, pile-driving, vibro-densification, or construction support vessel movement, would occur. • Overall, average underwater noise from Project construction and operation activities is expected to be comparable to average existing levels of underwater noise due to existing high levels, but will at times exceed existing conditions. Underwater noise related to conservative levels of Project commercial vessel movements is predicted to increase over existing underwater noise levels for only approximately 3% of a year for vessel berthing and unberthing, and for approximately 2% of a year for vessel approach and departure. • Future cumulative increases in commercial vessel traffic in the region are expected to make a relatively small incremental contribution to overall underwater noise levels. This prediction reflects the existing high levels of vessel traffic within the study area and the already-dominant contribution of commercial vessel traffic noise to the acoustic environment. The results of the underwater noise assessment were considered in the assessments of marine fish, marine mammals, and coastal birds. An interaction between Project-related underwater noise and marine invertebrates is not anticipated, and therefore was not assessed.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.8 Underwater Noise 9.8.2 Assessment of Purpose and Approach 9.8.6 Underwater Noise, Methods Appendix 9.8-A Construction and Terminal Activity Underwater Noise Modelling Study Technical Report Appendix 9.8-B Regional Commercial Vessel Traffic Underwater Noise Modelling Study Technical Report 13.0 Marine Fish 13.6 Future Conditions with the Project 14.0 Marine Mammals 14.6 Future Conditions with the Project 15.0 Coastal Birds 15.7 Future Conditions with the Project
STZ-28.3	Requested more information on the types of mitigations implemented for underwater noise.	03-Jul-2014, Aboriginal Groups Valued Components Workshop #2	**03-Jul-2014, Workshop:** Recorded comment for consideration by the Project team. **12-Nov-2014, Workshop:** This topic was discussed during a presentation on underwater noise and vibration. The presentation summarised mitigation	**Addressed in EIS Section 33.3.7:** The Underwater Noise Management Plan will describe measures to manage underwater noise and over-pressure waves generated during pile driving and other construction activities as necessary to avoid or reduce potential effects on marine mammals, diving coastal birds, and aquatic life. Key components of the plan will	**EIS** 33.3.7 Underwater Noise Management Plan

Stz'uminus First Nation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			measures to address potential effects of underwater noise during construction. • Project placement and design; • Best management practices and standards; • Industry practices; • Equipment maintenance and noise reduction; • Timing or seasonal windows; • Marine mammal observers and hydrophone; • Monitoring of zones of potential injury or disturbance; and • Onsite juvenile Chinook habitat restoration. **01-Apr-2015, Letter from the VFPA to Stz'uminus First Nation:** Provided a copy of the EIS, which included EIS Section 33.3.7 Underwater Noise Management Plan.	include use of underwater noise reduction and dampening methods and technologies. The plan will incorporate measures described in Best Management Practices for Pile Driving and Related Operations, prepared by the B.C. Marine and Pile Driving Contractors Association and DFO (2003). Compliance monitoring parameters for underwater noise will be addressed as part of the Construction Compliance Monitoring Plan.	

APPENDIX IR10-01-C6

COWICHAN TRIBES: ISSUES, VIEWS, AND CONCERNS RELATED TO THE PROPOSED PROJECT AND MARINE SHIPPING ASSOCIATED WITH THE PROJECT

Cowichan Tribes

Table 1: Air Quality – Intermediate Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
CT-1.1	Asked for clarification on the assertion that air quality is expected to improve while climate emissions increase. Requested additional information on the new air emission standards.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Responded that air quality improves with a decrease in emissions for criteria air contaminants as well as for some traces in organic compounds. Greenhouse gas emissions will be higher in terms of global emissions, so that is what is meant by an improvement in air quality as well as an increase in climate emissions. There will be decreases in emissions both overall and on a per-truck basis because of new, more stringent emission standards for on-road vehicles. The assessment only considers emission reduction measures that have been confirmed. There may well be additional reduction measures in the future that would further contribute to lowering emissions. Future reductions in emissions can be estimated based on expected equipment turnover. The Vancouver Fraser Port Authority's (VFPA) truck licensing system restricts the engine age and emissions standards of vehicles that are allowed to enter VFPA terminals. By 2015, all trucks that access VFPA marine terminals will be required to achieve a 2007 engine emission performance or better. The International Maritime Organization (IMO) is implementing the North American Emission Control Area (ECA), which will be coming into effect in January 2015, requiring the sulphur content in fuel to be no higher than 0.1% for vessels.	**Addressed in EIS Section 9.2.7.1:** Regulatory initiatives for air quality and their incorporation into the assessment of future emissions are described in EIS Section 9.2.7.1. **Addressed in EIS Appendix 7.2-B (#42):** An assessment was carried out to predict potential changes in air quality as a result of Roberts Bank Terminal 2 (RBT2 or Project). The results of the air quality assessment were used in the assessments of human health and current use of land and resources for traditional purposes (Current Use). The assessment modelled Project-related fuel combustion and fugitive dust emission sources during the construction phase, and fuel combustion emission sources during the operation phases, and compared future conditions with the Project to modelled existing conditions and future expected conditions. Existing conditions considered emissions from marine vessels, trains, trucks, vehicles, and cargo handling equipment from the existing Westshore Terminals, Deltaport Terminal, and BC Ferries Terminal, while emissions from industrial, commercial, and residential sources within Delta were represented through measured air quality levels in Tsawwassen. A general trend of decreasing concentrations of contaminants has been observed and is expected to continue in the Lower Fraser Valley for some criteria air contaminants, as well as for some trace organic contaminants. Predicted maximum concentrations were used to conservatively estimate existing conditions and potential changes from the Project. Estimated emissions and predicted ambient concentrations did not account for the inclusion of shore power as part of the Project, which is expected to decrease future emissions from ships at berth, ultimately improving future air quality compared to predicted concentrations. The predicted concentrations also did not account for the switch to the use of liquefied natural gas (LNG) fuel for ferry vessels at the BC Ferries Terminal. The assessment concludes that: • Air quality in the region will improve in the future, with or without the Project, as a result of improvements in engine technologies as older equipment is replaced by newer equipment at the three existing marine terminals, and the use of cleaner fuels. • Cumulative changes, incorporating the Project and other certain and reasonably foreseeable projects and activities, are predicted to be small relative to expected improvements in future ambient air quality levels. • Project construction activities are predicted to cause a small increase in concentrations of some contaminants, but will be mitigated through the use of emission reduction measures to limit fugitive dust emissions and a monitoring program to guide construction activity in the event that ambient air concentration exceed defined criteria threshold levels. • Criteria air contaminant (i.e., carbon monoxide, nitrogen oxides, sulphur dioxide, particulate matter, and ground-level ozone) and trace organic contaminants (i.e., formaldehyde and other contaminants related to fuel combustion) levels are predicted to be below ambient air quality criteria on land, with limited exceptions. The exceptions for predicted nitrogen dioxide levels near the causeway are considered to be an artificially caused by the conservative methods used in the air quality assessment, and are not expected to actually exceed established ambient air quality criteria. • The Project is expected to have a negligible effect on future ozone levels. • Although Project activities would emit black carbon, black carbon is expected to decrease in the future with the Project due to equipment fleet turnover at existing Roberts Bank terminals to newer engines that meet more stringent emission standards for particulate matter.	**Environmental Impact Statement (EIS, CEAR Document #181)** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 9.0 Physical Setting 9.2 Air Quality 9.2.5 Methods Appendix 9.2-A Air Quality Study Main Report Appendix A - Emissions Inventory Appendix B – Existing Air Quality Appendix C - Air Dispersion Modelling Appendix F - Ships Underway 9.2.6 Existing Conditions Table 9.2-4 Air Quality Criteria for Criteria Air Contaminants Table 9.2-5 Air Quality Criteria for Toxic Organic Contaminants 9.2.7 Expected Conditions 9.2.7.1 Regulatory Initiatives 9.2.8 Future Conditions with the Project 9.2.9 Future Conditions with the Project and Other Projects and Activities Appendix 9.2-A Air Quality Study Appendix H – Westshore Coal Dust Assessment

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				The Project is not expected to result in any significant adverse effect on human health, including from changes in air quality because air quality is expected to improve. The benefits of existing emission reduction initiatives are realised in the existing emissions monitored at local air quality stations in Metro Vancouver. Future benefits to air quality, such as improvements in engine technology and fuel quality, are described based on their anticipated level of benefit to future air quality emissions, in EIS Section 9.2.7. Through its ongoing Air Action Program*, the VFPA is constantly looking at addressing air quality and climate change, by focusing on the use of technologies and the promotion of operational efficiencies to reduce air emissions from port operations, such as those mitigation measures suggested during consultation. Key components of the Air Action Program include the EcoAction Program, the Northwest Ports Clean Air Strategy, the Landside Air Emissions Inventory, and environmental requirements through the Truck Licensing Program. Information regarding the VFPA's Air Action Program can be found at http://www.portmetrovancouver.com/en/environment/initiatives/Air.aspx. *The Air Action program was renamed to Air, Energy and Climate Action. As part of the Deltaport Third Berth Project (DP3), the VFPA funded the establishment of the Tsawwassen Air Quality Monitoring Station. The location of the station, at Pebble Hill Reservoir located at 411 Milsom Wynd in Delta, was chosen by the Delta Air Quality Monitoring Technical Working Group (composed of representatives from Corporation of Delta, Environment Canada, Metro Vancouver, Tsawwassen First Nation, and the VFPA). The station is comprised of state-of-the-art monitoring equipment including ozone and particulate monitoring technologies. Since this station is part of Metro Vancouver's regional air quality monitoring network, results from the station can be viewed in real-time at www.bcairquality.ca/readings. **Additional information provided by the VFPA:** The analysis of the data from this station indicates that there has been a reduction in both sulphur dioxide (SO_2) and fine particulate matter ($PM_{2.5}$) concentrations measured at this monitoring station after the implementation of the requirements for low sulphur fuels from ships under ECA regulations. For 2010, the levels of carbon monoxide, SO_2, $PM_{2.5}$, and ground-level ozone meet the most stringent of Canadian, provincial, and regional ambient air quality standards or objectives. **Additional response provided by the VFPA:** During operation, Project-related exposures to air emissions are not predicted to result in measurable health effects. During construction, a moderate health effect is predicted for a small area over water between the Westshore and RBT2 terminals, where public access is not likely. Therefore, health effects during construction are unlikely to occur. Air quality will be monitored during construction and operation, and there would be adaptive measures should Project emissions result in exceedance of ambient air quality objectives/criteria.	

Cowichan Tribes

Table 2: Alternative Means of Carrying out the Project

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
CT-2.1	Asked about the process of determining whether the Project is feasible, and whether the decision was made based on only economic and technical factors, or if environmental or cultural impacts were considered.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Responded that in going through the process of selecting the Project location and design, the VFPA has considered environmental effects throughout the design process, and many changes have been made along the way. Stated that the design that has been selected is conceivably acceptable to environmental regulators. Stated that the Panel will determine whether the effects of the Project can be mitigated sufficiently.	**Addressed in EIS Appendix 7.2-B (#2):** The VFPA's approach for identifying and selecting alternatives was undertaken internally. As part of this process, the VFPA reviewed and considered Indigenous input provided as part of the environmental assessment processes for prior projects at Roberts Bank. Alternatives to the Project are described in EIS Section 5.0. The VFPA considered the following alternatives for creating container capacity to meet the forecasted demand, both within and outside of its jurisdiction: • Incremental capacity and efficiency increases are underway or in planning at Deltaport Terminal and Centerm. These projects will help meet short-term container demand to the early 2020s, but would not meet forecasted longer-term requirements. • Lease tenures on properties adjacent to the Vanterm property will persist until at least the late 2020s, and converting them to containers would displace other trade-related activities. If improvements at Vanterm were feasible, expansion would not be anticipated until sometime after 2030, and therefore would not meet the need to deliver additional container capacity required by the mid-2020s. • Larger container ships, such as those visiting Deltaport Terminal, Centerm, and Vanterm, cannot be accommodated in the Fraser River channel due to draught requirements and length (ability to turn around in the river). Fraser Surrey Docks is not expected to be a major source of container capacity to meet demand beyond 2018. • Conversion of the Lynnterm terminal to handle containers is not technically or financially feasible, due to road constraints and conflict with current handling operations. • Development of the VFPA's Fraser Richmond properties to provide large-scale container capacity is not technically feasible due to road and rail capacity constraints and issues with larger container ships in the Fraser River channel. • Planned expansions at the Fairview Terminal in Prince Rupert will help meet short-term west coast container demand to the early 2020s, but will not meet forecasted longer-term requirements. The results of the VFPA's analysis concludes that the Project is the only technically and financially feasible option to meet long-term demand for container capacity on Canada's west coast. Feasibility of the Project will also be determined by the outcome of the environmental assessment process, and the decisions by provincial and federal ministers of the environment. **Addressed in response to IR1-06:** Technical feasibility criteria used to evaluate alternatives to the location, orientation, layout and configuration of the marine terminal at Roberts Bank was based on whether potential environmental effects were deemed to be acceptable by regulators. Generally, alternatives located in subtidal habitat (i.e., deeper waters) were considered favourable as the potential for environmental effects in shallower, intertidal waters would increase the potential for effects to marine invertebrate and fish habitats, and pose a risk to obtaining the permits required for the Project (i.e., Fisheries Act Authorization). Economic feasibility criteria considered construction costs and schedule (including dredge, fill, and soil improvement requirements), as well as operational costs associated with downtime from weather/navigation constraints, yard efficiencies, and maintenance dredging. Options W1 and W2 of the terminal, located west of the existing Roberts Bank terminals were considered to be technically and economically feasible (Table IR1-06-2). An assessment of environmental effects of these alternatives is provided in the VFPA's response to IR1-07.	**EIS** 5.0 Alternative Means of Carrying out the Project 5.3.1 Increase Capacity and Efficiency of Existing Container Terminals within VFPA Jurisdiction 7.0 Engagement and Consultation 7.2.1 Aboriginal Groups Engagement and Consultation, Engagement and Consultation Process Overview Appendix 7.2-B Aboriginal Groups Issues and Interests Table **Information Requests** Response to Sufficiency Information Request #06 (IR1-06 of CEAR Document #897) Response to Sufficiency Information Request #07 (IR1-07 of CEAR Document #897)

Cowichan Tribes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
CT-2.2	Requested additional information and asked about the Port Alberni Trans-shipment Hub concept.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Responded that the Port Alberni Port Authority has put forth a proposal that would see the creation of a transshipment container terminal where containers would be unloaded from vessels and transferred to barges for shipping. From there the containers would [be barged to Vancouver and] unloaded from the barges at a terminal and transferred for intermodal transport by truck and rail. It is a concept that has been publicly presented, but its current status is uncertain with respect to economic viability and willingness-interest from industry; it would require a major shift in the way containers are handled on the west coast of North America, [and would still require additional terminal capacity in Vancouver].		**EIS** 5.0 Alternative Means of Carrying out the Project 5.3 Location of Marine Terminal within British Columbia Alternatives Appendix 7.2-B Aboriginal Groups Issues and Interests Table

Cowichan Tribes

Table 3: Archaeological and Heritage Resources – Valued Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
CT-3.1	Requested more information on beach weirs and historic tidal channels. Concerned that the Archaeological Overview Assessment only considers fish weirs for sturgeon and does not consider other types (i.e., salmon).	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Recorded comment for consideration by Project team. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#154):** Ethnographic information including Indigenous Traditional Knowledge (ITK) suggests that salmon were traditionally caught using methods other than those using wooden stakes. These methods, trawl nets and harpooning, are not likely to have left archaeological evidence if they were used. The potential effects are to "fish trap stakes" in general and consider other species of fish in addition to sturgeon (i.e., salmon).	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 28.0 Archaeological and Heritage Resources 28.5.1.2 Ethnography
CT-3.2	Concerned about the exclusion of Cowichan Nation Alliance member nations from the scope of the Archaeological Overview Assessment.	04-Mar-2014, Letter to the VFPA from Cowichan Tribes on behalf of Cowichan Nation Alliance 22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**04-Mar-2014:** Recorded comment for consideration by the Project team. **06-May-2014, Letter from the VFPA:** Stated that the purpose of the Archaeological Overview Assessment is not to provide a detailed ethnographic history, but an ethnographic overview of the study area. However, the ethnography section has been revised and also includes a listing of all First Nations that have a potential claim to the study area, according to GeoBC's Consultative Areas Database. The Cowichan Nation Alliance provided the Brealey report to the VFPA in confidence. The VFPA requested permission from the Cowichan Nation Alliance to provide the report to Millennia Research Limited but was denied. Therefore, this information is not included in the Archaeological Overview Assessment. **22-Oct-2014, Workshop:** Stated that Tsawwassen First Nation, Musqueam First Nation, and Hwlitsum provided the VFPA with information about fish weir use on the intertidal flat and that this preliminary assessment was written before more recent information had been received. The VFPA has read the report prepared by Dr. Kennedy and submitted by the Cowichan Nation Alliance regarding historical use, and recalled that information about Halalt use of traps for salmon was provided. The VFPA apologised that information is not reflected in the presentation, and explained this presentation had been prepared prior to reading the report. The scope of the Archaeological Overview Assessment is not meant to cover proof of claim. There is a section covering Current Use that includes a very comprehensive discussion of the interests and use of the Cowichan Nation Alliance, which is much broader than this assessment, which considers the potential physical disturbance of archaeological sites.	**Addressed in EIS Appendix 7.2-B (#151):** The purpose of the archaeological and heritage resources assessment was to determine whether there is potential for archaeological and heritage resources to exist in the assessment area, and to determine any Project-related effects on these resources, if they are present. The assessment was supported by an Archaeology Overview Assessment, which included an ethnographic overview of the area and a review of the potential for undocumented heritage sites to exist in the local assessment area (LAA). The results of the archaeological and heritage resources assessment were considered in EIS Section 32.0. The LAA included the physical footprint of the Project plus a 100 m buffer zone, as well as a zone of coastal-geomorphological influence. The regional assessment area (RAA) considered a four kilometre (km) area around the Project area. No archaeological sites were identified in the LAA, either using the B.C. Archaeology Branch's online heritage registry or through the Archaeological Overview Assessment. If archaeological or historical materials remain in the intertidal area, it is likely that they have been preserved in the sediment layers, if not affected by previous construction. The Project may affect archaeological resources, namely, fish trap stakes, if present in the Project area. Direct effects could result from Project-related construction activities, and indirect effects could result from changes to sediment deposition or erosion. Through mitigation, including excavation of test trenches prior to construction activities and the implementation of an Archaeological Monitoring and Management Plan, potential damage to archaeological resources would be avoided and the opportunity for future archaeological study would be protected. The Project is not expected to result in significant residual effects to archaeological and heritage resources. The Project is not expected to result in any incremental cumulative effects to archaeological and heritage resources. A description of the past use of the Roberts Bank area by Indigenous groups is provided in EIS Section 32.0. The presentation of information on past use of the area in the assessment of archaeological and heritage resources is tailored to those Indigenous groups whose past uses are directly linked to the type of physical archaeological resources that have the potential to be present in the study area, and have the potential to be affected by the Project.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 28.0 Archaeological and Heritage Resources 28.2 Selection of Archaeological and Heritage Resources VC 28.3 Assessment Boundaries 28.4 Information Sources 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Land and Resources for Traditional Purposes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			The VFPA committed to take the feedback and information shared and provide it to the teams working on the assessment and writing the reports. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	The scope or methods of the archaeological and heritage resources assessment are described in EIS Section 28.0.	

Table 4: Coastal Birds – Valued Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
CT-4.1	Asked whether there is potential for wildlife to confuse day for night due to lights.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Stated that this was considered for birds, and more information would be provided in a later presentation on light. **12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2:** Presented on coastal birds, stating that effects from disturbance (noise, light, vessel movement) can be effectively mitigated. Presented mitigations measures to address lighting impacts, valances to minimise light trespass. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#45):** The potential changes in light that may be caused by the Project, and the potential effects of those changes on valued components (VCs) and on Current Use are considered in the EIS. The results of the light assessment informed the assessments of marine fish, coastal birds, visual resources, and human health, and Current Use. The assessment focused on two aspects of light: • Light trespass, the amount of light that strays from its intended purpose onto neighbouring areas; and • Sky glow, the unwanted illumination of the night sky that affects the visibility of stars. The assessment concluded that: • Overall, the Project is not expected to change the general light environment of the Lower Mainland and the Gulf Islands and no measurable incremental cumulative changes related to light are expected. • Project-related lighting is expected to result in a minimal increase in light trespass levels. • Increases in sky glow levels are expected, but are not anticipated to result in a noticeable change from existing conditions. Suggested mitigations were considered in the effects assessment. Mitigation measures to address effects on visual resources and coastal birds consist of implementation of Environmental Management Plans, including Light Management Plans, for construction and operation phases. The Light Management Plans will describe measures to reduce excess lighting and sky glow, including: • Orienting lights downwards and away from residential and marine areas; • Using shielding to minimise light trespass; • Controlling light levels and limiting light use to areas where activities are occurring; • Where possible, using fixtures that emit light at wavelengths shown to minimise disorienting effects to birds; • During construction, ensuring dredge lighting system shields light from spilling outside the basic working footprint of the dredge; and • During operation, establishing a centralised lighting control system to select lighting where required. **Addressed in EIS Appendix 7.2-B (#99):** A review of documented effects of both natural and artificial light on birds is provided in EIS Section 15.7.2.1. The EIS considers the potential effects of artificial light on coastal birds, including the potential for increased risk of predation on shorebirds by nocturnal raptors (i.e., owls). Overall, the Project is not expected to compromise the productive potential of the local area to support coastal bird productivity, or change to species' viability. The assessment concludes there are no significant adverse residual effects from the Project to coastal birds. The Project is not expected to result in measurable incremental adverse cumulative effects to coastal birds. **Addressed in MSA Section 8.3:** Potential effects of artificial light from shipping traffic in the marine shipping area. The MSA notes that nocturnal feeding marine birds can be attracted to artificial light sources, such as ship lighting, and that mortality is known to occur. For the LAA, no collisions with vessels have been recorded, which indicates that collisions with vessels are most likely infrequent and, if they do occur, do so on a small scale (in terms of the number of birds).	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 9.0 Physical Setting 9.4 Light 9.4.4 Relevant Guidelines 13.0 Marine Fish 13.6.3 Future Conditions with the Project, Potential Effect - Changes in Productivity, 13.7.5 Mitigation Measures, Mitigation #4 for Changes in the Light Environment 15.0 Coastal Birds 15.7.2.1 Mechanisms Affecting Productivity 25.0 Visual Resources 25.7.2 Mitigation Measures, Mitigation Measure #2 – Lighting Design and Operation – Light Management Plans 27.0 Human Health 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Land and Resources for Traditional Purposes 33.3.5 Construction EMP, Light Management Plan 33.4.3 Operation EMP, Light Management Plan **Marine Shipping Addendum (MSA, CEAR Document #316)** 8.3 Coastal Birds **Information Requests** Response to Sufficiency Information Request #02 (IR9-02)

Cowichan Tribes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				Addressed in response to IR9-02: The VFPA's forthcoming response to IR9-02, as requested by the Review Panel, will further discuss mitigation measures related to artificial light for migratory and non-migratory birds and avian species.	
CT-4.2	Asked if Tundra and Trumpeter Swans use the Project area, and whether or not they were considered in the assessment. Added that swans were historically numerous, then disappeared.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Responded that swans have been in the area, and that long-term use of that area by the species is understood. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#93):** The Fraser River estuary is an important area to many coastal birds because of the abundant food sources. The Roberts Bank area supports an abundance and diversity of bird species. An assessment was undertaken to determine the effects of the Project on coastal birds. The assessment of coastal birds focused on seven sub-components: • Shorebirds, represented by Pacific dunlin and western sandpiper; • Waterfowl, represented by American wigeon and brant (which is a proxy for swans); • Herons, represented by great blue heron; • Diving birds, represented by surf scoter and western grebe; • Raptors, represented by bald eagle, barn owl and peregrine falcon; • Gulls and terns, represented by Caspian tern and glaucous-winged gull; and • Passerines, also known as songbirds, represented by barn swallow. The use of the Fraser River estuary and the Project area by trumpeter swan and tundra swan is described in the EIS, under the waterfowl section (EIS Section 15.5.4). Overall, the Project is not expected to compromise the productive potential of the local area to support coastal bird productivity, or change to species' viability. The assessment concludes there are no significant adverse residual effects from the Project to coastal birds. The Project is not expected to result in measurable incremental adverse cumulative effects to coastal birds.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 15.0 Coastal Birds 15.2 Selection of Coastal Birds Valued Component 15.5.4 Existing Conditions, Waterfowl 15.7.2 Future Conditions with the Project, Potential Effect – Changes in Productivity Appendix 15-B Shorebird Foraging Opportunity during Migration Appendix 15-C Overwintering Dunlin Foraging Opportunity
CT-4.3	Asked why humans had not been considered in the Shorebird Opportunity Model.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Responded that interactions are addressed separately in the EIS. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Section 15.0:** The focus of the Shorebird Opportunity Model (EIS Appendix 15-B) was on shorebird access to food sources and the capacity of the LAA to support existing and future shorebird populations (with the project). Although humans may interact with shorebirds, the food resources upon which shorebirds depend are largely in the intertidal zone where the potential for shorebird-human interactions are minimal.	**EIS** 15.0 Coastal Birds 15.2 Selection of Coastal Birds Valued Component 15.5.4 Existing Conditions, Waterfowl 15.7.2 Future Conditions with the Project, Potential Effect – Changes in Productivity Appendix 15-B Shorebird Foraging Opportunity during Migration Appendix 15-C Overwintering Dunlin Foraging Opportunity

Table 5: Coastal Geomorphology – Intermediate Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
CT-5.1	Stated that elders in 1990 asked for flow to be maintained through the causeway. Commented that sand appears to have accumulated on the north side of the causeway. Asked about the long-term environmental impacts of the existing causeway.	01-Nov-2013, Meeting with Cowichan Nation Alliance 22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**01-Nov-2013, Meeting:** Responded that work completed by a coastal geomorphologist and by a fisheries biologist determined that by breaching the causeway more damage would be done. Responded that work was completed to look at flow through the causeway and it was determined that while it was conceptually okay, in practice it would create a bigger issue (i.e., it would remove the mudflat if you removed the causeway). The reason why the terminal is situated further out from the mudflats is because building a terminal near the mudflat would have a negative impact. The further out the terminal is built, the less impact to the mudflat. **22-Oct-2014, Workshop:** Presented information on coastal geomorphology, including the existing conditions and the anticipated future changes as a result of the Project. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Additional information provided by the VFPA:** An independent technical study, "Potential Effects of Opening the Causeway," was undertaken for the Vancouver Port Authority in 2005 to clarify issues related to physical processes and hydraulic behaviour in the inter-causeway area of Roberts Bank. This report determined that there is a substantial risk that a new opening in the causeway could initiate a new sequence of morphological changes on the tidal flats, which could adversely affect the existing habitat conditions. Furthermore, the assessed opening would be expected to have only a minimal contribution to flushing flows in the inter-causeway area. The report is available on the Project website: http://www.robertsbankterminal2.com/wp-content/uploads/RBT2-Potential-Effects-of-Opening-the-Causeway-June-2005-NHC-Memo-January-2014.pdf. Based on the findings of this report, and the evaluation of adding a flow passage channel, the VFPA does not propose to open the Roberts Bank causeway. Further information concerning this study is available in the VFPA's response to IR1-13. **Addressed in the EIS Appendix 7.2-B (#52):** EIS Section 9.5 describes existing conditions on Roberts Bank, including the past influences of the Roberts Bank causeway and BC Ferries Terminal causeway on the Roberts Bank ecosystem. The potential effects of the Project on ocean currents (hydrodynamics), wave climate, and local seabed scour and deposition (morphodynamics) were investigated using the TELEMAC numerical modelling system. Since no reasonably foreseeable projects or activities were identified during the assessment that will influence or change the conditions of coastal geomorphology within proximity of the Project, an assessment of future incremental cumulative changes to coastal geomorphology was not undertaken. **Addressed in response to IR2-09:** Additional clarification is provided in the VFPA's response to IR2-09, which describes how sand was deposited on the north side of the causeway during the initial causeway construction activities in 1969. These sediments have persisted and are not the result of ongoing coastal geomorphology processes. **Further information provided by the VFPA:** **07-Jan-2014, Letter from the VFPA to Penelakut Tribe:** The potential effects of opening the causeway were assessed by Northwest Hydraulic Consultants Ltd. in June 2005. Based on the tidal influence in the area, it was determined that there would be no benefit with regard to introducing flows through the causeway (e.g., the amount of water that would flow through the opening would be very small compared to the tidal exchange in the inter-causeway area), and such an opening may actually result in new channel formation and concurrent erosion of existing eel grass.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 9.5 Coastal Geomorphology 9.5.5 Methods 9.5.6 Existing Conditions 9.5.9 Future Conditions with the Project and Other Projects and Activities Appendix 9.5-B Rationale for Exclusion of Other Certain and Reasonably Foreseeable Projects in the Cumulative Change Assessment of Coastal Geomorphology **2005 Memorandum Concerning Potential Effects of Opening the Roberts Bank Causeway** http://www.robertsbankterminal2.com/wp-content/uploads/RBT2-Potential-Effects-of-Opening-the-Causeway-June-2005-NHC-Memo-January-2014.pdf. **Information Requests** Response to Sufficiency Information Request #13 (IR1-13 of CEAR Document #897) Response to Sufficiency Information Request #09 (IR2-09 of CEAR Document #961)
CT-5.2	Asked how the Project affects the water. Asked for further clarification related to changes in geomorphology	01-Nov-2013, Meeting with Cowichan Nation Alliance 22-Oct-2014, Cowichan Nation Alliance	**01-Nov-2013, Meeting:** Recorded comment for consideration by the Project team. **22-Oct-2014, Workshop:** Responded that the environment will experience only very slow change.	**Addressed in EIS Appendix 7.2-B (#48):** Coastal geomorphology considers the physical processes such as waves and currents that change or maintain the physical environment of coastal areas. An assessment was undertaken to determine potential changes to coastal geomorphology as a result of the Project.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 9.5 Coastal Geomorphology 9.6 Surficial Geology and Marine Sediment

Cowichan Tribes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	associated with the proposed Project. Asked what the environment will look like with changes in accretion and siltation.	EIS Workshop #1	Stated that there is not expected to be a lot difference with the addition of the proposed Project. Referred to the image on slide 31 of the presentation that illustrated where a difference is expected. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	The assessment consisted of three study approaches to determine the potential effects of changes to natural processes from the Project footprint in subtidal and intertidal areas. Studies were informed by dialogue with the Coastal Geomorphology Technical Advisory Group (TAG). The results of the coastal geomorphology assessment were considered in the assessments of surficial geology and marine sediment, marine water quality, marine vegetation, marine invertebrates, marine fish, marine mammals, coastal birds, ongoing productivity of commercial, recreational, and Aboriginal fisheries, and archaeological and heritage resources. The Project layout and configuration have been modified to reduce the potential for a number of adverse changes to geomorphology during Project construction and operation. For example, developing the terminal almost entirely within the subtidal zone of Roberts Bank will largely avoid changes to geomorphology. Changes to coastal geomorphology are not expected from terminal development activities, but are related to the terminal footprint itself. The footprint will interact with tidal currents and wind-generated waves resulting in alterations to sediment transport, sediment erosion and deposition, and water flow exchange in the construction and operation phases. During causeway construction, drainage channels are expected to form on the tidal flats adjacent to the causeway. This change will occur during construction only, and will be temporary and reversible. The VFPA will ensure the study and management of potential channel formation related to drainage of tidal waters through the causeway dyke during the construction phase. Changes will be incorporated in detailed design, as required. Changes from the expansion of the tug basin include the conversion of local tidal flats to subtidal waters. Although the formation of additional tidal channels is not anticipated, a small increase in the size of an existing channel is likely. No incremental cumulative changes in coastal geomorphology are anticipated to result from the Project in combination with other projects and activities. **Addressed in response to IR2-08:** As outlined in the VFPA's response to IR2-08, ongoing geomorphic processes have resulted in changes to the Fraser River delta foreslope (located in deeper water at the outer edge of the tidal flats) in the vicinity of the proposed terminal. Construction of RBT2 will result in armouring of a 1,700 m long section of the foreslope down to -30 m chart datum (CD), and will effectively halt any erosion of the foreslope in that area that may be occurring at present. **Addressed in responses to IR2-07 and IR2-09:** As outlined in the VFPA's responses to IR2-07 and IR2-09, topographic changes on the tidal flats have been evaluated, including changes to existing tidal channels. These changes are related to ongoing geomorphic processes as well as changes related to previous construction of the causeway and existing terminals. Widening of the causeway and development of RBT2 is not predicted to change drainage patterns or the morphology of the tidal flats in this area north of the causeway in the future with the Project. **Addressed in response to IR2-16:** Clarification concerning the assessment of changes to coastal geomorphology that may occur in relation to the construction and operation of the proposed Project is provided in the VFPA's response to IR2-16. The response confirmed that all Project components have been assessed in	9.7 Marine Water Quality 9.7.8 Future Conditions with the Project 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Lands and Resources for Traditional Purposes 35.0 Effects Assessment Summaries **Information Requests** Response to Sufficiency Information Request #07 (IR2-07 of CEAR Document #961) Response to Sufficiency Information Request #08 (IR2-08 of CEAR Document #961) Response to Sufficiency Information Request #09 (IR2-09 of CEAR Document #961) Response to Sufficiency Information Request #16 (IR2-16 of CEAR Document #961) Response to Sufficiency Information Request #17 (IR2-17 of CEAR Document #961)

Cowichan Tribes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				accordance with the requirements of the *Updated EIS Guidelines* for the local study area, which extends from the BC Ferries Terminal to Canoe Passage. **Addressed in response to IR2-17:** The VFPA's response to IR2-17 includes additional clarification concerning the expected extents of changes to coastal geomorphology related to the proposed Project. Changes to coastal geomorphology and hydrodynamic conditions in areas on the south side of the existing Roberts Bank causeway, including the inter-causeway area and areas south of the BC Ferries Terminal, that are related to the Project components on the north side of the causeway are not anticipated because areas on the south side are hydrodynamically isolated from the north side of the Roberts Bank causeway by deep water and the presence of the existing causeways. The only Project component expected to influence coastal geomorphology or hydrodynamics in the inter-causeway area is the expanded tug basin, which is expected to result in localised changes to the existing coastal landforms in that area.	
CT-5.3	Concerned that Canoe Pass is getting closed off because of the current terminal configuration and corresponding build-up of sand.	01-Nov-2013, Meeting with Cowichan Nation Alliance	**01-Nov-2013, Meeting:** Recorded comment for consideration for the Project team. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#49):** Field studies, air photo review, and modelling of sediment deposition at Roberts Bank (including Canoe Passage) were undertaken during the Project assessment, as described in the EIS. A Canoe Passage discharge channel location and sediment distribution (e.g., bar formation or buildup of sand) were modelled to assess variation pre and post-terminal construction. Potential changes associated with the configuration of RBT2 were assessed in relation to Roberts Bank, including the Canoe Passage discharge channel. Project-related changes to coastal geomorphological processes on Roberts Bank are predicted to be associated with the terminal footprint. However, the Project is not anticipated to alter sediment dynamics or water movement in and around the mouth of the Fraser River. Changes are anticipated around the terminal and within the intertidal zone shoreward of the terminal. The effects of these changes on VCs are considered in the EIS.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table

Cowichan Tribes

Table 6: Economic Development – Valued Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information

CT-6.1	Asked whether potential negative impacts on other industries are assessed in the economic development valued component.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:**
			Responded that the impacts on other industries was assessed in the EIS.
			01-Apr-2015, Letter from the VFPA to Cowichan Tribes:
			Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.
				Addressed in EIS Appendix 7.2-B (#113):
				The economic development assessment evaluated potential Project-related effects on local and regional economies, and focused on:
				• Business revenues associated with the direct supply of materials, goods, and services to the Project for construction and operation;
				• Business revenues associated with supply of inputs to the businesses that are directly supplying goods and services to the Project;
				• Induced revenues for businesses related to household spending by workers employed as a result of the Project;
				• Construction sand supply and consumption; and
				• Consistency with economic development plans.
				The economic development assessment concluded that:
				• The Project is expected to result in the following positive effects on economic development in Metro Vancouver:
				  ○ During the 5.5 year construction phase:
				  ▪ $837 million in additional gross revenues to businesses in Metro Vancouver
				  ▪ $238 million in induced household spending in Metro Vancouver
				  ○ During operation:
				  ▪ $31 million annually in materials, good, and services contracting revenue to the economy of Metro Vancouver
				  ▪ $71 million of annual induced household spending in in Metro Vancouver
				• The Project is expected to result in an increase in materials, goods, and services contracting revenues for Indigenous businesses located in Metro Vancouver.
				• The Project is expected to result in negligible effects on construction sand availability and price.
				• The Project is consistent with economic development strategies in Metro Vancouver's Regional Growth Strategy, the economic development objectives of the City of Delta, and the general directions set out in the Tsawwassen Land Use Plan of Tsawwassen First Nation.
				• The Project is expected to result in positive effects to economic development in Metro Vancouver; therefore, the Project is not expected to result in measurable adverse residual effects. The Project is not expected to result in incremental adverse cumulative effects on economic development.
				• The economic development assessment includes assessment of potential adverse effects on local sand supply, resulting from the Project-related demand, as well as potential adverse effects on labour market balance (including wage inflation or labour shortages). Further details on rationale for the scope, methods, and conclusions are provided in EIS Section 20.0.

			12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2: Members of the Cowichan Nation Alliance were provided with the opportunity to discuss socio-economic VCs. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **13-May-2016, Email from the VFPA to Cowichan Tribes:** Provided an "Employment Opportunities Information Sheet." The information sheet highlighted opportunities during construction and operations.		32.3.3 Mitigation Measures 34.0 Benefits to Canadians 34.2 Benefits of the Project 35.0 Effects Assessment Summaries Table 35-2 Proposed Mitigation Measures and Commitments ***Updated Guidelines for the Preparation of an Environmental Impact Statement* (*Updated EIS Guidelines*; CEAR Document #177)**
CT-6.3	Concerned about the labour market and economic development studies excluding Aboriginal members and/or communities located outside the Metro Vancouver region.	11-Dec-2014, Health & Aboriginal Rights Workshop – Cowichan Nation Alliance	**11-Dec-2014, Workshop:** Recorded comment for consideration by Project team. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **19-Apr-2016, Letter from the VFPA to Cowichan Tribes:** Shared meeting notes from the 11-Dec-2014 meeting, which included the following post-meeting note: As noted in the response for issue ID# 111 of RBT2 EIS Appendix 7.2-B, the local assessment area (LAA) for labour market and economic development was defined as Metro Vancouver. Cowichan community members living in Metro Vancouver will be reflected in the aggregate data for this region. The LAA was structured to capture the Project's potential labour market and economic development effects that will occur locally and are measureable or detectable. While there may be members of Aboriginal groups located outside of Metro Vancouver that participate in one or more aspects of Project employment, or other economic effects, the effects on the labour market and economies of these Aboriginal groups were not considered to be measureable or detectable. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in the EIS Appendix 7.2-B (#111):** The LAA for labour market and economic development was defined as Metro Vancouver. Cowichan community members living in Metro Vancouver will be reflected in the aggregate data for this region. The LAA was structured to capture the Project's potential labour market and economic development effects that will occur locally and are measureable or detectable. While there may be members of Indigenous groups located outside of Metro Vancouver that participate in one or more aspects of Project employment, or other economic effects, the effects on the labour market and economies of these Indigenous groups were not considered to be measureable or detectable. **Addressed in EIS Appendix 7.2-B (#112):** Opportunities for training and employment opportunities related to the Project are described in EIS Section 32.3.3. As accommodation for any potential effects to specified Indigenous groups' ability to exercise their Aboriginal rights, the VFPA proposes to assist these Indigenous groups in accessing opportunities resulting from the Project. In addition to making contracting opportunities available to specified Indigenous groups, the VFPA will ensure that construction employment opportunities are also made available. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs. Through ongoing engagement, the VFPA will seek input from these Indigenous communities with respect to plans to ensure access to Project-related benefits. The VFPA has consulted and will continue to engage with Indigenous groups regarding opportunities to benefit economically and socially from the Project.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 18.0 Social and Economic Setting 18.4 Population 19.0 Labour Market 19.3.1 Spatial Boundaries 20.0 Economic Development 20.3.1 Spatial Boundaries 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.3.3 Mitigation Measures 34.0 Benefits to Canadians 34.2 Benefits of the Project 35.0 Effects Assessment Summaries Table 35-2 Proposed Mitigation Measures and Commitments

Cowichan Tribes

Table 7: Effects Assessment Methods (including Cumulative Effects)

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
CT-7.1	Proposed that certain central terms be defined to ensure consistent use and understanding throughout the Project review process – namely "cumulative effect," "cumulative environmental effect," "mitigation," and "report".	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"The Canadian Environmental Assessment Agency (Agency) has developed a glossary of terms used in the context of the* Canadian Environmental Assessment Act, 2012 *(CEAA 2012) and it is available at: http://www.ceaa-acee.gc.ca/default.asp?Lang=en&n=E7F0FC59-1&offset=&toc=hide. In addition, CEAA 2012 defines the term "mitigation measures" as measures for the elimination, reduction or control of the adverse environmental effects of a designated project, and includes restitution for any damage to the environment caused by those effects through replacement, restoration, compensation or any other means."* *For the purposes of Crown consultation, if members of the Cowichan Nation Alliance would like to provide information to the Review Panel about the impacts of any aspect of the Project, including marine shipping, the Review Panel will receive this information as directed in Section 3.9."*	**Additional information provided by the VFPA:** In developing the EIS, the VFPA relied on federal guidance documents (such as noted by the CEA Agency in their April 17, 2015 letter (CEAR Document #278)). The EIS also includes a glossary (summary of definitions) applicable specifically to the EIS.	
CT-7.2	Stated that in order to comprehensively assess the full extent of Project impacts, it is essential that the Review Panel consider cumulative effects that are measured against a pre-industrial baseline; this is necessary to understand the extent to which the environment and the ability of Aboriginal peoples to exercise Aboriginal and Treaty rights has already been compromised. Recommended that the draft ToR include a non-exhaustive list of projects and activities that should be included to ensure their impacts are considered e.g. the Tsawwassen Ferry Terminal, the Deltaport Terminal Road and Rail Improvement Project, the South Fraser Perimeter Road, the Tsawwassen First Nation Industrial Land Development, the Tsawwassen Mills and Power Centre and the Deltaport Third Berth Project.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"A list of projects has been provided in the Environmental Impact Statement (EIS) Guidelines http://www.ceaa-acee.gc.ca/050/documents/p80054/97463E.pdf on page 31 and includes the following direction to the Proponent: "The EIS will include a narrative discussion of existing projects in the vicinity of the proposed project, including but not limited to the Tsawwassen Ferry Terminal, Deltaport Terminal Road and Rail Improvement Project, South Fraser Perimeter Road, Tsawwassen First Nation Industrial Land Development, Tsawwassen Mills and Power Centre and Deltaport Third Berth."* *On page 32 of the EIS Guidelines request that* "This narrative discussion should include historical data, where available and applicable, to assist interested parties to understand the potential effects of the project and how they may be addressed." *Also, if members of the Cowichan Nation Alliance have information relating to the state of the environment as it relates to the Project, including effects, we invite you to contact the proponent with any pre- industrial baseline information or data you*	**Addressed in response to AIR-12.04.15-13:** In the EIS, the existing conditions (baseline) reflect the conditions of the environment as modified by past development. Further discussion of how the VFPA considered the effects of past, present, and future projects is provided in completeness-phase AIR-12.04.15-13, including in that responses' schedules focused on applicable VCs.	**Information Requests** Response to Additional Information Request #13 (AIR-12.04.15-13 of CEAR Document #388)

Cowichan Tribes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			may have, including Aboriginal traditional knowledge."		
CT-7.3	Stated that Cowichan Nation Alliance anticipates there will be a significant need for ongoing environmental monitoring of the integrity of the Fraser River estuary upon consideration of the growing number of developments in that area. Recommended express direction to the Review Panel to consider the value of ongoing monitoring. Recommended amendment to section 3.2 to of the ToR to address this concern.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"Your comment has been considered. However, the Agency encourages you to provide any information or concerns you have related to the Fraser River estuary to the Review Panel for their consideration as part of the environmental assessment."*	**Addressed in EIS Section 33.5:** Similar to the Adaptive Management Strategy for DP3, as described in EIS Section 33.5, the VFPA is committed to developing and implementing a Follow-up Program for the Project. The purpose of the Follow-up Program is to verify the accuracy of residual effect predictions made in the EIS, and determine the effectiveness of any measures taken to mitigate the adverse environmental effects of the Project. To ensure the Program's elements adequately reflect conditions of Project approvals, final designs, and construction or operation approaches, as well as public, Indigenous group, and regulator feedback received during the review of the EIS, the VFPA will lead the development of the Follow-up Program after the submission of the EIS. The Follow-up Program will include: • An evaluation of the adequacy of existing data to provide a benchmark against which to test Project-related effects; • A monitoring design drawing on the measurable parameters identified to be field-tested; • A methodological approach for using field-collected data to measure and verify the accuracy of the effects predicted in the EIS; • A reporting framework that defines frequency of reporting, distribution and feedback mechanisms; and • Details of the VFPA's approach to adaptive management for the Project through construction and operation. The Follow-up Program will be developed in consultation with federal agencies, including the CEA Agency, Fisheries and Oceans Canada (DFO), and Environment and Climate Change Canada (ECCC). Complete drafts of the RBT2 Follow-up Program will be made available prior to the start of field measurements to ensure parties consulted on the program and approving agencies have an opportunity to evaluate and approve the program. Feedback from Indigenous groups regarding the draft program will be sought through the VFPA's ongoing engagement initiatives.	**EIS** 33.5 Roberts Bank Terminal 2 Follow-up Program
CT-7.4	Stated that the Review Panel's identification and recommendation of mitigation measures aimed at addressing potential impacts to Aboriginal and Treaty rights is a significant aspect of the Project review. As such, it is critical that the Review Panel be directed to consider all relevant factors when undertaking this task. For example, the Review Panel's consideration should not be restricted solely to the information received pursuant to section 3.5, but should also include the Review Panel's analysis of the section 2.1 factors, including the Review Panels' assessment of the effects of the Project on asserted and established Aboriginal and Treaty rights, including	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"Section 3.7, now Section 3.11, has been revised to direct the Review Panel to use information received throughout the environmental assessment, which allows it to use information collected under any section of the Terms of Reference.* *Please see page 3 of the "Aboriginal Consultation and EA Handout" http://www.ceaa-acee.gc.ca/050/documents/p80054/100180E.pdf for further details. If the Cowichan Nation Alliance has information or opinions on*		

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	cumulative effects and the significance of those effects. Stated that it is also important that section 3.7 reflect the importance of considering impacts to Aboriginal and Treaty rights independent of the Review Panel's recommendation of mitigation measures. Recommended that the Review Panel specify the degree to which each recommended mitigation measure will avoid or minimise the potential adverse effects of the Project on Aboriginal and Treaty rights. This aspect of the analysis is fundamental to the determination of whether a particular mitigation measure is suitable, whether additional accommodation of Aboriginal and Treaty rights is warranted, and may ultimately influence whether the Project should proceed. Recommended amendments to section 3.7 of the draft ToR to address this concern.		*proposed mitigation during the EA process, the Review Panel would welcome that information. The Review Panel has been mandated to provide in its report rationale, conclusions and recommendations on the environmental assessment including any mitigation measures and follow up programs. Section 3.11 allows the Review Panel to make recommendations, which will be considered by the Crown, on avoiding or mitigating environmental effects related to potential impacts on potential or established Aboriginal or Treaty rights.* *At the end of the process it is up to the federal government to decide whether or not to adopt the recommendations contained in the Review Panel's report."*		
CT-7.5	Asked whether the EwE Model Study Area predicts Project impacts south of the American border.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Responded that the answer varies based on the VC in question, but there may be some localised effects. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#101):** The ecosystem model is described in the EIS. The model incorporated predator-prey relationships (biotic factors) and environmental factors within the marine environment. No productivity changes, as determined by the ecosystem model, are anticipated outside of Canadian waters, as productivity-related effects result from construction activities, the Project footprint itself, and indirect localised changes to coastal processes around the terminal.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 10.0 Biophysical Setting 10.3 Overview of Assessing Ecosystem Productivity Appendix 10.3-A Roberts Bank Ecopath with Ecosim and Ecospace Model Parameter Estimates Appendix 10.3-B Roberts Bank Ecosystem Model Development and Key Run Appendix 10.3-C Roberts Bank Spatial Ecosystem Model Sensitivity Analysis Appendix 10-D Roberts Bank Spatial Ecosystem Model Sensitivity Analysis
CT-7.6	Asked about the third party review of the EwE model: who is conducting the review, what the review consists of, and why the review is being conducted.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Stated that a VFPA-commissioned third party is conducting the review who is experienced in the study of marine ecosystems and modelling, and speculated that he will be looking at the inputs, the results, and assessing whether or not they are valid and based on correct information.	**Additional information provided by the VFPA:** In January 2014, the federal Minister of Environment referred the Project for an environmental assessment by an independent review panel. The entire EIS, including the EwE (Ecopath with Ecosim and Ecospace) model, also referred to as the Roberts Bank ecosystem model, is subject to review by the Review Panel. The independent review of the EwE model commissioned by the VFPA (as noted in the previous column) was undertaken prior to finalisation of the EIS. The results of the review informed and were incorporated into the model as it is presented in the EIS.	**Information Requests** Response to Information Request #6 (IR-7.31.15-06 of CEAR Document #314) Information Request Package 3 Preamble in Support of Responses to IR3-01 to IR3-24 – Roberts Bank Ecosystem Model (CEAR Document #928)

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			Explained that David Preikshot (the independent reviewer) has a PhD in Fisheries Science at UBC.	**Addressed in Information Request Package 3 Preamble in Support of Responses to IR3-01 to IR3-24:** As noted in the Preamble in Support of Responses to IR3-01 to IR3-24, the VFPA has actively responded to questions about the application of the Roberts Bank ecosystem model, including through completeness information request responses (see IR-7.31.15-06) and in separate, agency-specific engagement. DFO and Natural Resources Canada (NRC) provided written questions to the VFPA based on a preliminary review of the EIS on November 19, 2015, ahead of an in-person meeting on November 23, 2015. The meeting included representatives from the VFPA, NRC, DFO, ECCC, and other federal agencies. Following this large-scale engagement, a series of more topic-specific meetings were held with individual and/or combinations of agencies through December 2015 and February 2016. Involving DFO, NRC, ECCC, and the VFPA, the meetings provided clarity on topics such as hydrology, sediment modelling, and ecosystem modelling questions posed by the agencies. The VFPA provided a cumulative submission of responses to the agencies in March and May 2016, and these questions and responses were posted to the CEA Agency's registry on September 28, 2016 (CEAR Document #547). In December 2016, the Canadian Science Advisory Secretariat of the DFO Science Branch released its independent review of the Roberts Bank ecosystem model (CEAR Document #900). Numerous federal experts conducted the review, including from DFO and the Canadian Wildlife Service. The general conclusions of the review support how the model was established and agreed that input parameter estimates were adequate for the Roberts Bank ecosystem. Importantly, the DFO Science Branch (with input from NRC) concluded "the EwE model, as implemented in this project and reviewed here, is a useful first-order framework to organise information and derive initial estimates of how the system may respond to perturbations" (CEAR Document #900, p.20).	**From the VFPA to the Review Panel re: Answers to preliminary technical questions submitted during the completeness phase from DFO, NRC, and Environment and Climate Change Canada, concerning the ecosystem modelling to support the RBT2 environmental review (NOTE: Updated September 28, 2016) (CEAR Document #547)**
CT-7.7	Asked about the funding for the ecosystem productivity model and whether the model is objective.	03-Jul-2014, Aboriginal Groups Valued Components Workshop #2	**03-Jul-2014, Workshop:** Explained that the VFPA is working with the University of British Columbia's Fisheries Centre (now the Institute for the Oceans and Fisheries), a leader in ecosystem modelling and the key developer of the EwE approach. Stated that in the environmental assessment application will have all the different assumptions used, all the data sources and why the technical team picked those, for people to critique and give the VFPA feedback on. Stated that the VFPA is trying to be as transparent and open as possible.	**Addressed in Information Request Package 3 Preamble in Support of Responses to IR3-01 to IR3-24:** The VFPA obtained input on selecting the appropriate approach to assessing productivity at Roberts Bank through the Productive Capacity TAG process. The TAG process recommended use of the EwE model, which is well documented in the scientific literature and has been widely used to quantitatively describe marine food webs, fisheries policy exploration (regulatory decisions on managing fisheries), ecosystem-based fisheries management, and a joint B.C.-Canada environmental assessment. The EwE model was developed at the Institute for the Oceans and Fisheries, and more than 400 ecosystem models applying the software have been published. Thirteen of these publications describe marine areas in B.C., six of which are located in the Strait of Georgia. More information on this model can be found at http://www.ecopath.org/. Additional information concerning the VFPA's selection and use of the EwE model in the environmental assessment is available in	**Information Requests** Information Request Package 3 Preamble in Support of Responses to IR3-01 to IR3-24 – Roberts Bank Ecosystem Model (CEAR Document #928)

Cowichan Tribes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				Information Request Package 3 Preamble in Support of Responses to IR3-01 to IR3-24.	
CT-7.8	Noted stark disagreement between the Cowichan Nation Alliance and the VFPA about how cumulative effects are assessed and applied to impacts to Rights. Expressed concern with the cumulative effects studies.	11-Dec-2014, Health & Aboriginal Rights Workshop – Cowichan Nation Alliance 29-Aug-2017, Follow Up Program Workshop with Cowichan Nation Alliance, Lyackson First Nation, and Malahat First Nation	**11-Dec-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests, including concerns around cumulative effects, and provided the VFPA's responses. **29-Aug-2017, Workshop:** Committed to provide information from the EIS and information requests related to cumulative effects studies for RBT2. **20-Feb-2018, Email from the VFPA:** The VFPA provided draft meeting notes from the 29-Aug-2017 Follow-up Program Workshop. A post-meeting note was included regarding cumulative effects: *"Section 8.1.9 of the RBT2 EIS describes the cumulative effects assessment methodology for the RBT2 environmental impact assessment. An assessment of future cumulative effects was conducted when an adverse residual effect was predicted to occur to a valued component (VC) due to a Project-related interaction. For an intermediate component (IC), an assessment of future cumulative change was conducted to assess when Project-induced changes to an IC may combine cumulatively with changes caused by other projects and activities that will be carried out. Assessment of future cumulative effects for VCs and future cumulative change for ICs can be found in the following sections of the EIS:* *ICs:* • *Air Quality: Section 9.2.9* • *Noise and Vibration: Section 9.3.10* • *Light: Section 9.4.9* • *Coastal Geomorphology: Section 9.5.9* • *Surficial Geology and Marine Sediment: Section 9.6.9* • *Marine Water Quality: Section 9.7.9* • *Underwater Noise: Section 9.8.8* *Biophysical VCs:* • *Marine Vegetation: Section 11.10* • *Marine Invertebrates: Section 12.10* • *Marine Fish: Section 13.10* • *Marine Mammals: Section 14.10*	**Additional information provided by the VFPA:** The *EIS Guidelines* issued by the CEA Agency do not require a cumulative effects assessment with respect to the ability of Indigenous groups to exercise their asserted or established treaty or Aboriginal rights. **Addressed in EIS Appendix 7.2-B (#27):** The methods used to assess the potential effects of the Project, including mitigation measures, residual effects, and cumulative effects, are described in EIS Section 8.0. The environmental assessment for the Project was developed to meet the requirements specified in the *EIS Guidelines* and is consistent with existing guidance documents, including the "Operational Policy Statement Assessing Cumulative Environmental Effects Under the *Canadian Environmental Assessment Act 2012*" and "Determining Whether a Project is Likely to Cause Significant Adverse Environmental Effects," the "Cumulative Effects Assessment Practitioners' Guide," and the "Guideline for the Selection of Valued Components and Assessment of Potential Effects," among others. Descriptions of existing pre-Project conditions relevant to each VC and IC were developed based on existing information, field studies, data analysis, and modelling. The description of existing conditions considered how ICs and VCs have been already affected by other projects and activities that have been carried out. Expected conditions were also determined where substantial changes are expected to occur to a VC or IC in the future prior to Project construction or operation, such as from changes in regulation or as a result of other projects or activities currently underway. Potential Project-related effects that may persist after the implementation of mitigation measures are called residual effects. The EIS identifies Project-related residual effects and their significance. The determination of significance is specific to each VC and the EIS presents the rationale for the significance thresholds applied. Where measurable residual effects to a VC have been predicted to result from the Project, a cumulative effects assessment was conducted to determine whether Project-related residual effects are likely to interact cumulatively with the effects of other projects and activities. Similarly, where Project-induced changes to an IC were expected, the potential for those changes to combine cumulatively with changes caused by other projects and activities was assessed. Where the Project was predicted to contribute to cumulative effects, additional mitigation measures were considered. The VFPA then determined the significance and likelihood of any adverse residual cumulative effects following the implementation of mitigation measures. Where it was determined that potential adverse effects could occur, technically and economically feasible mitigation measures to avoid, reduce, or offset potential adverse effects to an acceptable level have been proposed. The design and implementation of proposed mitigation measures considers input received from regulators, Indigenous groups, local government, and the public.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 8.0 Effects Assessment Methods 8.1 Environmental Assessment Methods 8.1.6 Mitigation Measures 8.1.7 Characterisation of Residual Effects and Context 8.1.8 Determination of Significance of Residual Adverse Effects 8.1.9 Cumulative Effects Assessment ***Updated EIS Guidelines***

Cowichan Tribes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			• *Coastal Birds: Section 15.11* *Socio-Economic VCs:* • *Marine Commercial Use: Section 21.11* • *Visual Resources: Section 25.10* • *Land and Water Use: Section 26.10* • *Human Health: Section 27.10* • *Cumulative Effects Assessment: Section 28.10* *Information requests related to cumulative effects for RBT2 include:* • *IR #13 – Cumulative Effects Assessment* • *AIR #13 – Cumulative Effects Assessment"*	The methods used to assess the potential effects of the Project, including mitigation measures, residual effects and cumulative effects, are described in the EIS. The VFPA has consulted with Indigenous groups regarding Project components and activities, selection of VCs, the potential effects of the Project, proposed mitigation measures, and potential changes to the environment related to the Project. Indigenous groups were also provided draft community profiles and rights and Current Use information for their review and comments. Feedback received was incorporated into the EIS.	
CT-7.9	Concerned about the use of representative species in the assessment.	03-Jul-2014, Aboriginal Groups Valued Components Workshop #2	**03-Jul-2014, Workshop:** Provided participants with a handout showing ICs, VCs, and species represented by each VC. Discussed how representative species are used in environmental assessments. Explained that for example for the VC marine fish, there are a number of representative focal species and sub-components, more for ease of organisation than anything. For marine fish there are five sub-components, and of those, 13 focal species are covered. Explained why those focal species were selected and some of the studies that supported our selection. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#25):** ICs, VCs, and VC sub-components are identified in EIS Section 8.0. EIS Section 8.0 describes the overall 3-step VC selection process, including the rationale for focusing the assessment on VC sub-components. The rationale for selection of specific ICs, VCs, and VC sub-components is described in each assessment section. For example, discussion regarding sub-component selection relative to species of importance to Indigenous groups, including eulachon and sturgeon, is captured in EIS Section 13.0. **Addressed in EIS Section 8.0:** Subsequent to VC selection, VC sub-components were identified to further structure and streamline the assessment as appropriate. For example, for biophysical VCs, sub-component species or groups were chosen for the ability to represent other species that are similar in nature, occupy comparable types of habitats, serve similar ecological roles, or could otherwise be affected by the Project in an analogous way. In selecting representative species, or in some cases species groups, consideration was given to species of specific importance to regulatory agencies, Indigenous groups, and the public, as identified by community knowledge and ITK, and during consultation and engagement, and assessment planning. **Addressed in Information Request Package 5 – Response to Information Requests Relating to Representative Species:** Representative species are considered in terms of the biological and ecological similarities they share with other species within the sub-component, and for potential similarities in how the Project may interact with and affect them. In some cases, biological attributes may differ within a sub-component grouping, but their interactions with the Project and mechanisms contributing to potential effects from the Project are considered to be analogous. As a result, the VFPA selected representative species for each sub-component for which sufficient information is known, in order to provide an assessment that considers all potential interactions and Project-related effects. For example, substantial information exists for the southern resident killer whale (the representative species used for toothed marine mammals) and much less so for the transient killer whale. While there are some biological differences between the two, they are considered the same species; both rely on underwater noise for prey detection; and potential Project effects and mitigation measures are the same. In this example, it would be both impractical and inefficient to undertake	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 8.0 Effects Assessment Methods **Information Requests** Information Request Package 5 – Response to Information Requests Relating to Represented Species

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				an assessment on both species as the conclusions of the assessment would be the same. Moreover, in selecting representative species, or in some cases species groups, consideration was given to species of specific importance to regulatory agencies, Indigenous groups, and the public, as identified by community knowledge and ITK, and during consultation and engagement, and assessment planning. This approach was taken as it would be impractical to characterise existing conditions and assess effects on every species that may frequent the Roberts Bank area. In this way, the use of VCs, sub-components, or representative species improves the effectiveness and efficiency of assessment by focusing on the key Project interactions.	
CT-7.10	Stated that the broad drafting of the VCs risks insufficient coverage of environmental components of importance to the Cowichan Nation Alliance. Requested that the following species be listed under the relevant Valued Component heading: i. Marine vegetation: green seaweed ii. Coastal terrestrial vegetation: bull rush, reeds, cranberries, blueberries, camas iii. Marine fish: Coho, Spring, Chum, Pink, Chinook, and Sockeye Salmon, eulachon, herring, cod, halibut, flounder and sturgeon iv. Marine invertebrates: red sea urchin, sea cucumber, and mussels v. Marine mammals: harbour seal vi. Migratory birds: Brant geese, canvasback duck, Common Merganser, and Mallard	09-May-2014, Letter from Cowichan Tribes acting in alliance with the Stz'uminus, Penelakut, Hwlitsum and Halalt communities	**09-May-2014:** Recorded comment for consideration by Project team. **06-Jun-2014 and 03-Jul-2014, Workshops:** Aboriginal Groups Valued Components Workshop #1 and #2 provided an opportunity for Indigenous groups to comment on the VCs.	**Addressed in EIS Volume 3:** i. Marine vegetation: Green seaweed (EIS Section 11.0 has been included as the marine vegetation sub-component macroalgae, which includes *Ulva* spp., as well as other brown algal species (bull kelp, rockweed). ii. Coastal terrestrial vegetation: bull rush, reeds, cranberries, blueberries, camas (EIS Section 11.0). This was considered when selecting marine vegetation sub-components (EIS Section 11.2.1). As the Project is located in the marine environment and Project-related interactions with terrestrial vegetation species are not anticipated, these species were not incorporated into the effects assessment (without an interaction, there is no potential for an effect on these species). iii. Marine fish: coho, spring, chum, pink, Chinook, and sockeye salmon, eulachon, herring, cod, halibut, flounder, and sturgeon (EIS Section 13.0). • All Pacific salmon were considered in the assessment under the sub-component Pacific salmon. Chum and Chinook were selected as representative species for the five salmon species, as they are more estuarine dependent (any predicted effects to chum and Chinook are representative of effects to the other species). Refer to EIS Section 13.2.1 for more information. • Eulachon was assessed through representative forage fish species (see EIS Sections 13.6.2.1 and 13.6.3.3). Eulachon was not selected as a representative species as it is rare within the marine fish LAA based on surveys conducted at Roberts Bank and Sturgeon Bank in past years (EIS Section 13.2). • Pacific herring was included in the assessment as a representative species under the forage fish sub-component. • Lingcod was included in the assessment as a representative species under the reef fish sub-component. Rock cod were assessed through their representation by rockfish, as discussed in EIS Section 13.5.2. • Starry flounder was included in the assessment as a representative species under the flatfish sub-component. Pacific halibut are not typically found in estuarine environments (including the Fraser River estuary) and therefore would not interact with and be adversely affected by the Project.	**EIS** 11.0 Marine Vegetation 11.2.1 Sub-components 12.0 Marine Invertebrates 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component 13.2.1 Sub-components 13.5.2 Selection of Marine Fish Valued Component 14.0 Marine Mammals 14.2.1 Sub-components 15.0 Coastal Birds 15.2.1 Sub-components

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				• Sturgeon were assessed through the use of Chinook and chum salmon representative species. Sturgeon was not selected as a representative species as it is also rare within the marine fish LAA. Refer to EIS Section 13.2.1 for more information. iv. Marine invertebrates: red sea urchin, sea cucumber, and mussels (EIS Section 12.0). • Red sea urchin and sea cucumbers were assessed through the use of Dungeness crab representative species. Red sea urchin and sea cucumbers were considered when selecting marine invertebrate sub-components, but were not selected as representative species as their typical habitat is not an estuarine sand-dominated environment like Roberts Bank. As such, Project-related effects to these species are anticipated to be very limited. • Mussels (specifically the bay mussel (*Mystilus trossulus*)) was included in the assessment under the bivalve shellfish sub-component. v. Marine mammals: harbour seal (EIS Section 14.0). • Harbour seal was considered and included in the marine mammals' effects assessment under the seals and sea lions sub-component. vi. Migratory birds: Brant geese, canvasback duck, Common Merganser, and Mallard (EIS Section 15.0). Brant was included in the coastal birds' effects assessment as a representative species of the waterfowl sub-component. American Wigeon represented Mallard, while common merganser and canvasback duck are represented within the diving bird sub-component. These latter two species were not selected as representative species as they are not common at Roberts Bank, nevertheless, any potential effects to these species are assessed through more common species (that have been selected as representative species). Refer to EIS Section 15.2.1 for more information.	
CT-7.11	Requested more information on the scope and purpose of field studies.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Stated that the studies have been undertaken, and will be included in the EIS for review. Each IC and VC section of the EIS contains information on field studies that were undertaken in support of the EIS.	**Additional information provided by the VFPA:** In 2012, the VFPA initiated field, desktop (i.e. literature review), and modelling studies to inform the understanding of existing conditions at Roberts Bank. Building on available information, these studies were designed to address known data gaps, as well as issues and interests of Indigenous groups, stakeholders, and the public, as well as to provide baseline information to assess Project-related effects as part of the environmental assessment. Some Technical Data Reports are appendices to EIS sections, while others are available publicly on the RBT2 website: http://www.robertsbankterminal2.com/environmental-assessment/technical-data-reports/	**RBT2 Project website** http://www.robertsbankterminal2.com/environmental-assessment/technical-data-reports/
CT-7.12	Stated that scoping is arguably the most important part of EIS preparation and Aboriginal interests must be considered, particular during the selection of Valued Components and defining baseline conditions.	15-Jun-2015, Letter to the CEA Agency from Cowichan Tribes and Stz'uminus First	**01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in responses to IR-7.31.15-08 and MSA IR-02.24.16-4:** How ITK was utilised in the EIS and MSA is described in the VFPA's response to IR-7.31.15-08 and MSA IR-02.24.16-4. During the scoping phase of the environmental assessment, specific feedback was sought from Indigenous groups on a list of proposed VCs	**EIS** Appendix 7.2-A Consultation Activities by Aboriginal Group Appendix 7.2-B Aboriginal Groups Interests and Issues Table

Cowichan Tribes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	Requested a rationale for excluding Cowichan Nation Alliance participation in the TAG process. As described further in Section 7.4, the TAG process focused on four key areas identified by [the VFPA]: 1. Coastal Geomorphology, 2. Productive Capacity, 3. Biofilm and Shorebirds, and 4. Southern Resident Killer Whales. Requested a rationale for how the four key areas represent the breadth of Aboriginal interests on Roberts Bank. Stated that First Nations participated in the Technical Working Group process during the Deltaport Third Berth evaluation and deserve a place at the Technical Tables. Asked which technical gaps exist within this process due to inadequate Aboriginal participation.	Nation (CEAR Document #242)	**13-Oct-2015, Letters from the CEA Agency to Cowichan Tribes (CEAR Document #306):** *"The Agency has requested additional information on Aboriginal Traditional Knowledge in its letter of July 31, 2015 to [the VFPA] (page 3, #8). Within that information request the following was requested:* *"Provide a description of where and how Aboriginal traditional knowledge has been used to support the selection of valued components, baseline descriptions, the assessment of effects including the identification of mitigation measures, and in the determination of significance of adverse environmental effects. If Aboriginal traditional knowledge was not used, provide a rationale for why that information was not considered.""* *"This is a comment about the involvement of First Nations in [the VFPA's] TAGs and preparation of the EIS. This is not a completeness issue."* *"There is no requirement in the EIS Guidelines to focus TAG's work on specific topics. The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	and sub-components. As described in EIS Appendix 7.2-A, a VC selection and rationale document was sent to Indigenous groups for review and feedback in April 2014. An additional opportunity for input on VC and sub-component selection was provided through participation by Indigenous groups in VC selection workshops held in June and July of 2014. In addition to these specific opportunities to provide feedback on VC and sub-component selection, as engagement activities continued, relevant information provided by Indigenous groups was taken into consideration (as described in EIS Section 7.2). **Addressed in EIS Appendix 7.2-B (#23):** The VFPA established the TAG process in 2012 to engage and consult with leaders in the technical and scientific community to provide guidance on four key topic areas – southern resident killer whales, biofilm and shorebirds, coastal geomorphology, and productive capacity. The TAG Terms of Reference and Summary Reports are available on the Project website: http://www.robertsbankterminal2.com/information-centre/project-documents/. The following Indigenous groups were invited to contribute to the TAG process: • Tsawwassen First Nation; • Musqueam First Nation; • Semiahmoo First Nation; • Tsleil-Waututh Nation; • Stó:lō Nation; and • Stó:lō Tribal Council. The TAG process was also discussed in meetings with Indigenous groups, and summary reports on the TAG process were provided to all Indigenous groups for review and comment. Additional information provided by the VFPA: Summary Reports are also available as appendices to the following IR responses: • Package 2 Preamble - Appendix IR2-A Coastal Geomorphology Technical Advisory Group Summary Report • Preamble in Support of Responses to IR3-01 to IR3-24 - Appendix IR3-A Productive Capacity Technical Advisory Group Summary Report • Appendix IR5-29-B Biofilm & Shorebirds Technical Advisory Group Summary Report • Appendix IR5-29-C Southern Resident Killer Whales Technical Advisory Group Final Report	7.3.3.2 Consultation **Information Requests** Response to Information Request #8 (IR-7.31.15-08 of CEAR Document #314) Response to Additional Information Request #4 (MSA IR-02.24.16-4 of CEAR Document #386) Revised Responses to Information Request Package 2 (CEAR Document #961) Responses to Information Request Package 3 (CEAR Document #984) Response to Information Request #5 (IR56-29 of CEAR Doc #1185)
CT-7.13	Requested information about the process whereby it was determined that a VC was of interest to Aboriginal groups. Asked which VCs were identified by Aboriginal groups. Requested list of specific VCs that were selected based on Community Knowledge and ATK.	15-Jun-2015, Letter to the CEA Agency from Cowichan Tribes and Stz'uminus First Nation (CEAR Document #242)	**13-Oct-2015, Letters from the CEA Agency to Cowichan Tribes (CEAR Document #306):** *"The Agency has requested additional information on Aboriginal Traditional Knowledge in its letter of July 31, 2015 to [the VFPA] (page 3, #8)."* See additional detail above.	**Addressed in responses to IR-7.31.15-08 and MSA IR-02.24.16-4:** How ITK was utilised in the EIS and MSA, including when it was used to inform VC selection, is described in IR-7.31.15-08 and MSA IR-02.24.16-4. During the scoping phase of the environmental assessment, specific feedback was sought from Indigenous groups on a list of proposed VCs and sub-components. As described in EIS Appendix 7.2-A, a VC	**EIS** 7.2 Aboriginal Groups Engagement and Consultation Appendix 7.2-A Consultation Activities by Aboriginal Group **Information Requests**

Cowichan Tribes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	Stated that candidate VCs of interest to Aboriginal groups were excluded if the following two additional questions were not answered affirmatively: "Does the candidate VC occur near or within the Project Area?" and "Could the Project interact with the candidate VC?" Asked how Community Knowledge and ATK was incorporated to answer these two additional questions.		*"The Agency did not request additional information regarding VC selection since there is already some information provided in the EIS. The Panel will determine whether it requires additional information or clarification with respect to VC selection to inform its sufficiency review."*	selection and rationale document was sent to Indigenous groups for review and feedback in April 2014. An additional opportunity for input on VC and sub-component selection was provided through participation by Indigenous groups in VC selection workshops held in June and July of 2014. In addition to these specific opportunities to provide feedback on VC and sub-component selection, as engagement activities continued, relevant information provided by Indigenous groups was taken into consideration (as described in EIS Section 7.2).	Response to Information Request #8 (IR-7.31.15-08 of CEAR Document #314) Response to Additional Information Request #4 (MSA IR-02.24.16-4 of CEAR Document #386)
CT-7.14	Requested the threshold criteria which were adopted with respect to determination of significance of residual adverse cumulative effects. Stated that they need to understand what the thresholds as they dictate the classification of "significance."	15-Jun-2015, Letter to the CEA Agency from Cowichan Tribes and Stz'uminus First Nation (CEAR Document #242)	**13-Oct-2015, Letters from the CEA Agency to Cowichan Tribes (CEAR Document #306):** *"The Agency did not request additional information for this item since there is already some information provided in the EIS. The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in EIS Section 8.0:** To determine the significance of residual adverse effects, the assessment considered the nature of each residual effect and the context within which it is expected to occur. The existing (or expected) condition of each VC was compared with the future conditions predicted to result from the Project. The anticipated future condition of each VC with the Project was compared to a threshold of significance defined for that specific VC. The threshold of significance is the point beyond which the integrity of the VC may be compromised, and the residual effect is considered to be significant. If the future condition of the VC with the Project does not exceed the defined threshold, the effect is considered to be not significant. If the future condition of the VC with the Project does exceed the defined threshold, the effect is considered to be significant. When defining the threshold of significance, the assessment included consideration of existing standards, guidelines, or objectives that have been established by government through regulation or applicable regional land and resource use management plans or other mechanisms, where available and suitable for determining significance. If no appropriate government-established threshold was available, the significance threshold was defined using the professional judgement of the Project team and current scientific knowledge about the VC. The rationale for the significance threshold used in the assessment and for the determination of significance is provided for each VC.	**EIS** 8.0 Effects Assessment Methods 8.1.8 Determination of Significance of Residual Adverse Effects
CT-7.15	Asked why cumulative effects on the ability of First Nations to exercise Aboriginal rights was not identified as a VC.	15-Jun-2015, Letter to the CEA Agency from Cowichan Tribes and Stz'uminus First Nation (CEAR Document #242)	**13-Oct-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #306):** *"This item was not required by the EIS Guidelines. The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review.* *Aboriginal groups are encouraged to describe to the Panel how past projects and the proposed project have/will potentially cumulatively impact First Nation's future ability to exercise asserted or established Aboriginal or Treaty rights.* *The Agency has requested additional information on cumulative effects in its letter of July 31, 2015 to [the VFPA] (page 8, #13). This*		

Cowichan Tribes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			information should inform the cumulative environmental effects of the proposed project and may assist in understanding potential cumulative impacts on First Nation's future ability to exercise asserted or established Aboriginal or Treaty rights."		
CT-7.16	Asked if the cumulative effect of a 6% increase in container vessel traffic will become the tipping-point that results in measurable and undesirable impacts when all project-based vessel traffic increases are taken into consideration located within both B.C. and the State of Washington. Only southern resident killer whales were deemed to be near such a threshold.	13-Jan-2016, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #385)	**12-May-2016, Letter from the CEA Agency to Cowichan Nation Alliance (CEAR Document #398):** *"The Agency requested additional information on the projects used in the cumulative effects assessment in additional information request "#7 Reasonably Foreseeable Projects and Activities".* *In addition, the Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in MSA Section 6.7:** As noted in MSA Section 6.7, each assessment section in MSA Sections 7.0, 8.0, and 9.0 includes an assessment of potential additional future cumulative interactions between the residual effects anticipated for the VC (or residual changes for an IC), if any, and effects associated with additional marine shipping activity in the marine shipping area in 2030 related to reasonably foreseeable projects and activities. Projected future marine shipping traffic volumes are provided in MSA Table 4-7. These traffic volumes are associated with certain and reasonably foreseeable projects and activities listed in MSA Appendix 6-A. The significance determination for any residual cumulative effects is made using the same significance threshold as defined for the assessment of residual effects. Potential interactions with future certain or reasonably foreseeable marine-based projects are limited to increases in vessel traffic associated with those projects. The MSA concludes that no adverse cumulative effects are anticipated, with the exception of potential effects to southern resident killer whales. Consistent with the conclusions reached in the EIS, the MSA concludes that southern resident killer whales have already been significantly adversely affected by past projects and activities; therefore, cumulative effects are expected to remain significant. Further information concerning how significance criteria was utilised in the MSA is further discussed in MSA IR-02.24.16-7.	**MSA** 6.7 Cumulative Effects Assessment Appendix 6-A Certain and Reasonably Foreseeable Projects and Associated Activities Considered in the Marine Shipping Cumulative Effects Assessments 7.0 Physical Environment Effects Assessments 8.0 Marine Biophysical Environment Effects Assessments 9.0 Human Environment Effects Assessments **Information Requests** Response to Additional Information Request #7 (MSA IR-02.24.16-7 of CEAR Document #386)
CT-7.17	Noted that identified rockfish predators include dolphins and porpoises, pinnipeds, southern resident killer whales, bald eagles, gulls and terns, juvenile and adult salmon, dogfish, large demersal fish, lingcod, rockfish, skate, and starry flounder. Requested a more accurate list. Asked why human withdrawals (i.e., fishing) were excluded.	15-Jun-2015, Letter to the CEA Agency from Cowichan Tribes and Stz'uminus First Nation (CEAR Document #242)	**01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **13-Oct-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #306):** *"The Agency did not request additional information for this item since there is already some information provided in the EIS in Section 16: Ongoing productivity of Commercial, Recreational and Aboriginal Fisheries Effects Assessment. The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in EIS Appendix 7.2-B (#101):** The Roberts Bank ecosystem model is described in the EIS. The model incorporated predator-prey relationships (biotic factors) and environmental factors within the marine environment, and does not incorporate anthropogenic influences such as fishing. Since changes are determined by comparing productivity in the future with the Project, to the future without the Project, the level of human influence is deemed to be the same with and without the Project, and humans are not included in the food web.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table

Cowichan Tribes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
CT-7.18	Concerned that information can be manipulated in the assessment to minimise the appearance of impacts to certain species. For example: • Assessments average things out over populations and a period of time, and underrepresent the effect. • Species will have different baseline biomass depending on the time of the year.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Stated that results have not been averaged, and that the team fully understands a lot of species are there temporarily. Explained that this presentation is a high level summary and more detail and specificity will be provided in the EIS. For context, many birds are there for short periods of time. Even though they are there in large numbers for a few weeks, the biomass their presence amounts to over the course of a year is small, which is the timeframe used for the model; the model incorporates seasonal information.	**Additional information provided by the VFPA:** As is noted in the VFPA's response to preliminary questions from DFO and NRC in 2015, question 2.17 Time Steps (2.2.6), annual averages are used to include both spatial and temporal variation in biomass estimates for Roberts Bank. This allows comparisons across highly seasonal and endemic groups. Annual averages are a standard metric for ecological questions and are necessary when conducting an ecosystem level assessment (Harvey 2013, Mackinson and Daskalov 2008, and Preikshot 2013). Understanding that there is variability within any estimate, sensitivity analyses were conducted to examine model performance with a range of input biomasses, centred on the initial value (see question 2.7 (Use of Confidence Limits in RB Model) for more information on this) (CEAR Document #547).	**CEAR Document #547 from the VFPA to the Review Panel Re: Answers to Preliminary Technical Questions Submitted During the Completeness Phase from DFO, NRC And Environment and Climate Change Canada, Concerning the Ecosystem Modelling to Support the RBT2 Environmental Review**

Cowichan Tribes

Table 8: Engagement and Consultation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
CT-8.1	Stated that Cowichan Nation Alliance has yet to receive sufficient information regarding the framework that will guide Crown consultation to address potential impacts on Aboriginal and Treaty rights, and that will ensure the Crown discharges its constitutional duties prior to making any decisions about the Project. Recommended that Canada work with Aboriginal groups to develop a detailed consultation plan that includes a process and forum for groups to address issues arising from potential impacts to Aboriginal and Treaty rights from the Project.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"The Crown sent letters to Cowichan Tribes, Stz'uminus First Nation, Penelakut First Nation, Halalt First Nation on January 7, 2014 with a proposed Consultation Workplan and invited comments or questions from the First Nations about the Crown's consultation process and proposed approach for discussing and addressing issues arising from potential impacts to Aboriginal and Treaty rights from the Project. We welcome a discussion on the proposed Consultation Workplan with any of the First Nations. To date, we have not received any feedback on the proposal."*		
CT-8.2	Stated that the Review Panel clearly does not have a mandate to discharge all of the Crown's consultation obligations toward Aboriginal groups, as evidenced by section 3.4 of Draft ToR: the Review Panel is prohibited from deciding constitutional issues that engage Aboriginal rights including (a) the validity of potential or established Aboriginal or Treaty rights asserted by an Aboriginal group or the strength of such claims; (b) the scope of the Crown's duty to consult an Aboriginal group; (c) whether the Crown has met its duty to consult or accommodate in respect of rights recognized and affirmed by section 35; (d) whether the Project would be an infringement of potential or established Aboriginal or Treaty rights; and (e) any matter of Treaty interpretation (historic and modern). While the Review Panel will receive information about any potential adverse impacts of the Project on potential or established Aboriginal or Treaty rights and related interests, and may recommend mitigation measures to avoid or minimize those impacts, the scope of this mandate does not involve an ongoing dialogue with Aboriginal groups as is demonstrated by the prohibited issues identified above. The Review Panel has no authority to render conclusions regarding the extent to which the Project might infringe Aboriginal or Treaty rights and does not	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"Noted. The Terms of Reference has been amended to provide additional clarity about the role of the Review Panel and of the federal Crown in Section 3.7 which now reads 'Through these Terms of Reference, the Review Panel is given the mandate to collect information on behalf of the Crown as outlined in Section 3.9 to 3.11. The federal government maintains the duty to consult throughout the environmental assessment process and will be responsible for the items detailed in section 3.8, where necessary.'"*		

Cowichan Tribes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	have a mandate to consider accommodation measures beyond mitigation measures. Accordingly, the Crown must provide another forum for these critical issues to be addressed.				
CT-8.3	Requested more information regarding how the noted constitutional issues will be decided, and at what stage of the process. Asked if, for example, the Crown will engage in consultation regarding accommodation measures other than Project mitigation measures during the Project review, or following the Review Panel's issuance of its report.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"The Crown will request Aboriginal groups identify any outstanding impacts to potential or established Aboriginal or Treaty rights once the Review Panel's report has been made public and the Crown will consult as appropriate with Aboriginal groups on proposed measures for addressing outstanding impacts.* *Additional information on the integration of Aboriginal consultation into the environmental assessment (EA) process was provided to the Cowichan Nation Alliance with federal officials on November 27, 2014, and is available online in the "Aboriginal Consultation and EA Handout" http://www.ceaa-acee.gc.ca/050/documents/p80054/100180E.pdf and in the "Review Panel and Aboriginal Consultation Process Diagrams Handout" http://www.ceaa-acee.gc.ca/050/documents/p80054/100179E.pdf"*		
CT-8.4	Emphasised the Crown's legal obligation to provide a clear and transparent outline of how Crown consultation will be undertaken. It is essential that a reasonable amount of time be provided for this process, and in light of the very brief prescribed timeline under which the Project review must proceed, it is essential that Crown consultation commence at an early stage. Stated that the Crown must recognise that the simple fact that the *CEAA 2012* prescribes that the Minister render a decision on the Project within 24 months from the day on which the environmental assessment was referred to the Review Panel (with the possibility of an additional three-month extension) cannot operate to terminate consultation where substantive issues remain to be discussed between the parties. Stated that it is difficult to imagine that the time set aside for post Review Panel report activities will be sufficient to undertake meaningful Crown- Aboriginal consultation.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"The Crown intends for consultation to be ongoing throughout the entire EA process, and it will be integrated into the EA to the extent possible. We have heard key concerns from members of the Cowichan Nation Alliance and will consider them going forward.* *Additional information on the EA and consultation process is contained in the consultation work plan and handouts referenced in the response above. Issues of concern to Aboriginal groups that are outside the EA process, and any potential outstanding issues identified after the Review Panel report, should be identified and discussed with the Agency.* *Timelines for the federal government's administration of the EA are a legislated requirement under CEAA 2012. However the Agency strives to facilitate and accommodate the participation of Aboriginal groups whenever possible within these legislated timelines.* *Consultation is an ongoing dialogue between the Crown and Aboriginal groups, and should the Project be allowed to proceed subject to conditions in an EA decision statement, consultation with potentially impacted Aboriginal groups would carry on into the permitting phase and beyond depending on what, if any, issues remained outstanding at the time of the EA decision."*		
CT-8.5	Commented that participation funding offered by the VFPA is insufficient. Stated that Penelakut's requests to the VFPA for capacity have been denied or ignored.	12-Nov-14, Cowichan Nation Alliance EIS Workshop #2 28-Aug-2014, Meeting with Cowichan Nation Alliance	**Cowichan Nation Alliance:** 09-Jan-2014: Offered funding for group Traditional Use study. 24-Apr-2014: Accepted funding for group Traditional Use study. **Cowichan Tribes:**	**Addressed in EIS Appendix 7.2-B (#19):** The VFPA has provided or offered funding support to ensure the ongoing participation of Indigenous groups involved in the Project's consultation processes. Additional agreements were also initiated to support the development of studies	**EIS** 7.0 Engagement and Consultation 7.2 Aboriginal Engagement and Consultation

Cowichan Tribes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	Requested funding to hire a professional to review technical information and attend meetings. Requested funding to cover all VFPA referrals. Requested funding for travel to and from Penelakut for meetings and workshops with the VFPA. Criticised participation funding agreement as insufficient. Stated that Penelakut will not be able to participate properly without additional funding. Requested funding to support Follow-up Program discussions.	29-Aug-2017, Follow Up Program Workshop with Cowichan Nation Alliance, Lyackson First Nation and Malahat First Nation	06-Jan-2014: Offered funding for participation in the consultation program. 24-Apr-2014: Accepted funding for participation in the consultation program. 22-Aug-2014: Offered funding for fall 2014 consultation activities. 11-Sep-2014: Accepted funding for fall 2014 consultation activities. 11-May-2015: Offered funding for participation in Project-related consultation activities including Marine Shipping study. 25-May-2015: Accepted funding for participation in Project-related consultation activities including the Marine Shipping study. 07-Mar-2016: Offered funding to support ongoing involvement in consultation activities. 09-Mar-2016: Accepted funding to support ongoing involvement in consultation activities. 24-Oct-2017: Offered additional funding for participation in consultation activities for the RBT2 Project. 17-Nov-2017: Accepted additional funding for participation in consultation activities for the RBT2 Project.	regarding the Current Use. As a result of these engagement and consultation activities, Indigenous groups have provided traditional use information relating to the Project area. VFPA participation funding agreements have been negotiated between the VFPA and Indigenous groups, either individually or through associations representing the Indigenous groups. The VFPA has provided participation funding to 12 Indigenous groups or associations representing these groups: Tsawwassen First Nation; Musqueam First Nation; Semiahmoo First Nation; Tsleil-Waututh Nation; Cowichan Tribes; Penelakut Tribe; Halalt First Nation; Stz'uminus First Nation; Lake Cowichan First Nation; Lyackson First Nation; Metis Nation British Columbia; and Hwlitsum.	Appendix 7.2-A Consultation Activities by Aboriginal Group Appendix 7.2-B Aboriginal Groups Interests and Issues Table
CT-8.6	Stated that at the 2014 workshop the VFPA committed to providing responses to questions. Concerned that all questions are not being responded to. Referred to the difficulty of finding the answers to questions raised today from tens of thousands of pages of materials in the Environmental Impact Statement.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2 11-Dec-2014, Health & Aboriginal Rights Workshop – Cowichan Nation Alliance	**12-Nov-2014, Workshop:** Reiterated that the purpose of the meeting is to present the information available so far, and to get feedback. Acknowledged that not all of the questions posed today will be able to be immediately answered, but that they are being noted so as to be addressed and responded to. Referred to Appendix 7.2-B which will list all concerns raised, provide a response, and describe where to find additional information in the EIS. **11-Dec-2014, Workshop:** Responses to questions that have not yet been responded to will be included in the EIS, once assessment information has been finalised. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **06-May-2015, RBT2 EIS Orientation Workshop:** In response to this concern, the VFPA provided an EIS orientation presentation in order to provide an overview of the EIS and provide an opportunity for questions about the structure and organisation of the EIS. **19-Apr-2016, Letter from the VFPA to Cowichan Tribes:** Provided the notes from the following workshops: • 06-Jun-14 Aboriginal Groups Valued Components Workshop #1; • 03-Jul-14 Aboriginal Groups Valued Components Workshop #2; • 07-Oct-14 Aboriginal Groups Workshop #1; • 08-Oct-14 Aboriginal Groups Workshop #2; • 22-Oct-14 Cowichan Nation Alliance Workshop #1; • 28-Oct-14 Aboriginal Groups Workshop #3; • 29-Oct-14 Aboriginal Groups Workshop #4; and • 12-Nov-14 Cowichan Nation Alliance Workshop #2.	**Addressed in EIS Appendix 7.2-B:** All issues raised by Cowichan Tribes and responses provided by the VFPA can be found in EIS Appendix 7.2-B, including references to the specific sections in the EIS. **Additional information provided by the VFPA:** IR10-01 provides responses to all comments and concerns raised by all members of the Cowichan Nation Alliance regarding the Project and marine shipping from October 2012 up to December 31, 2017.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table **Information Requests** Response to Sufficiency Information Request #1 (IR10-01)

Table 9: Environmental Assessment and Permitting Process

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
CT-9.1	Asked if it would be a harmonised process with the Province.	05-Mar-2013, Meeting with Cowichan Nation Alliance	**05-Mar-2013, Meeting:** Noted that the process has yet to be determined. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#8):** On November 5, 2014, the B.C. Environmental Assessment Office (EAO) confirmed the Project is reviewable under Part 8 of the Reviewable Projects Regulation, B.C. *Environmental Assessment Act*. On December 19, 2014, the B.C. Minister of Environment issued an order under s. 14 of the Act establishing the Province's procedures and methods for conducting the environmental assessment for the Project. The Minister ordered that the scope of the Project is as defined by the CEA Agency in the *EIS Guidelines*; the scope of the assessment must include factors established by the federal Minister and potential adverse environmental, economic, social, heritage, and health effects, including cumulative effects, and practicable means to mitigate such potential adverse environmental effects, and potential adverse effects on Indigenous groups; the EAO will principally rely on the environmental assessment to be conducted by the federal review panel and on consultation conducted by the CEA Agency with Indigenous groups, whose interests are potentially affected by the Project; and the EAO must make a recommendation to the Minister within 30 days of receiving notice of the decision from the federal Minister. The information presented in the EIS is intended to satisfy both federal and provincial environmental assessment requirements. More information regarding the federal environmental assessment for the Project can be found on the CEA Agency website at www.ceaa-acee.gc.ca, Reference Number: 80054. More information regarding the provincial environmental assessment for the Project can be found on the EAO's Project Information Centre (e-PIC) website at http://a100.gov.bc.ca/appsdata/epic/html/deploy/epic_project_home_410.html	**EIS** 6.0 Environmental Assessment and Permitting Process 6.2 Provincial Involvement and Process Appendix 7.2-B Aboriginal Groups Interests and Issues Table
CT-9.2	Concerned that the EIS meets DFO standards not First Nation standards.	03-Jul-2014, Aboriginal Groups Valued Components Workshop #2	**03-Jul-2014, Workshop:** Acknowledged the concern and stated that the Project team is trying to understand other perspectives and wants to make sure that the effects to fisheries are well understood.	**Addressed in EIS Section 1.0:** The environmental assessment for the Project was developed to meet the requirements specified in the *EIS Guidelines* prepared by the CEA Agency. Indigenous groups have the opportunity to review the EIS and in that context, raise this comment to the CEA Agency and other agencies as appropriate.	**EIS** 1.1 Purpose of the Environmental Impact Statement
CT-9.3	Noted that the draft Panel Terms of Reference is inconsistent with its reference to "Project". Stated that there are references to "project" and "designated Project". Recommended that all references to the proposed ... project be referred to as the "Project".	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"Your comment has been incorporated."*		
CT-9.4	Stated that the draft Terms of Reference (ToR) should direct the Review Panel to explicitly assess potential Project impacts on Aboriginal and Treaty rights and culture. We note that the list of factors as set out at section 2.1 provides that the Review Panel must account for the "environmental effects" of the Project, of which term is defined at section 5(1) of the *CEAA 2012* to include effects to Aboriginal	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"The Terms of Reference provide direction to the Review Panel regarding its role and mandate in conducting the EA. In* Part 3- Mandate of the Panel *in the Terms of Reference, direction has been provided to the Review Panel on collecting information on behalf of the Crown as it relates to potential*		

Cowichan Tribes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	peoples and their use of lands and resources for traditional purposes; however, in light of the significance of potential impacts to Aboriginal and Treaty rights from the Project, a more direct reference in the list of factors is warranted.		*impacts of the project to potential or established Aboriginal or Treaty rights."*		
CT-9.5	Stated that the draft ToR fails to provide explicit requirements and guidance for assessing socio-economic impacts in relation to Aboriginal people. Noted that the list of factors provides that the Review Panel must account for the "environmental effects" of the Project, which is defined at section 5(1) of the *CEAA 2012* to include health and socio- economic conditions; however we submit that the Review Panel would benefit from clear guidance on this issue.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"The Agency is currently considering guidance on this topic."*		
CT-9.6	Stated that it is essential that the Review Panel only recommend mitigation measures that are capable of achieving their stated purposes, and capable of demonstrating measurable success. Accordingly, Cowichan Nation Alliance recommended language that requires the Review Panel to put forward only those recommendations that are capable of demonstrating success in mitigating any significant adverse environmental effects. Recommended amendments to section 2.1 the draft ToR to address this concern.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"Section 2.1 provides direction directly from CEAA 2012 and as mentioned above, the legislation provides clarity about what is meant by mitigation.* *The information related to the success of past project mitigation measures should be included in the EIS as discussed above.* *Your comment on possible environmental effects or impacts to potential or established Aboriginal or Treaty rights has been considered and language has been added to section 3.9 as it relates to the Review Panel's mandate in relation to Aboriginal consultation."*		
CT-9.7	Stated that the scope of factors to be considered in the environmental assessment should not be limited by the content of the EIS guidelines. A review panel should give the requisite authority and discretion to decide for themselves the proper scope of the factors that they are considering, as this will fall under their expertise. Recommended amendments to section 2.3 of the draft ToR to address this concern.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"The purpose of the EIS Guidelines is for the proponent to identify the information requirements for the preparation of the EIS. The EIS Guidelines specify the nature, scope and extent of the information required for the EIS. Note that the EIS Guidelines set out the minimum information requirements – it is the proponent's responsibility to provide any additional information as required by the Agency or the Review Panel, once it has been*		

Cowichan Tribes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			established, for the assessment of the environmental effects of the Project. *Under CEAA 2012, the scope of the factors to be taken into account in the environmental assessment by the Review Panel are those in section 19(1)* a) *to* i)*. The Minister may require that any other matter relevant to the EA be taken into account by the Review Panel under section 19 (1)* j)*."*		
CT-9.8	Stated that the Review Panel should not be limited to considering information provided solely by the participants – government agencies and departments may also have valuable information to contribute. Recommended amendments to Section 3.5 of the draft ToR to address this concern.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"Your comment has been considered and Section 3.5 has been amended to direct that the "Review Panel shall accept as part of its record and review:" Federal authorities and government are already considered participants in the Review Panel process and henceforth covered by this Section."*		
CT-9.9	Stated that Panel members should have knowledge or experience relevant to the anticipated impacts of the Project on Aboriginal and Treaty rights. Recommended amendments to section 4.1 of the draft ToR to address this concern.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"Cowichan Nation Alliance members are welcome to submit potential panel candidates to the Agency. Panel Members must be unbiased and free from conflict of interest relative to the Project and have knowledge or experience relevant to the anticipated environmental effects of the project. Please provide suggested names and CVs to [provided contact information]."*		
CT-9.10	Stated that it is critical that those parties that provide the Panel Members with support in a procedural, technical, administrative or advisory manner be unbiased and free from any conflict of interest relative to the Project and, where applicable, have knowledge or experience relevant to the anticipated environmental effects and impacts of the Project. Requested addition to the end of section 4.5: The Secretariat will be unbiased and free from conflict of interest relative to the Project.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"Your proposed change has been made."*		
CT-9.11	Requested addition to the end of section 4.18: Any federal authority that assists the Review Panel will be unbiased and	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):**		

Cowichan Tribes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	free from conflict of interest relative to the Project and will have knowledge or experience relevant to the anticipated environmental effects and impacts of the Project.	on behalf of Cowichan Nation Alliance (CEAR Document #126)	*"Federal experts participate in environmental assessments in accordance with the mandate and areas of responsibility of their departments. Public servants are guided in their work and professional conduct by the Values and Ethics Code for the Public Service."*		
CT-9.12	Stated that it is possible the Review Panel will not be capable of fulfilling its mandate and submit its report to the Minister within 14 months. Recommended that section 4.13 expressly confirm that the Review Panel must ultimately take the time that it requires to properly and completely discharge it mandate subject to the CEAA 2012, which allows the Minister to modify the statutory limits imposed on a review panel (CEAA 2012, subsection 38 (4)). Recommended amendments to section 4.13 of the draft ToR to address this concern.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"CEAA 2012 has legislated timelines for the completion of an EA by Review Panel. The Review Panel must fulfill its mandate and provide a report to the Minister within the timelines set out in the legislation and as directed in the Terms of Reference."*		
CT-9.13	Stated that the Review Panel should be required to give more than 30 days' notice of tis public hearing, as many participants must prepare and reschedule other commitments in order to participate. Accordingly, notice of a minimum of 90 days should be required. Stated that the timing and location of the public hearing is of critical importance to our communities; we require an opportunity to comment on the draft document setting out the schedule and location of public hearing prior to finalisation by the Review Panel. Recommended amendments to section 4.22 of the draft ToR to address this concern.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"The Terms of Reference provides a minimum timeframe for the notice of the start of public hearings.* *The Review Panel is responsible for developing procedures for the conduct of the public hearing, including timing, location, format and other logistics. The Panel may, at its discretion, make draft hearing procedures available for comment.* *If members of the Cowichan Nation Alliance have suggestions on the timing or notification required for public hearings, they may provide that information to the Review Panel once it is established."*		
CT-9.14	Stated that the draft ToR should direct the Review Panel to explicitly include their identification of potential impacts on Aboriginal and Treaty rights and culture in the report. Noted that the list of required coverage in the Review Panel's report includes an identification of those conclusions that relate to the environmental effects defined in	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"The Review Panel has been directed to collect and summarize information provided to it by Review Panel participants about any potential impacts on potential or established Aboriginal or Treaty rights in its report (section 3.10).* *The Minister of the Environment has requested the Review Panel provide its conclusions and*		

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	section 5 of the CEAA 2012, which includes effects to aboriginal peoples and their use of lands and resources for traditional purposes; however, in light of the significance of potential impacts to Aboriginal and Treaty rights from the Project, a more direct reference to the list of required coverage for the report is warranted. Recommended amendments to section 4.27 of the draft ToR to address this concern.		*recommendations in relation to any environmental effects of the Project on Aboriginal people as set out in section 5 of CEAA 2012 as it is responsible for conducting the EA on the designated project.* *The Crown will maintain the duty to consult throughout the EA process and will conduct an assessment of what the potential project impacts are to the exercise of potential or established Aboriginal or Treaty rights. The Crown has already communicated the preliminary depth of consultation assessment letters dated January 7th, 2014 as referenced in the first response in this table.* *The Crown will communicate a revised depth of consultation assessment once the Review Panel has issued its report and is willing to discuss this assessment with Cowichan Nation Alliance members at this time. Cowichan Nation Alliance members are encouraged to raise any potential environmental effects, and/or impacts of the Project on potential or established Aboriginal or Treaty rights to the Review Panel to ensure the Crown has a robust understanding of your concerns at the point that the Review Panel issues its report."*		
CT-9.15	Stated that section 4.28 obliges the Review Panel to include in its report "information it has received with respect to the justifiability of those significant adverse environmental effects". If the report is to recognise arguments that seek to justify significant adverse effects, the report must, as a matter of fairness and completeness, recognise arguments that such effects are not justified. Otherwise, the Minister will receive a biased report. Recommended amendments to section 4.28 of the draft ToR to address this concern.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"Please see the additional clarity on justification related to likely significant adverse environmental effects added in Section 3.5 which states* "In accordance with sections 47 and 52 of CEAA 2012, if the Minister decides that the project is likely to cause significant adverse environmental effects, the Minister will refer the matter to the Governor in Council (Cabinet) who must decide whether those environmental effects are justified in the circumstances." *The Review Panel will not make the determination on whether likely significant adverse environmental effects may be justified, but if, taking into account the implementation of any mitigation measures, the Review Panel concludes that the project is likely to cause significant adverse environmental effects, the Panel may include in its report information that it has received with respect to whether those significant adverse environmental effects are justified in the circumstances."*		

Cowichan Tribes

Table 10: Environmental Management Program

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
CT-10.1	Asked if the lessons learned from eelgrass transplants that took place as part of Deltaport Third Berth have been taken into account for RBT2. Noted that eelgrass is very important to Cowichan Tribes. Interested in and request information about the follow-up monitoring work that took place as part of Deltaport Third Berth.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Responded that the VFPA recently hosted a workshop that brought together eelgrass experts from the west coast to share knowledge and experience. Noted that prior to 1986 there were a lot of challenges, but since then transplants have had a success rate of over 90%. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **29-Aug-2017, Follow Up Program Workshop with Cowichan Nation Alliance, Lyackson First Nation and Malahat First Nation:** The VFPA met with members of the Cowichan Nation Alliance to discuss the Follow-up Program and lessons learned from DP3.	**Addressed in EIS Appendix 7.2-B (#201):** Onsite eelgrass habitat creation is proposed through transplanting in an area approximating 3 ha. Based on the review of previous habitat creation programs (e.g., DP3), eelgrass transplants are considered to be an effective means of increasing productivity of marine vegetation. The VFPA will implement a Follow-up Program, which will include monitoring to confirm that all offsetting measures meet intended objectives and function as designed. Monitoring will include methods and success measures to confirm that offsetting measures have been effective. The *Fisheries Act* Authorization will require that functional objectives are met.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 17.0 Mitigation for Marine Biophysical Valued Components 17.3.2 Offsetting Potential Effects, Offsetting Framework 17.6 Mitigation for Marine Biophysical Valued Components, Monitoring and Reporting
CT-10.2	Stated that no Aboriginal involvement with the Scientific Advisory Committee (SAC) and monitoring was a failure to consult with Aboriginal communities for the Deltaport Third Berth Project. Noted the SAC would be a good opportunity to have Aboriginal Traditional Knowledge included and to have First Nations input on the selection of committee members. Added "we would like engagement in the governance of the monitoring program."	29-Aug-2017, Follow Up Program Workshop with Cowichan Nation Alliance, Lyackson First Nation and Malahat First Nation	**29-Aug-2017, Workshop:** Noted input on governance for the Follow-up Program and stated that it will be considered in the planning for the RBT2 Follow-up Program governance structure for further discussion in future Follow-up Program meetings.	**Addressed response to in IR10-11:** The VFPA's response to IR10-11, as requested by the Review Panel, describes how Indigenous groups will be involved in the development, implementation, and management of the RBT2 Follow-up Program.	**Information Requests** Response to Sufficiency Information Request #11 (IR10-11)
CT-10.3	Noted they never agreed with the VFPA assessment on level of impact and expect the impacts to be larger. Expressed concern with how the assessment was conducted by the VFPA's consultants. Stated that they want to see a third party environmental monitor involved in Follow-up Program implementation that is not involved in the original findings. Suggested the monitoring program be separated from the VFPA jurisdiction.	29-Aug-2017, Follow-up Program Workshop with Cowichan Nation Alliance, Lyackson First Nation and Malahat First Nation	**29-Aug-2017, Workshop:** The VFPA met with members of the Cowichan Nation Alliance to discuss the Follow-up Program and lessons learned from DP3. The VFPA sought input into the Program through asking the following questions at the workshop: • What is important to you (Cowichan Nation Alliance) and your community?; • What elements would you (Cowichan Nation Alliance) like to see monitored?; and	**Additional information provided by the VFPA:** As a result of extensive studies and assessment, the VFPA is confident potential adverse effects can be fully or partially avoided or reduced through Project design and the implementation of environmental management programs. Where Project-related effects cannot be fully avoided or reduced, offsetting measures, such as the creation and enhancement of habitat, will be applied. **Addressed in EIS Section 33.5:** Similar to the Adaptive Management Strategy for DP3 as described in EIS Section 33.5, the VFPA is committed to developing and implementing a Follow-up Program for the Project. The purpose of the Follow-up Program is to verify the accuracy of residual effect predictions made in the EIS, and determine the effectiveness of any	**EIS** 33.5 Follow-up Program

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			• How would you (Cowichan Nation Alliance) like to be involved moving forward? Noted comments on monitoring and stated that they will be considered in Follow-up Program planning.	measures taken to mitigate the adverse environmental effects of the Project. To ensure the program's elements adequately reflect conditions of Project approvals, final designs, and construction or operation approaches, as well as public, Indigenous group, and regulator feedback received during the review of the EIS, the VFPA will lead the development of the Follow-up Program after the submission of the EIS. The Follow-up Program will include: • An evaluation of the adequacy of existing data to provide a benchmark against which to test Project-related effects; • A monitoring design drawing on the measurable parameters identified to be field-tested; • A methodological approach for using field-collected data to measure and verify the accuracy of the effects predicted in the EIS; • A reporting framework that defines frequency of reporting, distribution, and feedback mechanisms; and • Details of the VFPA's approach to adaptive management for the Project through construction and operation. The Follow-up Program will be developed in consultation with federal agencies, including the CEA Agency, DFO, and ECCC. Complete drafts of the RBT2 Follow-up Program will be made available prior to the start of field measurements to ensure parties consulted on the program and approving agencies have an opportunity to evaluate and approve the program. Feedback from Indigenous groups regarding the draft program will be sought through the VFPA's ongoing engagement initiatives.	

Cowichan Tribes

Table 11: Human Health – Valued Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
CT-11.1	Concerned about the determination that the Project is not expected to result in detectable effects on human health.	11-Dec-2014, Health & Aboriginal Rights Workshop - Cowichan Nation Alliance	**11-Dec-2014, Workshop:** Recorded comment for consideration by Project team. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#149):** The following are highlights of the human health assessment: • Seven potential mechanisms for human health effects were assessed: air emissions, noise and vibration, shellfish contamination, stress and annoyance, employment and income, food security, and health inequity. • Potential Project-related effects on human health are expected to be fully or partially mitigated through the implementation of environmental management plans and additional mitigation measures. • The Project is not expected to result in any significant adverse residual effects on human health. • The Project is not expected to result in measurable incremental residual cumulative effects to human health. With mitigation, all potential Project-related effects are expected to be negligible (not measurable), with the exception of residual effects on human health related to exposure to air emissions during construction, and exposure to noise during construction and operation. These effects are predicted to be not significant. A rationale for the determination is provided in EIS Section 27.0.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 8.0 Effects Assessment Methods 27.0 Human Health 27.6 Future Conditions with the Project – Potential Project-Related Effects 27.7 Mitigation Measures 27.8 Characterisation of Residual Effects and Context 27.9 Determination of Significance of Residual Adverse Effects

Cowichan Tribes

Table 12: Labour Market – Valued Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
CT-12.1	Asked if the Project is expected to have a negative impact on any other types of employment.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Responded that the VFPA looked at labour market balance as an indicator, and conducted analyses to consider what the effect of the Project's employment and procurement would be, in relation to the availability of workers for other industries. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Section 19.0 Labour Market.	**Addressed in EIS Section 19.0:** The Project is expected to result in the following positive effects on the labour market in Metro Vancouver: • During the 5.5 year construction phase: o 4,150 person-years of direct employment, worth $494 million in wages; o 9,724 person-years of total direct, indirect, and induced employment, worth approximately $824 million in wages; • During operation: o 835 person-years of annual direct employment connected to terminal operations, worth approximately $138 million in wages annually; o 1,412 person-years of annual total direct, indirect, and induced employment, worth $169 million in wages annually; o A slight lowering of the unemployment rate in Metro Vancouver; o A positive effect on the participation rate; and o A small boost to median incomes in Delta and Metro Vancouver. Training opportunities associated with construction and operation are anticipated to generate positive effects for the Project's direct workforce. Positive changes in employment and labour income are anticipated for the Indigenous population in Metro Vancouver during Project construction and operation. The Project is not expected to result in measurable adverse residual effects to the labour market.	**EIS** 19.0 Labour Market

Cowichan Tribes

Table 13: Light – Intermediate Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
CT-13.1	Concerned that the light study did not consider the night sky with cloud cover as this increases the light effects over the water. Concerned about how the locations for monitoring light effects were selected, with specific reference to Galiano Island and Valdes Island.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Responded that the assessment teams for visual resources and light are different. The team carrying out the light assessment work (at night) took a subset of the points of reception (PORs) from the visual resources (day) assessment, because there is less variation expected from point to point. Stated that for both the day and night assessments, PORs were concentrated in areas in closer proximity to the Project site. The POR on Valdes was added later through consultation. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#47):** Measurements of sky glow depend on the visibility of the stars, and were taken on nights with no or low cloud cover, where possible. The rationale for the assessment methods is included in EIS Section 9.4 and the technical report. The rationale for selection of the PORs is included in EIS Section 9.4. The light assessment included a POR on Galiano Island and on Valdes island. The measurements taken from, and predictions made for, these PORs are intended to be representative of surrounding areas.	**EIS** 9.0 Physical Setting 9.4 Light 9.4.2 Assessment Purpose and Approach 9.4.5 Methods Appendix 9.4-A Roberts Bank Terminal 2 Light Assessment Study, Study Methods Appendix 7.2-B Aboriginal Groups Interests and Issues Table
CT-13.2	Asked if RBT2 would be subject to, or exempt from, Delta bylaws around light, and if not, whether the VFPA would be willing to meet or match their requirements anyway.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. Post meeting note shared with Cowichan Nation Alliance in draft meeting notes: There are not any standards or bylaws for light such as there are for noise, for example. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#99 and #45):** A process is underway to change the current outdoor lighting fixtures at the Deltaport Terminal to light-emitting diodes (LEDs). LEDs are more directional and easier to control in terms of where light is focused. It is anticipated that the change to LEDs will reduce both light trespass and sky glow from the Deltaport Terminal, provided good lighting design practices are followed (specifically, the use of full cut-off light fixtures to limit up-light and only lighting areas that are required to be lit). The lighting on one crane at Deltaport has been fully replaced with LED lights, offering a point of comparison with the older lights. **Addressed in EIS Section 33.0:** The Light Management Plans for construction and operation phases will be developed prior to the respective phases. The Light Management Plans will describe measures to reduce excess lighting and sky glow, including: • Orienting lights downwards and away from residential and marine areas; • Using shielding to minimise light trespass; • Controlling light levels and limiting light use to areas where activities are occurring; • Where possible, using fixtures that emit light at wavelengths shown to minimise disorienting effects to birds; • During construction, ensuring dredge lighting system shields light from spilling outside the basic working footprint of the dredge; and • During operation, establishing a centralised lighting control system to select lighting where required. Feedback on applicable environmental management plan sub-plans will be solicited from Indigenous groups potentially affected by the Project.	**EIS** 9.0 Physical Setting 9.4 Light 9.4.4 Relevant Guidelines Appendix 9.4-A Roberts Bank Terminal 2 Light Assessment Study Appendix 7.2-B Aboriginal Groups Interests and Issues Table 33.0 Environmental Management Program

Table 14: Marine Commercial Use – Valued Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
CT-14.1	Concerned that the Project could negatively impact fishermen and their livelihoods.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Presented information on the preliminary assessment of potential Project effects and cumulative effects on Commercial, Recreational, Aboriginal (CRA) Fisheries and any proposed mitigation, as well as receive feedback on the draft findings and proposed mitigation. The presentation includes: executive summary, sub-components, indicators, assessment boundaries, the local and regional assessment areas, information sources, an overview of each of the fisheries (CRA), existing conditions for Pacific Salmon, Groundfish, Forage Fish, and Shellfish, expected conditions at Project commencement, potential Project-related effects, proposed mitigation measures, anticipated residual effects, the preliminary determination of significance, and anticipated cumulative effects. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#117):** Marine commercial use, or the use of marine waters and resources to generate revenue, has been identified as an important economic factor in local and regional communities, and for Indigenous groups. The marine commercial use assessment included four sub-components: • Seafood harvesting; • Marine fish harvesting; • Guided sport fishing; and • Marine-based tourism. Potential effects on marine commercial use include displacement of commercial crab harvesting during construction and operation, resulting in a potential change of harvesting area, total harvest, and revenue, due to the Project footprint and the proposed expansion of the area closed to commercial crabbing. The VFPA will work with DFO to engage commercial crab harvesters to identify and implement feasible mitigation measures; and will implement construction and operation environmental management plans related to construction phase communication, construction monitoring, and crab salvages effects from displacement of commercial crab harvesting during construction and operations. The Project is anticipated to result in a negligible effect to marine fish harvesting, guided sport fishing, and marine-based tourism. These negligible effects are related to changes in area, access, resource availability, and harvesting revenues. The Project is expected to result in a residual effect of changes to seafood harvesting area, harvest, and revenue. The residual effect is determined to be not significant, as Dungeness crab are known to move substantial distances to baited traps, and harvest activity can be moved to another open area. Other planned or reasonably foreseeable projects and activities would also displace crab harvesting, and this effect would combine with that of the Project to result in an incremental cumulative effect on commercial crab fishing. This adverse incremental cumulative effect is determined to be not significant.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 12.0 Marine Invertebrates 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries 21.0 Marine Commercial Use 21.6 Future Conditions with the Project – Potential Project-related Effects 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Land and Resources for Traditional Purposes 32.2.6 Future Conditions With the Project - Potential Project-related Effects

Table 15: Marine Fish – Valued Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
CT-15.1	Concerned that the Project will affect migrating salmon that return from the South to the Fraser River through Canoe Passage. Concerned about mitigation for natural migration patterns that are in the Project area and the impacts to salmon being made that we do not understand yet along with other animal's natural migration.	03-Jul-2014, Aboriginal Groups Valued Components Workshop #2 22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**03-Jul-2014, Workshop:** Responded that the Regional Study Area has been extended to Hope, which will capture a large portion of that migration and that is actually where the DFO sub-areas stop. Stated that a real effort was made to capture some, if not all, of the migration. Stated that sockeye hold more in the North arm and South arm, but that there are species of Chinook and chum that hold around Canoe Passage, so that area is being included. Canoe Passage is a fairly small distributary of the Fraser but there is still holding there. Sockeye in particular are coming out and heading north, with the exception of the Harrison Lake stock, which DFO thinks might be migrating south. **22-Oct-2014, Workshop:** Responded that the options for onsite habitat mitigation do consider fish passage. The primary intent is to soften the shoreline to make it more amenable to salmonid use. Stated that juvenile salmon use eelgrass beds and tidal marsh habitat. Stated that the mitigation measures primarily consider juvenile salmon outmigration and rearing. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#78):** Field studies, air photo review, and modelling were undertaken during the coastal geomorphology assessment at Roberts Bank, including Canoe Passage. Changes are anticipated around the terminal and within the intertidal zone shoreward of the terminal. The potential effects of these changes on marine fish are considered in the EIS. An assessment was undertaken to determine the effects of the Project on the productivity of marine fish, including Pacific salmon. The assessment of marine fish, as well as marine vegetation and invertebrates upon which fish depend, consider seasonal influences, and potential Project-related changes on these influences. Terminal footprint-related changes to coastal process such as currents and freshwater-marine water mixing near and shoreward of the terminal are anticipated. Project-related changes in salinity and turbidity are discussed with respect to marine water quality. A discussion of the potential effects of these changes on marine fish, including different fish life stages, is presented in the marine fish assessment. **Addressed in EIS Section 13.6.3.1:** The potential effect on the migration behaviour of juvenile salmon from terminal placement and causeway widening was assessed qualitatively. Two effects mechanisms—changes in the light environment and changes in habitat availability—were considered to have the potential to influence migration behaviour of juvenile salmon and result in a minor decrease of juvenile salmon productivity pre-mitigation. With implementation of mitigation measures, including adherence to juvenile salmon fisheries-sensitive window, implementation of a light management plan, as well as offsetting in the form of onsite native eelgrass transplants and reconstructed tidal marsh habitats north of the widened causeway, migration-related changes in juvenile salmon productivity were assessed as negligible. **Addressed in responses to IR5-18 and IR5-22:** Further discussions about terminal placement's potential effects on the migratory behaviour of juvenile salmon is available in the VFPA's responses to IR5-18 and IR5-22.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.0 Physical Setting 9.5 Coastal Geomorphology 9.5.8 Future Conditions with the Project 9.7 Marine Water Quality 9.7.8 Future Conditions with the Project 13.0 Marine Fish 13.6 Future Conditions with the Project 13.6.3 Potential Effect - Changes in Productivity Table 13-6 Desktop and Field Studies Related to Marine Fish to Support the Assessment Table 13-10 Summary of Roberts Bank Ecosystem Model Productivity Results for Marine Fish **Information Requests** Response to Sufficiency Information Request #18 (IR5-18 of CEAR Document #1153) Response to Sufficiency Information Request #22 (IR5-22 of CEAR Document #1153)
CT-15.2	Stated that sockeye salmon have not been assessed in the EIS and is an information gap. Stated that the Cowichan Nation Alliance is not satisfied with the explanation provided as to why sockeye is excluded from the assessment. Stated that field studies were conducted at the wrong time of the year. Concerned that there will be negative impacts on sockeye as a result of the Project.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2 11-Dec-2014, Health & Aboriginal Rights Workshop – Cowichan Nation Alliance 29-Aug-2017, Follow Up Program	**12-Nov-2014, Workshop:** Responded that the VCs were defined based on the findings of the fieldwork. Referred to trawls being done in the area to determine what species are present in the area; different species can occur in the area, but Chinook and chum have more of a presence. Responded that the VFPA understands the importance of the species (sockeye) and more details specific to sockeye can be provided.	**Addressed in EIS Appendix 7.2-B (#107):** Sockeye salmon was not selected as a representative species within the Pacific salmon sub-component, as studies indicate that juvenile sockeye salmon do not use the Roberts Bank area in high abundance, relative to chum and Chinook salmon (which have been selected as representative species in the assessment). Since chum and Chinook are the most estuarine-dependent species of salmon, the potential for Project-related interactions with these species is greatest. Results of the assessment based on these two species represent a more conservative approach, given the life histories and habitat use	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.0 Physical Setting 9.5 Coastal Geomorphology 9.5.8 Future Conditions with the Project 9.7 Marine Water Quality

Cowichan Tribes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	Stressed the importance of sockeye to the Cowichan Nation Alliance. Requested for peer review of the work pertaining to sockeye. Reiterated their concerns regarding the impact of the Project on migrating fish and disagreement that the VPFA consultants did not find evidence of sockeye salmon in the local assessment area.	Workshop with Cowichan Nation Alliance, Lyackson First Nation and Malahat First Nation	**11-Dec-2014, Workshop:** Responded that the VFPA thought more information about how sockeye had been considered had been provided to the Cowichan Nation Alliance, and apologised if they have not yet received anything. The EIS will describe more fully how salmon have been assessed. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **29-Aug-2017, Workshop:** Noted concerns regarding fish, and will include this as ongoing topic for further discussion on representative species and ways to address concerns raised.	of chum and Chinook. Therefore, potential Project-related effects on sockeye salmon are considered within the assessment through the assessment on the sub-component Pacific salmon, as represented by chum and Chinook. **Additional information provided by the VFPA:** Minor decreases in productivity are anticipated during the construction and operation phases for all marine fish sub-components, with the exceptions of negligible changes in productivity for certain species, including adult Chinook and chum salmon (representative species for sockeye and other Pacific salmon species) and lingcod, and an increase in productivity for shiner perch during the operation phase. Productivity decreases can be partially mitigated through the implementation of environmental management plans and the creation of habitat. Residual effects are anticipated for flatfish and forage fish as a result of permanent loss of subtidal sand habitat associated with the terminal footprint and disturbance from underwater noise. The assessment concludes there are no significant adverse effects from the Project, as marine fish productivity or long-term integrity would not be compromised. The Project is not expected to result in measurable incremental adverse cumulative effects to marine fish. Sockeye salmon are considered in the assessment of marine commercial use as the primary species of salmon sought in the assessment area. The economic component of sockeye fishing is addressed in EIS Section 21.0. A field sampling program for salmon was conducted at Roberts Bank in 2012 and 2013. While it is possible that 2012 to 2013 seasonal surveying for the Project did not capture all salmon species present at Roberts Bank, historical survey data add to the weight of evidence, suggesting a realistic representation of species composition and abundance at Roberts Bank. **Addressed in responses to IR5-15 and AIR-12.04.15-09:** In its response to IR5-15, the VFPA specifically discusses existing conditions related to sockeye salmon and describes the status and management practices associated with the species. Rationale as to how sockeye salmon were assessed via use of Chinook and chum as representative species, as well as similarities between species as they pertain to existing conditions (e.g., life history and habitat requirements), the mechanisms through which the Project may affect sockeye, as well as effectiveness of mitigation, are presented in the VFPA's response to AIR-12.04.15-09, including Appendix AIR9-A Table 2; and in the VFPA's response to IR5-15. **Addressed in EIS Section 13.3:** The marine fish LAA encompasses an area of approximately 5,416 ha. In determining LAA boundaries, consideration was given to the nature and characteristics of marine fish, and potential exposure of marine fish to various Project influences (e.g., total suspended solids (TSS), sedimentation, and underwater sound levels). Also taken into account were social	9.7.8 Future Conditions with the Project 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component 13.3.1 Spatial Boundaries 13.4.1 Information Sources, Desktop and Field Studies 13.5.1 Existing Conditions, Pacific Salmon 13.6 Future Conditions with the Project Table 13-6 Desktop and Field Studies Related to Marine Fish to Support the Assessment Table 13-10 Summary of Roberts Bank Ecosystem Model Productivity Results for Marine Fish 13.6.3 Potential Effect - Changes in Productivity **Information Requests** Response to Additional Information Request #09 (AIR-12.04.15-09 of CEAR Document #388) Response to Sufficiency Information Request #15 (IR5-15 of CEAR Document #1078)

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				and cultural considerations, such as community knowledge and ITK, and current land and resource use by Indigenous groups and others. The RAA, which covers an area of approximately 52,456 ha, was established to provide a regional context for the assessment of Project-related effects. The RAA was also established to encompass the area within which the residual effects of the Project on marine fish may combine with the effects of other projects and activities to potentially result in a cumulative effect. Marine and freshwater RAA boundaries were determined based on DFO Pacific Fisheries Management Area limits (see EIS Figure 12-3).	
CT-15.3	Stated that the EIS should consider salmon pooling at the mouth of the Fraser River and investigate Project-related impacts on sockeye salmon in this area. Stated that fishermen report that Canoe Pass is an important holding area for sockeye.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Recorded comment for consideration by Project team. Referred to trawls being done in the area to determine what species are present in the area; different species can occur in the area, but Chinook and chum have more of a presence. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Section 13.0:** While there is evidence that adult sockeye pass through the estuary annually en route to the Fraser River to spawn, available information indicates that most stocks enter the Fraser River with little or no delay (i.e., perhaps one day); hence, any potential interaction between the Project and migrating or passing individual adult sockeye salmon would be limited to approximately several days per year. A potential exception is a portion of the late-run timing group, which typically holds in the outer estuary for several weeks prior to starting upriver migration; however, since 1995, large segments of the late-run sockeye have ceased their holding behaviour and entered the Fraser River three to six weeks earlier than historically observed. As noted in EIS Section 13.2.1, there is no scientific evidence that waters at or near Roberts Bank represent holding areas for adult sockeye. **Addressed in response to IR5-15:** In its response to IR5-15, the VFPA specifically discusses existing conditions related to sockeye and describes the status and management practices associated with the species. The response also further assesses potential effects of the Project on sockeye directly. As further described in the response to IR5-15, based on existing literature, there is no formally defined holding area within the Fraser River estuary for returning adult sockeye. It appears that the brackish layer or plume within which adult sockeye may hold can extend as far north as Gibsons Landing, as far west and south as the Gulf Islands (from Gabriola Island near Nanaimo to Saturna Island at Boundary Passage), and as far east at Point Roberts area. However, since 1995, sockeye holding behaviour appears to have ceased.	**EIS** 13.0 Marine Fish **Information Requests** Response to Sufficiency Information Request #15 (IR5-15 of CEAR Document #1078)
CT-15.4	Asked why people have not been included as one of the species that eats chum salmon in the food web example (slides 12-13, Marine Fish Presentation at 2014 Cowichan Nation Alliance Workshop #2).	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Responded that the approach undertaken seeks to understand the ecosystem from a natural perspective, and human interactions are addressed in a different way.	**Addressed in EIS Appendix 7.2-B (#101):** The Roberts Bank ecosystem model is described in the EIS. The model incorporated predator-prey relationships (biotic factors) and environmental factors within the marine environment, and does not incorporate anthropogenic influences such as fishing. Since changes are determined by comparing productivity in the future with the Project, to the future without the Project, the level of human influence is deemed to be the same with and	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 10.0 Biophysical Setting 10.3 Overview of Assessing Ecosystem Productivity

Cowichan Tribes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			01-Apr-2015, Letter from the VFPA to Cowichan Tribes: Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	without the Project, and humans are not included in the food web. However, the existing conditions for species included in the model are reflective of existing harvesting levels by humans; therefore, human interaction within the model is implicit. **Addressed in response to IR3-09:** Dungeness crab fishing at Roberts Bank was investigated using the Roberts Bank ecosystem model in the VFPA's response to IR3-09. Salmon harvesting was not considered, because salmon harvesting occurs over large geographic areas, with only a small proportion of the salmon catch coming from areas in the periphery of or adjacent to Roberts Bank. As such, salmon fishing was considered unlikely to influence model results. Results from the Roberts Bank ecosystem model re-run showed that when Dungeness crab fishing was considered, results were generally the same when compared to those described in the EIS.	Appendix 10.3-A Roberts Bank Ecopath with Ecosim and Ecospace Model Parameter Estimates Appendix 10.3-B Roberts Bank Ecosystem Model Development and Key Run Appendix 10.3-C Roberts Bank Spatial Ecosystem Model Sensitivity Analysis Appendix 10-D Roberts Bank Spatial Ecosystem Model Sensitivity Analysis **Information Requests** Response to Sufficiency Information Request #09 (IR3-09 of CEAR Document #984)
CT-15.5	Concerned that a spill could travel into mouth of Fraser River and impact migratory salmon species.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Recorded comment for consideration by Project team. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in Appendix 7.2-B (#185):** The Project is not located on the Fraser River and no Project-related effects are predicted on the Fraser River.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 30.0 Potential Accidents or Malfunctions Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment Appendix B - Tables
CT-15.6	Asked whether fish are being redirected away from Canoe Pass because of ships and whether that impact will increase with RBT2.	01-Nov-2013, Meeting with Cowichan Nation Alliance	**01-Nov-2013, Meeting:** Recorded comment for consideration by the Project team.	**Additional information provided by the VFPA:** There is no known evidence that existing shipping activity is affecting movement patterns of fish at Roberts Bank. In MSA Section 8.1, potential effects of underwater noise were considered to be negligible because noise generated by Project-associated marine vessel activity and future cumulative shipping activities would not exceed injury thresholds for fish species or the Pacific salmon species behavioural threshold. Further, while noise-induced behavioural changes are possible for Pacific herring, potential effects would be localised to within 20 m of a container ship and of short duration (as the ship passes by) and are therefore not anticipated to affect the integrity of populations within the LAA. **Further information provided by the VFPA:** **07-Jan-2014, Letter from the VFPA to Penelakut Tribe:** A review of historical and recent air photos, in addition to modelling of sediment deposition at Roberts Bank (including Canoe Passage) is underway. Historic Canoe Passage discharge channel locations and sediment distribution (e.g., bar formation or build-up of sand) will be documented to assess natural variation pre- and post-terminal construction, and potential	**MSA** 8.1 Marine Fish

Cowichan Tribes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				changes as a result of the proposed terminal configuration will be assessed. Fish and fish habitat suitability studies are currently underway to assess current fish distribution and abundance, and potential changes in fish presence as a result of the proposed Project will be assessed. Potential changes resulting from the Project during both construction and operations phases will be included in the assessment. Potential effects on marine fish migration behaviour from changes in the light environment and changes in habitat availability are assessed in the EIS. With mitigation, including implementation of a light management plan, and onsite offsetting in the form of eelgrass transplants and tidal marsh creation, changes in productivity of marine fish associated with these rearing habitats is assessed as negligible.	

Table 16: Marine Invertebrates – Valued Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
CT-16.1	Concerned about effects on crabs, particularly in relation to black material observed in crabs harvested in the area. Crab harvesting in the RBT2 Project area results in black (coal polluted crabs), which are not edible. Asked how the VFPA can remediate lands first to deal with coal.	01-Nov-2013, Meeting with Cowichan Nation Alliance 12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**01-Nov-2013, Meeting:** Responded that crabs are part of the baselines studies and the VFPA is looking at current conditions of the baseline studies. **12-Nov-2014, Workshop:** Referred to the black crab study being carried out separately from the environmental assessment. Two black crab samples have been collected, and are currently waiting to be tested. The VFPA will be able to provide an update once that has happened. Tsawwassen First Nation collected the crab samples for this study. **07-Aug-2014, Email from the VFPA to Cowichan Tribes:** Provided information on a study that the VFPA is undertaking related to black material observed in Dungeness crabs previously harvested from the Fraser River estuary. This black material has been noticed by Tsawwassen and Musqueam First Nation crabbers in DFO Fisheries Management Areas 28 and 29 and as such we are working with these communities in the collection of crabs for testing. Provided details on the purpose, methodology, study area, and timeframe. **09-Jul-2015, Email from the VFPA to Cowichan Tribes:** Followed up to previous communications and the Dungeness Crab field study notification of August 2014. Attached a letter and memorandum regarding the studies undertaken by Hemmera in response to reports from Indigenous groups to the VFPA regarding blackening of Dungeness crab and concerns related to potential contamination. The memo included a summary of findings. The results of both studies were the same: • There is no evidence of coal contamination, based on the results of sensitive tissue chemistry analysis testing for PAHs, metals, and trace elements; • Consumption risks are acceptably low and pose no risk to human health; and • The underlying cause of the blackened shells is determined to be shell disease (a common condition due to bacterial infection of existing lesions/damage in the crab shells). **12-Apr-2018, Letter from the VFPA to Cowichan Tribes:** Stated that since concerns were raised, the Project team has conducted further work on these topics to	**Addressed in EIS Section 27.0 and EIS Appendix 27-C:** Addresses potential effects of contaminant-related consumption risks of Dungeness crab, where contaminant analysis of crab tissue and the completion of a human health risk assessment was completed to support the development of the RBT2 environmental assessment. The leg muscle tissue did not contain detectable PAH concentrations, in spite of the use of sensitive laboratory analytical methods. Only arsenic was present in concentrations of potential concern and, consequently, was carried forward in a quantitative human health risk assessment; it was concluded that arsenic-associated health risks from the consumption of Dungeness crab tissue are acceptably low. A second study paralleled the above in terms of methods and analysis, but involved collaboration with Indigenous groups to provide samples of crabs as well microscopic examination of the tissue structures (i.e., histologic) of blackened areas. Again, results yielded no evidence of crab contamination related to coal dust, based on sensitive tissue chemistry analysis testing for PAHs, metals, and trace elements. Results of microscopic examination point to localised physical damage of the exoskeleton and the bacterial shell disease as the underlying cause of blackening. **Addressed in EIS Appendix 7.2-B (#74):** Potential Project-related effects on Dungeness crabs are described in the EIS. An Edible Shellfish Study was undertaken to quantify bivalve shellfish and Dungeness crab soft tissue contaminant concentrations. The results of this study are provided in the EIS in the marine invertebrates and human health sections. In late 2014, samples of crab were collected by Indigenous crab harvesters concerned about contamination, and the VFPA has submitted these for tissue testing for various substances of concern, including PAHs, metals, and fungus. Preliminary observational results indicate that the causes of black colouration of crabs is consistent with shell disease, and not likely related to contamination from coal dust (EIS Appendix 27-C, Section 4.76). The detailed results of laboratory tests will be shared with Indigenous groups when available.	**EIS** 12.0 Marine Invertebrates 12.4.1 Desktop and Field Studies Table 12-4 Marine Invertebrates Studies to Support the Assessment 12.5.3 Existing Conditions, Dungeness Crabs 12.6.2 Future Conditions with the Project, Negligible Effects 27.0 Human Health 27.6.4 Potential Effect # 3 – Adverse Health Effects due to Stress and Annoyance - Perceived Contamination Appendix 27-C Shellfish Harvesting Potential and Contaminant-related Consumption Risks at Roberts Bank **Information Requests** Response to Sufficiency Information Request #33 (IR4-33 of CEAR Document #1078) Response to Sufficiency Information Request #34 (IR4-34 of CEAR Document #946) **Memorandum Re: Summary Report – Roberts Bank Dungeness Crab Health Studies**

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			respond to information requests from the Review Panel, to better understand potential effects and suggested mitigation, and to gain deeper understanding of the viewpoints of Indigenous groups and stakeholders. Provided the following documents review: • IR4-33 - Crab Hepatopancreas Additional Study Summary; and • IR4-34 - Black Crab Additional Studies Summary. Stated that the VFPA is interested in hearing views regarding options to mitigate potential effects to crabs and crabbing in the Project area.	**Addressed in responses to IR4-33 and IR4-34:** Further information concerning the VFPA's investigations into 'blackened' crabs is provided in the response to IR4-34. In summary, black lesions were observed on four of the five crabs collected by Indigenous harvesters. The black lesions were concluded to be consistent with chitinolytic shell disease, generically referred to as 'shell disease', a condition common to crab and other crustaceans. This disease is caused by a bacterial or fungal infection of an area where the outer layer of the shell has been previously damaged. Shell disease has not been linked to contamination. The disease is not specific to the Roberts Bank area and is present across the Pacific Northwest, including Alaska and B.C. and in Atlantic Canada. In its response to IR4-33, the VFPA provided results of the study. In summary: A crab hepatopancreas study was conducted at Roberts Bank to determine the concentrations of contaminants of concern in crab hepatopancreas in the LAA. In June 2017, Dungeness crab were collected from five traps placed at each of the three study locations (15 traps total). Twelve adult male crabs were harvested from each of the three sites (36 crab total). Samples were submitted under chain of custody to analytical laboratories accredited by the Canadian Association for Laboratory Accreditation (CALA) for the analysis requested. The analysis was completed in August 2017. Collectively, the results of a statistical comparison across sites indicate that the average concentrations of PCBs, coal indicator elements, arsenic compounds, and PAHs measured in hepatopancreas from crab collected from the RBT2 and ITP sites are not statistically higher than those measured in crab from the Canoe Passage reference site. This suggests that existing sediment and water quality in and around the existing terminal and proposed RBT2 terminal are not contributing to contaminant concentrations in crab hepatopancreas that are higher than levels found in crab hepatopancreas from the Canoe Passage reference site. **Additional information provided by the VFPA:** **07-Jan-2014, Letter from the VFPA to Penelakut Tribe:** The proposed Project is being designed to exclusively handle containers. There will not be an increase in coal shipments as a result of the	

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				Project. The VFPA has undertaken shellfish studies in the Roberts Bank area to assess contamination, and proposes to study crab tissues to assess whether the black material is coal dust, a fungus, or other substance.	
CT-16.2	Requested more information on sea pens. Asked what is known about the impact and role of orange sea pens in the area. Asked what the per cent decrease in productivity is expected to be. Asked if the orange sea pen test transplant area has been determined yet to be either successful or unsuccessful. Concerned with the impact of a loss of sea pens on habitat and other species.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Stated that sea pens are known to exist in the area; however, from a scientific and ecological perspective, they are poorly understood. The first studies were done in 2002-2003, and more field studies were more recently undertaken in 2011 using an underwater remote vehicle. Additional recent studies have included people going underwater to count sea pens, to map their distribution, and to identify other species associated with them. One study sought to understand them better in the context of water flows and sediments and other studies looked at transplanting sea pens. If the transplant was not viable or unreliable, the effects would be characterised in a worst-case scenario. In this current status of the assessment, it is anticipated that there will be a moderate impact on the orange sea pens in the area if transplanting is unsuccessful. **07-Feb-2018, Email from the VFPA to Cowichan Tribes:** "Starting in 2014, the Project team conducted a pilot study to test a method for transplanting orange sea pens, which involved the transplant of 1,200 orange sea pens to three sites within the LAA for the Project. Please find attached a report titled *Orange Sea Pen Transplant Pilot and Monitoring Program*. The results of the study show that the pilot sea pen transplant was successful, with stable densities and evidence of recruitment at two of the three transplant sites. This report will be submitted to the Review Panel shortly with the VFPA's response to IR5-05."	**Addressed in EIS Section 12.0:** As noted in EIS Section 12.0, the VFPA stated that the proposed Project would result in a moderate reduction in orange sea pen productivity, and that the level of confidence in this assessment was considered to be moderate. **Addressed in response to IR-7.31.15-24:** The VFPA's response to IR-7.31.15-24 presents the inter-relations between orange sea pens and other marine species and the predicted effects to other marine species from the Project-related loss of orange sea pen habitat. **Addressed in response to IR5-05:** The VFPA's response to IR5-05 provides the Orange Sea Pen Transplant Pilot and Monitoring Program report (Appendix IR5-05-A). In summary, the pilot sea pen transplant was successful. Stable densities, and evidence of recruitment, at two of the three transplant sites demonstrate that not only can environmental conditions successfully be used to predict habitat suitability for orange sea pens across a larger study area, but also attests to the ecological viability of transplantation as a potential mitigation method. **Addressed in response to IR5-06:** The VFPA's response to IR5-06 discusses the confidence in the effect rating for orange sea pens. In summary, the moderate confidence ranking was rooted in four main points (each of which are described below): • The success of the orange sea pen pilot transplant and monitoring program (see IR5-05); • Remaining orange sea pen productivity with the Project (before mitigation) is considerable (45%) such that the population will persist at Roberts Bank; • Reproductive and larval biological characteristics of orange sea pens, which confer a high ability to replenish stocks; and • Coral transplants are common and successful elsewhere. **Addressed in response to IR5-07:** The VFPA's response to IR5-07 provides an assessment of the potential ecological effects on other components of the environment such as marine invertebrates and marine fish resulting	**EIS** 12.0 Marine Invertebrates **Information Requests** Response to Information Request #24 (IR-7.31.15-24 of CEAR Document #314) Response to Sufficiency Information Request #05 (IR5-05 of CEAR Document #1145) Response to Sufficiency Information Request #06 (IR5-06 of CEAR Document #1145) Response to Sufficiency Information Request #07 (IR5-07 of CEAR Document #1145)

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				from a decrease in the orange sea pen population due to the proposed Project activities. As noted in the response to IR5-07, the conclusion of no significant effects to marine invertebrates and fish remain unchanged.	
CT-16.3	Referred to the food webs showing biomass in the future with and without the Project (slides 17-18 of Marine Invertebrates presentation at Cowichan Nation Alliance Workshop #2), and the bubbles changing in size. Requested the exact number of anticipated change for each of the species.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Recorded comment for consideration by Project team. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included information on the biophysical setting in Section 10.0.	**Addressed in EIS Section 10.0:** The VFPA used an ecosystem-based approach to assess Project-related effects to the productivity of marine biophysical VCs. Modelling of ecosystem productivity was one of several tools used to inform effects assessments. Productivity is a measure of the amount of plant and animal biological material (or biomass) produced within an area over a given amount of time. A predator-prey food web for the Roberts Bank ecosystem was developed to represent the linkages and interactions between marine vegetation, invertebrates, fish, mammals, and coastal bird species that influence the productivity of the ecosystem. The model calculates productivity changes to 58 functional groups to represent the complex interactions of this ecosystem; productivity changes to each of these groups calculated by the model are presented in EIS Appendix 10-C. The results are presented as changes to biomass in the groups, not species' abundance (number of individuals). The model was also used to predict the productivity of proposed on-site habitat that would be created to offset expected Project-related effects on the productivity of marine biophysical VCs.	**EIS** 10.0 Biophysical Setting Appendix 10-C Roberts Bank Ecosystem Model Development and Key Run
CT-16.4	Concerned with the potential for RBT2 to constrain crabbing areas. Stated that fishing will be confined to a smaller area and there is concern regarding crowding. Stated that their use of the Roberts Bank area has increased recently because crabs in proximity to Penelakut are contaminated by the Crofton Mill. Stated that they rely on crab taken from the RBT2 area to support its food, social and ceremonial fishery and its traditional way of life.	17-Jun-2015, Meeting with Cowichan Nation Alliance	**17-Jun-2015, Meeting:** Recorded comment for consideration by Project team. **28-Jul-2016, Issues Workshop – Island Nations:** The VFPA hosted an issues workshop where concerns raised about project impacts to crab where discussed along with proposed mitigation measures. Explained that the EIS section for current use/rights considers the navigational closure area. FSC harvesters can access this closure area to crab without floats; commercial and other harvesters cannot. That closure area would be expanded to accommodate the new terminal and would increase in size. The idea would be that VFPA would work with DFO to continue the practice to only allow FSC crabbing within that area. We also have identified other consultation mechanisms to continue engagement with Aboriginal groups regarding monitoring/follow up programs regarding resources	**Addressed in EIS Appendix 7.2-B (#117):** Marine commercial use, or the use of marine waters and resources to generate revenue, has been identified as an important economic factor in local and regional communities, and for Indigenous groups. The marine commercial use assessment included four sub-components: • Seafood harvesting; • Marine fish harvesting; • Guided sport fishing; and • Marine-based tourism. Potential effects on marine commercial use include displacement of commercial crab harvesting during construction and operation, resulting in a potential change of harvesting area, total harvest, and revenue, due to the Project footprint and the proposed expansion of the area closed to commercial crabbing. The VFPA will work with DFO to engage commercial crab harvesters to identify and	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 12.0 Marine Invertebrates 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries 21.0 Marine Commercial Use 21.6 Future Conditions with the Project – Potential Project-related Effects 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Land and Resources for Traditional Purposes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			relied upon by Aboriginal groups. We have identified the opportunity for future VFPA-Aboriginal group collaboration. **12-Apr-2018, Letter from the VFPA to Cowichan Tribes:** Stated that since your concerns were raised, the Project team has conducted further work on these topics to respond to information requests from the Review Panel, to better understand potential effects and suggested mitigation, and to gain deeper understanding of the viewpoints of Indigenous groups and stakeholders. Provided the RBT2 Crab Mitigation Summary Overview, which detailed the following: • Mitigation measures to avoid or reduce effects to crab as outlined in the EIS; and • Additional crab harvesting related mitigation measure suggestions under review. Stated that the VFPA is interested in hearing views regarding options to mitigate potential effects to crabs and crabbing in the Project area.	implement feasible mitigation measures, and will implement construction and operation environmental management plans related to construction phase communication, construction monitoring, and crab salvages effects from displacement of commercial crab harvesting during construction and operations. The Project is anticipated to result in a negligible effect to marine fish harvesting, guided sport fishing, and marine-based tourism. These negligible effects are related to changes in area, access, resource availability, and harvesting revenues. The Project is expected to result in a residual effect of changes to seafood harvesting area, harvest, and revenue. The residual effect is determined to be not significant, as Dungeness crab are known to move substantial distances to baited traps, and harvest activity can be moved to another open area. Other planned or reasonably foreseeable projects and activities would also displace crab harvesting, and this effect would combine with that of the Project to result in an incremental cumulative effect on commercial crab fishing. This adverse incremental cumulative effect is determined to be not significant. **Addressed in response to IR10-07:** The VFPA's response to IR10-07, as requested by the Review Panel, further discusses potential economic implications of any permanent or temporary displacement related to the navigational closure.	32.2.6 Future Conditions With the Project - Potential Project-Related Effects **Information Requests** Response to Sufficiency Information Request #07 (IR10-07)
CT-16.5	Requested specific information which explains how ATK was utilised in subcomponent selection – pertaining to the marine invertebrates' effects assessment.	15-Jun-2015, Letter to the CEA Agency from Cowichan Tribes and Stz'uminus First Nation (CEAR Document #242)	**13-Oct-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #306):** *"The Agency has requested additional information on Aboriginal Traditional Knowledge its letter of July 31, 2015 to [the VFPA] (page 3, #8)."*	**Addressed in responses to IR-7.31.15-08 and MSA IR-02.24.16-4:** How ITK was utilised in the EIS and MSA is described in the VFPA's responses to IR-7.31.15-08 and MSA IR-02.24.16-4. In the case of marine invertebrates, sub-component selection was informed by other types of Indigenous information, but relevant ITK was not available.	**Information Requests** Response to Information Request #8 (IR-7.31.15-08 of CEAR Document #314) Response to Additional Information Request #4 (MSA IR-02.24.16-4 of CEAR Document #386)
CT-16.6	Stated that the characterisation of existing conditions is reflective of the year 2013, when marine invertebrate studies were completed in the local assessment area. The selection of 2013 as a baseline is arbitrary. Asked how the EIS conclusions would change with an earlier baseline.	15-Jun-2015, Letter to the CEA Agency from Cowichan Tribes and Stz'uminus First Nation (CEAR Document #242)	**13-Oct-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #306):** *"The Agency has requested additional information on this item in its letter of July 31, 2015 to [the VFPA] (page 7, #13)."*	**Addressed in response to AIR-12.04.15-13:** In the EIS, the existing conditions (at around the time of EIS writing) (baseline) reflect the conditions of the environment as modified by past development. Further discussion of how the VFPA considered the effects of past, present, and future projects is provided in completeness-phase AIR-12.04.15-13, including in that response's schedules focused on applicable VCs.	**Information Requests** Response to Additional Information Request #13 (AIR-12.04.15-13 of CEAR Document #388)

Cowichan Tribes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
CT-17.1	Asked if a change in salinity can have an effect on marine mammals, marine fish, and marine vegetation such as eelgrass.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Stated that there will be extensive discussion around all of the VCs and how they relate to these ICs. **12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2:** Presentations on marine mammals, marine fish, and marine vegetation were provided to Cowichan Nation Alliance in Workshop #2. The VFPA presented that Roberts Bank is dynamic, highly variable, estuarine environment and that biofilm has adapted to a wide range of salinity variability. Explained that the VFPA will monitor and evaluate to confirm changes in water quality (salinity) and sediment erosion and deposition patterns through its Follow-up Program. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#50):** Changes in hydrology are predicted to affect salinity and turbidity levels, and increase sediment deposition as a result of the Project, but these changes are anticipated to be minimal relative to existing natural variability. These localised indirect effects of changes in hydrology on habitat are evaluated in the marine biophysical component effects assessments, including marine vegetation, marine invertebrates, marine fish, and coastal birds.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.6 Surficial Geology and Marine Sediment 9.6.6 Existing Conditions 9.6.8 Future Conditions with the Project 9.7 Marine Water Quality 9.7.6 Existing Conditions 9.7.8 Future Conditions with the Project 10.0 Biophysical Setting 10.3 Overview of Assessing Ecosystem Productivity 11.0 Marine Vegetation 11.6.3 Potential Effect – Changes in Productivity 12.0 Marine Invertebrates 12.6.3 Potential Effect – Changes in Productivity 13.0 Marine Fish 13.6.2 Negligible Effects 14.0 Marine Mammals 14.6.2 Potential Effects of the Project on Southern Resident Killer Whales 14.6.4 Potential Effects of the Project on Steller Sea Lions 17.0 Mitigation for Marine Biophysical Valued Components 17.3.2 Offsetting

Cowichan Tribes

Table 18: Marine Shipping Addendum

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
CT-18.1	Concerned with cumulative effects to Aboriginal rights associated with marine shipping. Stated that increases in shipping will result in "death by a thousand cuts". Concerned that the draft Current Use Summary does not include effects from malfunctions or accidents, as well as cumulative environmental effects.	17-Jun-2015, Meeting with Cowichan Nation Alliance 09-Sep-2015, Letter to the VFPA from Cowichan Tribes on behalf of Cowichan Nation Alliance	**17-Jun-2015, Meeting:** Recorded comment for consideration by the Project team. **02-Oct-2015, Letter from the VFPA to Cowichan Tribes cc: Stz'uminus First Nation, Halalt First Nation, Penelakut Tribe:** Explained that the document shared by the VFPA on July 27, 2015 included a draft summary of CNA's current use in the marine shipping study area, and therefore did not include accidents and malfunctions or potential effects. Noted that these topics will be addressed in the Report to be submitted to the Canadian Environmental Assessment Agency ("CEAA") in the fall of 2015. **09-Nov-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the MSA for the proposed Project, which included its assessment of cumulative effects in MSA Section 6.0.	**Addressed in MSA Appendix 5-B (#23):** The approach to the cumulative effects assessment is provided in MSA Section 6.0. Each IC and VC assessment section considers cumulative changes and cumulative effects to which the Project contributes. This entails consideration of residual effects of routine marine shipping associated with the Project, if any such effects are predicted, in combination with effects of other projects and activities that have been or will be carried out. MSA Section 9.5 describes how Current Use activities have been affected by other projects and activities that have been carried out. As residual effects to Current Use as a result of marine shipping associated with the Project are not predicted, an assessment of future cumulative effects was not carried out. Taking a precautionary approach, the assessment of potential impacts to Indigenous groups' ability to exercise asserted or established Aboriginal and treaty rights as a result of Project-associated shipping was based on the assumption that traditional use presently occurring in the marine shipping area (i.e., Current Use) is an expression of the exercise of Aboriginal or treaty rights. Where traditional use was not identified as occurring at present within the marine shipping area, but similar use was identified as practiced in the past in the marine shipping area, asserted as an Aboriginal right, or protected under treaty, this use was assumed to be potentially exercisable as an Aboriginal or treaty right, and subject to potential impacts as a result of Project-associated shipping in much the same way as potential effects on Current Use. Considering the conclusions of the Current Use assessment, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the marine shipping a without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location. These mitigation measures for addressing potential incremental effects on Current Use are expected to also be effective at addressing the	**MSA** Appendix 5-B Aboriginal Issues and Interests 6.0 Effects Assessment Approach 6.7 Cumulative Effects Assessment 7.1 through 9.4 (All IC and VC assessments) 9.5 Current Use of Lands and Resources for Traditional Purposes, and Aboriginal and Treaty Rights

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				potential incremental impact to the exercise of Aboriginal and treaty rights. No additional mitigation measures have therefore been suggested for the potential incremental impact to the exercise of Aboriginal and treaty rights.	
CT-18.2	Stated that Canada, B.C., Parks and First Nations are working to establish the National Marine Conservation Initiative in the Gulf Islands. Concerned with impacts from shipping to this initiative and conservation areas.	17-Jun-2015, Meeting with Cowichan Nation Alliance	**17-Jun-2015, Meeting:** Recorded comment for consideration by Project team. **02-Oct-2015, Letter from the VFPA to Cowichan Tribes cc: Stz'uminus First Nation, Halalt First Nation, Penelakut Tribe:** Stated that potential effects will be addressed in the MSA, which will be submitted to the CEA Agency. **09-Nov-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the MSA for the proposed Project, which included MSA Appendix 5-B listing all the issues and interests raised by Indigenous groups and the VFPA's response.	**Addressed in MSA Appendix 5-B (#26):** The conservation areas within the marine shipping area are described in MSA Section 2.1.2 and shown on MSA Figure 2-2. The extent to which potential effects of marine shipping associated with the Project are predicted to occur within conservation areas is addressed within each relevant IC or VC section.	**MSA** 2.0 Geographic Setting 2.1.2 Species at Risk and Conservation Areas Figure 2-2 Conservation Areas in and near the Marine Shipping Area Appendix 5-B Aboriginal Issues and Interests
CT-18.3	Concerned with the impacts of marine shipping to short fishing openings.	17-Jun-2015, Meeting with Cowichan Nation Alliance	**17-Jun-2015, Meeting:** Recorded comment for consideration by Project team. Noted that the VFPA is not involved in setting the regulations for Aboriginal fisheries. **02-Oct-2015, Letter from the VFPA to Cowichan Tribes cc: Stz'uminus First Nation, Halalt First Nation, Penelakut Tribe:** Stated that potential effects will be addressed in the MSA, which will be submitted to the CEA Agency. **09-Nov-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the MSA for the proposed Project, which included MSA Appendix 5-B listing all the issues and interests raised by Indigenous groups and the VFPA's response.	**Addressed in MSA Section 9.2:** Potential effects of vessel transit from Project-associated shipping on commercial fish and seafood harvesting marine area displacement, access, fish and seafood availability, and gear damage or loss would not be measurable from existing conditions and are therefore considered to be negligible. Potential consequential effects on harvest and associated revenues of commercial fishing and seafood enterprises are also considered to be negligible. When all lines of evidence are considered, the effect of vessel transit on commercial fishing and seafood harvesting is considered to be negligible.	**MSA** 9.2 Marine Commercial Use 9.2.5.1 Negligible Effects

Cowichan Tribes

Table 19: Marine Vegetation – Valued Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
CT-19.1	Concerned with the potential effects of the Project on eelgrass habitat for crabs and other species.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1 28-Jul-2016, Issues Workshop – Island Nations	**22-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **28-Jul-2016, Workshop:** Explained that the EIS predicted a negligible effect on eelgrass overall. There is a negligible effect which is offset through transplants. The placement of the terminal will also create a wave shadow causing more optimal conditions for eelgrass growth. We don't believe there will be eelgrass mediated effects to crabs.	**Addressed in EIS Appendix 7.2-B (#68):** Potential effects on eelgrass habitat, as well as on crabs and other species that use eelgrass habitat, are described in the EIS. Eelgrass beds are highly productive habitats in the Roberts Bank ecosystem, serving numerous critical functions, such as food, shelter, and rearing habitat for numerous species. Eelgrass is a sub-component of the marine vegetation assessment. The assessment concludes that changes in productivity of eelgrass are predicted to be negligible (i.e., not measurable or detectable). Increases in productivity of eelgrass are anticipated with the implementation of standard management practices and environmental management plans, and the creation of onsite habitat. Approximately three hectares of native eelgrass will be established through transplants in the inter-causeway area.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 11.0 Marine Vegetation 11.6.3 Potential Effect – Changes in Productivity 11.7.2 Reduction and Off-setting Measures 12.0 Marine Invertebrates 12.6.3 Potential Effect – Changes in Productivity 12.7.2 Mitigation #1 for Direct Mortality
CT-19.2	Concerned with the conclusions of significance for biofilm including for the cumulative effects assessment. Asked about the certainty of confidence modelling and whether it is possible to see the results from an independent third party review on the marine vegetation effects assessment.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Responded that the confidence for biofilm is relatively high. Studies were not limited to modelling; the Roberts Bank ecosystem model is not being relied upon for the confidence prediction. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses **24-Apr-2017, Email from the VFPA to Cowichan Tribes:** The VFPA is conducting a study in April and May 2017 to assess the spatial and temporal variability of biofilm community composition at Roberts Bank. Biofilm is a thin (~2 mm), dense layer of predominantly organic substances (e.g., diatoms, bacteria, and organic detritus) found on the surface of shallow freshwater, marine, and estuarine sediments. Biofilm is known to form an important component of the western sandpiper diet at Roberts Bank during the northward migration. This study, in conjunction with past biofilm studies conducted in 2012, 2013, 2014, and 2016, will strengthen the existing understanding of biofilm community dynamics at Roberts Bank, and may inform future monitoring programs at Roberts Bank.	**Addressed in EIS Appendix 7.2-B (#63):** In January 2014, the federal Minister of Environment referred the Project for an environmental assessment by an independent review panel. The entire EIS, including the marine vegetation assessment, will be subject to an independent review. The scope and methods of the marine vegetation study are presented in EIS Section 11.0. The assessment of marine vegetation focused on eelgrass, intertidal marsh, macroalgae, biomat, and biofilm. Studies were informed by engagement with the Shorebirds-Biofilm TAG and regulatory agencies. The LAA included Roberts Bank, and the RAA included Roberts Bank, Roberts Bank North, the lower Fraser River, Canoe Passage, and Boundary Bay. Existing conditions were characterised for representative species for each of eelgrass, intertidal marsh, macroalgae, biomat, and biofilm. Existing conditions for marine vegetation are influenced by previous developments, including the development of the Roberts Bank and BC Ferries terminals, the dynamic natural environment, and species that forage on marine vegetation. Overall, net productivity of marine vegetation is expected to increase with the Project, without mitigation, and would be further increased with the implementation of environmental management plans and the creation of habitat. The overall productivity increase is due to sheltering of the intertidal zone shoreward of the terminal, which would optimise physical conditions for marine vegetation. During Project construction and operation, changes in productivity of eelgrass, biofilm, and biomat are predicted to be negligible (i.e., not measurable or detectable), while increases in productivity of intertidal marsh is expected. Productivity of rockweed, a macroalgae, is predicted to decrease during construction and operation. This decrease can	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 11.0 Marine Vegetation **Information Requests** Response to Sufficiency Information Request #4 (IR8-04 of CEAR Document #1110)

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				be mitigated through the creation of onsite subtidal rock reef habitat. The Project is expected to temporarily influence community composition of biofilm during freshet from terminal footprint-related changes in salinity but is expected to return to existing conditions outside of the annual freshet period. The assessment concludes that there are no significant adverse residual effects from the Project to marine vegetation, as it will continue to maintain its existing ecological functions. The Project is not expected to result in any incremental cumulative effects to marine vegetation. **Additional information provided by the VFPA:** The VFPA's response to IR8-04 presents the results of studies undertaken in 2017 related to biofilm dynamics. The studies' results complement the findings of the EIS and add to the overall understanding of biofilm science. In summary, the results align with the following conclusions in the EIS, specifically that: • Ongoing salinity monitoring continues to show that under existing conditions there is large variation in salinity across Roberts Bank due to variable Fraser River flow and tidal mixing; • Biofilm is abundant across the existing salinity gradient, found in both freshwater- and marine-influenced locations; and • The Project will not affect the availability or quality of food available to migrating western sandpipers.	
CT-19.3	Asked for clarification on the statement that biomat and biofilm are relatively new to science. Asked if there could be other things that the biologists are not aware of.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Stated that biofilm is relatively new to science in that it was first discovered at Roberts Bank in 2003, in association with work being undertaken for the DP3 project. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses **24-Apr-2017, Email from the VFPA to Cowichan Tribes:** The VFPA is conducting a study in April and May 2017 to assess the spatial and temporal variability of biofilm community composition at Roberts Bank. Biofilm is a thin (~2 mm), dense layer of predominantly organic substances (e.g., diatoms, bacteria, and organic detritus) found on the surface of shallow freshwater, marine, and estuarine sediments. Biofilm is known to form an important component of the western sandpiper diet at Roberts Bank during the northward migration. This study, in conjunction with past biofilm studies conducted in 2012, 2013, 2014, and 2016, will strengthen the existing understanding of biofilm	**Addressed in EIS Section 11.0 and EIS Appendix 7.2-B (#65):** Biofilm, a thin dense layer of microscopic photosynthetic algae and bacteria, sediment, and organic matter, is found within the upper intertidal zone and is an important food source for invertebrates, fish, and bird species (including migratory western sandpiper and dunlin). Biomat is described as microbial mat, which can take different forms and be composed of a variety of single and multi-cellular organisms, which for the purposes of the marine vegetation effects assessment, is defined as blue-green algae and associated diatoms. Biomat, located in the upper intertidal area of Roberts Bank, is a primary producer and is likely consumed by higher trophic levels. **Additional information provided by the VFPA:** The VFPA's response to IR8-04 presents the results of studies undertaken in 2017 related to biofilm dynamics. The studies' results complement the findings of the EIS and add to the overall understanding of biofilm science. In summary, the results align with the following conclusions in the EIS, specifically that: • Ongoing salinity monitoring continues to show that under existing conditions there is large variation in salinity across Roberts Bank due to variable Fraser River flow and tidal mixing;	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 11.0 Marine Vegetation 11.5.4 Existing Conditions, Biomat 11.5.5 Existing Conditions, Biofilm 11.6. 			community dynamics at Roberts Bank, and may inform future monitoring programs at Roberts Bank.	• Biofilm is abundant across the existing salinity gradient, found in both freshwater- and marine-influenced locations; and • The Project will not affect the availability or quality of food available to migrating western sandpipers.	
CT-19.4	Concerned about the role of offsetting within the determination of residual effects. Requested more information related to habitat offsetting.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Stated that the potential effect would be site-specific to RBT2. This presentation does not discuss any offsetting work that the VFPA would consider in conjunction with the Project. This assessment looks at whether there are any potential effects, and considers how they could be avoided or mitigated. If they cannot be avoided or mitigated and there is a residual effect that is when offsetting would be considered. The VFPA is undertaking an extensive program for offsetting. For marine vegetation, there are two potential Project-related effects. The first is decreased productivity, for which mitigation measures (including offsetting) are anticipated to result in there being no residual effects. The VFPA referred to slide 17 (of Marine Vegetation presentation, Cowichan Nation Alliance Workshop #2), which is a table of the marine vegetation sub-component species and their expected difference in productivity between future conditions without the Project and future conditions with the Project. There is an onsite habitat mitigation program, where work would be expected to be conducted right at and near the terminal. It is anticipated that work will be successful. Some measures may be able to be done in advance, and we will know whether or not they are successful. There is also a commitment to monitor. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses	**Addressed in EIS Appendix 7.2-B (#28):** Project-related effects on marine biophysical VCs that cannot be fully mitigated through avoidance or reduction or other mitigation measures will be addressed through offsetting. Offsetting proposed for this Project is focused on the creation and enhancement of biophysical habitats that currently support species of the Roberts Bank ecosystem. The concepts proposed are consistent with current legislation and policy and are based on well-established techniques that have been successfully implemented at Roberts Bank, elsewhere in B.C., and in the Pacific Northwest. The EIS includes a description of onsite habitat concepts to offset potential decreases in productivity, including the identification of beneficial habitat types for each of the VC sub-components, and representative species and groups where applicable. **Addressed in EIS Appendix 7.2-B (#198):** Onsite habitat is intended to soften the perimeter of the Project's shoreline to be more ecologically representative of the existing estuary, to create similar habitat to those that will be affected by the Project, and to create habitat that generally enhances the productivity of the Roberts Bank ecosystem. The five habitat types considered for onsite offsetting include: • Intertidal marsh: Important for shoreline stabilisation, gas and nutrient regulation, contaminant filtering, and nutrient supply, as well as providing structural habitat used for shelter and food by organisms. Some of the species that use intertidal marsh habitat at Roberts Bank include bivalve shellfish, Dungeness crabs, juvenile Chinook salmon, shiner perch, sand lance, and waterfowl. Approximately 15 ha of intertidal marsh is proposed along the widened causeway and in the S-bend of the new terminal. • Sandy gravel beach: Provides spawning area for forage fish, including surf smelt, Pacific herring, and sand lance. Two sandy gravel beaches, totalling approximately 4.5 ha, are proposed along the widened causeway. The beaches are intended to provide attachment-type habitat and substrate suitable for marine vegetation and invertebrates, and to benefit some of their predators (e.g., juvenile Chinook salmon, waterfowl, and American wigeon). • Mudflat: Plays a role in dissipating wave energy and supports large numbers of birds and fish. Mudflats also support biofilm, an important component of the food web in estuarine and coastal ecosystems. Approximately 4.5 ha of mudflats is proposed along the widened causeway and in the S-Bend of the new terminal. Biofilm,	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 17.0 Mitigation for Marine Biophysical Valued Components 17.3 Offsetting Potential Effects 17.3.2 Offsetting Potential Effects, Offsetting Framework

Cowichan Tribes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				invertebrates, waterfowl, and shorebirds will benefit from this habitat. • Subtidal rock reefs: Support rockfish populations and assist in meeting fisheries management objectives to alleviate historic declines of regional populations. The creation of approximately two hectares of reef habitat will benefit macroalgae vegetation, and provide refuge, feeding, and spawning habitat for invertebrates, fish, and birds. • Eelgrass: Eelgrass beds are highly productive habitats in the Roberts Bank ecosystem, serving numerous critical functions, such as food, shelter, and rearing habitat for numerous species. Approximately three hectares of native eelgrass will be established through transplants in the inter-causeway area. The onsite habitat concepts presented in EIS Section 17.0 have been presented to Indigenous groups, the community, stakeholders, and the public in open houses and small group meetings that took place in the fall of 2014. The feedback received from Indigenous groups has been considered in the finalisation of the EIS.	
CT-19.5	Concerned that the assessment excludes marine vegetation that is culturally important to Cowichan Nation Alliance and could be impacted by the Project. Requested that 'coastal terrestrial vegetation' be identified as a distinct Valued Component.	09-May-2014, Letter from Cowichan Tribes acting in alliance with the Stz'uminus, Penelakut, Hwlitsum and Halalt communities	**09-May-2014:** Recorded comment for consideration by the Project team. **06-Jun-2014 and 03-Jul-2014, Workshops:** The VFPA hosted two workshops for Indigenous groups on the VCs providing them with an opportunity to comment on the proposed VCs. For coastal terrestrial vegetation, there is no interaction with the Project and the terrestrial environment, either directly or indirectly, due to the marine-based nature of the Project, and therefore no effects are anticipated. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Section 8.0:** The process for selecting VCs is described in EIS Section 8.0. Rationale for not selecting terrestrial vegetation as a VC is provided in EIS Appendix 8-A. Terrestrial vegetation on the Roberts Bank causeway to the track tie-in location (a less than 1 ha area with in the British Columbia Rail (BCR) right-of-way) is characteristic of highly disturbed sites. Terrestrial vegetation of ecological value does not occur proximal to the Project. Additionally, the Project area does not contain any wetlands above the high water level. Wetlands below high water level are included in the marine vegetation VC.	**EIS** 8.0 Effects Assessment Methods Appendix 8-A Valued Component Selection Rationale Table 8-A2 Rationales for Candidate Component Exclusion Decisions and Other Considerations

Table 20: Mitigation for Marine Biophysical Valued Components (including Onsite Habitat Concepts)

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
CT-20.1	Asked what the rationale is for including fish refugia in the caisson design.	01-Nov-2013, Meeting with Cowichan Nation Alliance	**01-Nov-2013, Meeting:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Sections 4.0 and 13.0.	**Addressed in EIS Sections 4.0 and 13.0:** A mitigation opportunity for marine fish during operation of the terminal includes provision of refuge habitat in the caissons. To increase the availability and connectivity of refuge habitat for marine fish, and to provide a diversity of potential food sources, design options for the caisson face have been considered (EIS Section 4.0) and are described further in EIS Section 13.7.1.3. **Additional information provided by the VFPA:** **07-Jan-2014, Letter from the VFPA to Penelakut Tribe:** The upper portions of the caissons are not filled with ballast rock, only water. In previous projects, such as DP3, a decision was made to provide an opening into every 2nd or 3rd caisson to allow fish and marine creatures to seek refuge inside this water filled area of the caisson. This fish refugia concept was carried over in the design for the proposed Project. It is an accepted DFO habitat development concept.	**EIS** 4.0 Project Description 13.0 Marine Fish 13.7.1.3 Caisson Fish Habitat
CT-20.2	Asked what the mortality rate during crab salvage efforts would be during molting season.	28-Jul-2016, Issues Workshop – Island Nations	**28-Jul-2016, Workshop:** Stated that mortality related to construction activities has not been quantified. Assumptions would have to be made around density, which could be done; the VFPA is hoping that the mitigation will be good enough in that crabs will be trapped and removed from the construction area, and timing windows would be respected to reduce mortality.	**Addressed in response to IR5-04:** The VFPA's response to IR5-04 discusses the planned approach for crab salvage during the construction of RBT2. Salvages are planned for all Project activities that have the potential to cause direct mortality to legal-sized male and gravid female Dungeness crabs. A list and schedule of proposed Project activities is provided in Table IR5-04-1; the activities for which Dungeness crab mortality or injury may occur are indicated, and for those activities that may cause mortality or injury, plans for salvages are also indicated.	**Information Requests** Response to Sufficiency Information Request #4 (IR5-04 of CEAR Document #1209)

Cowichan Tribes

Table 21: Noise and Vibration – Intermediate Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information

CT-21.1	Concerned about potential noise effects from shunting to wildlife and humans.
	Stated that members are affected and interrupted by the shunting.
	Asked if the numbers (of noise events) presented are an expected average over a 24-hour period.
		22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:**
			Recorded comment for consideration by Project team.
			01-Apr-2015, Letter from the VFPA to Cowichan Tribes:
			Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.
			19-Apr-2016, Letter from the VFPA to Cowichan Tribes:
			Shared meeting notes from the 22-Oct-2014 workshop, which included the following post-meeting note: Stated that the number of noise events is predicted on a per-hour basis.
				Addressed in EIS Appendix 7.2-B (#43):
				The potential changes in noise and vibration that may be caused by the Project, and the potential effects of those changes on biophysical VCs and human health are considered in the EIS. Mitigation measures to address noise-related effects are also described in the EIS.
				The noise and vibration assessment examined potential changes in noise and vibration as a result of the Project. The results of the noise and vibration assessment were used in the assessments of coastal birds, marine commercial use, outdoor recreation, human health, and Current Use.
				The assessment considered the potential changes in noise and vibration that may result from the Project and the potential cumulative changes in noise and vibration that are likely to result from the Project in combination with other certain and reasonably foreseeable projects and activities, including incremental marine vessel traffic.
				The assessment considers noise and vibration from trains, as a source contributing to existing conditions, as well as a potential Project-related source of noise and vibration and a potential source of cumulative change in noise and vibration.
				Mitigation measures related to noise are included in the human health assessment (EIS Section 27.9.2).
				The assessment considered Project-related sources of noise and vibration, including construction equipment, container ships at berth, container handling activities, and movement of trains and trucks on the terminal and causeway. The assessment focused on continuous noise, low frequency noise, transient and impulsive noise, and ground-borne vibration.
				The assessment concluded that:
				• Project-related changes in annual average noise levels in communities near the Project are expected to be minor and, for the most part, not perceptible.
				• The Project, in combination with other certain and reasonably foreseeable projects and activities, is expected to result in minimal incremental cumulative changes to noise in areas close to road and rail corridors.
				• Some changes in noise conditions that could be perceptible include:
				  ○ Increased noise during periods of peak construction activity.
				  ○ The number of intermittent noises during operation would increase, but the noise levels would be the same or lower than from the existing Roberts Bank terminals.
				  ○ Increased noise in marine areas is expected to be perceptible close to the terminal.
				  ○ The construction and operation of the marine terminal and causeway is not expected to result in perceptible increases in levels of ground-borne vibration.
				Suggested mitigations were considered in the development of proposed mitigation for Project-related changes in noise. Noise Management Plans would be developed for construction and operation phases and would integrate with the VFPA's existing noise monitoring programs.
				Mitigation of construction-related noise would include:
				• Scheduling of higher-noise generating activities during weekdays, and during the daytime;
				• Shutdown of equipment and vehicles when not in use;
				• Utilisation of equipment that produces less noise; and

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				• Awareness and training for construction crews. Mitigation for operation-related noise would include: • Optimised tonality of equipment alarms to limit audibility on shore while meeting safety requirements; • Operator awareness and training; and • Regular maintenance of equipment (e.g., lubrication of pulleys and other moving parts, replacement of deteriorated exhaust mufflers, maintaining efficiencies of engines through servicing).	
CT-21.2	Noted that Penelakut has a village site at the north end of Galiano Island at Porlier Pass. Asked if studies were done on the west side of Porlier Pass and the Gulf Island passages.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Referred to the work carried out by acoustician that determined the areas identified in the slide is where noise is expected to go. Stated that sound does not necessarily travel with currents. Rather, it bounces off of surfaces. There is likely to be noise in that area, but not Project noise, which is what the slides are referring to. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#44):** The spatial boundaries for the noise and vibration assessment, and the rationale for their selection, is included in EIS Section 9.3. The marine study area includes all marine areas within 10 km of the proposed terminal, including areas at the mouth of the Fraser River and Canoe Passage, north of the northern tip of Westham Island. The spatial boundaries for the noise and vibration assessment, and the rationale for their selection, is included in EIS Section 9.3.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.0 Physical Setting 9.3 Noise and Vibration

Cowichan Tribes

Table 22: Port Operations

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
CT-22.1	Asked where ships currently re-fuel in the VFPA's jurisdiction.	01-Nov-2013, Meeting with Cowichan Nation Alliance	**01-Nov-2013, Meeting:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Section 4.4.2.1 Container Ship Manoeuvres.	**Addressed in EIS Section 4.4.2.1:** Facilities to support bunkering of ships do not exist at Roberts Bank, nor does the Project include any facilities to support bunkering. Container ships usually bunker at one of their home ports. **Additional information provided by the VFPA:** **07-Jan-2014, Letter from the VFPA to Penelakut Tribe:** Container ships cannot re-fuel at Roberts Bank. Container ships are on a tight schedule and will arrange to pick up fuel at a location where they will be at berth for a longer time (home port) and where fuel is less expensive, usually in Asia. Vessels within the VFPA's jurisdiction that need to re-fuel will typically take on fuel in Burrard Inlet, alongside at berth or at one of the designated anchorages in the inlet. The fuel is delivered to the vessels by barge, either from the Stanovan Marine Terminal (Chevron) in Burnaby or the Shellburn Marine Terminal (Shell Canada), also in Burnaby. Tugs used to guide the container ships during arrival and departure, bunker at the Chevron marine fuelling station in Burrard inlet.	**EIS** 4.4.2.1 Container Ship Manoeuvres
CT-22.2	Concerned about traffic and increased use of anchorages around the Gulf Islands. Concerned about increased number of large ships anchoring in Cowichan Tribes territory. Stated that increased shipping traffic from the proposed Project would likely increase the frequency of these freighters anchoring in Cowichan Bay. Concerned with sewage effluent and ships moored and anchored south of Penelakut and north of Thetis Island. Stated that ships are dumping effluent and it is impacting their beaches. Stated that they are there for two weeks and does not know why they would not be in the Fraser River.	17-Jun-2014, Technical Working Group Meeting #4 09-Sep-2015, Letter to the VFPA from Cowichan Tribes 18-April-2017, Chief & Council Meeting – Cowichan Nation Alliance 07-Nov-2017, Cowichan Nation Alliance Meeting with Federal Agencies	**17-Jun-2014, Meeting:** Recorded comment for consideration by Project team. **02-Oct-2015, Letter from the VFPA to Cowichan Tribes cc: Stz'uminus First Nation, Halalt First Nation, Penelakut Tribe:** Referred Cowichan Nation Alliance to Section 3.3.2 of the Marine Shipping Overview document sent to Cowichan Nation Alliance on May 26, 2015: There are no plans, or foreseen terminal operating requirements, for off-terminal anchoring of container ships waiting for a berth at the new RBT2 marine terminal. Container ships operate on a scheduled service, usually between Asia and the west coast, and adjust their speeds as required to arrive at the terminal within their assigned arrival window; thus, anchorage is not a normal requirement. Exception to this could occur in the event of an extreme storm event in the Pacific Ocean, resulting in a refuge anchorage requirement for safety reasons or to accommodate unexpected ship-specific maintenance personnel, or operation issues that may arise. Container ship anchorages for	**Addressed in EIS Appendix 7.2-B (#72):** The scope of the Project, as defined in the *EIS Guidelines* issued by the CEA Agency, includes vessel movements within VFPA jurisdiction, including approach, berthing, unberthing, and departure from the terminal. The assessment does not include the anchoring of ships in the Gulf Island area. **Addressed in MSA Appendix 5-B (#3):** Anchorage is discussed in MSA Section 4.0. Container ships operate on a scheduled service, and adjust their speeds as required to arrive at the terminal within their assigned arrival window; thus, anchorage is not a normal requirement and there are no plans or requirements for off-terminal anchoring of container ships waiting for a berth at the new RBT2 marine terminal. Exceptions to this could occur in the event of an extreme storm event in the Pacific, resulting in refuge anchorage requirement for safety reasons, or to accommodate unexpected ship-specific maintenance, personnel, or operation issues that may arise. The assessment of marine shipping associated with the Project is based on a routine vessel transit scenario. Because anchorage only occurs in rare circumstances, anchorage is not assessed as an activity related to marine shipping associated with the Project.	**EIS** 4.4.2.1 Container Ship Manoeuvres Appendix 7.2-B Aboriginal Groups Interests and Issues Table **MSA** 4.0 Activity Description 4.2.2.2 Anchorage Appendix 5-B Aboriginal Issues and Interests **Information Requests** Response to Sufficiency Information Request #01 (IR5-01 of CEAR Document #1078) **TC IR-07 of CEAR Document #982 from Transport Canada to the Review Panel re: Response to Information Requests issued by the Review Panel on May 10, 2017**

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			Deltaport Terminal in 2012 and 2013 were rare, with a frequency range of three to four per year out of an approximate annual total of 270 ship calls to Deltaport Terminal in each of those years. The same frequency can be assumed for marine shipping associated with RBT2, resulting in approximately three to four unforeseen container ship anchorages per year. As defined in the *EIS Guidelines*, issued by the CEA Agency, the scope of the Project includes marine transportation within the VFPA's jurisdiction. Ship traffic through the Gulf Islands is outside of the scope of the Project. The MSA includes an assessment of potential effects associated with marine shipping outside the VFPA's jurisdiction. The spatial boundaries are included in the noise and vibration (EIS Section 9.3) and underwater noise (EIS Section 9.8) assessments. Project-related changes to noise and vibration, both above water and underwater, are not expected to extend from the Project area into this area. The appropriate authority for comments related to island anchorages is the Pacific Pilotage Authority (contact information provided). **09-Nov-2015, Letter from the VFPA to Cowichan Tribes:** The data provided by the VFPA regarding container ship anchorages for Deltaport in 2012 and 2013 pertained to anchorages occurring within the VFPA's jurisdiction. The VFPA does not have information on anchorages occurring outside the VFPA's jurisdiction. For additional information regarding anchorages occurring around the Gulf Islands, including concerns with overflow anchorage along the coast of Gabriola Island, you may contact the Pacific Pilotage Authority [contact name and information provided]. The VFPA has not prepared a response to the letter submitted by Gabriolans Against Freighter Anchorages, as this letter was addressed to the CEA Agency and concerns anchorages occurring outside the VFPA's jurisdiction. **18-April-2017, Meeting:** Recorded comment for consideration. **07-Nov-2017, Meeting:** The Cowichan Nation Alliance met with federal agencies, including the CEA Agency,	**Additional information provided in response to IR5-01:** The VFPA's response to IR5-01 generally discusses aspects of anchorage outside of the VFPA's jurisdiction. Notably, it references detailed information regarding anchorages in Transport Canada's response to Panel information request TC IR-07 from Transport Canada to the Review Panel. Transport Canada's response to information request TC IR-07 tabulates detailed information regarding anchorages and minimum, mean, and maximum number of days in Appendix D (Pacific Pilotage Authority Anchorage Usage Data 2012 – 2016 for the Pacific Pilotage Authority Marine Shipping Area). As shown in these tables, a total of 124 anchorages occurred between 2012 and 2016 for container vessels destined for VFPA jurisdiction, and the mean number of anchorage days was 2.69, with a minimum of 0.05 days and a maximum of 83.64 days. **Additional information provided by the VFPA:** Information regarding an interim protocol for the use of Southern B.C. Anchorages can be found on Transport Canada's website. The following text is an excerpt from the *Interim Protocol for the Use of Southern B.C. Anchorages webpage*: An interim protocol for the use of Southern B.C. anchorages has been developed by Transport Canada in collaboration with the Chamber of Shipping of BC, the Shipping Federation of Canada, the Pacific Pilotage Authority, the VFPA, and the Port of Nanaimo (working group members). It also takes into account comments provided to Transport Canada by coastal communities about the impact of increased use of anchorages in their surrounding waters. Drafts of the interim protocol were also shared with coastal communities and Indigenous groups. Under the protocol, the VFPA assigns anchorages as equitably as possible, subject to individual anchorage size restrictions, using their computerised queueing system, which takes into account the dimensions of the vessel and specific anchorage usage over the previous 30 days. The objective of this approach is to balance the usage, so that no single anchorage is in constant use, and that that there is an equitable rotation of use through all suitable anchorages. Noise and Lights: All vessels, while at anchor, should minimise noise levels and light usage in consideration of local residents. The following guidelines apply: Noise: • Generator usage should be reduced to the minimum required generator(s) to operate essential services and systems;	**Interim Protocol for the Use of Southern B.C. Anchorages. Available at:** **https://www.tc.gc.ca/en/services/marine/ports-harbours/interim-protocol-use-southern-bc-anchorages.html**

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			Transport Canada, ECCC, Health Canada, DFO, NRC, and the Canadian Coast Guard. Transport Canada committed to connect the Cowichan Nation Alliance with a representative of Transport Canada to discuss anchorage concerns further. **16-Nov-2017, Email from the CEA Agency to Cowichan Tribes:** Provided draft meeting notes from the 07-Nov-2017 meeting, which included a link to IR5-01 that discusses aspects of anchorage outside of the VFPA's jurisdiction, and TC IR-07.	• External doors and hatches to machinery spaces must be kept closed as often as possible; • Use of power tools and chipping hammers must be kept to a minimum and is not permitted on deck on weekends, nor between 1900 and 0700 hours on weekdays. Lights: • While the vessel is to be lit in compliance with the Collision Regulations, deck lights must be kept to a minimum, and • Lighting used to illuminate Concerns with any of the specifics related to the responsibilities of ships at anchor (e.g., noise, light) within the protocol, can be reported to the VFPA Operations Centre. The VFPA Operations Centre will relay the complaints to the vessel agent with a copy to the Chamber of Shipping of BC, the Shipping Federation of Canada, and Transport Canada with the request to follow up with the vessel. The Interim Protocol is a temporary and voluntary measure that addresses some of the concerns Canada and the Port have heard in recent years. The Oceans Protection Plan, National Anchorage Framework will be undertaking the studies and consultation necessary to develop principles that determine the location and management practices for anchorages outside of ports in the future. In 2017, Transport Canada announced the Oceans Protection Plan's Anchorages initiative. The Anchorages Initiative will engage governments, marine industry, Indigenous groups, community organisations, and stakeholders to: • Develop a process to identify potential anchorage locations; • Analyse and respond to environmental, economic, cultural, safety and security concerns now and over the long-term; • Draft a "best practices at anchor" manual; and • Propose oversight/management options for anchorage locations outside the port authority's boundaries. The comprehensive review will use an evidence-based approach, and includes hearing feedback on issues from Indigenous groups, coastal communities, other levels of governments, and industry. Results and lessons learned from the Interim Protocol will help inform the national Anchorages Initiative.	
CT-22.3	Related concerns regarding: • Pollution impacts from anchoring ships to shellfish;	17-Jun-2014, Technical Working Group Meeting #4	**17-Jun-2014, Meeting:** There are regulations currently in place that prevent the discharge of bilge water in VFPA jurisdiction. Similarly, vessels that enter VFPA jurisdiction are not permitted to release raw	**Addressed in EIS Section 13.6.2.1:** Potential operation-phase changes from wastewater (sewage) and stormwater discharges, and discharges from ships (bilge water and ballast water) are not expected to affect marine vegetation due to the distant	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	• Ships not following proper bilge water regulations; • Invasive species of clams being introduced and varnish clams disappearing; and • Invasive species of mussels (blue) being introduced to Penelakut territory.		sewage effluent. If required, untreated sewage can be discharged at least 12 miles (19.3 km) from shore with the ship moving faster than 4 knots. If sewage is comminuted (i.e., blended or pulverised), discharges can take place 3 miles (4.8 km) from shore. For ships equipped with approved treatment plants there are also limits to the permissible coliform counts.	location of discharges into subtidal waters, the incorporation of management and treatment measures described in EIS Section 4.2.1, and the implementation of regulatory requirements and guidelines (refer to EIS Section 9.7.8 for more information). **Addressed in EIS Appendix 7.2-B (#100):** The VFPA was the first port in North America to prohibit in-port ballast water exchange without prior mid-ocean exchange, a practice which became the basis of government requirements now enforced by Transport Canada. To prevent the invasion of foreign species into local waters, international regulations, through the IMO, are managed by Transport Canada. All commercial deep sea vessels are required to carry out a ballast water exchange prior to entering Canadian waters. This is done outside the exclusive economic zone of 200 nautical miles and in water deeper than 2,000 m. By requiring vessels to complete this ballast 'flush' well outside Canadian waters, the aim is to prevent any foreign organisms from entering into the local ecosystem. The U.S.A. has similar requirements, and vessels arriving from the Puget Sound area need to forward the completed U.S. forms to Canadian authorities prior to entry into Canadian waters. Import containers are generally not opened at the terminal. Canada Border Services Agency inspects the contents of a percentage of import containers off-terminal in Richmond, and in the future will be done at the facility on Tsawwassen First Nation land currently being developed. All ships use rat guards on their mooring lines to ensure that rats and other rodents do not crawl up or down the mooring lines between the ship and the wharf. The VFPA is a part of the B.C. *Spartina* Working Group, which maps, tests eradication methods, and supports the removal of invasive English cordgrass from the Fraser River estuary.	9.7 Marine Water Quality 9.7.8 Future Conditions with the Project 13.0 Marine Fish 13.6.2.1 Changes in Water Quality

Cowichan Tribes

CT-23.1	Asked who is responsible for the cost of clean-up in the event of a spill and who is responsible for compensation of lost food sources for First Nations people. Stated that the VFPA should be held accountable, not just the shipper. Asked how the VFPA is bolstering WCMRC (Western Canada Marine Response Corporation) capacity to respond. Asked whether the VFPA contributes to WCMRC. Asked if Canada's compensation regime for impacts from a major container vessel casualty from its containers, debris, and/or wreckage fully compensate for natural resource damages, as well as to Cowichan Nation Alliance subsistence (non-commercial) and traditional fisheries. If yes, what are these compensation avenues?	07-Oct-2014, Aboriginal Groups Workshop #1 22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1 13-Jan-2016, Letter to the CEA Agency from Cowichan Tribe on behalf of Cowichan Nation Alliance (CEAR Document #385)	**07-Oct-2014, Workshop:** Explained that in regards to WCMRC, each vessel (i.e. the shipping company), the terminal operator (the company responsible for the loading and unloading of ships), and the company responsible for constructing the project in the first place, must have a formal agreement with WCMRC, and pay into the fund/service, and then WCMRC responds to the spills. **22-Oct-2014, Workshop:** Stated that the framework of responsibility is based on the polluter pays principle. Each vessel, the terminal operator (the company responsible for the loading and unloading of ships), and the company responsible for constructing the project, must have a formal agreement with WCMRC, and pay into the fund/service, and then WCMRC responds to the spills. Stated that the VFPA would be responsible for the safe access and transit to or from the site, and implementing changes to navigation patterns to keep people clear of a potential spill. Increased traffic and risk of collision is considered in the assessment. The review panel will need to consider the VFPA's role in such an incident. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response. **12-May-2016, Letter from the CEA Agency to Cowichan Nation Alliance (CEAR Document #398):** *The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review.*	**Addressed in EIS Appendix 7.2-B (#207):** The EIS describes the parties who would be notified and assume responsibility as On Scene Commander for spill clean-up in the event of a marine spill within VFPA jurisdiction, including Roberts Bank. These parties include the Canadian Coast Guard and the WCMRC. The VFPA's role following a spill would be to maintain situational awareness and coordinate the incident response. **Addressed in EIS Appendix 7.2-B (#208):** Generally, the owner of the vessel from which the spill originates is responsible, in accordance with the *Marine Liability Act*. There is more information on liability on Transport Canada's website, which explains liability and compensation for oil spill clean-up and damages, including funds available for clean-up: http://www.tc.gc.ca/eng/marinesafety/menu-4100.htm#m. Additional sources information on funds available for clean-up are available at the following link: http://www.tc.gc.ca/eng/marinesafety/oep-ers-regime-funds-1119.htm **Additional information provided by the VFPA:** The *Canada Shipping Act (2001)* is Transport Canada's regulatory framework surrounding marine pollution and its enforcement. In the case of a report of pollution in the water, including oil or fuel spills, Canada operates under the National Spill Response Protocol, which specifies that the Canadian Coast Guard is responsible for ensuring the clean-up of ship sourced spills of oil and other pollutants. While the VFPA is not the lead agency when it comes to spill response, it provides assistance often in the form of working with first responders and other agencies, providing information on a situation through the 24/7 operations centre, security cameras, patrol boats, and drone. As per a 2009 letter of understanding, the VFPA can be called upon by the Coast Guard to conduct an initial inspection in response to a pollution report in our federal jurisdiction. On the west coast, the Canadian Coast Guard contracts spill clean-up to WCMRC. This is also the agency that ships or terminal operators are required to call if they discover they have been the source of a spill.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 30.0 Potential Accidents or Malfunctions 30.3.3 Port Metro Vancouver Practices and Procedures Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment
CT-23.2	Concerned that the assessment for accidents and malfunctions should consider extreme weather events, not only ideal/normal weather patterns.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Responded that the VFPA is taking a conservative and worst-case scenario approach, so weather extremes are considered. The worst weather condition might also be overlaid with the timing of something such as spawning season, for the purposes of the assessment.	**Addressed in EIS Appendix 7.2-B (#213):** A description of how local conditions and natural hazards, such as severe or extreme weather conditions and weather-related events, could adversely affect the Project, and how these in turn, could affect the environment, is presented in EIS Section 31.0. Project design and management measures capable of mitigating the effects of extreme weather conditions on the Project also will effectively address any potential effects associated with ideal/normal weather patterns. As described in EIS Section 9.1, climate is recognised as one of the primary drivers in shaping the Roberts Bank ecosystem. The influence of weather patterns typical for south coast B.C. and Roberts Bank are considered as an aspect of the Project's physical	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.0 Physical Setting 9.1 Climate, Coastal Conditions, and Geotechnical Considerations

Cowichan Tribes

			01-Apr-2015, Letter from the VFPA to Cowichan Tribes: Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	setting in existing conditions, expected conditions, and future conditions in the assessment of Project-related effects on the ICs and VCs.	31.0 Effects of the Environment on the Project 31.2.1 Extreme Weather and Weather-related Events
CT-23.3	Requested a list of hazardous materials/dangerous goods that are shipped in containers. Asked if there has been an assessment done on which hazardous materials are currently being handled in the Port.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Responded the Port has records and statistics on the contents of containers. Noted that more information on the contents of containers would be provided in the EIS. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in MSA Appendix 5-B (#109):** The potential for an accident involving a spilled container, and hazardous contents of containers, is addressed in MSA Section 10.0. Details on the types of hazardous materials shipped in containers are provided in EIS Appendix 30-A (Table G-3 in Appendix G). Regulations for securing containers, and for the transport of dangerous goods, are set by the IMO http://www.imo.org/en/About/Conventions/ListOfConventions/Pages/International-Convention-for-the-Safety-of-Life-at-Sea-(SOLAS),-1974.aspx. The International Maritime Dangerous Goods Code is the international code that establishes where dangerous goods should be loaded on a ship. Some should be loaded below deck, others should be loaded on deck, some dangerous goods need to be separated by certain distances from other types of goods, and some dangerous goods need to be segregated in different holds from other goods. The implementation of the Code is mandatory under the International Convention for the Safety of Life at Sea (SOLAS) and the International Convention for the Prevention of Pollution from Ships (MARPOL 73/78).	**EIS** Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment **MSA** 10.0 Potential Accidents or Malfunctions
CT-23.4	Asked if shipping of hydrocarbons in containers has been included in the assessment, as hydrocarbons are being increasingly shipped by rail, resulting in incidents. Asked if there is an increase in the movement of coal contemplated in the Project.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Responded that there have not been plans or projections for a change in the distribution of contents of containers. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#6):** The proposed Project is a container terminal and does not include any coal-related elements. There are no plans to modify the Project to handle bulk oil or coal.	**EIS** 4.0 Project Description Appendix 7.2-B Aboriginal Groups Interests and Issues Table
CT-23.5	Concerned about the increased tanker traffic including oil spills, spill response, vessel safety, invasive species and cumulative effects.	01-Nov-2013, Meeting with Cowichan Nation Alliance	**01-Nov-2013, Meeting:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#204):** Potential spills of deleterious materials (e.g., hydrocarbons) and their environmental effects are discussed in the EIS. Plausible worst-case scenarios involving a marine vessel, motor vehicle, and train accident, each assumed to result in a spill of deleterious materials, are assessed. The regulatory management framework, standard practices, and Project-specific measures to reduce the risk of accidents or malfunctions, including spills, as well as the emergency response and mitigation measures to be implemented in the event of a spill are described. Three worst-case scenarios involving hydrocarbon spills were assessed: a container ship impact incident at the terminal, a tanker truck accident on Roberts Bank Way North, and a yard locomotive derailment on the widened causeway. The assessment determined that a ship impact scenario involving a marine spill of heavy fuel oil at the terminal would result in adverse residual effects to all marine biophysical VCs, as well as marine commercial use, outdoor recreation, and land and water use. While the residual effects on southern resident killer whales, coastal birds, and Current Use were considered significant, due to the extremely low probability of such a scenario, all residual effects were considered unlikely.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 30.0 Potential Accidents or Malfunctions Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				Since the diesel spill in each of the land-based scenarios would occur away from the marine environment, no potential interactions with marine biophysical VCs were identified. Further, no residual adverse effects were identified with respect to socio-economic VCs, including services and infrastructure and human health. As with any activity, the potential for unplanned incidents during Project construction and operation exists. The VFPA, its tenants, contractors, operators, and intermodal partners are committed to continue to improve port-wide operational practices and procedures to ensure the safety of workers and the public, and protection of the environment. The composition and number of hazardous goods containers handled at Deltaport Terminal in 2012 was reviewed during the development of the Quantitative Risk Assessment (see Table B-4 (Appendix B) of EIS Appendix 30-A). The estimated probability and potential consequences of a range of accidents or malfunctions, including spills of deleterious materials from ships during Project construction and operation, are described in the EIS. **Additional information provided by the VFPA:** **07-Jan-2014, Letter from the VFPA to Penelakut Tribe:** The proposed Project is being designed to exclusively handle containers. There will be no additional tankers as a result of the Project. The proposed Project will undergo a thorough and independent environmental assessment, which will include a component that will look at potential cumulative effects and potential for spills.	
CT-23.6	Concerned that bunker fuel or cargo spill would be distributed by ocean currents - not just in shipping lanes.	09-Sep-2015, Letter to the VFPA from Cowichan Tribes on behalf of Cowichan Nation Alliance	**02-Oct-2015, Letter from the VFPA to Cowichan Tribes cc: Stz'uminus First Nation, Halalt First Nation, Penelakut Tribe:** The document shared by the VFPA on July 27, 2015 included a draft summary of Cowichan Nation Alliance's Current Use in the marine shipping study area, and therefore did not include accidents and malfunctions or potential effects. These topics will be addressed in the report to be submitted to the CEA Agency in the fall of 2015. For more information regarding factors considered in the assessment of effects of marine shipping associated with the Project, please see the Marine Shipping Overview document shared with Cowichan Nation Alliance on May 26, 2015, or the *Updated EIS Guidelines*, issued by the CEA Agency on April 17, 2015.	**Addressed in MSA Appendix 5-B (#104):** The assessment of potential accidents or malfunctions (MSA Section 10.0), considers the effects of a plausible worst-case spill scenario on the environment. The plausible worst-case scenario assessed is a powered grounding of a container ship resulting in a release of heavy fuel oil. The location of the plausible worst-case spill scenario is in Boundary Passage near the south end of South Pender Island. MSA Section 10.0 includes a description of the applicable mitigation for a plausible worst-case spill scenario. **Addressed in MSA Section 10.0:** The assessment for the plausible worst-case spill scenario concluded that, with the exception of human health, measurable residual adverse effects are predicted for all VCs. In all cases, the identified residual adverse effects of a spill are unlikely to occur, because of the very low probability of an accident or malfunction that could result in a spill. With the exceptions of residual effects on marine mammals (southern resident killer whale), marine commercial use (guided sport fishing and marine-based tourism sub-components), outdoor recreation, archaeological and heritage resources, and Current Use, adverse residual effects were considered not significant. A serious residual adverse impact on the ability of Indigenous groups to exercise Aboriginal and treaty rights in areas overlapping or near the hypothetical spill area would be expected in the event of such a spill.	**MSA** Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents or Malfunctions 10.3.3 Identification of Plausible Worst-case Accident or Malfunction Scenarios 10.4 Mitigation
CT-23.7	Concerned with the safety of those participating in Tribal Journeys.	17-Jun-2015, Meeting with Cowichan Nation Alliance	**02-Oct-2015, Letter from the VFPA to Cowichan Tribes cc: Stz'uminus First Nation, Halalt First Nation, Penelakut Tribe:** Stated that potential effects will be addressed in the MSA, which will be submitted to the CEA Agency. **09-Nov-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous	**Addressed in EIS Appendix 7.2-B (#206):** A quantitative risk assessment of potential accidents and malfunctions related to marine vessel traffic, including the risk of a collision between a container ship and small craft (i.e., fishing and recreational vessels), was undertaken and is described in EIS Section 30.0, as well as EIS Appendix 30-A. Data collected by DFO between 2008 and 2012 for vessels in DFO sub-areas encompassing Canadian and U.S. waters transited by ships bound for Roberts Bank was reviewed. These data indicated that daily fishing vessel numbers in the area are low (i.e., no vessels per sub-area on most days; maximum of six vessels on one day in the largest sub-area). On this basis, the quantitated risk assessment estimated the	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 30.0 Potential Accident and Malfunctions 30.4.4 Vessel Collision Appendix 30-A Marine Vessel Incidence

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			issues and interests and provided the VFPA's response.	return period for a collision involving a container ship and a fishing vessel as 1 in 50 years, equivalent to a 'very low' probability in this assessment. A Land and Marine Traffic Management Plan is included in the Environmental Management Program (EIS Section 33.0) in order to mitigate potential marine vessel traffic issues. **Addressed in MSA Section 10.0:** Includes a description of applicable collision risk reduction measures. The assessment of Current Use considers the risk of collision, and perceptions of safety and determined that residual effects of the collision scenario on Current Use was considered significant, though unlikely to occur. **Addressed in response to IR10-15:** The VFPA's response to IR10-15, as requested by the Review Panel, further discusses potential effects to the quality of the Current Use experience resulting from marine shipping associated with the Project. **Addressed in response to IR13-20:** The VFPA's forthcoming response to IR13-20 will further discuss Project-related changes to the wave environment and their potential effects on current use activities, access, and navigation.	Prediction Inputs to the Quantitative Risk Assessment **MSA** Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents or Malfunctions **Information Requests** Response to Sufficiency Information Request #15 (IR10-15) Response to Sufficiency Information Request#20 (IR13-20)
CT-23.8	Asked if there will be timely and adequate rescue and tow of a disabled container vessel that is undertaken by a tug of adequate. If yes will these be commercial tugs of opportunity or a dedicated response tug operated by trained and experienced crew for high seas rescue.	13-Jan-2016, Letter to the CEA Agency from Cowichan Tribe on behalf of Cowichan Nation Alliance (CEAR Document #385)	**12-May-2016, Letter from the CEA Agency to Cowichan Nation Alliance (CEAR Document #398):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Additional information provided by the VFPA:** Transport Canada is the federal lead in regulating marine shipping in Canada, and other federal departments such as the Canadian Coast Guard, ECCC, DFO, and NRC have key roles that enhance marine safety and security, influence marine shipping activities, and help protect the marine environment. Transport Canada's Response to the Review Panel's April 4, 2018 Information Requests provides a whole-of-government overview of activities undertaken by the Government of Canada related to spill management.	**Transport Canada Response to the Review Panel's April 4, 2018 Information Requests (CEAR Document #1204)**
CT-23.9	Asked if there will be timely and adequate salvage capability provided for a container vessel threatened or stricken with structural failure and needing hull patching and/or container cargo removal? If yes, will the salvage services be from a company sourced internationally, or will services be provided by a salvor representative whose office resides in B.C. and has repositioned equipment strategically located for rapid deployment? What will the timelines be for each salvage service (stability analysis, fire-fighting, hull patching, towing, cargo/fuel removal, shore	13-Jan-2016, Letter to the CEA Agency from Cowichan Tribe on behalf of Cowichan Nation Alliance (CEAR Document #385)	**12-May-2016, Letter from the CEA Agency to Cowichan Nation Alliance (CEAR Document #398):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Additional information provided by the VFPA:** Transport Canada is the federal lead in regulating marine shipping in Canada, and other federal departments such as the Canadian Coast Guard, ECCC, DFO, and NRC have key roles that enhance marine safety and security, influence marine shipping activities, and help protect the marine environment. 	clean-up) within the marine study area?				
CT-23.10	Asked if there will be planning and collaboration by Transport Canada with the Cowichan Nation Alliance on potential places of refuge within our Traditional Territory Stated that if yes, what are Transport Canada's intentions and approaches?	13-Jan-2016, Letter to the CEA Agency from Cowichan Tribe on behalf of Cowichan Nation Alliance (CEAR Document #385)	**12-May-2016, Letter from the CEA Agency to Cowichan Nation Alliance (CEAR Document #398):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Additional information provided by the VFPA:** Transport Canada's response to information request TC IR-07 discusses planning and collaboration in the development of new places of refuge. In its response, Transport Canada notes it "recently led a review and update of the Pacific regional POR [place of refuge] plan. The plan provides guidance in regional POR planning and decision-making for federal, provincial, First Nations, municipal and non- government partners, and includes a more comprehensive and cooperative mechanism for risk assessment and decision-making. As the federal government retains responsibility for marine shipping, if the urgency of the situation requires immediate action, Transport Canada and Canadian Coast Guard will initiate action under the *Canada Shipping Act, 2001* and engage with other partners (e.g., Province of BC, Public Safety Canada, Parks Canada, Environment and Climate Change Canada, First Nations, municipalities) as soon as possible thereafter using the plan, including the Incident Command System and Unified Command. Under the Oceans Protection Plan, places of refuge engagement will be expanded to the rest of the Pacific coast to enhance the plan with new sub-regional annexes, including for the South Coast, summarising the navigation criteria, in balance with the environmental, socio-economic and cultural values of First Nations and local communities that may be exposed to some risk from a POR decision. These new annexes will modify and/or update current pre-surveyed places of refuge, from the existing regional plan dated 2009. It should be noted that "pre-surveyed" doesn't mean "pre-designated". Actual assignment of a place of refuge anchorage is undertaken in accordance with this plan, using a cooperative risk assessment and decision-making process whenever time and operational imperatives allow. Engagement with other First Nations and coastal communities will ensure these annexes are developed in a balanced and fully informed manner."	**TC IR-07 (CEAR Document #982) from Transport Canada to the Review Panel re: Response to Information Requests issued by the Review Panel on May 10, 2017**
CT-23.11	Asked if there are regions and periods whereby sea conditions for daylight oil spill and/or container-debris response are not safe or ineffective within our Traditional Territory. If yes, what would be the frequency of limiting factors such as: waves, wind, fog, currents, etc. within the marine study area?	13-Jan-2016, Letter to the CEA Agency from Cowichan Tribe on behalf of Cowichan Nation Alliance (CEAR Document #385)	**12-May-2016, Letter from the CEA Agency to Cowichan Nation Alliance (CEAR Document #398):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Additional information provided by the VFPA:** Transport Canada is the federal lead in regulating marine shipping in Canada, and other federal departments such as the Canadian Coast Guard, ECCC, DFO, and NRC have key roles that enhance marine safety and security, influence marine shipping activities, and help protect the marine environment. 	determination and emergency preparedness purposes, what direction does Transport Canada provide to the shipping industry and for federal impact assessments in defining the nature, scale and scope of major vessel casualty's consequences?				
CT-23.13	Asked if heavy fuel oils (bunker) used by the project's container vessels - if spilled in BC's marine temperate waters - submerge (over wash) and/or sink anywhere within the marine study area? If yes, then what is the current capability within industry and government with regards to having specialized equipment and trained personnel to realistically track and recover such oil? How is this specialized equipment and operations evaluated by regulatory agencies?	13-Jan-2016, Letter to the CEA Agency from Cowichan Tribe on behalf of Cowichan Nation Alliance (CEAR Document #385)	**12-May-2016, Letter from the CEA Agency to Cowichan Nation Alliance (CEAR Document #398):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in MSA Section 10.4:** MSA Appendix 10-B provides qualitative evaluations of the physical fate and transport of potential spills. The evaluation focuses on the Boundary Passage region where the probability of an accident or malfunction and associated spill to the marine environment is greater and the environmental consequence likely higher. The identified residual adverse environmental effects are unlikely to occur, because of the very low probability of the accident scenarios. MSA Section 10.4 discusses existing emergency response mechanisms and arrangements with Response Organisations within the spatial extent of marine shipping associated with the Project. MSA Section 10.4.4.1 specifically discusses the capabilities of WCMRC, the Response Organisation within the marine shipping area. WCMRC maintains a team of full-time and part-time employees, and trains on average 150 to 200 marine contractors and fishers in spill response each year. In addition to formal training, WCMRC conducts a program of equipment deployment and desktop exercises over the three-year certification cycle. WCMRC meets the equipment requirements for certified Response Organisations by maintaining the following: • A dedicated fleet of specialised oil spill response vessels, with a combined skimming capacity of 468 tonnes/hour; • More than 35,500 m of boom; • The capacity to clean-up 1,500 m of shoreline/day; • 8,100 tonnes of primary storage capacity; • Four sweep systems for on-water oil collection; • Incident Command Post kits containing all the materials and equipment required to establish and operate a complete Incident Command Post. Three of these kits are currently stored in trailers ready to be mobilised in Burnaby, Duncan, and Prince Rupert, B.C.; • A communications network that includes fixed and portable repeaters and a mobile communications vehicle for supporting remote operations; • Equipment or Office warehouses in Burnaby, Duncan, and Prince Rupert; and • Equipment caches in Haida Gwaii, Kitimat, Shearwater, Port Hardy, Campbell River, Sunshine Coast, Port Alberni, Nanaimo, Deltaport, Fraser River, and Esquimalt.	**MSA** 10.4 Mitigation Measures 10.4.4.1 Western Canada Marine Response Corporation Capabilities Appendix 10-B Marine Fate of Shipping Spill-type Accidents
CT-23.14	Asked if there will be a requirement to heat recovered heavy bunker fuels in BC's temperate waters in order to facilitate its transfer from recovery vessels to transport barges then to land for disposal? If yes, then what is the current capability in industry and government with regards to having specialized equipment and trained	13-Jan-2016, Letter to the CEA Agency from Cowichan Tribe on behalf of Cowichan Nation Alliance (CEAR Document #385)	**12-May-2016, Letter from the CEA Agency to Cowichan Nation Alliance (CEAR Document #398):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Additional information provided by the VFPA:** Transport Canada is the federal lead in regulating marine shipping in Canada, and other federal departments such as the Canadian Coast Guard, ECCC, DFO, and NRC have key roles that enhance marine safety and security, influence marine shipping activities, and help protect the marine environment. Table 24: Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Lands and Resources for Traditional Purposes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
CT-24.1	Concerned that the community profile for Cowichan Tribes does not include their Aboriginal interests in the mainland, including the Project area. Concerned that the description of Cowichan Nation Alliance's members' historical village (Tl'uqtinus) and use of the area is inaccurate and not respectful. Stated that Cowichan Nation Alliance will review the information and identify information gaps. Provided a list of recommended revisions to EIS Section 32.0.	01-Aug-2014, Letter from Cowichan Tribes 11-Dec-2014, Health & Aboriginal Rights Workshop – Cowichan Nation Alliance 15-Jan-2015, Letter from the Cowichan Nation Alliance	**11-Dec-2014, Workshop:** Stated that the information presented is an excerpt from the Kennedy (2014) report. Stated that the information could be made clearer. Requested additional clarification in writing from the Cowichan Nation Alliance. **25-Mar-2015, Letter from the VFPA to the Cowichan Nation Alliance:** Responded to the Cowichan Nation Alliance's requested revisions and demonstrated how they had been considered in the draft.	**Addressed in EIS Appendix 7.2-B (#178):** The VFPA provided draft summaries of past and current use and community information within EIS Section 32.0 for review by each Indigenous group and comments received were incorporated. EIS Section 32.1.1.5 presents Stz'uminus First Nation's community profile information. EIS Section 32.2.4.5 presents information in relation to Tl'uqtinus. **Additional information provided by the VFPA:** On April 24, 2014, the VFPA and Cowichan Nation Alliance, which at that time consisted of Cowichan Tribes, Penelakut Tribes, Halalt First Nation, Stz'uminus First Nation, and Hwlitsum, signed a funding agreement to support a RBT2-specific use study. On July 11, 2014, the VFPA provided Cowichan Tribes with a draft of the Community Profile Extract for the opportunity to review and provide comments. Comments were received from Cowichan Tribes on August 1, 2014. On October 16, 2014, the Cowichan Nation Alliance provided the VFPA with a report titled *Port Metro Vancouver: Roberts Bank Terminal 2: Cowichan Nation Alliance Current and Planned Use.* The VFPA met the Cowichan Nation Alliance on December 11, 2014 to provide information regarding the assessment of potential Project effects and cumulative effects on Aboriginal and Treaty Rights and Related Interests and Current Use of Lands and Resources for Traditional Purposes; and to identify any additional information to inform the assessment. The presentation and discussion included content regarding the proposed methodology for this assessment, the VFPA's understanding of existing conditions, based on the information provided by the Cowichan Nation Alliance, and preliminary conclusions of the assessment. On December 9, 2014, the VFPA provided the Cowichan Tribes with an advance draft of the existing conditions section for "Potential or Established Aboriginal and Treaty Rights and Related Interests, and including current use of lands and resources for traditional purposes" of the EIS. The VFPA requested that Cowichan Tribes confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final EIS. Comments on the draft sections were received from the Cowichan Nation Alliance on January 15, 2015.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.1.1.6 Cowichan Tribes 32.2.4.5 Cowichan Nation Alliance (Cowichan Tribes, Halalt First Nation, Penelakut Tribe, Stz'uminus First Nation)

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				On March 25, 2015, the VFPA provided the Cowichan Nation Alliance with a table outlining all Cowichan Nation Alliance's comments on the draft sections, responses to each comment from the VFPA, and a description of subsequent changes made to the sections in the EIS.	
CT-24.2	Stated that the VFPA is always stating that the Project will have no impacts and is not interested in mitigating effects.	11-Dec-2014, Health & Aboriginal Rights Workshop - Cowichan Nation Alliance	**11-Dec-2014, Workshop:** Stated that the VFPA is open to hearing suggestions for mitigation measures. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#5):** The EIS considers clear, enforceable measures that are technically and economically feasible that would mitigate any adverse effects of the Project, as required by the *EIS Guidelines*. The approach to considering mitigation measures for adverse effects is described in EIS Section 8.0. The proposed approach for mitigation to address Project-related effects to marine biophysical VCs is described in EIS Section 17.0. **Addressed in EIS Appendix 7.2-B (#197):** The VFPA has adopted the use of the following mitigation hierarchy to address Project effects: 1. Avoidance, such as through Project placement and design, and adherence to fisheries-sensitive windows; 2. Reduction, such as through the implementation of standard management practices and Environmental Management Plans; and 3. Offsetting, which involves the creation and enhancement of biophysical habitats that support species of the Roberts Bank ecosystem. Marine sub-components or representative species that undergo decreases in productivity will be offset to the extent feasible using onsite offsetting.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 8.0 Effects Assessment Methods 8.1.6 Mitigation Measures 17.0 Mitigation for Marine Biophysical Valued Components 17.1 Avoiding Potential Effects 17.2 Reducing Potential Effects 17.3.2 Offsetting Framework 17.5 Mitigation Summary for Potential Marine Biophysical Valued Component Productivity Losses
CT-24.3	Concerned that the timing and funding offered by the VFPA to support a TUS study was inadequate. Stated that the VFPA was not provided with the whole breadth of information related to current use, given the timeline and funding provided.	11-Dec-2014, Health & Aboriginal Rights Workshop - Cowichan Nation Alliance	**11-Dec-2014, Workshop:** Explained that if the Current Use study had not been provided to the VFPA, the authors would have been relying on other sources of information, and there may not have been any content in the Current Use report. Stated that there is a lot of value to what is provided by Indigenous groups. If there are major concerns with the way information is being presented in terms of conclusions or content, the VFPA invites Cowichan Nation Alliance to comment.	**Addressed in EIS Appendix 7.2-B (#175):** The VFPA provided funding to the specified Indigenous groups to support consultation. Additionally, the VFPA provided funding to support completion of traditional use studies to these Indigenous groups and all groups provided a traditional use study. Further information, provided during fall 2014 consultation and in writing, has been incorporated into the EIS. The VFPA will continue to consult with appropriate Indigenous groups and there will be further opportunities to provide information through the CEA Agency process.	**EIS** 7.0 Engagement and Consultation Appendix 7.2-B Aboriginal Groups Interests and Issues Table 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes
CT-24.4	Concerned that current use assessment precludes an assessment of future use. Stated that commercial harvesting, government regulations and legislations have made participation in commercial fishing challenging.	11-Dec-2014, Health & Aboriginal Rights Workshop – Cowichan Nation Alliance	**11-Dec-2014, Workshop:** Stated that the rights portion (EIS Section 32.0) of the assessment incorporates past use as well as interest in future use.	**Addressed in EIS Appendix 7.2-B (#174):** The methods used to assess the potential effects of the Project on Current Use are consistent with existing federal guidance, including the *EIS Guidelines* issued by the CEA Agency.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including

Cowichan Tribes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	Stated that Cowichan Nation Alliance plans to be fishing in the Project area in the future. Stated that the Cowichan Nation Alliance will supply information about how they see future use fitting into the assessment.		**01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	The rationale for the determination of negligible residual effects to Current Use is included in the EIS. Information sources used in EIS Section 32.0 are listed in EIS Section 32.2.3, with Project-specific studies appearing in EIS Section 32.2.3.1. A full list of references cited appears in EIS Section 32.4. **Addressed in response to IR10-26:** The VFPA's response to IR10-26, as requested by the Review Panel, discusses potential effects of the proposed Project on the reasonably foreseeable future Current Use activities that have been identified by Indigenous groups.	Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Lands and Resources for Traditional Purposes 32.2.3 Information Sources 32.2.3.1 Project-Specific Studies. 32.3 Potential Adverse Impacts on Aboriginal and Treaty Rights and Related Interests Analysis 32.4 Existing Conditions ***Updated EIS Guidelines*** **Information Requests** Response to Sufficiency Information Request #26 (IR10-26)
CT-24.5	Concerned that Draft Report of Current Use does not include cumulative effects.	09-Sep-2015, Letter to the VFPA from Cowichan Tribes on behalf of Cowichan Nation Alliance	**02-Oct-2015, Letter from the VFPA to Cowichan Tribes cc: Stz'uminus First Nation, Halalt First Nation, Penelakut Tribe:** *"The document shared by the VFPA on July 27, 2015 included a draft summary of [Cowichan First Nation's] current use in the marine shipping study area, and therefore did not include accidents and malfunctions or potential effects. These topics will be addressed in the Report to be submitted to the [CEA Agency] in the fall of 2015. For more information regarding factors considered in the assessment of effects of marine shipping associated with the Project, please see the Marine Shipping Overview document shared with [Cowichan First Nation] on May 26, 2015, or the updated EIS guidelines, issued by [the CEA Agency] on April 17, 2015."*	**Addressed in MSA Appendix 5-B (#23):** The approach to the cumulative effects assessment is provided in MSA Section 6.0. Each IC and VC assessment section considers cumulative changes and cumulative effects to which the Project contributes. This entails consideration of residual effects of routine marine shipping associated with the Project, if any such effects are predicted, in combination with effects of other projects and activities that have been or will be carried out. MSA Section 9.5 describes how Current Use activities have been affected by other projects and activities that have been carried out. As residual effects to Current Use as a result of marine shipping associated with the Project are not predicted, an assessment of future cumulative effects was not carried out.	**MSA** Appendix 5-B Aboriginal Issues and Interests 6.0 Effects Assessment Approach 6.7 Cumulative Effects Assessment 7.1 through 9.4 (All IC and VC assessments) 9.5 Current Use of Lands and Resources for Traditional Purposes, and Aboriginal and Treaty Rights
CT-24.6	Concerned that the Draft Report of Current Use does not include effects from malfunctions or accidents.	09-Sep-2015, Letter to the VFPA from Cowichan Tribes on behalf of Cowichan Nation Alliance	**02-Oct-2015, Letter from the VFPA to Cowichan Tribes cc: Stz'uminus First Nation, Halalt First Nation, Penelakut Tribe:** *"The document shared by the VFPA on July 27, 2015 included a draft summary of [Cowichan First Nation's] current use in the marine shipping study area, and therefore did not include accidents and malfunctions or potential effects. These topics will be addressed in the Report to be submitted to the [CEA Agency] in the fall of 2015. For more information regarding factors considered in the assessment of effects of marine shipping associated with the Project, please see the Marine Shipping Overview document shared with [Cowichan First Nation] on May 26, 2015, or the updated EIS guidelines, issued by [the CEA Agency] on April 17, 2015."*	**Addressed in MSA Appendix 5-B (#87):** MSA Section 10.0 includes consideration of a collision scenario between a container ship and a smaller vessel such as a fishing vessel. Potential effects of such an event are assessed for VCs marine commercial use, outdoor recreation, human health, and Current Use. MSA Section 9.5 considers the risk of collision and perceptions of safety. MSA Section 10.0 considers plausible worst-case spill scenarios. **Addressed in MSA Section 10.0:** MSA Section 10.5.13 assesses the potential effects on Current Use and potential impacts on the ability to exercise asserted or established Aboriginal and treaty rights resulting from accidents or malfunctions arising from marine shipping associated with the Project.	**MSA** Appendix 5-B Aboriginal Issues and Interests 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4 Existing Conditions 9.5.5.1 Negligible Effects of Vessel Transit on Current Use 9.5.5.2 Potential Effects of Vessel Transit on Current Use 10.0 Potential Accidents or Malfunctions 10.5.9 Human Health 10.5.10 Marine Commercial Use

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				The assessment for the plausible worst-case spill scenario concluded that, with the exception of human health, measurable residual adverse effects are predicted for all VCs. In all cases, the identified residual adverse effects of a spill are unlikely to occur, because of the very low probability of an accident or malfunction that could result in a spill. With the exceptions of residual effects on marine mammals (southern resident killer whale), marine commercial use (guided sport fishing and marine-based tourism sub-components), outdoor recreation, archaeological and heritage resources, and Current Use, adverse residual effects were considered not significant. A serious residual adverse impact on the ability of Indigenous groups to exercise Aboriginal and treaty rights in areas overlapping or near the hypothetical spill area would be expected in the event of such a spill. The plausible worst-case collision scenario has the potential to result in measurable residual adverse effects on human health, marine commercial use, outdoor recreation, Current Use, and asserted or established Aboriginal and treaty rights. In all cases, the identified residual adverse effects of a collision are unlikely to occur, because of the very low probability of collision. The assessment concluded that residual adverse effects are expected to be not significant for marine commercial use and outdoor recreation, but significant for human health. For Current Use, the residual effect could range from not significant to significant, depending on the capacity of the affected Indigenous group to continue to undertake Current Use. In the event of a collision between a vessel engaged in traditional use activities and a container ship, a minor to serious adverse residual impact on the ability of the affected Indigenous group to exercise Aboriginal and treaty rights associated with those activities would be expected. The identified residual adverse effects of a collision are unlikely to occur, because of the very low probability of collision.	10.5.11 Outdoor Recreation 10.5.13 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights
CT-24.7	Concerned that Draft Report of Current Use emphasizes Cowichan activities in the international shipping lanes only.	09-Sep-2015, Letter to the VFPA from Cowichan Tribes on behalf of Cowichan Nation Alliance	**02-Oct-2015, Letter from the VFPA to Cowichan Tribes cc: Stz'uminus First Nation, Halalt First Nation, Penelakut Tribe:** *"Your letter additionally includes an expression of concern related to the VFPA's definition of the [marine shipping area]. The [marine shipping area] is defined to include activities that take place between the 12 nautical mile limit of Canada's territorial sea to the limit of the VFPA's care and control. The [marine shipping area] is defined more broadly than the international shipping lane, and is*	**Addressed in MSA Section 9.5:** The spatial boundaries for the assessment are summarised in MSA Table 9.5-1 and shown in MSA Figure 9.5-1 through MSA Figure 9.5-11. The LAA for each Indigenous group was selected to conservatively define the area within which Project-associated shipping has the potential to affect the Current Use activities of that Indigenous group. The RAA for each Indigenous group was established to provide a regional context for that Indigenous group	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights

Cowichan Tribes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			intended to include areas that could potentially be impacted by marine shipping associated with RBT2. It includes the trans-boundary inland marine waters in this area, as well as numerous islands and islets belonging to either the Gulf Islands or San Juan Islands."	for the assessment of effects from Project-associated shipping.	
CT-24.8	Stated that the EIS identifies "Outdoor Recreation" and "Labour Market" as "Valued Components", saying "Valued components are the focus of the environmental assessment for the purposes of evaluating Project-related effects". But the EIS classifies "Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes" as an "Other effects assessment" undertaken "in addition to the assessment of intermediate and valued components". Explain the rationale for this distinction: Why is the Protection of Aboriginal Rights not a Valued Component?	15-Jun-2015, Letter to the CEA Agency from Cowichan Tribes and Stz'uminus First Nation (CEAR Document #242)	**13-Oct-2015, Letters from the CEA Agency to Cowichan Tribes (CEAR Document #306):** *"This appears to be an item better addressed to [the VFPA] given that they have determined how to determine and characterize valued components. The Agency did not request additional information for this item since there is already some information provided in the EIS. The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in EIS Section 32.1:** Section 32.1 of the EIS explains that the assessment of the current use of lands and resources for traditional purposes (Current Use) is subject to different requirements in the EIS Guidelines than the assessment of potential impacts on the exercise of asserted or determined Aboriginal and treaty rights (pp. 32-1 to 32-2). **Additional information provided by the VFPA:** The identification of a component as a "Valued Component" (VC) is based on the definition of environmental effects in Section 5 of CEAA 2012, not on whether a component is valued. The distinction between the assessment of environmental effects defined under Section 5 of CEAA 2012 versus the assessment of potential impacts to Aboriginal and treaty rights comes down to statutory versus common law requirements, which are reflected in the structure of the EIS Guidelines. Section 5 of CEAA 2012 identifies factors for which environmental effects must be assessed under that statute, including under subsection 5(1)(c), which relates to the effects of a change to the environment on Aboriginal people. If residual effects to these factors are identified, the significance of these residual effects must be determined, and cumulative effects assessed, per Section 19(1) of CEAA 2012. The EIS Guidelines identified how Section 5 environmental effects were to be assessed in sections 10.1, 11.1, 12.1, and 13.1. The requirements for the assessment of Section 5 environmental effects (statutory requirements) do not apply to the assessment of rights. Rather, the requirements for the assessment of potential impacts to the exercise of rights stems from common law requirements relating to the Crown's duty to consult and accommodate. The EIS Guidelines lays out the requirements for the rights assessment in sections 9.2, 10.2, 11.2, 12.2 of the Guidelines, which are different from those relating to Section 5 factors (as above, sections 9.1, 10.1, 11.1, 12.1, 13.1). The determination of significance and assessment of cumulative effects, while required for Section 5 factors per Section 19(1) of CEAA 2012, are not required for rights.	**EIS** 32.1 Component Overview and Regulatory Setting

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				While Current Use is a Section 5 CEAA 2012 factor (under subsection 5(1)(c)), and was accordingly assessed using the VC methodology to meet the requirements of the EIS Guidelines, the VC methodology was not applied to the rights assessment; however, because the Current Use and rights assessments were embedded within the same EIS chapter, but subject to different assessment methods, the chapter was not referred to as a "VC" assessment, even though a part of the chapter was assessed using the VC methodology, and the results drawn forward for application to the rights assessment.	
CT-24.9	Stated that the conclusions of the VFPA's experts that the impacts on the marine environment will be either non-existent or immaterial is at odds with the fact that the terminal will displace at least 117 hectares of marine area that was previously a useable fishing/marine resource. Stated that the impact is always determined to be negligible, and presentations do not acknowledge the impact that will occur.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Shared preliminary results from the environmental assessment, provided information about the proposed mitigation of Project effects, and sought input from members of the Cowichan Nation Alliance. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Section 8.0 Effects Assessment Methods.	**Addressed in EIS Section 8.0:** The methods used to assess the potential effects of the Project, including mitigation measures, residual effects, and cumulative effects, are described in EIS Section 8.0. The environmental assessment for the Project was developed to meet the requirements specified in the *EIS Guidelines* and consistent with existing guidance documents, including the Operational Policy Statement Assessing Cumulative Environmental Effects Under the *Canadian Environmental Assessment Act, 2012* and Determining Whether a Project is Likely to Cause Significant Adverse Environmental Effects, the Cumulative Effects Assessment Practitioners' Guide, and the Guideline for the Selection of Valued Components and Assessment of Potential Effects, among others.	**EIS** 8.0 Effects Assessment Methods 8.1 Environmental Assessment Methods 8.1.6 Mitigation Measures 8.1.7 Characterisation of Residual effects and Context 8.1.8 Determination of Significance of Residual Adverse Effects 8.1.9 Cumulative Effects Assessment

Cowichan Tribes

Table 25: Project Overview and Description

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
CT-25.1	Requested to know how much of Roberts Bank is taken up by the Project.	05-Mar-2013, Meeting with Cowichan Nation Alliance	**05-Mar-2013, Meeting:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#1):** The engineering design of the Project components, as well as construction phase activities are described in detail in EIS Section 4.0. EIS Section 5.0 provides a summary of alternative design options that were considered, and the rationale for the selected option. The proposed Project consists of three main components: 1. A new three-berth marine container terminal; 2. A widened causeway to accommodate additional road and rail infrastructure; and 3. An expanded tug basin to accommodate a second tug operations contractor. The marine terminal would be located immediately west of the existing Roberts Bank terminals, approximately 5.5 km from the east end of the causeway. The terminal would be rectangular in shape, approximately 1,700 m long and 700 m wide, and would support moorage of three container ships on the south side, container storage in the centre, and rail intermodal yards on the north side. The total usable above-water area of the marine terminal would be 108 ha. The Roberts Bank causeway would be widened to link existing road and rail networks to the marine terminal and to accommodate additional road and rail infrastructure. Widening would range from 0 m to approximately 140 m at the widest point. **Addressed in Project Construction Update:** As requested by the RBT2 Review Panel, the VFPA submitted the Project Construction Update (PCU) on June 12, 2018. The report updates EIS Table 4-1, presenting minor changes to the Project footprint. **Additional information provided by the VFPA:** **07-Jan-2014, Letter from the VFPA to Penelakut Tribe:** The total marine footprint of the terminal will be approximately 117 ha. The orientation of the proposed terminal has been designed to facilitate the berthing of container ships, and to minimise disturbance to marine physical components (e.g., water and sediment) processes. The environmental assessment will include an analysis of potential effects on water areas.	**EIS** 4.0 Project Description 4.4.1 Construction-phase Activities 4.2.2 Project Component Details, Widened Causeway 4.2.3 Expanded Tug Basin 5.0 Alternative Means of Carrying out the Project Appendix 7.2-B Aboriginal Groups Interests and Issues Table **Project Construction Update (PCU; CEAR Document #1210)**

Cowichan Tribes

Table 26: Project Benefits

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
CT-26.1	Asked what is being proposed for accommodation. Recalled that accommodation for the Deltaport Third Berth (DP3) Project was extended to Musqueam and Tsawwassen, with other nations receiving participation funding only. Asked about the revenue from the Project. Interested in discussions around a Mutual Benefits Agreement.	01-Nov-2013, Meeting with Cowichan Nation Alliance 11-Dec-2014, Health & Aboriginal Rights Workshop – Cowichan Nation Alliance 16-Jan-2015, Letter to the VFPA from Cowichan Tribes on behalf of Cowichan Nation Alliance 10-Nov-2015, Meeting with Cowichan Nation Alliance 18-Apr-2017, Chief & Council Meeting - Cowichan Nation Alliance	**01-Nov-2013, Meeting:** Stated that the VFPA will provide the Cowichan Nation Alliance with more information regarding economic opportunities at a later date. **11-Dec-2014, Workshop:** Noted interest in joint venture partnership and revenue sharing. Stated that this will be an ongoing discussion. **10-Nov-2015, Meeting:** Recorded comment for consideration by Project team. **18-Apr-2017, Meeting:** Discussed the development of a mutual benefits agreement with Cowichan Nation Alliance and asked for input on what could be included – business, contracting, employment, etc. **16-Jun-2017, Letter from the VFPA to Cowichan Tribes:** "Further to discussions at our meeting on April 18, 2017, the VFPA is interested in initiating discussions with Cowichan Tribes regarding potential legacy benefits from the Project, Legacy benefits are intended to benefit Aboriginal groups if the Project proceeds, and would be over and above the economic benefits resulting from the Project. Examples of types of legacy benefits are: restoring fisheries, training, funding cultural initiatives, enhancing environmentally sensitive areas or revitalizing aquaculture. As we discussed with you, it is our intent to develop this concept into a plan that reflect the interests, objectives and priorities of Aboriginal groups involved in the RBT2 Project. We welcome input regarding potential legacy benefits for Aboriginal groups that could be provided as part of the Project. With that in mind, we request a meeting with Cowichan Tribes to hear about your community's priorities in relation to this funding. In addition to general legacy benefits, the VFPA is interested in entering into direct discussions with Cowichan Tribes regarding a potential mutual benefits agreement ("MBA') for the Project."	**Addressed in EIS Appendix 7.2-B (#112):** Opportunities for training and employment opportunities related to the Project are described in EIS Section 32.3.3. As accommodation for any potential effects to specified Indigenous groups' ability to exercise their Aboriginal rights, the VFPA proposes to assist these Indigenous groups in accessing opportunities resulting from the Project. In addition to making contracting opportunities available to specified Indigenous groups, the VFPA will ensure that construction employment opportunities are also made available. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs. Through ongoing engagement, the VFPA will seek input from these Indigenous communities with respect to plans to ensure access to Project-related benefits. The VFPA has consulted and will continue to engage with Indigenous groups regarding opportunities to benefit economically and socially from the Project. **Additional information provided by the VFPA:** Stz'uminus First Nation, Halalt First Nation, and Cowichan Tribes have agreed to negotiate a Mutual Benefits Agreement collectively. Penelakut Tribe is negotiating with the VFPA separately. Discussions include opportunities for skills, training, employment and contracting. Discussions regarding Legacy Benefits are also ongoing.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table
CT-26.2	Interested in skills training and employment opportunities. Concerned with the challenges of accessing employment opportunities due to location and educational attainment. Requested for an early list of procurement and employment opportunities. Concerned with the current lack of Project-specific employment information and asked if that information will be determined before the RFP is issued for the terminal operator.	01-Nov-2013, Meeting with Cowichan Nation Alliance 17-Jun-2014, Technical Working Group Meeting #4 03-Jul-2014, Aboriginal Groups Valued Components Workshop #2 11-Dec-2014, Health & Aboriginal Rights	**01-Nov-2013, Meeting:** Referred to the InterVISTAS Study and how there is information on the jobs contained within that report. Stated that all jobs will not be unionised and that the VFPA cannot even say there will be a union at the RBT2 terminal. That is not a VFPA decision. These are early days and we are about 7 to 10 years out from being finished. There is an opportunity to identify jobs and skills needed to build it. Talked about support businesses, direct and indirect jobs such as: trucking, logistics centres, and rail business. There is an opportunity to identify jobs and to look at long-term opportunities around employment. Committed to prepare a written response regarding job opportunities, skills, and training.	**Addressed in EIS Appendix 7.2-B (#215):** During a five-and-a-half-year construction period, the Project would generate significant employment benefits for B.C. Project construction would generate a total of 12,719 person-years of direct, indirect, and induced employment of B.C. workers, and approximately $1 billion in wages: • 4,150 person-years of direct employment, with wages of $494 million; • 6,264 person-years of indirect employment, with wages of $374 million; and • 2,305 person-years of induced employment, with wages of $129 million.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.3.3 Mitigation Measures

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
		Workshop – Cowichan Nation Alliance 10-Nov-2015, Meeting with Cowichan Nation Alliance 18-Apr-2017, Chief & Council Meeting - Cowichan Nation Alliance	**17-Jun-2014, Workshop:** Stated that skills and training requirements will be considered under the proposed labour market VC, and the VFPA is interested in discussing this in more detail. A discussion is needed on the importance of flagging training relevant to upcoming Project-related jobs. The VFPA is aware of the importance of giving communities time to prepare for employment opportunities. **03-Jul-2014, Workshop:** Stated that the VFPA is trying to access the historical data, in relation to Indigenous versus non-Indigenous employment related to port activities. Stated that the VFPA does have data on what we call labour force characteristics (age, educational level, skill training level, in what particular industries the Indigenous workforce is working). This helps us profile the Indigenous population generally within our study area, which is the area that we are concerned about. Stated that ultimately the goal is to be able to present what we call benefit enhancement recommendations, that is linked integrally to the labour market strategy that will be put forward through the Project, that not only talks quantitatively about how many jobs, but also how, and what sort of target initiatives could be put forward to enable certain segments of the population to take advantage. **11-Dec-2014, Workshop:** Asked for information on the benefits and opportunities the Cowichan Nation Alliance may be interested and noted that discussions are just beginning. **10-Nov-2015, Meeting:** Recorded comment for consideration by Project team. **12-May-2016, Letter from the VFPA to Cowichan Tribes:** Enclosed an Information Sheet specific to Employment. Stated that the VFPA would like to meet to discuss employment opportunities related to the Project. **18-Apr-2017, Meeting:** Discussed the development of a mutual benefits agreement with Cowichan Nation Alliance and asked for input on what could be included – business, contracting, employment, etc. **16-Jun-2017, Letter from the VFPA to Cowichan Tribes:** "Further to discussions at our meeting on April 18, 2017, the VFPA is interested in initiating discussions with Cowichan Tribes regarding potential legacy benefits from the Project, Legacy benefits are intended to benefit Aboriginal groups if the Project proceeds, and would be over and above the economic benefits resulting from the Project. Examples of types of legacy benefits are: restoring fisheries, training, funding cultural initiatives, enhancing environmentally sensitive areas or revitalizing aquaculture. As we discussed with you, it is our intent to develop this concept into a plan that reflect the interests, objectives and priorities of Aboriginal groups involved in the RBT2 Project.	Of the Project's direct spending on materials, goods, and services for construction, approximately $862 million, or an average of $157 million per year, would be spent on materials, goods, and services in B.C. An additional $482 million would be spent on production inputs to make or provide the direct materials, goods, and services. The total gross revenues for businesses in B.C. supplying materials, goods, and services for Project construction is estimated as $1.3 billion, with $837 million of this revenue accruing to businesses in Metro Vancouver. During the operation phase, Project activities on the marine terminal, widened causeway, and expanded tug basin would generate an annual total of 1,553 person-years of direct, indirect, and induced employment, and total wages of approximately $185 million: • 928 person-years of direct employment connected to terminal operations, with wages of approximately $153 million; • 625 person-years of indirect and induced employment to support terminal operations, with wages of approximately $32 million. During the operation phase, the annual average goods and services revenues for B.C. due to terminal operations spending are estimated at $23.3 million with an additional $10.0 million in goods and services revenues for upstream supply industries. The total gross revenues for businesses supplying B.C. materials, goods, and services for terminal operations are estimated as $33.3 million annually. Approximately $31 million of this revenue would accrue to businesses in Metro Vancouver. The VFPA proposes to assist Semiahmoo First Nation, Tsleil-Waututh Nation, Stz'uminus First Nation, Cowichan Tribes, Halalt First Nation, Lake Cowichan First Nation, Lyackson First Nation, Penelakut Tribes, Hwlitsum, and Métis Nation British Columbia in accessing potential economic opportunities resulting from the Project, including contracting opportunities as well as construction employment opportunities. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs. To support the development and implementation of plans to facilitate access to such Project-related benefits, the VFPA will continue engagement, initiated in December 2014. Opportunities for Indigenous training and	34.0 Benefits to Canadians 34.2 Benefits of the Project 35.0 Effects Assessment Summaries Table 35-2 Proposed Mitigation Measures and Commitments

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			We welcome input regarding potential legacy benefits for Aboriginal groups that could be provided as part of the Project. With that in mind, we request a meeting with Cowichan Tribes to hear about your community's priorities in relation to this funding. In addition to general legacy benefits, the VFPA is interested in entering into direct discussions with Cowichan Tribes regarding a potential mutual benefits agreement ("MBA') for the Project.”	employment opportunities related to the Project are described in EIS Section 32.3.3. **Addressed in EIS Appendix 7.2-B (#112):** As accommodation for any potential effects to specified Indigenous groups' ability to exercise their Aboriginal rights, the VFPA proposes to assist these Indigenous groups in accessing opportunities resulting from the Project. In addition to making contracting opportunities available to specified Indigenous groups, the VFPA will ensure that construction employment opportunities are also made available. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs. Through ongoing engagement, the VFPA will seek input from these Indigenous communities with respect to plans to ensure access to Project-related benefits. **Additional information provided by the VFPA:** Stz’uminus, Halalt First Nation, and Cowichan Tribes have agreed to negotiate a Mutual Benefits Agreement collectively. Penelakut Tribe is negotiating with the VFPA separately. Discussions include opportunities for skills, training, employment and contracting.	

Cowichan Tribes

Table 27: Surficial Geology and Marine Sediment – Intermediate Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
CT-27.1	Asked about the effects of truck traffic on sediment along the causeway with respect to contaminants.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#202):** There is not anticipated to be a Project interaction between air emissions from truck traffic on the causeway, and uptake of contaminants in soils, plants, or species relying on soils and plants. Rationale for this conclusion is included in EIS Appendix 27-A.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 27.0 Human Health Appendix 27-A Air Quality HHRA Technical Report
CT-27.2	Asked about potential heavy metals, PCBs, hydrocarbons, contaminants, and pollutants in sediment along the causeway and around the Project area. Asked which contaminants the sediment samples tested for and for the baseline results. Asked if the conclusions of the assessment are based on the averages of those samples. Concerned about the potential effects on clams and other shellfish.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** There were approximately 57 different metals the samples were tested for, and stated that the full list will be in noted in the EIS. Slide 10 says the assessment is focused on areas where there will be disturbance. The results have not been rolled into an average. The EIS will include a detailed table that shows results for each of the data points. There were no PCBs or hydrocarbons present in the areas that were surface sampled. Sampling at the actual terminal site was of a higher intensity because that is where the greatest disturbance is expected, because of disposal at sea (DAS) and dredging activities. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#55):** As described in the EIS, the physical and chemical characteristics of sediments that will be affected by construction activities, including sediments that will be re-suspended during dredging activities, were investigated and results were compared to recommended quality guidelines and regulatory criteria. Baseline levels of heavy metals and other contaminants along the causeway are included in EIS Section 9.6. Specific listings of studied contaminants—and how the analyses were completed—are available in EIS Appendix 9.6-A. Overall, sediment quality within the study area is within the range of levels expected in an estuarine environment and without local contamination sources. Outcomes from the marine water quality assessment regarding total suspended sediment concentrations associated with dredging and dumping activities informed the assessment of marine vegetation, marine invertebrates, marine fish, marine mammals, coastal birds, ongoing productivity of commercial, recreational, and Aboriginal fisheries, and outdoor recreation. The shellfish consumption human health risk assessment in EIS Appendix 27-C addresses this scenario by examining tissue contaminant concentrations in existing areas of Roberts Bank with higher concentrations of coal dust contaminants. Any construction-related sediment re-suspension will result in sediment contaminant concentrations that are lower than the assessed existing conditions since (i) once re-suspended, the re-settled sediments will be a mixture of the historical deposits and new sediment contributions from Fraser River outflows; and (ii) there is no plausible mechanism for the geochemical focusing of the contaminants of potential concern as a result of the re-suspension scenario. **Addressed in EIS Section 12.6.2.1:** While contaminants are present at Roberts Bank, they are closely associated with fine sediment and have therefore accumulated in locations outside those that will be disturbed by Project activities, such as the upper intertidal zone north of the causeway. No appreciable sediment contamination was observed in Project areas. Because sediments that will be re-suspended and deposited as a result of construction phase activities are not contaminated, changes in contaminant concentrations bioavailable to the food chain are not anticipated. Overall, contaminant re-suspension is not considered to affect marine invertebrate productivity because: (i) there are no Project-	**EIS** 9.6 Physical Setting, Surficial Geology and Marine Sediment Appendix 9.6-A Sediment and Water Quality Characterization Studies 12.5.2 Bivalve Shellfish 12.5.3 Dungeness Crabs 12.6.2.1 Changes in Water Quality Appendix 27-C Human Health Risk Assessment

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				related inputs of contaminants in the LAA; (ii) no appreciable sediment contamination was observed in Project areas; and (iii) where contaminants are present, concentrations are either below applicable thresholds in sediments or below consumption thresholds in bivalve shellfish and Dungeness crab tissue based on rigorous human health risk assessment (EIS Sections 12.5.2.5 and 12.5.3.5). Project-related contamination is therefore unlikely to occur.	
CT-27.3	Concerned with the potential effects of disposal at sea on the sea bed.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Explained that the DAS would occur at 3 locations along the -45 m contour line directly off the berth face of the planned terminal. Stated that the VFPA is working on that matter and it will be included in the EIS. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#55):** Dredging and DAS-related activities are described in the EIS and considered in the assessment of potential effects on marine physical and biophysical components. As described in the EIS, the physical and chemical characteristics of sediments that will be affected by construction activities, including sediments that will be re-suspended during dredging activities, were investigated and results were compared to recommended quality guidelines and regulatory criteria. DAS activities will occur subject to Environment Canada's DAS permit requirements under the *Canadian Environmental Protection Act, 1999*. Outcomes from the marine water quality assessment regarding total suspended sediment concentrations associated with dredging and dumping activities informed the assessment of marine vegetation, marine invertebrates, marine fish, marine mammals, coastal birds, ongoing productivity of commercial, recreational, and Aboriginal fisheries, and outdoor recreation. See EIS Section 9.6.8 and EIS Appendix 9.6-C for more information. **Addressed in Information Request Package 3 Preamble in Support of Responses to IR3-25 to IR3-40:** As noted in in Information Request Package 3 Preamble in Support of Responses to IR3-25 to IR3-40, based on information provided by ECCC (CEAR Document #564), discharge of supernatant containing unsettled fines from the containment dykes during filling is not expected to be subject to DAS permitting. **Addressed in PCU:** As requested by the Review Panel, the VFPA submitted the PCU on June 12, 2018, providing: • Detailed revised Project description, including a revised construction schedule; • Revised Project interaction matrix; • Preliminary details pertaining to the management and timing of dredging activities and the discharge of sediment-laden water; and • Revised assessment of environmental effects as required by the Project modifications. PCU Sections 1.0 and 2.0 describe the changes to the EIS, including updates to specific construction activities, the construction schedule, and relevant Project Description figures and appendices. In PCU Section 3.0, changes or effects resulting from the construction updates on ICs and VCs are described. Overall,	**EIS** 4.0 Project Description 4.4.1 Project Activities, Construction Phase Activities Table 4-5 Source and Quantities of Material Requiring Disposal at Sea Figure 4-21 Intermediate Transfer Pit and Disposal at Sea Candidate Locations Appendix 7.2-B Aboriginal Groups Interests and Issues Table 8.0 Effects Assessment Methods Table 8-1 Intermediate Component and Valued Component Linkages 9.0 Physical Setting 9.6 Physical Setting, Surficial Geology and Marine Sediment 9.6.5 Methods 9.6.6 Surficial Geology and Marine Sediment, Existing Conditions 9.6.8 Future Conditions with the Project Appendix 9.6-C Roberts Bank Terminal 2 Technical Report, Dredging Studies – Dispersion Modelling 9.7 Physical Setting, Marine Water Quality **Information Requests** Information Request Package 3 Preamble in Support of Responses to IR3-25 to IR3-40 – General and Disposal at Sea-related Project Construction Update (CEAR Document #928) **PCU (CEAR Document #1210)**

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				these changes to the environmental assessment resulting from construction updates can generally be summarised as follows: • Reductions in potential adverse changes or effects on ICs, biophysical VCs, social VCs, and Current Use; and • Increases in positive interactions with socio-economic VCs. These beneficial changes to ICs and VCs occur at the level of interactions or potential effects, and in most cases are slight changes, and thus do not affect the overall conclusions made in the EIS, including proposed mitigation, residual effect characterisations, significance determinations, or cumulative effects, as applicable, with one exception. The only component predicted to have a change to residual effects is land and water use, with a reduction of a residual effect on access to Tsawwassen First Nation community lease lands from a measurable non-significant residual effect to a negligible residual effect, due to elimination of the ITP and associated activities.	

Table 28: Underwater Noise – Intermediate Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
CT-28.1	Asked if above-ground noise is transmitted under water.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Above ground noise is not anticipated to propagate into the water to result in behavioural effects to marine mammals and was determined to be a negligible effect.		
CT-28.2	Stated that different species experience different perceptions of noise. Asked how much is known about the different ways species perceive noise. Asked about the effect of impulsive noise events on fish and other marine species.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1 12-Nov-2014 Cowichan Nation Alliance EIS Workshop #2	**22-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. **12-Nov-2014, Workshop:** This topic was discussed during a presentation on underwater noise and vibration. The presentation summarised: • Human generated underwater noise can affect fish and marine mammals (assessed separately as VCs) with representative species for each VC that may experience noise differently; • The VFPA conducted extensive state-of-art field and modeling studies for RBT2, using most up to date science on how different species hear and respond to underwater noise, conducted new studies on what levels of underwater noise may affect southern resident killer whales; • Existing underwater noise conditions relatively high, primarily due to commercial vessel traffic, including ferry traffic; • RBT2 will produce underwater noise (construction and operations); no impulsive noise is planned during construction (i.e., impact piling not anticipated, only vibratory piling); and • Preliminary results of studies indicate RBT2 noise levels will be minor to moderate. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#61):** The scope and methods of the underwater noise study are summarised in the EIS section, and detailed in the supporting appendix. Underwater noise considers the level of underwater sound in the marine environment. An assessment was undertaken to determine potential changes in underwater noise as a result of the Project and focused on construction and operation activities that would produce underwater noise. Modelling was undertaken to predict future underwater noise as a result of construction activities, such as dredging, pile driving, vibro-densification, and operation activities, such as movements of container ships and tug boats associated with terminal approach and departure, and berthing and unberthing. The assessment concludes that: • Underwater noise levels during construction are predicted to be comparable on average to existing levels measured at Roberts Bank, with the exception of some periods when certain activities, such as dredging, pile-driving, vibro-densification, or construction support vessel movement, would occur. • Overall, average underwater noise from Project construction and operation activities is expected to be comparable to average existing levels of underwater noise due to existing high levels, but will at times exceed existing conditions. Underwater noise related to conservative levels of Project commercial vessel movements is predicted to increase over existing underwater noise levels for only approximately 3% of a year for vessel berthing and unberthing, and for approximately 2% of a year for vessel approach and departure. • Future cumulative increases in commercial vessel traffic in the region are expected to make a relatively small incremental contribution to overall underwater noise levels. This prediction reflects the existing high levels of vessel traffic within the study area and the already-dominant contribution of commercial vessel traffic noise to the acoustic environment. The results of the underwater noise assessment were considered in the assessments of marine fish, marine mammals, and coastal birds. An interaction between Project-related underwater noise and marine invertebrates is not anticipated, and therefore was not assessed.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.8 Underwater Noise 9.8.2 Assessment of Purpose and Approach 9.8.6 Underwater Noise, Methods Appendix 9.8-A Construction and Terminal Activity Underwater Noise Modelling Study Technical Report Appendix 9.8-B Regional Commercial Vessel Traffic Underwater Noise Modelling Study Technical Report 13.0 Marine Fish 13.6 Future Conditions with the Project 14.0 Marine Mammals 14.6 Future Conditions with the Project 15.0 Coastal Birds 15.7 Future Conditions with the Project
CT-28.3	Requested more information on the types of mitigations implemented for underwater noise.	03-Jul-2014, Aboriginal Groups Valued Components Workshop #2	**03-Jul-2014, Workshop:** Recorded comment for consideration by the Project team. **12-Nov-2014, Workshop:** This topic was discussed during a presentation on underwater noise and vibration. The presentation summarised mitigation	**Addressed in EIS Section 33.3.7:** The Underwater Noise Management Plan will describe measures to manage underwater noise and over-pressure waves generated during pile driving and other construction activities as necessary to avoid or reduce potential effects on marine mammals, diving coastal birds, and aquatic life. Key components of the plan will	**EIS** 33.3.7 Underwater Noise Management Plan

Cowichan Tribes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			measures to address potential effects of underwater noise during construction. • Project placement and design; • Best management practices and standards; • Industry practices; • Equipment maintenance and noise reduction; • Timing or seasonal windows; • Marine mammal observers and hydrophone; • Monitoring of zones of potential injury or disturbance; and • Onsite juvenile Chinook habitat restoration. **01-Apr-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the EIS, which included EIS Section 33.3.7 Underwater Noise Management Plan.	include use of underwater noise reduction and dampening methods and technologies. The plan will incorporate measures described in Best Management Practices for Pile Driving and Related Operations, prepared by the B.C. Marine and Pile Driving Contractors Association and DFO (2003). Compliance monitoring parameters for underwater noise will be addressed as part of the Construction Compliance Monitoring Plan.	

APPENDIX IR10-01-C7

HALALT FIRST NATION: ISSUES, VIEWS, AND CONCERNS RELATED TO THE PROPOSED PROJECT AND MARINE SHIPPING ASSOCIATED WITH THE PROJECT

Halalt First Nation

Table 1: Air Quality – Intermediate Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-1.1	Asked for clarification on the assertion that air quality is expected to improve while climate emissions increase. Requested additional information on the new air emission standards.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Responded that air quality improves with a decrease in emissions for criteria air contaminants as well as for some traces in organic compounds. Greenhouse gas emissions will be higher in terms of global emissions, so that is what is meant by an improvement in air quality as well as an increase in climate emissions. There will be decreases in emissions both overall and on a per-truck basis because of new, more stringent emission standards for on-road vehicles. The assessment only considers emission reduction measures that have been confirmed. There may well be additional reduction measures in the future that would further contribute to lowering emissions. Future reductions in emissions can be estimated based on expected equipment turnover. The Vancouver Fraser Port Authority's (VFPA) truck licensing system restricts the engine age and emissions standards of vehicles that are allowed to enter VFPA terminals. By 2015, all trucks that access VFPA marine terminals will be required to achieve a 2007 engine emission performance or better. The International Maritime Organization (IMO) is implementing the North American Emission Control Area (ECA), which will be coming into effect in January 2015, requiring the sulphur content in fuel to be no higher than 0.1% for vessels.	**Addressed in EIS Section 9.2.7.1:** Regulatory initiatives for air quality and their incorporation into the assessment of future emissions are described in EIS Section 9.2.7.1. **Addressed in EIS Appendix 7.2-B (#42):** An assessment was carried out to predict potential changes in air quality as a result of Roberts Bank Terminal 2 (RBT2 or Project). The results of the air quality assessment were used in the assessments of human health and current use of land and resources for traditional purposes (Current Use). The assessment modelled Project-related fuel combustion and fugitive dust emission sources during the construction phase, and fuel combustion emission sources during the operation phases, and compared future conditions with the Project to modelled existing conditions and future expected conditions. Existing conditions considered emissions from marine vessels, trains, trucks, vehicles, and cargo handling equipment from the existing Westshore Terminals, Deltaport Terminal, and BC Ferries Terminal, while emissions from industrial, commercial, and residential sources within Delta were represented through measured air quality levels in Tsawwassen. A general trend of decreasing concentrations of contaminants has been observed and is expected to continue in the Lower Fraser Valley for some criteria air contaminants, as well as for some trace organic contaminants. Predicted maximum concentrations were used to conservatively estimate existing conditions and potential changes from the Project. Estimated emissions and predicted ambient concentrations did not account for the inclusion of shore power as part of the Project, which is expected to decrease future emissions from ships at berth, ultimately improving future air quality compared to predicted concentrations. The predicted concentrations also did not account for the switch to the use of liquefied natural gas (LNG) fuel for ferry vessels at the BC Ferries Terminal. The assessment concludes that: • Air quality in the region will improve in the future, with or without the Project, as a result of improvements in engine technologies as older equipment is replaced by newer equipment at the three existing marine terminals, and the use of cleaner fuels. • Cumulative changes, incorporating the Project and other certain and reasonably foreseeable projects and activities, are predicted to be small relative to expected improvements in future ambient air quality levels. • Project construction activities are predicted to cause a small increase in concentrations of some contaminants, but will be mitigated through the use of emission reduction measures to limit fugitive dust emissions and a monitoring program to guide construction activity in the event that ambient air concentration exceed defined criteria threshold levels. • Criteria air contaminant (i.e., carbon monoxide, nitrogen oxides, sulphur dioxide, particulate matter, and ground-level ozone) and trace organic contaminants (i.e., formaldehyde and other contaminants related to fuel combustion) levels are predicted to be below ambient air quality criteria on land, with limited exceptions. The exceptions for predicted nitrogen dioxide levels near the causeway are considered to be an artificially caused by the conservative methods used in the air quality assessment, and are not expected to actually exceed established ambient air quality criteria. • The Project is expected to have a negligible effect on future ozone levels. • Although Project activities would emit black carbon, black carbon is expected to decrease in the future with the Project due to equipment fleet turnover at existing Roberts Bank terminals to newer engines that meet more stringent emission standards for particulate matter.	**Environmental Impact Statement (EIS, CEAR Document #181)** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 9.0 Physical Setting 9.2 Air Quality 9.2.5 Methods Appendix 9.2-A Air Quality Study Main Report Appendix A - Emissions Inventory Appendix B – Existing Air Quality Appendix C - Air Dispersion Modelling Appendix F - Ships Underway 9.2.6 Existing Conditions Table 9.2-4 Air Quality Criteria for Criteria Air Contaminants Table 9.2-5 Air Quality Criteria for Toxic Organic Contaminants 9.2.7 Expected Conditions 9.2.7.1 Regulatory Initiatives 9.2.8 Future Conditions with the Project 9.2.9 Future Conditions with the Project and Other Projects and Activities Appendix 9.2-A Air Quality Study Appendix H – Westshore Coal Dust Assessment

Halalt First Nation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				The Project is not expected to result in any significant adverse effect on human health, including from changes in air quality because air quality is expected to improve. The benefits of existing emission reduction initiatives are realised in the existing emissions monitored at local air quality stations in Metro Vancouver. Future benefits to air quality, such as improvements in engine technology and fuel quality, are described based on their anticipated level of benefit to future air quality emissions, in EIS Section 9.2.7. Through its ongoing Air Action Program*, the VFPA is constantly looking at addressing air quality and climate change, by focusing on the use of technologies and the promotion of operational efficiencies to reduce air emissions from port operations, such as those mitigation measures suggested during consultation. Key components of the Air Action Program include the EcoAction Program, the Northwest Ports Clean Air Strategy, the Landside Air Emissions Inventory, and environmental requirements through the Truck Licensing Program. Information regarding the VFPA's Air Action Program can be found at http://www.portmetrovancouver.com/en/environment/initiatives/Air.aspx. *The Air Action program was renamed to Air, Energy and Climate Action. As part of the Deltaport Third Berth Project (DP3), the VFPA funded the establishment of the Tsawwassen Air Quality Monitoring Station. The location of the station, at Pebble Hill Reservoir located at 411 Milsom Wynd in Delta, was chosen by the Delta Air Quality Monitoring Technical Working Group (composed of representatives from Corporation of Delta, Environment Canada, Metro Vancouver, Tsawwassen First Nation, and the VFPA). The station is comprised of state-of-the-art monitoring equipment including ozone and particulate monitoring technologies. Since this station is part of Metro Vancouver's regional air quality monitoring network, results from the station can be viewed in real-time at www.bcairquality.ca/readings. **Additional information provided by the VFPA:** The analysis of the data from this station indicates that there has been a reduction in both sulphur dioxide (SO_2) and fine particulate matter ($PM_{2.5}$) concentrations measured at this monitoring station after the implementation of the requirements for low sulphur fuels from ships under ECA regulations. For 2010, the levels of carbon monoxide, SO_2, $PM_{2.5}$, and ground-level ozone meet the most stringent of Canadian, provincial, and regional ambient air quality standards or objectives. **Additional response provided by the VFPA:** During operation, Project-related exposures to air emissions are not predicted to result in measurable health effects. During construction, a moderate health effect is predicted for a small area over water between the Westshore and RBT2 terminals, where public access is not likely. Therefore, health effects during construction are unlikely to occur. Air quality will be monitored during construction and operation, and there would be adaptive measures should Project emissions result in exceedance of ambient air quality objectives/criteria.	
HFN-1.2	Asked what impacts will these contaminant levels have on the environment, and what mitigations and/or monitoring will be implemented. Stated that air quality is a major concern and one that must be addressed to the finest details. Stated that criteria air contaminant and trace organic contaminant levels have exceptions that are predicted	15-Jun-2015, Letter to the Canadian Environmental Assessment Agency (CEA Agency) from Halalt First Nation (CEAR Document #253)	**13-Oct-2015, Letter from the CEA Agency to Halalt First Nation (CEAR Document #312):** *"The Agency did not request additional information for this item since there is already some information provided in the EIS. The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in EIS Section 9.2:** EIS Section 9.2 presents modelled results of the Project's changes to air quality, including results related to criteria air contaminants, trace organic contaminants, greenhouse gases, and black carbon. The overall assessment is considered to provide a conservative evaluation of potential changes in air quality resulting from the Project. The implementation of shore power is expected to decrease predicted future emissions during Project operation. The combination of Project-related emissions with emissions from other certain and reasonably foreseeable projects and activities is expected to make a small incremental contribution to overall air quality levels. Future cumulative ambient air quality concentrations are predicted to be below air quality criteria on land, including populated areas. **Addressed in EIS Section 33.0:** The VFPA is committed to developing Environmental Management Plans as mitigation, including a Construction Air Quality and Dust Control Plan and a Construction Compliance	**EIS** 9.2. Air Quality 33.0 Environmental Management Program 33.3 Construction Environmental Management Plans 33.5 RBT2 Follow-Up Program **Information Requests** Response to Sufficiency Information Request #12

Halalt First Nation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	to be below air quality criteria on land.			Monitoring Plan (which will include monitoring of air quality). Details of the monitoring plan, and its links to the proposed RBT2 Follow-Up Program are currently in development by the VFPA, in consultation with regulators and Indigenous groups. **Addressed in response to IR6-37:** The VFPA's response to IR6-37 indicates that to verify effect predictions and demonstrate that air quality standards are being met during the operation phase, monitoring will be conducted using Station T39. Station T39 was specifically established in June 2010 to monitor air quality in relation to the operation of marine terminals at Roberts Bank, stemming from the 2005 air quality assessment conducted for DP3. Station T39 has been shown to be representative of air quality levels for criteria air contaminants (i.e., CO, NO_2, SO_2, O_3, and $PM_{2.5}$) in overland areas at Roberts Bank and on Tsawwassen First Nation Lands (refer to the response to IR6-09 of CEAR Document #1113 for more information). SO_2 monitoring data over the period 2010 to 2016 has shown that ambient levels of SO_2 at Station T39 declined with the introduction of the ECA for sulphur in fuel (as described in the response to IR6-12 of CEAR Document #1188), which indicates that Station T39 provides a good measure of changes in emissions from ships operating at and in the vicinity of Roberts Bank. Details of the operation phase air quality monitoring program will be provided in a sub-plan of the Operation Compliance Monitoring Plan, which will be developed and implemented by the Terminal Operator. The air quality monitoring program is anticipated to include or identify the following basic elements: • Contaminants of potential concern to be monitored and reported on; • Monitoring locations and equipment to obtain air quality concentrations and meteorological data; • Monitoring details, including frequency of data analysis and reporting requirements; • Quality assurance or quality control measures; and Adaptive management measures to be implemented if contaminant levels approach pre-determined levels (i.e., levels to be set below the applicable ambient air quality objective to ensure that the objective is respected).	(IR6-12 of CEAR Document #1188) Response to Sufficiency Information Request #37 (IR6-37 of CEAR Document #1188)

Halalt First Nation

Table 2: Alternative Means of Carrying out the Project

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-2.1	Asked about the process of determining whether the Project is feasible, and whether the decision was made based on only economic and technical factors, or if environmental or cultural impacts were considered.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Responded that in going through the process of selecting the Project location and design, the VFPA has considered environmental effects throughout the design process, and many changes have been made along the way. Stated that the design that has been selected is conceivably acceptable to environmental regulators. Stated that the Panel will determine whether the effects of the Project can be mitigated sufficiently.	**Addressed in EIS Appendix 7.2-B (#2):** The VFPA's approach for identifying and selecting alternatives was undertaken internally. As part of this process, the VFPA reviewed and considered Indigenous input provided as part of the environmental assessment processes for prior projects at Roberts Bank. Alternatives to the Project are described in EIS Section 5.0. The VFPA considered the following alternatives for creating container capacity to meet the forecasted demand, both within and outside of its jurisdiction: • Incremental capacity and efficiency increases are underway or in planning at Deltaport Terminal and Centerm. These projects will help meet short-term container demand to the early 2020s, but would not meet forecasted longer-term requirements. • Lease tenures on properties adjacent to the Vanterm property will persist until at least the late 2020s, and converting them to containers would displace other trade-related activities. If improvements at Vanterm were feasible, expansion would not be anticipated until sometime after 2030, and therefore would not meet the need to deliver additional container capacity required by the mid-2020s. • Larger container ships, such as those visiting Deltaport Terminal, Centerm, and Vanterm, cannot be accommodated in the Fraser River channel due to draught requirements and length (ability to turn around in the river). Fraser Surrey Docks is not expected to be a major source of container capacity to meet demand beyond 2018. • Conversion of the Lynnterm terminal to handle containers is not technically or financially feasible, due to road constraints and conflict with current handling operations. • Development of the VFPA's Fraser Richmond properties to provide large-scale container capacity is not technically feasible due to road and rail capacity constraints and issues with larger container ships in the Fraser River channel. • Planned expansions at the Fairview Terminal in Prince Rupert will help meet short-term west coast container demand to the early 2020s, but will not meet forecasted longer-term requirements. The results of the VFPA's analysis concludes that the Project is the only technically and financially feasible option to meet long-term demand for container capacity on Canada's west coast. Feasibility of the Project will also be determined by the outcome of the environmental assessment process, and the decisions by provincial and federal ministers of the environment. **Addressed in response to IR1-06:** Technical feasibility criteria used to evaluate alternatives to the location, orientation, layout and configuration of the marine terminal at Roberts Bank was based on whether potential environmental effects were deemed to be acceptable by regulators. Generally, alternatives located in subtidal habitat (i.e., deeper waters) were considered favourable as the potential for environmental effects in shallower, intertidal waters would increase the potential for effects to marine invertebrate and fish habitats, and pose a risk to obtaining the permits required for the Project (i.e., Fisheries Act Authorization). Economic feasibility criteria considered construction costs and schedule (including dredge, fill, and soil improvement requirements), as well as operational costs associated with downtime from weather/navigation constraints, yard efficiencies, and maintenance dredging. Options W1 and W2 of the terminal, located west of the existing Roberts Bank terminals were considered to be technically and economically feasible (Table IR1-06-2). An assessment of environmental effects of these alternatives is provided in the VFPA's response to IR1-07.	**EIS** 5.0 Alternative Means of Carrying out the Project 5.3.1 Increase Capacity and Efficiency of Existing Container Terminals within VFPA Jurisdiction 7.0 Engagement and Consultation 7.2.1 Aboriginal Groups Engagement and Consultation, Engagement and Consultation Process Overview Appendix 7.2-B Aboriginal Groups Issues and Interests Table **Information Requests** Response to Sufficiency Information Request #06 (IR1-06 of CEAR Document #897) Response to Sufficiency Information Request #07 (IR1-07 of CEAR Document #897)

Halalt First Nation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-2.2	Requested additional information and asked about the Port Alberni Trans-shipment Hub concept.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Responded that the Port Alberni Port Authority has put forth a proposal that would see the creation of a transshipment container terminal where containers would be unloaded from vessels and transferred to barges for shipping. From there the containers would be [barged to Vancouver and] unloaded from the barges at a terminal and transferred for intermodal transport by truck and rail. It is a concept that has been publicly presented, but its current status is uncertain with respect to economic viability and willingness-interest from industry; it would require a major shift in the way containers are handled on the west coast of North America, [and would still require additional terminal capacity in Vancouver].		

Halalt First Nation

Table 3: Archaeological and Heritage Resources – Valued Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-3.1	Requested more information on beach weirs and historic tidal channels. Concerned that the Archaeological Overview Assessment only considers fish weirs for sturgeon and does not consider other types (i.e., salmon).	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Recorded comment for consideration by Project team. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#154):** Ethnographic information including Indigenous Traditional Knowledge (ITK) suggests that salmon were traditionally caught using methods other than those using wooden stakes. These methods, trawl nets and harpooning, are not likely to have left archaeological evidence if they were used. The potential effects are to "fish trap stakes" in general and consider other species of fish in addition to sturgeon (i.e., salmon).	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 28.0 Archaeological and Heritage Resources 28.5.1.2 Ethnography
HFN-3.2	Concerned about the exclusion of Cowichan Nation Alliance member nations from the scope of the Archaeological Overview Assessment.	04-Mar-2014, Letter to the VFPA from Cowichan Tribes on behalf of Cowichan Nation Alliance 22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**04-Mar-2014:** Recorded comment for consideration by the Project tea. **06-May-2014, Letter from the VFPA to the Cowichan Nation Alliance:** Stated that the purpose of the Archaeological Overview Assessment is not to provide a detailed ethnographic history, but an ethnographic overview of the study area. However, the ethnography section has been revised and also includes a listing of all First Nations that have a potential claim to the study area, according to GeoBC's Consultative Areas Database. The Cowichan Nation Alliance provided the Brealey report to the VFPA in confidence. The VFPA requested permission from the Cowichan Nation Alliance to provide the report to Millennia Research Limited but was denied. Therefore, this information is not included in the Archaeological Overview Assessment. **22-Oct-2014, Workshop:** Stated that Tsawwassen First Nation, Musqueam First Nation, and Hwlitsum provided the VFPA with information about fish weir use on the intertidal flat and that this preliminary assessment was written before more recent information had been received. The VFPA has read the report prepared by Dr. Kennedy and submitted by the Cowichan Nation Alliance regarding historical use, and recalled that information about Halalt use of traps for salmon was provided. The VFPA apologised that information is not reflected in the presentation, and explained this presentation had been prepared prior to reading the report. The scope of the Archaeological Overview Assessment is not meant to cover proof of claim. There is a section covering Current Use that includes a very comprehensive discussion of the interests and use of the Cowichan Nation Alliance, which is much broader than this assessment, which considers the potential physical disturbance of archaeological sites.	**Addressed in EIS Appendix 7.2-B (#151):** The purpose of the archaeological and heritage resources assessment was to determine whether there is potential for archaeological and heritage resources to exist in the assessment area, and to determine any Project-related effects on these resources, if they are present. The assessment was supported by an Archaeology Overview Assessment, which included an ethnographic overview of the area and a review of the potential for undocumented heritage sites to exist in the local assessment area (LAA). The results of the archaeological and heritage resources assessment were considered in EIS Section 32.0. The LAA included the physical footprint of the Project plus a 100 m buffer zone, as well as a zone of coastal-geomorphological influence. The regional assessment area (RAA) considered a four kilometre (km) area around the Project area. No archaeological sites were identified in the LAA, either using the B.C. Archaeology Branch's online heritage registry or through the Archaeological Overview Assessment. If archaeological or historical materials remain in the intertidal area, it is likely that they have been preserved in the sediment layers, if not affected by previous construction. The Project may affect archaeological resources, namely, fish trap stakes, if present in the Project area. Direct effects could result from Project-related construction activities, and indirect effects could result from changes to sediment deposition or erosion. Through mitigation, including excavation of test trenches prior to construction activities and the implementation of an Archaeological Monitoring and Management Plan, potential damage to archaeological resources would be avoided and the opportunity for future archaeological study would be protected. The Project is not expected to result in significant residual effects to archaeological and heritage resources. The Project is not expected to result in any incremental cumulative effects to archaeological and heritage resources. A description of the past use of the Roberts Bank area by Indigenous groups is provided in EIS Section 32.0. The presentation of information on past use of the area in the assessment of archaeological and heritage resources is tailored to those	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 28.0 Archaeological and Heritage Resources 28.2 Selection of Archaeological and Heritage Resources VC 28.3 Assessment Boundaries 28.4 Information Sources 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Land and Resources for Traditional Purposes

Halalt First Nation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			The VFPA committed to take the feedback and information shared and provide it to the teams working on the assessment and writing the reports. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	Indigenous groups whose past uses are directly linked to the type of physical archaeological resources that have the potential to be present in the study area, and have the potential to be affected by the Project. The scope or methods of the archaeological and heritage resources assessment are described in EIS Section 28.0.	
HFN-3.3	Interested in being involved in the Archaeological Monitoring and Management Plan.	15-Jun-2015, Letter to the CEA Agency from Halalt First Nation (CEAR Document #253)	**13-Oct-2015, Letter from the CEA Agency to Halalt First Nation (CEAR Document #312):** *"This is a statement rather than a comment on completeness. Therefore additional information was not requested by the Agency."*	**Addressed in EIS Section 33.3:** To ensure their alignment with all required Project permits, any conditions of approvals, final designs, finalised construction or operation approaches, and site-specific considerations, the Project's Environmental Management Plans are necessarily developed and finalised nearer to the start of the construction and operation phases. The VFPA is intending to consult with the CEA Agency, B.C. Archaeology Branch, and appropriate Indigenous groups in relation to the Archaeological Monitoring and Management Plan. **Addressed in response to IR10-12:** The VFPA's response to IR10-12, as requested by the Review Panel, further discusses the VFPA's proposed approach to engagement and consultation with Indigenous peoples during and after the environmental review.	**EIS** 33.3 Construction Environmental Management Plan **Information Requests** Response to Sufficiency Information Request #12 (IR10-12)

Table 4: Coastal Birds – Valued Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-4.1	Asked whether there is potential for wildlife to confuse day for night due to lights.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Stated that this was considered for birds, and more information would be provided in a later presentation on light. **12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2:** Presented on coastal birds, stating that effects from disturbance (noise, light, vessel movement) can be effectively mitigated. Presented mitigations measures to address lighting impacts, valances to minimise light trespass. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#45):** The potential changes in light that may be caused by the Project, and the potential effects of those changes on valued components (VCs) and on Current Use are considered in the EIS. The results of the light assessment informed the assessments of marine fish, coastal birds, visual resources, and human health, and Current Use. The assessment focused on two aspects of light: • Light trespass, the amount of light that strays from its intended purpose onto neighbouring areas; and • Sky glow, the unwanted illumination of the night sky that affects the visibility of stars. The assessment concluded that: • Overall, the Project is not expected to change the general light environment of the Lower Mainland and the Gulf Islands and no measurable incremental cumulative changes related to light are expected. • Project-related lighting is expected to result in a minimal increase in light trespass levels. • Increases in sky glow levels are expected, but are not anticipated to result in a noticeable change from existing conditions. Suggested mitigations were considered in the effects assessment. Mitigation measures to address effects on visual resources and coastal birds consist of implementation of Environmental Management Plans, including Light Management Plans, for construction and operation phases. The Light Management Plans will describe measures to reduce excess lighting and sky glow, including: • Orienting lights downwards and away from residential and marine areas; • Using shielding to minimise light trespass; • Controlling light levels and limiting light use to areas where activities are occurring; • Where possible, using fixtures that emit light at wavelengths shown to minimise disorienting effects to birds; • During construction, ensuring dredge lighting system shields light from spilling outside the basic working footprint of the dredge; and • During operation, establishing a centralised lighting control system to select lighting where required. **Addressed in EIS Appendix 7.2-B (#99):** A review of documented effects of both natural and artificial light on birds is provided in EIS Section 15.7.2.1. The EIS considers the potential effects of artificial light on coastal birds, including the potential for increased risk of predation on shorebirds by nocturnal raptors (i.e., owls). Overall, the Project is not expected to compromise the productive potential of the local area to support coastal bird productivity, or change to species' viability. The assessment concludes there are no significant adverse residual effects from the Project to coastal birds. The Project is not expected to result in measurable incremental adverse cumulative effects to coastal birds. **Addressed in MSA Section 8.3:** Potential effects of artificial light from shipping traffic in the marine shipping area. The MSA notes that nocturnal feeding marine birds can be attracted to artificial light sources, such as ship lighting, and that mortality is known to occur. For the LAA, no collisions with vessels have been recorded, which indicates that collisions with vessels are most likely infrequent and, if they do occur, do so on a small scale (in terms of the number of birds).	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 9.0 Physical Setting 9.4 Light 9.4.4 Relevant Guidelines 13.0 Marine Fish 13.6.3 Future Conditions with the Project, Potential Effect - Changes in Productivity, 13.7.5 Mitigation Measures, Mitigation #4 for Changes in the Light Environment 15.0 Coastal Birds 15.7.2.1 Mechanisms Affecting Productivity 25.0 Visual Resources 25.7.2 Mitigation Measures, Mitigation Measure #2 – Lighting Design and Operation – Light Management Plans 27.0 Human Health 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Land and Resources for Traditional Purposes 33.3.5 Construction EMP, Light Management Plan 33.4.3 Operation EMP, Light Management Plan **Marine Shipping Addendum (MSA, CEAR Document #316)** 8.3 Coastal Birds **Information Requests** Response to Sufficiency Information Request #02 (IR9-02)

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				Addressed in response to IR9-02: The VFPA's forthcoming response to IR9-02, as requested by the Review Panel, will further discuss mitigation measures related to artificial light for migratory and non-migratory birds and avian species.	
HFN-4.2	Asked if Tundra and Trumpeter Swans use the Project area, and whether or not they were considered in the assessment. Added that swans were historically numerous, then disappeared.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Responded that swans have been in the area, and that long-term use of that area by the species is understood.	**Addressed in EIS Appendix 7.2-B (#93):** The Fraser River estuary is an important area to many coastal birds because of the abundant food sources. The Roberts Bank area supports an abundance and diversity of bird species. An assessment was undertaken to determine the effects of the Project on coastal birds. The assessment of coastal birds focused on seven sub-components: • Shorebirds, represented by Pacific dunlin and western sandpiper; • Waterfowl, represented by American wigeon and brant (which is a proxy for swans); • Herons, represented by great blue heron; • Diving birds, represented by surf scoter and western grebe; • Raptors, represented by bald eagle, barn owl and peregrine falcon; • Gulls and terns, represented by Caspian tern and glaucous-winged gull; and • Passerines, also known as songbirds, represented by barn swallow. The use of the Fraser River estuary and the Project area by trumpeter swan and tundra swan is described in the EIS, under the waterfowl section (EIS Section 15.5.4). Overall, the Project is not expected to compromise the productive potential of the local area to support coastal bird productivity, or change to species' viability. The assessment concludes there are no significant adverse residual effects from the Project to coastal birds. The Project is not expected to result in measurable incremental adverse cumulative effects to coastal birds.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 15.0 Coastal Birds 15.2 Selection of Coastal Birds Valued Component 15.5.4 Existing Conditions, Waterfowl 15.7.2 Future Conditions with the Project, Potential Effect – Changes in Productivity Appendix 15-B Shorebird Foraging Opportunity during Migration Appendix 15-C Overwintering Dunlin Foraging Opportunity
HFN-4.3	Asked why humans had not been considered in the Shorebird Opportunity Model. Concerned that humans have not been considered in the Shorebird Opportunity Model. Asked why humans have been excluded in the opportunity model.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2 15-Jun-2015, Letter to the CEA Agency from Halalt First Nation (CEAR Document #253)	**12-Nov-2014, Workshop:** Responded that interactions are addressed separately in the EIS. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **13-Oct-2015, Letter from the CEA Agency to Halalt First Nation (CEAR Document #312):** *"The Agency did not request additional information for this item since it was not required by the EIS Guidelines."*	**Addressed in EIS Section 15.0:** The focus of the Shorebird Opportunity Model (EIS Appendix 15-B) was on shorebird access to food sources and the capacity of the LAA to support existing and future shorebird populations (with the project). Although humans may interact with shorebirds, the food resources upon which shorebirds depend are largely in the intertidal zone where the potential for shorebird-human interactions are minimal.	**EIS** 15.0 Coastal Birds 15.2 Selection of Coastal Birds Valued Component 15.5.4 Existing Conditions, Waterfowl 15.7.2 Future Conditions with the Project, Potential Effect – Changes in Productivity Appendix 15-B Shorebird Foraging Opportunity during Migration Appendix 15-C Overwintering Dunlin Foraging Opportunity

Table 5: Coastal Geomorphology – Intermediate Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-5.1	Stated that elders in 1990 asked for flow to be maintained through the causeway. Commented that sand appears to have accumulated on the north side of the causeway. Asked about the long-term environmental impacts of the existing causeway. Concerned that the causeway design does not include venting to generate more flow into and out of the inter-causeway area. Stated that the issue still exists, despite being addressed by the one study. Asked if there are other mitigation methods that could be investigated to limit the effect of the causeway on the inter-causeway water flow. Concerned with potential Project-related effects on water flow and intertidal health.	01-Nov-2013, Meeting with Cowichan Nation Alliance 22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1 15-Jun-2015, Letter to the CEA Agency from Halalt First Nation (CEAR Document #253)	**01-Nov-2013, Meeting:** Responded that work completed by a coastal geomorphologist and by a fisheries biologist determined that by breaching the causeway more damage would be done. Responded that work was completed to look at flow through the causeway and it was determined that while it was conceptually okay, in practice it would create a bigger issue (i.e., it would remove the mudflat if you removed the causeway). The reason why the terminal is situated further out from the mudflats is because building a terminal near the mudflat would have a negative impact. The further out the terminal is built, the less impact to the mudflat. **22-Oct-2014, Workshop:** Presented information on coastal geomorphology, including the existing conditions and the anticipated future changes as a result of the Project. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **13-Oct-2015, Letter from the CEA Agency to Halalt First Nation (CEAR Document #312):** *"The Agency did not request additional information for this item since there is already some information provided in the EIS on causeway design. The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Additional information provided by the VFPA:** An independent technical study, "Potential Effects of Opening the Causeway," was undertaken for the Vancouver Port Authority in 2005 to clarify issues related to physical processes and hydraulic behaviour in the inter-causeway area of Roberts Bank. This report determined that there is a substantial risk that a new opening in the causeway could initiate a new sequence of morphological changes on the tidal flats, which could adversely affect the existing habitat conditions. Furthermore, the assessed opening would be expected to have only a minimal contribution to flushing flows in the inter-causeway area. The report is available on the Project website: http://www.robertsbankterminal2.com/wp-content/uploads/RBT2-Potential-Effects-of-Opening-the-Causeway-June-2005-NHC-Memo-January-2014.pdf. Based on the findings of this report, and the evaluation of adding a flow passage channel, the VFPA does not propose to open the Roberts Bank causeway. Further information concerning this study is available in the VFPA's response to IR1-13. **Addressed in the EIS Appendix 7.2-B (#52):** EIS Section 9.5 describes existing conditions on Roberts Bank, including the past influences of the Roberts Bank causeway and BC Ferries Terminal causeway on the Roberts Bank ecosystem. The potential effects of the Project on ocean currents (hydrodynamics), wave climate, and local seabed scour and deposition (morphodynamics) were investigated using the TELEMAC numerical modelling system. Since no reasonably foreseeable projects or activities were identified during the assessment that will influence or change the conditions of coastal geomorphology within proximity of the Project, an assessment of future incremental cumulative changes to coastal geomorphology was not undertaken. **Addressed in response to IR2-09:** Additional clarification is provided in the VFPA's response to IR2-09, which describes how sand was deposited on the north side of the causeway during the initial causeway construction activities in 1969. These sediments have persisted and are not the result of ongoing coastal geomorphology processes. **Additional information provided by the VFPA:** **07-Jan-2014, Letter from the VFPA to Penelakut Tribe:** The potential effects of opening the causeway were assessed by Northwest Hydraulic Consultants Ltd. in June 2005. Based on the tidal influence in the area, it was determined that there would be no benefit with regard to introducing flows through the causeway (e.g., the amount of water that would flow through the opening would be very small compared to the tidal exchange in the inter-causeway area), and such an opening may actually result in new channel formation and concurrent erosion of existing eel grass.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 9.5 Coastal Geomorphology 9.5.5 Methods 9.5.6 Existing Conditions 9.5.9 Future Conditions with the Project and Other Projects and Activities Appendix 9.5-B Rationale for Exclusion of Other Certain and Reasonably Foreseeable Projects in the Cumulative Change Assessment of Coastal Geomorphology **2005 Memorandum Concerning Potential Effects of Opening the Roberts Bank Causeway** http://www.robertsbankterminal2.com/wp-content/uploads/RBT2-Potential-Effects-of-Opening-the-Causeway-June-2005-NHC-Memo-January-2014.pdf. **Information Requests** Response to Sufficiency Information Request #13 (IR1-13 of CEAR Document #897) Response to Sufficiency Information Request #09 (IR2-09 of CEAR Document #961)
HFN-5.2	Asked how the Project affects the water. Asked for further clarification related to changes in geomorphology	01-Nov-2013, Meeting with Cowichan Nation Alliance 22-Oct-2014, Cowichan Nation Alliance	**01-Nov-2013, Meeting:** Noted that studies are being conducted on coastal geomorphology. Noted that the studies will form the basis of the environmental assessment and they are ongoing.	**Addressed in EIS Appendix 7.2-B (#48):** Coastal geomorphology considers the physical processes such as waves and currents that change or maintain the physical environment of coastal areas. An assessment was undertaken to determine potential changes to coastal geomorphology as a result of the Project.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 9.5 Coastal Geomorphology 9.6 Surficial Geology and Marine Sediment

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	associated with the proposed Project. Asked what the environment will look like with changes in accretion and siltation.	EIS Workshop #1	**22-Oct-2014, Workshop:** Responded that the environment will experience only very slow change. Stated that there is not expected to be a lot difference with the addition of the proposed Project. Referred to the image on slide 31 of the presentation that illustrated where a difference is expected. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	The assessment consisted of three study approaches to determine the potential effects of changes to natural processes from the Project footprint in subtidal and intertidal areas. Studies were informed by dialogue with the Coastal Geomorphology Technical Advisory Group (TAG). The results of the coastal geomorphology assessment were considered in the assessments of surficial geology and marine sediment, marine water quality, marine vegetation, marine invertebrates, marine fish, marine mammals, coastal birds, ongoing productivity of commercial, recreational, and Aboriginal fisheries, and archaeological and heritage resources. The Project layout and configuration have been modified to reduce the potential for a number of adverse changes to geomorphology during Project construction and operation. For example, developing the terminal almost entirely within the subtidal zone of Roberts Bank will largely avoid changes to geomorphology. Changes to coastal geomorphology are not expected from terminal development activities, but are related to the terminal footprint itself. The footprint will interact with tidal currents and wind-generated waves resulting in alterations to sediment transport, sediment erosion and deposition, and water flow exchange in the construction and operation phases. During causeway construction, drainage channels are expected to form on the tidal flats adjacent to the causeway. This change will occur during construction only, and will be temporary and reversible. The VFPA will ensure the study and management of potential channel formation related to drainage of tidal waters through the causeway dyke during the construction phase. Changes will be incorporated in detailed design, as required. Changes from the expansion of the tug basin include the conversion of local tidal flats to subtidal waters. Although the formation of additional tidal channels is not anticipated, a small increase in the size of an existing channel is likely. No incremental cumulative changes in coastal geomorphology are anticipated to result from the Project in combination with other projects and activities. **Addressed in response to IR2-08:** As outlined in the VFPA's response to IR2-08, ongoing geomorphic processes have resulted in changes to the Fraser River delta foreslope (located in deeper water at the outer edge of the tidal flats) in the vicinity of the proposed terminal. Construction of RBT2 will result in armouring of a 1,700 m long section of the foreslope down to -30 m chart datum (CD), and will effectively halt any erosion of the foreslope in that area that may be occurring at present. **Addressed in responses to IR2-07 and IR2-09:** As outlined in the VFPA's responses to IR2-07 and IR2-09, topographic changes on the tidal flats have been evaluated, including changes to existing tidal channels. These changes are related to ongoing geomorphic processes as well as changes related to previous construction of the causeway and existing terminals. Widening of the causeway and development of RBT2 is not predicted to change drainage patterns or the morphology of the tidal flats in this area north of the causeway in the future with the Project. **Addressed in response to IR2-16:** Clarification concerning the assessment of changes to coastal geomorphology that may occur in relation to the construction and operation of the proposed Project is provided in the VFPA's response to IR2-16. The response confirmed that all Project components have been assessed in	9.7 Marine Water Quality 9.7.8 Future Conditions with the Project 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Lands and Resources for Traditional Purposes 35.0 Effects Assessment Summaries **Information Requests** Response to Sufficiency Information Request #07 (IR2-07 of CEAR Document #961) Response to Sufficiency Information Request #08 (IR2-08 of CEAR Document #961) Response to Sufficiency Information Request #09 (IR2-09 of CEAR Document #961) Response to Sufficiency Information Request #16 (IR2-16 of CEAR Document #961) Response to Sufficiency Information Request #17 (IR2-17 of CEAR Document #961)

Halalt First Nation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				accordance with the requirements of the *Updated EIS Guidelines* for the local study area, which extends from the BC Ferries Terminal to Canoe Passage. **Addressed in response to IR2-17:** The VFPA's response to IR2-17 includes additional clarification concerning the expected extents of changes to coastal geomorphology related to the proposed Project. Changes to coastal geomorphology and hydrodynamic conditions in areas on the south side of the existing Roberts Bank causeway, including the inter-causeway area and areas south of the BC Ferries Terminal, that are related to the Project components on the north side of the causeway are not anticipated because areas on the south side are hydrodynamically isolated from the north side of the Roberts Bank causeway by deep water and the presence of the existing causeways. The only Project component expected to influence coastal geomorphology or hydrodynamics in the inter-causeway area is the expanded tug basin, which is expected to result in localised changes to the existing coastal landforms in that area.	
HFN-5.3	Concerned that Canoe Pass is getting closed off because of the current terminal configuration and corresponding build-up of sand.	01-Nov-2013, Meeting with Cowichan Nation Alliance	**01-Nov-2013, Meeting:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#49):** Field studies, air photo review, and modelling of sediment deposition at Roberts Bank (including Canoe Passage) were undertaken during the Project assessment, as described in the EIS. A Canoe Passage discharge channel location and sediment distribution (e.g., bar formation or buildup of sand) were modelled to assess variation pre and post-terminal construction. Potential changes associated with the configuration of RBT2 were assessed in relation to Roberts Bank, including the Canoe Passage discharge channel. Project-related changes to coastal geomorphological processes on Roberts Bank are predicted to be associated with the terminal footprint. However, the Project is not anticipated to alter sediment dynamics or water movement in and around the mouth of the Fraser River. Changes are anticipated around the terminal and within the intertidal zone shoreward of the terminal. The effects of these changes on VCs are considered in the EIS.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table

Table 6: Economic Development – Valued Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information

HFN-6.1	Asked whether potential negative impacts on other industries are assessed in the economic development valued component.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:**
			Responded that the impacts on other industries was assessed in the EIS.
			01-Apr-2015, Letter from the VFPA to Halalt First Nation:
			Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.
				Addressed in EIS Appendix 7.2-B (#113):
				The economic development assessment evaluated potential Project-related effects on local and regional economies, and focused on:
				• Business revenues associated with the direct supply of materials, goods, and services to the Project for construction and operation;
				• Business revenues associated with supply of inputs to the businesses that are directly supplying goods and services to the Project;
				• Induced revenues for businesses related to household spending by workers employed as a result of the Project;
				• Construction sand supply and consumption; and
				• Consistency with economic development plans.
				The economic development assessment concluded that:
				• The Project is expected to result in the following positive effects on economic development in Metro Vancouver:
				  ○ During the 5.5 year construction phase:
				  ▪ $837 million in additional gross revenues to businesses in Metro Vancouver
				  ▪ $238 million in induced household spending in Metro Vancouver
				  ○ During operation:
				  ▪ $31 million annually in materials, good, and services contracting revenue to the economy of Metro Vancouver
				  ▪ $71 million of annual induced household spending in in Metro Vancouver
				• The Project is expected to result in an increase in materials, goods, and services contracting revenues for Indigenous businesses located in Metro Vancouver.
				• The Project is expected to result in negligible effects on construction sand availability and price.
				• The Project is consistent with economic development strategies in Metro Vancouver's Regional Growth Strategy, the economic development objectives of the City of Delta, and the general directions set out in the Tsawwassen Land Use Plan of Tsawwassen First Nation.
				• The Project is expected to result in positive effects to economic development in Metro Vancouver; therefore, the Project is not expected to result in measurable adverse residual effects. The Project is not expected to result in incremental adverse cumulative effects on economic development.
				• The economic development assessment includes assessment of potential adverse effects on local sand supply, resulting from the Project-related demand, as well as potential adverse effects on labour market balance (including wage inflation or labour shortages). Further details on rationale for the scope, methods, and conclusions are provided in EIS Section 20.0.
					EIS

	required for the EIS.		**29-Oct-2014, Aboriginal Groups EIS Preliminary Results Workshop #4:** Members of the Cowichan Nation Alliance were provided with the opportunity to discuss socio-economic VCs. **12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2:** Members of the Cowichan Nation Alliance were provided with the opportunity to discuss socio-economic VCs. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **13-May-2016, Email from the VFPA to Halalt First Nation:** Provided an "Employment Opportunities Information Sheet." The information sheet highlighted opportunities during construction and operations.	*BC Environmental Assessment Act*. The socio-economic studies undertaken to support the EIS fulfil this requirement.	Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.3.3 Mitigation Measures 34.0 Benefits to Canadians 34.2 Benefits of the Project 35.0 Effects Assessment Summaries Table 35-2 Proposed Mitigation Measures and Commitments ***Updated Guidelines for the Preparation of an Environmental Impact Statement* (*Updated EIS Guidelines*; CEAR Document #177)**
HFN-6.3	Concerned about the labour market and economic development studies excluding Aboriginal members and/or communities located outside the Metro Vancouver region. Stated that it is limiting to First Nations communities, who have recognised traditional use of the area, to be dismissed from the economic development of the area. Stated that Halalt First Nation wants the opportunity to explore contract procurement and joint venture opportunities, in addition to other economic development opportunities in the region.	11-Dec-2014, Health & Aboriginal Rights Workshop – Cowichan Nation Alliance 15-Jun-2015, Letter to the CEA Agency from Halalt First Nation (CEAR Document #253)	**11-Dec-2014:** Recorded comment for consideration by Project team. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **13-Oct-2015, Letter from the CEA Agency to Halalt First Nation (CEAR Document #312):** *"The Agency did not request additional information for this item since it is outside the scope of the Environmental Assessment."* **19-Apr-2016, Letter from the VFPA to Halalt First Nation:** Shared meeting notes from the 11-Dec-2014 workshop, which included the following post-meeting note: As noted in the response for issue ID# 111 of RBT2 EIS Appendix 7.2-B, the local assessment area (LAA) for labour market and economic development was defined as Metro Vancouver. Cowichan community members living in Metro Vancouver will be reflected in the aggregate data for this region. The LAA was structured to capture the Project's potential labour market and economic development effects that will occur locally and are measureable or detectable. While there may be members of Aboriginal groups located outside of Metro Vancouver that participate in one or more aspects of Project employment, or other economic effects, the effects on the labour market and economies of these Aboriginal groups were not considered to be measureable or detectable. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in the EIS Appendix 7.2-B (#111):** The LAA for labour market and economic development was defined as Metro Vancouver. Cowichan community members living in Metro Vancouver will be reflected in the aggregate data for this region. The LAA was structured to capture the Project's potential labour market and economic development effects that will occur locally and are measureable or detectable. While there may be members of Indigenous groups located outside of Metro Vancouver that participate in one or more aspects of Project employment, or other economic effects, the effects on the labour market and economies of these Indigenous groups were not considered to be measureable or detectable. **Addressed in EIS Appendix 7.2-B (#112):** Opportunities for training and employment opportunities related to the Project are described in EIS Section 32.3.3. As accommodation for any potential effects to specified Indigenous groups' ability to exercise their Aboriginal rights, the VFPA proposes to assist these Indigenous groups in accessing opportunities resulting from the Project. In addition to making contracting opportunities available to specified Indigenous groups, the VFPA will ensure that construction employment opportunities are also made available. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs. Through ongoing engagement, the VFPA will seek input from these Indigenous communities with respect to plans to ensure access to Project-related benefits. The VFPA has consulted and will continue to engage with Indigenous groups regarding opportunities to benefit economically and socially from the Project.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 18.0 Social and Economic Setting 18.4 Population 19.0 Labour Market 19.3.1 Spatial Boundaries 20.0 Economic Development 20.3.1 Spatial Boundaries 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.3.3 Mitigation Measures 34.0 Benefits to Canadians 34.2 Benefits of the Project 35.0 Effects Assessment Summaries Table 35-2 Proposed Mitigation Measures and Commitments

Halalt First Nation

Table 7: Effects Assessment Methods (including Cumulative Effects)

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-7.1	Proposed that certain central terms be defined to ensure consistent use and understanding throughout the Project review process – namely "cumulative effect," "cumulative environmental effect," "mitigation," and "report".	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"The Canadian Environmental Assessment Agency (Agency) has developed a glossary of terms used in the context of the* Canadian Environmental Assessment Act, 2012 *(CEAA 2012) and it is available at: http://www.ceaa-acee.gc.ca/default.asp?Lang=en&n=E7F0FC59-1&offset=&toc=hide. In addition, CEAA 2012 defines the term "mitigation measures" as measures for the elimination, reduction or control of the adverse environmental effects of a designated project, and includes restitution for any damage to the environment caused by those effects through replacement, restoration, compensation or any other means."* *For the purposes of Crown consultation, if members of the Cowichan Nation Alliance would like to provide information to the Review Panel about the impacts of any aspect of the Project, including marine shipping, the Review Panel will receive this information as directed in Section 3.9."*	**Additional information provided by the VFPA:** In developing the EIS, the VFPA relied on federal guidance documents (such as noted by the CEA Agency in their April 17, 2015 letter (CEAR Document #278)). The EIS also includes a glossary (summary of definitions) applicable specifically to the EIS.	
HFN-7.2	Stated that in order to comprehensively assess the full extent of Project impacts, it is essential that the Review Panel consider cumulative effects that are measured against a pre-industrial baseline; this is necessary to understand the extent to which the environment and the ability of Aboriginal peoples to exercise Aboriginal and Treaty rights has already been compromised. Recommended that the draft ToR include a non-exhaustive list of projects and activities that should be included to ensure their impacts are considered e.g. the Tsawwassen Ferry Terminal, the Deltaport Terminal Road and Rail Improvement Project, the South Fraser Perimeter Road, the Tsawwassen First Nation Industrial Land Development, the Tsawwassen Mills and Power Centre and the Deltaport Third Berth Project.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"A list of projects has been provided in the Environmental Impact Statement (EIS) Guidelines http://www.ceaa-acee.gc.ca/050/documents/p80054/97463E.pdf on page 31 and includes the following direction to the Proponent: "The EIS will include a narrative discussion of existing projects in the vicinity of the proposed project, including but not limited to the Tsawwassen Ferry Terminal, Deltaport Terminal Road and Rail Improvement Project, South Fraser Perimeter Road, Tsawwassen First Nation Industrial Land Development, Tsawwassen Mills and Power Centre and Deltaport Third Berth."* *On page 32 of the EIS Guidelines request that* "This narrative discussion should include historical data, where available and applicable, to assist interested parties to understand the potential effects of the project and how they may be addressed." *Also, if members of the Cowichan Nation Alliance have information relating to the state of the environment as it relates to the Project, including effects, we invite you to contact the proponent with any pre- industrial baseline information or data you*	**Addressed in response to AIR-12.04.15-13:** In the EIS, the existing conditions (baseline) reflect the conditions of the environment as modified by past development. Further discussion of how the VFPA considered the effects of past, present, and future projects is provided in completeness-phase AIR-12.04.15-13, including in that responses' schedules focused on applicable VCs.	**Information Requests** Response to Additional Information Request #13 (AIR-12.04.15-13 of CEAR Document #388)

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			may have, including Aboriginal traditional knowledge."		
HFN-7.3	Stated that Cowichan Nation Alliance anticipates there will be a significant need for ongoing environmental monitoring of the integrity of the Fraser River estuary upon consideration of the growing number of developments in that area. Recommended express direction to the Review Panel to consider the value of ongoing monitoring. Recommended amendment to section 3.2 to of the ToR to address this concern.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"Your comment has been considered. However, the Agency encourages you to provide any information or concerns you have related to the Fraser River estuary to the Review Panel for their consideration as part of the environmental assessment."*	**Addressed in EIS Section 33.5:** Similar to the Adaptive Management Strategy for DP3, as described in EIS Section 33.5, the VFPA is committed to developing and implementing a Follow-up Program for the Project. The purpose of the Follow-up Program is to verify the accuracy of residual effect predictions made in the EIS, and determine the effectiveness of any measures taken to mitigate the adverse environmental effects of the Project. To ensure the Program's elements adequately reflect conditions of Project approvals, final designs, and construction or operation approaches, as well as public, Indigenous group, and regulator feedback received during the review of the EIS, the VFPA will lead the development of the Follow-up Program after the submission of the EIS. The Follow-up Program will include: • An evaluation of the adequacy of existing data to provide a benchmark against which to test Project-related effects; • A monitoring design drawing on the measurable parameters identified to be field-tested; • A methodological approach for using field-collected data to measure and verify the accuracy of the effects predicted in the EIS; • A reporting framework that defines frequency of reporting, distribution and feedback mechanisms; and • Details of the VFPA's approach to adaptive management for the Project through construction and operation. The Follow-up Program will be developed in consultation with federal agencies, including the CEA Agency, Fisheries and Oceans Canada (DFO), and Environment and Climate Change Canada (ECCC). Complete drafts of the RBT2 Follow-up Program will be made available prior to the start of field measurements to ensure parties consulted on the program and approving agencies have an opportunity to evaluate and approve the program. Feedback from Indigenous groups regarding the draft program will be sought through the VFPA's ongoing engagement initiatives.	**EIS** 33.5 Roberts Bank Terminal 2 Follow-up Program
HFN-7.4	Stated that the Review Panel's identification and recommendation of mitigation measures aimed at addressing potential impacts to Aboriginal and Treaty rights is a significant aspect of the Project review. As such, it is critical that the Review Panel be directed to consider all relevant factors when undertaking this task. For example, the Review Panel's consideration should not be restricted solely to the information received pursuant to section 3.5, but should also include the Review Panel's analysis of the section 2.1 factors, including the Review Panels' assessment of the effects of the Project on asserted and established	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"Section 3.7, now Section 3.11, has been revised to direct the Review Panel to use information received throughout the environmental assessment, which allows it to use information collected under any section of the Terms of Reference.* *Please see page 3 of the "Aboriginal Consultation and EA Handout" http://www.ceaa-acee.gc.ca/050/documents/p80054/100180E.pdf for further details. If the Cowichan Nation Alliance has information or opinions on*		

Halalt First Nation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	Aboriginal and Treaty rights, including cumulative effects and the significance of those effects. Stated that it is also important that section 3.7 reflect the importance of considering impacts to Aboriginal and Treaty rights independent of the Review Panel's recommendation of mitigation measures. Recommended that the Review Panel specify the degree to which each recommended mitigation measure will avoid or minimise the potential adverse effects of the Project on Aboriginal and Treaty rights. This aspect of the analysis is fundamental to the determination of whether a particular mitigation measure is suitable, whether additional accommodation of Aboriginal and Treaty rights is warranted, and may ultimately influence whether the Project should proceed. Recommended amendments to section 3.7 of the draft ToR to address this concern.		*proposed mitigation during the EA process, the Review Panel would welcome that information. The Review Panel has been mandated to provide in its report rationale, conclusions and recommendations on the environmental assessment including any mitigation measures and follow up programs. Section 3.11 allows the Review Panel to make recommendations, which will be considered by the Crown, on avoiding or mitigating environmental effects related to potential impacts on potential or established Aboriginal or Treaty rights.* *At the end of the process it is up to the federal government to decide whether or not to adopt the recommendations contained in the Review Panel's report."*		
HFN-7.5	Asked whether the EwE Model Study Area predicts Project impacts south of the American border.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Responded that the answer varies based on the VC in question, but there may be some localised effects. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#101):** The ecosystem model is described in the EIS. The model incorporated predator-prey relationships (biotic factors) and environmental factors within the marine environment. No productivity changes, as determined by the ecosystem model, are anticipated outside of Canadian waters, as productivity-related effects result from construction activities, the Project footprint itself, and indirect localised changes to coastal processes around the terminal.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 10.0 Biophysical Setting 10.3 Overview of Assessing Ecosystem Productivity Appendix 10.3-A Roberts Bank Ecopath with Ecosim and Ecospace Model Parameter Estimates Appendix 10.3-B Roberts Bank Ecosystem Model Development and Key Run Appendix 10.3-C Roberts Bank Spatial Ecosystem Model Sensitivity Analysis Appendix 10-D Roberts Bank Spatial Ecosystem Model Sensitivity Analysis
HFN-7.6	Asked about the third party review of the EwE model: who is conducting the review, what the review consists of, and why the review is being conducted.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Stated that a VFPA-commissioned third party is conducting the review who is experienced in the study of marine ecosystems and modelling, and speculated that he will be looking at the inputs, the results, and assessing whether or not they are valid and based on correct information.	**Additional information provided by the VFPA:** In January 2014, the federal Minister of Environment referred the Project for an environmental assessment by an independent review panel. The entire EIS, including the EwE (Ecopath with Ecosim and Ecospace) model, also referred to as the Roberts Bank ecosystem model, is subject to review by the Review Panel. The independent review of the EwE model commissioned by the VFPA (as noted in the previous column) was undertaken prior to finalisation	**Information Requests** Response to Information Request #6 (IR-7.31.15-06 of CEAR Document #314) Information Request Package 3 Preamble in Support of Responses to IR3-01 to IR3-24 –

Halalt First Nation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			Explained that David Preikshot (the independent reviewer) has a PhD in Fisheries Science at UBC. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	of the EIS. The results of the review informed and were incorporated into the model as it is presented in the EIS. **Addressed in Information Request Package 3 Preamble in Support of Responses to IR3-01 to IR3-24:** As noted in the Preamble in Support of Responses to IR3-01 to IR3-24, the VFPA has actively responded to questions about the application of the Roberts Bank ecosystem model, including through completeness information request responses (see IR-7.31.15-06) and in separate, agency-specific engagement. DFO and Natural Resources Canada (NRC) provided written questions to the VFPA based on a preliminary review of the EIS on November 19, 2015, ahead of an in-person meeting on November 23, 2015. The meeting included representatives from the VFPA, NRC, DFO, ECCC, and other federal agencies. Following this large-scale engagement, a series of more topic-specific meetings were held with individual and/or combinations of agencies through December 2015 and February 2016. Involving DFO, NRC, ECCC, and the VFPA, the meetings provided clarity on topics such as hydrology, sediment modelling, and ecosystem modelling questions posed by the agencies. The VFPA provided a cumulative submission of responses to the agencies in March and May 2016, and these questions and responses were posted to the CEA Agency's registry on September 28, 2016 (CEAR Document #547). In December 2016, the Canadian Science Advisory Secretariat of the DFO Science Branch released its independent review of the Roberts Bank ecosystem model (CEAR Document #900). Numerous federal experts conducted the review, including from DFO and the Canadian Wildlife Service. The general conclusions of the review support how the model was established and agreed that input parameter estimates were adequate for the Roberts Bank ecosystem. Importantly, the DFO Science Branch (with input from NRC) concluded "the EwE model, as implemented in this project and reviewed here, is a useful first-order framework to organise information and derive initial estimates of how the system may respond to perturbations" (CEAR Document #900, p.20).	Roberts Bank Ecosystem Model (CEAR Document #928) **From the VFPA to the Review Panel re: Answers to preliminary technical questions submitted during the completeness phase from DFO, NRC, and Environment and Climate Change Canada, concerning the ecosystem modelling to support the RBT2 environmental review (NOTE: Updated September 28, 2016) (CEAR Document #547)**
HFN-7.7	Asked about the funding for the ecosystem productivity model and whether the model is objective.	03-Jul-2014, Aboriginal Groups Valued Components Workshop #2	**03-Jul-2014, Workshop:** Explained that the VFPA is working with the University of British Columbia's Fisheries Centre (now the Institute for the Oceans and Fisheries), a leader in ecosystem modelling and the key developer of the EwE approach. Stated that in the environmental assessment application will have all the different assumptions used, all the data sources and why the technical team picked those, for people to critique and give the VFPA feedback on. Stated that the VFPA is trying to be as transparent and open as possible.	**Addressed in Information Request Package 3 Preamble in Support of Responses to IR3-01 to IR3-24:** The VFPA obtained input on selecting the appropriate approach to assessing productivity at Roberts Bank through the Productive Capacity TAG process. The TAG process recommended use of the EwE model, which is well documented in the scientific literature and has been widely used to quantitatively describe marine food webs, fisheries policy exploration (regulatory decisions on managing fisheries), ecosystem-based fisheries management, and a joint B.C.-Canada environmental assessment. The EwE model was developed at the Institute for the Oceans and Fisheries, and more than 400 ecosystem models applying the software have been published. Thirteen of these publications describe marine areas in B.C., six of which are located in the Strait of Georgia. More information on this model can be found at http://www.ecopath.org/.	**Information Requests** Information Request Package 3 Preamble in Support of Responses to IR3-01 to IR3-24 – Roberts Bank Ecosystem Model (CEAR Document #928)

Halalt First Nation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				Additional information concerning the VFPA's selection and use of the EwE model in the environmental assessment is available in Information Request Package 3 Preamble in Support of Responses to IR3-01 to IR3-24.	
HFN-7.8	Noted stark disagreement between the Cowichan Nation Alliance and the VFPA about how cumulative effects are assessed and applied to impacts to Rights. Expressed concern with the cumulative effects studies.	11-Dec-2014, Health & Aboriginal Rights Workshop – Cowichan Nation Alliance 29-Aug-2017, Follow Up Program Workshop with Cowichan Nation Alliance, Lyackson First Nation, and Malahat First Nation	**11-Dec-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests, including concerns around cumulative effects, and provided the VFPA's responses. **29-Aug-2017, Workshop:** Committed to provide information from the EIS and information requests related to cumulative effects studies for RBT2. **20-Feb-2018, Email from the VFPA:** The VFPA provided draft meeting notes from the 29-Aug-2017 Follow-up Program Workshop. A post-meeting note was included regarding cumulative effects: *"Section 8.1.9 of the RBT2 EIS describes the cumulative effects assessment methodology for the RBT2 environmental impact assessment. An assessment of future cumulative effects was conducted when an adverse residual effect was predicted to occur to a valued component (VC) due to a Project-related interaction. For an intermediate component (IC), an assessment of future cumulative change was conducted to assess when Project-induced changes to an IC may combine cumulatively with changes caused by other projects and activities that will be carried out. Assessment of future cumulative effects for VCs and future cumulative change for ICs can be found in the following sections of the EIS:* *ICs:* • *Air Quality: Section 9.2.9* • *Noise and Vibration: Section 9.3.10* • *Light: Section 9.4.9* • *Coastal Geomorphology: Section 9.5.9* • *Surficial Geology and Marine Sediment: Section 9.6.9* • *Marine Water Quality: Section 9.7.9* • *Underwater Noise: Section 9.8.8* *Biophysical VCs:* • *Marine Vegetation: Section 11.10* • *Marine Invertebrates: Section 12.10*	**Additional information provided by the VFPA:** The *EIS Guidelines* issued by the CEA Agency do not require a cumulative effects assessment with respect to the ability of Indigenous groups to exercise their asserted or established treaty or Aboriginal rights. **Addressed in EIS Appendix 7.2-B (#27):** The methods used to assess the potential effects of the Project, including mitigation measures, residual effects, and cumulative effects, are described in EIS Section 8.0. The environmental assessment for the Project was developed to meet the requirements specified in the *EIS Guidelines* and is consistent with existing guidance documents, including the "Operational Policy Statement Assessing Cumulative Environmental Effects Under the *Canadian Environmental Assessment Act 2012*" and "Determining Whether a Project is Likely to Cause Significant Adverse Environmental Effects," the "Cumulative Effects Assessment Practitioners' Guide," and the "Guideline for the Selection of Valued Components and Assessment of Potential Effects," among others. Descriptions of existing pre-Project conditions relevant to each VC and IC were developed based on existing information, field studies, data analysis, and modelling. The description of existing conditions considered how ICs and VCs have been already affected by other projects and activities that have been carried out. Expected conditions were also determined where substantial changes are expected to occur to a VC or IC in the future prior to Project construction or operation, such as from changes in regulation or as a result of other projects or activities currently underway. Potential Project-related effects that may persist after the implementation of mitigation measures are called residual effects. The EIS identifies Project-related residual effects and their significance. The determination of significance is specific to each VC and the EIS presents the rationale for the significance thresholds applied. Where measurable residual effects to a VC have been predicted to result from the Project, a cumulative effects assessment was conducted to determine whether Project-related residual effects are likely to interact cumulatively with the effects of other projects and activities. Similarly, where Project-induced changes to an IC were expected, the potential for those changes to combine cumulatively with changes caused by other projects and activities was assessed. Where the Project was predicted to contribute to cumulative effects, additional mitigation measures were considered. The VFPA then determined the significance and likelihood of any adverse residual cumulative effects following the implementation of mitigation measures. Where it was determined that potential adverse effects could occur, technically and economically feasible mitigation measures to avoid, reduce, or offset potential adverse effects to an acceptable level have been proposed. The design and implementation of proposed mitigation	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 8.0 Effects Assessment Methods 8.1 Environmental Assessment Methods 8.1.6 Mitigation Measures 8.1.7 Characterisation of Residual Effects and Context 8.1.8 Determination of Significance of Residual Adverse Effects 8.1.9 Cumulative Effects Assessment ***Updated EIS Guidelines***

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			• *Marine Fish: Section 13.10* • *Marine Mammals: Section 14.10* • *Coastal Birds: Section 15.11* *Socio-Economic VCs:* • *Marine Commercial Use: Section 21.11* • *Visual Resources: Section 25.10* • *Land and Water Use: Section 26.10* • *Human Health: Section 27.10* • *Cumulative Effects Assessment: Section 28.10* *Information requests related to cumulative effects for RBT2 include:* • *IR #13 – Cumulative Effects Assessment* • *AIR #13 – Cumulative Effects Assessment"*	measures considers input received from regulators, Indigenous groups, local government, and the public. The methods used to assess the potential effects of the Project, including mitigation measures, residual effects and cumulative effects, are described in the EIS. The VFPA has consulted with Indigenous groups regarding Project components and activities, selection of VCs, the potential effects of the Project, proposed mitigation measures, and potential changes to the environment related to the Project. Indigenous groups were also provided draft community profiles and rights and Current Use information for their review and comments. Feedback received was incorporated into the EIS.	
HFN-7.9	Concerned about the use of representative species in the assessment.	03-Jul-2014, Aboriginal Groups Valued Components Workshop #2	**03-Jul-2014, Workshop:** Provided participants with a handout showing ICs, VCs, and species represented by each VC. Discussed how representative species are used in environmental assessments. Explained that for example for the VC marine fish, there are a number of representative focal species and sub-components, more for ease of organisation than anything. For marine fish there are five sub-components, and of those, 13 focal species are covered. Explained why those focal species were selected and some of the studies that supported our selection. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#25):** ICs, VCs, and VC sub-components are identified in EIS Section 8.0. EIS Section 8.0 describes the overall 3-step VC selection process, including the rationale for focusing the assessment on VC sub-components. The rationale for selection of specific ICs, VCs, and VC sub-components is described in each assessment section. For example, discussion regarding sub-component selection relative to species of importance to Indigenous groups, including eulachon and sturgeon, is captured in EIS Section 13.0. **Addressed in EIS Section 8.0:** Subsequent to VC selection, VC sub-components were identified to further structure and streamline the assessment as appropriate. For example, for biophysical VCs, sub-component species or groups were chosen for the ability to represent other species that are similar in nature, occupy comparable types of habitats, serve similar ecological roles, or could otherwise be affected by the Project in an analogous way. In selecting representative species, or in some cases species groups, consideration was given to species of specific importance to regulatory agencies, Indigenous groups, and the public, as identified by community knowledge and ITK, and during consultation and engagement, and assessment planning. **Addressed in Information Request Package 5 – Response to Information Requests Relating to Representative Species:** Representative species are considered in terms of the biological and ecological similarities they share with other species within the sub-component, and for potential similarities in how the Project may interact with and affect them. In some cases, biological attributes may differ within a sub-component grouping, but their interactions with the Project and mechanisms contributing to potential effects from the Project are considered to be analogous. As a result, the VFPA selected representative species for each sub-component for which sufficient information is known, in order to provide an assessment that considers all potential interactions and Project-related effects. For example, substantial information exists for the southern resident killer whale (the representative species used for toothed marine mammals) and much less so for the transient killer whale. While there are some biological differences between the two, they are considered the same species; both rely on underwater noise for prey detection;	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 8.0 Effects Assessment Methods **Information Requests** Information Request Package 5 – Response to Information Requests Relating to Represented Species

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				and potential Project effects and mitigation measures are the same. In this example, it would be both impractical and inefficient to undertake an assessment on both species as the conclusions of the assessment would be the same. Moreover, in selecting representative species, or in some cases species groups, consideration was given to species of specific importance to regulatory agencies, Indigenous groups, and the public, as identified by community knowledge and ITK, and during consultation and engagement, and assessment planning. This approach was taken as it would be impractical to characterise existing conditions and assess effects on every species that may frequent the Roberts Bank area. In this way, the use of VCs, sub-components, or representative species improves the effectiveness and efficiency of assessment by focusing on the key Project interactions.	
HFN-7.10	Stated that the broad drafting of the VCs risks insufficient coverage of environmental components of importance to the Cowichan Nation Alliance. Requested that the following species be listed under the relevant Valued Component heading: i. Marine vegetation: green seaweed ii. Coastal terrestrial vegetation: bull rush, reeds, cranberries, blueberries, camas iii. Marine fish: Coho, Spring, Chum, Pink, Chinook, and Sockeye Salmon, eulachon, herring, cod, halibut, flounder and sturgeon iv. Marine invertebrates: red sea urchin, sea cucumber, and mussels v. Marine mammals: harbour seal vi. Migratory birds: Brant geese, canvasback duck, Common Merganser, and Mallard.	09-May-2014, Letter from Cowichan Tribes acting in alliance with the Stz'uminus, Penelakut, Hwlitsum and Halalt communities	**09-May-2014:** Recorded comment for consideration by Project team. **06-Jun-2014 and 03-Jul-2014, Workshops:** Aboriginal Groups Valued Components Workshop #1 and #2 provided an opportunity for Indigenous groups to comment on the VCs.	**Addressed in EIS Volume 3:** i. Marine vegetation: Green seaweed (EIS Section 11.0 has been included as the marine vegetation sub-component macroalgae, which includes *Ulva* spp., as well as other brown algal species (bull kelp, rockweed). ii. Coastal terrestrial vegetation: bull rush, reeds, cranberries, blueberries, camas (EIS Section 11.0). This was considered when selecting marine vegetation sub-components (EIS Section 11.2.1). As the Project is located in the marine environment and Project-related interactions with terrestrial vegetation species are not anticipated, these species were not incorporated into the effects assessment (without an interaction, there is no potential for an effect on these species). iii. Marine fish: coho, spring, chum, pink, Chinook, and sockeye salmon, eulachon, herring, cod, halibut, flounder, and sturgeon (EIS Section 13.0). • All Pacific salmon were considered in the assessment under the sub-component Pacific salmon. Chum and Chinook were selected as representative species for the five salmon species, as they are more estuarine dependent (any predicted effects to chum and Chinook are representative of effects to the other species). Refer to EIS Section 13.2.1 for more information. • Eulachon was assessed through representative forage fish species (see EIS Sections 13.6.2.1 and 13.6.3.3). Eulachon was not selected as a representative species as it is rare within the marine fish LAA based on surveys conducted at Roberts Bank and Sturgeon Bank in past years (EIS Section 13.2). • Pacific herring was included in the assessment as a representative species under the forage fish sub-component. • Lingcod was included in the assessment as a representative species under the reef fish sub-component. Rock cod were assessed through their representation by rockfish, as discussed in EIS Section 13.5.2. • Starry flounder was included in the assessment as a representative species under the flatfish sub-component. Pacific halibut are not typically found in estuarine environments (including the Fraser River estuary) and	**EIS** 11.0 Marine Vegetation 11.2.1 Sub-components 12.0 Marine Invertebrates 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component 13.2.1 Sub-components 13.5.2 Selection of Marine Fish Valued Component 14.0 Marine Mammals 14.2.1 Sub-components 15.0 Coastal Birds 15.2.1 Sub-components

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				therefore would not interact with and be adversely affected by the Project. • Sturgeon were assessed through the use of Chinook and chum salmon representative species. Sturgeon was not selected as a representative species as it is also rare within the marine fish LAA. Refer to EIS Section 13.2.1 for more information. iv. Marine invertebrates: red sea urchin, sea cucumber, and mussels (EIS Section 12.0). • Red sea urchin and sea cucumbers were assessed through the use of Dungeness crab representative species. Red sea urchin and sea cucumbers were considered when selecting marine invertebrate sub-components, but were not selected as representative species as their typical habitat is not an estuarine sand-dominated environment like Roberts Bank. As such, Project-related effects to these species are anticipated to be very limited. • Mussels (specifically the bay mussel (*Mystilus trossulus*)) was included in the assessment under the bivalve shellfish sub-component. v. Marine mammals: harbour seal (EIS Section 14.0). • Harbour seal was considered and included in the marine mammals effects assessment under the seals and sea lions sub-component. vi. Migratory birds: Brant geese, canvasback duck, Common Merganser, and Mallard (EIS Section 15.0). Brant was included in the coastal birds effects assessment as a representative species of the waterfowl sub-component. American Wigeon represented Mallard, while common merganser and canvasback duck are represented within the diving bird sub-component. These latter two species were not selected as representative species as they are not common at Roberts Bank, nevertheless, any potential effects to these species are assessed through more common species (that have been selected as representative species). Refer to EIS Section 15.2.1 for more information.	
HFN-7.11	Requested more information on the scope and purpose of field studies.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Stated that the studies have been undertaken, and will be included in the EIS for review. Each IC and VC section of the EIS contains information on field studies that were undertaken in support of the EIS.	**Additional information provided by the VFPA:** In 2012, the VFPA initiated field, desktop (i.e. literature review), and modelling studies to inform the understanding of existing conditions at Roberts Bank. Building on available information, these studies were designed to address known data gaps, as well as issues and interests of Indigenous groups, stakeholders, and the public, as well as to provide baseline information to assess Project-related effects as part of the environmental assessment. Some Technical Data Reports are appendices to EIS sections, while others are available publicly on the RBT2 website: http://www.robertsbankterminal2.com/environmental-assessment/technical-data-reports/	**RBT2 Project website** http://www.robertsbankterminal2.com/environmental-assessment/technical-data-reports/

Halalt First Nation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-7.12	Asked if the cumulative effect of a 6% increase in container vessel traffic will become the tipping-point that results in measurable and undesirable impacts when all project-based vessel traffic increases are taken into consideration located within both B.C. and the State of Washington. Only southern resident killer whales were deemed to be near such a threshold.	13-Jan-2016, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #385)	**12-May-2016, Letter from the CEA Agency to Cowichan Nation Alliance (CEAR Document #398):** *"The Agency requested additional information on the projects used in the cumulative effects assessment in additional information request "#7 Reasonably Foreseeable Projects and Activities".* *In addition, the Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in MSA Section 6.7:** As noted in MSA Section 6.7, each assessment section in MSA Sections 7.0, 8.0, and 9.0 includes an assessment of potential additional future cumulative interactions between the residual effects anticipated for the VC (or residual changes for an IC), if any, and effects associated with additional marine shipping activity in the marine shipping area in 2030 related to reasonably foreseeable projects and activities. Projected future marine shipping traffic volumes are provided in MSA Table 4-7. These traffic volumes are associated with certain and reasonably foreseeable projects and activities listed in MSA Appendix 6-A. The significance determination for any residual cumulative effects is made using the same significance threshold as defined for the assessment of residual effects. Potential interactions with future certain or reasonably foreseeable marine-based projects are limited to increases in vessel traffic associated with those projects. The MSA concludes that no adverse cumulative effects are anticipated, with the exception of potential effects to southern resident killer whales. Consistent with the conclusions reached in the EIS, the MSA concludes that southern resident killer whales have already been significantly adversely affected by past projects and activities; therefore, cumulative effects are expected to remain significant. Further information concerning how significance criteria was utilised in the MSA is further discussed in MSA IR-02.24.16-7.	**MSA** 6.7 Cumulative Effects Assessment Appendix 6-A Certain and Reasonably Foreseeable Projects and Associated Activities Considered in the Marine Shipping Cumulative Effects Assessments 7.0 Physical Environment Effects Assessments 8.0 Marine Biophysical Environment Effects Assessments 9.0 Human Environment Effects Assessments **Information Requests** Response to Additional Information Request #7 (MSA IR-02.24.16-7 of CEAR Document #386)
HFN-7.13	Concerned that information can be manipulated in the assessment to minimise the appearance of impacts to certain species. For example: • Assessments average things out over populations and a period of time, and underrepresent the effect. • Species will have different baseline biomass depending on the time of the year.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Stated that results have not been averaged, and that the team fully understands a lot of species are there temporarily. Explained that this presentation is a high level summary and more detail and specificity will be provided in the EIS. For context, many birds are there for short periods of time. Even though they are there in large numbers for a few weeks, the biomass their presence amounts to over the course of a year is small, which is the timeframe used for the model; the model incorporates seasonal information.	**Additional information provided by the VFPA:** As is noted in the VFPA's response to preliminary questions from DFO and NRC in 2015, question 2.17 Time Steps (2.2.6), annual averages are used to include both spatial and temporal variation in biomass estimates for Roberts Bank. This allows comparisons across highly seasonal and endemic groups. Annual averages are a standard metric for ecological questions and are necessary when conducting an ecosystem level assessment (Harvey 2013, Mackinson and Daskalov 2008, and Preikshot 2013). Understanding that there is variability within any estimate, sensitivity analyses were conducted to examine model performance with a range of input biomasses, centred on the initial value (see question 2.7 (Use of Confidence Limits in RB Model) for more information on this) (CEAR Document #547).	**CEAR Document #547 from the VFPA to the Review Panel Re: Answers to Preliminary Technical Questions Submitted During the Completeness Phase from DFO, NRC And Environment and Climate Change Canada, Concerning the Ecosystem Modelling to Support the RBT2 Environmental Review**

Halalt First Nation

Table 8: Engagement and Consultation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-8.1	Stated that Cowichan Nation Alliance has yet to receive sufficient information regarding the framework that will guide Crown consultation to address potential impacts on Aboriginal and Treaty rights, and that will ensure the Crown discharges its constitutional duties prior to making any decisions about the Project. Recommended that Canada work with Aboriginal groups to develop a detailed consultation plan that includes a process and forum for groups to address issues arising from potential impacts to Aboriginal and Treaty rights from the Project.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"The Crown sent letters to Cowichan Tribes, Stz'uminus First Nation, Penelakut First Nation, Halalt First Nation on January 7, 2014 with a proposed Consultation Workplan and invited comments or questions from the First Nations about the Crown's consultation process and proposed approach for discussing and addressing issues arising from potential impacts to Aboriginal and Treaty rights from the Project. We welcome a discussion on the proposed Consultation Workplan with any of the First Nations. To date, we have not received any feedback on the proposal."*		
HFN-8.2	Stated that the Review Panel clearly does not have a mandate to discharge all of the Crown's consultation obligations toward Aboriginal groups, as evidenced by section 3.4 of Draft ToR: the Review Panel is prohibited from deciding constitutional issues that engage Aboriginal rights including (a) the validity of potential or established Aboriginal or Treaty rights asserted by an Aboriginal group or the strength of such claims; (b) the scope of the Crown's duty to consult an Aboriginal group; (c) whether the Crown has met its duty to consult or accommodate in respect of rights recognized and affirmed by section 35; (d) whether the Project would be an infringement of potential or established Aboriginal or Treaty rights; and (e) any matter of Treaty interpretation (historic and modern). While the Review Panel will receive information about any potential adverse impacts of the Project on potential or established Aboriginal or Treaty rights and related interests, and may recommend mitigation measures to avoid or minimize those impacts, the scope of this mandate does not involve an ongoing dialogue with Aboriginal groups as is demonstrated by the prohibited issues identified above. The Review Panel has no authority to render conclusions regarding the extent to which the Project might infringe	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"Noted. The Terms of Reference has been amended to provide additional clarity about the role of the Review Panel and of the federal Crown in Section 3.7 which now reads* "Through these Terms of Reference, the Review Panel is given the mandate to collect information on behalf of the Crown as outlined in Section 3.9 to 3.11. The federal government maintains the duty to consult throughout the environmental assessment process and will be responsible for the items detailed in section 3.8, where necessary.""		

Halalt First Nation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	Aboriginal or Treaty rights and does not have a mandate to consider accommodation measures beyond mitigation measures. Accordingly, the Crown must provide another forum for these critical issues to be addressed.				
HFN-8.3	Requested more information regarding how the noted constitutional issues will be decided, and at what stage of the process. Asked if, for example, the Crown will engage in consultation regarding accommodation measures other than Project mitigation measures during the Project review, or following the Review Panel's issuance of its report.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"The Crown will request Aboriginal groups identify any outstanding impacts to potential or established Aboriginal or Treaty rights once the Review Panel's report has been made public and the Crown will consult as appropriate with Aboriginal groups on proposed measures for addressing outstanding impacts.* *Additional information on the integration of Aboriginal consultation into the environmental assessment (EA) process was provided to the Cowichan Nation Alliance with federal officials on November 27, 2014, and is available online in the "Aboriginal Consultation and EA Handout" http://www.ceaa-acee.gc.ca/050/documents/p80054/100180E.pdf and in the "Review Panel and Aboriginal Consultation Process Diagrams Handout" http://www.ceaa-acee.gc.ca/050/documents/p80054/100179E.pdf"*		
HFN-8.4	Emphasised the Crown's legal obligation to provide a clear and transparent outline of how Crown consultation will be undertaken. It is essential that a reasonable amount of time be provided for this process, and in light of the very brief prescribed timeline under which the Project review must proceed, it is essential that Crown consultation commence at an early stage. Stated that the Crown must recognise that the simple fact that the *CEAA 2012* prescribes that the Minister render a decision on the Project within 24 months from the day on which the environmental assessment was referred to the Review Panel (with the possibility of an additional three-month extension) cannot operate to terminate consultation where substantive issues remain to be discussed between the parties. Stated that it is difficult to imagine that the time set aside for post Review Panel report activities will be sufficient to undertake meaningful Crown- Aboriginal consultation.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"The Crown intends for consultation to be ongoing throughout the entire EA process, and it will be integrated into the EA to the extent possible. We have heard key concerns from members of the Cowichan Nation Alliance and will consider them going forward.* *Additional information on the EA and consultation process is contained in the consultation work plan and handouts referenced in the response above. Issues of concern to Aboriginal groups that are outside the EA process, and any potential outstanding issues identified after the Review Panel report, should be identified and discussed with the Agency.* *Timelines for the federal government's administration of the EA are a legislated requirement under CEAA 2012. However the Agency strives to facilitate and accommodate the participation of Aboriginal groups whenever possible within these legislated timelines.* *Consultation is an ongoing dialogue between the Crown and Aboriginal groups, and should the Project be allowed to proceed subject to conditions in an EA decision statement, consultation with potentially impacted Aboriginal groups would carry on into the permitting phase and beyond depending on what, if any, issues remained outstanding at the time of the EA decision."*		
HFN-8.5	Commented that participation funding offered by the VFPA is insufficient. Requested further funding.	12-Nov-14, Cowichan Nation Alliance EIS Workshop #2	**Cowichan Nation Alliance:** 09-Jan-2014: Offered funding for group Traditional Use study. 24-Apr-2014: Accepted funding for group Traditional Use study.	**Addressed in EIS Appendix 7.2-B (#19):** The VFPA has provided or offered funding support to ensure the ongoing participation of Indigenous groups	**EIS** 7.0 Engagement and Consultation

			• 28-Oct-14 Aboriginal Groups Workshop #3; • 29-Oct-14 Aboriginal Groups Workshop #4; and • 12-Nov-14 Cowichan Nation Alliance Workshop #2.		
HFN-8.7	Stated that to date Halalt has had only limited and inadequate participation in the preparation of the EIS. Stated that Halalt's input and the input of the Cowichan Nation Alliance would have added to the "completeness" of the EIS. Stated that Halalt's lack of participation in TAGs and the subsequent identification of Aboriginal related value components results in inadequate consideration of its Aboriginal rights.	15-Jun-2015, Letter to the CEA Agency from Halalt First Nation (CEAR Document #253)	**13-Oct-2015, Letter from the CEA Agency to Halalt First Nation (CEAR Document #312):** *"The Agency did not request additional information for this item since the information provided here is not a request that relates to the completeness of the EIS Guidelines, but rather the working relationship with [the VFPA]."*	**Addressed in the EIS Appendix 7.2-B (#15):** Since January 2011, the VFPA has consulted with Indigenous groups regarding Project planning, components and activities, selection of VCs, the potential effects of the Project, proposed mitigation measures, and potential changes to the environment related to the Project. The VFPA also held technical workshops with Indigenous groups at which the VFPA and technical specialists engaged directly with members of Indigenous groups, discussing specific areas of Indigenous interest and reviewing related technical topics. The intent of the fall 2014 workshops, as described in EIS Section 7.2.2 and detailed in EIS Appendix 7.2-A, was to provide preliminary EIS results and proposed mitigations and obtain feedback in a simplified presentation and plain language format. Materials were provided to Indigenous groups approximately two weeks in advance of workshops, to provide time to read the material so that questions and comments could be raised in the workshops. The VFPA also provided an opportunity to provide further comment following the workshops. Most questions asked during consultation are addressed in this appendix. Some questions, comments and requests were addressed at the workshops or through follow up communications. The process identified for responding to Indigenous interests and/or issues is provided in the EIS. The VFPA continues to be open to hear concerns and will notify Indigenous groups when the EIS is submitted.	**EIS** 7.0 Engagement and Consultation 7.2.2 Pre-EIS Submission Consultation Process Appendix 7.2-A Consultation Activities by Aboriginal Group Appendix 7.2-B Aboriginal Groups Interests and Issues Table

Table 9: Environmental Assessment and Permitting Process

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-9.1	Asked if it would be a harmonised process with the Province.	05-Mar-2013, Meeting with Cowichan Nation Alliance	**05-Mar-2013, Meeting:** Noted that the process has yet to be determined. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#8):** On November 5, 2014, the B.C. Environmental Assessment Office (EAO) confirmed the Project is reviewable under Part 8 of the Reviewable Projects Regulation, B.C. *Environmental Assessment Act*. On December 19, 2014, the B.C. Minister of Environment issued an order under s. 14 of the Act establishing the Province's procedures and methods for conducting the environmental assessment for the Project. The Minister ordered that the scope of the Project is as defined by the CEA Agency in the *EIS Guidelines*; the scope of the assessment must include factors established by the federal Minister and potential adverse environmental, economic, social, heritage, and health effects, including cumulative effects, and practicable means to mitigate such potential adverse environmental effects, and potential adverse effects on Indigenous groups; the EAO will principally rely on the environmental assessment to be conducted by the federal review panel and on consultation conducted by the CEA Agency with Indigenous groups, whose interests are potentially affected by the Project; and the EAO must make a recommendation to the Minister within 30 days of receiving notice of the decision from the federal Minister. The information presented in the EIS is intended to satisfy both federal and provincial environmental assessment requirements. More information regarding the federal environmental assessment for the Project can be found on the CEA Agency website at www.ceaa-acee.gc.ca, Reference Number: 80054. More information regarding the provincial environmental assessment for the Project can be found on the EAO's Project Information Centre (e-PIC) website at http://a100.gov.bc.ca/appsdata/epic/html/deploy/epic_project_home_410.html	**EIS** 6.0 Environmental Assessment and Permitting Process 6.2 Provincial Involvement and Process Appendix 7.2-B Aboriginal Groups Interests and Issues Table
HFN-9.2	Concerned that the EIS meets DFO standards not First Nation standards.	03-Jul-2014, Aboriginal Groups Valued Components Workshop #2	**03-Jul-2014:** Acknowledged the concern and stated that the Project team is trying to understand other perspectives and wants to make sure that we understand what the effects are to fisheries.	**Addressed in EIS Section 1.0:** The environmental assessment for the Project was developed to meet the requirements specified in the *EIS Guidelines* prepared by the CEA Agency. Indigenous groups have the opportunity to review the EIS and in that context, raise this comment to the CEA Agency and other agencies as appropriate.	**EIS** 1.1 Purpose of the Environmental Impact Statement
HFN-9.3	Noted that the draft Panel Terms of Reference is inconsistent with its reference to "Project". Stated that there are references to "project" and "designated Project". Recommended that all references to the proposed ... project be referred to as the "Project".	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"Your comment has been incorporated."*		
HFN-9.4	Stated that the draft Terms of Reference (ToR) should direct the Review Panel to explicitly assess potential Project impacts on Aboriginal and Treaty rights and culture. We note that the list of factors as set out at section 2.1 provides that the Review Panel must	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"The Terms of Reference provide direction to the Review Panel regarding its role and mandate in conducting the EA. In* Part 3- Mandate of the Panel *in the Terms of Reference, direction has been provided to the Review Panel on collecting*		

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	account for the "environmental effects" of the Project, of which term is defined at section 5(1) of the *CEAA 2012* to include effects to Aboriginal peoples and their use of lands and resources for traditional purposes; however, in light of the significance of potential impacts to Aboriginal and Treaty rights from the Project, a more direct reference in the list of factors is warranted.	Alliance (CEAR Document #126)	*information on behalf of the Crown as it relates to potential impacts of the project to potential or established Aboriginal or Treaty rights."*		
HFN-9.5	Stated that the draft ToR fails to provide explicit requirements and guidance for assessing socio-economic impacts in relation to Aboriginal people. Noted that the list of factors provides that the Review Panel must account for the "environmental effects" of the Project, which is defined at section 5(1) of the *CEAA 2012* to include health and socio- economic conditions; however we submit that the Review Panel would benefit from clear guidance on this issue.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"The Agency is currently considering guidance on this topic."*		
HFN-9.6	Stated that it is essential that the Review Panel only recommend mitigation measures that are capable of achieving their stated purposes, and capable of demonstrating measurable success. Accordingly, Cowichan Nation Alliance recommended language that requires the Review Panel to put forward only those recommendations that are capable of demonstrating success in mitigating any significant adverse environmental effects. Recommended amendments to section 2.1 the draft ToR to address this concern.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"Section 2.1 provides direction directly from CEAA 2012 and as mentioned above, the legislation provides clarity about what is meant by mitigation.* *The information related to the success of past project mitigation measures should be included in the EIS as discussed above.* *Your comment on possible environmental effects or impacts to potential or established Aboriginal or Treaty rights has been considered and language has been added to section 3.9 as it relates to the Review Panel's mandate in relation to Aboriginal consultation."*		
HFN-9.7	Stated that the scope of factors to be considered in the environmental assessment should not be limited by the content of the EIS guidelines. A review panel should give the requisite authority and discretion to decide for themselves the proper scope of the factors that they are considering, as this will fall under their expertise.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"The purpose of the EIS Guidelines is for the proponent to identify the information requirements for the preparation of the EIS. The EIS Guidelines specify the nature, scope and extent of the information required for the EIS. Note that the EIS Guidelines set out the minimum information requirements – it is the proponent's responsibility to provide any additional information as required by the Agency or the Review Panel, once it has been*		

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	Recommended amendments to section 2.3 of the draft ToR to address this concern.		*established, for the assessment of the environmental effects of the Project.* *Under CEAA 2012, the scope of the factors to be taken into account in the environmental assessment by the Review Panel are those in section 19(1)* a) *to* i)*. The Minister may require that any other matter relevant to the EA be taken into account by the Review Panel under section 19 (1)* j)*."*		
HFN-9.8	Stated that the Review Panel should not be limited to considering information provided solely by the participants – government agencies and departments may also have valuable information to contribute. Recommended amendments to Section 3.5 of the draft ToR to address this concern.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"Your comment has been considered and Section 3.5 has been amended to direct that the "Review Panel shall accept as part of its record and review:" Federal authorities and government are already considered participants in the Review Panel process and henceforth covered by this Section."*		
HFN-9.9	Stated that Panel members should have knowledge or experience relevant to the anticipated impacts of the Project on Aboriginal and Treaty rights. Recommended amendments to section 4.1 of the draft ToR to address this concern.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"Cowichan Nation Alliance members are welcome to submit potential panel candidates to the Agency. Panel Members must be unbiased and free from conflict of interest relative to the Project and have knowledge or experience relevant to the anticipated environmental effects of the project. Please provide suggested names and CVs to [provided contact information]."*		
HFN-9.10	Stated that it is critical that those parties that provide the Panel Members with support in a procedural, technical, administrative or advisory manner be unbiased and free from any conflict of interest relative to the Project and, where applicable, have knowledge or experience relevant to the anticipated environmental effects and impacts of the Project. Requested addition to the end of section 4.5: The Secretariat will be unbiased and free from conflict of interest relative to the Project.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"Your proposed change has been made."*		
HFN-9.11	Requested addition to the end of section 4.18: Any federal authority that assists the Review Panel will be unbiased and free from conflict of interest relative to the Project and will have knowledge or experience relevant to	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"Federal experts participate in environmental assessments in accordance with the mandate and areas of responsibility of their departments. Public servants are guided in their work and professional*		

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	the anticipated environmental effects and impacts of the Project.	Alliance (CEAR Document #126)	*conduct by the Values and Ethics Code for the Public Service."*		
HFN-9.12	Stated that it is possible the Review Panel will not be capable of fulfilling its mandate and submit its report to the Minister within 14 months. Recommended that section 4.13 expressly confirm that the Review Panel must ultimately take the time that it requires to properly and completely discharge it mandate subject to the CEAA 2012, which allows the Minister to modify the statutory limits imposed on a review panel (CEAA 2012, subsection 38 (4)). Recommended amendments to section 4.13 of the draft ToR to address this concern.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"CEAA 2012 has legislated timelines for the completion of an EA by Review Panel. The Review Panel must fulfill its mandate and provide a report to the Minister within the timelines set out in the legislation and as directed in the Terms of Reference."*		
HFN-9.13	Stated that the Review Panel should be required to give more than 30 days' notice of tis public hearing, as many participants must prepare and reschedule other commitments in order to participate. Accordingly, notice of a minimum of 90 days should be required. Stated that the timing and location of the public hearing is of critical importance to our communities; we require an opportunity to comment on the draft document setting out the schedule and location of public hearing prior to finalisation by the Review Panel. Recommended amendments to section 4.22 of the draft ToR to address this concern.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"The Terms of Reference provides a minimum timeframe for the notice of the start of public hearings.* *The Review Panel is responsible for developing procedures for the conduct of the public hearing, including timing, location, format and other logistics. The Panel may, at its discretion, make draft hearing procedures available for comment.* *If members of the Cowichan Nation Alliance have suggestions on the timing or notification required for public hearings, they may provide that information to the Review Panel once it is established."*		
HFN-9.14	Stated that the draft ToR should direct the Review Panel to explicitly include their identification of potential impacts on Aboriginal and Treaty rights and culture in the report. Noted that the list of required coverage in the Review Panel's report includes an identification of those conclusions that relate to the environmental effects defined in section 5 of the CEAA 2012, which includes effects to aboriginal peoples and their use of lands and resources	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"The Review Panel has been directed to collect and summarize information provided to it by Review Panel participants about any potential impacts on potential or established Aboriginal or Treaty rights in its report (section 3.10).* *The Minister of the Environment has requested the Review Panel provide its conclusions and recommendations in relation to any environmental effects of the Project on Aboriginal people as set out in section 5 of CEAA 2012 as it is responsible for conducting the EA on the designated project.*		

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	for traditional purposes; however, in light of the significance of potential impacts to Aboriginal and Treaty rights from the Project, a more direct reference to the list of required coverage for the report is warranted. Recommended amendments to section 4.27 of the draft ToR to address this concern.		*The Crown will maintain the duty to consult throughout the EA process and will conduct an assessment of what the potential project impacts are to the exercise of potential or established Aboriginal or Treaty rights. The Crown has already communicated the preliminary depth of consultation assessment letters dated January 7th, 2014 as referenced in the first response in this table.* *The Crown will communicate a revised depth of consultation assessment once the Review Panel has issued its report and is willing to discuss this assessment with Cowichan Nation Alliance members at this time. Cowichan Nation Alliance members are encouraged to raise any potential environmental effects, and/or impacts of the Project on potential or established Aboriginal or Treaty rights to the Review Panel to ensure the Crown has a robust understanding of your concerns at the point that the Review Panel issues its report."*		
HFN-9.15	Stated that section 4.28 obliges the Review Panel to include in its report "information it has received with respect to the justifiability of those significant adverse environmental effects". If the report is to recognise arguments that seek to justify significant adverse effects, the report must, as a matter of fairness and completeness, recognise arguments that such effects are not justified. Otherwise, the Minister will receive a biased report. Recommended amendments to section 4.28 of the draft ToR to address this concern.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"Please see the additional clarity on justification related to likely significant adverse environmental effects added in Section 3.5 which states* "In accordance with sections 47 and 52 of CEAA 2012, if the Minister decides that the project is likely to cause significant adverse environmental effects, the Minister will refer the matter to the Governor in Council (Cabinet) who must decide whether those environmental effects are justified in the circumstances." *The Review Panel will not make the determination on whether likely significant adverse environmental effects may be justified, but if, taking into account the implementation of any mitigation measures, the Review Panel concludes that the project is likely to cause significant adverse environmental effects, the Panel may include in its report information that it has received with respect to whether those significant adverse environmental effects are justified in the circumstances."*		

Halalt First Nation

Table 10: Environmental Management Program

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-10.1	Asked if the lessons learned from eelgrass transplants that took place as part of Deltaport Third Berth have been taken into account for RBT2. Interested in and request information about the follow-up monitoring work that took place as part of Deltaport Third Berth.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Responded that the VFPA recently hosted a workshop that brought together eelgrass experts from the west coast to share knowledge and experience. Noted that prior to 1986 there were a lot of challenges, but since then transplants have had a success rate of over 90%. **29-Aug-2017, Follow Up Program Workshop with Cowichan Nation Alliance, Lyackson First Nation and Malahat First Nation:** The VFPA met with members of the Cowichan Nation Alliance to discuss the Follow-up Program and lessons learned from DP3.	**Addressed in EIS Appendix 7.2-B (#201):** Onsite eelgrass habitat creation is proposed through transplanting in an area approximating 3 ha. Based on the review of previous habitat creation programs (e.g., DP3), eelgrass transplants are considered to be an effective means of increasing productivity of marine vegetation. The VFPA will implement a Follow-up Program, which will include monitoring to confirm that all offsetting measures meet intended objectives and function as designed. Monitoring will include methods and success measures to confirm that offsetting measures have been effective. The *Fisheries Act* Authorization will require that functional objectives are met.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 17.0 Mitigation for Marine Biophysical Valued Components 17.3.2 Offsetting Potential Effects, Offsetting Framework 17.6 Mitigation for Marine Biophysical Valued Components, Monitoring and Reporting
HFN-10.2	Stated that no Aboriginal involvement with the Scientific Advisory Committee (SAC) and monitoring was a failure to consult with Aboriginal communities for the Deltaport Third Berth Project. Noted the SAC would be a good opportunity to have Aboriginal Traditional Knowledge included and to have First Nations input on the selection of committee members. Added "we would like engagement in the governance of the monitoring program."	29-Aug-2017, Follow Up Program Workshop with Cowichan Nation Alliance, Lyackson First Nation and Malahat First Nation	**29-Aug-2017, Workshop:** Noted input on governance for the Follow-up Program and stated that it will be considered in the planning for the RBT2 Follow-up Program governance structure for further discussion in future Follow-up Program meetings.	**Addressed response to in IR10-11:** The VFPA's response to IR10-11, as requested by the Review Panel, describes how Indigenous groups will be involved in the development, implementation, and management of the RBT2 Follow-up Program.	**Information Requests** Response to Sufficiency Information Request #11 (IR10-11)
HFN-10.3	Noted they never agreed with the VFPA assessment on level of impact and expect the impacts to be larger. Expressed concern with how the assessment was conducted by the VFPA's consultants. Stated that they want to see a third party environmental monitor involved in Follow-up Program implementation that is not involved in the original findings. Suggested the monitoring program be separated from the VFPA jurisdiction	29-Aug-2017, Follow-up Program Workshop with Cowichan Nation Alliance, Lyackson First Nation and Malahat First Nation	**29-Aug-2017, Workshop:** The VFPA met with members of the Cowichan Nation Alliance to discuss the Follow-up Program and lessons learned from DP3. The VFPA sought input into the Program through asking the following questions at the workshop: • What is important to you (Cowichan Nation Alliance) and your community?; • What elements would you (Cowichan Nation Alliance) like to see monitored?; and • How would you (Cowichan Nation Alliance) like to be involved moving forward? Noted comments on monitoring and stated that they will be considered in Follow-up Program planning.	**Additional information provided by the VFPA:** As a result of extensive studies and assessment, the VFPA is confident potential adverse effects can be fully or partially avoided or reduced through Project design and the implementation of environmental management programs. Where Project-related effects cannot be fully avoided or reduced, offsetting measures, such as the creation and enhancement of habitat, will be applied. **Addressed in EIS Section 33.5:** Similar to the Adaptive Management Strategy for DP3 as described in EIS Section 33.5, the VFPA is committed to developing and implementing a Follow-up Program for the Project. The purpose of the Follow-up Program is to verify the accuracy of residual effect predictions made in the EIS, and determine the effectiveness of any measures taken to mitigate the adverse environmental effects of the Project. To ensure the program's elements adequately reflect conditions of Project approvals, final designs, and construction or operation approaches, as well as public, Indigenous group, and regulator feedback received during the review of the EIS, the VFPA will lead the	**EIS** 33.5 Follow-up Program

Halalt First Nation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				development of the Follow-up Program after the submission of the EIS. The Follow-up Program will include: • An evaluation of the adequacy of existing data to provide a benchmark against which to test Project-related effects; • A monitoring design drawing on the measurable parameters identified to be field-tested; • A methodological approach for using field-collected data to measure and verify the accuracy of the effects predicted in the EIS; • A reporting framework that defines frequency of reporting, distribution, and feedback mechanisms; and • Details of the VFPA's approach to adaptive management for the Project through construction and operation. The Follow-up Program will be developed in consultation with federal agencies, including the CEA Agency, DFO, and ECCC. Complete drafts of the RBT2 Follow-up Program will be made available prior to the start of field measurements to ensure parties consulted on the program and approving agencies have an opportunity to evaluate and approve the program. Feedback from Indigenous groups regarding the draft program will be sought through the VFPA's ongoing engagement initiatives.	

Halalt First Nation

Table 11: Human Health – Valued Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-11.1	Concerned about the determination that the Project is not expected to result in detectable effects on human health.	11-Dec-2014, Health & Aboriginal Rights Workshop - Cowichan Nation Alliance	**11-Dec-2014, Workshop:** Recorded comment for consideration by Project team. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#149):** The following are highlights of the human health assessment: • Seven potential mechanisms for human health effects were assessed: air emissions, noise and vibration, shellfish contamination, stress and annoyance, employment and income, food security, and health inequity. • Potential Project-related effects on human health are expected to be fully or partially mitigated through the implementation of environmental management plans and additional mitigation measures. • The Project is not expected to result in any significant adverse residual effects on human health. • The Project is not expected to result in measurable incremental residual cumulative effects to human health. With mitigation, all potential Project-related effects are expected to be negligible (not measurable), with the exception of residual effects on human health related to exposure to air emissions during construction, and exposure to noise during construction and operation. These effects are predicted to be not significant. A rationale for the determination is provided in EIS Section 27.0.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 8.0 Effects Assessment Methods 27.0 Human Health 27.6 Future Conditions with the Project – Potential Project-Related Effects 27.7 Mitigation Measures 27.8 Characterisation of Residual Effects and Context 27.9 Determination of Significance of Residual Adverse Effects
HFN-11.2	Concerned about the effect of increased marine traffic disturbing sediments containing coal dust deposits. Stated that the EIS clearly states that re-suspension of sediments containing coal dust deposits during the construction phase will occur. Stated that the EIS does not include any information regarding the release of coal dust during the operation phase.	15-Jun-2015, Letter to the CEA Agency from Halalt First Nation (CEAR Document #253)	**13-Oct-2015, Letter from the CEA Agency to Halalt First Nation (CEAR Document #312):** *"The Agency did not request additional information for this item since there is already some information provided in the EIS. The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in EIS Appendix 7.2-B (#58):** The proposed Project is a container terminal and does not include any coal-related elements. The Project will not contribute to coal dust. Coal dust from Westshore Terminals (the existing coal terminal at Roberts Bank) was included in the examination of air quality existing conditions and air quality cumulative effects assessment. The human health assessment considered the potential for contamination of edible shellfish related to Project activities resulting in re-suspension of historical deposits of coal in sediments. The assessment concluded that there were no risks to human health related to re-suspension of sediments containing coal. Because sediments that will be re-suspended and deposited as a result of construction-phase activities are not contaminated, changes in contaminant concentrations bioavailable to the food chain are not anticipated.	**EIS** 4.0 Project Description Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.2 Air Quality Appendix 9.2-A Air Quality Study 27.0 Human Health **Information Requests** Response to Sufficiency Information Request #33 (IR4-33 of CEAR Document #1078) Response to Sufficiency Information Request #34 (IR4-34 of CEAR Document #946) **Memorandum Re: Summary Report – Roberts Bank Dungeness Crab Health Studies**
HFN-11.3	Stated that the Edible Shellfish Study is not complete and the condition of diseased shellfish is unknown. Asked if the results of the Edible Shellfish Study will affect the EIS with regards to the crab health assessment and future crab health predictions. Asked if current conditions are related to contamination from coal dust and what additional assessment steps will occur.	15-Jun-2015, Letter to the CEA Agency from Halalt First Nation (CEAR Document #253)	**13-Oct-2015, Letter from the CEA Agency to Halalt First Nation (CEAR Document #312):** *"The Agency did not request additional information for this item since there is already some information provided in the EIS. In this case [the VFPA] concluded that the effects from the project would be negligible. The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in responses to IR4-33 and IR4-34:** Further information concerning the VFPA's investigations into 'blackened' crabs is provided in the VFPA's response to IR4-34. In summary, black lesions were observed on four of the five crabs collected by Indigenous harvesters. The black lesions were concluded to be consistent with chitinolytic shell disease, generically referred to as 'shell disease', a condition common to crab and other crustaceans. This disease is caused by a bacterial or fungal infection of an area where the outer layer of the shell has been previously damaged. Shell disease has not been linked to contamination. The disease is not specific to the Roberts Bank area and is present across the Pacific Northwest, including Alaska and B.C. and in Atlantic Canada. In its response to IR4-33, the VFPA provided results of the study. In summary: A crab hepatopancreas study was conducted at Roberts Bank to determine the concentrations of contaminants of concern in crab hepatopancreas in the LAA. In	**Information Requests** Response to Sufficiency Information Request #33 (IR4-33 of CEAR Document #1078) Response to Sufficiency Information Request #34 (IR4-34 of CEAR Document #946)

Halalt First Nation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	Stated that if the study results are positive for contamination from coal dust, the EIS will need to be updated to address this.		**01-May-2017, Email from the VFPA:** Hemmera, on behalf of the VFPA, plans on conducting a study in May or June 2017 to measure contaminant levels in shellfish collected at Roberts Bank. The study will consist of collection of Dungeness crab and Macoma clams from three locations at Roberts Bank, and laboratory analysis for a suite of contaminants including polychlorinated biphenyls (PCBs), polycyclic aromatic hydrocarbons (PAHs), and trace elements. This study, in conjunction with past shellfish studies, will further strengthen the existing understanding of shellfish contaminant levels at Roberts Bank. **12-Apr-2018, Letter from the VFPA to each member of the Cowichan Nation Alliance:** Stated that since your concerns were raised, the Project team has conducted further work on these topics to respond to information requests from the Review Panel, to better understand potential effects and suggested mitigation, and to gain deeper understanding of the viewpoints of Indigenous groups and stakeholders. Provided the following documents review: • IR4-33 - Crab Hepatopancreas Additional Study Summary • IR4-34 - Black Crab Additional Studies Summary Stated that the VFPA is interested in hearing views regarding options to mitigate potential effects to crabs and crabbing in the Project area.	June 2017, Dungeness crab were collected from five traps placed at each of the three study locations (15 traps total). Twelve adult male crabs were harvested from each of the three sites (36 crabs total). Samples were submitted under chain of custody to analytical laboratories accredited by the Canadian Association for Laboratory Accreditation (CALA) for the analysis requested. The analysis was completed in August 2017. Collectively, the results of a statistical comparison across sites indicate that the average concentrations of PCBs, coal indicator elements, arsenic compounds, and PAHs measured in hepatopancreas from crab collected from the RBT2 and intermediate transfer pit (ITP) sites are not statistically higher than those measured in crab from the Canoe Passage reference site. This suggests that existing sediment and water quality in and around the existing terminal and proposed RBT2 terminal are not contributing to contaminant concentrations in crab hepatopancreas that are higher than levels found in crab hepatopancreas from the Canoe Passage reference site.	

Halalt First Nation

Table 12: Labour Market – Valued Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-12.1	Asked if the Project is expected to have a negative impact on any other types of employment.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Responded that the VFPA looked at labour market balance as an indicator, and conducted analyses to consider what the effect of the Project's employment and procurement would be, in relation to the availability of workers for other industries. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Section 19.0 Labour Market.	**Addressed in EIS Section 19.0:** The Project is expected to result in the following positive effects on the labour market in Metro Vancouver: • During the 5.5 year construction phase: o 4,150 person-years of direct employment, worth $494 million in wages; o 9,724 person-years of total direct, indirect, and induced employment, worth approximately $824 million in wages; • During operation: o 835 person-years of annual direct employment connected to terminal operations, worth approximately $138 million in wages annually; o 1,412 person-years of annual total direct, indirect, and induced employment, worth $169 million in wages annually; o A slight lowering of the unemployment rate in Metro Vancouver; o A positive effect on the participation rate; and o A small boost to median incomes in Delta and Metro Vancouver. Training opportunities associated with construction and operation are anticipated to generate positive effects for the Project's direct workforce. Positive changes in employment and labour income are anticipated for the Indigenous population in Metro Vancouver during Project construction and operation. The Project is not expected to result in measurable adverse residual effects to the labour market.	**EIS** 19.0 Labour Market

Halalt First Nation

Table 13: Light – Intermediate Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-13.1	Concerned that the light study did not consider the night sky with cloud cover as this increases the light effects over the water. Concerned about how the locations for monitoring light effects were selected, with specific reference to Galiano Island and Valdes Island.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Responded that the assessment teams for visual resources and light are different. The team carrying out the light assessment work (at night) took a subset of the points of reception (PORs) from the visual resources (day) assessment, because there is less variation expected from point to point. Stated that for both the day and night assessments, PORs were concentrated in areas in closer proximity to the Project site. The POR on Valdes was added later through consultation. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#47):** Measurements of sky glow depend on the visibility of the stars, and were taken on nights with no or low cloud cover, where possible. The rationale for the assessment methods is included in EIS Section 9.4 and the technical report. The rationale for selection of the PORs is included in EIS Section 9.4. The light assessment included a POR on Galiano Island and on Valdes island. The measurements taken from, and predictions made for, these PORs are intended to be representative of surrounding areas.	**EIS** 9.0 Physical Setting 9.4 Light 9.4.2 Assessment Purpose and Approach 9.4.5 Methods Appendix 9.4-A Roberts Bank Terminal 2 Light Assessment Study, Study Methods Appendix 7.2-B Aboriginal Groups Interests and Issues Table
HFN-13.2	Asked if RBT2 would be subject to, or exempt from, Delta bylaws around light, and if not, whether the VFPA would be willing to meet or match their requirements anyway.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. Post meeting note shared with Cowichan Nation Alliance in draft meeting notes: There are not any standards or bylaws for light such as there are for noise, for example. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#99 and #45):** A process is underway to change the current outdoor lighting fixtures at the Deltaport Terminal to light-emitting diodes (LEDs). LEDs are more directional and easier to control in terms of where light is focused. It is anticipated that the change to LEDs will reduce both light trespass and sky glow from the Deltaport Terminal, provided good lighting design practices are followed (specifically, the use of full cut-off light fixtures to limit up-light and only lighting areas that are required to be lit). The lighting on one crane at Deltaport has been fully replaced with LED lights, offering a point of comparison with the older lights. **Addressed in EIS Section 33.0:** The Light Management Plans for construction and operation phases will be developed prior to the respective phases. The Light Management Plans will describe measures to reduce excess lighting and sky glow, including: • Orienting lights downwards and away from residential and marine areas; • Using shielding to minimise light trespass; • Controlling light levels and limiting light use to areas where activities are occurring; • Where possible, using fixtures that emit light at wavelengths shown to minimise disorienting effects to birds; • During construction, ensuring dredge lighting system shields light from spilling outside the basic working footprint of the dredge; and • During operation, establishing a centralised lighting control system to select lighting where required. Feedback on applicable environmental management plan sub-plans will be solicited from Indigenous groups potentially affected by the Project.	**EIS** 9.0 Physical Setting 9.4 Light 9.4.4 Relevant Guidelines Appendix 9.4-A Roberts Bank Terminal 2 Light Assessment Study Appendix 7.2-B Aboriginal Groups Interests and Issues Table 33.0 Environmental Management Program

Halalt First Nation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-13.3	Stated that lighting is predicted to play a role in structuring predator-prey interactions. Stated that the Light Management Program should ensure minimal impact of lighting. Asked how First Nations communities will be involved with these management programs. Asked if First Nations communities will receive copies of the Light Management Program.	15-Jun-2015, Letter to the CEA Agency from Halalt First Nation (CEAR Document #253)	**13-Oct-2015, Letter from the CEA Agency to Halalt First Nation (CEAR Document #312):** *"The Agency did not request additional information for this item since there is already some information on Management Programs provided in the EIS. The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in EIS Section 33.0:** The Light Management Plans, for construction and operation phases will be developed prior to the respective phases. The Light Management Plans will describe measures to reduce excess lighting and sky glow, including: • Orienting lights downwards and away from residential and marine areas; • Using shielding to minimise light trespass; • Controlling light levels and limiting light use to areas where activities are occurring; • Where possible, using fixtures that emit light at wavelengths shown to minimise disorienting effects to birds; • During construction, ensuring dredge lighting system shields light from spilling outside the basic working footprint of the dredge; and • During operation, establishing a centralised lighting control system to select lighting where required. Feedback on applicable environmental management plan sub-plans will be solicited from Indigenous groups potentially affected by the Project.	**EIS** 33.0 Environmental Management Program

Table 14: Marine Commercial Use – Valued Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-14.1	Concerned that the Project could negatively impact fishermen and their livelihoods.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Presented information on the preliminary assessment of potential Project effects and cumulative effects on Commercial, Recreational, Aboriginal (CRA) Fisheries and any proposed mitigation, as well as receive feedback on the draft findings and proposed mitigation. The presentation includes: executive summary, sub-components, indicators, assessment boundaries, the local and regional assessment areas, information sources, an overview of each of the fisheries (CRA), existing conditions for Pacific Salmon, Groundfish, Forage Fish, and Shellfish, expected conditions at Project commencement, potential Project-related effects, proposed mitigation measures, anticipated residual effects, the preliminary determination of significance, and anticipated cumulative effects. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#117):** Marine commercial use, or the use of marine waters and resources to generate revenue, has been identified as an important economic factor in local and regional communities, and for Indigenous groups. The marine commercial use assessment included four sub-components: • Seafood harvesting; • Marine fish harvesting; • Guided sport fishing; and • Marine-based tourism. Potential effects on marine commercial use include displacement of commercial crab harvesting during construction and operation, resulting in a potential change of harvesting area, total harvest, and revenue, due to the Project footprint and the proposed expansion of the area closed to commercial crabbing. The VFPA will work with DFO to engage commercial crab harvesters to identify and implement feasible mitigation measures; and will implement construction and operation environmental management plans related to construction phase communication, construction monitoring, and crab salvages effects from displacement of commercial crab harvesting during construction and operations. The Project is anticipated to result in a negligible effect to marine fish harvesting, guided sport fishing, and marine-based tourism. These negligible effects are related to changes in area, access, resource availability, and harvesting revenues. The Project is expected to result in a residual effect of changes to seafood harvesting area, harvest, and revenue. The residual effect is determined to be not significant, as Dungeness crab are known to move substantial distances to baited traps, and harvest activity can be moved to another open area. Other planned or reasonably foreseeable projects and activities would also displace crab harvesting, and this effect would combine with that of the Project to result in an incremental cumulative effect on commercial crab fishing. This adverse incremental cumulative effect is determined to be not significant.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 12.0 Marine Invertebrates 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries 21.0 Marine Commercial Use 21.6 Future Conditions with the Project – Potential Project-related Effects 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Land and Resources for Traditional Purposes 32.2.6 Future Conditions With the Project - Potential Project-related Effects

Table 15: Marine Fish – Valued Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-15.1	Concerned that the Project will affect migrating salmon that return from the South to the Fraser River through Canoe Passage. Concerned about mitigation for natural migration patterns that are in the Project area and the impacts to salmon being made that we do not understand yet along with other animal's natural migration.	03-Jul-2014, Aboriginal Groups Valued Components Workshop #2 22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**03-Jul-2014, Workshop:** Responded that the Regional Study Area has been extended to Hope, which will capture a large portion of that migration and that is actually where the DFO sub-areas stop. Stated that a real effort was made to capture some, if not all, of the migration. Stated that sockeye hold more in the North arm and South arm, but that there are species of Chinook and chum that hold around Canoe Passage, so that area is being included. Canoe Passage is a fairly small distributary of the Fraser but there is still holding there. Sockeye in particular are coming out and heading north, with the exception of the Harrison Lake stock, which DFO thinks might be migrating south. **22-Oct-2014, Workshop:** Responded that the options for onsite habitat mitigation do consider fish passage. The primary intent is to soften the shoreline to make it more amenable to salmonid use. Stated that juvenile salmon use eelgrass beds and tidal marsh habitat. Stated that the mitigation measures primarily consider juvenile salmon outmigration and rearing. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. .	**Addressed in EIS Appendix 7.2-B (#78):** Field studies, air photo review, and modelling were undertaken during the coastal geomorphology assessment at Roberts Bank, including Canoe Passage. Changes are anticipated around the terminal and within the intertidal zone shoreward of the terminal. The potential effects of these changes on marine fish are considered in the EIS. An assessment was undertaken to determine the effects of the Project on the productivity of marine fish, including Pacific salmon. The assessment of marine fish, as well as marine vegetation and invertebrates upon which fish depend, consider seasonal influences, and potential Project-related changes on these influences. Terminal footprint-related changes to coastal process such as currents and freshwater-marine water mixing near and shoreward of the terminal are anticipated. Project-related changes in salinity and turbidity are discussed with respect to marine water quality. A discussion of the potential effects of these changes on marine fish, including different fish life stages, is presented in the marine fish assessment. **Addressed in EIS Section 13.6.3.1:** The potential effect on the migration behaviour of juvenile salmon from terminal placement and causeway widening was assessed qualitatively. Two effects mechanisms—changes in the light environment and changes in habitat availability—were considered to have the potential to influence migration behaviour of juvenile salmon and result in a minor decrease of juvenile salmon productivity pre-mitigation. With implementation of mitigation measures, including adherence to juvenile salmon fisheries-sensitive window, implementation of a light management plan, as well as offsetting in the form of onsite native eelgrass transplants and reconstructed tidal marsh habitats north of the widened causeway, migration-related changes in juvenile salmon productivity were assessed as negligible. **Addressed in responses to IR5-18 and IR5-22:** Further discussions about terminal placement's potential effects on the migratory behaviour of juvenile salmon is available in the VFPA's responses to IR5-18 and IR5-22.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.0 Physical Setting 9.5 Coastal Geomorphology 9.5.8 Future Conditions with the Project 9.7 Marine Water Quality 9.7.8 Future Conditions with the Project 13.0 Marine Fish 13.6 Future Conditions with the Project 13.6.3 Potential Effect - Changes in Productivity Table 13-6 Desktop and Field Studies Related to Marine Fish to Support the Assessment Table 13-10 Summary of Roberts Bank Ecosystem Model Productivity Results for Marine Fish **Information Requests** Response to Sufficiency Information Request #18 (IR5-18 of CEAR Document #1153) Response to Sufficiency Information Request #22 (IR5-22 of CEAR Document #1153)
HFN-15.2	Stated that sockeye salmon have not been assessed in the EIS and is an information gap. Stated that the Cowichan Nation Alliance is not satisfied with the explanation provided as to why sockeye is excluded from the assessment. Stated that field studies were conducted at the wrong time of the year. Concerned that sockeye salmon have not received adequate consideration in the EIS.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2 11-Dec-2014, Health & Aboriginal Rights Workshop – Cowichan Nation Alliance 15-Jun-2015, Letter to the CEA	**12-Nov-2014, Workshop:** Responded that the VCs were defined based on the findings of the fieldwork. Referred to trawls being done in the area to determine what species are present in the area; different species can occur in the area, but Chinook and chum have more of a presence. Responded that the VFPA understands the importance of the species (sockeye) and more details specific to sockeye can be provided.	**Addressed in EIS Appendix 7.2-B (#107):** Sockeye salmon was not selected as a representative species within the Pacific salmon sub-component, as studies indicate that juvenile sockeye salmon do not use the Roberts Bank area in high abundance, relative to chum and Chinook salmon (which have been selected as representative species in the assessment). Since chum and Chinook are the most estuarine-dependent species of salmon, the potential for Project-related interactions with these species is greatest. Results of the assessment based on these two species represent a more conservative approach, given the life histories and habitat use	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.0 Physical Setting 9.5 Coastal Geomorphology 9.5.8 Future Conditions with the Project 9.7 Marine Water Quality

Halalt First Nation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	Concerned that the exclusion of sockeye salmon as a focal species, the economic component to its catch value is not adequately assessed. Concerned that there will be negative impacts on sockeye as a result of the Project. Stressed the importance of sockeye to the Cowichan Nation Alliance. Requested for peer review of the work pertaining to sockeye. Reiterated their concerns regarding the impact of the Project on migrating fish and disagreement that the VPFA consultants did not find evidence of sockeye salmon in the local assessment area. Stated that the scope of the field sampling program is too narrow to address all fish species that may be affected by the Project. Stated that the local assessment area used to assess representative species excludes important areas Northwest of Roberts Bank that are within the vicinity of the proposed Project. Stated that commercial fishing of sockeye salmon is recognised in the EIS; however, the effect of the Project on sockeye salmon is missing due to the narrow constraints of the local assessment area.	Agency from Halalt First Nation (CEAR Document #253) 29-Aug-2017, Follow Up Program Workshop with Cowichan Nation Alliance, Lyackson First Nation and Malahat First Nation	**11-Dec-2014, Workshop:** Responded that the VFPA thought more information about how sockeye had been considered had been provided to the Cowichan Nation Alliance, and apologised if they have not yet received anything. The EIS will describe more fully how salmon have been assessed. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **13-Oct-2015, Letter from the CEA Agency to Halalt First Nation (CEAR Document #312):** *"The Agency did not request additional information for this item since there is already some information provided in the EIS. [The VFPA] provided a rationale for not assessing effects to sockeye. The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."* **29-Aug-2017, Workshop:** Noted concerns regarding fish, and will include this as ongoing topic for further discussion on representative species and ways to address concerns raised.	of chum and Chinook. Therefore, potential Project-related effects on sockeye salmon are considered within the assessment through the assessment on the sub-component Pacific salmon, as represented by chum and Chinook. **Additional information provided by the VFPA:** Minor decreases in productivity are anticipated during the construction and operation phases for all marine fish sub-components, with the exceptions of negligible changes in productivity for certain species, including adult Chinook and chum salmon (representative species for sockeye and other Pacific salmon species) and lingcod, and an increase in productivity for shiner perch during the operation phase. Productivity decreases can be partially mitigated through the implementation of environmental management plans and the creation of habitat. Residual effects are anticipated for flatfish and forage fish as a result of permanent loss of subtidal sand habitat associated with the terminal footprint and disturbance from underwater noise. The assessment concludes there are no significant adverse effects from the Project, as marine fish productivity or long-term integrity would not be compromised. The Project is not expected to result in measurable incremental adverse cumulative effects to marine fish. Sockeye salmon are considered in the assessment of marine commercial use as the primary species of salmon sought in the assessment area. The economic component of sockeye fishing is addressed in EIS Section 21.0. A field sampling program for salmon was conducted at Roberts Bank in 2012 and 2013. While it is possible that 2012 to 2013 seasonal surveying for the Project did not capture all salmon species present at Roberts Bank, historical survey data add to the weight of evidence, suggesting a realistic representation of species composition and abundance at Roberts Bank. **Addressed in responses to IR5-15 and AIR-12.04.15-09:** In its response to IR5-15, the VFPA specifically discusses existing conditions related to sockeye salmon and describes the status and management practices associated with the species. Rationale as to how sockeye salmon were assessed via use of Chinook and chum as representative species, as well as similarities between species as they pertain to existing conditions (e.g., life history and habitat requirements), the mechanisms through which the Project may affect sockeye, as well as effectiveness of mitigation, are presented in the VFPA's response to AIR-12.04.15-09, including Appendix AIR9-A Table 2; and in the VFPA's response to IR5-15. **Addressed in EIS Section 13.3:** The marine fish LAA encompasses an area of approximately 5,416 ha. In determining LAA boundaries, consideration was given to the nature and characteristics of marine fish, and potential exposure of marine fish to various Project influences (e.g., total suspended solids (TSS), sedimentation, and underwater sound levels). Also taken into account were social	9.7.8 Future Conditions with the Project 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component 13.3.1 Spatial Boundaries 13.4.1 Information Sources, Desktop and Field Studies 13.5.1 Existing Conditions, Pacific Salmon 13.6 Future Conditions with the Project Table 13-6 Desktop and Field Studies Related to Marine Fish to Support the Assessment Table 13-10 Summary of Roberts Bank Ecosystem Model Productivity Results for Marine Fish 13.6.3 Potential Effect - Changes in Productivity **Information Requests** Response to Additional Information Request #09 (AIR-12.04.15-09 of CEAR Document #388) Response to Sufficiency Information Request #15 (IR5-15 of CEAR Document #1078)

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				and cultural considerations, such as community knowledge and ITK, and current land and resource use by Indigenous groups and others. The RAA, which covers an area of approximately 52,456 ha, was established to provide a regional context for the assessment of Project-related effects. The RAA was also established to encompass the area within which the residual effects of the Project on marine fish may combine with the effects of other projects and activities to potentially result in a cumulative effect. Marine and freshwater RAA boundaries were determined based on DFO Pacific Fisheries Management Area limits (see EIS Figure 12-3).	
HFN-15.3	Stated that the EIS should consider salmon pooling at the mouth of the Fraser River and investigate Project-related impacts on sockeye salmon in this area. Stated that fishermen report that Canoe Pass is an important holding area for sockeye.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2 15-Jun-2015, Letter to the CEA Agency from Halalt First Nation (CEAR Document #253)	**12-Nov-2014, Workshop:** Recorded comment for consideration by Project team. Referred to trawls being done in the area to determine what species are present in the area; different species can occur in the area, but chinook and chum have more of a presence. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **13-Oct-2015, Letter from the CEA Agency to Halalt First Nation (CEAR Document #312):** *"The Agency did not request additional information for this item since there is already some information provided in the EIS. [The VFPA] provided a rationale for not assessing effects to sockeye. The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in EIS Section 13.0:** While there is evidence that adult sockeye pass through the estuary annually en route to the Fraser River to spawn, available information indicates that most stocks enter the Fraser River with little or no delay (i.e., perhaps one day); hence, any potential interaction between the Project and migrating or passing individual adult sockeye salmon would be limited to approximately several days per year. A potential exception is a portion of the late-run timing group, which typically holds in the outer estuary for several weeks prior to starting upriver migration; however, since 1995, large segments of the late-run sockeye have ceased their holding behaviour and entered the Fraser River three to six weeks earlier than historically observed. As noted in EIS Section 13.2.1, there is no scientific evidence that waters at or near Roberts Bank represent holding areas for adult sockeye. **Addressed in response to IR5-15:** In its response to IR5-15, the VFPA specifically discusses existing conditions related to sockeye and describes the status and management practices associated with the species. The response also further assesses potential effects of the Project on sockeye directly. As further described in the response to IR5-15, based on existing literature, there is no formally defined holding area within the Fraser River estuary for returning adult sockeye. It appears that the brackish layer or plume within which adult sockeye may hold can extend as far north as Gibsons Landing, as far west and south as the Gulf Islands (from Gabriola Island near Nanaimo to Saturna Island at Boundary Passage), and as far east at Point Roberts area. However, since 1995, sockeye holding behaviour appears to have ceased.	**EIS** 13.0 Marine Fish **Information Requests** Response to Sufficiency Information Request #15 (IR5-15 of CEAR Document #1078)
HFN-15.4	Asked why people have not been included as one of the species that eats chum salmon in the food web example (slides 12-13, Marine Fish Presentation at 2014 Cowichan Nation Alliance Workshop #2).	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Responded that the approach undertaken seeks to understand the ecosystem from a natural perspective, and human interactions are addressed in a different way.	**Addressed in EIS Appendix 7.2-B (#101):** The Roberts Bank ecosystem model is described in the EIS. The model incorporated predator-prey relationships (biotic factors) and environmental factors within the marine environment, and does not incorporate anthropogenic influences such as fishing. Since changes are determined by comparing productivity in the future with the Project, to the future without the Project, the level of human influence is deemed to be the same with and	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 10.0 Biophysical Setting 10.3 Overview of Assessing Ecosystem Productivity

Halalt First Nation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			01-Apr-2015, Letter from the VFPA to Halalt First Nation: Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	without the Project, and humans are not included in the food web. However, the existing conditions for species included in the model are reflective of existing harvesting levels by humans; therefore, human interaction within the model is implicit. **Addressed in response to IR3-09:** Dungeness crab fishing at Roberts Bank was investigated using the Roberts Bank ecosystem model in the VFPA's response to IR3-09. Salmon harvesting was not considered, because salmon harvesting occurs over large geographic areas, with only a small proportion of the salmon catch coming from areas in the periphery of or adjacent to Roberts Bank. As such, salmon fishing was considered unlikely to influence model results. Results from the Roberts Bank ecosystem model re-run showed that when Dungeness crab fishing was considered, results were generally the same when compared to those described in the EIS.	Appendix 10.3-A Roberts Bank Ecopath with Ecosim and Ecospace Model Parameter Estimates Appendix 10.3-B Roberts Bank Ecosystem Model Development and Key Run Appendix 10.3-C Roberts Bank Spatial Ecosystem Model Sensitivity Analysis Appendix 10-D Roberts Bank Spatial Ecosystem Model Sensitivity Analysis **Information Requests** Response to Sufficiency Information Request #09 (IR3-09 of CEAR Document #984)
HFN-15.5	Concerned that a spill could travel into mouth of Fraser River and impact migratory salmon species.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Recorded comment for consideration by Project team. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in Appendix 7.2-B (#185):** The Project is not located on the Fraser River and no Project-related effects are predicted on the Fraser River.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 30.0 Potential Accidents or Malfunctions Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment Appendix B - Tables
HFN-15.6	Asked whether fish are being redirected away from Canoe Pass because of ships and whether that impact will increase with RBT2.	01-Nov-2013, Meeting with Cowichan Nation Alliance	**01-Nov-2013, Meeting:** Recorded comment for consideration by the Project team. Potential effects on marine fish migration behaviour from changes in the light environment and changes in habitat availability are assessed in the EIS. With mitigation, including implementation of a light management plan, and onsite offsetting in the form of eelgrass transplants and tidal marsh creation, changes in productivity of marine fish associated with these rearing habitats is assessed as negligible.	**Additional information provided by the VFPA:** There is no known evidence that existing shipping activity is affecting movement patterns of fish at Roberts Bank. In MSA Section 8.1, potential effects of underwater noise were considered to be negligible because noise generated by Project-associated marine vessel activity and future cumulative shipping activities would not exceed injury thresholds for fish species or the Pacific salmon species behavioural threshold. Further, while noise-induced behavioural changes are possible for Pacific herring, potential effects would be localised to within 20 m of a container ship and of short duration (as the ship passes by) and are therefore not anticipated to affect the integrity of populations within the LAA. **Further information provided by the VFPA:** **07-Jan-2014, Letter from the VFPA to Penelakut Tribe:** A review of historical and recent air photos, in addition to modelling of sediment deposition at Roberts Bank (including Canoe Passage) is underway. Historic Canoe Passage discharge channel locations and sediment distribution (e.g., bar formation or build-up of sand) will be documented to assess natural variation pre- and post-terminal construction, and potential	**MSA** 8.1 Marine Fish

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				changes as a result of the proposed terminal configuration will be assessed. Fish and fish habitat suitability studies are currently underway to assess current fish distribution and abundance, and potential changes in fish presence as a result of the proposed Project will be assessed. Potential changes resulting from the Project during both construction and operations phases will be included in the assessment.	
HFN-15.7	Stated that sturgeon is underrepresented as components affected by the Project. Requested an investigation into the Project-related effects on sturgeon.	15-Jun-2015, Letter to the CEA Agency from Halalt First Nation (CEAR Document #253)	**13-Oct-2015, Letter from the CEA Agency to Halalt First Nation (CEAR Document #312):** *"The Agency has requested additional information on these items in its letter of July 31, 2015 to [the VFPA] (pages 4 and 5, #9 and #10)."*	**Addressed in EIS Appendix 7.2-B (#79):** Potential Project-related effects on sturgeon (white sturgeon and green sturgeon) are considered in the marine fish assessment within the Pacific salmon sub-component. Sturgeon species were not selected as a representative species due to their rarity in the Roberts Bank area. Representative species in the Pacific salmon sub-component include Chinook and chum salmon. Based on qualitative and empirical evidence considered during the marine fish assessment, minor decreases in productivity to Pacific salmon are anticipated due to direct mortality (e.g., entrainment of juveniles), and changes in the acoustic (i.e., if impact pile driving is used) and light environments during the Project's construction phase, as well as due to changes in habitat availability during Project operation. Effects on Pacific salmon associated with changes in water quality and changes in biotic interactions are considered negligible. **Addressed in response to IR-7.31.15-09:** The VFPA's response to IR-7.31.15-09 provides a characterisation, including the results of baseline surveys, of fish populations (e.g., marine invertebrates, marine fish, marine mammals, and other marine animals) found in, or migrating through, the LAA and RAA. **Addressed in response to AIR-12.04.15-09:** The VFPA's response to AIR-12.04.15-09 outlines in detail the selection process for VCs, sub-components, and representative species and rationale for selection. Discussion of how sockeye, sturgeon, and eulachon were captured in the assessment (i.e., by proxy), is provided. **Addressed in response to IR-7.31.15-10:** The VFPA's response to IR-7.31.15-10 provides local and regional scale maps for potential or confirmed fish habitat. **Addressed in response to IR5-15:** In its response to IR5-15, the VFPA specifically discusses existing conditions related to sturgeon and describes the status and management practices associated with the species. Rationale as to how sturgeon were assessed via use of Chinook and chum salmon as representative species, as well as similarities between species as they pertain to existing conditions (e.g., life history and habitat requirements), the mechanisms through which the Project may affect sturgeon, as well as effectiveness of mitigation, are presented in	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component 13.2.1 Sub-components 13.4.1 Information Sources, Desktop and Field Studies 13.6.3 Potential Effect - Changes in Productivity **Information Requests** Response to Information Request #9 (IR-7.31.15-09 of CEAR Document #314) Response to Additional Information Request #09 (AIR-12.04.15-09 of CEAR Document #388) Response to Information Request #10 (IR-7.31.15-10 of CEAR Document #314) Response to Sufficiency Information Request #15 (IR5-15 of CEAR Document #1078)

				AIR-12.04.15-09 (CEAR Document #388), including Appendix AIR9-A Table 2; and in the VFPA's response to IR5-15.	
HFN-15.8	Stated that eulachon is underrepresented as components affected by the Project. Requested an investigation into the Project-related effects on eulachon. Stated that the marine fish local assessment area is too narrow and does not consider Project-related effects on species migrating through the Salish Sea and up the Fraser River. Stated that the study area only includes fish caught South of the Fraser River Canoe Passage.	15-Jun-2015, Letter to the CEA Agency from Halalt First Nation (CEAR Document #253)	**13-Oct-2015, Letter from the CEA Agency to Halalt First Nation (CEAR Document #312):** *"The Agency has requested additional information on these items in its letter of July 31, 2015 to [the VFPA] (pages 4 and 5, #9 and #10)."*	**Addressed in response to IR-7.31.15-09:** The VFPA's response to IR-7.31.15-09 provides a characterisation, including the results of baseline surveys, of fish populations (e.g., marine invertebrates, fish, marine mammals, and other marine animals) found in, or migrating through, the LAA and RAA. **Addressed in response to AIR-12.04.15-09:** The VFPA's response to AIR-12.04.15-09 outlines in detail the selection process for VCs, sub-components, and representative species and rationale for selection. Discussion of how sockeye, sturgeon, and eulachon were captured in the assessment (i.e., by proxy) is provided. **Addressed in response to IR-7.31.15-10:** The VFPA's response to IR-7.31.15-10 provides local and regional scale maps for potential or confirmed fish habitat. **Addressed in response to IR5-15:** The VFPA's response to IR5-15 specifically discusses biology, migration behaviour, habitat utilisation, the status, and management practices associated with eulachon. As noted in that response, assessment conclusions and mitigation measures for representative species also apply to eulachon and white sturgeon (Lower Fraser population) and remain unchanged. **Addressed in EIS Section 8.0:** As noted in EIS Section 8.1.3, spatial assessment boundaries were identified for each VC based on the spatial characteristics of the Project and the VC (e.g., location, distribution, range), and the areas within which Project-VC interactions and effects are expected to occur. When determining the spatial boundary, the Project team also considered, as applicable, available community knowledge and ITK, information on current land and resource use by Indigenous groups, and other pertinent ecological, technical, social, and cultural considerations, as well as input from government, Indigenous groups, and the public.	**EIS** 8.1.3 Establishment of Assessment Boundaries **Information Requests** Response to Information Request #9 (IR-7.31.15-09 of CEAR Document #314) Response to Additional Information Request #09 (AIR-12.04.15-09 of CEAR Document #388) Response to Information Request #10 (IR-7.31.15-10 of CEAR Document #314) Response to Sufficiency Information Request #15 (IR5-15 of CEAR Document #1078)
HFN-15.9	Stated that the marine fish local assessment area is too narrow and does not consider Project-related effects on species migrating through the Salish Sea and up the Fraser River. Stated that the study area only includes fish caught South of the Fraser River Canoe Passage.	15-Jun-2015, Letter to the CEA Agency from Halalt First Nation (CEAR Document #253)	**13-Oct-2015, Letter from the CEA Agency to Halalt First Nation (CEAR Document #312):** *"The Agency has requested additional information on these items in its letter of July 31, 2015 to [the VFPA] (pages 4 and 5, #9 and #10)."*	**Addressed in EIS Section 8.0:** As noted in EIS Section 8.1.3, spatial assessment boundaries were identified for each VC based on the spatial characteristics of the Project and the VC (e.g., location, distribution, range), and the areas within which Project-VC interactions and effects are expected to occur. When determining the spatial boundary, the Project team also considered, as applicable, available community knowledge and ITK, information on Current Use, and other pertinent ecological, technical, social, and cultural considerations, as well as input from government, Indigenous groups, and the public. **Addressed in response to IR-7.31.15-09:** The VFPA's response to IR-7.31.15-09 provides a characterisation, including the results of baseline surveys, of fish populations (e.g., marine invertebrates, marine fish, marine	**EIS** 8.1.3 Establishment of Assessment Boundaries **Information Requests** Response to Information Request #9 (IR-7.31.15-09 of CEAR Document #314) Response to Additional Information Request #09 (AIR-12.04.15-09 of CEAR Document #388) Response to Information Request #10 (IR-7.31.15-10 of CEAR Document #314)

Halalt First Nation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				mammals, and other marine animals) found in, or migrating through, the LAA and RAA. **Addressed in response to AIR-12.04.15-09:** The VFPA's response to AIR-12.04.15-09 outlines in detail the selection process for VCs, sub-components, and representative species and rationale for selection. Discussion of how sockeye, sturgeon, and eulachon were captured in the assessment (i.e., by proxy) is provided. **Addressed in response to IR-7.31.15-10:** The VFPA's response to IR-7.31.15-10 provides local and regional scale maps for potential or confirmed fish habitat.	
HFN-15.10	Concerned that the existing infrastructure and the current Project will continue to negatively affect the health and/or availability of fish. Asked how these effects will be controlled and requested information regarding the environmental management plan. Asked if the environmental management plan will be constructed with the consultation of First Nation communities. Asked if the environmental management plan be subject to review. Stated that there is a predicted minor decrease in marine fish productivity with the Project. Stated that the EIS states that these effects can be partially mitigated through the implementation of environmental management plans and the creation of habitat.	15-Jun-2015, Letter to the CEA Agency from Halalt First Nation (CEAR Document #253)	**13-Oct-2015, Letter from the CEA Agency to Halalt First Nation (CEAR Document #312):** *"The Agency did not request additional information for this item since there is already some information provided in the EIS. The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."* **27-Nov-2017:** The VFPA held a Follow-up Program meeting with the Cowichan Nation Alliance. The VFPA discussed the Follow-up Program and lessons learned from DP3. The VFPA sought feedback from Cowichan Nation Alliance on the Follow-up Program and asked what Cowichan Nation Alliance felt should be considered, what they felt was important to their community, and how they would like to be involved going forward.	**Addressed in EIS Section 33.0:** Project-related environmental management plans will be developed prior to the start of construction and operation phases to ensure alignment with required permits and approvals, final designs, finalised construction or operation approaches, and site-specific considerations. Environmental management plans applicable to fish include: • Construction Compliance Monitoring Plan • Environmental Training Plan • Dredging and Sediment Discharge Plan • Light Management Plan • Underwater Noise Management Plan • Sediment and Erosion Control Plan • Marine Species Salvage Plan • Hazardous Materials and Waste Management Plan • Health and Safety and Emergency Response Management Plan • Spill Preparedness and Response Plan Feedback on applicable environmental management plan sub-plans will be solicited from Indigenous groups potentially affected by the Project.	**EIS** 33.0 Environmental Management Program

Halalt First Nation

Table 16: Marine Invertebrates – Valued Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-16.1	Concerned about effects on crabs, particularly in relation to black material observed in crabs harvested in the area. Crab harvesting in the RBT2 Project area results in black (coal polluted crabs), which are not edible. Asked how the VFPA can remediate lands first to deal with coal.	01-Nov-2013, Meeting with Cowichan Nation Alliance 12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**01-Nov-2013, Meeting:** Responded that crabs are part of the baselines studies and the VFPA is looking at current conditions of the baseline studies. **12-Nov-2014, Workshop:** Referred to the black crab study being carried out separately from the environmental assessment. Two black crab samples have been collected, and are currently waiting to be tested. The VFPA will be able to provide an update once that has happened. Tsawwassen First Nation collected the crab samples for this study. **07-Aug-2014, Email from the VFPA to Halalt First Nation:** Provided information on a study that the VFPA is undertaking related to black material observed in Dungeness crabs previously harvested from the Fraser River estuary. This black material has been noticed by Tsawwassen and Musqueam First Nation crabbers in DFO Fisheries Management Areas 28 and 29 and as such we are working with these communities in the collection of crabs for testing. Provided details on the purpose, methodology, study area, and timeframe. **09-Jul-2015, Email from the VFPA to Halalt First Nation:** Followed up to previous communications and the Dungeness Crab field study notification of August 2014. Attached a letter and memorandum regarding the studies undertaken by Hemmera in response to reports from Indigenous groups to the VFPA regarding blackening of Dungeness crab and concerns related to potential contamination. The memo included a summary of findings. The results of both studies were the same: • There is no evidence of coal contamination, based on the results of sensitive tissue chemistry analysis testing for PAHs, metals, and trace elements; • Consumption risks are acceptably low and pose no risk to human health; and • The underlying cause of the blackened shells is determined to be shell disease (a common condition due to bacterial infection of existing lesions/damage in the crab shells). **12-Apr-2018, Letter from the VFPA to Halalt First Nation:** Stated that since concerns were raised, the Project team has conducted further work on these topics to	**Addressed in EIS Section 27.0 and EIS Appendix 27-C:** Addresses potential effects of contaminant-related consumption risks of Dungeness crab, where contaminant analysis of crab tissue and the completion of a human health risk assessment was completed to support the development of the RBT2 environmental assessment. The leg muscle tissue did not contain detectable PAH concentrations, in spite of the use of sensitive laboratory analytical methods. Only arsenic was present in concentrations of potential concern and, consequently, was carried forward in a quantitative human health risk assessment; it was concluded that arsenic-associated health risks from the consumption of Dungeness crab tissue are acceptably low. A second study paralleled the above in terms of methods and analysis, but involved collaboration with Indigenous groups to provide samples of crabs as well microscopic examination of the tissue structures (i.e., histologic) of blackened areas. Again, results yielded no evidence of crab contamination related to coal dust, based on sensitive tissue chemistry analysis testing for PAHs, metals, and trace elements. Results of microscopic examination point to localised physical damage of the exoskeleton and the bacterial shell disease as the underlying cause of blackening. **Addressed in EIS Appendix 7.2-B (#74):** Potential Project-related effects on Dungeness crabs are described in the EIS. An Edible Shellfish Study was undertaken to quantify bivalve shellfish and Dungeness crab soft tissue contaminant concentrations. The results of this study are provided in the EIS in the marine invertebrates and human health sections. In late 2014, samples of crab were collected by Indigenous crab harvesters concerned about contamination, and the VFPA has submitted these for tissue testing for various substances of concern, including PAHs, metals, and fungus. Preliminary observational results indicate that the causes of black colouration of crabs is consistent with shell disease, and not likely related to contamination from coal dust (EIS Appendix 27-C, Section 4.76). The detailed results of laboratory tests will be shared with Indigenous groups when available.	**EIS** 12.0 Marine Invertebrates 12.4.1 Desktop and Field Studies Table 12-4 Marine Invertebrates Studies to Support the Assessment 12.5.3 Existing Conditions, Dungeness Crabs 12.6.2 Future Conditions with the Project, Negligible Effects 27.0 Human Health 27.6.4 Potential Effect # 3 – Adverse Health Effects due to Stress and Annoyance - Perceived Contamination Appendix 27-C Shellfish Harvesting Potential and Contaminant-related Consumption Risks at Roberts Bank **Information Requests** Response to Sufficiency Information Request #33 (IR4-33 of CEAR Document #1078) Response to Sufficiency Information Request #34 (IR4-34 of CEAR Document #946) **Memorandum Re: Summary Report – Roberts Bank Dungeness Crab Health Studies**

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			respond to information requests from the Review Panel, to better understand potential effects and suggested mitigation, and to gain deeper understanding of the viewpoints of Indigenous groups and stakeholders. Provided the following documents review: • IR4-33 - Crab Hepatopancreas Additional Study Summary; and • IR4-34 - Black Crab Additional Studies Summary. Stated that the VFPA is interested in hearing views regarding options to mitigate potential effects to crabs and crabbing in the Project area.	**Addressed in responses to IR4-33 and IR4-34:** Further information concerning the VFPA's investigations into 'blackened' crabs is provided in the response to IR4-34. In summary, black lesions were observed on four of the five crabs collected by Indigenous harvesters. The black lesions were concluded to be consistent with chitinolytic shell disease, generically referred to as 'shell disease', a condition common to crab and other crustaceans. This disease is caused by a bacterial or fungal infection of an area where the outer layer of the shell has been previously damaged. Shell disease has not been linked to contamination. The disease is not specific to the Roberts Bank area and is present across the Pacific Northwest, including Alaska and B.C. and in Atlantic Canada. In its response to IR4-33, the VFPA provided results of the study. In summary: A crab hepatopancreas study was conducted at Roberts Bank to determine the concentrations of contaminants of concern in crab hepatopancreas in the LAA. In June 2017, Dungeness crab were collected from five traps placed at each of the three study locations (15 traps total). Twelve adult male crabs were harvested from each of the three sites (36 crab total). Samples were submitted under chain of custody to analytical laboratories accredited by the Canadian Association for Laboratory Accreditation (CALA) for the analysis requested. The analysis was completed in August 2017. Collectively, the results of a statistical comparison across sites indicate that the average concentrations of PCBs, coal indicator elements, arsenic compounds, and PAHs measured in hepatopancreas from crab collected from the RBT2 and ITP sites are not statistically higher than those measured in crab from the Canoe Passage reference site. This suggests that existing sediment and water quality in and around the existing terminal and proposed RBT2 terminal are not contributing to contaminant concentrations in crab hepatopancreas that are higher than levels found in crab hepatopancreas from the Canoe Passage reference site. **Further information provided by the VFPA:** **07-Jan-2014, Letter from the VFPA to Penelakut Tribe:** The proposed Project is being designed to exclusively handle containers. There will not be an increase in coal shipments as a result of the Project. The VFPA has undertaken shellfish	

Halalt First Nation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				studies in the Roberts Bank area to assess contamination, and proposes to study crab tissues to assess whether the black material is coal dust, a fungus, or other substance.	
HFN-16.2	Requested more information on sea pens. Asked what is known about the impact and role of orange sea pens in the area. Asked what the per cent decrease in productivity is expected to be. Asked if the orange sea pen test transplant area has been determined yet to be either successful or unsuccessful. Concerned with the impact of a loss of sea pens on habitat and other species. Concerned about the large decrease in orange sea pen productivity. Asked what effect will the decrease in sea pen have on the marine environment. Asked if their predicted decrease will affect marine health, and if so what mitigation methods could be implemented. Stated that the EIS clearly indicates an interaction of the orange sea pen with other marine organisms. Stated that the EIS predicts a 55% decrease in orange sea pen productivity, but fails to include information regarding the impact this has on the marine environment.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2 15-Jun-2015, Letter to the CEA Agency from Halalt First Nation (CEAR Document #253)	**12-Nov-2014, Workshop:** Stated that sea pens are known to exist in the area; however, from a scientific and ecological perspective, they are poorly understood. The first studies were done in 2002-2003, and more field studies were more recently undertaken in 2011 using an underwater remote vehicle. Additional recent studies have included people going underwater to count sea pens, to map their distribution, and to identify other species associated with them. One study sought to understand them better in the context of water flows and sediments and other studies looked at transplanting sea pens. If the transplant was not viable or unreliable, the effects would be characterised in a worst-case scenario. In this current status of the assessment, it is anticipated that there will be a moderate impact on the orange sea pens in the area if transplanting is unsuccessful. **13-Oct-2015, Letter from the CEA Agency to Halalt First Nation (CEAR Document #312):** *"The Agency has requested additional information on this item in its letter of July 31, 2015 to [the VFPA] (page 12, #24)."* **07-Feb-2018, Email from the VFPA to Halalt First Nation:** "Starting in 2014, the Project team conducted a pilot study to test a method for transplanting orange sea pens, which involved the transplant of 1,200 orange sea pens to three sites within the LAA for the Project. Please find attached a report titled *Orange Sea Pen Transplant Pilot and Monitoring Program*. The results of the study show that the pilot sea pen transplant was successful, with stable densities and evidence of recruitment at two of the three transplant sites. This report will be submitted to the Review Panel shortly with the VFPA's response to IR5-05."	**Addressed in EIS Section 12.0:** As noted in EIS Section 12.0, the VFPA stated that the proposed Project would result in a moderate reduction in orange sea pen productivity, and that the level of confidence in this assessment was considered to be moderate. **Addressed in response to IR-7.31.15-24:** The VFPA's response to IR-7.31.15-24 presents the inter-relations between orange sea pens and other marine species and the predicted effects to other marine species from the Project-related loss of orange sea pen habitat. **Addressed in response to IR5-05:** The VFPA's response to IR5-05 provides the Orange Sea Pen Transplant Pilot and Monitoring Program report (Appendix IR5-05-A). In summary, the pilot sea pen transplant was successful. Stable densities, and evidence of recruitment, at two of the three transplant sites demonstrate that not only can environmental conditions successfully be used to predict habitat suitability for orange sea pens across a larger study area, but also attests to the ecological viability of transplantation as a potential mitigation method. **Addressed in response to IR5-06:** The VFPA's response to IR5-06 discusses the confidence in the effect rating for orange sea pens. In summary, the moderate confidence ranking was rooted in four main points (each of which are described below): • The success of the orange sea pen pilot transplant and monitoring program (see IR5-05); • Remaining orange sea pen productivity with the Project (before mitigation) is considerable (45%) such that the population will persist at Roberts Bank; • Reproductive and larval biological characteristics of orange sea pens, which confer a high ability to replenish stocks; and • Coral transplants are common and successful elsewhere. **Addressed in response to IR5-07:** The VFPA's response to IR5-07 provides an assessment of the potential ecological effects on other components of the environment such as marine invertebrates and marine fish resulting from a decrease in the orange sea pen population	**EIS** 12.0 Marine Invertebrates **Information Requests** Response to Information Request #24 (IR-7.31.15-24 of CEAR Document #314) Response to Sufficiency Information Request #05 (IR5-05 of CEAR Document #1145) Response to Sufficiency Information Request #06 (IR5-06 of CEAR Document #1145) Response to Sufficiency Information Request #07 (IR5-07 of CEAR Document #1145)

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				due to the proposed Project activities. As noted in the response to IR5-07, the conclusion of no significant effects to marine invertebrates and fish remain unchanged.	
HFN-16.3	Referred to the food webs showing biomass in the future with and without the Project (slides 17-18 of Marine Invertebrates presentation at Cowichan Nation Alliance Workshop #2), and the bubbles changing in size. Requested the exact number of anticipated change for each of the species.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Recorded comment for consideration by Project team. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included information on the biophysical setting in Section 10.0.	**Addressed in EIS Section 10.0:** The VFPA used an ecosystem-based approach to assess Project-related effects to the productivity of marine biophysical VCs. Modelling of ecosystem productivity was one of several tools used to inform effects assessments. Productivity is a measure of the amount of plant and animal biological material (or biomass) produced within an area over a given amount of time. A predator-prey food web for the Roberts Bank ecosystem was developed to represent the linkages and interactions between marine vegetation, invertebrates, fish, mammals, and coastal bird species that influence the productivity of the ecosystem. The model calculates productivity changes to 58 functional groups to represent the complex interactions of this ecosystem; productivity changes to each of these groups calculated by the model are presented in EIS Appendix 10-C. The results are presented as changes to biomass in the groups, not species' abundance (number of individuals). The model was also used to predict the productivity of proposed on-site habitat that would be created to offset expected Project-related effects on the productivity of marine biophysical VCs.	**EIS** 10.0 Biophysical Setting Appendix 10-C Roberts Bank Ecosystem Model Development and Key Run
HFN-16.4	Concerned with the potential for RBT2 to constrain crabbing areas. Stated that fishing will be confined to a smaller area and there is concern regarding crowding. Stated that their use of the Roberts Bank area has increased recently because crabs in proximity to Penelakut are contaminated by the Crofton Mill. Stated that they rely on crab taken from the RBT2 area to support its food, social and ceremonial fishery and its traditional way of life. Requested an explanation as to why potential adverse effects on crab harvesting is deemed negligible.	17-Jun-2015, Meeting with Cowichan Nation Alliance 15-Jun-2015, Letter to the Canadian Environmental Assessment Agency (CEA Agency) from Halalt First Nation (CEAR Document #253)	**17-Jun-2015, Meeting:** Recorded comment for consideration by Project team. **28-Jul-2016, Issues Workshop – Island Nations:** The VFPA hosted an issues workshop where concerns raised about project impacts to crab where discussed along with proposed mitigation measures. Explained that the EIS section for current use/rights considers the navigational closure area. FSC harvesters can access this closure area to crab without floats; commercial and other harvesters cannot. That closure area would be expanded to accommodate the new terminal and would increase in size. The idea would be that VFPA would work with DFO to continue the practice to only allow FSC crabbing within that area. We also have identified other consultation mechanisms to continue engagement with Aboriginal groups regarding monitoring/follow up programs regarding resources relied upon by Aboriginal groups. We have	**Addressed in EIS Appendix 7.2-B (#117):** Marine commercial use, or the use of marine waters and resources to generate revenue, has been identified as an important economic factor in local and regional communities, and for Indigenous groups. The marine commercial use assessment included four sub-components: • Seafood harvesting; • Marine fish harvesting; • Guided sport fishing; and • Marine-based tourism. Potential effects on marine commercial use include displacement of commercial crab harvesting during construction and operation, resulting in a potential change of harvesting area, total harvest, and revenue, due to the Project footprint and the proposed expansion of the area closed to commercial crabbing. The VFPA will work with DFO to engage commercial crab harvesters to identify and implement feasible mitigation measures, and will	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 12.0 Marine Invertebrates 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries 21.0 Marine Commercial Use 21.6 Future Conditions with the Project – Potential Project-related Effects 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Land and Resources for Traditional Purposes 32.2.6 Future Conditions With the Project - Potential Project-Related Effects

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			identified the opportunity for future VFPA-Aboriginal group collaboration. **12-Apr-2018, Letter from the VFPA to Halalt First Nation:** Stated that since your concerns were raised, the Project team has conducted further work on these topics to respond to information requests from the Review Panel, to better understand potential effects and suggested mitigation, and to gain deeper understanding of the viewpoints of Indigenous groups and stakeholders. Provided the RBT2 Crab Mitigation Summary Overview, which detailed the following: • Mitigation measures to avoid or reduce effects to crab as outlined in the EIS; and • Additional crab harvesting related mitigation measure suggestions under review. Stated that the VFPA is interested in hearing views regarding options to mitigate potential effects to crabs and crabbing in the Project area.	implement construction and operation environmental management plans related to construction phase communication, construction monitoring, and crab salvages effects from displacement of commercial crab harvesting during construction and operations. The Project is anticipated to result in a negligible effect to marine fish harvesting, guided sport fishing, and marine-based tourism. These negligible effects are related to changes in area, access, resource availability, and harvesting revenues. The Project is expected to result in a residual effect of changes to seafood harvesting area, harvest, and revenue. The residual effect is determined to be not significant, as Dungeness crab are known to move substantial distances to baited traps, and harvest activity can be moved to another open area. Other planned or reasonably foreseeable projects and activities would also displace crab harvesting, and this effect would combine with that of the Project to result in an incremental cumulative effect on commercial crab fishing. This adverse incremental cumulative effect is determined to be not significant. **Addressed in response to IR10-07:** The VFPA's response to IR10-07, as requested by the Review Panel, further discusses potential economic implications of any permanent or temporary displacement related to the navigational closure.	**Information Requests** Response to Sufficiency Information Request #07 (IR10-07)

Halalt First Nation

Table 17: Marine Water Quality

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-17.1	Asked if a change in salinity can have an effect on marine mammals, marine fish, and marine vegetation such as eelgrass.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Stated that there will be extensive discussion around all of the VCs and how they relate to these ICs. **12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2:** Presentations on marine mammals, marine fish, and marine vegetation were provided to Cowichan Nation Alliance in Workshop #2. The VFPA presented that Roberts Bank is dynamic, highly variable, estuarine environment and that biofilm has adapted to a wide range of salinity variability. Explained that the VFPA will monitor and evaluate to confirm changes in water quality (salinity) and sediment erosion and deposition patterns through its Follow-up Program. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#50):** Changes in hydrology are predicted to affect salinity and turbidity levels, and increase sediment deposition as a result of the Project, but these changes are anticipated to be minimal relative to existing natural variability. These localised indirect effects of changes in hydrology on habitat are evaluated in the marine biophysical component effects assessments, including marine vegetation, marine invertebrates, marine fish, and coastal birds.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.6 Surficial Geology and Marine Sediment 9.6.6 Existing Conditions 9.6.8 Future Conditions with the Project 9.7 Marine Water Quality 9.7.6 Existing Conditions 9.7.8 Future Conditions with the Project 10.0 Biophysical Setting 10.3 Overview of Assessing Ecosystem Productivity 11.0 Marine Vegetation 11.6.3 Potential Effect – Changes in Productivity 12.0 Marine Invertebrates 12.6.3 Potential Effect – Changes in Productivity 13.0 Marine Fish 13.6.2 Negligible Effects 14.0 Marine Mammals 14.6.2 Potential Effects of the Project on Southern Resident Killer Whales 14.6.4 Potential Effects of the Project on Steller Sea Lions 17.0 Mitigation for Marine Biophysical Valued Components 17.3.2 Offsetting

Table 18: Marine Shipping Addendum

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-18.1	Concerned with cumulative effects to Aboriginal rights associated with marine shipping. Stated that increases in shipping will result in "death by a thousand cuts". Concerned that the draft Current Use Summary does not include effects from malfunctions or accidents, as well as cumulative environmental effects.	17-Jun-2015, Meeting with Cowichan Nation Alliance 09-Sep-2015, Letter to the VFPA from Cowichan Tribes on behalf of Cowichan Nation Alliance	**17-Jun-2015, Meeting:** Recorded comment for consideration by the Project team. **02-Oct-2015, Letter from the VFPA to Cowichan Tribes cc: Stz'uminus First Nation, Halalt First Nation, Penelakut Tribe:** Explained that the document shared by the VFPA on July 27, 2015 included a draft summary of CNA's current use in the marine shipping study area, and therefore did not include accidents and malfunctions or potential effects. Noted that these topics will be addressed in the Report to be submitted to the Canadian Environmental Assessment Agency ("CEAA") in the fall of 2015. **09-Nov-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the MSA for the proposed Project, which included its assessment of cumulative effects in MSA Section 6.0.	**Addressed in MSA Appendix 5-B (#23):** The approach to the cumulative effects assessment is provided in MSA Section 6.0. Each IC and VC assessment section considers cumulative changes and cumulative effects to which the Project contributes. This entails consideration of residual effects of routine marine shipping associated with the Project, if any such effects are predicted, in combination with effects of other projects and activities that have been or will be carried out. MSA Section 9.5 describes how Current Use activities have been affected by other projects and activities that have been carried out. As residual effects to Current Use as a result of marine shipping associated with the Project are not predicted, an assessment of future cumulative effects was not carried out. Taking a precautionary approach, the assessment of potential impacts to Indigenous groups' ability to exercise asserted or established Aboriginal and treaty rights as a result of Project-associated shipping was based on the assumption that traditional use presently occurring in the marine shipping area (i.e., Current Use) is an expression of the exercise of Aboriginal or treaty rights. Where traditional use was not identified as occurring at present within the marine shipping area, but similar use was identified as practiced in the past in the marine shipping area, asserted as an Aboriginal right, or protected under treaty, this use was assumed to be potentially exercisable as an Aboriginal or treaty right, and subject to potential impacts as a result of Project-associated shipping in much the same way as potential effects on Current Use. Considering the conclusions of the Current Use assessment, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the marine shipping a without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location. These mitigation measures for addressing potential incremental effects on Current Use are expected to also be effective at addressing the	**MSA** Appendix 5-B Aboriginal Issues and Interests 6.0 Effects Assessment Approach 6.7 Cumulative Effects Assessment 7.1 through 9.4 (All IC and VC assessments) 9.5 Current Use of Lands and Resources for Traditional Purposes, and Aboriginal and Treaty Rights

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				potential incremental impact to the exercise of Aboriginal and treaty rights. No additional mitigation measures have therefore been suggested for the potential incremental impact to the exercise of Aboriginal and treaty rights.	
HFN-18.2	Stated that Canada, B.C., Parks and First Nations are working to establish the National Marine Conservation Initiative in the Gulf Islands. Concerned with impacts from shipping to this initiative and conservation areas.	17-Jun-2015, Meeting with Cowichan Nation Alliance	**17-Jun-2015, Meeting:** Recorded comment for consideration by Project team. **02-Oct-2015, Letter from the VFPA to Cowichan Tribes cc: Stz'uminus First Nation, Halalt First Nation, Penelakut Tribe:** Stated that potential effects will be addressed in the MSA, which will be submitted to the CEA Agency. **09-Nov-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the MSA for the proposed Project, which included MSA Appendix 5-B listing all the issues and interests raised by Indigenous groups and the VFPA's response.	**Addressed in MSA Appendix 5-B (#26):** The conservation areas within the marine shipping area are described in MSA Section 2.1.2 and shown on MSA Figure 2-2. The extent to which potential effects of marine shipping associated with the Project are predicted to occur within conservation areas is addressed within each relevant IC or VC section.	**MSA** 2.0 Geographic Setting 2.1.2 Species at Risk and Conservation Areas Figure 2-2 Conservation Areas in and near the Marine Shipping Area Appendix 5-B Aboriginal Issues and Interests
HFN-18.3	Concerned with the impacts of marine shipping to short fishing openings.	17-Jun-2015, Meeting with Cowichan Nation Alliance	**17-Jun-2015, Meeting:** Recorded comment for consideration by Project team. Noted that the VFPA is not involved in setting the regulations for Aboriginal fisheries. **02-Oct-2015, Letter from the VFPA to Cowichan Tribes cc: Stz'uminus First Nation, Halalt First Nation, Penelakut Tribe:** Stated that potential effects will be addressed in the MSA, which will be submitted to the CEA Agency. **09-Nov-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the MSA for the proposed Project, which included MSA Appendix 5-B listing all the issues and interests raised by Indigenous groups and the VFPA's response.	**Addressed in MSA Section 9.2:** Potential effects of vessel transit from Project-associated shipping on commercial fish and seafood harvesting marine area displacement, access, fish and seafood availability, and gear damage or loss would not be measurable from existing conditions and are therefore considered to be negligible. Potential consequential effects on harvest and associated revenues of commercial fishing and seafood enterprises are also considered to be negligible. When all lines of evidence are considered, the effect of vessel transit on commercial fishing and seafood harvesting is considered to be negligible.	**MSA** 9.2 Marine Commercial Use 9.2.5.1 Negligible Effects
HFN-18.4	Requested more information on increased vessel traffic. Concerned with increase vessel traffic within Halalt territory and that Project will result in more ships in shipping lanes, traveling through Coast Salish fishing areas, at and beyond Roberts Bank.	18-Sep-2014, Meeting with Halalt First Nation	**18-Sep-2014, Meeting:** Recorded comment for consideration by Project team. **09-Nov-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the MSA for the proposed Project, which included MSA.	**Addressed in MSA Section 4.0:** MSA Section 4.0 contains vessel traffic numbers related to vessel traffic occurring outside the VFPA's jurisdiction. **Addressed in response to IR4-04:** The VFPA's response to IR4-04 provides updated vessel movements for all marine shipping area segments in 2012 and projected movements in 2030. **Addressed in MSA Section 9.2:** Potential effects of vessel transit from Project-associated shipping on commercial fish and seafood harvesting marine area displacement, access, fish and seafood availability, and gear damage or loss would not be measurable from existing conditions and are therefore considered to be negligible. Potential consequential effects on harvest and associated	**MSA** 4.0 Activity Description Appendix 5-B Aboriginal Issues and Interests 9.1 Human Health 9.2 Marine Commercial Use 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 10.0 Potential Accidents or Malfunctions **Information Requests** Response to Sufficiency Information Request #04 (IR4-04 of CEAR Document #1051)

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				revenues of commercial fishing and seafood enterprises are also considered to be negligible. When all lines of evidence are considered, the effect of vessel transit on commercial fishing and seafood harvesting is considered to be negligible. **Addressed in MSA Section 10.0:** The assessment of potential accidents or malfunctions considers a variety of potential effects related to two plausible worst-case scenarios selected based on the analysed probabilities of occurrence, higher risk areas, and possible consequences: • A collision between a container ship and a small vessel within an existing shipping lane, resulting in damage to the vessel and/or gear as well a serious injury or fatality; and • A powered grounding of a container ship on a hard substrate, resulting in a spill of 7,500 m^3 of heavy fuel oil. In both cases, the identified residual adverse effects are unlikely to occur, because of the very low probability of the accident scenarios	

Halalt First Nation

Table 19: Marine Vegetation – Valued Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-19.1	Concerned with the potential effects of the Project on eelgrass habitat for crabs and other species.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **28-Jul-2016, Workshop:** Explained that the EIS predicted a negligible effect on eelgrass overall. There is a negligible effect which is offset through transplants. The placement of the terminal will also create a wave shadow causing more optimal conditions for eelgrass growth. We don't believe there will be eelgrass mediated effects to crabs.	**Addressed in EIS Appendix 7.2-B (#68):** Potential effects on eelgrass habitat, as well as on crabs and other species that use eelgrass habitat, are described in the EIS. Eelgrass beds are highly productive habitats in the Roberts Bank ecosystem, serving numerous critical functions, such as food, shelter, and rearing habitat for numerous species. Eelgrass is a sub-component of the marine vegetation assessment. The assessment concludes that changes in productivity of eelgrass are predicted to be negligible (i.e., not measurable or detectable). Increases in productivity of eelgrass are anticipated with the implementation of standard management practices and environmental management plans, and the creation of onsite habitat. Approximately three hectares of native eelgrass will be established through transplants in the inter-causeway area.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 11.0 Marine Vegetation 11.6.3 Potential Effect – Changes in Productivity 11.7.2 Reduction and Off-setting Measures 12.0 Marine Invertebrates 12.6.3 Potential Effect – Changes in Productivity 12.7.2 Mitigation #1 for Direct Mortality
HFN-19.2	Concerned with the conclusions of significance for biofilm including for the cumulative effects assessment. Asked about the certainty of confidence modelling and whether it is possible to see the results from an independent third party review on the marine vegetation effects assessment.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Responded that the confidence for biofilm is relatively high. Studies were not limited to modelling; the Roberts Bank ecosystem model is not being relied upon for the confidence prediction. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses **24-Apr-2017, Email from the VFPA to Halalt First Nation:** The VFPA is conducting a study in April and May 2017 to assess the spatial and temporal variability of biofilm community composition at Roberts Bank. Biofilm is a thin (~2 mm), dense layer of predominantly organic substances (e.g., diatoms, bacteria, and organic detritus) found on the surface of shallow freshwater, marine, and estuarine sediments. Biofilm is known to form an important component of the western sandpiper diet at Roberts Bank during the northward migration. This study, in conjunction with past biofilm studies conducted in 2012, 2013, 2014, and 2016, will strengthen the existing understanding of biofilm community dynamics at Roberts Bank, and may inform future monitoring programs at Roberts Bank.	**Addressed in EIS Appendix 7.2-B (#63):** In January 2014, the federal Minister of Environment referred the Project for an environmental assessment by an independent review panel. The entire EIS, including the marine vegetation assessment, will be subject to an independent review. The scope and methods of the marine vegetation study are presented in EIS Section 11.0. The assessment of marine vegetation focused on eelgrass, intertidal marsh, macroalgae, biomat, and biofilm. Studies were informed by engagement with the Shorebirds-Biofilm TAG and regulatory agencies. The LAA included Roberts Bank, and the RAA included Roberts Bank, Roberts Bank North, the lower Fraser River, Canoe Passage, and Boundary Bay. Existing conditions were characterised for representative species for each of eelgrass, intertidal marsh, macroalgae, biomat, and biofilm. Existing conditions for marine vegetation are influenced by previous developments, including the development of the Roberts Bank and BC Ferries terminals, the dynamic natural environment, and species that forage on marine vegetation. Overall, net productivity of marine vegetation is expected to increase with the Project, without mitigation, and would be further increased with the implementation of environmental management plans and the creation of habitat. The overall productivity increase is due to sheltering of the intertidal zone shoreward of the terminal, which would optimise physical conditions for marine vegetation. During Project construction and operation, changes in productivity of eelgrass, biofilm, and biomat are predicted to be negligible (i.e., not measurable or detectable), while increases in productivity of intertidal marsh is expected. Productivity of rockweed, a macroalgae, is predicted to decrease during construction and operation. This decrease can	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 11.0 Marine Vegetation **Information Requests** Response to Sufficiency Information Request #4 (IR8-04 of CEAR Document #1110)

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				be mitigated through the creation of onsite subtidal rock reef habitat. The Project is expected to temporarily influence community composition of biofilm during freshet from terminal footprint-related changes in salinity but is expected to return to existing conditions outside of the annual freshet period. The assessment concludes that there are no significant adverse residual effects from the Project to marine vegetation, as it will continue to maintain its existing ecological functions. The Project is not expected to result in any incremental cumulative effects to marine vegetation. **Additional information provided by the VFPA:** The VFPA's response to IR8-04 presents the results of studies undertaken in 2017 related to biofilm dynamics. The studies' results complement the findings of the EIS and add to the overall understanding of biofilm science. In summary, the results align with the following conclusions in the EIS, specifically that: • Ongoing salinity monitoring continues to show that under existing conditions there is large variation in salinity across Roberts Bank due to variable Fraser River flow and tidal mixing; • Biofilm is abundant across the existing salinity gradient, found in both freshwater- and marine-influenced locations; and • The Project will not affect the availability or quality of food available to migrating western sandpipers.	
HFN-19.3	Asked for clarification on the statement that biomat and biofilm are relatively new to science. Asked if there could be other things that the biologists are not aware of.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Stated that biofilm is relatively new to science in that it was first discovered at Roberts Bank in 2003, in association with work being undertaken for the DP3 project. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **24-Apr-2017, Email from the VFPA to Halalt First Nation:** The VFPA is conducting a study in April and May 2017 to assess the spatial and temporal variability of biofilm community composition at Roberts Bank. Biofilm is a thin (~2 mm), dense layer of predominantly organic substances (e.g., diatoms, bacteria, and organic detritus) found on the surface of shallow freshwater, marine, and estuarine sediments. Biofilm is known to form an important component of the western sandpiper diet at Roberts Bank during the northward migration. This study, in conjunction with past biofilm studies conducted in 2012, 2013, 2014, and 2016, will strengthen the existing understanding of biofilm	**Addressed in EIS Section 11.0 and EIS Appendix 7.2-B (#65):** Biofilm, a thin dense layer of microscopic photosynthetic algae and bacteria, sediment, and organic matter, is found within the upper intertidal zone and is an important food source for invertebrates, fish, and bird species (including migratory western sandpiper and dunlin). Biomat is described as microbial mat, which can take different forms and be composed of a variety of single and multi-cellular organisms, which for the purposes of the marine vegetation effects assessment, is defined as blue-green algae and associated diatoms. Biomat, located in the upper intertidal area of Roberts Bank, is a primary producer and is likely consumed by higher trophic levels. **Additional information provided by the VFPA:** The VFPA's response to IR8-04 presents the results of studies undertaken in 2017 related to biofilm dynamics. The studies' results complement the findings of the EIS and add to the overall understanding of biofilm science. In summary, the results align with the following conclusions in the EIS, specifically that: • Ongoing salinity monitoring continues to show that under existing conditions there is large variation in salinity across Roberts Bank due to variable Fraser River flow and tidal mixing;	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 11.0 Marine Vegetation 11.5.4 Existing Conditions, Biomat 11.5.5 Existing Conditions, Biofilm 11.6. 			community dynamics at Roberts Bank, and may inform future monitoring programs at Roberts Bank.	• Biofilm is abundant across the existing salinity gradient, found in both freshwater- and marine-influenced locations; and • The Project will not affect the availability or quality of food available to migrating western sandpipers.	
HFN-19.4	Concerned about the role of offsetting within the determination of residual effects. Requested more information related to habitat offsetting.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Stated that the potential effect would be site-specific to RBT2. This presentation does not discuss any offsetting work that the VFPA would consider in conjunction with the Project. This assessment looks at whether there are any potential effects, and considers how they could be avoided or mitigated. If they cannot be avoided or mitigated and there is a residual effect that is when offsetting would be considered. The VFPA is undertaking an extensive program for offsetting. For marine vegetation, there are two potential Project-related effects. The first is decreased productivity, for which mitigation measures (including offsetting) are anticipated to result in there being no residual effects. The VFPA referred to slide 17 (of Marine Vegetation presentation, Cowichan Nation Alliance Workshop #2), which is a table of the marine vegetation sub-component species and their expected difference in productivity between future conditions without the Project and future conditions with the Project. There is an onsite habitat mitigation program, where work would be expected to be conducted right at and near the terminal. It is anticipated that work will be successful. Some measures may be able to be done in advance, and we will know whether or not they are successful. There is also a commitment to monitor. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses	**Addressed in EIS Appendix 7.2-B (#28):** Project-related effects on marine biophysical VCs that cannot be fully mitigated through avoidance or reduction or other mitigation measures will be addressed through offsetting. Offsetting proposed for this Project is focused on the creation and enhancement of biophysical habitats that currently support species of the Roberts Bank ecosystem. The concepts proposed are consistent with current legislation and policy and are based on well-established techniques that have been successfully implemented at Roberts Bank, elsewhere in B.C., and in the Pacific Northwest. The EIS includes a description of onsite habitat concepts to offset potential decreases in productivity, including the identification of beneficial habitat types for each of the VC sub-components, and representative species and groups where applicable. **Addressed in EIS Appendix 7.2-B (#198):** Onsite habitat is intended to soften the perimeter of the Project's shoreline to be more ecologically representative of the existing estuary, to create similar habitat to those that will be affected by the Project, and to create habitat that generally enhances the productivity of the Roberts Bank ecosystem. The five habitat types considered for onsite offsetting include: • Intertidal marsh: Important for shoreline stabilisation, gas and nutrient regulation, contaminant filtering, and nutrient supply, as well as providing structural habitat used for shelter and food by organisms. Some of the species that use intertidal marsh habitat at Roberts Bank include bivalve shellfish, Dungeness crabs, juvenile Chinook salmon, shiner perch, sand lance, and waterfowl. Approximately 15 ha of intertidal marsh is proposed along the widened causeway and in the S-bend of the new terminal. • Sandy gravel beach: Provides spawning area for forage fish, including surf smelt, Pacific herring, and sand lance. Two sandy gravel beaches, totalling approximately 4.5 ha, are proposed along the widened causeway. The beaches are intended to provide attachment-type habitat and substrate suitable for marine vegetation and invertebrates, and to benefit some of their predators (e.g., juvenile Chinook salmon, waterfowl, and American wigeon). • Mudflat: Plays a role in dissipating wave energy and supports large numbers of birds and fish. Mudflats also support biofilm, an important component of the food web in estuarine and coastal ecosystems. Approximately 4.5 ha of mudflats is proposed along the widened causeway and in the S-Bend of the new terminal. Biofilm,	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 17.0 Mitigation for Marine Biophysical Valued Components 17.3 Offsetting Potential Effects 17.3.2 Offsetting Potential Effects, Offsetting Framework

Halalt First Nation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				invertebrates, waterfowl, and shorebirds will benefit from this habitat. • Subtidal rock reefs: Support rockfish populations and assist in meeting fisheries management objectives to alleviate historic declines of regional populations. The creation of approximately two hectares of reef habitat will benefit macroalgae vegetation, and provide refuge, feeding, and spawning habitat for invertebrates, fish, and birds. • Eelgrass: Eelgrass beds are highly productive habitats in the Roberts Bank ecosystem, serving numerous critical functions, such as food, shelter, and rearing habitat for numerous species. Approximately three hectares of native eelgrass will be established through transplants in the inter-causeway area. The onsite habitat concepts presented in EIS Section 17.0 have been presented to Indigenous groups, the community, stakeholders, and the public in open houses and small group meetings that took place in the fall of 2014. The feedback received from Indigenous groups has been considered in the finalisation of the EIS.	
HFN-19.5	Concerned that the assessment excludes marine vegetation that is culturally important to Cowichan Nation Alliance and could be impacted by the Project. Requested that 'coastal terrestrial vegetation' be identified as a distinct Valued Component.	09-May-2014, Letter from Cowichan Tribes acting in alliance with the Stz'uminus, Penelakut, Hwlitsum and Halalt communities	**09-May-2014:** Recorded comment for consideration by the Project team. **06-Jun-2014 and 03-Jul-2014, Workshops:** The VFPA hosted two workshops for Indigenous groups on the VCs providing them with an opportunity to comment on the proposed VCs. For coastal terrestrial vegetation, there is no interaction with the Project and the terrestrial environment, either directly or indirectly, due to the marine-based nature of the Project, and therefore no effects are anticipated.	**Addressed in EIS Section 8.0:** The process for selecting VCs is described in EIS Section 8.0. Rationale for not selecting terrestrial vegetation as a VC is provided in EIS Appendix 8-A. Terrestrial vegetation on the Roberts Bank causeway to the track tie-in location (a less than 1 ha area with in the British Columbia Rail (BCR) right-of-way) is characteristic of highly disturbed sites. Terrestrial vegetation of ecological value does not occur proximal to the Project. Additionally, the Project area does not contain any wetlands above the high water level. Wetlands below high water level are included in the marine vegetation VC.	**EIS** 8.0 Effects Assessment Methods Appendix 8-A Valued Component Selection Rationale Table 8-A2 Rationales for Candidate Component Exclusion Decisions and Other Considerations

Halalt First Nation

Table 20: Mitigation for Marine Biophysical Valued Components (including Onsite Habitat Concepts)

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-20.1	Asked what the rationale is for including fish refugia in the caisson design.	01-Nov-2013, Meeting with Cowichan Nation Alliance	**01-Nov-2013, Meeting:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Section 13.0 Marine Fish.	**Addressed in EIS Sections 4.0 and 13.0:** A mitigation opportunity for marine fish during operation of the terminal includes provision of refuge habitat in the caissons. To increase the availability and connectivity of refuge habitat for marine fish, and to provide a diversity of potential food sources, design options for the caisson face have been considered (EIS Section 4.0) and are described further in EIS Section 13.7.1.3. **Additional information provided by the VFPA:** **07-Jan-2014, Letter from the VFPA to Penelakut Tribe:** The upper portions of the caissons are not filled with ballast rock, only water. In previous projects, such as DP3, a decision was made to provide an opening into every 2nd or 3rd caisson to allow fish and marine creatures to seek refuge inside this water filled area of the caisson. This fish refugia concept was carried over in the design for the proposed Project. It is an accepted DFO habitat development concept.	**EIS** 4.0 Project Description 13.0 Marine Fish 13.7.1.3 Caisson Fish Habitat
HFN-20.2	Asked what the mortality rate during crab salvage efforts would be during molting season.	28-Jul-2016, Issues Workshop – Island Nations	**28-Jul-2016, Workshop:** Stated that mortality related to construction activities has not been quantified. Assumptions would have to be made around density, which could be done; the VFPA is hoping that the mitigation will be good enough in that crabs will be trapped and removed from the construction area, and timing windows would be respected to reduce mortality.	**Addressed in response to IR5-04:** The VFPA's response to IR5-04 discusses the planned approach for crab salvage during the construction of RBT2. Salvages are planned for all Project activities that have the potential to cause direct mortality to legal-sized male and gravid female Dungeness crabs. A list and schedule of proposed Project activities is provided in Table IR5-04-1; the activities for which Dungeness crab mortality or injury may occur are indicated, and for those activities that may cause mortality or injury, plans for salvages are also indicated.	**Information Requests** Response to Sufficiency Information Request #4 (IR5-04 of CEAR Document #1209)
HFN-20.3	Requested details regarding lessons learned from previous habitat creation programs and how these lessons have been considered within the EIS.	15-Jun-2015, Letter to the CEA Agency from Halalt First Nation (CEAR Document #253)	**13-Oct-2015, Letter from the CEA Agency to Halalt First Nation (CEAR Document #312):** *"The Agency did not request additional information for this item since it is not required by the EIS Guidelines. The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."* **29-Aug-2017, Follow Up Program Workshop with Cowichan Nation Alliance, Lyackson First Nation, and Malahat First Nation:** The VFPA met with members of the Cowichan Nation Alliance to discuss the Follow-up Program and lessons learned from DP3. This included a presentation on DP3's Habitat Compensation Plan.	**Addressed in responses to IR7-28:** The VFPA's forthcoming response to IR7-28, as requested by the Review Panel, will discuss the effectiveness of past fish habitat compensation measures.	**Information Requests** Response to Sufficiency Information Request #28 (IR7-28)

Halalt First Nation

Table 21: Noise and Vibration – Intermediate Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information

HFN-21.1	Concerned about potential noise effects from shunting to wildlife and humans.
	Stated that members are affected and interrupted by the shunting.
	Asked if the numbers (of noise events) presented are an expected average over a 24-hour period.
		22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:**
			Recorded comment for consideration by Project team.
			01-Apr-2015, Letter from the VFPA to Halalt First Nation:
			Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.
			19-Apr-2016, Letter from the VFPA to Halalt First Nation:
			Shared meeting notes from the 22-Oct-2014 workshop, which included the following post-meeting note: Stated that the number of noise events is predicted on a per-hour basis.
				Addressed in EIS Appendix 7.2-B (#43):
				The potential changes in noise and vibration that may be caused by the Project, and the potential effects of those changes on biophysical VCs and human health are considered in the EIS. Mitigation measures to address noise-related effects are also described in the EIS.
				The noise and vibration assessment examined potential changes in noise and vibration as a result of the Project. The results of the noise and vibration assessment were used in the assessments of coastal birds, marine commercial use, outdoor recreation, human health, and Current Use.
				The assessment considered the potential changes in noise and vibration that may result from the Project and the potential cumulative changes in noise and vibration that are likely to result from the Project in combination with other certain and reasonably foreseeable projects and activities, including incremental marine vessel traffic.
				The assessment considers noise and vibration from trains, as a source contributing to existing conditions, as well as a potential Project-related source of noise and vibration and a potential source of cumulative change in noise and vibration.
				Mitigation measures related to noise are included in the human health assessment (EIS Section 27.9.2).
				The assessment considered Project-related sources of noise and vibration, including construction equipment, container ships at berth, container handling activities, and movement of trains and trucks on the terminal and causeway. The assessment focused on continuous noise, low frequency noise, transient and impulsive noise, and ground-borne vibration.
				The assessment concluded that:
				• Project-related changes in annual average noise levels in communities near the Project are expected to be minor and, for the most part, not perceptible.
				• The Project, in combination with other certain and reasonably foreseeable projects and activities, is expected to result in minimal incremental cumulative changes to noise in areas close to road and rail corridors.
				• Some changes in noise conditions that could be perceptible include:
				  ○ Increased noise during periods of peak construction activity.
				  ○ The number of intermittent noises during operation would increase, but the noise levels would be the same or lower than from the existing Roberts Bank terminals.
				  ○ Increased noise in marine areas is expected to be perceptible close to the terminal.
				  ○ The construction and operation of the marine terminal and causeway is not expected to result in perceptible increases in levels of ground-borne vibration.
				Suggested mitigations were considered in the development of proposed mitigation for Project-related changes in noise. Noise Management Plans would be developed for construction and operation phases and would integrate with the VFPA's existing noise monitoring programs.
				Mitigation of construction-related noise would include:
				• Scheduling of higher-noise generating activities during weekdays, and during the daytime;
				• Shutdown of equipment and vehicles when not in use;
				• Utilisation of equipment that produces less noise; and

				• Awareness and training for construction crews. Mitigation for operation-related noise would include: • Optimised tonality of equipment alarms to limit audibility on shore while meeting safety requirements; • Operator awareness and training; and • Regular maintenance of equipment (e.g., lubrication of pulleys and other moving parts, replacement of deteriorated exhaust mufflers, maintaining efficiencies of engines through servicing).	
HFN-21.2	Noted that Penelakut has a village site at the north end of Galiano Island at Porlier Pass. Asked if studies were done on the west side of Porlier Pass and the Gulf Island passages.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Referred to the work carried out by acoustician that determined the areas identified in the slide is where noise is expected to go. Stated that sound does not necessarily travel with currents. Rather, it bounces off of surfaces. There is likely to be noise in that area, but not Project noise, which is what the slides are referring to. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#44):** The spatial boundaries for the noise and vibration assessment, and the rationale for their selection, is included in EIS Section 9.3. The marine study area includes all marine areas within 10 km of the proposed terminal, including areas at the mouth of the Fraser River and Canoe Passage, north of the northern tip of Westham Island. The spatial boundaries for the noise and vibration assessment, and the rationale for their selection, is included in EIS Section 9.3.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.0 Physical Setting 9.3 Noise and Vibration

Halalt First Nation

Table 22: Outdoor Recreation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-22.1	Concerned that the data provided in the recreational fishing studies is not representative of the Project area. Suggested that a study of recreational fisheries in the area should be included within the EIS. Stated that the recreational fishing studies provide broad data for the entire Salish Sea. Stated that basing local recreational fisheries from this data is unrepresentative of the fisheries around the proposed Project.	15-Jun-2015, Letter to the CEA Agency from Halalt First Nation (CEAR Document #253)	**13-Oct-2015, Letter from the CEA Agency to Halalt First Nation (CEAR Document #312):** *"The Agency did not request additional information for this item since there is already some information provided in the EIS. The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in EIS Section 24.0:** EIS Section 24.4 presents a listing of secondary sources of information for outdoor recreation, including the use of DFO recreation harvesting statistics and fishing management plans and relevant recreational fishing and hunting restrictions as set out by DFO, Ministry of Forests, Lands and Natural Resource Operations (MFLNRO), and Delta. The assessment concludes that the Project footprint and proposed expansion of the area closed to recreational crabbing are expected to result in the displacement of recreational crab harvesters. Recreational crab harvesters that currently use the western side of the Roberts Bank terminals would be required to move to other areas. Following mitigation, the residual effect of displacement is determined to be negligible. The Project is not expected to result in measurable adverse residual effects to outdoor recreation. The Project is not expected to result in any incremental cumulative effects to outdoor recreation.	**EIS** 24.0 Outdoor Recreation 24.4 Information Sources

Table 23: Port Operations

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-23.1	Asked where ships currently re-fuel in the VFPA's jurisdiction.	01-Nov-2013, Meeting with Cowichan Nation Alliance	**01-Nov-2013, Meeting:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Section 4.4.2.1 Container Ship Manoeuvres.	**Addressed in EIS Section 4.4.2.1:** Facilities to support bunkering of ships do not exist at Roberts Bank, nor does the Project include any facilities to support bunkering. Container ships usually bunker at one of their home ports. **Additional information provided by the VFPA:** **07-Jan-2014, Letter from the VFPA to Penelakut Tribe:** Container ships cannot re-fuel at Roberts Bank. Container ships are on a tight schedule and will arrange to pick up fuel at a location where they will be at berth for a longer time (home port) and where fuel is less expensive, usually in Asia. Vessels within the VFPA's jurisdiction that need to re-fuel will typically take on fuel in Burrard Inlet, alongside at berth or at one of the designated anchorages in the inlet. The fuel is delivered to the vessels by barge, either from the Stanovan Marine Terminal (Chevron) in Burnaby or the Shellburn Marine Terminal (Shell Canada), also in Burnaby. Tugs used to guide the container ships during arrival and departure, bunker at the Chevron marine fuelling station in Burrard inlet.	**EIS** 4.4.2.1 Container Ship Manoeuvres
HFN-23.2	Concerned about traffic and increased use of anchorages around the Gulf Islands. Concerned about increased number of large ships anchoring in Cowichan Tribes territory. Stated that increased shipping traffic from the proposed Project would likely increase the frequency of these freighters anchoring in Cowichan Bay. Concerned with sewage effluent and ships moored and anchored south of Penelakut and north of Thetis Island. Stated that ships are dumping effluent and it is impacting their beaches. Stated that they are there for two weeks and does not know why they would not be in the Fraser River.	17-Jun-2014, Technical Working Group Meeting #4 09-Sep-2015, Letter to the VFPA from Cowichan Tribes on behalf of the Cowichan Nation Alliance 18-April-2017, Chief & Council Meeting – Cowichan Nation Alliance 07-Nov-2017, Cowichan Nation Alliance Meeting with Federal Agencies	**17-Jun-2014, Meeting:** Recorded comment for consideration by Project team. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response. **02-Oct-2015, Letter from the VFPA to Cowichan Tribes cc: Stz'uminus First Nation, Halalt First Nation, Penelakut Tribe:** Referred Cowichan Nation Alliance to Section 3.3.2 of the Marine Shipping Overview document sent to Cowichan Nation Alliance on May 26, 2015: There are no plans, or foreseen terminal operating requirements, for off-terminal anchoring of container ships waiting for a berth at the new RBT2 marine terminal. Container ships operate on a scheduled service, usually between Asia and the west coast, and adjust their speeds as required to arrive at the terminal within their assigned	**Addressed in EIS Appendix 7.2-B:** The scope of the Project, as defined in the *EIS Guidelines* issued by the CEA Agency, includes vessel movements within VFPA jurisdiction, including approach, berthing, unberthing, and departure from the terminal. The assessment does not include the anchoring of ships in the Gulf Island area. The MSA includes an assessment of the impacts of Project-associated marine shipping outside the VFPA's jurisdiction. For questions regarding island anchorages, please contact the CEO of the Pacific Pilotage Authority at [email address]. **Addressed in MSA Appendix 5-B (#3):** Anchorage is discussed in MSA Section 4.0. Container ships operate on a scheduled service, and adjust their speeds as required to arrive at the terminal within their assigned arrival window; thus, anchorage is not a normal requirement and there are no plans or requirements for off-terminal anchoring of container ships waiting for a berth at the new RBT2 marine terminal. Exceptions to this could occur in the event of an extreme storm event in the Pacific, resulting in refuge anchorage requirement for safety reasons, or to accommodate unexpected ship-specific maintenance,	**EIS** 4.4.2.1 Container Ship Manoeuvres Appendix 7.2-B Aboriginal Groups Interests and Issues Table **MSA** 4.0 Activity Description 4.2.2.2 Anchorage Appendix 5-B Aboriginal Issues and Interests **Information Requests** Response to Sufficiency Information Request #01 (IR5-01 of CEAR Document #1078) **TC IR-07 of CEAR Document #982 from Transport Canada to the Review Panel re: Response to Information Requests issued by the Review Panel on May 10, 2017**

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			arrival window; thus, anchorage is not a normal requirement. Exception to this could occur in the event of an extreme storm event in the Pacific Ocean, resulting in a refuge anchorage requirement for safety reasons or to accommodate unexpected ship-specific maintenance personnel, or operation issues that may arise. Container ship anchorages for Deltaport Terminal in 2012 and 2013 were rare, with a frequency range of three to four per year out of an approximate annual total of 270 ship calls to Deltaport Terminal in each of those years. The same frequency can be assumed for marine shipping associated with RBT2, resulting in approximately three to four unforeseen container ship anchorages per year. As defined in the *EIS Guidelines*, issued by the CEA Agency, the scope of the Project includes marine transportation within the VFPA's jurisdiction. Ship traffic through the Gulf Islands is outside of the scope of the Project. The MSA includes an assessment of potential effects associated with marine shipping outside the VFPA's jurisdiction. The spatial boundaries are included in the noise and vibration (EIS Section 9.3) and underwater noise (EIS Section 9.8) assessments. Project-related changes to noise and vibration, both above water and underwater, are not expected to extend from the Project area into this area. The appropriate authority for comments related to island anchorages is the Pacific Pilotage Authority (contact information provided). **18-April-2017, Meeting:** Recorded comment for consideration. **07-Nov-2017, Meeting:** The Cowichan Nation Alliance met with federal agencies, including the CEA Agency, Transport Canada, ECCC, Health Canada, DFO, NRC, and the Canadian Coast Guard. Transport Canada committed to connect the Cowichan Nation Alliance with a representative of Transport Canada to discuss anchorage concerns further. **16-Nov-2017, Email from the CEA Agency to Halalt First Nation:** Provided draft meeting notes from the 07-Nov-2017 meeting, which included a link to IR5-01 that discusses aspects of anchorage outside of the VFPA's jurisdiction, and TC IR-07.	personnel, or operation issues that may arise. The assessment of marine shipping associated with the Project is based on a routine vessel transit scenario. Because anchorage only occurs in rare circumstances, anchorage is not assessed as an activity related to marine shipping associated with the Project. **Additional information provided in response to IR5-01:** The VFPA's response to IR5-01 generally discusses aspects of anchorage outside of the VFPA's jurisdiction. Notably, it references detailed information regarding anchorages in Transport Canada's response to Panel information request TC IR-07 from Transport Canada to the Review Panel. Transport Canada's response to information request TC IR-07 tabulates detailed information regarding anchorages and minimum, mean, and maximum number of days in Appendix D (Pacific Pilotage Authority Anchorage Usage Data 2012 – 2016 for the Pacific Pilotage Authority Marine Shipping Area). As shown in these tables, a total of 124 anchorages occurred between 2012 and 2016 for container vessels destined for VFPA jurisdiction, and the mean number of anchorage days was 2.69, with a minimum of 0.05 days and a maximum of 83.64 days. **Additional information provided by the VFPA:** Information regarding an interim protocol for the use of Southern B.C. Anchorages can be found on Transport Canada's website. The following text is an excerpt from the *Interim Protocol for the Use of Southern B.C. Anchorages webpage*: An interim protocol for the use of Southern B.C. anchorages has been developed by Transport Canada in collaboration with the Chamber of Shipping of BC, the Shipping Federation of Canada, the Pacific Pilotage Authority, the VFPA, and the Port of Nanaimo (working group members). It also takes into account comments provided to Transport Canada by coastal communities about the impact of increased use of anchorages in their surrounding waters. Drafts of the interim protocol were also shared with coastal communities and Indigenous groups. Under the protocol, the VFPA assigns anchorages as equitably as possible, subject to individual anchorage size restrictions, using their computerised queueing system, which takes into account the dimensions of the vessel and specific anchorage usage over the previous 30 days. The objective of this approach is to balance the usage, so that no single anchorage is in constant use, and that that there is an equitable rotation of use through all suitable anchorages. Noise and Lights:	**Interim Protocol for the Use of Southern B.C. Anchorages. Available at:** **https://www.tc.gc.ca/en/services/marine/ports-harbours/interim-protocol-use-southern-bc-anchorages.html**

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				All vessels, while at anchor, should minimise noise levels and light usage in consideration of local residents. The following guidelines apply: Noise: • Generator usage should be reduced to the minimum required generator(s) to operate essential services and systems; • External doors and hatches to machinery spaces must be kept closed as often as possible; • Use of power tools and chipping hammers must be kept to a minimum and is not permitted on deck on weekends, nor between 1900 and 0700 hours on weekdays. Lights: • While the vessel is to be lit in compliance with the Collision Regulations, deck lights must be kept to a minimum, and • Lighting used to illuminate Concerns with any of the specifics related to the responsibilities of ships at anchor (e.g., noise, light) within the protocol, can be reported to the VFPA Operations Centre. The VFPA Operations Centre will relay the complaints to the vessel agent with a copy to the Chamber of Shipping of BC, the Shipping Federation of Canada, and Transport Canada with the request to follow up with the vessel. The Interim Protocol is a temporary and voluntary measure that addresses some of the concerns Canada and the Port have heard in recent years. The Oceans Protection Plan, National Anchorage Framework will be undertaking the studies and consultation necessary to develop principles that determine the location and management practices for anchorages outside of ports in the future. In 2017, Transport Canada announced the Oceans Protection Plan's Anchorages initiative. The Anchorages Initiative will engage governments, marine industry, Indigenous groups, community organisations, and stakeholders to: • Develop a process to identify potential anchorage locations; • Analyse and respond to environmental, economic, cultural, safety and security concerns now and over the long-term; • Draft a "best practices at anchor" manual; and • Propose oversight/management options for anchorage locations outside the port authority's boundaries. The comprehensive review will use an evidence-based approach, and includes hearing feedback on issues from Indigenous groups, coastal communities, other levels of governments, and industry.	

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				Results and lessons learned from the Interim Protocol will help inform the national Anchorages Initiative.	
HFN-23.3	Related concerns regarding: • Pollution impacts from anchoring ships to shellfish; • Ships not following proper bilge water regulations; • Invasive species of clams being introduced and varnish clams disappearing; and • Invasive species of mussels (blue) being introduced to Penelakut territory.	17-Jun-2014, Technical Working Group Meeting #4	**17-Jun-2014, Meeting:** There are regulations currently in place that prevent the discharge of bilge water in VFPA jurisdiction. Similarly, vessels that enter VFPA jurisdiction are not permitted to release raw sewage effluent. If required, untreated sewage can be discharged at least 12 miles (19.3 km) from shore with the ship moving faster than 4 knots. If sewage is comminuted (i.e., blended or pulverised), discharges can take place 3 miles (4.8 km) from shore. For ships equipped with approved treatment plants there are also limits to the permissible coliform counts	**Addressed in EIS Section 13.6.2.1:** Potential operation-phase changes from wastewater (sewage) and stormwater discharges, and discharges from ships (bilge water and ballast water) are not expected to affect marine vegetation due to the distant location of discharges into subtidal waters, the incorporation of management and treatment measures described in EIS Section 4.2.1, and the implementation of regulatory requirements and guidelines (refer to EIS Section 9.7.8 for more information). **Addressed in EIS Appendix 7.2-B (#100):** The VFPA was the first port in North America to prohibit in-port ballast water exchange without prior mid-ocean exchange, a practice which became the basis of government requirements now enforced by Transport Canada. To prevent the invasion of foreign species into local waters, international regulations, through the IMO, are managed by Transport Canada. All commercial deep sea vessels are required to carry out a ballast water exchange prior to entering Canadian waters. This is done outside the exclusive economic zone of 200 nautical miles and in water deeper than 2,000 m. By requiring vessels to complete this ballast 'flush' well outside Canadian waters, the aim is to prevent any foreign organisms from entering into the local ecosystem. The U.S.A. has similar requirements, and vessels arriving from the Puget Sound area need to forward the completed U.S. forms to Canadian authorities prior to entry into Canadian waters. Import containers are generally not opened at the terminal. Canada Border Services Agency inspects the contents of a percentage of import containers off-terminal in Richmond, and in the future will be done at the facility on Tsawwassen First Nation land currently being developed. All ships use rat guards on their mooring lines to ensure that rats and other rodents do not crawl up or down the mooring lines between the ship and the wharf. The VFPA is a part of the B.C. *Spartina* Working Group, which maps, tests eradication methods, and supports the removal of invasive English cordgrass from the Fraser River estuary.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.7 Marine Water Quality 9.7.8 Future Conditions with the Project 13.0 Marine Fish 13.6.2.1 Changes in Water Quality

Halalt First Nation

Table 24: Potential Accidents or Malfunctions

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-24.1	Asked who is responsible for the cost of clean-up in the event of a spill and who is responsible for compensation of lost food sources for First Nations people. Stated that the VFPA should be held accountable, not just the shipper. Asked how the VFPA is bolstering WCMRC capacity to respond. Asked whether the VFPA contributes to WCMRC. Asked if Canada's compensation regime for impacts from a major container vessel casualty from its containers, debris, and/or wreckage fully compensate for natural resource damages, as well as to Cowichan Nation Alliance subsistence (non-commercial) and traditional fisheries. If yes, what are these compensation avenues?	07-Oct-2014, Aboriginal Groups Workshop #1 22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1 13-Jan-2016, Letter to the CEA Agency from Cowichan Tribe on behalf of Cowichan Nation Alliance (CEAR Document #385)	**07-Oct-2014, Workshop:** Explained that with WCMRC, each vessel (i.e. the shipping company), the terminal operator (the company responsible for the loading and unloading of ships), and the company responsible for constructing the project in the first place, must have a formal agreement with WCMRC, and pay into the fund/service, and then WCMRC responds to the spills. **22-Oct-2014, Workshop:** Stated that the framework of responsibility is based on the polluter pays principle. Each vessel, the terminal operator (the company responsible for the loading and unloading of ships), and the company responsible for constructing the project, must have a formal agreement with Western Canada Marine Response Corporation (WCMRC), and pay into the fund/service, and then WCMRC responds to the spills. Stated that the VFPA would be responsible for the safe access and transit to or from the site, and implementing changes to navigation patterns to keep people clear of a potential spill. Increased traffic and risk of collision is considered in the assessment. The review panel will need to consider the VFPA's role in such an incident. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response. **12-May-2016, Letter from the CEA Agency to Cowichan Nation Alliance (CEAR Document #398):** *The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review.*	**Addressed in EIS Appendix 7.2-B (#207):** The EIS describes the parties who would be notified and assume responsibility as On Scene Commander for spill clean-up in the event of a marine spill within VFPA jurisdiction, including Roberts Bank. These parties include the Canadian Coast Guard and the WCMRC. The VFPA's role following a spill would be to maintain situational awareness and coordinate the incident response. **Addressed in EIS Appendix 7.2-B (#208):** Generally, the owner of the vessel from which the spill originates is responsible, in accordance with the *Marine Liability Act*. There is more information on liability on Transport Canada's website, which explains liability and compensation for oil spill clean-up and damages, including funds available for clean-up: http://www.tc.gc.ca/eng/marinesafety/menu-4100.htm#m. Additional sources information on funds available for clean-up are available at the following link: http://www.tc.gc.ca/eng/marinesafety/oep-ers-regime-funds-1119.htm **Additional information provided by the VFPA:** The *Canada Shipping Act (2001)* is Transport Canada's regulatory framework surrounding marine pollution and its enforcement. In the case of a report of pollution in the water, including oil or fuel spills, Canada operates under the National Spill Response Protocol, which specifies that the Canadian Coast Guard is responsible for ensuring the clean-up of ship sourced spills of oil and other pollutants. While the VFPA is not the lead agency when it comes to spill response, it provides assistance often in the form of working with first responders and other agencies, providing information on a situation through the 24/7 operations centre, security cameras, patrol boats, and drone. As per a 2009 letter of understanding, the VFPA can be called upon by the Coast Guard to conduct an initial inspection in response to a pollution report in our federal jurisdiction. On the west coast, the Canadian Coast Guard contracts spill clean-up to WCMRC. This is also the agency that ships or terminal operators are required to call if they discover they have been the source of a spill.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 30.0 Potential Accidents or Malfunctions 30.3.3 Port Metro Vancouver Practices and Procedures Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment
HFN-24.2	Concerned that the assessment for accidents and malfunctions should consider extreme weather events, not only ideal/normal weather patterns.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Responded that the VFPA is taking a conservative and worst-case scenario approach, so weather extremes are considered. The worst weather condition might also be overlaid with the timing of something such as spawning season, for the purposes of the assessment.	**Addressed in EIS Appendix 7.2-B (#213):** A description of how local conditions and natural hazards, such as severe or extreme weather conditions and weather-related events, could adversely affect the Project, and how these in turn, could affect the environment, is presented in EIS Section 31.0. Project design and management measures capable of mitigating the effects of extreme weather conditions on the Project also will effectively address any potential effects associated with ideal/normal weather patterns. As described in EIS Section 9.1, climate is recognised as one of the primary drivers in shaping the Roberts Bank ecosystem. The influence of weather patterns typical for	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.0 Physical Setting 9.1 Climate, Coastal Conditions, and

			01-Apr-2015, Letter from the VFPA to Halalt First Nation: Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	south coast B.C. and Roberts Bank are considered as an aspect of the Project's physical setting in existing conditions, expected conditions, and future conditions in the assessment of Project-related effects on the ICs and VCs.	Geotechnical Considerations 31.0 Effects of the Environment on the Project 31.2.1 Extreme Weather and Weather-related Events
HFN-24.3	Requested a list of hazardous materials/dangerous goods that are shipped in containers. Asked if there has been an assessment done on which hazardous materials are currently being handled in the Port.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Responded the Port has records and statistics on the contents of containers Noted that more information on the contents of containers would be provided in the EIS. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in MSA Appendix 5-B (#109):** The potential for an accident involving a spilled container, and hazardous contents of containers, is addressed in MSA Section 10.0. Details on the types of hazardous materials shipped in containers are provided in EIS Appendix 30-A (Table G-3 in Appendix G). Regulations for securing containers, and for the transport of dangerous goods, are set by the IMO http://www.imo.org/en/About/Conventions/ListOfConventions/Pages/International-Convention-for-the-Safety-of-Life-at-Sea-(SOLAS),-1974.aspx. The International Maritime Dangerous Goods Code is the international code that establishes where dangerous goods should be loaded on a ship. Some should be loaded below deck, others should be loaded on deck, some dangerous goods need to be separated by certain distances from other types of goods, and some dangerous goods need to be segregated in different holds from other goods. The implementation of the Code is mandatory under the International Convention for the Safety of Life at Sea (SOLAS) and the International Convention for the Prevention of Pollution from Ships (MARPOL 73/78).	**EIS** Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment **MSA** 10.0 Potential Accidents or Malfunctions
HFN-24.4	Asked if shipping of hydrocarbons in containers has been included in the assessment, as hydrocarbons are being increasingly shipped by rail, resulting in incidents. Asked if there is an increase in the movement of coal contemplated in the Project.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Responded that there have not been plans or projections for a change in the distribution of contents of containers. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#6):** The proposed Project is a container terminal and does not include any coal-related elements. There are no plans to modify the Project to handle bulk oil or coal.	**EIS** 4.0 Project Description Appendix 7.2-B Aboriginal Groups Interests and Issues Table
HFN-24.5	Concerned about the increased tanker traffic including oil spills, spill response, vessel safety, invasive species and cumulative effects.	01-Nov-2013, Meeting with Cowichan Nation Alliance	**01-Nov-2013, Meeting:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#204):** Potential spills of deleterious materials (e.g., hydrocarbons) and their environmental effects are discussed in the EIS. Plausible worst-case scenarios involving a marine vessel, motor vehicle, and train accident, each assumed to result in a spill of deleterious materials, are assessed. The regulatory management framework, standard practices, and Project-specific measures to reduce the risk of accidents or malfunctions, including spills, as well as the emergency response and mitigation measures to be implemented in the event of a spill are described. Three worst-case scenarios involving hydrocarbon spills were assessed: a container ship impact incident at the terminal, a tanker truck accident on Roberts Bank Way North, and a yard locomotive derailment on the widened causeway. The assessment determined that a ship impact scenario involving a marine spill of heavy fuel oil at the terminal would result in adverse residual effects to all marine biophysical VCs, as well as marine commercial use, outdoor recreation, and land and water use. While the residual effects on southern resident killer whales, coastal birds, and Current Use were	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 30.0 Potential Accidents or Malfunctions Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				considered significant, due to the extremely low probability of such a scenario, all residual effects were considered unlikely. Since the diesel spill in each of the land-based scenarios would occur away from the marine environment, no potential interactions with marine biophysical VCs were identified. Further, no residual adverse effects were identified with respect to socio-economic VCs, including services and infrastructure and human health. As with any activity, the potential for unplanned incidents during Project construction and operation exists. The VFPA, its tenants, contractors, operators, and intermodal partners are committed to continue to improve port-wide operational practices and procedures to ensure the safety of workers and the public, and protection of the environment. The composition and number of hazardous goods containers handled at Deltaport Terminal in 2012 was reviewed during the development of the Quantitative Risk Assessment (see Table B-4 (Appendix B) of EIS Appendix 30-A). The estimated probability and potential consequences of a range of accidents or malfunctions, including spills of deleterious materials from ships during Project construction and operation, are described in the EIS. **Further information provided by the VFPA:** **07-Jan-2014, Letter from the VFPA to Penelakut Tribe:** The proposed Project is being designed to exclusively handle containers. There will be no additional tankers as a result of the Project. The proposed Project will undergo a thorough and independent environmental assessment, which will include a component that will look at potential cumulative effects and potential for spills.	
HFN-24.6	Concerned that bunker fuel or cargo spill would be distributed by ocean currents - not just in shipping lanes.	09-Sep-2015, Letter to the VFPA from Cowichan Tribes on behalf of Cowichan Nation Alliance	**02-Oct-2015, Letter from the VFPA to Cowichan Tribes cc: Stz'uminus First Nation, Halalt First Nation, Penelakut Tribe:** The document shared by the VFPA on July 27, 2015 included a draft summary of Cowichan Nation Alliance's Current Use in the marine shipping study area, and therefore did not include accidents and malfunctions or potential effects. These topics will be addressed in the report to be submitted to the CEA Agency in the fall of 2015. For more information regarding factors considered in the assessment of effects of marine shipping associated with the Project, please see the Marine Shipping Overview document shared with Cowichan Nation Alliance on May 26, 2015, or the *Updated EIS Guidelines*, issued by the CEA Agency on April 17, 2015.	**Addressed in MSA Appendix 5-B (#104):** The assessment of potential accidents or malfunctions (MSA Section 10.0), considers the effects of a plausible worst-case spill scenario on the environment. The plausible worst-case scenario assessed is a powered grounding of a container ship resulting in a release of heavy fuel oil. The location of the plausible worst-case spill scenario is in Boundary Passage near the south end of South Pender Island. MSA Section 10.0 includes a description of the applicable mitigation for a plausible worst-case spill scenario. **Addressed in MSA Section 10.0:** The assessment for the plausible worst-case spill scenario concluded that, with the exception of human health, measurable residual adverse effects are predicted for all VCs. In all cases, the identified residual adverse effects of a spill are unlikely to occur, because of the very low probability of an accident or malfunction that could result in a spill. With the exceptions of residual effects on marine mammals (southern resident killer whale), marine commercial use (guided sport fishing and marine-based tourism sub-components), outdoor recreation, archaeological and heritage resources, and Current Use, adverse residual effects were considered not significant. A serious residual adverse impact on the ability of Indigenous groups to exercise Aboriginal and treaty rights in areas overlapping or near the hypothetical spill area would be expected in the event of such a spill.	**MSA** Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents or Malfunctions 10.3.3 Identification of Plausible Worst-case Accident or Malfunction Scenarios 10.4 Mitigation
HFN-24.7	Concerned with the safety of those participating in Tribal Journeys.	17-Jun-2015, Meeting with Cowichan Nation Alliance	**02-Oct-2015, Letter from the VFPA to Cowichan Tribes cc: Stz'uminus First Nation, Halalt First Nation, Penelakut Tribe:** Stated that potential effects will be addressed in the MSA, which will be submitted to the CEA Agency.	**Addressed in EIS Appendix 7.2-B (#206):** A quantitative risk assessment of potential accidents and malfunctions related to marine vessel traffic, including the risk of a collision between a container ship and small craft (i.e., fishing and recreational vessels), was undertaken and is described in EIS Section 30.0, as well as EIS Appendix 30-A. Data collected by DFO between 2008 and 2012 for vessels in DFO sub-areas encompassing Canadian and U.S. waters transited by ships bound for Roberts Bank was reviewed. These data indicated that daily fishing vessel numbers in the area are	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 30.0 Potential Accident and Malfunctions 30.4.4 Vessel Collision

Halalt First Nation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			09-Nov-2015, Letter from the VFPA to Halalt First Nation: Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's response.	low (i.e., no vessels per sub-area on most days; maximum of six vessels on one day in the largest sub-area). On this basis, the quantitated risk assessment estimated the return period for a collision involving a container ship and a fishing vessel as 1 in 50 years, equivalent to a 'very low' probability in this assessment. A Land and Marine Traffic Management Plan is included in the Environmental Management Program (EIS Section 33.0) in order to mitigate potential marine vessel traffic issues. **Addressed in MSA Section 10.0:** Includes a description of applicable collision risk reduction measures. The assessment of Current Use considers the risk of collision, and perceptions of safety and determined that residual effects of the collision scenario on Current Use was considered significant, though unlikely to occur. **Addressed in response to IR10-15:** The VFPA's response to IR10-15, as requested by the Review Panel, further discusses potential effects to the quality of the Current Use experience resulting from marine shipping associated with the Project.	Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment **MSA** Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents or Malfunctions **Information Requests** Response to Sufficiency Information Request #15 (IR10-15)
HFN-24.8	Asked if there will be timely and adequate rescue and tow of a disabled container vessel that is undertaken by a tug of adequate. If yes will these be commercial tugs of opportunity or a dedicated response tug operated by trained and experienced crew for high seas rescue.	13-Jan-2016, Letter to the CEA Agency from Cowichan Tribe on behalf of Cowichan Nation Alliance (CEAR Document #385)	**12-May-2016, Letter from the CEA Agency to Cowichan Nation Alliance (CEAR Document #398):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Additional information provided by the VFPA:** Transport Canada is the federal lead in regulating marine shipping in Canada, and other federal departments such as the Canadian Coast Guard, ECCC, DFO, and NRC have key roles that enhance marine safety and security, influence marine shipping activities, and help protect the marine environment. Transport Canada's Response to the Review Panel's April 4, 2018 Information Requests provides a whole-of-government overview of activities undertaken by the Government of Canada related to spill management.	**Transport Canada Response to the Review Panel's April 4, 2018 Information Requests (CEAR Document #1204)**
HFN-24.9	Asked if there will be timely and adequate salvage capability provided for a container vessel threatened or stricken with structural failure and needing hull patching and/or container cargo removal? If yes, will the salvage services be from a company sourced internationally, or will services be provided by a salvor representative whose office resides in B.C. and has repositioned equipment strategically located for rapid deployment? What will the timelines be for each salvage service (stability analysis, fire-fighting, hull patching, towing, cargo/fuel removal, shore clean-up) within the marine study area?	13-Jan-2016, Letter to the CEA Agency from Cowichan Tribe on behalf of Cowichan Nation Alliance (CEAR Document #385)	**12-May-2016, Letter from the CEA Agency to Cowichan Nation Alliance (CEAR Document #398):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Additional information provided by the VFPA:** Transport Canada is the federal lead in regulating marine shipping in Canada, and other federal departments such as the Canadian Coast Guard, ECCC, DFO, and NRC have key roles that enhance marine safety and security, influence marine shipping activities, and help protect the marine environment. Halalt First Nation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-24.10	Asked if there will be planning and collaboration by Transport Canada with the Cowichan Nation Alliance on potential places of refuge within our Traditional Territory Stated that if yes, what are Transport Canada's intentions and approaches?	13-Jan-2016, Letter to the CEA Agency from Cowichan Tribe on behalf of Cowichan Nation Alliance (CEAR Document #385)	**12-May-2016, Letter from the CEA Agency to Cowichan Nation Alliance (CEAR Document #398):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Additional information provided by the VFPA:** Transport Canada's response to information request TC IR-07 discusses planning and collaboration in the development of new places of refuge. In its response, Transport Canada notes it "recently led a review and update of the Pacific regional POR [place of refuge] plan. The plan provides guidance in regional POR planning and decision-making for federal, provincial, First Nations, municipal and non- government partners, and includes a more comprehensive and cooperative mechanism for risk assessment and decision-making. As the federal government retains responsibility for marine shipping, if the urgency of the situation requires immediate action, Transport Canada and Canadian Coast Guard will initiate action under the *Canada Shipping Act, 2001* and engage with other partners (e.g., Province of BC, Public Safety Canada, Parks Canada, Environment and Climate Change Canada, First Nations, municipalities) as soon as possible thereafter using the plan, including the Incident Command System and Unified Command. Under the Oceans Protection Plan, places of refuge engagement will be expanded to the rest of the Pacific coast to enhance the plan with new sub-regional annexes, including for the South Coast, summarising the navigation criteria, in balance with the environmental, socio-economic and cultural values of First Nations and local communities that may be exposed to some risk from a POR decision. These new annexes will modify and/or update current pre-surveyed places of refuge, from the existing regional plan dated 2009. It should be noted that "pre-surveyed" doesn't mean "pre-designated". Actual assignment of a place of refuge anchorage is undertaken in accordance with this plan, using a cooperative risk assessment and decision-making process whenever time and operational imperatives allow. Engagement with other First Nations and coastal communities will ensure these annexes are developed in a balanced and fully informed manner."	**TC IR-07 (CEAR Document #982) from Transport Canada to the Review Panel re: Response to Information Requests issued by the Review Panel on May 10, 2017**
HFN-24.11	Asked if there are regions and periods whereby sea conditions for daylight oil spill and/or container-debris response are not safe or ineffective within our Traditional Territory. If yes, what would be the frequency of limiting factors such as: waves, wind, fog, currents, etc. within the marine study area?	13-Jan-2016, Letter to the CEA Agency from Cowichan Tribe on behalf of Cowichan Nation Alliance (CEAR Document #385)	**12-May-2016, Letter from the CEA Agency to Cowichan Nation Alliance (CEAR Document #398):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Additional information provided by the VFPA:** Transport Canada is the federal lead in regulating marine shipping in Canada, and other federal departments such as the Canadian Coast Guard, ECCC, DFO, and NRC have key roles that enhance marine safety and security, influence marine shipping activities, and help protect the marine environment. Transport Canada's Response to the Review Panel's April 4, 2018 Information Requests provides a whole-of-government overview of activities undertaken by the Government of Canada related to spill management.	**Transport Canada Response to the Review Panel's April 4, 2018 Information Requests (CEAR Document #1204)**
HFN-24.12	As a precautionary approach are current and future environmental impact assessments for vessel casualty scenarios and associated means for mitigation to be based on worst-case analysis rather than relying on statistical analysis to render consequences and preparedness lower as "credible" or "plausible" worst-case scenarios? For risk determination and emergency preparedness purposes, what	13-Jan-2016, Letter to the CEA Agency from Cowichan Tribe on behalf of Cowichan Nation Alliance (CEAR Document #385)	**12-May-2016, Letter from the CEA Agency to Cowichan Nation Alliance (CEAR Document #398):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Additional information provided by the VFPA:** The methods used to assess the potential accidents and malfunctions are consistent with the *EIS Guidelines* issued by the CEA Agency. **Additional information provided by the VFPA:** Transport Canada is the federal lead in regulating marine shipping in Canada, and other federal departments such as the Canadian Coast Guard, ECCC, DFO, and NRC have key roles that enhance marine safety and security, influence marine shipping activities, and help protect the marine environment. Transport Canada's Response to the Review Panel's April 4, 2018 Information Requests provides a whole-of-government overview of activities undertaken by the Government of Canada related to spill management.	***Updated EIS Guidelines*** **Transport Canada Response to the Review Panel's April 4, 2018 Information Requests (CEAR Document #1204)**

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	direction does Transport Canada provide to the shipping industry and for federal impact assessments in defining the nature, scale and scope of major vessel casualty's consequences?				
HFN-24.13	Asked if heavy fuel oils (bunker) used by the project's container vessels - if spilled in BC's marine temperate waters - submerge (over wash) and/or sink anywhere within the marine study area? If yes, then what is the current capability within industry and government with regards to having specialized equipment and trained personnel to realistically track and recover such oil? How is this specialized equipment and operations evaluated by regulatory agencies?	13-Jan-2016, Letter to the CEA Agency from Cowichan Tribe on behalf of Cowichan Nation Alliance (CEAR Document #385)	**12-May-2016, Letter from the CEA Agency to Cowichan Nation Alliance (CEAR Document #398):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in MSA Section 10.4:** MSA Appendix 10-B provides qualitative evaluations of the physical fate and transport of potential spills. The evaluation focuses on the Boundary Passage region where the probability of an accident or malfunction and associated spill to the marine environment is greater and the environmental consequence likely higher. The identified residual adverse environmental effects are unlikely to occur, because of the very low probability of the accident scenarios. MSA Section 10.4 discusses existing emergency response mechanisms and arrangements with Response Organisations within the spatial extent of marine shipping associated with the Project. MSA Section 10.4.4.1 specifically discusses the capabilities of WCMRC, the Response Organisation within the marine shipping area. WCMRC maintains a team of full-time and part-time employees, and trains on average 150 to 200 marine contractors and fishers in spill response each year. In addition to formal training, WCMRC conducts a program of equipment deployment and desktop exercises over the three-year certification cycle. WCMRC meets the equipment requirements for certified Response Organisations by maintaining the following: • A dedicated fleet of specialised oil spill response vessels, with a combined skimming capacity of 468 tonnes/hour; • More than 35,500 m of boom; • The capacity to clean-up 1,500 m of shoreline/day; • 8,100 tonnes of primary storage capacity; • Four sweep systems for on-water oil collection; • Incident Command Post kits containing all the materials and equipment required to establish and operate a complete Incident Command Post. Three of these kits are currently stored in trailers ready to be mobilised in Burnaby, Duncan, and Prince Rupert, B.C.; • A communications network that includes fixed and portable repeaters and a mobile communications vehicle for supporting remote operations; • Equipment or Office warehouses in Burnaby, Duncan, and Prince Rupert; and • Equipment caches in Haida Gwaii, Kitimat, Shearwater, Port Hardy, Campbell River, Sunshine Coast, Port Alberni, Nanaimo, Deltaport, Fraser River, and Esquimalt.	**MSA** 10.4 Mitigation Measures 10.4.4.1 Western Canada Marine Response Corporation Capabilities Appendix 10-B Marine Fate of Shipping Spill-type Accidents
HFN-24.14	Asked if there will be a requirement to heat recovered heavy bunker fuels in BC's temperate waters in order to facilitate its transfer from recovery vessels to transport barges then to land for disposal? If yes, then what is the current capability in industry and government with regards to having specialized equipment and trained personnel to heat and transfer highly viscous, weathered	13-Jan-2016, Letter to the CEA Agency from Cowichan Tribe on behalf of Cowichan Nation Alliance (CEAR Document #385)	**12-May-2016, Letter from the CEA Agency to Cowichan Nation Alliance (CEAR Document #398):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Additional information provided by the VFPA:** Transport Canada is the federal lead in regulating marine shipping in Canada, and other federal departments such as the Canadian Coast Guard, ECCC, DFO, and NRC have key roles that enhance marine safety and security, influence marine shipping activities, and help protect the marine environment. Transport Canada's Response to the Review Panel's April 4, 2018 Information Requests provides a whole-of-government overview of activities undertaken by the Government of Canada related to spill management.	**Transport Canada Response to the Review Panel's April 4, 2018 Information Requests (CEAR Document #1204)**

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	bunker oil? If present, how is this specialized equipment and operations evaluated by regulatory agencies?				
HFN-24.15	Asked if ambient-temperature water flushing and deluge systems commonly used for sediment-type shore treatment be singularly effective for weathered heavy fuel oil (bunker) stranded on shore? If not effective, will these water-systems require augmenting by heated water or shore-washing agents? For container-debris is there a systematic process to field assess shoreline impacts and then to identify mitigation measures (i.e., clean-up tactics) -such as modelled after the well-established Shoreline Clean-up Assessment Techniques (SCAT) for stranded oil? If yes, where is this guideline and who has been trained?	13-Jan-2016, Letter to the CEA Agency from Cowichan Tribe on behalf of Cowichan Nation Alliance (CEAR Document #385)	**12-May-2016, Letter from the CEA Agency to Cowichan Nation Alliance (CEAR Document #398):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Additional information provided by the VFPA:** Transport Canada is the federal lead in regulating marine shipping in Canada, and other federal departments such as the Canadian Coast Guard, ECCC, DFO, and NRC have key roles that enhance marine safety and security, influence marine shipping activities, and help protect the marine environment. Transport Canada's Response to the Review Panel's April 4, 2018 Information Requests provides a whole-of-government overview of activities undertaken by the Government of Canada related to spill management. **Addressed in response to IR11-12:** The VFPA's response to IR11-12, as requested by the Review Panel, will provide information concerning Geographic Response Plans (GRP) mapping for shorelines adjacent to and down-current from potential marine accidents and malfunctions associated with the proposed Project.	**Transport Canada Response to the Review Panel's April 4, 2018 Information Requests (CEAR Document #1204)** **Information Requests** Response to Sufficiency Information Request #12 (IR11-12)
HFN-24.16	As a container-debris generally results in a wide-range of types and amounts of HNS (e.g., hazardous materials/dangerous goods), asked who will provide this specialized services for both on-shore and on-water recovery, and who will manage this mitigation measure.	13-Jan-2016, Letter to the CEA Agency from Cowichan Tribe on behalf of Cowichan Nation Alliance (CEAR Document #385)	**12-May-2016, Letter from the CEA Agency to Cowichan Nation Alliance (CEAR Document #398):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Additional information provided by the VFPA:** Transport Canada is the federal lead in regulating marine shipping in Canada, and other federal departments such as the Canadian Coast Guard, ECCC, DFO, and NRC have key roles that enhance marine safety and security, influence marine shipping activities, and help protect the marine environment. Transport Canada's Response to the Review Panel's April 4, 2018 Information Requests provides a whole-of-government overview of activities undertaken by the Government of Canada related to spill management.	**Transport Canada Response to the Review Panel's April 4, 2018 Information Requests (CEAR Document #1204)**
HFN-24.17	Asked if there will there be an adequate number of willing shoreline workers to undertake a major clean-up of a wide-spread bunker oil spill and/or container debris field. Asked who is prepared to source, register, train, equip, supervise and pay for a workforce that could be in the order of several hundred to a thousand people. Asked if a regional or provincial survey been done to determine public availability, receptiveness, and composition	13-Jan-2016, Letter to the CEA Agency from Cowichan Tribe on behalf of Cowichan Nation Alliance (CEAR Document #385)	**12-May-2016, Letter from the CEA Agency to Cowichan Nation Alliance (CEAR Document #398):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Additional information provided by the VFPA:** Transport Canada is the federal lead in regulating marine shipping in Canada, and other federal departments such as the Canadian Coast Guard, ECCC, DFO, and NRC have key roles that enhance marine safety and security, influence marine shipping activities, and help protect the marine environment. Table 25: Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Lands and Resources for Traditional Purposes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-25.1	Concerned that the description of Cowichan Nation Alliance's members' historical village (Tl'uqtinus) and use of the area is inaccurate and not respectful. Stated that Cowichan Nation Alliance will review the information and identify information gaps. Provided a list of recommended revisions to EIS Section 32.0.	11-Dec-2014, Health & Aboriginal Rights Workshop – Cowichan Nation Alliance 15-Jan-2015, Letter from the Cowichan Nation Alliance	**11-Dec-2014, Workshop:** Stated that the information presented is an excerpt from the Kennedy (2014) report. Stated that the information could be made clearer. Requested additional clarification in writing from the Cowichan Nation Alliance. **25-Mar-2015, Letter from the VFPA to the Cowichan Nation Alliance:** Responded to the Cowichan Nation Alliance's requested revisions and demonstrated how they had been considered in the draft.	**Addressed in EIS Appendix 7.2-B (#178):** The VFPA provided draft summaries of past and current use and community information within EIS Section 32.0 for review by each Indigenous group and comments received were incorporated. EIS Section 32.1.1.7 presents Halalt First Nation's community profile information. EIS Section 32.2.4.5 presents information in relation to Tl'uqtinus. **Additional information provided by the VFPA:** On April 24, 2014, the VFPA and Cowichan Nation Alliance, which at that time consisted of Cowichan Tribes, Penelakut Tribes, Halalt First Nation, Stz'uminus First Nation, and Hwlitsum First Nation, signed a funding agreement to support a RBT2-specific use study. On July 11, 2014, the VFPA provided Halalt First Nation with a draft of the Community Profile Extract for the opportunity to review and provide comments. On October 16, 2014, the Cowichan Nation Alliance provided the VFPA with a report titled *Port Metro Vancouver: Roberts Bank Terminal 2: Cowichan Nation Alliance Current and Planned Use.* The VFPA met the Cowichan Nation Alliance on December 11, 2014 to provide information regarding the assessment of potential Project effects and cumulative effects on Aboriginal and Treaty Rights and Related Interests and Current Use of Lands and Resources for Traditional Purposes; and to identify any additional information to inform the assessment. The presentation and discussion included content regarding the proposed methodology for this assessment, the VFPA's understanding of existing conditions, based on the information provided by the Cowichan Nation Alliance, and preliminary conclusions of the assessment. On December 9, 2014, the VFPA provided the Halalt First Nation with an advance draft of the existing conditions section for "Potential or Established Aboriginal and Treaty Rights and Related Interests, and including current use of lands and resources for traditional purposes" of the EIS. The VFPA requested that Halalt First Nation confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final EIS. Comments on the draft sections were received from the Cowichan Nation Alliance on January 15, 2015. On March 25, 2015, the VFPA provided the Cowichan Nation Alliance with a table outlining all	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.1.1.7 Halalt First Nation 32.2.4.5 Cowichan Nation Alliance (Cowichan Tribes, Halalt First Nation, Penelakut Tribe, Stz'uminus First Nation)

				Cowichan Nation Alliance's comments on the draft sections, responses to each comment from the VFPA, and a description of subsequent changes made to the sections in the EIS.	
HFN-25.2	Stated that the VFPA is always stating that the Project will have no impacts and is not interested in mitigating effects.	11-Dec-2014, Health & Aboriginal Rights Workshop - Cowichan Nation Alliance	**11-Dec-2014, Workshop:** Stated that the VFPA is open to hearing suggestions for mitigation measures. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#5):** The EIS considers clear, enforceable measures that are technically and economically feasible that would mitigate any adverse effects of the Project, as required by the *EIS Guidelines*. The approach to considering mitigation measures for adverse effects is described in EIS Section 8.0. The proposed approach for mitigation to address Project-related effects to marine biophysical VCs is described in EIS Section 17.0. **Addressed in EIS Appendix 7.2-B (#197):** The VFPA has adopted the use of the following mitigation hierarchy to address Project effects: 1. Avoidance, such as through Project placement and design, and adherence to fisheries-sensitive windows; 2. Reduction, such as through the implementation of standard management practices and Environmental Management Plans; and 3. Offsetting, which involves the creation and enhancement of biophysical habitats that support species of the Roberts Bank ecosystem. Marine sub-components or representative species that undergo decreases in productivity will be offset to the extent feasible using onsite offsetting.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 8.0 Effects Assessment Methods 8.1.6 Mitigation Measures 17.0 Mitigation for Marine Biophysical Valued Components 17.1 Avoiding Potential Effects 17.2 Reducing Potential Effects 17.3.2 Offsetting Framework 17.5 Mitigation Summary for Potential Marine Biophysical Valued Component Productivity Losses
HFN-25.3	Concerned that the timing and funding offered by the VFPA to support a TUS study was inadequate. Stated that the VFPA was not provided with the whole breadth of information related to current use, given the timeline and funding provided.	11-Dec-2014, Health & Aboriginal Rights Workshop - Cowichan Nation Alliance	**11-Dec-2014, Workshop:** Explained that if the Current Use study had not been provided to the VFPA, the authors would have been relying on other sources of information, and there may not have been any content in the Current Use report. Stated that there is a lot of value to what is provided by Indigenous groups. If there are major concerns with the way information is being presented in terms of conclusions or content, the VFPA invites Cowichan Nation Alliance to comment.	**Addressed in EIS Appendix 7.2-B (#175):** The VFPA provided funding to the specified Indigenous groups to support consultation. Additionally, the VFPA provided funding to support completion of traditional use studies to these Indigenous groups and all groups provided a traditional use study. Further information, provided during fall 2014 consultation and in writing, has been incorporated into the EIS. The VFPA will continue to consult with appropriate Indigenous groups and there will be further opportunities to provide information through the CEA Agency process.	**EIS** 7.0 Engagement and Consultation Appendix 7.2-B Aboriginal Groups Interests and Issues Table 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes
HFN-25.4	Concerned that current use assessment precludes an assessment of future use. Stated that commercial harvesting, government regulations and legislations have made participation in commercial fishing challenging. Stated that Cowichan Nation Alliance plans to be fishing in the Project area in the future.	11-Dec-2014, Health & Aboriginal Rights Workshop – Cowichan Nation Alliance	**11-Dec-2014, Workshop:** Stated that the rights portion (EIS Section 32.0) of the assessment incorporates past use as well as interest in future use. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Section 32.0 Potential or Established Aboriginal and	**Addressed in EIS Appendix 7.2-B (#174):** The methods used to assess the potential effects of the Project on Current Use are consistent with existing federal guidance, including the *EIS Guidelines* issued by the CEA Agency. The rationale for the determination of negligible residual effects to Current Use is included in the EIS.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes

	Stated that the Cowichan Nation Alliance will supply information about how they see future use fitting into the assessment.		Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes.	Information sources used in EIS Section 32.0 are listed in EIS Section 32.2.3, with Project-specific studies appearing in EIS Section 32.2.3.1. A full list of references cited appears in EIS Section 32.4. **Addressed in response to IR10-26:** The VFPA's response to IR10-26, as requested by the Review Panel, discusses potential effects of the proposed Project on the reasonably foreseeable future Current Use activities that have been identified by Indigenous groups.	32.2 Current Use of Lands and Resources for Traditional Purposes 32.2.3 Information Sources 32.2.3.1 Project-Specific Studies. 32.3 Potential Adverse Impacts on Aboriginal and Treaty Rights and Related Interests Analysis 32.4 Existing Conditions ***Updated EIS Guidelines*** **Information Requests** Response to Sufficiency Information Request #26 (IR10-26)
HFN-25.5	Concerned that Draft Report of Current Use does not include cumulative effects.	09-Sep-2015, Letter to the VFPA from Cowichan Tribes on behalf of Cowichan Nation Alliance	**02-Oct-2015, Letter from the VFPA to Cowichan Tribes cc: Stz'uminus First Nation, Halalt First Nation, Penelakut Tribe:** *"The document shared by the VFPA on July 27, 2015 included a draft summary of [Cowichan First Nation's] current use in the marine shipping study area, and therefore did not include accidents and malfunctions or potential effects. These topics will be addressed in the Report to be submitted to the [CEA Agency] in the fall of 2015. For more information regarding factors considered in the assessment of effects of marine shipping associated with the Project, please see the Marine Shipping Overview document shared with [Cowichan First Nation] on May 26, 2015, or the updated EIS guidelines, issued by [the CEA Agency] on April 17, 2015."*	**Addressed in MSA Appendix 5-B (#23):** The approach to the cumulative effects assessment is provided in MSA Section 6.0. Each IC and VC assessment section considers cumulative changes and cumulative effects to which the Project contributes. This entails consideration of residual effects of routine marine shipping associated with the Project, if any such effects are predicted, in combination with effects of other projects and activities that have been or will be carried out. MSA Section 9.5 describes how Current Use activities have been affected by other projects and activities that have been carried out. As residual effects to Current Use as a result of marine shipping associated with the Project are not predicted, an assessment of future cumulative effects was not carried out.	**MSA** Appendix 5-B Aboriginal Issues and Interests 6.0 Effects Assessment Approach 6.7 Cumulative Effects Assessment 7.1 through 9.4 (All IC and VC assessments) 9.5 Current Use of Lands and Resources for Traditional Purposes, and Aboriginal and Treaty Rights
HFN-25.6	Concerned that the Draft Report of Current Use does not include effects from malfunctions or accidents.	09-Sep-2015, Letter to the VFPA from Cowichan Tribes on behalf of Cowichan Nation Alliance	**02-Oct-2015, Letter from the VFPA to Cowichan Tribes cc: Stz'uminus First Nation, Halalt First Nation, Penelakut Tribe:** *"The document shared by the VFPA on July 27, 2015 included a draft summary of [Cowichan First Nation's] current use in the marine shipping study area, and therefore did not include accidents and malfunctions or potential effects. These topics will be addressed in the Report to be submitted to the [CEA Agency] in the fall of 2015. For more information regarding factors considered in the assessment of effects of marine shipping associated with the Project, please see the Marine Shipping Overview document shared with [Cowichan First Nation] on May 26, 2015, or the updated EIS guidelines, issued by [the CEA Agency] on April 17, 2015."*	**Addressed in MSA Appendix 5-B (#87):** MSA Section 10.0 includes consideration of a collision scenario between a container ship and a smaller vessel such as a fishing vessel. Potential effects of such an event are assessed for VCs marine commercial use, outdoor recreation, human health, and Current Use. MSA Section 9.5 considers the risk of collision and perceptions of safety. MSA Section 10.0 considers plausible worst-case spill scenarios. **Addressed in MSA Section 10.0:** MSA Section 10.5.13 assesses the potential effects on Current Use and potential impacts on the ability to exercise asserted or established Aboriginal and treaty rights resulting from accidents or malfunctions arising from marine shipping associated with the Project. The assessment for the plausible worst-case spill scenario concluded that, with the exception of	**MSA** Appendix 5-B Aboriginal Issues and Interests 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4 Existing Conditions 9.5.5.1 Negligible Effects of Vessel Transit on Current Use 9.5.5.2 Potential Effects of Vessel Transit on Current Use 10.0 Potential Accidents or Malfunctions 10.5.9 Human Health 10.5.10 Marine Commercial Use 10.5.11 Outdoor Recreation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				human health, measurable residual adverse effects are predicted for all VCs. In all cases, the identified residual adverse effects of a spill are unlikely to occur, because of the very low probability of an accident or malfunction that could result in a spill. With the exceptions of residual effects on marine mammals (southern resident killer whale), marine commercial use (guided sport fishing and marine-based tourism sub-components), outdoor recreation, archaeological and heritage resources, and Current Use, adverse residual effects were considered not significant. A serious residual adverse impact on the ability of Indigenous groups to exercise Aboriginal and treaty rights in areas overlapping or near the hypothetical spill area would be expected in the event of such a spill. The plausible worst-case collision scenario has the potential to result in measurable residual adverse effects on human health, marine commercial use, outdoor recreation, Current Use, and asserted or established Aboriginal and treaty rights. In all cases, the identified residual adverse effects of a collision are unlikely to occur, because of the very low probability of collision. The assessment concluded that residual adverse effects are expected to be not significant for marine commercial use and outdoor recreation, but significant for human health. For Current Use, the residual effect could range from not significant to significant, depending on the capacity of the affected Indigenous group to continue to undertake Current Use. In the event of a collision between a vessel engaged in traditional use activities and a container ship, a minor to serious adverse residual impact on the ability of the affected Indigenous group to exercise Aboriginal and treaty rights associated with those activities would be expected. The identified residual adverse effects of a collision are unlikely to occur, because of the very low probability of collision.	10.5.13 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights
HFN-25.7	Concerned that Draft Report of Current Use emphasizes Cowichan activities in the international shipping lanes only.	09-Sep-2015, Letter to the VFPA from Cowichan Tribes on behalf of Cowichan Nation Alliance	**02-Oct-2015, Letter from the VFPA to Cowichan Tribes cc: Stz'uminus First Nation, Halalt First Nation, Penelakut Tribe:** *"Your letter additionally includes an expression of concern related to the VFPA's definition of the [marine shipping area]. The [marine shipping area] is defined to include activities that take place between the 12 nautical mile limit of Canada's territorial sea to the limit of the VFPA's care and control. The [marine shipping area] is defined more broadly than the international shipping lane, and is intended to include areas that could potentially be impacted by marine shipping associated with RBT2.*	**Addressed in MSA Section 9.5:** The spatial boundaries for the assessment are summarised in MSA Table 9.5-1 and shown in MSA Figure 9.5-1 through MSA Figure 9.5-11. The LAA for each Indigenous group was selected to conservatively define the area within which Project-associated shipping has the potential to affect the Current Use activities of that Indigenous group. The RAA for each Indigenous group was established to provide a regional context for that Indigenous group for the assessment of effects from Project-associated shipping.	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights

Halalt First Nation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			It includes the trans-boundary inland marine waters in this area, as well as numerous islands and islets belonging to either the Gulf Islands or San Juan Islands."		
HFN-25.8	Stated that the conclusions of the VFPA's experts that the impacts on the marine environment will be either non-existent or immaterial is at odds with the fact that the terminal will displace at least 117 hectares of marine area that was previously a useable fishing/marine resource. Stated that the impact is always determined to be negligible, and presentations do not acknowledge the impact that will occur.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Shared preliminary results from the environmental assessment, provided information about the proposed mitigation of Project effects, and sought input from members of the Cowichan Nation Alliance.	**Addressed in EIS Section 8.0:** The methods used to assess the potential effects of the Project, including mitigation measures, residual effects, and cumulative effects, are described in EIS Section 8.0. The environmental assessment for the Project was developed to meet the requirements specified in the *EIS Guidelines* and consistent with existing guidance documents, including the Operational Policy Statement Assessing Cumulative Environmental Effects Under the *Canadian Environmental Assessment Act, 2012* and Determining Whether a Project is Likely to Cause Significant Adverse Environmental Effects, the Cumulative Effects Assessment Practitioners' Guide, and the Guideline for the Selection of Valued Components and Assessment of Potential Effects, among others.	**EIS** 8.0 Effects Assessment Methods 8.1 Environmental Assessment Methods 8.1.6 Mitigation Measures 8.1.7 Characterisation of Residual effects and Context 8.1.8 Determination of Significance of Residual Adverse Effects 8.1.9 Cumulative Effects Assessment
HFN-25.9	Requested an explanation as to why potential adverse effects on crab harvesting is deemed negligible. Suggested Halalt receive accommodation to compensate the loss of the crab harvesting area. Stated that crab harvesting occurs in the direct vicinity of Roberts Bank, and the inability to harvest due to Project-related changes in access is an issue.	15-Jun-2015, Letter to the CEA Agency from Halalt First Nation (CEAR Document #253)	**13-Oct-2015, Letter from the CEA Agency to Halalt First Nation (CEAR Document #312):** *"The Agency did not request additional information for this item since there is already some information provided in the EIS. The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in EIS Section 21.0:** The Project is expected to result in a residual effect of changes to seafood harvesting area, harvest, and revenue. The residual effect is determined to be not significant, as Dungeness crab are known to move substantial distances to baited traps, and harvest activity can be moved to another open area. Other planned or reasonably foreseeable projects and activities would also displace crab harvesting, and this effect would combine with that of the Project to result in an incremental cumulative effect on commercial crab fishing. This adverse incremental cumulative effect is determined to be not significant. Measures proposed to reduce potential effects include: • Working with DFO to engage with commercial crab harvesters to identify and implement feasible mitigation measures; and • Implementation of construction and operation environmental management plans related to construction-phase communication, construction monitoring and crab salvages. **Addressed in response to IR7-34:** As noted in the VFPA's response to IR7-34, mitigation measures currently undergoing consultation and evaluation include: • Crab Management Area re-selection opportunity;	**EIS** 21.0 Marine Commercial Use **Information Requests** Response to Sufficiency Information Request #34 (IR7-34 of CEAR Document #1172)

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				• Adjustment of proposed navigational closure area expansion with consideration of commercial harvesting during Project operations; • Adjustment of the proposed navigational closure area expansion with consideration of Indigenous harvesting during operations; • Navigational Limited Access Fishing Area (multi-user system during operations); and • Financial compensation. The evaluation of additional mitigation measures is being informed by consultation with commercial crab harvesters (including the Area I Crab Fisherman Association), Indigenous groups, DFO, and may include other relevant regulatory agencies regarding their specific interests and concerns. Evaluation of technical and economic feasibility of the suggested measures is currently underway to inform this consultation. Technical feasibility considers the following: • Availability, applicability, and effectiveness of the specific technology; • Fit with local site characteristics, Project design, construction schedule; • Applicable regulatory frameworks; and • Whether implementation is within the VFPA's jurisdiction. Economic feasibility considers the following: • Scope of the Project design (Project re-design not required); • Construction schedule (Project construction delay not required); and Total cost of implementation of each measure during construction and/or operation.	
HFN-25.10	Stated that Halalt has demonstrated Aboriginal rights immediately at and surrounding the RBT2 project site. The project area site and the surrounding area fall within Halalt's traditional territory in its own right and in conjunction with other First Nation members of the Cowichan Nation Alliance with whom Halalt is aligned.	15-Jun-2015, Letter to the CEA Agency from Halalt First Nation (CEAR Document #253)	**13-Oct-2015, Letter from the CEA Agency to Halalt First Nation (CEAR Document #312):** *"The Agency has requested additional information on this item in its letter of July 31, 2015 to [the VFPA] (page 1, #2)."*	**Addressed in EIS Section 32.2.4.5:** The collective core and marine territories asserted by the Hul'qumi'num Treaty Group are identified in EIS Figure 32-5. The asserted core territory of the Hul'qumi'num Treaty Group fully overlaps the LAAs for the marine vegetation, marine invertebrates, marine fish, and coastal birds VCs, and the marine mammals LAA portion north of the international border. As noted in EIS Section 32.2.4.5, based on information reviewed or received, it is the VFPA's understanding that Cowichan Nation Alliance has identified the following asserted rights and related interests in relation to the Project area: • Harvesting marine resources (marine fish, marine invertebrates, marine mammals, and marine vegetation); • Harvesting coastal birds and ducks; • Use of marine travelways for FSC purposes; and	**EIS** 32.2.4.5 Cowichan Nation Alliance (Cowichan Tribes, Halalt First Nation, Penelakut Tribe, Stz'uminus First Nation) **Information Requests** Response to Information Request #2 (IR-7.31.15-02 of CEAR Document #314)

Halalt First Nation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				• Traditional lands and waters in area of Tl'uqtinus (on the South Arm of the Fraser River). **Addressed in response to IR-7.31.15-02:** The VFPA's response to IR-7.31.15-02 confirms that the Indigenous traditional territories presented in the EIS remain appropriate for the purpose of the environmental assessment.	
HFN-25.11	Stated that Halalt is very much concerned about cumulative impacts and how the RBT2 project will affect its ability to exercise its Aboriginal rights. For example, a quick review of ethnographic evidence will highlight Halalt's traditional rights in the Roberts Bank area. The EIS does little to address Halalt concerns.	15-Jun-2015, Letter to the CEA Agency from Halalt First Nation (CEAR Document #253)	**13-Oct-2015, Letter from the CEA Agency to Halalt First Nation (CEAR Document #312):** *"This item was not required by the EIS Guidelines. Aboriginal groups are encouraged to describe to the Panel how past projects and potentially the RBT2 project have/will cumulatively impact First Nation's future ability to exercise asserted or established Aboriginal or Treaty rights.* *The Agency has requested additional information on cumulative effects which are required by the EIS Guidelines in its letter of July 31, 2015 to [the VFPA] (page 8, #13). This information should inform the cumulative environmental effects of the RBT2 project and may assist in understanding potential cumulative impacts on First Nation's future ability to exercise asserted or established Aboriginal or Treaty rights."*	**Addressed in response to AIR-12.04.15-13:** In the EIS, the existing conditions (baseline) reflect the conditions of the environment as modified by past development. Further discussion of how the VFPA considered the effects of past, present, and future projects is provided in AIR-12.04.15-13, including in that response's schedules focused on applicable VCs.	**Information Requests** Response to Additional Information Request #13 (AIR-12.04.15-13 of CEAR Document #388)

Halalt First Nation

Table 26: Project Overview and Description

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-26.1	Requested to know how much of Roberts Bank is taken up by the Project.	05-Mar-2013, Meeting with Cowichan Nation Alliance	**05-Mar-2013, Meeting:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#1):** The engineering design of the Project components, as well as construction phase activities are described in detail in EIS Section 4.0. EIS Section 5.0 provides a summary of alternative design options that were considered, and the rationale for the selected option. The proposed Project consists of three main components: 1. A new three-berth marine container terminal; 2. A widened causeway to accommodate additional road and rail infrastructure; and 3. An expanded tug basin to accommodate a second tug operations contractor. The marine terminal would be located immediately west of the existing Roberts Bank terminals, approximately 5.5 km from the east end of the causeway. The terminal would be rectangular in shape, approximately 1,700 m long and 700 m wide, and would support moorage of three container ships on the south side, container storage in the centre, and rail intermodal yards on the north side. The total usable above-water area of the marine terminal would be 108 ha. The Roberts Bank causeway would be widened to link existing road and rail networks to the marine terminal and to accommodate additional road and rail infrastructure. Widening would range from 0 m to approximately 140 m at the widest point. **Addressed in Project Construction Update:** As requested by the RBT2 Review Panel, the VFPA submitted the Project Construction Update (PCU) on June 12, 2018. The report updates EIS Table 4-1, presenting minor changes to the Project footprint. **Additional information provided by the VFPA:** **07-Jan-2014, Letter from the VFPA to Penelakut Tribe:** The total marine footprint of the terminal will be approximately 117 ha. The orientation of the proposed terminal has been designed to facilitate the berthing of container ships, and to minimise disturbance to marine physical components (e.g., water and sediment) processes. The environmental assessment will include an analysis of potential effects on water areas.	**EIS** 4.0 Project Description 4.4.1 Construction-phase Activities 4.2.2 Project Component Details, Widened Causeway 4.2.3 Expanded Tug Basin 5.0 Alternative Means of Carrying out the Project Appendix 7.2-B Aboriginal Groups Interests and Issues Table **Project Construction Update (PCU; CEAR Document #1210)**

Table 27: Project Benefits

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-27.1	Asked what is being proposed for accommodation. Recalled that accommodation for the Deltaport Third Berth (DP3) Project was extended to Musqueam and Tsawwassen, with other nations receiving participation funding only. Interested in revenue sharing between Cowichan Nation Alliance and the VFPA. Asked about the revenue from the Project. Interested in discussions around a Mutual Benefits Agreement.	01-Nov-2013, Meeting with Cowichan Nation Alliance 18-Sep-2014, Meeting with Halalt First Nation 11-Dec-2014, Health & Aboriginal Rights Workshop – Cowichan Nation Alliance 16-Jan-2015, Letter to the VFPA from Cowichan Tribes on behalf of Cowichan Nation Alliance 15-Jun-2015, Letter to the CEA Agency from Halalt First Nation (CEAR Document #253) 10-Nov-2015, Meeting with Cowichan Nation Alliance 18-Apr-2017, Chief & Council Meeting - Cowichan Nation Alliance	**01-Nov-2013, Meeting:** Stated that the VFPA will provide the Cowichan Nation Alliance with more information regarding economic opportunities at a later date. **18-Sep-2014, Meeting:** Explained that information will be provided to Halalt First Nation and that further discussions will need to occur regarding opportunities. **11-Dec-2014, Workshop:** Noted interest in joint venture partnership and revenue sharing. Stated that this will be an ongoing discussion. **10-Nov-2015, Meeting:** Recorded comment for consideration by Project team. **18-Apr-2017, Meeting:** Discussed the development of a mutual benefits agreement with Cowichan Nation Alliance and asked for input on what could be included – business, contracting, employment, etc. **16-Jun-2017, Letter from the VFPA to Halalt First Nation:** "Further to discussions at our meeting on April 18, 2017, the VFPA is interested in initiating discussions with Halalt First Nation regarding potential legacy benefits from the Project, Legacy benefits are intended to benefit Aboriginal groups if the Project proceeds, and would be over and above the economic benefits resulting from the Project. Examples of types of legacy benefits are: restoring fisheries, training, funding cultural initiatives, enhancing environmentally sensitive areas or revitalizing aquaculture. As we discussed with you, it is our intent to develop this concept into a plan that reflect the interests, objectives and priorities of Aboriginal groups involved in the RBT2 Project. We welcome input regarding potential legacy benefits for Aboriginal groups that could be provided as part of the Project. With that in mind, we request a meeting with Halalt First Nation to hear about your community's priorities in relation to this funding. In addition to general legacy benefits, the VFPA is interested in entering into direct discussions with Halalt First Nation regarding a potential mutual benefits agreement ("MBA') for the Project. An MBA between the VFPA and Halalt First Nation could provide a number of opportunities allocated directly to Halalt First Nation in exchange for a letter of support for the Project that confirms Halalt First Nation has been adequately consulted and accommodated. We would like to hear whether negotiating an MBA is of interest to Halalt First Nation."	**Addressed in EIS Appendix 7.2-B (#112):** Opportunities for training and employment opportunities related to the Project are described in EIS Section 32.3.3. As accommodation for any potential effects to specified Indigenous groups' ability to exercise their Aboriginal rights, the VFPA proposes to assist these Indigenous groups in accessing opportunities resulting from the Project. In addition to making contracting opportunities available to specified Indigenous groups, the VFPA will ensure that construction employment opportunities are also made available. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs. Through ongoing engagement, the VFPA will seek input from these Indigenous communities with respect to plans to ensure access to Project-related benefits. The VFPA has consulted and will continue to engage with Indigenous groups regarding opportunities to benefit economically and socially from the Project. **Additional information provided by the VFPA:** Stz'uminus, Halalt First Nation, and Cowichan Tribes have agreed to negotiate a Mutual Benefits Agreement collectively. Penelakut Tribe is negotiating with the VFPA separately. Discussions include opportunities for skills, training, employment and contracting. Discussions regarding Legacy Benefits are also ongoing.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table

Halalt First Nation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-27.2	Concerned about skills training and the opportunities available. Interested in the skills and training requirements referenced. Interested in procurement, training, employment, and other economic opportunities early, to ensure time for community preparation to respond.	01-Nov-2013, Meeting with Cowichan Nation Alliance 17-Jun-2014, Technical Working Group Meeting #4 03-Jul-2014, Aboriginal Groups Valued Components Workshop #2 28-Sep-2014, Meeting with Halalt First Nation 11-Dec-2014, Health & Aboriginal Rights Workshop – Cowichan Nation Alliance 10-Nov-2015, Meeting with Cowichan Nation Alliance 15-Jun-2015, Letter to the CEA Agency from Halalt First Nation (CEAR Document #253) 18-Apr-2017, Chief & Council Meeting - Cowichan Nation Alliance	**01-Nov-2013, Meeting:** Referred to the InterVISTAS Study and how there is information on the jobs contained within that report. Stated that all jobs will not be unionised and that the VFPA cannot even say there will be a union at the RBT2 terminal. That is not a VFPA decision. These are early days and we are about 7 to 10 years out from being finished. There is an opportunity to identify jobs and skills needed to build it. Talked about support businesses, direct and indirect jobs such as: trucking, logistics centres, and rail business. There is an opportunity to identify jobs and to look at long-term opportunities around employment. Committed to prepare a written response regarding job opportunities, skills, and training. **17-Jun-2014, Workshop:** Stated that skills and training requirements will be considered under the proposed labour market VC, and the VFPA is interested in discussing this in more detail. A discussion is needed on the importance of flagging training relevant to upcoming Project-related jobs. The VFPA is aware of the importance of giving communities time to prepare for employment opportunities. **03-Jul-2014, Workshop:** Stated that the VFPA is trying to access the historical data, in relation to Indigenous versus non-Indigenous employment related to port activities. Stated that the VFPA does have data on what we call labour force characteristics (age, educational level, skill training level, in what particular industries the Indigenous workforce is working). This helps us profile the Indigenous population generally within our study area, which is the area that we are concerned about. Stated that ultimately the goal is to be able to present what we call benefit enhancement recommendations, that is linked integrally to the labour market strategy that will be put forward through the Project, that not only talks quantitatively about how many jobs, but also how, and what sort of target initiatives could be put forward to enable certain segments of the population to take advantage. **18-Sep-2014, Meeting:** Responded that the Project team has heard from First Nation communities that employment, training and contracting opportunities are of interest and importance. Stated that the VFPA also understands that communities require time to plan for opportunities and that information will be made available to Halalt First Nation that will assist in being prepared for potential opportunities. **11-Dec-2014, Workshop:** Asked for information on the benefits and opportunities the Cowichan Nation Alliance may be interested and noted that discussions are just beginning.	**Addressed in EIS Appendix 7.2-B (#215):** During a five-and-a-half-year construction period, the Project would generate significant employment benefits for B.C. Project construction would generate a total of 12,719 person-years of direct, indirect, and induced employment of B.C. workers, and approximately $1 billion in wages: • 4,150 person-years of direct employment, with wages of $494 million; • 6,264 person-years of indirect employment, with wages of $374 million; and • 2,305 person-years of induced employment, with wages of $129 million. Of the Project's direct spending on materials, goods, and services for construction, approximately $862 million, or an average of $157 million per year, would be spent on materials, goods, and services in B.C. An additional $482 million would be spent on production inputs to make or provide the direct materials, goods, and services. The total gross revenues for businesses in B.C. supplying materials, goods, and services for Project construction is estimated as $1.3 billion, with $837 million of this revenue accruing to businesses in Metro Vancouver. During the operation phase, Project activities on the marine terminal, widened causeway, and expanded tug basin would generate an annual total of 1,553 person-years of direct, indirect, and induced employment, and total wages of approximately $185 million: • 928 person-years of direct employment connected to terminal operations, with wages of approximately $153 million; • 625 person-years of indirect and induced employment to support terminal operations, with wages of approximately $32 million. During the operation phase, the annual average goods and services revenues for B.C. due to terminal operations spending are estimated at $23.3 million with an additional $10.0 million in goods and services revenues for upstream supply industries. The total gross revenues for businesses supplying B.C. materials, goods, and services for terminal operations are estimated as $33.3 million annually. Approximately $31 million of this revenue would accrue to businesses in Metro Vancouver. The VFPA proposes to assist Semiahmoo First Nation, Tsleil-Waututh Nation, Stz'uminus First Nation, Cowichan Tribes, Halalt First Nation, Lake Cowichan First Nation, Lyackson First Nation, Penelakut Tribes, Hwlitsum, and Métis Nation British Columbia in accessing potential economic opportunities resulting from the Project, including contracting opportunities as well as construction employment opportunities. 			10-Nov-2015, Meeting: Recorded comment for consideration by Project team. **12-May-2016, Letter from the VFPA to Halalt First Nation:** Enclosed an Information Sheet specific to Employment. Stated that the VFPA would like to meet to discuss employment opportunities related to the Project. **18-Apr-2017, Meeting:** Recorded comment for consideration by the Project team.	support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs. To support the development and implementation of plans to facilitate access to such Project-related benefits, the VFPA will continue engagement, initiated in December 2014. Opportunities for Indigenous training and employment opportunities related to the Project are described in EIS Section 32.3.3. **Addressed in EIS Appendix 7.2-B (#112):** As accommodation for any potential effects to specified Indigenous groups' ability to exercise their Aboriginal rights, the VFPA proposes to assist these Indigenous groups in accessing opportunities resulting from the Project. In addition to making contracting opportunities available to specified Indigenous groups, the VFPA will ensure that construction employment opportunities are also made available. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs. Through ongoing engagement, the VFPA will seek input from these Indigenous communities with respect to plans to ensure access to Project-related benefits. **Additional information provided by the VFPA:** Stz'uminus, Halalt First Nation, and Cowichan Tribes have agreed to negotiate a Mutual Benefits Agreement collectively. Penelakut Tribe is negotiating with the VFPA separately. Discussions include opportunities for skills, training, employment and contracting.	

Halalt First Nation

Table 28: Surficial Geology and Marine Sediment – Intermediate Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-28.1	Asked about the effects of truck traffic on sediment along the causeway with respect to contaminants.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#202):** There is not anticipated to be a Project interaction between air emissions from truck traffic on the causeway, and uptake of contaminants in soils, plants, or species relying on soils and plants. Rationale for this conclusion is included in EIS Appendix 27-A.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 27.0 Human Health Appendix 27-A Air Quality HHRA Technical Report
HFN-28.2	Asked about potential heavy metals, PCBs, hydrocarbons, contaminants, and pollutants in sediment along the causeway and around the Project area. Asked which contaminants the sediment samples tested for and for the baseline results. Asked if the conclusions of the assessment are based on the averages of those samples. Concerned about the potential effects on clams and other shellfish. The effect of current baseline levels of heavy metals, contaminants, and pollutants in sediment along the causeway on clams and other shellfish. Stated that the baseline levels are well presented in the EIS; however, the effects on clams and other shellfish are unclear.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1 15-Jun-2015, Letter to the Canadian Environmental Assessment Agency (CEA Agency) from Halalt First Nation (CEAR Document #253)	**22-Oct-2014, Workshop:** There were approximately 57 different metals the samples were tested for, and stated that the full list will be in noted in the EIS. Slide 10 says the assessment is focused on areas where there will be disturbance. The results have not been rolled into an average. The EIS will include a detailed table that shows results for each of the data points. There were no PCBs or hydrocarbons present in the areas that were surface sampled. Sampling at the actual terminal site was of a higher intensity because that is where the greatest disturbance is expected, because of disposal at sea (DAS) and dredging activities. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#55):** As described in the EIS, the physical and chemical characteristics of sediments that will be affected by construction activities, including sediments that will be re-suspended during dredging activities, were investigated and results were compared to recommended quality guidelines and regulatory criteria. Baseline levels of heavy metals and other contaminants along the causeway are included in EIS Section 9.6. Specific listings of studied contaminants—and how the analyses were completed—are available in EIS Appendix 9.6-A. Overall, sediment quality within the study area is within the range of levels expected in an estuarine environment and without local contamination sources. Outcomes from the marine water quality assessment regarding total suspended sediment concentrations associated with dredging and dumping activities informed the assessment of marine vegetation, marine invertebrates, marine fish, marine mammals, coastal birds, ongoing productivity of commercial, recreational, and Aboriginal fisheries, and outdoor recreation. The shellfish consumption human health risk assessment in EIS Appendix 27-C addresses this scenario by examining tissue contaminant concentrations in existing areas of Roberts Bank with higher concentrations of coal dust contaminants. Any construction-related sediment re-suspension will result in sediment contaminant concentrations that are lower than the assessed existing conditions since (i) once re-suspended, the re-settled sediments will be a mixture of the historical deposits and new sediment contributions from Fraser River outflows; and (ii) there is no plausible mechanism for the geochemical focusing of the contaminants of potential concern as a result of the re-suspension scenario. **Addressed in EIS Section 12.6.2.1:** While contaminants are present at Roberts Bank, they are closely associated with fine sediment and have therefore accumulated in locations outside those that will be disturbed by Project activities, such as the upper intertidal zone north of the causeway. No appreciable sediment contamination was observed in Project areas. Because sediments that will be re-suspended and deposited as a result of construction phase activities are not contaminated, changes in contaminant concentrations bioavailable to the food chain are not anticipated. Overall, contaminant re-suspension is not considered to affect marine invertebrate productivity because: (i) there are no Project-	**EIS** 9.6 Physical Setting, Surficial Geology and Marine Sediment Appendix 9.6-A Sediment and Water Quality Characterization Studies 12.5.2 Bivalve Shellfish 12.5.3 Dungeness Crabs 12.6.2.1 Changes in Water Quality Appendix 27-C Human Health Risk Assessment

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				related inputs of contaminants in the LAA; (ii) no appreciable sediment contamination was observed in Project areas; and (iii) where contaminants are present, concentrations are either below applicable thresholds in sediments or below consumption thresholds in bivalve shellfish and Dungeness crab tissue based on rigorous human health risk assessment (EIS Sections 12.5.2.5 and 12.5.3.5). Project-related contamination is therefore unlikely to occur.	
HFN-28.3	Concerned with the potential effects of disposal at sea on the sea bed.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Explained that the DAS would occur at 3 locations along the -45 m contour line directly off the berth face of the planned terminal. Stated that the VFPA is working on that matter and it will be included in the EIS. **01-Apr-2015, Letter from the VFPA to Halalt First Nation:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#55):** Dredging and DAS-related activities are described in the EIS and considered in the assessment of potential effects on marine physical and biophysical components. As described in the EIS, the physical and chemical characteristics of sediments that will be affected by construction activities, including sediments that will be re-suspended during dredging activities, were investigated and results were compared to recommended quality guidelines and regulatory criteria. DAS activities will occur subject to Environment Canada's DAS permit requirements under the *Canadian Environmental Protection Act, 1999*. Outcomes from the marine water quality assessment regarding total suspended sediment concentrations associated with dredging and dumping activities informed the assessment of marine vegetation, marine invertebrates, marine fish, marine mammals, coastal birds, ongoing productivity of commercial, recreational, and Aboriginal fisheries, and outdoor recreation. See EIS Section 9.6.8 and EIS Appendix 9.6-C for more information. **Addressed in Information Request Package 3 Preamble in Support of Responses to IR3-25 to IR3-40:** As noted in in Information Request Package 3 Preamble in Support of Responses to IR3-25 to IR3-40, based on information provided by ECCC (CEAR Document #564), discharge of supernatant containing unsettled fines from the containment dykes during filling is not expected to be subject to DAS permitting. **Addressed in PCU:** As requested by the Review Panel, the VFPA submitted the PCU on June 12, 2018, providing: • Detailed revised Project description, including a revised construction schedule; • Revised Project interaction matrix; • Preliminary details pertaining to the management and timing of dredging activities and the discharge of sediment-laden water; and • Revised assessment of environmental effects as required by the Project modifications. PCU Sections 1.0 and 2.0 describe the changes to the EIS, including updates to specific construction activities, the construction schedule, and relevant Project Description figures and appendices. In PCU Section 3.0, changes or effects resulting from the construction updates on ICs and VCs are described. Overall,	**EIS** 4.0 Project Description 4.4.1 Project Activities, Construction Phase Activities Table 4-5 Source and Quantities of Material Requiring Disposal at Sea Figure 4-21 Intermediate Transfer Pit and Disposal at Sea Candidate Locations Appendix 7.2-B Aboriginal Groups Interests and Issues Table 8.0 Effects Assessment Methods Table 8-1 Intermediate Component and Valued Component Linkages 9.0 Physical Setting 9.6 Physical Setting, Surficial Geology and Marine Sediment 9.6.5 Methods 9.6.6 Surficial Geology and Marine Sediment, Existing Conditions 9.6.8 Future Conditions with the Project Appendix 9.6-C Roberts Bank Terminal 2 Technical Report, Dredging Studies – Dispersion Modelling 9.7 Physical Setting, Marine Water Quality **Information Requests** Information Request Package 3 Preamble in Support of Responses to IR3-25 to IR3-40 – General and Disposal at Sea-related Project Construction Update (CEAR Document #928) **PCU (CEAR Document #1210)**

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				these changes to the environmental assessment resulting from construction updates can generally be summarised as follows: • Reductions in potential adverse changes or effects on ICs, biophysical VCs, social VCs, and Current Use; and • Increases in positive interactions with socio-economic VCs. These beneficial changes to ICs and VCs occur at the level of interactions or potential effects, and in most cases are slight changes, and thus do not affect the overall conclusions made in the EIS, including proposed mitigation, residual effect characterisations, significance determinations, or cumulative effects, as applicable, with one exception. The only component predicted to have a change to residual effects is land and water use, with a reduction of a residual effect on access to Tsawwassen First Nation community lease lands from a measurable non-significant residual effect to a negligible residual effect, due to elimination of the ITP and associated activities.	

Table 29: Underwater Noise – Intermediate Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
HFN-29.1	Asked if above-ground noise is transmitted under water.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Above ground noise is not anticipated to propagate into the water to result in behavioural effects to marine mammals and was determined to be a negligible effect.		
HFN-29.2	Stated that different species experience different perceptions of noise. Asked how much is known about the different ways species perceive noise. Asked about the effect of impulsive noise events on fish and other marine species.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1 12-Nov-2014 Cowichan Nation Alliance EIS Workshop #2	**22-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. **12-Nov-2014, Workshop:** This topic was discussed during a presentation on underwater noise and vibration. The presentation summarised: • Human generated underwater noise can affect fish and marine mammals (assessed separately as VCs) with representative species for each VC that may experience noise differently; • The VFPA conducted extensive state-of-art field and modeling studies for RBT2, using most up to date science on how different species hear and respond to underwater noise, conducted new studies on what levels of underwater noise may affect southern resident killer whales; • Existing underwater noise conditions relatively high, primarily due to commercial vessel traffic, including ferry traffic; • RBT2 will produce underwater noise (construction and operations); no impulsive noise is planned during construction (i.e., impact piling not anticipated, only vibratory piling); and • Preliminary results of studies indicate RBT2 noise levels will be minor to moderate.	**Addressed in EIS Appendix 7.2-B (#61):** The scope and methods of the underwater noise study are summarised in the EIS section, and detailed in the supporting appendix. Underwater noise considers the level of underwater sound in the marine environment. An assessment was undertaken to determine potential changes in underwater noise as a result of the Project and focused on construction and operation activities that would produce underwater noise. Modelling was undertaken to predict future underwater noise as a result of construction activities, such as dredging, pile driving, vibro-densification, and operation activities, such as movements of container ships and tug boats associated with terminal approach and departure, and berthing and unberthing. The assessment concludes that: • Underwater noise levels during construction are predicted to be comparable on average to existing levels measured at Roberts Bank, with the exception of some periods when certain activities, such as dredging, pile-driving, vibro-densification, or construction support vessel movement, would occur. • Overall, average underwater noise from Project construction and operation activities is expected to be comparable to average existing levels of underwater noise due to existing high levels, but will at times exceed existing conditions. Underwater noise related to conservative levels of Project commercial vessel movements is predicted to increase over existing underwater noise levels for only approximately 3% of a year for vessel berthing and unberthing, and for approximately 2% of a year for vessel approach and departure. • Future cumulative increases in commercial vessel traffic in the region are expected to make a relatively small incremental contribution to overall underwater noise levels. This prediction reflects the existing high levels of vessel traffic within the study area and the already-dominant contribution of commercial vessel traffic noise to the acoustic environment. The results of the underwater noise assessment were considered in the assessments of marine fish, marine mammals, and coastal birds. An interaction between Project-related underwater noise and marine invertebrates is not anticipated, and therefore was not assessed.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.8 Underwater Noise 9.8.2 Assessment of Purpose and Approach 9.8.6 Underwater Noise, Methods Appendix 9.8-A Construction and Terminal Activity Underwater Noise Modelling Study Technical Report Appendix 9.8-B Regional Commercial Vessel Traffic Underwater Noise Modelling Study Technical Report 13.0 Marine Fish 13.6 Future Conditions with the Project 14.0 Marine Mammals 14.6 Future Conditions with the Project 15.0 Coastal Birds 15.7 Future Conditions with the Project
HFN-29.3	Requested more information on the types of mitigations implemented for underwater noise.	03-Jul-2014, Aboriginal Groups Valued Components Workshop #2	**03-Jul-2014, Workshop:** Recorded comment for consideration by the Project team. **12-Nov-2014, Workshop:** This topic was discussed during a presentation on underwater noise and vibration. The presentation summarised mitigation	**Addressed in EIS Section 33.3.7:** The Underwater Noise Management Plan will describe measures to manage underwater noise and over-pressure waves generated during pile driving and other construction activities as necessary to avoid or reduce potential effects on marine mammals, diving coastal birds, and aquatic life. Key components of the plan will	**EIS** 33.3.7 Underwater Noise Management Plan

Halalt First Nation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			measures to address potential effects of underwater noise during construction. • Project placement and design; • Best management practices and standards; • Industry practices; • Equipment maintenance and noise reduction; • Timing or seasonal windows; • Marine mammal observers and hydrophone; • Monitoring of zones of potential injury or disturbance; and • Onsite juvenile Chinook habitat restoration.	include use of underwater noise reduction and dampening methods and technologies. The plan will incorporate measures described in Best Management Practices for Pile Driving and Related Operations, prepared by the B.C. Marine and Pile Driving Contractors Association and DFO (2003). Compliance monitoring parameters for underwater noise will be addressed as part of the Construction Compliance Monitoring Plan.	

APPENDIX IR10-01-C8

LAKE COWICHAN FIRST NATION: ISSUES, VIEWS, AND CONCERNS RELATED TO THE PROPOSED PROJECT AND MARINE SHIPPING ASSOCIATED WITH THE PROJECT

Table 1: Economic Development – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LCFN-1.1	Concerned that activities at the Project site interfere with the Nation's trade and inter-community relation activities.	15-Nov-2017, Letter to Panel (CEAR Document #1101)	The Vancouver Fraser Port Authority (VFPA) has reviewed this letter and provides the following information.	**Addressed in Response to IR10-06:** The VFPA's responses to IR10-06 and IR10-13, as requested by the Review Panel, provide additional information concerning the rationale for the current use effects assessment conclusions.	**Information Requests** Response to Sufficiency Information Request #06 (IR10-06)

Table 2: Effects Assessment Methods (including Cumulative Effects)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LCFN-2.1	Requested completeness information on the "Cumulative Effects of the project related to other projects such as the Kinder Morgan Project, and other reasonably known projects, including sediment plume and hydrology changes pushing the plume northward in the Salish Seas".	15-Jun-2015, Letter to the Canadian Environmental Assessment Agency (CEA Agency; CEAR Document #257)	**13-Oct-2015, Letter from the CEA Agency (CEAR Document #307):** *"…Additionally, the Agency has requested additional information on Cumulative Effects in its letter of July 31, 2015 to [the VFPA] (page 7, #13)."*	**Addressed in EIS Appendix 7.2-B (#39):** The list of certain and reasonably foreseeable projects and activities that have the potential to interact cumulatively with the Project-related effects is in EIS Table 8-8. This list includes all projects with the potential for a cumulative interaction with the Project. The CEA Agency is the appropriate authority to address questions related to the *Canadian Environmental Assessment Act* (*CEAA*) *2012* and designated projects. **Addressed in MSA Appendix 5-B (#24):** The assessment of potential effects of marine shipping associated with the Project incorporates the existing vessel traffic within the marine shipping area (defined in MSA Section 4.0). The list of certain and reasonably foreseeable projects and activities considered in the cumulative effects assessment is included in MSA Appendix 6-A. Kinder Morgan Pipeline Expansion Project (aka Transmountain Pipeline) is included in the list of Certain and Reasonably Foreseeable Projects and Activities, and therefore part of the cumulative effects assessments. **Addressed in Responses to IR-7.31.15-13 and AIR-12.04.15-13:** Further discussion of the cumulative effects methodology and how the effects of past, present, and future projects and activities in the context of cumulative effects were considered is provided in IR-7.31.15-13 and AIR-12.04.15-13. **Addressed in Response to IR4-09:** In the VFPA's response to IR4-09, updated project status and vessel movement information is provided as available for the projects listed in the EIS and MSA (north of Segment B), plus other new projects considered to be certain or reasonably foreseeable (as of July 1, 2017).	**Marine Shipping Addendum (MSA, CEAR Document #316)** Appendix 5-B Aboriginal Issues and Interests 6.0 Effects Assessment Approach 6.7 Cumulative Effects Assessment **Environmental Impact Statement (EIS, CEAR Document #181)** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 30.0 Potential Accidents or Malfunctions Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment **Information Requests** Response to Information Request #13 (IR-7.31.15-13 of CEAR Document #314) Response to Additional Information Request #13 (AIR-12.04.15-13 of CEAR Document #388) Response to Sufficiency Information Request #09 (IR4-09 of CEAR Document #1051)
LCFN-2.2	Stated that the VFPA has relied on the premise that only if there are residual effects will there be cumulative effects. Lake Cowichan First Nation does not agree that this follows, or that this logic follows in this order.	15-Jun-2015, Letter to the CEA Agency (CEAR Document #257)	**13-Oct-2015, Letter from the CEA Agency (CEAR Document #307):** *"…Additionally, the Agency has requested additional information on Cumulative Effects in its letter of July 31, 2015 to [the VFPA] (page 7, #13)."*	**Addressed in EIS Appendix 7.2-B (#157):** The methods used to assess the potential effects of the Project, including both residual effects of the Project and cumulative effects, are described in EIS Section 8.0. These methods are consistent with existing federal guidance. **Addressed in Responses to IR-7.31.15-13 and AIR-12.04.15-13:** Further discussion of the cumulative effects methodology and how the effects of past, present, and future projects and activities in the context of cumulative effects were considered is provided in IR-7.31.15-13 and AIR-12.04.15-13.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table **Information Requests** Response to Information Request #13 (IR-7.31.15-13 of CEAR Document #314) Response to Additional Information Request #13 (AIR-12.04.15-13 of CEAR Document #388)
LCFN-2.3	Stated that Chief Livingstone has expressed the following specific concerns related to: • Effects of the environment on the Project and the attendant spills or accidents that could occur and the long-term residual effects; and • Cumulative effects – spills and accidents specifically and the long-	15-Jun-2015, Letter to the CEA Agency (CEAR Document #257)	**13-Oct-2015, Letter from the CEA Agency (CEAR Document #307):** *"The Agency did not request additional information regarding accidents and malfunctions since there is already some information provided in the EIS. The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review.*	**Addressed in EIS Appendix 7.2-B (#204):** Potential spills of deleterious materials (e.g., hydrocarbons) and their environmental effects are discussed in the EIS. Plausible worst-case scenarios involving a marine vessel, motor vehicle, and train accident, each assumed to result in a spill of deleterious materials, are assessed. The regulatory management framework, standard practices, and Project-specific measures to reduce the risk of accidents or malfunctions, including spills, as well as the emergency response and mitigation measures to be implemented in the event of a spill are described. Three worst-case scenarios involving hydrocarbon spills were assessed: a container ship impact incident at the terminal, a tanker truck accident on Roberts Bank Way North, and a yard locomotive derailment on the widened causeway. The assessment determined that a ship impact scenario involving a marine spill of heavy fuel oil at the terminal would result in	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 31.0 Effects of the Environment on the Project **MSA** 10.0 Accidents and Malfunctions **Information Requests** Response to Information Request #13 (IR-7.31.15-13 of CEAR Document #314)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	term residual and cumulative effects.		*Additionally, the Agency has requested additional information on Cumulative Effects in its letter of July 31, 2015 to [the VFPA] (page 7, #13).”*	adverse residual effects to all marine biophysical valued components (VCs), as well as marine commercial use, outdoor recreation, and land and water use. While the residual effects on southern resident killer whales (SRKWs), coastal birds, and Current Use were considered significant, due to the extremely low probability of such a scenario, all residual effects were considered unlikely. Since the diesel spill in each of the land-based scenarios would occur away from the marine environment, no potential interactions with marine biophysical VCs were identified. Further, no residual adverse effects were identified with respect to socio-economic VCs, including services and infrastructure and human health. As with any activity, the potential for unplanned incidents during Project construction and operation exists. The VFPA, its tenants, contractors, operators, and intermodal partners are committed to continue to improve port-wide operational practices and procedures to ensure the safety of workers and the public, and protection of the environment. The composition and number of hazardous goods containers handled at Deltaport Terminal in 2012 was reviewed during the development of the Quantitative Risk Assessment (see Table B-4 (Appendix B) of EIS Appendix 30-A). The estimated probability and potential consequences of a range of accidents or malfunctions, including spills of deleterious materials from ships during Project construction and operation, are described in the EIS. **Addressed in MSA Section 10.0:** The potential effects of an oil spill on marine resources, including marine birds, marine mammals, and marine fish and fish habitat are considered within the assessment of potential accidents or malfunctions (MSA Section 10.0). This section also considers the potential effects on Current Use, and related impacts on rights, resulting from effects on marine resources. The assessment of potential accidents or malfunctions considers a variety of potential effects related to two plausible worst-case scenarios selected based on the analysed probabilities of occurrence, higher risk areas, and possible consequences: • A collision between a container ship and a small vessel within an existing shipping lane, resulting in damage to the vessel and/or gear as well a serious injury or fatality; and • A powered grounding of a container ship on a hard substrate, resulting in a spill of 7,500 m^3 of heavy fuel oil. In both cases, the identified residual adverse effects are unlikely to occur, because of the very low probability of the accident scenarios. A description of spill response protocols is also included in MSA Section 10.0. **Addressed in EIS Section 31.0:** EIS Section 31.0 addresses effects of the environment on the project. Effects of the environment on the Project, and any subsequent effects on the environment, would be avoided or minimised through a combination of design features, construction practices, and the Project’s environmental management program. Preliminary Project design addresses a range of potential effects of the environment on the Project, including extreme weather events and a predicted 1.0-metre sea level rise by 2100 (adjusted to a net 0.5-metre increase by accounting for factors such as uplift and settlement in the area). Measures conducted during Project construction to improve the ability of infrastructure to withstand a submarine landslide resulting from seismic activity include the dredging of soils and silts with poor seismic performance followed by vibro-densification. Due to the unpredictability and uncertainty associated with submarine landslides and tsunamis, and their expected low probability of occurrence at the Project site, measures to protect the Project during such events would be further defined in the detail design phase. Low-probability catastrophic events such as an earthquake of magnitude eight (M8) or higher, a submarine landslide in the immediate vicinity of the Project, or a large tsunami	Response to Additional Information Request #13 (AIR-12.04.15-13 of CEAR Document #388)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				could result in irreparable damage to the Project. The effects of a catastrophic natural event would be widespread in the Fraser River delta and would not be unique to the Project. The Project design assessed in the EIS considered anticipated climate-related sea level rise. While sea level rise is therefore not expected to adversely affect the Project over the long-term (to 2100), it is predicted to result in the inundation and conversion of intertidal habitat to subtidal habitat at Roberts Bank and throughout the Fraser River estuary. This inundation would result in the gradual conversion of the intertidal habitat, including the habitat created adjacent to the Project area to mitigate Project-related effects. Due to the presence of dyke structures and the widespread nature of sea level rise-related changes, it would not be possible to mitigate this effect of the environment on the Project by establishing new intertidal habitat. **Addressed in Responses to IR-7.31.15-13 and AIR-12.05.15-13:** Further discussion of the cumulative effects methodology and how the effects of past, present, and future projects and activities in the context of cumulative effects were considered is provided in IR-7.31.15-13 and AIR-12.04.15-13.	

Table 3: Effects of the Environment on the Project

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LCFN-3.1	Concerned that an earthquake could cause the land around the Project to liquefy and lead to spillage of potentially toxic contaminants into the Salish Sea. This could lead to containers washing out into the sea and striking vessels carrying dangerous cargo, diluted bitumen, coal, and other dangerous contents.	15-Nov-2017, Letter to Panel (CEAR Document #1101)	The VFPA has reviewed this letter and provides the following information.	**Addressed in EIS Section 30.0 and MSA Section 10.0:** In developing EIS Section 30.0 and MSA Section 10.0 on accidents and malfunctions, the VFPA identified plausible worst-case scenarios to assess. The scenarios were selected based on the probability of events occurring (using ship incident data collected over several years) and the environmental consequences of those events. An event such as that which is described, while possible, did not warrant assessment.	**EIS** 30.0 Potential Accidents or Malfunctions **MSA** 10.0 Accidents and Malfunctions

Table 4: Engagement and Consultation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LCFN-4.1	Commented the capacity funding provided is insufficient. Requested that Traditional Use Study funding be provided quickly due to Lake Cowichan First Nation's limited budget for retaining consultants. Requested funding to enable Q'ul-Lhanumutsun Aquatic Resources Society to assist Lyackson and Lake Cowichan in understanding marine resource issues and concerns. Commented that time and budget provided for Lake Cowichan First Nation to complete a Project-related Traditional Use Study was limited.	30-Apr-2014, Meeting with Lake Cowichan First Nation and Lyackson First Nation 12-Aug-2014, Meeting with Lake Cowichan First Nation and Lyackson First Nation 17-Nov-2014, E-mail 10-Dec-2014, Health & Aboriginal Rights Workshop – Lake Cowichan First Nation / Lyackson First Nation	**08-Apr-2014, Letter:** Offered funding for ongoing participation. **09-Sep-2014, Letter:** Accepted funding. **30-Apr-2014, Meeting:** Recorded comment for consideration by the Project team. **12-Aug-2014, Meeting:** Undertook to follow up right away on the request for quick provision of the Traditional Use Study funding. **19-Aug-2014, Letter:** Offered funding for a Traditional Use Study. **19-Aug-2014, Letter:** Accepted funding. **21-Aug-2014, Letter:** Lake Cowichan First Nation provided the VFPA with a report entitled "Ts'uubaasatx Traditions: Roberts Bank Marine and Terrestrial Resource Use", which provided a summary of four interviews conducted regarding Lake Cowichan First Nation members' use of the Project area. **22-Aug-2014, Letter:** Offered funding for fall 2014 consultation activities. **26-Aug-2014, Letter:** Accepted funding. **10-Dec-2014, Workshop:** Recorded comment for consideration by the Project team. **26-Jan-2015, Email from the VFPA:** *"With respect to your request for funding for the involvement of [Q'ul-Lhanumutsun Aquatic Resources Society] QARS, the port authority understands that the CEA Agency has provided funding for your review of the EIS and that this type of funding could assist in the involvement of QARS as support to Lake Cowichan and Lyackson in the EIS review. The port authority is also considering the provision of additional funding to support Aboriginal groups in the EIS review and you may wish to consider the use of some of that funding as well."* **11-May-2015, Letter:** Offered funding for participation in Project-related consultation activities including marine shipping study. **19-May-2015, Letter:** Accepted funding. **26-Apr-2016, Letter:** Offered funding to support ongoing involvement in consultation activities. **27-Apr-2016, Letter:** Accepted funding. **24-Oct-2017, Letter:** Offered additional funding for Participation in consultation activities for the Project. **25-Oct-2017, Letter:** Accepted additional funding.	**Addressed in EIS Appendix 7.2-B (#19):** The VFPA has provided or offered funding support to ensure the ongoing participation of Indigenous groups involved in the Project's consultation processes. Additional agreements were also initiated to support the development of studies regarding Current Use. As a result of these engagement and consultation activities, Indigenous groups have provided traditional use information relating to the Project area. The VFPA participation funding agreements have been negotiated between the VFPA and Indigenous groups, either individually or through associations representing the Indigenous groups. The VFPA has provided participation funding to 12 Indigenous groups or associations representing these groups: Tsawwassen First Nation; Musqueam First Nation; Semiahmoo First Nation; Tsleil-Waututh Nation; Cowichan Tribes; Penelakut Tribe; Halalt First Nation; Stz'uminus First Nation; Lake Cowichan First Nation; Lyackson First Nation; Metis Nation British Columbia; and Hwlitsum First Nation. Per Lake Cowichan First Nation's request, the VFPA was able to expedite payment for the Traditional Use Study such that the agreement was signed on 19-Aug-2014 and payment was sent 22-Aug-2014. The Traditional Use Study was submitted on 28-Aug-2014. **Addressed in EIS Appendix 7.2-B (#175):** The VFPA provided funding to the specified Indigenous groups to support consultation. Additionally, the VFPA provided funding to support completion of traditional use studies to these Indigenous groups and all groups provided a traditional use study. Further information, provided during fall 2014 consultation and in writing, has been incorporated into the EIS. The VFPA will continue to consult with appropriate Indigenous groups and there will be further opportunities to provide information through the CEA Agency process.	**EIS** 7.0 Engagement and Consultation 7.2 Aboriginal Engagement and Consultation Appendix 7.2-A Consultation Activities by Aboriginal Group Appendix 7.2-B Aboriginal Issues and Interests 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes

Table 5: Environmental Assessment and Permitting Process

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LCFN-5.1	Expressed concern with the non-requirement of a Disposal at Sea (DAS) permit even with the removal of the intermediate transfer pit (ITP) and noted they would ask Environment and Climate Change Canada (ECCC) why no permit is required.	05-Sep-2017, Meeting with Chief and Council	**05-Sep-2017:** Recorded comment for consideration by the Project team.	**Addressed in IR Package 3 Preamble in Support of Responses to IR3-25 to IR3-40:** ECCC outlined specific observations on proposed Project activities that may be subject to DAS permitting (see CEAR Document #564), including key details that would be required to determine applicable regulatory requirements under the *Canadian Environmental Protection Act*, *1999*. Information Request Package 3 Preamble in Support of Responses to IR3-25 to IR3-40 discusses the updated construction activities relevant to dredgeate handling and potential DAS regulatory requirements. Specifically, changes to the following are described: • Use of the ITP; • Management of silty 'fallout' material from the vibro-replacement process in the dredge basin; • Disposal of dredged material from the tug basin expansion; and • Disposal of supernatant (containing unsettled fines from fill material) from the terminal containment dykes. As a result of the changes, a DAS permit is no longer anticipated to be required for Project construction. The key changes relevant to this conclusion are described in the Preamble for each of the four Project construction activities identified above.	**Information Requests** Information Request Package 3 Preamble in Support of Responses to IR3-25 to IR3-40 – General and Disposal at Sea-related Project Construction Update (CEAR Document #928) **CEAR Document #564 From ECCC to the Review Panel re: Comments on the information relating to the environmental assessment of RBT2**
LCFN-5.2	Requested that construction methodologies that cause the least damage be implemented.	15-Nov-2017, Letter to Panel (CEAR Document #1101)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Section 33.0:** A Construction Environmental Management Plan (EMP) and an Operation EMP, each with several sub-plans, will be developed for the Project prior to construction and operation. The purpose of the EMPs is to ensure appropriate measures and controls are in place to prevent or reduce adverse environmental effects and to provide clearly defined action plans and emergency response procedures to protect human and environmental health. Project-related EMPs would be developed prior to the start of construction and operation phases to ensure alignment with required permits and approvals, final designs, finalised construction or operation approaches, and site-specific considerations. During the finalisation of the plans, relevant regulatory agencies would be consulted to ensure plans address regulatory requirements. EMPs and their sub-plans would be subject to review by applicable regulatory agencies. In addition, feedback on applicable sub-plans would be solicited from Indigenous groups potentially affected by the Project. The development of the Project's EMPs would be informed by the VC assessments presented in the EIS and would set out the applicable legislation and regulations, and relevant standards and guidelines to be complied with and the mitigation measures to be implemented during Project construction and operation. The EMPs would also describe compliance monitoring efforts and reporting to regulators.	**EIS** 33.0 Environmental Management Program

Table 6: Environmental Management Program

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LCFN-6.1	Stated that they want to see adaptive management strategies and reporting in the Follow-up Program. Requested that reporting be provided in writing and that there be funding to support review of the outcomes of the Follow-up Program, including holding meetings with the VFPA to discuss. Requested that high quality studies, monitoring, and follow-up programs be conducted should the Project proceed. Requested that adaptive management strategies, monitoring, follow-up, and reporting activities be carried out. Requested that regular annual reports to the community be provided once a year or more, with the opportunity for community members to participate in the Science Advisory Body. Requested that a critical third-party analysis be carried out post-construction and of operations on a regular and ongoing basis. Stated that if the Project proceeds, Lake Cowichan First Nation has the right to expect a bond.	26-Apr-2016, Meeting with Lake Cowichan First Nation and Lyackson First Nation 18-Aug-2017, Meeting with Administrative Staff 15-Nov-2017, Letter to Panel (CEAR Document #1101)	**26-Apr-2016, Meeting:** Responded that adaptive management and reporting would be a component of the Follow-up Program. **30-Aug-2017, Meeting:** The VFPA met with Lake Cowichan First Nation to discuss lessons learned from the Deltaport Third Berth Project as well as the Follow-up Program for RBT2. The VFPA sought feedback from Lake Cowichan on what they feel should be included in the Follow-up Program and how they would like to be involved going forward. Discussions are ongoing.	**Addressed in EIS Section 33.5:** Similar to the Adaptive Management Strategy for the Deltaport Third Berth Project, as described in EIS Section 33.5, the VFPA is committed to developing and implementing a Follow-up Program for the Project. The purpose of the Follow-up Program is to verify the accuracy of residual effect predictions made in the EIS, and determine the effectiveness of any measures taken to mitigate the adverse environmental effects of the Project. To ensure the Program's elements adequately reflect conditions of Project approvals, final designs, and construction or operation approaches, as well as public, Indigenous group, and regulator feedback received during the review of the EIS, the VFPA will lead the development of the Follow-up Program after the submission of the EIS. The Follow-up Program will include: • An evaluation of the adequacy of existing data to provide a benchmark against which to test Project-related effects; • A monitoring design drawing on the measurable parameters identified to be field-tested; • A methodological approach for using field-collected data to measure and verify the accuracy of the effects predicted in the EIS; • A reporting framework that defines frequency of reporting, distribution, and feedback mechanisms; and • Details of the VFPA's approach to adaptive management for the Project through construction and operation. The Follow-up Program will be developed in consultation with federal agencies, including the CEA Agency, Fisheries and Oceans Canada (DFO), and ECCC. Complete drafts of the RBT2 Follow-up Program will be made available prior to the start of field measurements to ensure parties consulted on the program and approving agencies have an opportunity to evaluate and approve the Program. Feedback from Indigenous groups regarding the draft Follow-up Program will be sought through the VFPA's ongoing engagement initiatives.	**EIS** 33.0 Environmental Management Program 33.5 Roberts Bank Terminal 2 Follow-up Program

Table 7: Light – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LCFN-7.1	Reiterated concern with LED lighting and its effect on wildlife and fish. Noted that LEDs might not be a good thing. They may be stressors to fish and wildlife, as fish come up to light if pointing a flashlight. Concerned that the use of LEDs, while commendable for reducing power consumption, would result in very bright lighting.	05-Sep-2017, Meeting with Chief and Council 15-Nov-2017, Letter to Panel (CEAR Document #1101)	**05-Sep-2017, Meeting:** Recorded comment for consideration by the Project team.	**Addressed in EIS Appendix 7.2-B (#99, #45):** A process is underway to change the current outdoor lighting fixtures at the Deltaport Terminal to light-emitting diodes (LEDs). LEDs are more directional and easier to control in terms of where light is focused. It is anticipated that the change to LEDs will reduce both light trespass and sky glow from the Deltaport Terminal, provided good lighting design practices are followed (specifically, the use of full cut-off light fixtures to limit up-light and only lighting areas that are required to be lit). The lighting on one crane at Deltaport has been fully replaced with LED lights, offering a point of comparison with the older lights. **Addressed in EIS Section 33.0:** Suggested light and lighting mitigations were considered in the effects assessment. Mitigation measures to address effects on visual resources and coastal birds consist of implementation of EMPs, including Light Management Plans, for construction and operation phases. The Light Management Plans will describe measures to reduce excess lighting and sky glow, including: • Orienting lights downwards and away from residential and marine areas; • Using shielding to minimise light trespass; • Controlling light levels and limiting light use to areas where activities are occurring; • Where possible, using fixtures that emit light at wavelengths shown to minimise disorienting effects to birds; • During construction, ensuring dredge lighting system shields light from spilling outside the basic working footprint of the dredge; and • During operation, establishing a centralised lighting control system to select lighting where required.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 33.0 Environmental Management Program
LCFN-7.2	Concerned that the Project could significantly increase both light pollution and light trespass.	15-Nov-2017, Letter to Panel (CEAR Document #1101)	The VFPA has reviewed this letter and has provided the additional information.	**Addressed in EIS Appendix 7.2-B (#45):** The potential changes in light that may be caused by the Project, and the potential effects of those changes on VCs and on Current Use are considered in the EIS. The results of the light assessment informed the assessments of marine fish, coastal birds, visual resources, and human health, and Current Use. The assessment focused on two aspects of light: • Light trespass, the amount of light that strays from its intended purpose onto neighbouring areas; and • Sky glow, the unwanted illumination of the night sky that affects the visibility of stars. The assessment concluded that: • Overall, the Project is not expected to change the general light environment of the Lower Mainland and the Gulf Islands and no measurable incremental cumulative changes related to light are expected. • Project-related lighting is expected to result in a minimal increase in light trespass levels. • Increases in sky glow levels are expected, but are not anticipated to result in a noticeable change from existing conditions. Suggested mitigations were considered in the effects assessment. Mitigation measures to address effects on visual resources and coastal birds consist of implementation of EMPs, including Light Management Plans, for construction and operation phases. The Light Management Plans will describe measures to reduce excess lighting and sky glow, including: • Orienting lights downwards and away from residential and marine areas; • Using shielding to minimise light trespass; • Controlling light levels and limiting light use to areas where activities are occurring;	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 9.4.4 Light, Relevant Guidelines 9.4.8 Light, Future Conditions with the Project

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				• Where possible, using fixtures that emit light at wavelengths shown to minimise disorienting effects to birds; • During construction, ensuring dredge lighting system shields light from spilling outside the basic working footprint of the dredge; and • During operation, establishing a centralised lighting control system to select lighting where required.	
LCFN-7.3	Requested that a light study be conducted to ensure a reduction of light pollution and light trespass if the Project is approved.	15-Nov-2017, Letter to Panel (CEAR Document #1101)	The VFPA has reviewed this letter and has provided the additional information.	**Addressed in EIS Appendix 7.2-B (#32):** The VFPA is committed to developing and implementing a Follow-up Program for the Project. The purpose of the Follow-up Program is to verify the accuracy of residual effect predictions made in the EIS, and determine the effectiveness of any measures taken to mitigate the adverse environmental effects of the Project. To ensure the Program's elements adequately reflect conditions of Project approvals, final designs, and construction or operation approaches, as well as public, Indigenous group, and regulator feedback received during the review of the EIS, the VFPA will lead the development of the Follow-up Program after the submission of the EIS. The Follow-up Program will be developed in consultation with federal agencies, including the CEA Agency, DFO, and ECCC. Complete drafts of the RBT2 Follow-up Program will be made available prior to the start of field measurements to ensure parties consulted on the program and approving agencies have an opportunity to evaluate and approve the Program. Feedback from Indigenous groups regarding the draft Program will be sought through the VFPA's ongoing engagement initiatives. Consideration has been given to the need for and scope of follow-up regarding predicted Project-related effects and proposed mitigation. EIS Appendix 33-A summarises proposed preliminary Follow-up Program elements.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 27.0 Human Health 27.7.1 Mitigation Measure #1 – Measures to Address Air Emissions-related Effects 27.12 Human Health, Monitoring and Follow-Up Programs Appendix 27-A Air Quality HHRA Technical Report, Figures 7 and 8 33.0 Environmental Management Program 33.3.3 Construction Environmental Management Plans, Air Quality and Dust Control Plan 33.5 Roberts Bank Terminal 2 Follow-up Program Appendix 33-A Proposed Draft Follow-up Program Elements
LCFN-7.4	Concerned that light at night is a known stressor to day and night birds, animals, and fish. Stated that it can cause confusion and exhaustion in these species, leaving them more vulnerable to prey.	15-Nov-2017, Letter to Panel (CEAR Document #1101)	The VFPA has reviewed this letter and has provided the additional information.	**Addressed in EIS Appendix 7.2-B (#95):** It is recognised that nocturnal behaviour of birds varies in response to lighting conditions. A review of documented effects of both natural and artificial light on birds is provided in the EIS. The potential effects on coastal birds of changes in artificial light related to the Project are considered in the EIS. A Light Management Plan will be included in the Construction EMP and the Operation EMP, to reduce artificial light-related effects on coastal birds. **Addressed in Response to IR5-25:** In summary, the assessment of potential effects of the Project predicted a minor decrease in juvenile salmon and herring productivity pre-mitigation that could result from lighting and shading associated with Project marine infrastructure. With mitigation, including implementation of a light management plan, effects on fish productivity from Project-related changes in the light environment will be negligible, with no residual effect. Additional information is provided in the response to IR5-25. **Addressed in Response to IR5-39:** The interaction between overpass lighting and rail switch lighting and the marine mammals VC indicated in EIS Appendix 8-B was in error. There is no anticipated interaction. Light from the Project is not anticipated to extend into the water, and known marine mammal haulouts in the local assessment area (LAA) for the Project are located at Sand Heads, approximately 16 kilometres from overpass lighting and rail switch lighting, where light will not reach (MSA Figure 8.2-3). **Addressed in Response to IR9-02:**	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 15.0 Coastal Birds 15.7.2 Future Conditions with the Project, Potential Effect- Changes in Productivity 15.8.3 Mitigation #2 – Measures to Address Productivity Loss due to Changes in Habitat Quality 33.0 Environmental Management Program 33.3.5 Construction EMP, Light Management Plan 33.4.3 Operation EMP, Light Management Plan **Information Requests** Response to Sufficiency Information Request #25 (IR5-25 of CEAR Document #1153)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				The VFPA's forthcoming response to IR9-02, as requested by the Review Panel, will further discuss mitigation measures related to artificial light for migratory and non-migratory birds and avian species.	Response to Sufficiency Information Request #39 (IR5-39 of CEAR Document #1138) Response to Sufficiency Information Request #02 (IR9-02)
LCFN-7.5	Concerned that lighting from the Project can obscure the stars in the night sky. From a cultural standpoint, the visibility of the night sky is of considerable importance to the Lake Cowichan First Nation's legends.	15-Nov-2017, Letter to Panel (CEAR Document #1101)	The VFPA has reviewed this letter and has provided the additional information.	**Addressed in EIS Section 9.4 and Appendix 9.4-A:** Sky glow is the result of stray light being scattered in the atmosphere, brightening the natural sky background level and reducing star visibility. EIS Section 9.4.8.2 presents the results of modelling undertaken related to sky glow. Based on a predicted change, the brightness of the stars does not appear to change noticeably.	**EIS** 9.4.8.2 Operation Appendix 9.4-A Light Assessment Study

Table 8: Marine Commercial Use – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LCFN-8.1	Concerned with impacts from marine shipping to fishermen.	23-Jul-2015, Meeting with Lake Cowichan First Nation and Lyackson First Nation	**23-Jul-2015, Meeting:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in MSA Appendix 5-B (#53):** The assessment of potential effects of marine shipping associated with the Project is included in MSA Sections 9.2 and 9.3. This section includes consideration of Indigenous commercial fishing licence holders. The assessment of marine commercial use was conducted to evaluate the potential effects of Project-associated marine shipping on commercial fish and seafood harvesting (including Indigenous marine fish and seafood harvesting), guided sport fishing, marine-based tourism, and marine transportation. Existing marine commercial use within the marine shipping area includes fishing and seafood harvesting of crab, shrimp, salmon, rockfish, red sea urchin, and a variety of other marine resources. Guided sport fishing activities focus on various salmon species, and whale-watching activities focus on SRKWs, humpback whales, and Steller sea lions. Commercial marine transportation activities in the marine shipping area include cargo and container ships, tankers, tugs and barges, and ferries. Potential effects on all types of marine commercial use assessed were determined to be negligible. These negligible effects include changes in each of: area use and access; biophysical conditions for marine fish, invertebrates, and mammals; availability of fish and seafood; marine mammal presence; and environmental setting due to marine shipping associated with the Project.	**MSA** Appendix 5-B Aboriginal Issues and Interests 9.2 Marine Commercial Use 9.2.4 Existing Conditions, Aboriginal Marine Fish and Seafood Commercial Harvesting 9.2.5.1 Negligible Effects – Marine Fishing and Seafood Harvesting 9.3 Outdoor Recreation 9.3.5.1 Negligible Effects – Recreational Fishing and Seafood Harvesting
LCFN-8.2	Concerned about the Roberts Bank bivalve shellfish closure.	10-Dec-2014, Health & Aboriginal Rights Workshop – Lake Cowichan First Nation / Lyackson First Nation	**10-Dec-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#75):** No bivalve harvesting is currently allowed within the local or regional assessment areas of marine invertebrates, due to both Sanitary and Biotoxin Shellfish Closures imposed by DFO over concerns regarding discharges from sanitary, stormwater, or industrial sources. DFO is the proper authority to determine the validity of shellfish closures. **Addressed in EIS Appendix 7.2-B (#135):** Commercial and recreational crab harvesting closures associated with the Roberts Bank terminals are considered in the marine commercial use (EIS Section 21.0) and outdoor recreation (EIS Section 24.0) assessments. DFO bivalve harvesting closures related to proximity to sanitary outfalls are considered in EIS Appendix 27-C. An assessment of current shellfish harvesting potential and contaminant-related consumption risks is provided in EIS Section 27.0 and EIS Appendix 27-C.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 21.0 Marine Commercial Use 21.5.1 Commercial Fish and Seafood Harvesting 27.0 Human Health 27.5.4 Exposure to Shellfish Contamination 27.6.1.3 Negligible Effects Related to Shellfish Contamination Appendix 27-C Shellfish Harvesting Potential and Contaminant-related Consumption Risks at Roberts Bank

Table 9: Marine Fish – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LCFN-9.1	Requested that resident herring stocks at Roberts Bank be studied, and potential Project impacts on resident herring stock be assessed. Recommended Q'ul-Lhanumutsun Aquatic Resources Society as being suitable to assist in collecting data and informing research. Concerned that resident herring cannot be assessed the same way as migratory species, and there could be key components missing. Noted herring are extremely sensitive to noise. Noted the Q'ul-Lhanumutsun Aquatic Resources Society mandate includes studying resident herring collapse. Asked how the assessment makes a distinction between migratory versus resident populations of herring, and which group of herring are expected to be impacted by the Project. Suggested ship noise associated with the BC Ferries and VFPA terminals is the reason herring are no longer found at Roberts Bank, and efforts should be made to bring them back. Noted there is evidence of herring in Tsawwassen First Nation middens. Concerned that RBT2 will contribute to underwater noise levels. Asked where/why the herring has gone.	28-Oct-2014, Preliminary EIS Results Workshop #3 17-Nov-2014, Email 10-Dec-2014, Health & Aboriginal Rights Workshop – Lake Cowichan First Nation / Lyackson First Nation 23-Jul-2015, Meeting with Lake Cowichan First Nation and Lyackson First Nation 12-Nov-2015, Meeting with Administrative Staff 05-Jun-2017, Meeting with Lake Cowichan First Nation and Lyackson First Nation	**28-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. **10-Dec-2014, Workshop:** Responded that there are underwater noise specialists involved in RBT2 to assess effects on marine creatures. A separate underwater noise study is underway. Field studies were conducted on herring and information is available on their use of the area; the effect to herring was evaluated. The Project is anticipated to be beneficial to herring, in general, largely because eelgrass beds are increasing and also some predator-prey relationships may change. For example, there may be less species feeding herring. A negative residual effect on herring is not anticipated. **26-Jan-2015, Email from the VFPA:** The concern about resident herring stocks has been addressed in the EIS and the required studies have been undertaken on the species. Given the work has been undertaken, the VFPA will not require additional studies to be done or data to be collected by Q'ul-Lhanumutsun Aquatic Resources Society. In terms of sharing the information collected to date on herring, the VFPA will be providing Lake Cowichan First Nation with the EIS upon its submission and, upon your review, should you wish to meet specifically on this, the VFPA would be happy to do so. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **05-Jun-2017, Meeting:** Recorded comment for consideration by the Project team.	**Addressed in EIS Appendix 7.2-B (#81):** Pacific herring is considered as a representative species in the forage fish sub-component of the marine fish assessment, as presented in the EIS. Qualitative and empirical evidence indicates that there will be minor decreases in forage fish productive potential driven by loss of subtidal sand habitat and disturbance of Pacific herring from underwater noise. Pacific herring are expected to experience a short-term decrease in productive potential (i.e., -2%) due to direct mortality from construction activities (i.e., entrainment) and minor acoustic effects (if either vibratory or impact pile driving is used), and long-term minor decreases due to reduction in the availability and quality of subtidal and intertidal sand habitat. **Addressed in EIS Appendix 7.2-B (#61):** The scope and methods of the underwater noise study are summarised in EIS Section 9.8, and detailed in the supporting appendix. Underwater noise considers the level of underwater sound in the marine environment. An assessment was undertaken to determine potential changes in underwater noise as a result of the Project and focused on construction and operation activities that would produce underwater noise. Modelling was undertaken to predict future underwater noise as a result of construction activities, such as dredging, pile driving, vibro-densification, and movements of support vessels, and operation activities, such as movements of container ships and tug boats associated with terminal approach and departure, and berthing and unberthing. The assessment concludes that: • Underwater noise levels during construction are predicted to be comparable on average to existing levels measured at Roberts Bank, with the exception of some periods when certain activities, such as dredging, pile-driving, vibro-densification, or construction support vessel movement, would occur. • Overall, average underwater noise from Project construction and operation activities is expected to be comparable to average existing levels of underwater noise due to existing high levels, but will at times exceed existing conditions. Underwater noise related to conservative levels of Project commercial vessel movements is predicted to increase over existing underwater noise levels for only approximately 3% of a year for vessel berthing and unberthing, and for approximately 2% of a year for vessel approach and departure. • Future cumulative increases in commercial vessel traffic in the region are expected to make a relatively small incremental contribution to overall underwater noise levels. This prediction reflects the existing high levels of vessel traffic within the study area and the already-dominant contribution of commercial vessel traffic noise to the acoustic environment. The results of the underwater noise assessment were considered in the assessments of marine fish, marine mammals, and coastal birds. An interaction between Project-related underwater noise and marine invertebrates is not anticipated, and therefore was not assessed. **Addressed in Response to IR4-18:** As noted in VFPA's response to IR4-18, as requested by the Review Panel, in response to anecdotal reports by a member of the public of herring spawn	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 9.8 Underwater Noise 9.8.2 Assessment of Purpose and Approach 9.8.6 Underwater Noise, Methods Appendix 9.8-A Construction and Terminal Activity Underwater Noise Modelling Study Technical Report Appendix 9.8-B Regional Commercial Vessel Traffic Underwater Noise Modelling Study Technical Report 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component 13.2.1 Sub-components 13.4.1 Information Sources, Desktop and Field Studies 13.5.3 Existing Conditions, Forage Fish 13.5.3.3 Pacific Herring 13.6 Future Conditions with the Project Table 13-6 Desktop and Field Studies related to Marine Fish to support the Assessment 13.6.3 Potential Effect - Changes in Productivity 13.8.1 Residual Effect – Characterisation of Productivity Loss Table 13-12 Marine Fish Productivity Summary (Prior to Mitigation) Based on Weight of Evidence 33.3 Construction Environmental Management Plans **Information Requests** Response to Sufficiency Information Request #18 (IR4-18 of CEAR Document #1051)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				on eelgrass on the north side of the Roberts Bank causeway in early April 2017, the VFPA conducted a survey to document presence and distribution of herring spawning activity at Roberts Bank. Survey results are in agreement with existing conditions described in EIS Section 13.5.3.3, and confirm that while the LAA does support some spawn, it does not appear to be an important herring spawning area. Adherence to EMPs (see EIS Section 33.3) will reduce the potential that herring will be affected by changes to water quality and sediment, or underwater noise during Project construction activities that will occur outside the fisheries-sensitive window. Notwithstanding the above, a potential for interaction with the Project has been identified and a residual effect has been assessed as not significant (see EIS Section 13.8.1).	
LCFN-9.2	Noted the difficulty of getting salmon. Explained Lyackson First Nation and Lake Cowichan First Nation have harvested their food fish together for the past three years, with the majority of this activity taking place in the mouth of the Fraser River. Stated that a recently interviewed Lyackson elder provided information about harvesting sturgeon, crab, shellfish, halibut, and flounder around the mouth of the Fraser River and toward Steveston, and referred to campsites in those areas.	10-Dec-2014, Health & Aboriginal Rights Workshop - Lake Cowichan First Nation / Lyackson First Nation 05-Jun-2017, Meeting with Lake Cowichan First Nation and Lyackson First nation	**10-Dec-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Section 13.0 on Marine Fish and Section 21.0 on Marine Commercial Use. **05-Jun-2017, Meeting:** Recorded comment for consideration by the Project team.	**Additional information provided by the VFPA:** The Project is not located on the Fraser River and no Project-related effects are predicted on the Fraser River. **Addressed in EIS Section 13.0:** Potential Project-related effects on marine fish, including all five species of Pacific salmon, are considered in the EIS. The assessment concludes there are no significant adverse effects from the Project, as marine fish productivity or long-term integrity would not be compromised. The Project is not expected to result in measurable incremental adverse cumulative effects to marine fish. In addition, the potential effects of the Project with respect to the ongoing productivity of commercial, recreational, and Aboriginal (CRA) fisheries are evaluated in the EIS (EIS Section 16.0). All Project construction and operation activities are expected to interact at an undetectable level with the ongoing productivity of CRA fisheries. Project-related effects, therefore, are not anticipated to compromise the ongoing productivity of CRA, and are expected to be negligible. Therefore, the Project is not expected to contribute to cumulative effects on these fisheries. **Addressed in EIS Section 21.0:** In addition, the potential effects of the Project with respect to the ongoing productivity of CRA fisheries are evaluated in the EIS. The Project is anticipated to result in a negligible effect to marine fish harvesting, guided sport fishing, and marine-based tourism. These negligible effects are related to changes in area, access, resource availability, and harvesting revenues. The Project is expected to result in a residual effect of changes to seafood harvesting area, harvest, and revenue. The residual effect is determined to be not significant, as Dungeness crab are known to move substantial distances to baited traps, and harvest activity can be moved to another open area. Other planned or reasonably foreseeable projects and activities would also displace crab harvesting, and this effect would combine with that of the Project to result in an incremental cumulative effect on commercial crab fishing. This adverse incremental cumulative effect is determined to be not significant. This is further addressed specifically in relation to potential effects on Current Use and potential impacts on Aboriginal rights and related interests, which are addressed in the EIS.	**EIS** 13.0 Marine Fish 13.6 Future Conditions with the Project 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries 16.6 Future Conditions with the Project 21.0 Marine Commercial Use 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				Addressed in EIS Section 32.2.6.2: According to EIS Section 13.0, minor decreases in productivity are anticipated for all sub-components during both construction and operation phases, pre-mitigation. A number of mitigation measures have been identified, including but not limited to avoidance (e.g., subtidal Project placement and use of timing windows), fish salvage, implementation of an Underwater Noise Management Plan, development and implementation of construction EMPs, and offsetting through creation of eelgrass, sandy gravel beach, tidal marsh, and subtidal rock reef habitat. These measures are expected to address potential Pacific salmon, reef fish, and demersal fish productivity losses; however, residual effects are anticipated for flatfish and forage fish, in part because of reduced habitat (loss of subtidal sand). These residual effects are considered in that assessment to be not significant, and cumulative effects are not predicted.	
LCFN-9.3	Concerned that many fisheries are currently adversely affected by the development and dyking of the banks of the Fraser River.	15-Nov-2017, Letter to Panel (CEAR Document #1101)	The VFPA has reviewed this letter and provides the following information.	**Addressed in Response to AIR-12.04.15-13:** In the EIS, the existing conditions reflect the conditions of the environment as modified by past development. Further discussion of how the VFPA considered the effects of past, present, and future projects and activities in the context of cumulative effects is provided in AIR-12.04.15-13, including in that response's Schedule 13-3 focused on fish and fish habitat.	**Information Requests** Response to Additional Information Request #13 (AIR-12.04.15-13 of CEAR Document #388)
LCFN-9.4	Concerned about the risk to sturgeon populations. Indicated that this is the second year in a row that food fisheries have been shut down, and perhaps the 3rd or 4th year that Lake Cowichan First Nation has not been able to acquire fish at all. Concerned that one-way valves at the dykes as well as other structures like the marina's docks do not allow fish to enter critical side channels.	15-Nov-2017, Letter to Panel (CEAR Document #1101)	The VFPA has reviewed this letter and provides the following information.	**Addressed in Response to IR5-15:** In its response to IR5-15, issued by the Review Panel on June 6, 2017 (CEAR Document #975), the VFPA specifically discusses existing conditions related to sturgeon and describes the status and management practices associated with the species. Rationale as to how sturgeon were assessed through the use of Chinook and chum salmon as representative species, as well as similarities between species as they pertain to existing conditions (e.g., life history and habitat requirements), the mechanisms through which the Project may affect sturgeon, as well as effectiveness of mitigation, are presented in AIR 12.04.15-09 (CEAR Document #388, including Appendix AIR9-A Table 2) and in the response to IR5-15.	**Information Requests** Response to Sufficiency Information Request #15 (IR5-15 of CEAR Document #1078)

Table 10: Marine Invertebrates – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LCFN -10.1	Concerned about presence of black crabs found in the Roberts Bank area, and that the Project will exacerbate existing conditions.	12-Aug-2014, Meeting with Lake Cowichan First Nation and Lyackson First Nation	**12-Aug-2014, Meeting:** Responded a study is being undertaken to address concerns related to black crabs. **09-Jul-2015, Email from the VFPA:** In response to reports from Indigenous groups regarding blackening of Dungeness crab and concerns related to potential contamination, the VFPA arranged for Hemmera to undertake testing of Dungeness crab tissue. The VFPA also provided Indigenous groups with crab sampling kits in an effort to obtain sample crab for testing. A memo detailing the results of black crab testing was attached. **01-May-2017, Email from the VFPA:** Hemmera, on behalf of the VFPA, plans on conducting a study in May or June 2017 to measure contaminant levels in shellfish collected at Roberts Bank. The study will consist of collection of Dungeness crab and Macoma clams from three locations at Roberts Bank, and laboratory analysis for a suite of contaminants including polychlorinated biphenyls (PCBs), polycyclic aromatic hydrocarbons (PAHs), and trace elements. This study, in conjunction with past shellfish studies, will further strengthen the existing understanding of shellfish contaminant levels at Roberts Bank. **12-Apr-2018, Letter from the VFPA:** Stated that since your concerns were raised, the Project team has conducted further work on these topics to respond to information requests from the Review Panel, to better understand potential effects and suggested mitigation, and to gain deeper understanding of the viewpoints of Indigenous groups and stakeholders. Provided the following documents review: • IR4-33 – Crab Hepatopancreas Additional Study Summary; and • IR4-34 – Black Crab Additional Studies Summary. Stated that the VFPA is interested in hearing views regarding options to mitigate potential effects to crabs and crabbing in the Project area.	**Addressed in EIS Appendix 7.2-B (#133):** Coal dust from Westshore Terminals (the existing coal terminal at Roberts Bank) was included in the characterisation of air quality existing conditions and the assessment of potential cumulative changes to air quality. Release of coal dust into the environment is not Project-related; however, re-suspension of sediments containing historical coal dust deposits may occur during the construction phase, potentially leading to short-term uptake of contaminants by both bivalve shellfish and Dungeness crab. To address concerns about the health of these species, studies on both bivalve shellfish (including clams) and Dungeness crabs examined the edible tissue concentrations of coal dust-derived contaminants (including PAHs and heavy metals). Results from lab analyses demonstrate that bivalve shellfish (including clams) do uptake PAHs found in the surrounding sediments; however, a human health risk assessment found concentrations in edible tissues were not high enough to pose a consumption risk. The assumptions used to estimate the consumption risk (i.e., total Incremental Lifetime Cancer Risk (ILCR)) are relatively conservative: The maximum observed PAH tissue concentration and a very high annual shellfish consumption rate. The total ILCR for exposure to potentially carcinogenic PAHs was estimated to be approximately on the order of magnitude lower than 1 in 100,000, the value considered by Health Canada and the B.C. Ministry of Environment to be an acceptable low risk potential. On this basis, it was concluded that PAHs in Roberts Bank edible bivalve tissues pose a negligible consumption human health risk. **Addressed in Response to IR4-33:** In its response to IR4-33, issued by the Review Panel on March 31, 2017 (CEAR Document #946), the VFPA provided results of the study. In summary: A crab hepatopancreas study was conducted at Roberts Bank to determine the concentrations of contaminants of concern in crab hepatopancreas in the LAA. In June 2017, Dungeness crab were collected from five traps placed at each of the three study locations (15 traps total). Twelve adult male crabs were harvested from each of the three sites (36 crab total). Samples were submitted under chain of custody to analytical laboratories accredited by the Canadian Association for Laboratory Accreditation (CALA) for the analysis requested. The analysis was completed in August 2017. Collectively, the results of a statistical comparison across sites indicate that the average concentrations of PCBs, coal indicator elements, arsenic compounds, and PAHs measured in hepatopancreas from crab collected from the RBT2 and ITP sites are not statistically higher than those measured in crab from the Canoe Passage reference site. This suggests that existing sediment and water quality in and around the existing terminal and proposed RBT2 terminal are not contributing to contaminant concentrations in crab hepatopancreas that are higher than levels found in crab hepatopancreas from the Canoe Passage reference site. **Addressed in Responses to IR4-33 and IR4-34:** Further information concerning the VFPA's investigations into 'blackened' crabs is provided in the VFPA's response to IR4-34. In summary, black lesions were observed on four of the five crabs collected by Indigenous harvesters. The black lesions were concluded to be consistent with chitinolytic shell disease, generically referred to as 'shell disease', a condition common to crab and other crustaceans. This disease is caused by a bacterial or fungal infection of an area where the outer layer of the shell has been previously damaged. Shell disease has not been	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 27.0 Human Health 27.5.4 Exposure to Shellfish Contamination Appendix 27-C Shellfish Harvesting Potential and Contaminant-related Consumption Risks at Roberts Bank **Information Requests** Response to Sufficiency Information Request #33 (IR4-33 of CEAR Document #946) Response to Sufficiency Information Request #34 (IR4-34 of CEAR Document #946)

				linked to contamination. The disease is not specific to the Roberts Bank area and is present across the Pacific Northwest, including Alaska and B.C. and in Atlantic Canada. In its response to IR4-33, issued by the Review Panel on March 31, 2017 (CEAR Document #1078), the VFPA provided results of the study. In summary: A crab hepatopancreas study was conducted at Roberts Bank to determine the concentrations of contaminants of concern in crab hepatopancreas in the LAA. In June 2017, Dungeness crab were collected from five traps placed at each of the three study locations (15 traps total). Twelve adult male crabs were harvested from each of the three sites (36 crab total). Samples were submitted under chain of custody to analytical laboratories accredited by the Canadian Association for Laboratory Accreditation (CALA) for the analysis requested. The analysis was completed in August 2017. Collectively, the results of a statistical comparison across sites indicate that the average concentrations of PCBs, coal indicator elements, arsenic compounds, and PAHs measured in hepatopancreas from crab collected from the RBT2 and ITP sites are not statistically higher than those measured in crab from the Canoe Passage reference site. This suggests that existing sediment and water quality in and around the existing terminal and proposed RBT2 terminal are not contributing to contaminant concentrations in crab hepatopancreas that are higher than levels found in crab hepatopancreas from the Canoe Passage reference site	
LCFN -10.2	Concerned about the over-harvest of clams by non-Indigenous people.	10-Dec-2014, Health & Aboriginal Rights Workshop - Lake Cowichan First Nation / Lyackson First Nation	**10-Dec-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#109):** Regulation and management of these fisheries occurs through the *Fisheries Act*, and is enforced by DFO.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries 16.5 Existing Conditions 16.6 Future Conditions with the Project
LCFN -10.3	Stated that they are working to repair clam gardens for use by the community. Concerned that marine shipping activities will harm this effort.	23-Jul-2015, Meeting with Lake Cowichan First Nation and Lyackson First Nation	**23-Jul-2015, Meeting:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in MSA Section 7.2:** As noted in MSA Section 7.2, an assessment of the wave environment was conducted to determine potential changes from vessel transits associated with the Project on wake-generated waves. Ship wake that is less than 10 cm in height is considered to be well within the range of natural conditions. **Addressed in MSA Appendix 5-B (#35):** The assessment of marine fish and fish habitat (MSA Section 8.1) includes consideration of potential effects on marine invertebrates, including bivalve shellfish. As noted in MSA Section 8.1.6.1, available data suggest that predicted wake wave heights arriving at shorelines within the LAA are well within the range of natural wave conditions, and are not distinguishable from the spectrum of wind-generated waves, except in non-calm conditions. Therefore, regardless of increased frequency of wake-related waves, any disturbance to marine fish and fish habitat will not be distinguishable from existing conditions and, consequently, is considered to be negligible.	**MSA** 7.2 Wave Environment 8.1 Marine Fish and Fish Habitat

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LCFN-11.1	Referred to the Eastern Pacific Humpback Whale being representative of other species, and expressed particular concern about the grey whale. Noted grey whales have been observed in Boundary Bay and on the east side of Valdes Island.	30-Apr-2014, Meeting with Lake Cowichan First Nation and Lyackson First Nation	**30-Apr-2014, Meeting:** Responded that no baleen whales were observed by the VFPA. All the baleen whales occur sporadically in the inside waters (not out by buoy J). They do occur, but it is not fairly common, and that includes the grey whale. **08-Oct-2014, Workshop:** The topic of marine mammals and potential effects from the Project was discussed at Preliminary EIS Results Workshop #2. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#87):** The EIS describes the models used to support the assessment of potential effects on marine mammals, and discusses uncertainty and level of confidence in the effect predictions. The marine mammal sub-component, baleen whales, including grey whale, are represented by humpback whales in the marine mammals' assessment. While the scope of the Project, as set out in the *EIS Guidelines*, includes vessel traffic within VFPA jurisdiction, the scope of assessment is not limited to VFPA jurisdiction. The EIS provides an assessment of potential Project-related effects to the maximum spatial extent of where they are expected to occur. The LAA encompasses the area in which Project-related effects (direct or indirect) to marine mammals could potentially occur. This boundary was established based on the zone of audibility for all representative species from modelled underwater noise from Project construction and operation. **Addressed in MSA Appendix 5-B (#47):** The assessment of potential effects on marine mammals (MSA Section 8.2) includes consideration of grey whales, as included in the sub-component baleen whales, and represented by humpback whales. **Additional information provided by the VFPA:** As noted in MSA Section 8.2, overall Potential effects on marine mammals related to Project-associated vessel transit activities include behavioural disturbance and acoustic masking due to changes to the acoustic environment and physical disturbance from vessel strikes. These effects are expected to be not significant for marine mammals. Incremental marine shipping associated with the Project is not anticipated to have an adverse effect on either SRKWs or North Pacific humpback whale critical habitat features when needed for life functions, or on the survival or recovery of SRKWs, North Pacific humpback whales, or Steller sea lions. Cumulative effects are expected not to be significant for seals, sea lions, baleen whales, and toothed whales other than SRKW. The assessment concludes that since past activities and projects have had a significant adverse effect on SRKW, Project-associated vessel activities in combination with existing and future vessel activity are expected to result in a significant cumulative effect to marine mammals.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 14.0 Marine Mammals Table 14-7 Marine Mammal Modelling Studies Contributing to Project-related Predictions 14.1 Component Overview and Regulatory Setting 14.2 Selection of Marine Mammals Valued Component 14.3 Assessment Boundaries 14.5 Existing Conditions Figure 14-1 Local and Regional Assessment Areas for Southern Resident Killer Whale Figure 14-2 Local and Regional Assessment Areas for Humpback Whales and Steller Sea Lions **MSA** Appendix 5-B Aboriginal Issues and Interests 8.2 Marine Mammals 8.2.1 Component Overview 8.2.6.3 Potential Effect #2 – Physical Disturbance from Vessel Strikes 8.2.7.2 Mitigation – Vessel Strikes 8.2.8.2 Residual Effect #2 – Physical Disturbance from Vessel Strikes 8.2.8.4 Summary of Residual Effects and Significance 8.2.9 Cumulative Effects Assessment
LCFN-11.2	Concerned about marine mammals being injured by vessel propellers.	10-Dec-2014, Health & Aboriginal Rights Workshop - Lake Cowichan First Nation / Lyackson First Nation	**10-Dec-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **09-Nov-2015, Letter from the VFPA:**	**Addressed in EIS Appendix 7.2-B (#89):** The assessment considers the potential effects on marine mammals of marine vessel traffic associated with Project construction and operation, including the potential for physical disturbance due to a Project-related vessel strike. As described in the EIS, as a result of mitigation measures during construction and operation, no detectable or measurable residual adverse effects from vessel strikes are predicted for marine mammals. The marine mammal assessment considers the potential for cumulative effects with respect to the potential residual effect (i.e., increased underwater noise produced by container ships and support tugs during Project operation), in combination with other projects and activities within the regional assessment area, including underwater noise from incremental marine vessel traffic outside VFPA jurisdiction. **Addressed in MSA Appendix 5-B (#44):** The assessment of marine mammals (MSA Section 8.2) includes consideration of potential effects on whales, including vessel strikes by Project-associated vessels. Overall, the	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 14.0 Marine Mammals 14.6 Future Conditions with the Project 14.6.2 Potential Effects of the Project on Southern Resident Killer Whales 14.6.3 Potential Effects of the Project on North Pacific Humpback Whale 14.6.4 Potential Effects of the Project on Steller Sea Lions

LCFN-11.3	Requested completeness information on 'resident herring stock analysis and impacts of the project on predator prey scope'. Concerned about the impact of the BC Ferries and VFPA causeways on the herring population. Indicated that the VFPA's scientists have not responded sufficiently to Lake Cowichan First Nation's concerns related to herring and the SRKWs' diet, nor have they responded to concerns about the possibility of resident versus migratory herring. Suggested that herring are part of the SRKWs' diet but herring populations have fled the region due to their sensitivity to the noise generated by BC Ferries and the VFPA's causeways. Commented herring are very important to	15-Jun-2015, Letter to the CEA Agency (CEAR Document #257) 23-Jul-2015, Meeting with Lake Cowichan First Nation and Lyackson First Nation 12-Nov-2015, Meeting with Administrative Staff 05-Jun-2017, Meeting with Lake Cowichan First Nation and Lyackson First Nation 15-Nov-2017, Letter to Panel (CEAR Document #1101)	**23-Jul-2015, Meeting:** Recorded comment for consideration by the Project team. **13-Oct-2015, Letter from the CEA Agency (CEAR Document #307):** *"The Agency has requested additional information on some of these items in its letter of July 31, 2015 to [the VFPA] (pages 2-5, #6, 10 and 11).* *The Agency did not request additional information regarding herring since there is already information provided in the EIS. The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."* **12-Nov-2015, Meeting:** Responded it is understood that Chinook feed on herring and that link is considered in the EIS ecosystem modelling. In IR-7.31.15-06, there are eight or nine sub-questions and an overview of the model. Information in the EIS is considered complete; results show herring will not be affected by the Project. That observation is based on a number of areas, marine mammal experts, empirical modelling, and professional judgement. SRKW feed primarily on salmon. Herring may form a small	**Addressed in EIS Section 13.0:** As noted in EIS Section 13.0, Pacific herring was included in the assessment as a representative species under the forage fish sub-component. EIS Section 13.5.3.3 discusses life history requirements, use of Roberts Bank, and the status and limiting factors of Pacific herring specifically. As a focal species, the Roberts Bank ecosystem model (described in EIS Section 10.0) specifically modelled literature-derived estimates for herring biomass, production, consumption, and trophic relationships. EIS Section 13.0 discusses potential Project effects to fish and fish habitat. Overall, marine fish are expected to experience a minor decrease in productivity in the future with the Project. Minor decreases in productivity are anticipated during the construction and operation phases for all marine fish sub-components, with the exceptions of negligible changes in productivity for certain species, including adult Chinook and chum salmon (representative species for sockeye and other Pacific salmon species) and lingcod, and an increase in productivity for shiner perch during the operation phase. Productivity decreases can be partially mitigated through the implementation of EMPs and the creation of habitat. Residual effects are anticipated for flatfish and forage fish as a result of permanent loss of subtidal sand habitat associated with the terminal footprint and disturbance from underwater noise. The assessment concludes there are no significant adverse effects from the Project, as marine fish productivity or long-term integrity would not be compromised. The Project is not expected to result in measurable incremental adverse cumulative effects to marine fish. **Addressed in EIS Appendix 7.2-B (#81):** Pacific herring is considered as a representative species in the forage fish sub-component of the marine fish assessment, as presented in the EIS. Qualitative and empirical evidence indicates that there will be minor decreases in forage fish productive potential driven by loss of subtidal sand habitat and disturbance of Pacific herring from underwater noise. Pacific herring are expected to experience a short-term decrease in productive potential (i.e., -2%) due to direct mortality from construction activities (i.e., entrainment) and minor acoustic effects (if either vibratory or impact pile driving is used),	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 9.8 Underwater Noise 10.0 Biophysical Setting 10.3 Overview of Assessing Ecosystem Productivity 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component 13.2.1 Sub-components 13.4.1 Information Sources, Desktop and Field Studies 13.5.3 Existing Conditions, Forage Fish 13.5.3.3 Pacific Herring Based on Weight of Evidence 14.0 Marine Mammals 14.5.1.4 Southern Resident Killer Whale Life Functions and Critical Habitat Features 14.9 Determination of Significance of Residual Adverse Effects **MSA** 8.1 Marine Fish and Fish Habitat **Information Requests** Response to Completeness Information Request #6 (IR-7.31.15-06 of CEAR Document #314)

	SRKW at different times of the year, based on first-hand knowledge; was critical that the assessment conclusion is not based on first-hand knowledge. Affirmed Lake Cowichan First Nation understanding that SRKW eat herring, or at least that they used to eat herring until they disappeared and now eat Chinook salmon. Asked why SRKW no longer eat herring. Stated that although the EIS discusses herring in a general sense, it does not capture or assess it specifically to effects relative to Species at Risk – SRKW – or predator-prey interactions in that specific fish-based food chain. Concerned that the Project will adversely impact the availability of herring and salmon for SRKW. Concerned that they are already adversely impacted by noise and the Project will increase the amount of noise. Indicated this is a concern they would raise at the Panel Hearings.		part of their diet, but effects are negligible. **10-Dec-2014, Health & Aboriginal Rights Workshop - Lake Cowichan First Nation / Lyackson First Nation:** Responded to previous concerns that there are underwater noise specialists involved in RBT2 to assess effects on marine creatures. A separate underwater noise study is underway. Field studies were conducted on herring and information is available on their use of the area; the effect to herring was evaluated. The Project is anticipated to be beneficial to herring in general, largely because eelgrass beds are increasing and also some predator-prey relationships may change. For example, there may be less species feeding herring. A negative residual effect on herring is not anticipated. **26-Jan-2015, Email from the VFPA:** The concern about resident herring stocks has been addressed in the EIS and the required studies have been undertaken on the species. Given the work has been undertaken, the VFPA will not require additional studies to be done or data to be collected by [Q'ul-Lhanumutsun Aquatic Resources Society] QARS. In terms of sharing the information collected to date on herring, the VFPA will be providing Lake Cowichan First Nation with the EIS upon its submission and, upon your review, should you wish to meet specifically on this, the VFPA would be happy to do so. **05-Jun-2017, Meeting:** Undertook to provide a response as to why SRKW are not eating herring anymore. Responded to previous concerns that further studies were recently done on herring and none were found in the vicinity of the Project.	and long-term minor decreases due to reduction in the availability and quality of subtidal and intertidal sand habitat. **Addressed in EIS Appendix 7.2-B (#92):** Project-related adverse residual effects to SRKWs (and all toothed whales) are expected to be not significant. The Project contribution of effects above existing conditions is very small and is not anticipated to adversely affect individuals or affect critical habitat features (acoustic environment, the availability of prey, and water and sediment quality) when needed by SRKWs for their life functions of foraging, mating, resting, or socialising. Destruction of SRKW critical habitat from Project construction and operation is not anticipated, and the Project will not limit the survival or recovery of SRKWs. Cumulative effects to baleen whales and seals and sea lions are expected to be not significant. However, due to their Endangered status and lack of recovery of the population, the VFPA has assumed that past activities and projects, including those described in the recovery strategy issued by DFO, have had a significant adverse effect on SRKWs. Therefore, the Project, in combination with past projects and activities that have been carried out, and certain and reasonably foreseeable projects that will be carried out, will result in a continued significant cumulative effect to SRKWs. **Addressed in MSA Section 8.1:** MSA Section 8.1 provides an assessment of potential effects of shipping associated with the Project, with Pacific herring selected as a sub-component. Potential effects of vessel wake-generated waves on marine fish and fish habitat were characterised as negligible, because only 2% of coastline in the LAA is within the wake-related zone of influence, and because wake-generated wave heights at shorelines are predicted to be well within the range of natural wave conditions. Fish and fish habitat are already adapted to the natural conditions; therefore, any wake-related influences would not be distinguishable from existing conditions. Similarly, potential effects of underwater noise were also considered to be negligible because noise associated with Project-associated marine vessel activity and future cumulative shipping activities would not exceed injury thresholds for fish species or the Pacific salmon species behavioural threshold. Further, while noise-induced behavioural changes are possible for Pacific herring, potential effects would be localised to within 20 metres of a container ship and of short duration (as the ship passes by) and are therefore not anticipated to affect the integrity of populations within the local assessment area. **Addressed in EIS Section 14.5.1:** As noted in EIS Section 14.5.1, recent science suggests Chinook salmon comprise over 70% of the SRKW's annual diet and 80% to 90% of their summer (July to August) diet. Annual consumption of Chinook salmon is supplemented 15% by other salmonids (i.e., 10% chum, 5% coho), and 15% by groundfish (i.e., 3% halibut, 3% sablefish, 3% lingcod, 3% dover sole, 3% gonatid squid). **Additional information provided by the VFPA:** The VFPA cannot confirm that herring were ever a significant component of the SRKW's diet and therefore cannot speculate on why they are currently not a part of their current diet.	Response to Completeness Information Request #10 (IR-7.31.15-10 of CEAR Document #314) Response to Completeness Information Request #11 (IR-7.31.15-11 of CEAR Document #314)
LCFN-11.4	Concerned that the SRKW data does not accurately describe	28-Oct-2014, Preliminary EIS Results	**28-Oct-2014, Workshop:** Stated that the VFPA takes into account a lot of sightings, whale	**Addressed in EIS Section 14.4:** Numerous literature and data sources were consulted for information on marine mammals, including the following:	**EIS** 14.0 Marine Mammals

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	where whales are observed. Stated that SRKW are seen regularly in the area traversed by the ferries to/from Nanaimo, which is not reflected on the density map. Suggested referring to a new technology that has been developed for finding whales to avoid and reduce vessel strikes, particularly at night. Suggested considering PLOS (Camera Thermal detection) One whale monitoring technology in the assessment, for mitigation from underwater noise impacts, as referenced in the following article: http://www.plosone.org/article/info%3Adoi%2F10.1371%2Fjournal.pone.0071217 Asked how the information Lake Cowichan First Nation provided to the VFPA related to new underwater noise technology was considered in the assessment.	Workshop #3 - Lake Cowichan First Nation 29-Oct-2014, Email 10-Dec-2014, Health & Aboriginal Rights Workshop – Lake Cowichan First Nation / Lyackson First Nation 05-Jun-2017, Meeting with Lake Cowichan First Nation and Lyackson First Nation	watching, from ferries; basically, anyone who is a citizen of B.C. can call in a sighting. During the Technical Advisory Group (TAG) process, the TAG concluded that this is the best/biggest data set available on killer whales. Stated that using this type of information is not going to be perfect, because there are more people in certain areas compared to others, but this is the best available current data source with thousands of data points to understand how animals are using a broad area. This is a really good data set, but it does have limitations. Stated that studying marine mammals is very challenging. They are underwater most of the time. Figuring out where they are is not always easy. Using hydrophones can be a challenge, and one needs to understand the distribution over a very large area. Stated that using the technologies that Lyackson First Nation is referring to is actually pretty tricky because they can only hear so far. Once the whale is so far away from the microphone, it cannot be picked up. Detecting marine mammals is always a challenge and the VFPA decided to go with the input of our experts. They felt that this was the biggest, most robust dataset that was available, and based on their recommendation this what we used; it is inclusive of a lot of information over quite a large area. **10-Dec-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Section 14.0 Marine Mammals. **05-Jun-2017, Meeting:** Undertook to get back to Lake Cowichan First Nation with a detailed response. [See "Additional information provided by the VFPA" in the next column.]	• Publicly available Indigenous traditional knowledge (LGL Limited and Tsawwassen Fisheries 2012, 2013), workshops with Indigenous groups, and Indigenous traditional knowledge obtained from Project-specific studies related to Current Use (described in EIS Section 32.0); • Marine mammals in the Roberts Bank area have been studied for over three decades. Previous studies that are considered relevant in this assessment include books, academic journals, consultant technical reports, government technical reports, and other scientific literature, which reflect this growing body of knowledge; • Previous environmental assessments and monitoring reports (e.g., Deltaport Third Berth Project and ambient noise measurements (Stantec 2010): underwater noise predictive modelling study to determine the extent of the area of disturbance for SRKWs in the vicinity of the vibro-densification and dredging activities (Jacques Whitford AXYS and JASCO Research Ltd. 2007a and 2007b, Jacques Whitford AXYS et al. 2007); and surveys for marine mammals conducted before and during construction from 2003 to 2008 (Triton Environmental Consultants Ltd. 2004, Stantec 2010); and • Databases (e.g., B.C. Conservation Data Centre, Committee on the Status of Endangered Wildlife in Canada (COSEWIC) Wildlife Species Database, Species at Risk Public Registry, BC Cetacean Sightings Network, and OM Sighting Network). The VFPA also initiated a Technical Advisory Group process in 2011 to gather input from experts on SRKWs to address known data gaps. **Additional Information provided by the VFPA:** The Technical Advisory Group, including DFO, advised that the BC Cetacean Sighting Network Data was the best large long-term dataset to determine the occurrence of SRKW in the Salish Sea. During the development of EIS, the VFPA also deployed a hydrophone at the proposed terminal site to detect SRKW when they were present in the Project area, 24 hours a day, in order to supplement the sighting network data. The VFPA has committed to conducting mitigation measures during the construction period to protect SRKW from acoustic disturbance, including trained marine mammal observers, underwater noise monitoring, and detection of SRKW with hydrophones. Technologies, such as thermal imaging described above, are being explored by the VFPA as a potential mitigation measure during periods of darkness and low visibility; however, the ability of these technologies to detect killer whales is not well understood. The VFPA is committed to continue to explore new technologies to mitigate potential underwater noise disturbance during the construction period. **Further Information provided in the Response to IR4-10:** In 2016, the Enhancing Cetacean Habitat and Observation (ECHO) Program conducted a desktop study identifying three quiet ship classifications and three propeller technologies shown to reduce underwater noise in support of new criteria for the EcoAction Program. Effective January 1, 2017, the EcoAction Program includes new incentive criteria to provide harbour due rate discounts for quieter ships (i.e., ship classification society quiet vessel notations, cavitation/wake flow reduction technologies), making Canada the first country in the world, and Port of Vancouver the first port, with a marine underwater noise reduction incentive. Since the VFPA launched its new EcoAction underwater noise reduction criteria in 2017, 12 vessels took actions to reduce their underwater noise levels and received a bronze level incentive resulting in reduced harbour due rates. As it relates to RBT2, container ships calling on RBT2 that qualify under the EcoAction Program by meeting incentive criteria for reducing underwater noise levels, informed by ECHO initiatives, will reduce potential effects to at-risk whales. These reductions in underwater noise would occur in the southern coast of B.C. due to both marine shipping associated with the Project along shipping lanes, and when container ships are calling at RBT2.	14.4 Information Sources **Information Requests** Response to Sufficiency Information Request #10 (IR4-10 of CEAR Document #1051)

LCFN-11.5	Stated that Lyackson and Lake Cowichan are hoping to hunt seals in the future, and are interested in protecting the ability to undertake this activity.	23-Jul-2015, Meeting with Lake Cowichan First Nation and Lyackson First Nation	**23-Jul-2015, Meeting:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in MSA Appendix 5-B (#81):** Concern is noted. The VFPA acknowledges that reported Current Use in a given area does not necessarily reflect past levels of use or desired future use by Indigenous groups, and this is reflected in the assessment wherever relevant as indicated by an Indigenous group. The assessment of potential adverse effects on Aboriginal and treaty rights is primarily based on the results of the Current Use analysis and effects assessment, as well as the results of the Indigenous group consultation undertaken for the Project. The assessment of Current Use does not limit the assessment of Aboriginal and treaty rights. The assessment of rights includes all Aboriginal and treaty rights, regardless of whether they are being currently exercised. **Addressed in EIS Section 32.2.6.2:** The Project is not expected to affect the Current Use of marine mammals for harvesting purposes, which, based on information reviewed, is not presently occurring. The Project is also not expected to affect existing ceremonial uses related to this resource. **Addressed in Response to IR10-26:** The VFPA's response to IR10-26, as requested by the Review Panel, discusses potential effects of the proposed Project on the reasonably foreseeable future Current Use activities that have been identified by Indigenous groups.	**MSA** Appendix 5-B Aboriginal Issues and Interests 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4 Existing Conditions 9.5.11 Potential Adverse Impacts on Asserted or Established Aboriginal and Treaty Rights 14.0 Marine Mammals 32.2.6.2 Potential Effect 2: Changes in Availability of Preferred Current Use Resources **Information Requests** Response to Sufficiency Information Request #26 (IR10-26)
LCFN-11.6	Concerned with cumulative effects of increased marine shipping from multiple projects and potential impacts to Steller sea lions	23-Jul-2015, Meeting with Lake Cowichan First Nation and Lyackson First Nation	**23-Jul-2015, Meeting:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#89):** The assessment considers the potential effects on marine mammals of marine vessel traffic associated with Project construction and operation, including the potential for physical disturbance due to a Project-related vessel strike. As described in the EIS, as a result of mitigation measures during construction and operation, no detectable or measurable residual adverse effects from vessel strikes are predicted for marine mammals. The marine mammal assessment considers the potential for cumulative effects with respect to the potential residual effect (i.e., increased underwater noise produced by container ships and support tugs during Project operation), in combination with other projects and activities within the regional assessment area, including underwater noise from incremental marine vessel traffic outside VFPA jurisdiction. Cumulative effects to baleen whales and seals and sea lions are expected to be not significant. **Addressed in MSA Appendix 5-B (#23):** The approach to the cumulative effects assessment is provided in MSA Section 6.0. Cumulative effects are expected to be not significant for seals, sea lions, baleen whales, and toothed whales, other than SRKWs. The VFPA has assumed that past activities and projects, including those described in the recovery strategy issued by DFO, have had a significant adverse effect on SRKWs. As such, Project-associated vessel activity, in combination with existing and future vessel activity, is expected to continue to result in a significant cumulative effect to SRKWs.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 14.0 Marine Mammals 14.10 Cumulative Effects Assessment **MSA** Appendix 5-B Aboriginal Issues and Interests 8.2 Marine Mammals 8.2.9.1 Cumulative Effect #1 – Behavioural Effects Due to Underwater Noise 8.2.9.2 Mitigation Measures for Cumulative Effects 8.2.9.3 Assessment of Residual Cumulative Effects and Significance Determination
LCFN-11.7	Stated that a basking shark and grey whale have been sighted off the eastern shore of Valdes Island, and should be included in the assessment.	27-May-2014, Technical Working Group Meeting #3 23-Jul-2015, Meeting with Lyackson First Nation and Lake Cowichan First Nation	**27-May-2014, Meeting:** Responded that with respect to the potential basking shark sighting, we understand this to be a rare sighting and based on this input are looking at available information on basking sharks. Though the VFPA is not currently considering shark species as a VC or focal species in the environmental assessment we are	**Addressed in MSA Section 8.2:** An assessment of the potential environmental effects from marine shipping associated with the proposed Project on basking sharks and grey whales was completed, using humpback whales as a representative species (refer to MSA Section 8.2.6.3). Potential effects on marine mammals related to Project-associated vessel transit activities include behavioural disturbance and acoustic masking due to changes to the acoustic environment and physical disturbance from vessel strikes. These effects are expected to be not significant for marine mammals.	**EIS** Appendix 8-A Valued Component Selection Rationale **MSA** 8.1 Marine Fish and Fish Habitat 8.1.5 Existing Conditions 8.2.6.3 Potential Effect #2 – Physical Disturbance from Vessel Strikes

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			considering the potential for an interaction and potential effect to sharks. **23-Jul-2015, Meeting:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Section 8.2 Marine Mammals.		

Table 12: Marine Shipping Addendum

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LCFN -12.1	Stated that Lake Cowichan and Lyackson have no data on current use in the marine shipping area, and require additional funding and time to complete a study.	23-Jul-2015, Meeting with Lake Cowichan First Nation and Lyackson First Nation	**11-May-2015:** Offered funding of for participation in Project-related consultation activities including a marine shipping study. **19-May-2015:** Accepted funding. **23-Jul-2015, Meeting:** Explained that the VFPA's approach to Current Use is to use existing information. Stated that the VFPA is putting together profiles. Stated that the VFPA provided Lake Cowichan First Nation with the draft Current Use section already (by email on 24-Jun-2015). Stated that the Lyackson First Nation draft Current Use sections will be going out shortly. The VFPA is sharing the draft for input from Indigenous groups. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in MSA Appendix 5-B (#67):** The VFPA has engaged with each of the Indigenous groups listed in the *Updated EIS Guidelines* and provide drafts of Current Use existing conditions sections, and to request any additional Current Use information that the Indigenous group may wish to provide. The revised Current Use summary, following incorporation of any additional input from Indigenous groups is provided in the assessment of Current Use (MSA Section 9.5). The VFPA has acknowledged the challenges of participating in consultation during summer months, and has extended timelines to accommodate the provision of additional information from Indigenous groups. The VFPA has provided funding to Indigenous groups participating in consultation, and considers the amount of funding offered to be adequate and proportionate to the level of effort required by each Indigenous group to participate, given the scope of work. The VFPA increased the funding provided in some circumstances in response to specific requests. **Addressed in Section 17 of the *Updated EIS Guidelines*:** Section 17 of the *Updated EIS Guidelines* notes: "It is likely that a Tier 1 approach (Qualitative; description based on expert opinion and traditional and local knowledge) will be an appropriate level of detail in most cases. For select environmental effects and locations where there may be a higher risk of environmental effects, a Tier 2 approach (Semiquantitative; measured site-specific data and existing site information) would likely be an appropriate level of detail. To the degree possible, the proponent [the VFPA] should maximise the use of existing material that is relevant to marine shipping activities associated with the Project which is beyond proponent's care and control and within the 12 nautical mile limit of the territorial sea. Existing material may be utilized from academic studies, work of government and non-government working groups, past or ongoing environmental assessments, Aboriginal traditional knowledge reports or any other source the proponent deems appropriate for its presentation of this material" The MSA addresses the requirements of section 17 of the *Updated EIS Guidelines* regarding the environmental effects of marine shipping associated with the Project beyond the Project scope.	**MSA** 5.0 Aboriginal Groups Engagement and Consultation 5.1.2 Consultation Objectives 5.1.4 Aboriginal Groups Engagement and Consultation Methods Appendix 5-B Aboriginal Issues and Interests 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4.1 Existing Conditions, Tsawout First Nation 9.5.4.5 Existing Conditions, Malahat First Nation 9.5.4.6 Existing Conditions, Beecher Bay First Nation 9.5.4.7 Existing Conditions, Esquimalt Nation 9.5.4.9 Existing Conditions, T'Sou-ke First Nation 9.5.4.10 Existing Conditions, Pacheedaht First Nation 9.5.4.11, Existing Conditions, Dididaht First Nation 9.5.4.16 Existing Conditions, Lake Cowichan First Nation 9.5.4.17 Existing Conditions, Lyackson First Nation ***Updated Guidelines for the Preparation of an Environmental Impact Statement* (*Updated EIS Guidelines*, CEAR Document #177)**

Table 13: Marine Vegetation – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LCFN -13.1	Concerned about whether or not biomat and biofilm should be considered as a Species at Risk, given their rarity, and the lack of knowledge about them. Concerned about effects on biofilm and marsh. Interested in the relationship between biomat and biofilm and the existing causeway.	30-Apr-2014, Meeting with Lake Cowichan First Nation and Lyackson First Nation 28-Oct-2014, Preliminary EIS Results Workshop #3 10-Dec-2014, Health & Aboriginal Rights Workshop - Lake Cowichan First Nation / Lyackson First Nation	**30-Apr-2014, Meeting:** Recorded comment for consideration by the Project team. **28-Oct-2014, Workshop:** Responded that in some cases, there is a residual effect to biofilm and also not. If there is a residual effect, then we need to understand: 'is there another project or activity that would also have a similar residual effect that would occur at the same time and same place?' We have gone through the project and activity list that we understand are planned in the future, and that is not the case; there are no other projects or activities that would cause a similar effect that would occur at the same time, at same place as RBT2. **10-Dec-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **24-Apr-2017, Email from the VFPA:** The VFPA is conducting a study in April and May 2017 to assess the spatial and temporal variability of biofilm community composition at Roberts Bank. Biofilm is a thin (~2 mm), dense layer of predominantly organic substances (e.g., diatoms, bacteria, and organic detritus) found on the surface of shallow freshwater, marine, and estuarine sediments. Biofilm is known to form an important component of the western sandpiper diet at Roberts Bank during the northward migration. This study, in conjunction with past biofilm studies conducted in 2012, 2013, 2014, and 2016, will strengthen the existing understanding of biofilm community dynamics at Roberts Bank, and may inform future monitoring programs at Roberts Bank. Study Name: Biofilm – Biofilm Dynamics Study (continued from May 2016) Purpose: To assess factors influencing biofilm community dynamics at Roberts Bank. Study Area: Roberts Bank upper intertidal zones. Methods: Biologists will collect sediment samples from the Roberts Bank upper intertidal zone and analyse the samples for biofilm species composition and indicators of nutritional value to shorebirds. Abiotic parameters (temperature, salinity, and depth) will be monitored at the sampling locations during this study. Timing: This study will be conducted during daylight hours in April and May 2017.	**Addressed in EIS Appendix 7.2-B (#65):** Biofilm, a thin dense layer of microscopic photosynthetic algae and bacteria, sediment, and organic matter, is found within the upper intertidal zone and is an important food source for invertebrates, fish, and bird species (including migratory western sandpiper and dunlin). Biomat is described as microbial mat, which can take different forms and be composed of a variety of single and multi-cellular organisms, which for the purposes of the marine vegetation effects assessment, is defined as blue-green algae and associated diatoms. Biomat, located in the upper intertidal area of Roberts Bank, is a primary producer and is likely consumed by higher trophic levels. Biofilm, biomat, and intertidal marsh are considered in the effects assessment as sub-components of the marine vegetation VC. The existing conditions (including ecological function) for biomat and biofilm in the Project area and the potential effects of the Project on these marine vegetation sub-components, as well as on coastal birds, are described in the EIS. The assessment concludes that, overall, net productivity of marine vegetation is expected to increase with the Project, without mitigation, and would be further increased with the implementation of EMPs and the creation of habitat. During Project construction and operation, changes in the productivity of biofilm and biomat would be negligible (i.e., not measurable or detectable), while increases in the productivity of intertidal marsh are expected. The Project is expected to temporarily influence community composition of biofilm during freshet from terminal footprint-related changes in salinity. Biofilm community composition is expected to return to existing conditions outside of the annual freshet period. As described in the EIS, the temporary, reversible changes in the biofilm community assemblage from salinity changes during freshet are not predicted to affect shorebirds. **Addressed in Response to IR8-04:** As noted in the VFPA's response to IR8-04, biofilm sampling and analysis have been completed since the submission of the EIS. Sampling was undertaken in both 2016 and 2017. The results and analysis of the 2016 program are presented in the response. The results from the 2017 sampling program were subsequently submitted to the Panel registry and align with the 2016 results. The response provides the background and rationale for the additional studies as well as commentary on how the 2016 results compare with the findings and conclusions presented in the EIS. Two standalone reports are attached to the response as Appendices IR8-04-A and IR8-04-B. The results of the 2016 additional studies complement the findings of the EIS and adds to the overall understanding of biofilm science. In summary, the results align with the following conclusions in the EIS: • Impacts to western sandpiper have largely been avoided through the placement of the marine terminal almost six kilometres away from their main feeding areas on Roberts Bank;	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 11.0 Marine Vegetation 11.5.4 Existing Conditions, Biomat 11.5.5 Existing Conditions, Biofilm 11.6. Future Conditions with the Project 11.6.4 Potential Effect – Changes in Biofilm Assemblage Composition 15.0 Coastal Birds 15.7.2 Potential Effect – Changes in Productivity **Information Requests** Response to Sufficiency Information Request #4 (IR8-04 of CEAR Document #1110) Additional Information in Response to IR8-04 (CEAR Document #1215)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				• The availability of food at Roberts Bank with the Project in place will not be limiting for migrating western sandpiper; • Ongoing salinity monitoring continues to show that under existing conditions there is large variation in salinity across Roberts Bank due to variable Fraser River flow and tidal mixing; • Biofilm is abundant across the existing salinity gradient, found in both freshwater- and marine-influenced locations; and • The Project will not affect the availability or quality of food available to migrating western sandpiper.	
LCFN -13.2	Concerned about potential impact on marine plants, and subsequent impacts to water quality and flow. Noted Lake Cowichan First Nation community project that involved the planting of over 850 native plants on their waterfront property. Requested prioritisation of traditional plants as part of mitigation measures.	12-Aug-2014, Meeting with Lake Cowichan First Nation and Lyackson First Nation	**12-Aug-2014, Meeting:** Offered to meet with the group to provide more information about the Habitat Enhancement Program and explains the objective of getting community input into planting plants of cultural significance on the Habitat Enhancement Program sites and that this has been achieved to date. **28-Oct-2014, Preliminary EIS Results Workshop #3:** At the Preliminary EIS Results Workshop #3, the VFPA presented on marine vegetation and explained that marine vegetation is expected to experience a slight net increase in productivity—some species productivity will increase, while others decrease. The effects on productivity are not anticipated to be significant. Biofilm productivity is also not anticipated to change with RBT2, though a change in biofilm community is anticipated: short-term, reversible. Overall, no cumulative effects are anticipated. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Section 11.0 Marine Vegetation.	**Addressed in EIS Section 11.0:** Overall, net productivity of marine vegetation is expected to increase with the Project, without mitigation, and would be further increased with the implementation of EMPs and the creation of habitat. The overall productivity increase is due to sheltering of the intertidal zone shoreward of the terminal, which would optimise physical conditions for marine vegetation. During Project construction and operation, changes in productivity of eelgrass, biofilm, and biomat are predicted to be negligible (i.e., not measurable or detectable), while increases in productivity of intertidal marsh are expected. Productivity of rockweed, a macroalgae, is predicted to decrease during construction and operation. This decrease can be mitigated through the creation of on-site subtidal rock reef habitat. The Project is expected to temporarily influence community composition of biofilm during freshet from terminal footprint-related changes in salinity, but is expected to return to existing conditions outside of the annual freshet period. The assessment concludes there are no significant adverse residual effects from the Project to marine vegetation, as it would continue to maintain its existing ecological functions. The Project is not expected to result in any incremental adverse cumulative effects to marine vegetation.	**EIS** 11.0 Marine Vegetation

Table 14: Potential Accidents or Malfunctions

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LCFN -14.1	Concerned about the Project being able to withstand environmental forces such as an earthquake, and waves and liquefaction that could occur as a result of such an event.	10-Dec-2014, Health & Aboriginal Rights Workshop - Lake Cowichan First Nation / Lyackson First Nation	**10-Dec-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#214):** Potential effects related to a spill in the marine environment are addressed in EIS Section 30.0. Seismic events are considered in EIS Section 31.0. Effects of the environment on the Project related to extreme weather and weather-related events, and any subsequent effects on the environment, would be avoided or reduced through application of design criteria and implementation of standard management practices, work procedures, and mitigation measures during construction and operation. Effects of the environment on the Project related to low-probability events such as a large earthquake, a submarine landslide in the immediate vicinity of the Project, or a large tsunami, could result in irreparable damage to the Project. Effects of a catastrophic natural event or sea level rise would be widespread in the Fraser River delta and would not be unique to the Project. Measures conducted during Project construction to improve the ability of infrastructure to withstand a submarine landslide resulting from seismic activity include the dredging of soils and silts with poor seismic performance followed by vibro-densification. Due to the unpredictability and uncertainty associated with submarine landslides and tsunamis, and their expected low probability of occurrence at the Project site, measures to protect the Project during such events would be further defined in the detail design phase.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 30.0 Potential Accidents or Malfunctions 31.0 Effects of the Environment on the Project 31.4 Seismic Activity
LCFN -14.2	Noted Roberts Bank is a sensitive area; concerned about spills and accidents. Requested more information on this topic. Concerned that spills and accidents could occur due to activities related to the Project, from the container ships themselves, to on-land activities at the project site. Expressed reservation towards assurances by the VFPA that precautionary measures will be taken since other shipping accidents such as the MV Queen of the North has not been salvaged and the shipwreck still holds diesel.	03-Jul-2014, AG Valued Components Workshop #2 10-Dec-2014, Health & Aboriginal Rights Workshop - Lake Cowichan First Nation / Lyackson First Nation 15-Nov-2017, Letter to Panel (CEAR Document #1101)	**03-Jul-2014, Workshop:** Recorded comment for consideration by the Project team. **07-Oct-2014, Workshop:** Accidents and malfunctions were discussed at Preliminary EIS Results Workshop #1. **10-Dec-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#204):** Potential spills of deleterious materials (e.g., hydrocarbons) and their environmental effects are discussed in the EIS. Plausible worst-case scenarios involving a marine vessel, motor vehicle, and train accident, each assumed to result in a spill of deleterious materials, are assessed. The regulatory management framework, standard practices, and Project-specific measures to reduce the risk of accidents or malfunctions, including spills, as well as the emergency response and mitigation measures to be implemented in the event of a spill are described. Three worst-case scenarios involving hydrocarbon spills were assessed: a container ship impact incident at the terminal, a tanker truck accident on Roberts Bank Way North, and a yard locomotive derailment on the widened causeway. The assessment determined that a ship impact scenario involving a marine spill of heavy fuel oil at the terminal would result in adverse residual effects to all marine biophysical VCs, as well as marine commercial use, outdoor recreation, and land and water use. While the residual effects on SRKWs, coastal birds, and Current Use were considered significant, due to the extremely low probability of such a scenario, all residual effects were considered unlikely. Since the diesel spill in each of the land-based scenarios would occur away from the marine environment, no potential interactions with marine biophysical VCs were identified. Further, no residual adverse effects were identified with respect to socio-economic VCs, including services and infrastructure and human health. As with any activity, the potential for unplanned incidents during Project construction and operation exists. The VFPA, its tenants, contractors, operators, and intermodal partners are committed to continue to improve port-wide operational practices and procedures to ensure the safety of workers and the public, and protection of the environment. The composition and number of hazardous goods containers handled at Deltaport Terminal in 2012 was reviewed during the development of the Quantitative Risk Assessment (see Table B-4 (Appendix B) of EIS Appendix 30-A). The estimated probability and potential consequences of a range of accidents or malfunctions, including spills of deleterious materials from ships during Project construction and operation, are described in the EIS.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 30.0 Potential Accidents or Malfunctions Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment Appendix B - Tables

Table 15: Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Lands and Resources for Traditional Purposes

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LCFN-15.1	Stressed the importance of accessing traditional food, particularly for elders. Concerned that industrial development has resulted in a loss of harvesting skills and knowledge. Noted they have instituted programs for the revival of traditional and cultural practices, and actively promote the nutrition and health benefits of traditional foods.	10-Dec-2014, Health & Aboriginal Rights Workshop - Lake Cowichan First Nation / Lyackson First Nation 05-Jun-2017, Meeting with Lake Cowichan First Nation and Lyackson First Nation	**10-Dec-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **05-Jun-2017, Meeting:** Recorded comment for consideration by the Project team.	**Addressed in EIS Appendix 7.2-B (#128):** The human health assessment considered the subsistence food consumption of individual Indigenous groups, as summarised in EIS Section 32.2. This information was included in the evaluation of potential effects on food security, as well as health inequity. **Addressed in EIS Appendix 7.2-B (#183):** The Current Use assessment considers the quality of the experience of carrying out Current Use activities, which considers cultural aspects. The assessment of impacts on rights also considers cultural aspects and practices. The importance of traditional foods to culture and tradition is considered in the Current Use assessment (EIS Section 32.2). **Addressed in EIS Section 32.2:** EIS Section 32.2 examines potential Project-related and cumulative effects that are relevant to traditional food consumption and nutritional health. These potential effects are related to access to preferred locations for harvesting preferred food resources, availability of preferred food resources, and quality of preferred food resources. Based on information considered in the Current Use assessment (EIS Section 32.2), there are no anticipated residual effects to most traditional food sources, including marine vegetation, marine fish, coastal birds, marine mammals, and most marine invertebrates, including bivalve shellfish and Dungeness crab.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 27.0 Human Health 27.5.7 Food Security 27.6 Future Conditions with the Project – Potential Project-related Effects 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Land and Resources for Traditional Purposes
LCFN-15.2	Shared additional information on traditional and current use: • Lake Cowichan First Nation would engage in trade at Tl'uqtinus and then travel north to Squamish; • Roberts Bank was an area of importance for subsistence harvesting. Noted berry fields were identified as being important sources of nutrition; • Lake Cowichan First Nation would hunt marine mammals in all areas where those species range; • Elders described long-range harvests and hunts in 60 foot canoes for days and weeks at a time; and • Lake Cowichan First Nation would harvest shellfish at Roberts Bank and in the Southern Gulf Islands.	10-Dec-2014, Health & Aboriginal Rights Workshop - Lake Cowichan First Nation / Lyackson First Nation	**10-Dec-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Section 32.0 on Current Use.	**Addressed in EIS Section 32.0:** As noted in EIS Section 32.2.4.6, based on information reviewed or received to date (at the time of EIS writing), it is the VFPA's understanding that Lake Cowichan First Nation has identified the following asserted rights and related interests, in relation to the Project area: • Harvesting marine resources (marine vegetation, marine invertebrates, marine fish); and • Hunting (ducks). Key sources relied upon to describe the asserted rights and Current Use of Lake Cowichan First Nation in the vicinity of the Project were a Project-specific study, entitled *Ts'uubaasatx Traditions: Roberts Bank Marine and Terrestrial Resource Use* (Chuuchkamalthnii 2014); publicly available information pertaining to Lake Cowichan Current Use (usually presented in the context of collective HTG interests); and ongoing consultation between the VFPA and Lake Cowichan regarding the Project.	**EIS** 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2.4.6 Lake Cowichan First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LCFN-15.3	Concerned that the EIS does not account for present, future, and near-future use and occupancy on the lower Fraser River. Noted Lake Cowichan First Nation and Lyackson First Nation are seeking to have the village site at Tl'uqtinus returned to them through treaty negotiations.	10-Dec-2014, Health & Aboriginal Rights Workshop - Lake Cowichan First Nation / Lyackson First Nation	**10-Dec-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#184):** As presented in the EIS, the Project is not expected to result in adverse residual effects on Tl'uqtinus and the mouth of the Fraser River.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 8.0 Effects Assessment Methods 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes
LCFN-15.4	Concerned that the Project intrudes on the Nation's land title rights.	15-Nov-2017, Letter to Panel (CEAR Document #1101)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Section 32.3:** The Project is not predicted to adversely impact the ability of Lake Cowichan First Nation to exercise their asserted or established Aboriginal and treaty rights.	**EIS** 32.3 Potential Adverse Impacts on Aboriginal and Treaty Rights and Related Interests Analysis Table 32-7 Summary of Mitigation Measures to Address Potential Impacts on the Exercise of Aboriginal or Treaty Rights
LCFN-15.5	Concerned that the Canadian government has refused to discuss the topics of lands and opportunities on the lower mainland at the Treaty Table. Expressed that the Crown has allowed legislation, regulation, and policy to be developed that has directly infringed and adversely impacts the title, rights, and interests of Lake Cowichan First Nation.	15-Nov-2017, Letter to Panel (CEAR Document #1101)	The VFPA understands that this comment is directed to the Review Panel and is of the view that the concern is outside the scope of the environmental assessment. The VFPA has reviewed this letter and has no additional information to provide.		
LCFN-15.6	Expressed that the introduction of shipping lanes and berths in the Fraser River and international laws that supersede Canada's own legislation for rights of ways to large ships is an infringement to Lake Cowichan First Nation's ability to fish.	15-Nov-2017, Letter to Panel (CEAR Document #1101)	The VFPA understands that this comment is directed to the Review Panel and is of the view that the concern is outside of the scope of the environmental assessment. The VFPA has reviewed this letter and has no additional information to provide.		

Table 16: Project Benefits

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LCFN-16.1	Interested in a Mutual Benefits Agreement. Stated that they would send the VFPA with a list of requested Mutual Benefits Agreement items.	05-Sep-2017, Meeting with Chief and Council	**05-Sep-2017, Meeting:** Committed to provide Lake Cowichan First Nation with additional funding related to Mutual Benefits Agreement negotiations and Project consultation activities. **18-Jan-2018, Meeting:** Lake Cowichan and the VFPA began discussions on a Mutual Benefits Agreement. Discussions are ongoing. **24-Jan-2018, Letter from the VFPA:** Offered Lake Cowichan funding to support the involvement of Lake Cowichan First Nation in activities related to negotiating a Mutual Benefits Agreement for the Project. **25-Jan-2018:** Lake Cowichan signed the contribution agreement.	**Addressed in EIS Appendix 7.2-B (#215):** The VFPA proposes to assist Indigenous groups in accessing potential economic opportunities resulting from the Project, including contracting opportunities as well as construction employment opportunities. To support Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs. To support the development and implementation of plans to facilitate access to such Project-related benefits, the VFPA will continue engagement, initiated in December 2014. Opportunities for Indigenous training and employment opportunities related to the Project are described in EIS Section 32.3.3.	**EIS** Appendix 7.2-B: Aboriginal Issues and Interests 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.3.3 Mitigation Measures 34.0 Benefits to Canadians 34.2 Benefits of the Project 35.0 Effects Assessment Summaries Table 35-2 Proposed Mitigation Measures and Commitments

Table 17: Traffic / Transportation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LCFN-17.1	Concerned about increased vessel traffic and impacts to traditional forms of ocean travel.	10-Dec-2014, Health & Aboriginal Rights Workshop - Lake Cowichan First Nation / Lyackson First Nation	**10-Dec-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#206):** A quantitative risk assessment of potential accidents and malfunctions related to marine vessel traffic, including the risk of a collision between a container ship and small craft (i.e., fishing and recreational vessels), was undertaken and is described in EIS Section 30.0, as well as the Quantitative Risk Assessment (EIS Appendix 30-A). As noted in EIS Section 32.2.6.4, while the risk of an incident is very low or negligible, container ship traffic at Roberts Bank in the Strait of Georgia is expected to increase; perceptions of risk relating to safety and security while on the water will likely persist among Indigenous groups and persons plying these waters for Current Use. **Addressed in MSA Section 9.5:** MSA Section 9.5 assesses potential effects on the Current Use and potential impacts to the exercise of asserted or established Aboriginal and treaty rights that may result from marine shipping associated with the Project. Potential effects on Current Use as a result of Project-associated vessel transit activities are considered negligible before mitigation for access to preferred Current Use locations, due to Project-associated ship wake, the availability and quality of preferred Current Use resources, and the quality of the Current Use experience (i.e., cultural practices) tied to those aspects of Current Use. Residual effects on access to preferred Current Use locations due to Project-associated container ship pass-bys, and on cultural practices tied to that aspect of Current Use, are considered negligible after the implementation of mitigation. Considering the conclusions of the Current Use assessment, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the marine shipping area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location. These mitigation measures for addressing potential incremental effects on Current Use are expected to also be effective at addressing the potential incremental impact to the exercise of Aboriginal and treaty rights. No additional mitigation measures have therefore been suggested for the potential incremental impact to the exercise of Aboriginal and treaty rights. **Further Information is provided in the Response to IR7-22:** The response to IR7-22, as requested by the Review Panel, discusses the potential effects of waves generated by Project-associated vessels during calm conditions on small craft engaged in activities in open water at various points and various distances from shore throughout the marine shipping area. For all segments discussed in the MSA, vessel wakes from Project-associated vessels are not expected to introduce new navigational hazards for small-craft operators.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 30.0 Potential Accident and Malfunctions 30.4.4 Vessel Collision Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Lands and Resources for Traditional Purposes 32.2.6.4 Potential Effect 4 - Changes in Quality of Current Use Experience **MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights **Information Requests** Response to Sufficiency Information Request #22 (IR7-22 of CEAR Document #1141)

Table 17: Underwater Noise – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LCFN-17.1	Asked about the science behind underwater noise and how noise is measured and experienced underwater. Asked about the effects of underwater noise for fish and marine mammals.	15-Apr-2014, Technical Workshop Group Meeting #2 27-May-2014, Technical Workshop Group Meeting #3 06-Jun-2014, AG Valued Components Workshop #1 08-Oct-2014, Preliminary EIS Results Workshop #2 28-Oct-2014, Preliminary EIS Results Workshop #3 10-Dec-2014, Health & Aboriginal Rights Workshop – Lake Cowichan First Nation / Lyackson First Nation	**15-Apr-2014, Meeting:** Responded that while the mechanisms of sound propagation over land and over water are similar, there is less scientific knowledge about sound propagation over water in various weather conditions. For the technical report related to sound propagation over water, we reviewed literature on the topic and used computer modelling to help address concerns of Tsawwassen residents of reported higher noise levels during certain conditions. **27-May-2014, Meeting:** Stated that an assessment of underwater noise from the Project will be included in the EIS. Stated that the EIS will consider the potential effects of underwater noise associated with ship movements within the VFPA's jurisdiction and SRKW critical habitat in Canada. **06-Jun-2014, Workshop:** Recorded comment for consideration by the Project team. **08-Oct-2014, Workshop:** Described the existing conditions related to noise and vibration and anticipated future changes resulting from the Project components and activities, as well as to provide an opportunity for feedback from participants. Noted the assessment for noise and vibration is ongoing and not yet complete. **28-Oct-2014, Workshop:** Stated that explaining decibels underwater is challenging; I don't have a good example for you right now. But those levels would be characterised as ambient conditions. Confirmed that underwater noise is a potential effect to marine fish, and notes all of the marine fish sub-components are being evaluated in the context of underwater noise. **10-Dec-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#61):** The scope and methods of the underwater noise study are summarised in the EIS section, and detailed in the supporting appendix. Underwater noise considers the level of underwater sound in the marine environment. An assessment was undertaken to determine potential changes in underwater noise as a result of the Project and focused on construction and operation activities that would produce underwater noise. Modelling was undertaken to predict future underwater noise as a result of construction activities, such as dredging, pile driving, vibro-densification, and movements of support vessels, and operation activities, such as movements of container ships and tug boats associated with terminal approach and departure, and berthing and unberthing. The assessment concludes that: • Underwater noise levels during construction are predicted to be comparable on average to existing levels measured at Roberts Bank, with the exception of some periods when certain activities, such as dredging, pile-driving, vibro-densification, or construction support vessel movement, would occur. • Overall, average underwater noise from Project construction and operation activities is expected to be comparable to average existing levels of underwater noise due to existing high levels, but will at times exceed existing conditions. Underwater noise related to conservative levels of Project commercial vessel movements is predicted to increase over existing underwater noise levels for only approximately 3% of a year for vessel berthing and unberthing, and for approximately 2% of a year for vessel approach and departure. • Future cumulative increases in commercial vessel traffic in the region are expected to make a relatively small incremental contribution to overall underwater noise levels. This prediction reflects the existing high levels of vessel traffic within the study area and the already-dominant contribution of commercial vessel traffic noise to the acoustic environment. The results of the underwater noise assessment were considered in the assessments of marine fish, marine mammals, and coastal birds. An interaction between Project-related underwater noise and marine invertebrates is not anticipated, and therefore was not assessed. **Addressed in EIS Appendix 7.2-B (#90):** The assessment presented in the EIS considers the potential effects of Project-related changes in underwater noise on marine mammals. The assessment includes the potential cumulative effects on marine mammals of the Project in combination with other projects and activities, including noise from existing and incremental marine vessel traffic. Future underwater noise levels with the Project are comparable to levels currently measured at Roberts Bank and mitigation would be implemented to reduce construction-related effects; population modelling predicted no statistical difference in the effects of underwater noise on SRKW life functions and subsequent population-level effects, between existing conditions and future conditions with the Project, and future conditions with the Project in combination with future certain and foreseeable projects. Project-related adverse residual effects to marine mammals are expected to be not significant.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 9.8 Underwater Noise 9.8.2 Assessment of Purpose and Approach 9.8.6 Underwater Noise, Methods Appendix 9.8-A Construction and Terminal Activity Underwater Noise Modelling Study Technical Report Appendix 9.8-B Regional Commercial Vessel Traffic Underwater Noise Modelling Study Technical Report 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component 13.2.1 Sub-components 13.4.1 Information Sources, Desktop and Field Studies 13.5.3 Existing Conditions, Forage Fish 13.6 Future Conditions with the Project Table 13-6 Desktop and Field Studies Related to Marine Fish to Support the Assessment Table 13-10 Summary of Roberts Bank Ecosystem Model Productivity Results for Marine Fish 13.6.3 Potential Effect - Changes in Productivity Table 13-12 Marine Fish Productivity Summary (Prior to Mitigation) Based on Weight of Evidence 14.0 Marine Mammals Table 14-7 Marine Mammal Modelling Studies Contributing to Project-related Predictions 14.1 Component Overview and Regulatory Setting 14.2 Selection of Marine Mammals Valued Component 14.3 Assessment Boundaries 14.5 Existing Conditions 14.6 Future Conditions with the Project Figure 14-1 Local and Regional Assessment Areas for Southern Resident Killer Whale Figure 14-2 Local and Regional Assessment Areas for Humpback Whales and Steller Sea Lions 15.0 Coastal Birds 15.7 Future Conditions with the Project

Table 18: Visual Resources – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LCFN-18.1	Suggested beautifying the causeway: • Plantings along the causeway to compensate for the loss in marine habitat. • Incorporation of natural plants in retaining walls, like a green wall; plants to face the ocean side; utilisation of beach soil to encourage natural plant growth.	08-Oct-2014, Preliminary EIS Results Workshop #2	**08-Oct-2014, Workshop:** Noted that a causeway vegetation buffer is currently a proposed mitigation measure and undertook consideration of the suggestion as a means of mitigating changes to viewscape. Noted that a vegetation buffer was done for the Deltaport Third Berth Project with limited success and there is very shallow soil in that area. Many Deltaport Third Berth Project plantings did not take. Research has been done for RBT2 to figure out what species would thrive in that environment.	**Addressed in EIS Appendix 7.2-B (#124):** The use of a vegetation buffer along the causeway as a proposed mitigation measure for effects on daytime visual resources was excluded from further assessment after consideration of feedback received during consultation with Indigenous groups, as well as inter-disciplinary input on technical feasibility. It was concluded that a vegetation buffer would have limited, if any, effectiveness as mitigation for adverse effects on visual resources, and could result in a predation risk to shorebirds from raptors. Past experience with a vegetation buffer on the causeway have been unsuccessful due to soil conditions.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 25.0 Visual Resources 25.7 Mitigation Measures

APPENDIX IR10-01-C9

LYACKSON FIRST NATION: ISSUES, VIEWS, AND CONCERNS RELATED TO THE PROPOSED PROJECT AND MARINE SHIPPING ASSOCIATED WITH THE PROJECT

Lyackson First Nation

Table 1: Air Quality – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-1.1	Asked what the air quality impact of the Project will be on the southern Gulf Islands. Stated that Lyackson remains concerned about how the Project will contribute to the cumulative effects of reduced air quality. Stated that the Project assessment has failed to adequately capture this concern. Concerned that increased vessel traffic will result in increased air pollution.	15-Apr-2014, Technical Working Group Meeting #2 01-Nov-2016, Letter to Panel (CEAR Document #733) 04-Apr-2017, Meeting with Administrative Staff	**15-Apr-2014, Meeting:** Responded the preliminary view is that the drop in concentrations with distance is exponential and too small to differentiate from background levels at that distance (i.e., 8.1) Stated that it is anticipated that the changes in air quality will not extend beyond the local study area and therefore would not reach the Gulf Islands. The air quality assessment model outputs will provide predicted results to support this preliminary view. **08-Oct-2014, Workshop:** Air quality was discussed in detail at Preliminary EIS Results Workshop #2. Presentation stated: • Assessment approach follows conservative methodology that predicts potential worst-case changes in air quality. • Results are overstated compared to what would actually be expected to occur. • Air quality is expected to improve, or remain similar to existing conditions for most of the substances emitted. • Improvements in fuel and technology standards for ships, cargo handling equipment, locomotives, and trucks on the road will reduce emissions compared to current operations. • Emissions of climate forcing substances (e.g., greenhouse gases and black carbon) are expected to increase. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **04-Apr-2017, Meeting:** Recorded comment for consideration by the Project team.	**Addressed in EIS Appendix 7.2-B (#42):** An assessment was carried out to predict potential changes in air quality as a result of the Project. The results of the air quality assessment were used in the assessments of human health and current use of land and resources for traditional purposes (Current Use). The assessment concludes that: • Air quality will improve in the future, with or without the Project, as a result of improvements in engine technologies and the use of cleaner fuels. • Cumulative changes, incorporating the Project and other certain and reasonably foreseeable projects and activities, are predicted to be small relative to expected future ambient air quality levels. • Project construction activities are predicted to cause a small increase in concentrations of some contaminants. • Criteria air contaminant (i.e., carbon monoxide, nitrogen oxides, sulphur dioxide, particulate matter, and ground-level ozone) and trace organic contaminant (i.e., formaldehyde and other contaminants related to fuel combustion) levels are predicted to be below air quality criteria on land, with limited exceptions. • The Project is expected to have a negligible effect on future ozone levels and to increase greenhouse gas emissions (i.e., carbon dioxide, methane, and nitrous oxide). • Although Project activities would emit black carbon, black carbon is expected to decrease in the future with the Project due to equipment fleet turnover at existing Roberts Bank terminals to newer engines that meet more stringent emission standards for particulate matter. The Project is not expected to result in any significant adverse effect on human health, including from changes in air quality. During operation, it is unlikely that Project-related exposures to air emissions would result in health effects. The only residual effect associated with air quality changes would be experienced by individuals on the water near the terminal during construction due to short-term and infrequent dust generation. The benefits of existing initiatives are realised in the existing emissions monitored at local air quality stations in Metro Vancouver. Future benefits, such as improvements in fuel, are described based on their anticipated level of benefit to future air quality emissions. **Additional information provided in MSA Section 7.1:** As noted in MSA Section 7.1, an assessment was conducted to determine the potential changes to air quality from marine shipping associated with the Project. The assessment considered air emissions associated with vessel transit activities. Within the marine shipping area, ship emissions are the primary source of nitrous oxides, sulphur dioxide, and particulate matter emissions, and a relatively small source of gaseous volatile organic compound emissions. MSA Section 7.1.6 presents an assessment of cumulative air quality changes. Criteria air contaminants due to emissions from large marine vessels will be lower in 2030, with or without Project-associated vessel emissions, compared to existing conditions, due to the implementation of fuel and technology standard improvements through the North American Emission Control Area (ECA) (under the responsibility of the International Maritime Organization (IMO)). Air quality objectives and standards for nitrogen dioxide, sulphur dioxide, and fine particulate matter will not be exceeded with ship emissions in the marine shipping area under future cumulative conditions, including Project-associated vessel emissions. The emissions of these criteria air contaminants from Project-associated ships are expected to represent less than 8% of	**Environmental Impact Statement (EIS, CEAR Document #181)** Appendix 7.2-B Aboriginal Issues and Interests 9.0 Physical Setting 9.2 Air Quality 9.2.5 Methods Appendix 9.2-A Air Quality Study Main Report Appendix A - Emissions Inventory Appendix B – Existing Air Quality Appendix C - Air Dispersion Modelling Appendix F - Ships Underway 9.2.6 Existing Conditions Table 9.2-4 Air Quality Criteria for Criteria Air Contaminants Table 9.2-5 Air Quality Criteria for Toxic Organic Contaminants 9.2.7 Air Quality Existing Conditions 9.2.8 Future Conditions with the Project 9.2.9 Future Conditions with the Project and Other Projects and Activities Appendix 9.2-A Air Quality Study Appendix H – Westshore Coal Dust Assessment **Marine Shipping Addendum (MSA, CEAR Document #316)** 7.1 Air Quality 7.1.6 Cumulative Air Quality Change Assessment

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				the total annual cumulative emissions from large marine vessels along the vessel routes, and approximately 6% of total annual cumulative greenhouse gas emissions. Trace particulate organic matter emissions (the organic fraction of particulate matter emissions) are projected to decrease substantially compared to existing conditions, due to emission reduction requirements set out for ships operating within the North American ECA. This assessment predicted that emissions of other trace gaseous volatile organic gas compounds will increase by more than 20% with large marine vessel activity in the future, although some trace organics may decrease with the implementation of the North American ECA. Vessel traffic associated with the Project is expected to represent eight of the 20 percentage points of this increase. While there are no criteria for diesel particulate matter in Canada, concentrations within the marine shipping area are currently above acceptable source impact limits for Washington State and are projected to remain above this limit in the future. The levels of other trace organics are projected to be below air quality objectives and limits in the future.	
LFN-1.2	Asked about air quality regulations for the new equipment.	08-Oct-2014, Preliminary EIS Results Workshop #2	**08-Oct-2014, Workshop:** Responded that manufacturers have to meet new standards or regulations. Any new locomotive or truck (for example) that is purchased will have to meet those standards. New vessels have to meet the IMO standards to NO_2 emissions. The fuel requirement for vessels is part of the ECA, which comes into effect January 1, 2015. Container ships and bulk ships tend to last about 20 and 25 years, respectively. Equipment on the terminal gradually gets replaced as well, with new equipment having to meet whatever the current standards are. For example, there are three relatively old Stacker-Reclaimers currently in use at Westshore are expected to be replaced by 2020-2025. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#41):** The Project design places priority on the safe and efficient handling of containers and provision of a functional interface with intermodal carriers, consistent with the current design of other such terminals worldwide. Project-related changes in greenhouse gases and climate-forcing particulate matter (e.g., black carbon) are assessed in the air quality assessment. The carbon footprint for the Project will be reduced through the use of electrically-powered equipment at the terminal and shore power for berthed vessels. Shore power is a part of the VFPA's overall Air Action Program*, which also includes projects that minimise emissions of trucks, cargo handling equipment, and trains. The VFPA has already provided shore power connections for cruise ships at Canada Place and is actively working on increasing the use of shore power to include cargo ships. The Project has been designed to include connections for vessel shore power. Shore power connections will enable ships to be plugged into electrical power sources at the wharf so that their diesel engines and associated electrical generators can be turned off, thus reducing air and noise emissions. Electrical services for tug shore power connections will be extended, or added from the existing tug basin services. Mitigation measures related to air quality are included in EIS Section 27.0, and in EIS Section 35.0. *The Air Action program was renamed to Air, Energy and Climate Action. **Additional information provided by the VFPA:** The VFPA leads a suite of initiatives that reduce air emissions associated with key port activities: ships, trucks, cargo-handling equipment, and terminal activities. The VFPA's approach is to collaboratively work with industry and stakeholders in each sector to develop programs that respond to their unique operating context and meet industry leading environmental objectives. Key initiatives include the EcoAction Program, the Northwest Ports Clean Air Strategy, Air Emissions Inventories, Energy Action Initiative, and environmental requirements through the Truck Licensing Program. Information regarding the VFPA's Air, Energy and Climate Action initiatives can be found at: https://www.portvancouver.com/environment/air-energy-climate-action/	**EIS:** 4.0 Project Description 4.2.1 Project Component Details, Marine Terminal 4.4.2 Project Activities, Operation-phase Activities Appendix 7.2-B Aboriginal Issues and Interests 9.0 Physical Setting 9.2 Air Quality 9.2.8 Future Conditions with the Project 27.0 Human Health 27.7 Mitigation Measures 35.0 Effects Assessment Summaries Table 35-2 Proposed Mitigation Measures and Commitments
LFN-1.3	Asked if the North American Emission Control Area coming into effect in 2015 will result in improvements in 4-5 years' time.	08-Oct-2014, Preliminary EIS Results Workshop #2	**08-Oct-2014, Workshop:** Responded that an immediate improvement in terms of SO_2 and particulate matter is expected, because the fuel use is immediate. Explained that in 2010 the average sulphur content in fuel for ships calling in Vancouver was 2.4%, in 2012 the requirement became	**Addressed in EIS Section 9.2.5.1:** Changes associated with the North American ECA are described in the EIS. Older, higher-emitting container ships will be gradually taken out of service through normal fleet turnover and replaced by newer, lower-emitting ships that meet tighter engine emission standards as defined by the IMO for ships operating in the ECA.	**EIS** 9.2 Air Quality 9.2.5 Methods

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			1%, and as of January 1, 2015 it will be 0.1%. An immediate change is realised with fuel but there is a delayed response for the turnover of equipment (NO_2). Equipment standards are mandated/regulated on the manufacturing side, but the timing of the purchase of new equipment is at the discretion of operators. It takes a few years to build a ship, so vessels are commonly built to meet the anticipated standards for when it will come into operation. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Section 9.2 Air Quality.	The EIS accounts for changes resulting from the ECA in the prediction of changes to air quality in the operations phase.	9.2.5.1 Temporal Boundaries, Future Conditions with the Project, Operations Phase

Lyackson First Nation

Table 2: Alternative Means of Carrying out the Project

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-2.1	Stated that Lyackson does not support the rationale for more goods being imported and exported from the port; nor does Lyackson support higher manufacturing which would result in increased worldwide emissions.	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** The VFPA's mandate is to facilitate Canada's trade objectives, ensuring goods are moved safely, while protecting the environment and considering local communities. Canada is a resource-rich nation that relies on trade to support its growing population and standard of living. Canada's West Coast, including the VFPA and the Port of Prince Rupert, have experienced substantial growth in container shipping. Canadian importers and exporters of all sizes, from grain exporters in Saskatchewan to blueberry farmers in B.C., rely on the port to help sustain their businesses and support growth opportunities. All levels of government have current and future plans to capitalise on a growing global economy, which requires Canada to be prepared for the trade that will come to Canadian ports. The role of the VFPA is to ensure the port is ready for Canada's trading future. As we plan, we must consider how to provide needed port facilities within a growing metropolitan area. We have also consulted with local governments, Indigenous groups, and residents on the ways we can grow responsibly.	**Roberts Bank Terminal 2 Project Review Panel Terms of Reference (CEAR Document #176)**

Lyackson First Nation

Table 3: Archaeological and Heritage Resources – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-3.1	Concerned that ship wake will cause erosion of shoreline; particularly related to burial grounds on the shoreline of the San Juan and Gulf islands, and within the Gulf Islands National Park. Suggested that a slow bell be introduced to help mitigate impacts.	23-Jul-2015, Meeting with Lyackson First Nation and Lake Cowichan First Nation	**23-Jul-2015, Meeting:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Section 9.4 Archaeological and Heritage Resources.	**Addressed in MSA Section 9.4.6:** The potential effects on archaeological and heritage resources from vessel transit (marine shipping) are viewed as negligible because the only physical mechanism for effect, vessel wakes, are predicted to be within the natural variation in size of wind waves and would reflect only a small percentage of the annual maximum storm wave energy. **Addressed in IR10-21:** The VFPA's response to IR10-21, as requested by the Review Panel, discusses potential project effects to sites of physical and cultural importance to Indigenous peoples. **Additional information provided by the VFPA:** The VFPA maintains a list of potential mitigation measures for marine shipping associated with the Project that are received through consultation and other means for consideration and evaluation by the appropriate federal authorities. Lyackson First Nation's suggestion has been logged. The VFPA remains open to suggestions regarding potential mitigation measures. **Addressed in IR13-19:** The VFPA's forthcoming response to IR13-19 will further discuss potential effects of shoaling on shoreline structures and sites of physical and cultural heritage importance.	**EIS** 9.4 Archaeological and Heritage Resources 9.4.5 Existing Conditions 9.4.6.1 Negligible Effect #1 – Disturbance from Vessel Wake **MSA** Appendix 5-B Aboriginal Issues and Interests **Information Requests** Sufficiency Information Request #21 (IR10-21) Sufficiency Information Request #19 (IR13-19)
LFN-3.2	Asked if there could be archaeological sites where the local assessment area (LAA) touches the shoreline.	29-Oct-2014, Preliminary EIS Results Workshop #4	**29-Oct-2014, Workshop:** Responded there are no recorded archaeological sites in the LAA. Identified the onshore and intertidal zones within the LAA along the north side of the Deltaport causeway and noted preliminary field reconnaissance was undertaken in the area. Identified the BC Ferries causeway, areas to the south and Point Roberts and explained that known archaeological sites are located there largely because the area was once an island. Explained that over the past couple thousand years sediment from Fraser River was deposited, filling in the area to the north and connecting the island to the mainland. Noted the shoreline has moved out over time as a result of this process.	**Addressed in EIS Appendix 7.2-B (#151):** The purpose of the archaeological and heritage resources assessment was to determine whether there is potential for archaeological and heritage resources to exist in the assessment area, and to determine any Project-related effects on these resources, if they are present. The assessment was supported by an Archaeology Overview Assessment, which included an ethnographic overview of the area and a review of the potential for undocumented heritage sites to exist in the LAA. The results of the archaeological and heritage resources assessment were considered in the assessment of EIS Section 32.0. The LAA included the physical footprint of the Project plus a 100 m buffer zone, as well as a zone of coastal-geomorphological influence. The regional assessment area (RAA) considered a 4 km area around the Project area. No archaeological sites were identified in the LAA, either using the B.C. Archaeology Branch's online heritage registry or through the Archaeological Overview Assessment. If archaeological or historical materials remain in the intertidal area, it is likely that they have been preserved in the sediment layers, if not affected by previous construction. The Project may affect archaeological resources, namely, fish trap stakes, if present in the Project area. Direct effects could result from Project-related construction activities, and indirect effects could result from changes to sediment deposition or erosion. Through mitigation, including excavation of test trenches prior to construction activities and the implementation of an Archaeological Monitoring and Management Plan, potential damage to archaeological resources would be avoided and the opportunity for future archaeological study would be protected. The Project is not expected to result in significant residual effects to archaeological and heritage resources. The Project is not expected to result in any incremental cumulative effects to archaeological and heritage resources. A description of the past use of the Roberts Bank area by Indigenous groups is provided in EIS Section 32.0. The presentation of information on past use of the area in the assessment of archaeological and heritage resources is tailored to those Indigenous groups whose past use is directly linked to the type of physical archaeological resources that have the potential to be present in the study area, and have the potential to be affected by the Project.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 28.0 Archaeological and Heritage Resources 28.2 Selection of Archaeological and Heritage Resources VC 28.3 Assessment Boundaries 28.4 Information Sources 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Land and Resources for Traditional Purposes **Information Requests** Sufficiency Information Request #21 (IR10-21) Sufficiency Information Request #23 (IR10-23) Sufficiency Information Request #13 (IR13-20)

				The scope or methods of the Archaeological and Heritage Resources assessment are described in the EIS. **Addressed in IR10-21:** The VFPA's response to IR10-21, as requested by the Review Panel, discusses potential project effects to sites of physical and cultural importance to Indigenous peoples. **Addressed in IR10-23:** The VFPA's response to IR10-23, as requested by the Review Panel, discusses potential loss or deterioration of archaeological sites resulting from natural and ship-wake waves greater than 10 cm. **Addressed in IR13-20:** The VFPA's forthcoming response to IR13-20 will further discuss Project-related changes to the wave environment and their potential effects on current use activities, access, and navigation.	
LFN-3.3	Commented that it would be helpful if the list of archaeological sites (slide 11) were arranged on a map as a visual aide.	29-Oct-2014, Preliminary EIS Results Workshop #4	**29-Oct-2014, Workshop:** Responded the sites are identified in the Archaeological Overview Assessment for the Project. (The draft Archaeological Overview Assessment for the Project was provided to Lyackson First Nation on 16-Dec-2013, and a revised draft was provided to Lyackson First Nation on 12-May-2014.)	**Addressed in EIS Appendix 28-A:** The archaeological sites are arranged on a map and included as Figure 1 – Study Area and Nearby Archaeological Sites in EIS Appendix 28-A.	**EIS** 28.0 Archaeological and Heritage Resources Appendix 28-A Roberts Bank Terminal 2 Technical Report, Archaeological Overview Assessment Figure 1 – Study Area and Nearby Archaeological Sties

Table 4: Coastal Birds – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-4.1	Asked what effect(s) noise has on birds.	15-Apr-2014, Technical Working Group Meeting #2 08-Oct-2014, Preliminary EIS Results Workshop #2	**15-Apr-2014, Meeting:** Responded that bird experts can be available at future working groups to answer these and any other related questions. **08-Oct-2014, Workshop:** Stated that the potential effect of noise on birds has been considered, and will be included in the EIS. Noted that coastal birds will be discussed in detail at an upcoming workshop. **29-Oct-2014, Workshop #4:** Described the results of the preliminary assessment of potential Project effects and cumulative effects on coastal birds and proposed mitigation. Requested feedback on the draft findings and proposed mitigation. Explained that noise can affect how coastal birds use their habitat in the LAA, but that these effects can be mitigated through avoidance measures (project planning and design, timing windows) and mitigation measures to address disturbance of underwater noise (bubble curtains, construction ramp-up periods) and above ground noise (construction ramp-up periods).	**Addressed in EIS Appendix 7.2-B (#96):** Existing conditions and potential effects of Project-related changes in airborne noise and underwater noise on coastal birds are considered in EIS Section 15.0. The assessments of potential Project-related changes in noise and vibration and underwater noise are included in EIS Sections 9.3 and 9.8, respectively. **Addressed in EIS Section 15.7.2.2:** Noise and other disturbance from construction or operation activities (e.g., underwater or above-ground noise, vessel movement, and increased total suspended solids) is considered as a factor affecting bird productivity. The potential effects of noise and other anthropogenic disturbances on birds include avoidance of the affected area, fright-flight responses, and physical damage of tissues and death. The EIS concludes that visual disturbance and noise from Project construction are anticipated to be minor; however, mitigation measures to reduce the effects from loud, abrupt, impulsive noise will be employed. Disturbance from operational activities are anticipated to be similar to existing conditions and likely to be negligible, as the main areas of terminal activity are in the subtidal zone, away from the areas of intense shorebird usage. The EIS concludes that the productive potential in the LAA to support shorebirds will not be compromised as a result of the Project.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 9.0 Physical Setting 9.3 Noise and Vibration 9.8 Underwater Noise 15.0 Coastal Birds 15.7.2 Future Conditions with the Project, Potential Effect – Changes to Productivity
LFN-4.2	Asked about vehicle strikes to birds, and how sound the data on vehicle strikes is, if people do not report striking birds.	29-Oct-2014, Preliminary EIS Results Workshop #4	**29-Oct-2014, Workshop:** A representative from B.C. Environmental Assessment Office (EAO) responded that there is a legal requirement in B.C. to report an incident where wildlife is killed to the Conservation Officer Service.	**Addressed in EIS Appendix 7.2-B (#99):** Vehicle collision-related mortalities are expected to be very low compared to population size and are not expected to affect the short- and long-term population viability of coastal birds, with the exception of barn owls. In the absence of mitigation, minor effects to the productive potential of the LAA to support barn owl are predicted. The VFPA will work with transportation authorities and the Canadian Wildlife Service to develop and implement measures to mitigate potential effects to barn owls from vehicle collisions.	**EIS** 4.0 Project Description 4.4.1 Project Activities, Construction-phase Activities Appendix 7.2-B Aboriginal Issues and Interests 15.0 Coastal Birds 15.7.3 Future Conditions with the Project, Potential Effect – Changes in Productivity 15.8 Mitigation Measures Table 15-12 Summary of Mitigation Measures to Address Adverse Project-related Effects on Coastal Birds 33.0 Environmental Management Program 33.3.5 Construction EMP, Light Management Plan 33.4.3 Operation EMP, Light Management Plan
LFN-4.3	Concerned about the potential effects of bird collisions with power lines as a result of the Project.	03-July-2014, Valued Components Workshop #2	**03-Jul-2014, Workshop:** Responded that there are non-buried power lines and the VFPA has done quite an extensive study to look at the effects of those power lines.	**Addressed in EIS Appendix 7.2-B (#98):** No new overhead transmission lines are required for the Project. All new electrical and communications cables required for the Project will be distributed through the site via underground ducts and conduits, as	**EIS** 4.0 Project Description

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
		08-Oct-2014, Preliminary EIS Results Workshop #2 29-Oct-2014, Preliminary EIS Results Workshop #4	Stated that the VFPA had biologists stationed along them doing flight behaviour surveys, so watching for birds crossing the power lines and noting their flight behaviours, what species, in what numbers, to get an idea of the types of birds that approach and try to hurdle over them. Stated that the VFPA also conducted weekly carcass surveys to identify the number, the species, and the chronology of bird fatalities along the causeway. Not every time was it caused by a power line, for example by predators and other things like that, so we were trying to look at sources of bird mortality and get an idea of the proportion caused by power lines. **08-Oct-2014, Workshop:** Recorded comment and noted that a presentation on coastal birds is planned for an upcoming workshop (29-Oct-2014). **29-Oct-2014, Workshop:** Responded that there are a couple of kinds of mitigation, one of them being the use of bird diverters along power lines, which makes the power lines more visible to birds, so they can be avoided. Noted that it is the VFPA's understanding that the mitigation measures (reflectors and bird diverters) are effective at minimising the effect of bird strikes. Stated that this may not eradicate the effect altogether; however, there are far fewer of them than without it.	described in the EIS. Consequently, effects on coastal birds related to collisions with power lines associated with the Project are not anticipated. The Tim Claremont bird strike study conducted at the Nanaimo Estuary by Cooper et al. (2004) and the study conducted by Hemmera (2014) to assess potential effects from overhead transmission lines and vehicles on birds followed similar methodologies, as they were both modelled after the same study conducted at the Deltaport Facility in 1994 (see Burger and Cassidy 1995). Hemmera biologists conducted studies from May 2012 to September 2013 to assess potential effects of overhead transmission wires and vehicle collisions on birds at the existing Roberts Bank terminals in Delta, B.C. The objective of the study was to determine existing effects of power lines on birds, noting that transmission lines for the Project will be buried, not installed overhead. The study report entitled Roberts Bank Terminal 2 Technical Data Report, Coastal Birds: Effects of Overhead Transmission Lines and Vehicle Traffic on Birds, is available at the following link: http://www.robertsbankterminal2.com/environmental-assessment/technical-data-reports/.	4.4.1 Project Activities, Construction-phase Activities Appendix 7.2-B Aboriginal Issues and Interests 15.0 Coastal Birds 15.5 Existing Conditions
LFN-4.4	Referred to discussion about trees along the causeway as a mitigation for the visual resources effects assessment. Recalled discussion about whether or not trees would result in an increased likelihood of bird strikes, by attracting more birds.	29-Oct-2014, Preliminary EIS Results Workshop #4	**29-Oct-2014, Workshop:** Referred to the visual resources valued component (VC) presentation at Preliminary EIS Result Workshop #2 on 08-Oct-2014 and recalled there was discussion of the potential advantages and disadvantages of planting trees along the causeway as a visual buffer. It was discussed that planting along the causeway may attract wildlife and put them at increased risk for strikes. Responded if habitat like that is built, the probability of predator species such as raptors using the area increases, which prey upon shorebirds and other species. There are some trade-offs and linkages associated with that, and that would definitely be a consideration.	**Addressed in EIS Appendix 7.2-B (#124):** The use of a vegetation buffer along the causeway as a proposed mitigation measure for effects on daytime visual resources was excluded from further assessment after consideration of feedback received during consultation with Indigenous groups, as well as inter-disciplinary input on technical feasibility. It was concluded that a vegetation buffer would have limited, if any, effectiveness as mitigation for adverse effects on visual resources, and could result in a predation risk to shorebirds from raptors. Past experiences with a vegetation buffer on the causeway have been unsuccessful due to soil conditions.	**EIS** 4.0 Project Description 4.4.1 Project Activities, Construction-phase Activities Appendix 7.2-B Aboriginal Issues and Interests 15.0 Coastal Birds 15.7.3 Future Conditions with the Project, Potential Effect – Changes in Productivity 15.8 Mitigation Measures Table 15-12 Summary of Mitigation Measures to Address Adverse Project-related Effects on Coastal Birds 33.0 Environmental Management Program 33.3.5 Construction EMP, Light Management Plan 33.4.3 Operation EMP, Light Management Plan

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-4.5	Concerned about the potential effects of lighting on birds. Concerned about the lighting at night from current development being a stressor for migratory birds. The Project is anticipated to magnify this already harmful effect. Concerned with the impact that the 24-hour lighting from the current Deltaport and Westshore Terminals has on migratory birds that rely on nesting areas along mud flats on Roberts Bank adjacent to the Project.	08-Oct-2014, Preliminary EIS Results Workshop #2 29-Oct-2014, Preliminary EIS Results Workshop #4 01-Nov-2016, Letter to Panel (CEAR Document #733)	**08-Oct-2014, Workshop:** Noted that the light assessment feeds into the effects assessments for marine fish, coastal birds, visual resources, and Current Use. Reviewed the light study purpose and approach, noting a technical study was carried out to measure current levels of light trespass and sky glow, and build a model to predict future levels. Presented slides on assessment methods and boundaries, noting points of reception (POR) locations, and classifications of measurement. Described existing conditions and expected conditions at Project commencement. **29-Oct-2014, Workshop #4:** Described the results of the preliminary assessment of potential Project effects and cumulative effects on coastal birds and proposed mitigation. Requested feedback on the draft findings and proposed mitigation. Explained that light can affect how coastal birds use their habitat in the LAA, but that these effects can be mitigated through avoidance measures (project planning and design, timing windows) and mitigation measures to address disturbance of artificial light, such as valances to minimise light trespass.	**Addressed in EIS Appendix 7.2-B: (#95):** It is recognised that nocturnal behaviour of birds varies in response to lighting conditions. A review of documented effects of both natural and artificial light on birds is provided in the EIS. The potential effects on coastal birds of changes in artificial light related to the Project are considered in the EIS. A Light Management Plan will be included in the Construction Environmental Management Plan (EMP) and the Operation EMP, to reduce artificial light-related effects on coastal birds. **Addressed in EIS Appendix 7.2-B (#45):** The potential changes in light that may be caused by the Project, and the potential effects of those changes on VCs and on Current Use are considered in the EIS. The results of the light assessment informed the assessments of marine fish, coastal birds, visual resources, and human health, and Current Use. The assessment focused on two aspects of light: • Light trespass, the amount of light that strays from its intended purpose onto neighbouring areas; and • Sky glow, the unwanted illumination of the night sky that affects the visibility of stars. The assessment concluded that: • Overall, the Project is not expected to change the general light environment of the Lower Mainland and the Gulf Islands and no measurable incremental cumulative changes related to light are expected; • Project-related lighting is expected to result in a minimal increase in light trespass levels; and • Increases in sky glow levels are expected, but are not anticipated to result in a noticeable change from existing conditions. Suggested mitigations were considered in the effects assessment. Mitigation measures to address effects on visual resources and coastal birds consist of implementation of EMPs, including Light Management Plans, for construction and operation phases. The Light Management Plans will describe measures to reduce excess lighting and sky glow, including: • Orienting lights downwards and away from residential and marine areas; • Using shielding to minimise light trespass; • Controlling light levels and limiting light use to areas where activities are occurring; • Where possible, using fixtures that emit light at wavelengths shown to minimise disorienting effects to birds; • During construction, ensuring dredge lighting system shields light from spilling outside the basic working footprint of the dredge; and • During operation, establishing a centralised lighting control system to select lighting where required. **Addressed in EIS Appendix 7.2-B (#99):** A review of documented effects of both natural and artificial light on birds is provided in the EIS. The EIS considers the potential effects of artificial light on coastal birds, including the potential for increased risk of predation on shorebirds by nocturnal raptors (i.e., owls).	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 15.0 Coastal Birds 15.7.2 Future Conditions with the Project, Potential Effect- Changes in Productivity 15.8.3 Mitigation #2 – Measures to Address Productivity Loss due to Changes in Habitat Quality 33.0 Environmental Management Program 33.3.5 Construction EMP, Light Management Plan 33.4.3 Operation EMP, Light Management Plan **MSA** 8.3 Marine Birds **Information Requests** Response to Sufficiency Information Request #2 (IR9-02)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				A Light Management Plan will be included in the Construction EMP and the Operation EMP, to reduce potential artificial light-related effects on coastal birds. **Addressed in MSA Section 8.3:** Potential effects of artificial light from shipping traffic in the marine shipping area. The MSA notes that nocturnal feeding marine birds can be attracted to artificial light sources, such as ship lighting, and that mortality is known to occur. For the LAA, no collisions with vessels have been recorded, which indicates that collisions with vessels are most likely infrequent and, if they do occur, do so on a small scale (in terms of the number of birds). **Addressed in IR9-02:** The VFPA's forthcoming response to IR9-02, as requested by the Review Panel, will further discuss mitigation measures related to artificial light for migratory and non-migratory birds and avian species.	
LFN-4.6	Noted the importance of biomat and biofilm for migratory birds, some of which are used for spiritual or cultural reasons.	30-Apr-2014, Meeting 08-Oct-2014, Preliminary EIS Results Workshop #2 10-Dec-2014, Health & Aboriginal Rights Workshop – Lyackson First Nation and Lake Cowichan First Nation	**30-Apr-2014, Meeting:** Committed to follow up with Lyackson regarding the widening of the causeway and the terminal's effect on biofilm and migratory birds. Responded that impacts to migratory birds are to be included in the EIS. **08-Oct-2014, Workshop:** Responded that the extent of the biofilm and biomat has been quantified for Roberts Bank. Stated that there is quite a bit of biofilm and biomat in the inter-causeway area. Both of them are basically a matrix of sediment particles; biomat is more of a cyanobacteria, a green algae, whereas biofilm is comprised of primary producers, smaller photosynthesising microscopic organisms that birds eat. Shared that the marine vegetation presentation will likely include a habitat map, showing the extent of biofilm and biomat, as well as present information about Project-related changes. Referred to a hyperspectral survey carried out for the marine vegetation assessment, to identify the areas where there is photosynthetic activity. **28-Oct-2014, Workshop:** Stated that biofilm productivity is not anticipated to change with RBT2. Stated that change in biofilm community is anticipated: short-term, reversible; temporary, seasonal transition of biofilm community during freshet. **29-Oct-2014, Workshop #4:** Biomat, biofilm, and migratory birds were discussed at Preliminary EIS Results Workshop #4.	**Addressed in EIS Appendix 7.2-B (#65):** The assessment addresses potential Project-related effects to biofilm and biomat, which are considered important to the Roberts Bank ecosystem. Biofilm, a thin dense layer of microscopic photosynthetic algae and bacteria, sediment, and organic matter, is found within the upper intertidal zone and is an important food source for invertebrates, fish, and bird species (including migratory western sandpiper and dunlin). Biomat is described as microbial mat, which can take different forms and be composed of a variety of single and multi-cellular organisms, which, for the purposes of the marine vegetation effects assessment, is defined as blue-green algae and associated diatoms. Biomat, located in the upper intertidal area of Roberts Bank, is a primary producer and is likely consumed by higher trophic levels. Biofilm, biomat, and intertidal marsh are considered in the effects assessment as sub-components of the marine vegetation VC. The existing conditions (including ecological function) for biomat and biofilm in the Project area and the potential effects of the Project on these marine vegetation sub-components, as well as on coastal birds, are described in the EIS. The assessment concludes that, overall, net productivity of marine vegetation is expected to increase with the Project, without mitigation, and would be further increased with the implementation of EMPs and the creation of habitat. During Project construction and operation, changes in the productivity of biofilm and biomat would be negligible (i.e., not measurable or detectable), while increases in the productivity of intertidal marsh are expected. The Project is expected to temporarily influence community composition of biofilm during freshet from terminal footprint-related changes in salinity. Biofilm community composition is expected to return to existing conditions outside of the annual freshet period. As described in the EIS, the temporary, reversible changes in the biofilm community assemblage from salinity changes during freshet are not predicted to affect shorebirds.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 11.0 Marine Vegetation 11.5.4 Existing Conditions, Biomat 11.5.5 Existing Conditions, Biofilm 11.6. Future Conditions with the Project 11.6.4 Potential Effect – Changes in Biofilm Assemblage Composition 15.0 Coastal Birds 15.7.2 Potential Effect – Changes in Productivity

			10-Dec-2014, Workshop: Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.		
LFN-4.7	Concerned about the impacts to birds as a result of the Project, including impacts to Lyackson's cultural practices that are linked to the cultural importance of birds.	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in IR10-08:** The VFPA's response to IR10-08, as requested by the Review Panel, further discusses potential changes in quality of the current use experience resulting from the proposed project.	**Information Requests** Response to Sufficiency Information Request #08 (IR10-08)
LFN-4.8	Questioned the results of the assessment given that it was conducted based on inadequate baseline data, based on assumptions, and without involving First Nations in the significance decisions. Stated that it is not clear how Lyackson's input was considered in the assessment. Stated that proposed mitigation measures and plans have not been developed in consultation with First Nations.	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information. **29-Oct-2014, Preliminary EIS Results Workshop #4:** The VFPA described the results of the preliminary assessment of potential Project effects and cumulative effects on coastal birds and the proposed mitigation measures. The VFPA also described the definition of significance regarding potential impacts to coastal birds and the rationale for conclusions regarding the significance determination. The VFPA asked to receive feedback on the draft findings and proposed mitigation. The VFPA reviewed the executive summary, the list of VC sub-components and indicators (noting representative species), assessment boundaries, the LAA, RAA, information sources, and the shorebird opportunity model, noting it was an outcome of the TAG process and conducted in collaboration with Simon Fraser University (SFU). **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-A:** EIS Appendix 7.2-A describes the consultation undertaken during the development of the EIS, including with respect to data collection, proposed mitigation measures, and significance determinations. **Addressed in response to IR-7.31.15-08:** The VFPA's response to IR-7.31.15-08 provides a description of where and how Indigenous traditional knowledge (ITK) has been used to support the selection of VCs, baseline descriptions, the assessment of effects, including the identification of mitigation measures, and in the determination of significance of adverse environmental effects. **Addressed in response to MSA IR-02.24.16-4:** The VFPA's response to MSA IR-02.24.16-4 discusses the application of ITK in the MSA. **Addressed in IR10-02:** The VFPA's response to IR10-02, as requested by the Review Panel, provides further information concerning how available Indigenous knowledge was incorporated into the EIS and MSA.	**EIS** Appendix 7.2-A Aboriginal Group Consultation **Information Requests** Response to Information Request #8 (IR-7.31.15-08 of CEAR Document #314) Response to Additional Information Request #4 (MSA IR-02.24.16-04 of CEAR Document #386) Response to Sufficiency Information Request #2 (IR10-02)

Table 5: Coastal Geomorphology – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-5.1	Asked if the expanded tug boat basin, and the new crest protection in the area is expected to affect the coastal geomorphology in the Project area.	08-Oct-2014, Preliminary EIS Results Workshop #2	**08-Oct-2014, Workshop:** Responded the tug basin is within the inter-causeway zone, which has been looked at as part of the assessment. Changes to flow conditions are not anticipated in that area. It is thought that there is not enough room for tidal channels to form; earlier plans were modified to reduce the chances of tidal channels forming. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#48):** Coastal geomorphology considers the physical processes such as waves and currents that change or maintain the physical environment of coastal areas. An assessment was undertaken to determine potential changes to coastal geomorphology as a result of the Project. The assessment consisted of three study approaches to determine the potential effects of changes to natural processes from the Project footprint in subtidal and intertidal areas. Studies were informed by dialogue with the Coastal Geomorphology TAG. The results of the coastal geomorphology assessment were considered in the assessments of surficial geology and marine sediment, marine water quality, marine vegetation, marine invertebrates, marine fish, marine mammals, coastal birds, ongoing productivity of commercial, recreational, and Aboriginal fisheries, and archaeological and heritage resources. The Project layout and configuration has been modified to reduce the potential for a number of adverse changes to geomorphology during Project construction and operation. For example, developing the terminal almost entirely within the subtidal zone of Roberts Bank will largely avoid changes to geomorphology. Changes to coastal geomorphology are not expected from terminal development activities, but are related to the terminal footprint itself. The footprint will interact with tidal currents and wind-generated waves resulting in alterations to sediment transport, sediment erosion and deposition, and water flow exchange in the construction and operation phases. During causeway construction, drainage channels are expected to form on the tidal flats adjacent to the causeway. This change will occur during construction only, and will be temporary and reversible. The VFPA will ensure the study and management of potential channel formation related to drainage of tidal waters through the causeway dyke during the construction phase. Changes will be incorporated in detail design, as required. Changes from the expansion of the tug basin include the conversion of local tidal flats to subtidal waters. Although the formation of additional tidal channels is not anticipated, a small increase in the size of an existing channel is likely. No incremental cumulative changes in coastal geomorphology are anticipated to result from the Project in combination with other projects and activities.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 9.5 Coastal Geomorphology 9.5.6 Existing Conditions 9.5.8 Future Conditions with the Project Table 9.5-6 Predicted Morphological Changes from the Project Footprint Figure 9.5-35 Approximate Spatial Extent of Potential Changes Associated with the Project Footprint
LFN-5.2	Concerned about the effects of vessel traffic, berthing activities, ship wakes, and propeller/thruster currents on Lyackson First Nation marine and foreshore environments (Valdes Island).	08-Oct-2014, Preliminary EIS Results Workshop #2 10-Dec-2014, Health & Aboriginal Rights Workshop – Lyackson First Nation and Lake Cowichan First Nation	**08-Oct-2014, Workshop:** Stated that any ship that goes through deep water will create wake, but calculation showed that it would take 300 ships to create the same amount of waves as a one hour of a storm. Stated that the number of waves caused by ship wake is comparatively low. Stated that wave action caused by ship wake is measurable, but negligible. **10-Dec-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#51):** Changes to the physical environment, including currents, from transiting and berthing activities associated with the Project were considered. A detailed analysis of potential changes to geomorphology at Roberts Bank from ship wake was not conducted as the number and size of waves generated by the additional shipping in the area was anticipated to be very small relative to the overall wind-induced wave climate in the area. Analysis of potential changes to geomorphology on Le'eyqsun and surrounding islands was not conducted as these areas are outside of the scope of the assessment (Project-related changes are not anticipated in these areas). **Additional information provided by the VFPA:** As noted in MSA Section 7.2, an assessment of the wave environment was conducted to determine potential changes from vessel transits associated with the Project on wake-generated waves. Ship wake that is less than 10 cm in height is considered to be well within the range of natural conditions and therefore defines the threshold for consideration in the assessment. In Segment A (southern Strait of Georgia, and closest studied area to Valdes Island), the estimated Project-associated vessel wave heights are predicted to be equal to or less than 0.03 m due to the slow vessel speed observed in this segment. Thus, the vessel wake from Project-associated vessels are not expected to introduce new navigational hazards for small-craft operators in the southern Strait of Georgia during calm conditions.	**EIS** 7.2 Wave Environment 9.5 Coastal Geomorphology 9.5.9 Future Conditions with the Project and Other Certain and Reasonably Foreseeable Projects and Activities

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-5.3	Concerned about potential effects of dredging and sediment movement on sites around Valdes Island, including dump sites off Valdes. The Project would further increase these adverse effects. Stated that project construction and operations dredging will result in changed currents and potential pollution of the marine environment and marine resource relied upon by Lyackson members, including resources such as sockeye salmon that are only harvestable within Lyackson territory in the vicinity of the Project, as well as other unique environmental features associated with sea mammals (whales and sea lions), and other resources.	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in Project Construction Update (CEAR # 1210),** As requested by the RBT2 Review Panel, the VFPA submitted the Project Construction Update (PCU) on June 12, 2018 (CEAR #1210), providing: • Detailed revised Project description, including a revised construction schedule; • Revised Project interaction matrix; • Preliminary details pertaining to the management and timing of dredging activities and the discharge of sediment-laden water; and • Revised assessment of environmental effects as required by the Project modifications. Sections 1.0 and 2.0 of the PCU describe the changes to the environmental impact statement (EIS), including updates to specific construction activities, the construction schedule, and relevant Project Description figures and appendices. In PCU Section 3.0, changes or effects resulting from the construction updates on intermediate and valued components (ICs and VCs) are described. Overall, these changes to the environmental assessment resulting from construction updates can generally be summarised as follows: • Reductions in potential adverse changes or effects on ICs, biophysical VCs, social VCs, and Current Use; and • Increases in positive interactions with socio-economic VCs. These beneficial changes to ICs and VCs occur at the level of interactions or potential effects, and in most cases are slight changes, and thus do not affect the overall conclusions made in the EIS, including proposed mitigation, residual effect characterisations, significance determinations or cumulative effects, as applicable, with one exception. The only component predicted to have a change to residual effects is land and water use, with a reduction of a residual effect on access to TFN community lease lands from a measurable non-significant residual effect to a negligible residual effect, due to elimination of the ITP and associated activities. **Additional information provided by the VFPA:** There is no plan to utilise dump sites off Valdes Island.	**Information Requests** From the Vancouver Fraser Port Authority to the Review Panel re: Project Construction Update (See Reference Document #995) – CEAR #1210
LFN-5.4	Stated that the VFPA has not adequately assessed the Project's potential negative effects caused by silt on biofilm and biomat.	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Section 11.0:** The VFPA has undertaken extensive studies to assess potential project changes to biofilm and biomat. As noted in EIS Section 11.6.2.2, changes in sedimentation patterns resulting from terminal placement are expected to have a negligible influence on macroalgae productivity and no effect on biomat productivity. There is a lack of spatial overlap between areas of predicted change and the distribution of biomat within the LAA; therefore, this mechanism is not expected to influence the productivity of biomat. As noted in EIS Section 11.6.3.5, biofilm biomass at Roberts Bank has been shown to be positively correlated with fine sediment grain size, a characteristic associated with low-energy environments. Reductions in wave height and tidal current velocity within the tidal flats may therefore lead to increased biofilm productivity. In addition, increased sedimentation of fine sediments may occur with decreased energy. These changes have the potential to increase productivity in areas of existing biofilm as well as potentially create new areas of biofilm-suitable habitat over the long-term.	**EIS** 11.0 Marine Vegetation 11.6.2.2 Changes in Sedimentation and Coastal Processes 11.6.3.5 Biofilm

Lyackson First Nation

Table 6: Economic Development – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-6.1	Concerned that an increase in vessel traffic, including ferry traffic, Kinder Morgan traffic, and LNG related traffic, will negatively affect Lyackson's economic development opportunities on Valdes Island. Stated that all the Project impacts discussed in this report will further reduce the quality and quantity of the resources that Lyackson depend upon for socio-economic interests and continued practise of rights.	30-Apr-2014, Meeting 01-Nov-2016, Letter to Panel (CEAR Document #733)	**30-Apr-2014, Meeting:** Stated that impacts to marine traffic will be included in the EIS. **01-Nov-2016:** The VFPA has reviewed this letter and provides the following additional information.	**Addressed in IR10-27:** The VFPA's response to IR10-27, as requested by the Review Panel, discusses potential effects of the proposed Project on existing business ventures that have been identified by Indigenous groups.	**Information Requests** Response to Sufficiency Information Request #27 (IR10-27)
LFN-6.2	Given that Lyackson is looking at options to acquire land on both sides of the Fraser River, Lyackson is concerned with adverse impacts caused by project components such as powerlines and subsequent impacts due to electromagnetic fields. Stated that the Proponent has not adequately assessed this impact.	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Section 4.2.1.5:** As per EIS s. 4.2.1.5, electrical power at 69 kv will be obtained from the existing BC Hydro transmission line on the Roberts Bank causeway. The line to the new terminal's main substation will transition to an underground cable at the existing Deltaport Terminal and Westshore Terminals distribution point. According to system studies conducted by BC Hydro, no new overhead transmission lines will be required.	**EIS** 4.2.1.5 Infrastructure, Ancillary Systems, and Support Facilities

Table 7: Effects Assessment Methods (including Cumulative Effects)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-7.1	Stated that cumulative effects should include past, present, and future projects, including the BC Ferries causeway, Deltaport causeway, Westshore Terminal, Kinder Morgan, and Deltaport Terminal. Concerned that the baseline for the Proponent's cumulative effects assessment is starting at present time and consequently does not consider how the causeways already have changed the environment by existing projects.	15-Apr-2014, Technical Working Group Meeting #2 28-Oct-2014, Preliminary EIS Results Workshop #3 01-Nov-2016, Letter to Panel (CEAR Document #733)	**15-Apr-2014, Meeting:** Responded that Westshore Terminals is included in the assessment. Traffic increases and other assumptions have been incorporated into the model presented. If Kinder Morgan or another Project has conducted an air quality assessment, we will consider how their emissions combine with RBT2 emissions. **28-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#38):** The cumulative effects assessment takes into consideration the potential residual effects of the Project in combination with the effects of other projects and activities that have been or will be carried out, including effects on local and Indigenous communities. A review of previous studies, effects assessments, and commitments from other projects was conducted and has informed the Project's environmental assessment, as discussed in the EIS. Projects and activities contributing to existing and expected conditions in the Project area are identified and described. Information sources considered in the characterisation and assessment of each intermediate component (IC) and VC are identified in the respective effects assessment section. **Additional information provided by the VFPA:** Vessel traffic from Kinder Morgan's Trans Mountain Pipeline Project is included as a reasonably foreseeable project in the cumulative effects assessment. Vessel traffic from Westshore Terminals, BC Ferries, Deltaport is reflected in existing conditions. **Addressed in EIS, responses to IR-7.31.15-13 and AIR-12.04.15-13:** In the EIS, the existing conditions (i.e., baseline) reflect the conditions of the environment as modified by past development. Further discussion of the cumulative effects methodology and how the effects of past, present, and future projects and activities in the context of cumulative effects were considered is provided in IR-7.31.15-13 and AIR-12.04.15-13.	**EIS** 3.0 Geographical Setting 3.4 Projects and Activities Contributing to Existing and Expected Conditions Appendix 7.2-B Aboriginal Issues and Interests **Information Requests** Response to Information Request #13 (IR-7.31.15-13 of CEAR Document #314) Response to Additional Information Request #13 (AIR-12.04.15-13 of CEAR Document #388)
LFN-7.2	Criticised the process for cumulative effects assessment, which consistently results in a determination of no cumulative effect.	28-Oct-2014, Preliminary EIS Results Workshop #3	**28-Oct-2014, Workshop:** Responded that the intent of this environmental process is to be transparent about the effects based on the available information and the mitigation dealing with the effect. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#34, #36):** The methods used to assess the potential effects of the Project, including both residual effects of the Project and cumulative effects, are described in EIS Section 8.0. The environmental assessment for the Project was developed to meet the requirements specified in the *Updated Guidelines for the Preparation of an Environmental Impact Statement* (*Updated EIS Guidelines*; CEAR Document #177) and to be consistent with existing guidance documents, including the Operational Policy Statement Assessing Cumulative Environmental Effects Under the *Canadian Environmental Assessment Act, 2012*, Determining Whether a Project is Likely to Cause Significant Adverse Environmental Effects, the Cumulative Effects Assessment Practitioners' Guide, and the *Guideline for the Selection of Valued Components and Assessment of Potential Effects*, among others. Where measurable residual effects to a VC have been predicted to result from the Project, a cumulative effects assessment was conducted to determine whether Project-related residual effects are likely to interact cumulatively with the effects of other projects and activities. Similarly, where Project-induced changes to an IC were expected, the potential for those changes to combine cumulatively with changes caused by other projects and activities was assessed.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 8.0 Effects Assessment Methods 8.1.3 Establishment of Assessment Boundaries 8.19 Cumulative Effects Assessment
LFN-7.3	Stated that Lyackson needs information on cumulative effects and what it will do to harvesting on water and lands.	15-Apr-2014, Technical Working Group Meeting #2	**15-Apr-2014, Meeting:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#172):** The harvesting of plants, birds (including waterfowl), hunting and trapping of smaller animals, as well as other harvesting activities, are included in EIS Section 32.2. The Project is not predicted to have an effect on the Current Use related to harvest of plants or birds, or on hunting and trapping of waterfowl and smaller animals. **Addressed in EIS Appendix 7.2-B (#35):** Reasonably foreseeable projects and activities related to marine shipping, including incremental marine vessel traffic associated with RBT2, is considered in the cumulative effects assessment.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries 21.0 Marine Commercial Use 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				Addressed in EIS Appendix 7.2-B (#177): The potential cumulative effects of the Project in combination with other projects and activities that have been and will be carried out, including existing and future shipping, on Indigenous fisheries are discussed in EIS Sections 16.0, 21.0, and 32.2. In relation to ongoing productivity of commercial, recreational, and Aboriginal fisheries, the Project is not expected to contribute to cumulative effects on these fisheries. In relation to marine commercial use, the Project is expected to result in a residual effect of changes to seafood harvesting area, harvest, and revenue. The residual effect is determined to be not significant, as Dungeness crab are known to move substantial distances to baited traps, and harvest activity can be moved to another open area. Other planned or reasonably foreseeable projects and activities would also displace crab harvesting, and this effect would combine with that of the Project to result in an incremental cumulative effect on commercial crab fishing. This adverse incremental cumulative effect is determined to be not significant. In relation to Current Use, as the Project is not expected to result in measurable residual effects to Current Use, the Project is not expected to contribute incrementally to adverse cumulative effects.	Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Lands and Resources for Traditional Purposes 32.2.9 Cumulative Effects
LFN-7.4	Requested a diagram of representative species that shows which species are being represented, to share with Elders.	06-Jun-2014, Valued Components Workshop #1	**06-Jun-2014, Workshop:** Committed to provide this information prior to the 03-Jul-2014 meeting. **03-Jul-2014, Workshop:** Participants at the Valued Components Workshop #2 were provided with a handout showing ICs, VCs, and species represented by each VC. This information was also sent out electronically in advance of the meeting, and provided in poster form and displayed on the wall at the meeting. The concept of representative species was fully explained at this time. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#25):** ICs, VCs, and VC sub-components are identified in EIS Section 8.0, which describes the overall 3-step VC selection process, including the rationale for focusing the assessment on VC sub-components. The rationale for selection of specific ICs, VCs, and VC sub-components is described in each assessment section. For example, discussion regarding sub-component selection relative to species of importance to Indigenous groups, including eulachon and sturgeon, is captured in EIS Section 13.0. (Subsequent to VC selection, VC sub-components were identified to further structure and streamline the assessment as appropriate. For example, for biophysical VCs, sub-component species or groups were chosen for their ability to represent other species that are similar in nature, occupy comparable types of habitats, serve similar ecological roles, or could otherwise be affected by the Project in an analogous way.)	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 8.0 Effects Assessment Methods 8.1.2 Selection of Valued Components Figure 8-1 Valued Component Selection Process Appendix 8-A Valued Component Selection Rationale 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component
LFN-7.5	Asked about the distinction between VCs and ICs, and requested clarification around the difference between the effects assessment for VCs and ICs for residual and cumulative effects.	15-Apr-2014, Technical Working Group Meeting #2 07-Oct-2014, Preliminary EIS Results Workshop #1 28-Oct-2014, Preliminary EIS Results Workshop #3	**15-Apr-2014, Meeting:** Stated that air quality, noise, etc. are proposed as ICs. Changes to ICs from Project components and Project-related activities will be modelled and assessed in the EIS. How those changes could affect a number of aspects of the environment will also be assessed. The intermediate steps on the effect pathway will be described in the EIS. **07-Oct-2014, Workshop:** Stated that the VFPA has different naming conventions for parts of the IC assessment process, compared to the VC assessment process, but essentially they are the same steps. In the IC process, the effects assessment is essentially the step where	**Addressed in EIS Section 8.0:** The distinction between VCs and ICs is further explained in the EIS. VCs are the physical, biophysical, and human environment that may be affected by the Project that have been identified to be of concern by the proponent, government agencies, Indigenous peoples, and the public. The components along the pathway through which the effect is transmitted are referred to as ICs for the purposes of this assessment. **Addressed in EIS Appendix 7.2-B (#34):** The methods used to assess the potential effects of the Project, including both residual effects of the Project and cumulative effects, are described in EIS Section 8.0. The environmental assessment for the Project was developed to meet the requirements specified in the *Updated EIS Guidelines* and consistent with existing guidance documents, including the Operational Policy Statement Assessing Cumulative Environmental Effects Under the *Canadian Environmental Assessment Act*, *2012*, Determining Whether a Project is Likely to Cause Significant Adverse Environmental	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 8.0 Effects Assessment Methods 8.1.2 Selection of Valued Components Figure 8-1 Valued Component Selection Process Figure 8-2 Example of Pathway of Effects Table 8-1 Intermediate Component and Valued Component Linkages 8.19 Cumulative Effects Assessment

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			future conditions with the Project are described, and cumulative change is assessed in the step where future conditions with the Project and other projects and activities are described. **28-Oct-2014, Workshop:** Stated that an IC is something that is produced by the Project; it is a mechanism to potentially cause an effect on a VC. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Section 8.0 Effects Assessment Methods.	Effects, the Cumulative Effects Assessment Practitioners' Guide, and the *Guideline for the Selection of Valued Components and Assessment of Potential Effects*, among others. Where measurable residual effects to a VC have been predicted to result from the Project, a cumulative effects assessment was conducted to determine whether Project-related residual effects are likely to interact cumulatively with the effects of other projects and activities. Similarly, where Project-induced changes to an IC were expected, the potential for those changes to combine cumulatively with changes caused by other projects and activities was assessed. In most cases, the assessment of future cumulative effects was conducted within the boundaries of the RAA identified for the VC. For certain VCs, however, the cumulative effects assessment boundaries differed. In all cases, the rationale supporting the selection of spatial boundaries for the assessment of cumulative effects or changes on a VC or IC is provided in the corresponding section of the EIS. Where the Project was predicted to contribute to incremental cumulative effects, additional mitigation measures were considered. The VFPA then determined the significance and likelihood of any adverse residual cumulative effects following the implementation of mitigation measures.	
LFN-7.6	Concerned with limiting the Project scope to the VFPA's jurisdiction. Commented that the effects of the Project are being felt in the southern Gulf Islands, outside the VFPA's jurisdiction.	28-Oct-2014, Preliminary EIS Results Workshop #3	**28-Oct-2014, Workshop:** Responded that the assessment does look at effects from activities occurring within the VFPA's jurisdiction. However, effects from underwater noise are also being assessed in an area that extends beyond VFPA jurisdiction. Canadian Environmental Assessment Agency (CEA Agency): This would be an effect from the Project as proposed, the designated Project. This is very much within the environmental assessment as defined, because the effect originates at the Project, but the effect goes well beyond the Project, and that is very much within the environmental assessment and the direction that we have provided. The CEA Agency has asked the VFPA to provide further information on their marine jurisdiction, which is understood to be forthcoming. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B summarising the comments from Indigenous groups and the responses provided by the VFPA.	**Addressed in *Updated EIS Guidelines*:** The scope of the environmental assessment and the Project is defined by the CEA Agency in the *Updated EIS Guidelines*. In April 2015, the *EIS Guidelines* were updated to include assessment of marine traffic associated with the Project occurring outside the VFPA's jurisdiction. The MSA was submitted to the CEA Agency on October 26, 2015 and a copy was provided to Lyackson First Nation for review. **Addressed in MSA Appendix 5-B (#13):** The MSA addresses potential effects of marine shipping associated with the Project outside of the VFPA's jurisdiction, to the 12 nautical mile limit of Canada's territorial sea.	**MSA** 1.0 Introduction Appendix 5-B Aboriginal Issues and Interests ***Updated Guidelines for the Preparation of an Environmental Impact Statement* (*Updated EIS Guidelines*, CEAR Document #177)**
LFN-7.7	Concerned that a cumulative effects assessment will only be undertaken if a residual effect is predicted. Stated that the VFPA has relied on the premise that only if there are Residual Effects will there be cumulative effects. Lyackson does not agree that this follows,	27-May-2014, Technical Working Group Meeting #3 15-Jun-2015, Letter to the CEA Agency (CEAR	**27-May-2014, Workshop:** Responded that if there is a measurable residual effect resulting from the Project, and there is interaction with other projects, then that component would be carried forward into the cumulative effects assessment.	**Addressed in EIS Appendix 7.2-B (#34):** The methods used to assess the potential effects of the Project, including both residual effects of the Project and cumulative effects, are described in EIS Section 8.0. The environmental assessment for the Project was developed to meet the requirements specified in the *Updated EIS Guidelines* and consistent with existing guidance documents, including the Operational Policy Statement Assessing Cumulative Environmental Effects Under the *Canadian Environmental Assessment Act*, *2012*, Determining Whether a Project is Likely to Cause Significant Adverse Environmental	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 8.0 Effects Assessment Methods 8.1 Environmental Assessment Methods 8.1.6 Mitigation Measures

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	or that this logic follows in this order. Requested a comprehensive assessment of all accumulative effects associated with current and proposed new development collectively, to identify if all these effects together can be mitigated. This assessment must be conducted prior to assessing if the particular Project has residual effects. Concluded that the cumulative effects assessment has not been conducted appropriately by the Proponent, given that only residual effects were assessed.	Document #258) 01-Nov-2016, Letter to Panel (CEAR Document #733)	**13-Oct-2015, Letter from the CEA Agency (CEAR Document #308):** The CEA Agency replied to Lyackson First Nation stating *"The Agency did not request additional information regarding accidents and malfunctions since there is already some information provided in the EIS. The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review.* *Additionally, the Agency has requested additional information on Cumulative Effects in its letter of July 31, 2015 to [the VFPA] (page 7, #13)."* The VFPA has reviewed this letter and provides the following additional information.	Effects, the Cumulative Effects Assessment Practitioners' Guide, and the *Guideline for the Selection of Valued Components and Assessment of Potential Effects*, among others. **Addressed in EIS Section 8.0:** The methods used to assess the potential effects of the Project, including mitigation measures, residual effects and cumulative effects, are described in EIS Section 8.0. The environmental assessment for the Project was developed to meet the requirements specified in the *Updated EIS Guidelines* and consistent with existing guidance documents, including the Operational Policy Statement Assessing Cumulative Environmental Effects Under the *Canadian Environmental Assessment Act*, *2012*, Determining Whether a Project is Likely to Cause Significant Adverse Environmental Effects, the Cumulative Effects Assessment Practitioners' Guide, and the *Guideline for the Selection of Valued Components and Assessment of Potential Effects*, among others.	8.1.7 Characterisation of Residual effects and Context 8.1.8 Determination of Significance of Residual Adverse Effects 8.1.9 Cumulative Effects Assessment
LFN-7.8	Stated that Lyackson remains concerned that the Project assessment has not appropriately considered the cumulative impacts to climate change.	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Section 9.2:** Percentage increases or decreases for greenhouse gas and black carbon emissions are provided in EIS Table 9.2-37 for expected conditions compared to existing conditions, and for future conditions with the Project compared to both existing and expected conditions, as CO_2e over 20-year and 100-year time scales. With respect to greenhouse gas emissions, total annual emissions are predicted to be 27% higher in 2025 than in 2010 for operations of the existing Roberts Bank terminals, due to higher cargo shipments. Emissions of greenhouse gas are expected to increase by 94% in 2025 with the Project compared to existing emission rates in 2010, and increase by 52% in 2025 over what they would be at that time if the Project were not to proceed. Total annual emissions of black carbon predicted for expected conditions in 2025 at Roberts Bank are expected to decrease by 57%, compared to emissions from existing conditions in 2010, primarily due to equipment fleet turnover to newer engines that meet more stringent emission standards. Even with the additional emissions predicted from the Project, total annual emissions of black carbon in 2025 are predicted to be 47% lower compared to existing conditions. Black carbon emissions in 2025 are, however, expected to be 24% higher with the Project than they would be if the Project was not to proceed. These predicted changes in greenhouse gas and black carbon emissions do not consider the potential benefits of shore power to reduce emissions from ships at berth at RBT2 and Deltaport Terminal. The estimated reductions in emissions from ships at berth due to shore power of up to 10% to 98% (depending on which contaminant is considered) for RBT2 and 3% to 33% for Deltaport Terminal third berth.	**EIS** 9.2 Air Quality 9.2.10.1 Predicted Changes in Total Annual Emissions for Greenhouse Gases and Black Carbon from 2010 to 2025
LFN-7.9	Stated that the Project would exacerbate existing impacts and would act together with other anticipated changes in the environment, including sea level rise and increased industrial developments and population density in the Lower Mainland. Stated the Project would contribute to further adverse effects in these areas, and in the	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** The conclusion of the comprehensive environmental assessment conducted by the VFPA is that, after the implementation of mitigation, the Project is not expected to result in any significant adverse residual effects on any of the 16 VCs (described in the EIS). In addition, no significant adverse cumulative effects are anticipated, with the exception of a significant cumulative effect to southern resident killer whales (SRKWs). Due to their endangered status and a lack of recovery of the population, the VFPA has assumed that SRKWs have already been significantly adversely affected and therefore cumulative effects are expected to remain significant. More detail is provided in the summary of the assessment of marine mammals.	

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	area of Le'eyqsun and its surrounding foreshore and waters.			As a result of extensive studies and assessment, the VFPA is confident potential adverse effects can be fully or partially avoided or reduced through Project design and the implementation of environmental management programs. Where Project-related effects cannot be fully avoided or reduced, offsetting measures, such as the creation and enhancement of habitat, will be applied. A robust monitoring and follow-up program will be implemented to assess the effectiveness of mitigation measures.	
LFN-7.10	Suggested a regional marine use study and plan.	29-Aug-2017, Follow Up Program Workshop with Cowichan Nation Alliance, Lyackson First Nation and Malahat First Nation	**29-Aug-2017, Workshop:** Recorded comment for consideration by the Project team.	**Additional information provided by the VFPA:** The *Canadian Environmental Assessment Act* (*CEAA*)*, 2012* gives the Minister of Environment and Climate Change power to appoint a 'committee' (a body similar to a review panel) to conduct a regional study of activities, including existing and future projects, in a region. If deemed warranted, the Minister could initiate a regional marine use study and plan; however, such a study is outside the scope of the environmental assessment as defined by the *Updated EIS Guidelines* (the requirements of which have been met in EIS Section 21.0 and MSA Section 9.2).	**EIS** 21.0 Marine Commercial Use 21.5 Existing Conditions **MSA** 9.2 Marine Commercial Use ***Updated EIS Guidelines***

Table 8: Effects of the Environment on the Project

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-8.1	Concerned about the Project being able to withstand environmental forces such as an earthquake, and waves and liquefaction that could occur as a result of such an event.	10-Dec-2014, Health & Aboriginal Rights Workshop – Lyackson First Nation and Lake Cowichan First Nation	**10-Dec-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#214):** Effects of the environment on the Project related to extreme weather and weather-related events, and any subsequent effects on the environment, would be avoided or reduced through application of design criteria and implementation of standard management practices, work procedures, and mitigation measures during construction and operation. Effects of the environment on the Project related to low-probability events such as a large earthquake, a submarine landslide in the immediate vicinity of the Project, or a large tsunami, could result in irreparable damage to the Project. Effects of a catastrophic natural event or sea level rise would be widespread in the Fraser River delta and would not be unique to the Project. As noted in EIS Section 4.2.1 the wharf structure and terminal were not explicitly designed to withstand a tsunami event triggered by an earthquake or landslide, as stated in the Basis of Design (EIS Appendix 4-A) and described in more detail in EIS Section 31.2.3. **Additional information provided by the VFPA:** Original seismic criteria for RBT2 are discussed in EIS Section 4.2.1. As noted in Information Request Package 3 Preamble in Support of Responses to IR3-25 to IR3-40, further geotechnical analysis has been completed using data obtained in 2016 from the in situ and laboratory testing of ground conditions within the terminal footprint. Native soil beneath the terminal footprint has been determined to have a more favourable seismic response than was initially inferred. In addition, seismic performance requirements from the American Society of Civil Engineers (Standards ASCE/COPRI 61-14, Seismic Design of Piers and Wharves) were adopted in 2016 for all non-public marine structures within the Port of Vancouver. This ASCE/COPRI 61-14 standard had previously been adopted for wharves not accessible to the general public by many U.S. west coast ports (e.g., US Navy, Port of Los Angeles, and Port of Long Beach). **Addressed in Project Construction Update (CEAR # 1210):** As requested by the RBT2 Review Panel, the VFPA submitted the Project Construction Update (PCU) on June 12, 2018 (CEAR #1210), providing • Detailed revised Project description, including a revised construction schedule; • Revised Project interaction matrix; • Preliminary details pertaining to the management and timing of dredging activities and the discharge of sediment-laden water; and • Revised assessment of environmental effects as required by the Project modifications. Sections 1.0 and 2.0 of the PCU describe the changes to the environmental impact statement (EIS), including updates to specific construction activities, the construction schedule, and relevant Project Description figures and appendices. In PCU Section 3.0, changes or effects resulting from the construction updates on intermediate and valued components (ICs and VCs) are described. Overall, these changes to the environmental assessment resulting from construction updates can generally be summarised as follows: • Reductions in potential adverse changes or effects on ICs, biophysical VCs, social VCs, and Current Use; and • Increases in positive interactions with socio-economic VCs. These beneficial changes to ICs and VCs occur at the level of interactions or potential effects, and in most cases are slight changes, and thus do not affect the overall conclusions made in the EIS, including proposed mitigation, residual effect characterisations, significance determinations or cumulative effects, as applicable, with one exception. The only component predicted to have a change to residual effects is land and water use, with a reduction of a residual effect on access to TFN community lease lands from a measurable non-significant residual effect to a negligible residual effect, due to elimination of the ITP and associated activities. **Addressed in response to IR2-19a:**	**EIS** 4.2.1 Marine Terminal Appendix 4-A Basis of Design Appendix 7.2-B Aboriginal Issues and Interests 9.1.3 Geotechnical Considerations 30.0 Potential Accidents or Malfunctions 31.0 Effects of the Environment on the Project 31.2.3 Effects of the Environment on the Project – Submarine Landslides. 31.4 Seismic Activity **MSA** 10.0 Accidents and Malfunctions **Information Requests** Response to Sufficiency Information Request #19a (IR2-19a of CEAR Document #1145) From the Vancouver Fraser Port Authority to the Review Panel re: Project Construction Update (See Reference Document #995) – CEAR #1210

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				Table IR2-19a-1 in the VFPA's response to IR2-19a presents a summary of potential effects of tsunami-induced waves 1 m and 4 m in height on the Project and on marine shipping associated with the Project. **Addressed in EIS Section 30.0 and MSA Section 10.0:** In developing EIS Section 30.0 and MSA Section 10.0, the VFPA identified plausible worst-case scenarios to assess. The scenarios were selected based on the probability of events occurring (using ship incident data collected over several years) and the environmental consequences of those events. An event such as that which is described, while possible, did not warrant assessment.	
LFN-8.2	Concerned about how weather, waves, and storms will affect the new part of the port and disperse pollutants. Questioned the VFPA's predicted models of 25 versus 100-year storm events for assessment of appropriate catchments to keep deleterious substances from entering the environment.	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in response to IR4-37:** The VFPA's response to IR4-37 discusses the potential effects from a pulse of increased surface runoff not captured by the stormwater system at the terminal or by the widened causeway area, including sources from the tug basin and the widened causeway area, including consideration of the effects from all contaminants from the Project site on human health, biophysical environment, and the proposed onsite habitat compensation features. A pulse rain event exceeding a 1 in 10-year event will typically be high intensity and short-lived, and changes in water quality, if any, will not be prolonged based on volume of the receiving environment. A pulse of increased surface runoff not captured by the stormwater collection systems or infrastructure installed at the terminal or widened causeway could include small amounts of petroleum hydrocarbons (oil and grease), polycyclic aromatic hydrocarbons (PAHs), or suspended sediment (from coal dust or dust). The effects from a pulse of increased surface runoff not captured by the stormwater collection infrastructure at the terminal and along the widened causeway are anticipated to be negligible for the following reasons: • Pulse events are not expected to contain high concentrations of these substances due to the types of activities that occur at a container terminal (i.e., as compared to a bulk terminal); • Environmental management and monitoring plans will be implemented during both the construction and operation phases to ensure that potential risks on the site are managed; and • Surface runoff will be collected and conditioned by the stormwater systems routinely during events that are more frequent (i.e., less than a 1 in 10-year event).	**Information Requests** Response to Sufficiency Information Request #37 (IR4-37 of CEAR Document #1051)

Lyackson First Nation

Table 9: Engagement and Consultation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-9.1	Stated that capacity funding provided is insufficient. Requested funding to enable QARS (Q'ul-Lhanumutsun Aquatic Resources Society) to assist Lyackson and Lake Cowichan in understanding marine resource issues and concerns. Requested further funding to participate in review of the Project. Concerned about limited funds and tight timelines that meant they only produced the preliminary Lyackson Knowledge and Use Study report to date. Stated that Lyackson was not provided with sufficient financial capacity or necessary resources required to conduct an adequate assessment of the environmental assessment results and this presents a huge gap in the assessment. Noted funding is needed for First Nations to do reviews as their representatives with equal knowledge to assess the findings as the VFPA consultants hired to do the work. Expressed concern that Lyackson First Nation has not had funding to hire its own scientists to review the assessment and related data.	30-Apr-2014, Meeting 29-Oct-2014, Preliminary EIS Results Workshop #4 18-Nov-2014, Email 26-Apr-2016, Meeting 01-Nov-2016, Letter to Panel (CEAR Document #733) 03-May-2017, Meeting 29-Aug-2017, Follow Up Program Workshop with Cowichan Nation Alliance, Lyackson First Nation and Malahat First Nation 04-Oct-2017, Meeting	**08-Apr-2014, Letter:** Offered funding for ongoing participation. **30-Apr-2014, Meeting:** Lyackson First Nation committed to follow-up with the VFPA with specific concerns regarding budget and funding. **18-Aug-2014, Letter:** Offered funding for a Traditional Use Study. **19-Aug-2014, Letter:** Accepted funding. **22-Aug-2014, Letter:** Offered funding for fall 2014 consultation activities. **31-Aug-2014, Letter:** Lyackson First Nation provided a Traditional Use Study to the VFPA. **03-Oct-2014, Letter:** Lyackson accepted the VFPA's funding offers of 08-Apr-2014 and Aug-22-2014. **29-Oct-2014, Workshop:** Recorded comment for follow-up. **26-Jan-2015, Email from the VFPA:** *"With respect to your request for funding for the involvement of QARS, the port authority understands that the CEA Agency has provided funding for your review of the EIS and that this type of funding could assist in the involvement of QARS as support to Lake Cowichan and Lyackson in the EIS review. The port authority is also considering the provision of additional funding to support Aboriginal groups in the EIS review and you may wish to consider the use of some of that funding as well."* **26-Apr-2016, Meeting:** Recorded comment for follow-up. **11-May-2015, Letter:** Offered for participation in Project-related consultation activities including marine shipping study. **26-Feb-2016, Letter:** Accepted funding. **26-Apr-2016, Meeting:** Offered funding to support ongoing involvement in consultation activities. **28-Apr-2016, Letter:** Accepted funding. **29-Aug-2017, Workshop:** Noted requests for resources and funding.	**Addressed in EIS Appendix 7.2-B (#19):** The VFPA has provided or offered funding support to ensure the ongoing participation of Indigenous groups involved in the Project's consultation processes. Additional agreements were also initiated to support the development of studies regarding the Current Use. As a result of these engagement and consultation activities, Indigenous groups have provided traditional use information relating to the Project area. VFPA participation funding agreements have been negotiated between the VFPA and Indigenous groups, either individually or through associations representing the Indigenous groups. The VFPA has provided participation funding to 12 Indigenous groups or associations representing these groups.	**EIS** 7.0 Engagement and Consultation 7.2 Aboriginal Engagement and Consultation Appendix 7.2-A Consultation Activities by Aboriginal Group Appendix 7.2-B Aboriginal Issues and Interests 21.0 Marine Commercial Use 21.7.1 Seafood harvesting - Mitigation Measure #1 - Changes in Area, Harvest and Revenue= 24.0 Outdoor Recreation 24.7.1 Recreational Seafood Harvesting Mitigation Measure #1 – Changes in Harvesting Area Use and Displacement 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Land and Resources for Traditional Purposes

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			04-Oct-2017, Meeting: The VFPA and the CEA Agency committed to follow-up on additional funding for participation in the process. **24-Oct-2017, Letter:** Offered additional funding for participation in consultation activities for the Project. **06-Nov-2017, Letter:** Funding agreement was returned signed but undated. **01-Mar-2018, Letter:** Re-issued offer of additional funding for participation in consultation activities for the Project; null and void if not signed and returned by March 30, 2018. **13-Mar-2018, Letter:** Revised offer to Lyackson First Nation for funding to support the involvement of Lyackson First Nation in activities related to negotiating a mutual benefits agreement for the Project. **30-Mar-2018:** No signed agreement received. **24-Apr-2018, Letter:** Lyackson First Nation accepted the funding.		
LFN-9.2	Commented that consultation with the VFPA has been inadequate and consultation will not be fulfilled in the review panel process, Aboriginal Groups Workshops, or the meeting with the federal government planned for November. Stated that Indigenous consultation needs to address the things that matter to Indigenous groups in a way that is clear and understandable for Elders. Requested more discussion and time to comment. Commented that workshops include too much information for meaningful consultation. Commented that the format of the presentation does not provide adequate time for questions or discussion. Requested that future presentations include less academic terminology and include pictures to enable better understanding of materials (including for Elders). Requested that the VFPA lay out a schedule for upcoming sessions.	15-Apr-2014, Technical Working Group Meeting #2 06-Jun-2014, Valued Components Workshop #1 07-Oct-2014, Preliminary EIS Results Workshop #1 08-Oct-2014, Preliminary EIS Results Workshop #2 28-Oct-2014, Preliminary EIS Results Workshop #3	**15-Apr-2014, Meeting:** Agreed that there is an Indigenous consultation process that has to be followed. Stated that the VFPA can discuss with Lyackson and others how best to proceed. Stated that the VFPA understands that a lot of technical information needs to be presented to people who are not technical experts. The VFPA will hold discussions on how best to make this happen. The *EIS Guidelines* require that information needs to be shared in a form that is understandable. **07-Oct-2014, Workshop:** Responded that the VFPA understands the frustration, acknowledges there is a lot of material being presented, and apologises that the format is not working for everyone. Explained that the workshop has been set up in this format so as to get information on the table, and provide participants ways (email, comment form, subsequent individual community meetings) to follow up with additional questions and comments, once there has been time to absorb the material. Stated that the VFPA will have a follow up discussion about whether or not to change the format for subsequent meetings, and requested that the meeting progress in the format planned. The CEA Agency responded that they can explore options, and it would be helpful if in advance of their next meeting Lyackson First Nation would provide a prioritised list of questions so that as many as possible can be addressed. **08-Oct-2014, Workshop:** Expressed the VFPA's understanding that the information provided is not being shared with an expectation that participants would understand to the same depths as the scientists. Rather, it	**Addressed in EIS Appendix 7.2-B (#15):** Since January 2011, the VFPA has consulted with Indigenous groups regarding Project planning, components and activities, selection of VCs, the potential effects of the Project, proposed mitigation measures, and potential changes to the environment related to the Project. The VFPA also held technical workshops with Indigenous groups at which the VFPA and technical specialists engaged directly with members of Indigenous groups, discussing specific areas of Indigenous interest and reviewing related technical topics. The intent of the fall 2014 workshops, as described in EIS Section 7.2.2 and detailed in EIS Appendix 7.2-A, was to provide preliminary EIS results and proposed mitigations and obtain feedback in a simplified presentation and plain language format. Materials were provided to Indigenous groups approximately two weeks in advance of workshops, to provide time to read the material so that questions and comments could be raised in the workshops. The VFPA also provided an opportunity to provide further comment following the workshops. Most questions asked during consultation are addressed in (EIS Appendix 7.2-B). Some questions, comments, and requests were addressed at the workshops or through follow up communications. The process identified for responding to Indigenous interests and/or issues is provided in the EIS. The VFPA continues to be open to hear concerns and will notify Indigenous groups when the EIS is submitted.	**EIS** 7.0 Engagement and Consultation 7.2.2 Pre-EIS Submission Consultation Process Appendix 7.2-A Consultation Activities by Aboriginal Group Appendix 7.2-B Aboriginal Groups Interests and Issues Table

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	Stated that it is essential that First Nations gain an understanding of the material in order to consult meaningfully. Suggested that that the number of presentations be evened out between days.		is to provide an overview and understanding of all of the different studies undertaken as part of the assessment. Stated that it is helpful to think of the information being presented as a preview, and notes the meeting participants are the first people to see these results. It is hoped that this will enable better understanding of the full information which will be made available when the EIS is submitted in early 2015, and hopefully make it more digestible. **28-Oct-2014:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Additional information provided by the VFPA:** Participants of the Working Groups and fall Indigenous groups workshops were asked to provide feedback on the format, pace, and content of the meetings during and after each session. Feedback was used to plan and improve subsequent sessions. As a response to this comment, the VFPA incorporated additional visuals into subsequent workshop materials. Since the submission of the EIS in March of 2015 and the MSA in October 2015, the CEA Agency and subsequently the Review Panel have provided multiple opportunities for public comment on the Project, the EIS, and the MSA. All comments provided are posted publicly on the registry, maintained by the CEA Agency: http://www.ceaa-acee.gc.ca/050/evaluations/proj/80054?culture=en-CA	
LFN-9.3	Concerned that consultation has taken place with the VFPA but not with the Crown and expressed the importance of maintaining a direct line of communication between Indigenous groups and the Crown.	07-Oct-2014, Preliminary EIS Results Workshop #1 28-Oct-2014, Preliminary EIS Results Workshop #3	**07-Oct-2014, Workshop:** The CEA Agency responded that the proponent will have Lyackson First Nation's comments in the EIS and Lyackson First Nation will have the opportunity to speak directly to the Crown, and it is also encouraged that you share your concerns with the panel. Stated that the panel has a mandate to look at all of the changes that the Project could cause in the environment, as well as to collect information about impacts to rights. There are many different entry points, in terms of information being shared. **28-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B:** The CEA Agency is responsible for Crown consultation under the CEA Agency process, including identification of Indigenous groups for inclusion in the *EIS Guidelines.*	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table
LFN-9.4	Requested that the comments and feedback shared during meetings be incorporated into the EIS.	10-Dec-2014, Health & Aboriginal Rights Workshop – Lyackson First Nation and Lake Cowichan First Nation	**10-Dec-2014, Workshop:** Responded that what is said at today's meeting will be included. Stated that this summary is what was heard up to and through July 2014. Comments shared at the Fall workshops have not yet been incorporated, but will be seen reflected in the documents sent to Lake Cowichan First Nation and Lyackson First Nation the previous day (EIS draft Section 32.0). **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B:** Comments from Indigenous groups are included and addressed in EIS Appendix 7.2-B and throughout the EIS.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table
LFN-9.5	Noted that all Lyackson's comments are preliminary, including the Traditional Use Study, and more information is being gathered as the assessment moves forward.	29-Oct-2014, Preliminary EIS Results Workshop #4	**29-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided the EIS to Lyackson Fist Nation. Stated that the EIS will now become the subject of an environmental assessment, which will include an independent review panel and multiple		

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	Stated that Lyackson First Nation will need to see the whole body of work (EIS) to comment.		opportunities for comment from Indigenous groups and the broader public.		
LFN-9.6	Asked why Indigenous groups were not invited to participate in the TAGs.	28-Oct-2014, Preliminary EIS Results Workshop #3	Responded that a list of TAG members can be provided. **Post meeting note:** The list of TAG members was included in each of the summary reports (Productive Capacity, SRKWs, Coastal Geomorphology, and Biofilm & Shorebirds) shared November 27, 2013.	**Addressed in EIS Appendix 7.2-B (#23):** The VFPA established the TAG process in 2012 to engage and consult with leaders in the technical and scientific community to provide guidance on four key topic areas: SRKWs, biofilm and shorebirds, coastal geomorphology, and productive capacity. The TAG Terms of Reference and Summary Reports are available on the Project website: http://www.robertsbankterminal2.com/information-centre/project-documents/. The following Indigenous groups were invited to contribute to the TAG process: • Tsawwassen First Nation; • Musqueam First Nation; • Semiahmoo First Nation • Tsleil-Waututh Nation; • Stó:lō Nation; and • Stó:lō Tribal Council. The TAG process was also discussed in meetings with Indigenous groups, and summary reports on the TAG process were provided to all Indigenous groups for review and comment.	**EIS** 7.0 Engagement and Consultation Appendix 7.2-A Consultation Activities by Aboriginal Group Appendix 7.2-B Aboriginal Groups Interests and Issues Table 7.4 Technical Advisory Group Process (2012 to 2013)
LFN-9.7	Interested in the views of other First Nations regarding the Project, and whether Lyackson First Nation's concerns are shared with others. Asked if there is a list of who opposes the Project.	03-May-2017, Meeting	**03-May-2017, Meeting:** Responded that the VFPA cannot say if anyone opposes the Project or not, but there are appendices in the EIS and MSA that list all the concerns and issues raised by Indigenous groups. (Note: Copies of the EIS and MSA were provided to Lyackson First Nation on 01-Apr-2015 and 09-Nov-2015, respectively). Undertook to provide the notes from previously held workshops with Indigenous groups. **18-Jul-2017, Email from the VFPA:** The VFPA sent the following sets of workshop notes to Lyackson First Nation (all of which had been previously provided): • Valued Components Workshop #1 (06-Jun-2014); • Valued Components Workshop #2 (03-Jul-2014); • Preliminary EIS Results Workshop #1 (07-Oct-2014); • Preliminary EIS Results Workshop #2 (08-Oct-2014); • Preliminary EIS Results Workshop #3 (28-Oct-2014); • Preliminary EIS Results Workshop #4 (29-Oct-2014); • Health & Aboriginal Rights Workshop – Lake Cowichan First Nation / Lyackson First Nation (10-Dec-2014); and • Issues Workshop – Island Nations (28-Jul-2016).		
LFN-9.8	Commented on Hemmera referring to the Project as "theirs" and a media campaign talking about the benefits of these projects for B.C.	28-Oct-2014, Preliminary EIS Results Workshop #3	**28-Oct-2014, Workshop:** Recorded comment for consideration by the Project team.	**Addressed in EIS Section 1.4:** During Project planning, preliminary design, and preparation of the EIS, the VFPA gathered and integrated information from a wide range of sources, including the following: • Academic experts;	**EIS** 1.4 Use of Information

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	Noted the importance of Hemmera remaining independent. Troubled by the fact that the consultant commissioned for the Project assessment, Hemmera, is obviously biased and non-objective, given that Hemmera is known for having promoted the Project through media advertising.	01-Nov-2016, Letter to Panel (CEAR Document #733)		• Federal authorities with specialist or expert scientific information, advice, and knowledge relating to projects of this nature; • Other levels of government with expert and specialist knowledge; • Indigenous groups; • Communities; • Existing information relevant to the Project, including ITK; and • Professional practitioners (e.g., registered professional biologists, air quality specialists, geomorphologists). **Additional information provided by the VFPA:** The Project is undergoing a federal environmental assessment by an independent review panel, under *CEAA, 2012*.	

Table 10: Environmental Assessment and Permitting Process

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-10.1	Commented that it is not appropriate for the proponent to determine significance.	27-May-2014, Technical Working Group Meeting #3 28-Oct-2014, Preliminary EIS Results Workshop #3	**27-May-2014, Meeting:** The CEA Agency responded the person to determine the likelihood of a significant adverse effect is the Minister of Environment. The proponent can suggest what the significant environmental effect would be. Significance will be determined for Project effects as well as for the cumulative effect. **28-Oct-2014, Workshop:** Responded that the *EIS Guidelines* require the proponent to define significance and to assess the significance of the effect. The panel will be required to review the EIS and give their opinion on significance. They will seek input from Indigenous groups and various federal departments and other experts. The panel will make their determination and write a report. The final determination of significance is made by the Minster of the Environment based on recommendations from the panel. Only the Minister of the Environment can make a determination of significance. The CEA Agency responded that the VFPA is developing the EIS based on the guidelines. This includes reviewing potential different factors in determining significance. For each of the VCs, there could be a different determination based on that particular VC and all of the different factors affecting it. There are no standard criteria for determining significance. Significance is project-dependent and dependent on the VC. The CEA Agency has guidelines on significance determination, magnitude, frequency, duration, and context. The proponent has been asked why they came to their conclusions. The CEA Agency seeks input through the review panel from other stakeholders for their comments and rationale. Typically, this is an iterative process where the input of the Indigenous group is sought throughout.		
LFN-10.2	Concerned that B.C. EAO will require an assessment, and this will impose a significant additional consultation burden on Indigenous groups.	07-Oct-2014, Preliminary EIS Results Workshop #1	**07-Oct-2014, Workshop:** B.C. EAO responded that there are a number of options under provincial legislation in terms of approaches, so it may not take a typical provincial assessment process. B.C. EAO can confidently say that it does not intend to set up another process that is redundant. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#8):** On November 5, 2014, the B.C. EAO confirmed the Project is reviewable under Part 8 of the Reviewable Projects Regulation, *B.C. Environmental Assessment Act*. On December 19, 2014, the B.C. Minister of Environment issued an order under s. 14 of the Act establishing the Province's procedures and methods for conducting the environmental assessment for the Project. The Minister ordered that the scope of the Project is as defined by the CEA Agency in the *EIS Guidelines*; the scope of the assessment must include factors established by the federal Minister and potential adverse environmental, economic, social, heritage, and health effects, including cumulative effects, and practicable means to mitigate such potential adverse environmental effects, and potential adverse effects on Indigenous groups; the EAO will principally rely on the environmental assessment to be conducted by the federal review panel and on consultation conducted by the CEA Agency with Indigenous groups, whose interests are potentially affected by the Project; and the EAO must make a recommendation to the Minister within 30 days of receiving notice of the decision from the federal Minister.	**EIS** 6.0 Environmental Assessment and Permitting Process 6.2 Provincial Involvement and Process Appendix 7.2-B Aboriginal Groups Interests and Issues Table

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				The information presented in the EIS is intended to satisfy both federal and provincial environmental assessment requirements. More information regarding the federal environmental assessment for the Project can be found on the CEA Agency website at www.ceaa-acee.gc.ca, Reference Number: 80054. More information regarding the provincial environmental assessment for the Project can be found on the B.C. EAO's Project Information Centre (e-PIC) website at http://a100.gov.bc.ca/appsdata/epic/html/deploy/epic_project_home_410.html.	
LFN-10.3	Asked about changes to the *Fisheries Act* and *CEAA, 2012* and roles of the agencies. Asked whether or not the CEA Agency is now the responsible authority where it used to be Fisheries and Oceans Canada (DFO).	28-Oct-2014, Preliminary EIS Results Workshop #3	**28-Oct-2014, Workshop:** The CEA Agency responded that this is the key change. The CEA Agency will rely very heavily on DFO's comments in the review panel process and their professional opinion on the EIS. The Minister of the Environment will seek the advice and expertise of DFO. DFO deferred to the CEA Agency to explain the intricacies of the procedural aspects of it, but answered that information will be sought from DFO to be able to round out the opinions on the various components, and the effects that are anticipated to occur to those components.		

Table 11: Environmental Management Program

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-11.1	Requested more information on adaptive management used for the Deltaport Third Berth Project (DP3), including information on the effectiveness of this approach. Stated that the VFPA's Follow-up Program is hypothetical and has no details.	06-Jun-2014, Valued Components Workshop #1 08-Oct-2014, Preliminary EIS Results Workshop #2 04-Oct-2017, Meeting	**06-Jun-2014, Workshop:** Explained that DP3 was constructed and the adaptive management strategy was implemented to measure if what was speculated was in fact an outcome. Added that in the context of RBT2, it has not been brought up yet because the Project is still in an early phase where discussions are ongoing about what monitoring measures would be useful to have. Responded that the team has fully drawn upon information and data from DP3's adaptive management, and in many ways this assessment is growing from that strategy. **08-Oct-2014, Workshop:** Stated that the adaptive management strategy monitoring of the environment in this zone included a coastal geomorphology monitoring component that was related to the construction of DP3, so the VFPA has taken information that has been collected through DP3 and used it to help inform these other studies. **29-Aug-2017, Meeting with Lyackson First Nation, Cowichan Nation Alliance, and Malahat First Nation on the Follow-up Program:** The VFPA presented information on DP3's Environmental Management Program and lessons learned. The VFPA presented information on how the lessons learned would be incorporated into the RBT2 Follow-up Program. **04-Oct-2017, Meeting:** Explained that the VFPA will be coming to back to Lyackson to further discuss the Follow-up Program and get feedback from Lyackson before the Follow-up Program is finalised.	**Addressed in EIS Appendix 7.2-B (#32):** Onsite habitat selection considered lessons learned from previous habitat creation programs (e.g., DP3). The effectiveness monitoring reports for DP3 increased the understanding of the successes and challenges of previous habitat projects. The VFPA publishes annual reports on the Adaptive Management Strategy for DP3, which are available on the VFPA website (https://www.portvancouver.com/development-and-permits/status-of-applications/deltaport-third-berth-project/). An adaptive management approach will be taken as indicated in EIS Section 33.5. **Addressed in EIS Section 33.5:** The Follow-up Program will be developed in consultation with federal agencies, including the CEA Agency, DFO, and Environment and Climate Change Canada. Complete drafts of the RBT2 Follow-up Program will be made available prior to the start of field measurements to ensure parties consulted on the program and approving agencies have an opportunity to evaluate and approve the Program. Feedback from Indigenous groups regarding the draft Program will be sought through the VFPA's ongoing engagement initiatives. **Addressed in response to IR7-29:** The VFPA's response to IR7-29, as requested by the Review Panel, provides commentary on past eelgrass transplant initiatives.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 33.0 Environmental Management Program 33.5 Roberts Bank Terminal 2 Follow-up Program **Information Requests** Response to Sufficiency Information Request #29 (IR7-29)
LFN-11.2	Requested that that adaptive management practices based on the precautionary principle be applied prior to Project approval.	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Section 33.5:** Similar to the Adaptive Management Strategy for DP3, as described in EIS Section 33.5, the VFPA is committed to developing and implementing a Follow-up Program for the Project. The purpose of the Follow-up Program is to verify the accuracy of residual effect predictions made in the EIS, and determine the effectiveness of any measures taken to mitigate the adverse environmental effects of the Project. To ensure the Program's elements adequately reflect conditions of Project approvals, final designs, and construction or operation approaches, as well as public, Indigenous group, and regulator feedback received during the review of the EIS, the VFPA will lead the development of the Follow-up Program after the submission of the EIS. The Follow-up Program will include: • An evaluation of the adequacy of existing data to provide a benchmark against which to test Project-related effects;	**EIS** 33.5 Roberts Bank Terminal 2 Follow-up Program **Information Requests** Response to Sufficiency Information Request #11 (IR10-11)

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				• A monitoring design drawing on the measurable parameters identified to be field-tested; • A methodological approach for using field-collected data to measure and verify the accuracy of the effects predicted in the EIS; • A reporting framework that defines frequency of reporting, distribution, and feedback mechanisms; and • Details of the VFPA's approach to adaptive management for the Project through construction and operation. The Follow-up Program will be developed in consultation with federal agencies, including the CEA Agency, DFO, and Environment and Climate Change Canada. Complete drafts of the RBT2 Follow-up Program will be made available prior to the start of field measurements to ensure parties consulted on the program and approving agencies have an opportunity to evaluate and approve the Program. Feedback from Indigenous groups regarding the draft Program will be sought through the VFPA's ongoing engagement initiatives. **Additional information provided by the VFPA:** *CEAA, 2012* states: *"The Government of Canada, the Minister [of Environment and Climate Change], the [CEA] Agency, federal authorities and responsible authorities, in the administration of CEAA, 2012, must exercise their powers in a manner that protects the environment and human health and applies the precautionary principle."* **Addressed in IR10-11:** The VFPA's response to Information Requirements #IR10-11 as requested by the Review Panel describes how Indigenous groups will be involved in the development, implementation and management of the RBT2 follow-up program.	
LFN-11.3	Noted the Scientific Advisory Committee (SAC) would be a good opportunity to have Indigenous Traditional Knowledge included and to have First Nations' input on the selection of committee members. Stated that the VFPA and their consultants should not be handling the monitoring.	29-Aug-2017, Follow Up Program Workshop with Cowichan Nation Alliance, Lyackson First Nation and Malahat First Nation	**29-Aug-2017, Workshop:** Noted input on governance for the Follow-up Program and will incorporate into planning for the RBT2 Follow-up Program governance structure for further discussion in future Follow-up Program meetings.	**Addressed in IR10-11:** The VFPA's response to Information Requirements #IR10-11 as requested by the Review Panel describes how Indigenous groups will be involved in the development, implementation and management of the RBT2 follow-up program.	**Information Requests** Response to Sufficiency Information Request #11 (IR10-11)

Table 12: Human Health – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-12.1	Concerned with impacts from construction activities to air quality, causing health effects to fishers in boats in the Project area. Asked whether construction activities could be suspended during fisheries windows.	10-Dec-2014, Health & Aboriginal Rights Workshop – Lyackson First Nation and Lake Cowichan First Nation	**10-Dec-2014, Workshop:** Responded that the VFPA does not yet know what the construction schedule will be or whether construction activities would be suspended during a fisheries window.	**Additional information provided by the VFPA:** As noted in EIS Section 4.3.1, the construction schedule is aligned with the following environmental constraints: • Juvenile salmon closure – applies to work activities within the water column above –5.0 m CD (March 01 through to August 15 annually); and • Crab closure – applies to work activities on and in the seabed below –5.0 m CD (October 15 through to March 30 annually). There are no plans to suspend construction activities during commercial fisheries openings. **Addressed in EIS Appendix 7.2-B (#42):** An assessment was carried out to predict potential changes in air quality as a result of the Project. The results of the air quality assessment were used in the assessments of human health and Current Use. The assessment modelled Project-related emission sources during the construction phase, and fuel combustion during the construction and operation phases, and compared them to modelled existing conditions and future expected conditions. Existing conditions considered emissions from marine vessels, trains, trucks, vehicles, and equipment from the existing Westshore Terminals, Deltaport Terminal, and BC Ferries Terminal, while emissions from industrial, commercial, and residential sources within Delta were represented through measured air quality levels in Tsawwassen. A general trend of decreasing concentrations of contaminants has been observed and is expected in the Lower Fraser Valley for some criteria air contaminants, as well as for some trace organic contaminants. Coal dust is also included in the assessment of air quality in existing conditions, in the future with the Project, and in the cumulative effects assessment. Hypothetical maximum emissions scenarios were used to conservatively estimate existing conditions and potential changes from the Project. Estimated emissions and predicted ambient concentrations did not account for the inclusion of shore power as part of the Project, which is expected to decrease future emissions from ships at berth ultimately improving air quality. The assessment concludes that: • Air quality will improve in the future, with or without the Project, as a result of improvements in engine technologies and the use of cleaner fuels. • Cumulative changes, incorporating the Project and other certain and reasonably foreseeable projects and activities, are predicted to be small relative to expected future ambient air quality levels. • Project construction activities are predicted to cause a small increase in concentrations of some contaminants. • Criteria air contaminant (i.e., carbon monoxide, nitrogen oxides, sulphur dioxide, particulate matter, and ground-level ozone) and trace organic contaminant (i.e., formaldehyde and other contaminants related to fuel combustion) levels are predicted to be below air quality criteria on land, with limited exceptions. • The Project is expected to have a negligible effect on future ozone levels and to increase greenhouse gas emissions (i.e., carbon dioxide, methane, and nitrous oxide). • Although Project activities would emit black carbon, black carbon is expected to decrease in the future with the Project due to equipment fleet turnover at existing Roberts Bank terminals to newer engines that meet more stringent emission standards for particulate matter. The Project is not expected to result in any significant adverse effect on human health, including from changes in air quality. During operation, it is unlikely that Project-related exposures to air emissions would result in health effects. The only residual effect associated with air quality changes would be experienced by individuals on the water near the terminal during construction due to short-term and infrequent dust generation.	**EIS** 4.3.1 Construction Phase Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.0 Physical Setting 9.2.5 Air Quality, Methods 27.0 Human Health
LFN-12.2	Asked about the potential effect of contaminants on wildlife, birds, marine species, and the	08-Oct-2014, Preliminary EIS Results Workshop #2	**08-Oct-2014, Workshop:** Responded that this question will be answered by the presenters of those topics (birds, mammals, fish, etc.).	**Addressed in EIS Section 27.0:** As outlined in EIS Section 27.0, new contaminant input as a result of Project construction or operation is not anticipated; consequently, the human health assessment predicts a negligible potential for direct human health effects from Project construction or operation based on toxicological risks associated with marine	**EIS** 27.0 Human Health 32.2.7.3 Mitigation Measure #3: Changes in Quality of

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	potential for a residual effect on Indigenous people who eat these foods. Concerned about impacts to traditional resources as a result of reduced quality of traditional food resources due to industrial development. Lyackson is specifically concerned about impacts to human health as a result of contamination from the Project going up the food chain to fish, birds and people. This concern has not been adequately addressed by the Proponent.	01-Nov-2016, Letter to Panel (CEAR Document #733)	Responded that there are estimates of deposition of carcinogens such as benzo(a)pyrene, to the surface, for example in the crops that people eat. Stated that there would be ingestion that way, but in terms of wildlife, the answer is there is not enough dose response information available on wildlife. **10-Dec-2014, Health & Aboriginal Rights Workshop – Lyackson First Nation and Lake Cowichan First Nation:** Potential impacts to human health were discussed. The presentation covered exposure to shellfish contamination and food security: There are no potential direct adverse health effects predicted to result from exposure to contaminants in shellfish. Future changes with project, either during construction or operations, have no potential to increase the tissue concentrations of contaminants studied (i.e., polycyclic aromatic hydrocarbons or various trace elements that occur in coal dust).	shellfish consumption, and specifically of edible bivalve tissue and Dungeness crab muscle. No mitigation measures are therefore identified. EIS Section 27.0 also examines potential changes to stress and annoyance levels within the human health LAA as a result of perceived contamination of traditional food sources. Residual effects are anticipated to be negligible and are therefore not assessed further in the human health assessment. For all Indigenous groups, effects to the quality of Current Use resources are not anticipated as a result of Project construction or operation. The mitigation measures identified for other potential effects on Current Use and those proposed in the human health assessment related to perceived contamination will serve to alleviate concerns regarding perceived contamination risk; see EIS Section 32.2.7.3. **Addressed in IR13-22:** The VFPA's forthcoming response to IR13-22 will further discuss potential Project effects on the quality and availability of preferred resources.	Preferred Current Use Resources **Information Requests** Response to Sufficiency Information Request #22 (IR13-22)
LFN-12.3	Concerned that the shore power component of the terminal design will result in adverse effects on other First Nations in the province, through the increased demand of hydroelectric power.	08-Oct-2014, Preliminary EIS Results Workshop #2	**08-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#7):** The implementation of shore power at RBT2 would be done in consultation with BC Hydro, such that adequate electrical capacity will be available so as not to affect power supply. Consideration of Project-related demand on municipal power supply is not included in the EIS.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table
LFN-12.4	Commented on the difference in nutrition between grocery store and harvested foods and concern that the project will exacerbate existing issues with access to traditional foods.	10-Dec-2014, Health & Aboriginal Rights Workshop – Lyackson First Nation and Lake Cowichan First Nation	**10-Dec-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#150):** The human health assessment of potential Project-related effects on food security considered the difference in nutritional value between traditional foods and store-bought foods in that a reduction in consumption of traditional foods, as compared to store bought alternatives, would be considered an adverse health effect, due to the high nutritional value of traditional foods. **Addressed in EIS Section 32.2:** EIS Section 32.2 examines potential Project-related and cumulative effects that are relevant to traditional food consumption and nutritional health. These potential effects are related to access to preferred locations for harvesting preferred food resources, availability of preferred food resources, and quality of preferred food resources. Based on information considered in EIS Section 32.2, there are no anticipated residual effects to most traditional food sources, including marine vegetation, marine fish, coastal birds, marine mammals, and most marine invertebrates, including bivalve shellfish and Dungeness crab.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 27.0 Human Health 27.5.7 Food Security Section 32.2 Current Use of Lands and Resources for Traditional Purposes

Table 13: Land and Water Use – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-13.1	Concerned about effects related to the growth of Delta, a largely agricultural community, being filled in by other types of economic activity.	29-Oct-2014, Preliminary EIS Results Workshop #4	**29-Oct-2014, Workshop:** Responded that there are nine VCs that make up of the socio-economic assessment. They are population; labour market; economic development; local government finances; marine commercial use; outdoor recreation; services and infrastructure; land use; and health. Not all of these will be shared as a presentation of the program. They are all linked. Stated that agricultural land reserve (ALR) land and Delta is covered in EIS Section 26.0 and discusses how the Project fits into the community planning of the surrounding area and land use designations. The labour assessment and economic assessment relate to the health impact assessment to review potential impacts on health, economic development, and labour. They are separate studies woven together in the EIS. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#114):** An overview of the multiple components that make up the larger socio-economic assessment is provided in EIS Section 18.0. The assessment of potential Project-related effects on the economic development VC concluded that the Project will be consistent with the economic development objectives of the Corporation of Delta.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 18.0 Social and Economic Setting 21.0 Marine Commercial Use 26.0 Land and Water Use 26.7.2 Potential Effect #1 – Consistency with Land Use Planning Designations 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Land and Resources for Traditional Purposes

Lyackson First Nation

Table 14: Light – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-14.1	Commented that sky glow testing occurred on a clear night, but the lights from the VFPA are most visible when it is cloudy.	08-Oct-2014, Preliminary EIS Results Workshop #2	**08-Oct-2014, Workshop:** Responded that what sky glow measures is the visibility of the stars as affected by light, which is why the assessment had to be done on a clear night. Unfortunately, the methodology does not assess the brightness of the sky when there is cloud cover and the clouds are reflecting light. It is an emerging science, and it is something that is been discussed, but it is not part of this assessment. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#47):** Measurements of sky glow depend on the visibility of the stars, and were taken on nights with no or low cloud cover, where possible. The rationale for the assessment methods is included in the EIS and technical report.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 9.0 Physical Setting 9.4.2 Light, Assessment Purpose and Approach 9.4.5 Methods Appendix 9.4-A Roberts Bank Terminal 2 Light Assessment Study, Study Methods
LFN-14.2	Concerned with impacts from skyglow to cultural practices (i.e., a bathing ritual, mourning sites, cultural retreats on the east side of Valdes Island). Stated that specific Lyackson First Nation and Coast Salish oral traditions and sacred practices are reliant on stars and unimpaired visibility of the night sky. Stated that light pollution caused by the Project would reduce the sense of place and cultural practices related to sacred oral traditions and practices that are reliant on stars and unimpaired visibility of the night sky.	27-May-2014, Technical Working Group Meeting #3 31-Aug-2014, Lyackson First Nation Traditional Use Study 08-Oct-2014, Preliminary EIS Results Workshop #2 01-Nov-2016, Letter to Panel (CEAR Document #733)	**27-May-2014, Meeting:** Responded that some of this information will be in the proposed physical and cultural heritage VC and the EIS chapter on Aboriginal rights. Stated that the VFPA is working to develop Indigenous groups' community profiles for those groups close to the Project. There will also be a broader assessment of Current Use. Some of the intangible cultural uses will also be included in the EIS. Stated that the meeting on June 6, 2014 is intended to have a more detailed discussion on the proposed biophysical VCs. If desired, we could have a similar process on socio-economic VCs after the June 17, 2014 meeting. **31-Aug-2014:** Recorded comment for consideration by the Project team. **08-Oct-2014, Workshop:** Explained that the current brightness at POR1 (Galiano Island) is close to the next classification. Because the existing conditions are already so close to the threshold, the Project-related change bumps it up into the next category, from G2 to G3. However, the change is not expected to result in a noticeable difference in the visibility of the stars, and would not be perceptible to the naked eye. Reviewed the summary of light effects assessment, noting measurable changes in light trespass and sky glow are expected, though those changes are not expected to change the overall light conditions except for at POR1 on Galiano Island, for sky glow. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#179):** Cultural considerations, including culturally and/or spiritually important sites are included in the assessment of asserted or established Aboriginal or treaty rights, including EIS Section 32.0, where information relating to these sites was provided by Indigenous groups, in accordance with CEA Agency technical guidance (May 2014). **Addressed in EIS Sections 32.2.4.7 and 32.2.6.4:** Lyackson's concern regarding light pollution on the eastern side of Le'eyqsun at night is reported in EIS Section 32.2.4.7, which also details Lyackson's use of the east side of Le'eyqsun (S'utl'qulus) for cultural purposes, including for the newly constructed youth camp. EIS Section 32.2.6.4 includes "sensory disturbance from light, noise and vibration" and "reduced opportunities to transmit [ITK] (e.g., that may be associated with sensory disturbance while pursuing Current Use or avoidance of Current Use activities)". Light trespass is expected to change at one location immediately south of the Project area, near the existing Westshore Terminals, and sky glow is expected to change at one location on Galiano Island. No change is predicted at the east side of Le'eyqsun. **Addressed in EIS Section 9.4:** In addition, an effort is underway to gradually phase out the current outdoor lighting fixtures at the Deltaport Terminal in favour of light-emitting diodes (LEDs), which are expected to reduce light trespass and sky glow from the existing Deltaport Terminal in the coming years.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 9.4 Light 32.2.4.7 Lyackson First Nation 32.2.6.4 Potential Effect 4: Changes in Quality of Current Use Experience

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-14.3	Concerned with adverse economic impacts from skyglow to a Lyackson First Nation commercial campsite on Le'eyqsun. Stated that light pollution from the Project will reduce visibility of the night sky and consequently cause adverse economic impacts on Lyackson commercial tourism interests, including the plans for a campground on Le'eyqsun. Stated that the 24-hour lighting and is reportedly interfering with the visibility of the night sky and stars ("little people") for whom cultural activities and ceremonies are conducted. Further light pollution will further interference with Lyackson's socio economic interests such as establishment of camp sites for tourism on the East side of Le'eyqsun.	27-May-2014, Technical Working Group Meeting #3 31-Aug-2014, Lyackson First Nation Traditional Use Study 01-Nov-2016, Letter to Panel (CEAR Document #733)	**27-May-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#122):** The assessment of changes to light (light trespass and sky glow) includes the area of the commercial campground on Le-eyqsun. Economic effects associated with changes in light are not assessed in the EIS; however, changes in light are not anticipated to result in a change in zone classification (describing general light conditions) for sky glow or light trespass at the location of interest. **Addressed in EIS Sections 32.2.4.7 and 32.2.6.4:** Lyackson's concern regarding light pollution on the eastern side of Le'eyqsun at night is reported in EIS Section 32.2.4.7, which also details Lyackson's use of the east side of Le'eyqsun (S'utl'qulus) for cultural purposes, including for the newly constructed youth camp. EIS Section 32.2.6.4 assesses changes in quality of Current Use experience, which includes "sensory disturbance from light, noise and vibration" and "reduced opportunities to transmit [ITK] (e.g., that may be associated with sensory disturbance while pursuing Current Use or avoidance of Current Use activities)". Light trespass is expected to change at one location immediately south of the Project area, near the existing Westshore Terminals, and sky glow is expected to change at one location on Galiano Island. No change is predicted at the east side of Le'eyqsun. **Addressed in EIS Section 9.4:** In addition, an effort is underway to gradually phase out the current outdoor lighting fixtures at the Deltaport Terminal in favour of LEDs, which are expected to reduce light trespass and sky glow from the existing Deltaport Terminal in the coming years. **Addressed in IR10-27:** The VFPA's response to IR10-27, as requested by the Review Panel, discusses potential effects of the proposed Project on existing business ventures that have been identified by Indigenous groups.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 9.0 Physical Setting 9.4 Light 9.4.8 Light, Future Conditions with the Project 24.0 Outdoor Recreation 24.6.4 Other Land-based Outdoor Recreation – Rationale for Negligible Effect 25.0 Visual Resources 25.5.2 Project Setting and Prominent Visual Features 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Lands and Resources for Traditional Purposes 32.2.4.7 Lyackson First Nation 32.2.6.4 Potential Effect #4: Changes in Quality of Current Use Experience **Information Requests** Response to Sufficiency Information Request #27 (IR10-27)
LFN-14.4	Requested to know what measures have already been undertaken at Roberts Bank to address light pollution, noting it seems to have improved in the past year. Asked what light mitigation measures have been incorporated into the Project's design. Asked if in addition to down lighting, whether switching from pink to white light would result in a further detectable difference in brightness.	30-Apr-2014, Meeting 10-Dec-2014, Health & Aboriginal Rights Workshop – Lyackson First Nation and Lake Cowichan First Nation	**30-Apr-2014, Meeting:** Described technical light mitigation for Deltaport and Westshore. Responded that the VFPA is aware of ongoing upgrades at Deltaport, noting there may be additional improvements prior to start of the Project. Committed to follow up with an answer in regard to what light mitigation measures have been incorporated into the Project design so far. Stated that mitigation measures for light will be identified in the EIS. **08-Oct-2014:** Presented on the light effects assessment. Noted that the existing Deltaport terminal is considering switching from incandescent light bulbs to LED light bulbs, which have a different wavelength that is more blue-white in colour as opposed to pink. It is speculated that over the next five or so years a change could be observed with regard to the colour of light at Deltaport.	**Addressed in EIS Section 9.4:** As noted in EIS Section 9.4.7, a process is underway to change the current outdoor lighting fixtures at the Deltaport Terminal to LEDs. LEDs are more directional and easier to control in terms of where light is focused. It is anticipated that the change to LEDs will reduce both light trespass and sky glow from the Deltaport Terminal, provided good lighting design practices are followed (specifically, the use of full cut-off light fixtures to limit up-light and only lighting areas that are required to be lit). The lighting on one crane at Deltaport has been fully replaced with LED lights, offering a point of comparison with the older lights. Suggested mitigations for the Project were considered in the effects assessment. Mitigation measures to address effects on visual resources and coastal birds consist of implementation of EMPs, including Light Management Plans, for construction and operation phases. The Light Management Plans will describe measures to reduce excess lighting and sky glow, including: • Orienting lights downwards and away from residential and marine areas; • Using shielding to minimise light trespass; • Controlling light levels and limiting light use to areas where activities are occurring; • Where possible, using fixtures that emit light at wavelengths shown to minimise disorienting effects to birds;	**EIS** 9.4 Light 9.4.4 Light, Relevant Guidelines 9.4.7 Expected Conditions 9.4.8 Light, Future Conditions with the Project 15.7.2 Future Conditions with the Project - Potential Effect - Changes in Productivity – Artificial Lighting 33.3.5 Construction EMP, Light Management Plan 33.4.3 Operation EMP, Light Management Plan 35.0 Effects Assessment Summaries Table 35-2 Proposed

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			Referred to a question posed by another Indigenous group at the last workshop (07-Oct-2014) about the effect of light on birds, and stated that there is a lot of existing research about how birds are more or less attracted to different wavelengths (colours) of light. As a result, in conversations about mitigation for birds, a recommendation has been made to use the type of light bulb that birds are least attracted to. **10-Dec-2014, Workshop:** Responded that the VFPA is aware of ongoing upgrades at Deltaport, noting there may be additional improvements prior to start of the Project. Responded that mitigation measures for light will be identified in the EIS. Committed to following up on the question of whether switching from pink to white light would result in a further detectable difference in brightness. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Section 9.4 Light.	• During construction, ensuring dredge lighting system shields light from spilling outside the basic working footprint of the dredge; and • During operation, establishing a centralised lighting control system to select lighting where required. To ensure their alignment with all required project permits, any conditions of approvals, final designs, finalised construction or operation approaches and site-specific considerations, the Project's EMPs are necessarily developed and finalised nearer to the start of the construction and operation phases. **Further information provided by the VFPA:** LEDs are available in a variety of colours, but are generally whiter in colour compared to the more yellow High Pressure Sodium (HPS) lights. While there may be an observable difference in the light colour, with proper lighting design and mitigation (e.g., fully cut-off fixtures) the light at the receiver is expected be lower or worst-case the same as with HPS lighting.	Mitigation Measures and Commitments
LFN-14.5	Expressed a general concern about increased vessel traffic increasing light pollution.	04-Apr-2017, Meeting with Administrative Staff	**04-Apr-2017, Meeting:** Recorded comment for consideration by the Project team.	**Addressed in MSA Section 7.5:** An assessment was conducted to determine the potential changes to the light environment related to vessel transit activities for representative points of reception along the shipping lanes throughout the marine shipping area. Existing light conditions vary within the study area, depending on surrounding sources of light. Existing light trespass characteristics at assessed points of reception in the study area are similar to those in residential rural areas, whereas sky glow characteristics range from areas of low district brightness to areas of high district brightness. The incremental light from vessel transit activities is not expected to result in a change in light trespass classifications. Sky glow classifications are expected to temporarily change during the nighttime at two points of reception: Saturna Island and Stuart Island. However, these predicted changes are overestimated, based on the conservative assumption of two ships passing at the same time. The anticipated changes in light conditions related to Project-associated vessel transit activities are representative of a cumulative case (two ships passing at the same time). Although there would be more marine shipping activity in the future, it is highly unlikely that there would ever be more than two vessels passing in the shipping lanes at any given time.	**MSA** 7.5 Light
LFN-14.6	Stated that the light pollution caused by the Project would further reduce visibility of the night sky with potential adverse effects to fish and birds that rely on the night sky for navigation.	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Appendix 7.2-B (#95):** It is recognised that nocturnal behaviour of birds varies in response to lighting conditions. A review of documented effects of both natural and artificial light on birds is provided in the EIS. The potential effects on coastal birds of changes in artificial light related to the Project are considered in the EIS. A Light Management Plan will be included in the Construction EMP and the Operation EMP to reduce artificial light-related effects on coastal birds. **Addressed in IR9-02:**	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 15.0 Coastal Birds 15.7.2 Future Conditions with the Project, Potential Effect-Changes in Productivity 15.8.3 Mitigation #2 – Measures to Address

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				The VFPA's forthcoming response to IR9-02, as requested by the Review Panel, will further discuss mitigation measures related to artificial light for migratory and non-migratory birds and avian species. **Addressed in response to IR5-25:** In summary, the assessment of potential effects of the Project predicted a minor decrease in juvenile salmon and herring productivity pre-mitigation that could result from lighting and shading associated with Project marine infrastructure. With mitigation, including implementation of a light management plan, effects on fish productivity from Project-related changes in the light environment will be negligible, with no residual effect. Additional information is provided in the response to IR5-25. **Addressed in response to IR5-39:** The interaction between overpass lighting and rail switch lighting and the marine mammals VC indicated in EIS Appendix 8-B was in error. There is no anticipated interaction. Light from the Project is not anticipated to extend into the water, and known marine mammal haulouts in the LAA for the Project are located at Sand Heads, approximately 16 km from overpass lighting and rail switch lighting, where light will not reach (MSA Figure 8.2-3). **Addressed in response to IR7-42:** The VFPA's response to IR7-42 discusses the potential effects of the increased nighttime light from the proposed Project on recreational astronomy in the LAA and RAA in terms of changes to areas used and quality of environmental setting. Based on the above modelling results, no visible alteration to nighttime viewing conditions at Boundary Bay with the Project are anticipated. Based on the predicted change in light trespass and sky glow associated with the Project at Boundary Bay, and no anticipated change in nighttime viewing conditions at Boundary Bay, Project effects on quality of the nighttime visual environmental setting and on outdoor recreational experience at the Boundary Bay recreational astronomy viewing site are anticipated to be negligible. Based on current understanding that the Boundary Bay viewing site is the only recreational astronomy viewing area within the LAA or RAA, Project effects on recreational astronomy viewing in other parts of the LAA or RAA are not identified. There is no change to the land-based outdoor recreation assessment results as described in EIS Section 24.6.4.	Productivity Loss due to Changes in Habitat Quality 33.0 Environmental Management Program 33.3.5 Construction EMP, Light Management Plan 33.4.3 Operation EMP, Light Management Plan **Information Requests** Response to Sufficiency Information Request #25 (IR5-25 of CEAR Document #1153) Response to Sufficiency Information Request #39 (IR5-39 of CEAR Document #1138) Response to Sufficiency Information Request #42 (IR7-42 of CEAR Document #1049) Response to Sufficiency Information Request #02 (IR9-02)
LFN-14.7	Stated that 24-hour lighting is further a concern to fish, such as herring, which may come to the surface at night, becoming more susceptible to artificial prey opportunities and less available to traditional fishing practices that use light as an attractant. Concerned about light impacts on juvenile salmon and eelgrass habitat.	01-Nov-2016, Letter to Panel (CEAR Document #733) 04-Oct-2017, Meeting	**04-Oct-2017, Meeting:** Recorded comment for consideration by the Project team.	**Addressed in response to IR5-25:** In summary, the assessment of potential effects of the Project predicted a minor decrease in juvenile salmon and herring productivity pre-mitigation that could result from lighting and shading associated with Project marine infrastructure. With mitigation, including implementation of a light management plan, effects on fish productivity from Project-related changes in the light environment will be negligible, with no residual effect. Additional information is provided in the response to IR5-25.	**Information Requests** Response to Sufficiency Information Request #25 (IR5-25 of CEAR Document #1153)
LFN-14.8	Commented that light can have an effect on fish as well, and that they can increase predator/prey	06-Jun-2014, Valued	**06-Jun-2014, Workshop:** Responded that the VFPA will bring forward this issue for discussion at future sessions.	**Addressed in EIS Appendix 7.2-B (#85):** The effects of the Project on marine fish from aspects such as artificial lighting, including on herring, are considered in the EIS.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	opportunities including human access to fish due to increased light.	Components Workshop #1 08-Oct-2014, Preliminary EIS Results Workshop #2	**08-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. **28-Oct-2014, Preliminary EIS Workshop #3:** The VFPA held a workshop and the marine fish VC was further discussed. The presentation covered changes in productivity due to light disturbance and also provided an overview of the Light Management Plan. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	Changes in light conditions, in the form of shading during the day, or artificial lighting at night from overwater structures (e.g., the marine terminal) and associated activities (e.g., moored vessels), may affect individual marine fish performance. Project-related increases in illuminance are anticipated to raise the ambient brightness from low to medium. Exposure to periods of high or intermediate light (such as those brought about by artificial lighting at night) may cause temporary blindness as juvenile salmon may take up to 30 minutes to adjust their vision, with similar implications on foraging success and predator avoidance. Potential effects of the Project on fish related to light are described in more detail in the EIS. The potential effects to current Indigenous use of this resource are also assessed.	13.0 Marine Fish 13.6.3 Potential Effect - Changes in Productivity 13.7.5 Mitigation #4 for Changes in the Light Environment 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Lands and Resources for Traditional Purposes
LFN-14.9	Concluded that the Proponent has not adequately assessed likely Project related sensory disturbances (noise, light, and vibration) on Le'eyqsun and surrounding foreshore and waters.	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Sections 9.3 and 9.4:** EIS Sections 9.3 and 9.4 provide assessments of noise and light, respectively. IR7-06 presents an update of the ongoing discussion with Lyackson First Nation regarding the source of the noise referred to in EIS Section 32.2.4.7.	**EIS** 9.3 Noise and Vibration 9.4 Light **Information Requests** Response to Sufficiency Information Request #6 (IR7-06 of CEAR Document #1049)

Table 15: Marine Commercial Use – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-15.1	Stated that Lake Cowichan, Lyackson, Halalt, Penelakut, and Stz'uminus First Nation have five Area E gillnet licenses (and other licenses) and are very concerned about potential economic impacts to salmon fisheries. Stated that this section (Marine Commercial Use) is important to Indigenous groups and needs to be more detailed. Concerned with the determination that Indigenous fishers will not be affected by the commercial fishery closure. Commented that First Nations in the province have fought hard to get into the commercial fishing industry.	07-Oct-2014, Preliminary EIS Results Workshop #1	**07-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. **29-Oct-2014, Preliminary EIS Results Workshop #4:** Described results of the preliminary assessment of potential Project effects and cumulative effects on economic development and any proposed mitigation. Sought feedback on the draft findings and proposed mitigation. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#117):** Marine commercial use, or the use of marine waters and resources to generate revenue, has been identified as an important economic factor in local and regional communities, and for Indigenous groups. The marine commercial use assessment included four sub-components: • Seafood harvesting; • Marine fish harvesting; • Guided sport fishing; and • Marine-based tourism. The Project is anticipated to result in a negligible effect to marine fish harvesting, guided sport fishing, and marine-based tourism. These negligible effects are related to changes in area, access, resource availability, and harvesting revenues. The VFPA will work with DFO to engage commercial crab harvesters to identify and implement feasible mitigation measures, and will implement construction and operation EMPs related to construction phase communication, construction monitoring, and crab salvages effects from displacement of commercial crab harvesting during construction and operations. The Project is expected to result in a residual effect of changes to seafood harvesting area, harvest, and revenue. The residual effect is determined to be not significant, as Dungeness crab are known to move substantial distances to baited traps, and harvest activity can be moved to another open area. Other planned or reasonably foreseeable projects and activities would also displace crab harvesting, and this effect would combine with that of the Project to result in an incremental cumulative effect on commercial crab fishing. This adverse incremental cumulative effect is determined to be not significant.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 12.0 Marine Invertebrates 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries 21.0 Marine Commercial Use 21.6 Future Conditions with the Project – Potential Project-related Effects 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Land and Resources for Traditional Purposes 32.2.6 Future Conditions with the Project - Potential Project-Related Effects
LFN-15.2	Requested information on how the Project will affect access to fishing areas.	03-Jul-2014, Valued Components Workshop #2	**03-Jul-2014, Workshop:** Responded that because a lot of the focus is on fisheries, the VFPA thought it made sense to use the DFO management framework that they use to record data to help spatially. Stated that the VFPA will be focusing primarily on DFO Fisheries Management Areas 29-7 and 29-6 for the LAA, but regionally the VFPA will look much more broadly in the entire area 29. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#117):** Marine commercial use, or the use of marine waters and resources to generate revenue, has been identified as an important economic factor in local and regional communities, and for Indigenous groups. The marine commercial use assessment included four sub-components: • Seafood harvesting; • Marine fish harvesting; • Guided sport fishing; and • Marine-based tourism. Potential effects on marine commercial use include displacement of commercial crab harvesting during construction and operation, resulting in a potential change of harvesting area, total harvest, and revenue, due to the Project footprint and the proposed expansion of the area closed to commercial crabbing. The VFPA will work with DFO to engage commercial crab harvesters to identify and implement feasible mitigation measures; and will implement construction and operation EMPs related to construction phase communication, construction monitoring, and crab salvages effects from displacement of commercial crab harvesting during construction and operations.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 12.0 Marine Invertebrates 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries 21.0 Marine Commercial Use 21.6 Future Conditions with the Project – Potential Project-related Effects 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Land and Resources for Traditional Purposes

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				The Project is anticipated to result in a negligible effect to marine fish harvesting, guided sport fishing, and marine-based tourism. These negligible effects are related to changes in area, access, resource availability, and harvesting revenues. The Project is expected to result in a residual effect of changes to seafood harvesting area, harvest, and revenue. The residual effect is determined to be not significant, as Dungeness crab are known to move substantial distances to baited traps, and harvest activity can be moved to another open area. Other planned or reasonably foreseeable projects and activities would also displace crab harvesting, and this effect would combine with that of the Project to result in an incremental cumulative effect on commercial crab fishing. This adverse incremental cumulative effect is determined to be not significant.	32.2.6 Future Conditions With the Project - Potential Project-Related Effects
LFN-15.3	Disagreed with the determination that impacts to crabbing will not be significant. Stated that moving crab fishermen to another area has socioeconomic impacts to the fisher or harvester as well as to other crab management areas.	29-Oct-2014, Preliminary EIS Results Workshop #4	**29-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **12-Apr-2018, Letter from the VFPA:** Stated that since your concerns were raised, the Project team has conducted further work on these topics to respond to information requests from the Review Panel, to better understand potential effects and suggested mitigation, and to gain deeper understanding of the viewpoints of Indigenous groups and stakeholders. Provided the RBT2 Crab Mitigation Summary Overview, which detailed the following: • Mitigation measures to avoid or reduce effects to crab as outlined in the EIS; and • Additional crab harvesting related mitigation measure suggestions under review. Stated that the VFPA is interested in hearing views regarding options to mitigate potential effects to crabs and crabbing in the Project area.	**Addressed in EIS Appendix 7.2-B (#119):** The EIS describes potential effects on fishing activity (EIS Sections 21.0 and 24.0) and effects in other areas (e.g., Boundary Bay) that are not otherwise directly affected by the Project but that may be affected by displacement are considered in EIS Section 32.2. Mitigation measures to reduce effects on outdoor recreation include: • Working with DFO to engage with recreational crab harvesters to identify and implement feasible mitigation measures; and • Implementation of construction EMPs related to construction phase communication and crab salvages. Mitigation measures to reduce effects on marine commercial use include: • Working with DFO to engage with commercial crab harvesters to identify and implement feasible mitigation measures; and • Implementation of construction and operation EMPs related to construction phase communication, construction monitoring, and crab salvages. **Addressed in EIS Appendix 7.2-B (#120):** In the marine commercial use assessment, a residual effect is considered significant when all of the following conditions are met: • The effect occurs to a known area of commercial marine based activity or potential; • The effect displaces or excludes commercial marine-based activities from a known use area; • There are associated adverse harvest or revenue effects due to the displacement; and • The displaced commercial marine-based activity cannot move to known alternative activity areas due to regulatory reasons. The Project is expected to result in a residual effect of changes to seafood harvesting area, harvest, and revenue. This residual effect is determined to be not significant, however, as Dungeness crab are known to move substantial distances to baited traps, and harvest activity can be moved to another open area. The potential for an adverse effect related to changes in access to preferred Current Use locations for crab is discussed in EIS Section 32.2.6. With the implementation of mitigation measures (EIS Section 32.2.7), residual Project-related effects on Current Use are expected to be negligible (EIS Section 32.2.8).	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 21.0 Marine Commercial Use 21.7 Future Conditions with the Project – Potential Project-related Effects 21.10 Determination of Significance of Residual Adverse Effects Table 21-10 Summary of Determination of Significance of Residual Effects for Marine Commercial Use 24.0 Outdoor Recreation 24.6 Future Conditions with the Project – Potential Project-related Effects 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2.6 Current Use of Land and Resources for Traditional Purposes, Future Conditions with the Project – Potential Project-related Effects 32.2.7 Current Use of Land and Resources for Traditional Purposes, Mitigation Measures Current Use of Land and Resources for Traditional Purposes, Characterisation of Residual Effects and Context

Lyackson First Nation

Table 16: Marine Fish – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-16.1	Asked why sockeye are not being included in the presentations or EIS, stressing the importance of sockeye to Lyackson First Nation and Lyackson First Nation elders specifically. Reiterated concerns regarding sockeye. Stated that there needs to be monitoring of sockeye.	03-Jul-2014, Valued Components Workshop #2 29-Aug-2017, Follow Up Program Workshop with Cowichan Nation Alliance, Lyackson First Nation and Malahat First Nation	**03-Jul-2014, Workshop:** Responded that the use of the focal species to present information is not to suggest that one species is more important than another. Explained that the VFPA is working on an environmental assessment, and we are trying to find a way that people can read and digest a lot of information. Added that the VFPA is not saying that Chinook is more important than sockeye or otherwise, we are just saying that for the sake of presenting this information and understanding potential effects and how we can mitigate those effects. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **28-Jul-2016, Issues Workshop - Island Nations:** Explained that the rationale behind this approach that juvenile Chinook and chum are the most estuarine dependent species. Juvenile Chinook and chum spend the most time in the estuary relative to other species of salmon, and therefore are most likely to interact with the Project. Therefore, any predicted Project effects to Chinook or chum will conservatively predict effects to other species. Stated that the use of representative species is a fairly common EIS approach. The rationale is based on habitat use predominately, but taking a deeper dive into sockeye habitat use and history – the information includes past studies from DFO, academia, field data collected as part of the RBT2 base line studies and past environmental assessments indicate that juvenile sockeye do not use Roberts Bank in abundance. They tend to use lakes for rearing and smoltification and migrate out the river immediately. So, the spatial overlap of the Project with sockeye is considered fairly limited. The information that we have on adult sockeye habitat use indicates they do not spend much time in the Roberts Bank area either. They typically enter the Fraser River with little or no delay, so again, there is limited spatial and temporal overlap with the Project. So, to sum that up, the environmental assessment is about capturing Project interactions and pathways of effects and we definitely recognise and understand the importance of sockeye – and took the approach that we believe represents the most conservative assessment by assessing the species that spend the most time in the estuary. **29-Aug-2017, Workshop:**	**Addressed in EIS Appendix 7.2-B (#107):** In EIS Section 13.0, sockeye salmon was not selected as a representative species within the Pacific salmon sub-component, as studies indicate that juvenile sockeye salmon do not use the Roberts Bank area in high abundance, relative to chum and Chinook salmon (which have been selected as representative species in the assessment). Since chum and Chinook are the most estuarine-dependent species of salmon, the potential for Project-related interactions with these species is greatest. Results of the assessment based on these two species represent a more conservative approach, given the life histories and habitat use of chum and Chinook. Therefore, potential Project-related effects on sockeye salmon are considered within the assessment through the assessment on the sub-component Pacific salmon, as represented by chum and Chinook. Sockeye salmon are considered in the assessment of marine commercial use as the primary species of salmon sought in the assessment area. The economic component of sockeye fishing is addressed in EIS Section 21.0. **Addressed in response to IR5-15:** In the response to IR5-15, issued by the Review Panel on June 6, 2017 (CEAR Document #975), the VFPA specifically discusses existing conditions related to sockeye and describes the status and management practices associated with the species. The response also further assesses potential effects of the Project on sockeye directly.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 13.0 Marine Fish 13.2.1 Sub-components 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries 16.2.1 Sub-components 21.0 Marine Commercial Use 21.5.2 Existing Conditions, Aboriginal Commercial Fishing and Seafood Harvesting **Information Requests** Response to Sufficiency Information Request #15 (IR5-15 of CEAR Document #1078)

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			Noted concerns regarding fish, and will include this as ongoing topic for further discussion on representative species and ways to address concerns raised.		
LFN-16.2	Referred to the roughening up of caissons, and asks if it is being considered. Referred to caissons not working well for salmonids, and asked what is being proposed for salmonids.	07-Oct-2014, Preliminary EIS Results Workshop #1	**07-Oct-2014, Workshop:** Stated that the VFPA is looking at some potential treatments along the caisson berth face, to roughen the surface, to enable better attachment of micro-algae and invertebrates, and then along the berth face will potentially be a migration route for salmonids. Stated that engineering is investigating what could possibly be done to allow for the free passage of fry along the front of the caissons, but it was started only a week ago, so it is too early to be certain of its feasibility. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Section 17.0 regarding mitigation measures.	**Addressed in EIS Section 17.0:** Onsite habitat is intended to soften the perimeter of the Project's shoreline to be more ecologically representative of the existing estuary, to create similar habitat to those that will be affected by the Project, and to create habitat that generally enhances the productivity of the Roberts Bank ecosystem. Habitat types proposed as part of the Offsetting Framework that are particularly useful for salmonids include: • Intertidal marsh: Important for shoreline stabilisation, gas and nutrient regulation, contaminant filtering, and nutrient supply, as well as providing structural habitat used for shelter and food by organisms. Some of the species that use intertidal marsh habitat at Roberts Bank include bivalve shellfish, Dungeness crabs, juvenile Chinook salmon, shiner perch, sand lance, and waterfowl. Approximately 15 hectares of intertidal marsh is proposed along the widened causeway and in the S-bend of the new terminal. • Eelgrass: Eelgrass beds are highly productive habitats in the Roberts Bank ecosystem, serving numerous critical functions, such as food, shelter, and rearing habitat for numerous species. Approximately three hectares of native eelgrass will be established through transplants in the inter-causeway area.	**EIS** 17.0 Mitigation for Marine Biophysical Valued Components 17.3.2 Offsetting Potential Effects, Offsetting Framework
LFN-16.3	Asked if the breaching of the causeway might improve fish migration that is interfered with by the causeways. Concerned about the Project's impacts on near-shore fish habitat and questioned the Port's rationale for not wanting to breach the causeway.	07-Oct-2014, Preliminary EIS Results Workshop #1 01-Nov-2016, Letter to Panel (CEAR Document #733)	**07-Oct-2014, Workshop:** Responded that the breaching would not improve fish migration because the turbulent nature of the flows would result in fish being killed. Stated that because the VFPA is softening the shoreline as well, it is thought that both will provide a more suitable and conducive habitat for young salmonids. Noted salmonids prefer a mix of soft and hard substrates in order to migrate, at a mix of elevations. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#3):** The extent of widening along the causeway is determined by road and rail infrastructure requirements for the Project. To minimise the marine footprint, widening will vary from 0 m to approximately 140 m. Past experience at Roberts Bank has indicated that the tidal flats are sensitive to disturbance. In particular, past development has resulted in localised development and expansion of tidal channels and associated changes in the degree of influence of the Fraser River outflow plume on the inter-causeway area. During Project design, the addition of a flow passage channel (i.e., an opening) between the existing Westshore Terminals and the Project was evaluated to determine if the volume of water that would otherwise flow around the northwest corner could be reduced. It was determined that a 100-m-wide flow passage would slightly reduce flow velocities at the northwest corner, but it would generate additional local scour in the passage itself and adjacent areas unless other mitigation measures were installed. An independent technical study, "Potential Effects of Opening the Causeway," was undertaken for the VFPA in 2005 to clarify issues related to physical processes and hydraulic behaviour in the causeway area of Roberts Bank. This report determined that there is a substantial risk that a new opening in the causeway could initiate a new sequence of morphological changes on the tidal flats, which could adversely affect the existing habitat conditions. The report is available on the Project website: http://www.robertsbankterminal2.com/wp-content/uploads/RBT2-Potential-Effects-of-Opening-the-Causeway-June-2005-NHC-Memo-January-2014.pdf. Based on the findings of this report, and the evaluation of adding a flow passage channel, the VFPA does not propose to open the Roberts Bank causeway. **Addressed in response to IR1-13:**	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 13.6.3.1 Changes in Productivity of Pacific Salmon **Project Website** http://www.robertsbankterminal2.com/wp-content/uploads/RBT2-Potential-Effects-of-Opening-the-Causeway-June-2005-NHC-Memo-January-2014.pdf. **Information Requests** Response to Sufficiency Information Request #13 (IR1-13 of CEAR Document #897) Response to Sufficiency Information Request #18 (IR5-18 of CEAR Document #1153) Response to Sufficiency Information Request #22 (IR5-22 of CEAR Document #1153)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				The potential effects of opening the causeway were further discussed in the VFPA's response to IR1-13. During DP3, the VFPA, regulators, and Indigenous groups discussed the potential for opening the causeway by installing a culvert. Such a breach in the causeway was considered to allow flow exchange (i.e., to measurably change the salinity or delivery of sediment) to the inter-causeway area. Results of calculations and analyses are summarised in the technical memo noted above. The results showed that a culvert would not pass sufficient Fraser River flow to measurably change the salinity or delivery of sediment to the inter-causeway area. **Addressed in EIS Section 13.6.3.1:** The potential effect on the migration behaviour of juvenile salmon from terminal placement and causeway widening was assessed qualitatively. Two effects mechanisms—changes in the light environment and changes in habitat availability—were considered to have the potential to influence migration behaviour of juvenile salmon and result in a minor decrease of juvenile salmon productivity pre-mitigation. With implementation of mitigation measures, including adherence to juvenile salmon fisheries-sensitive window, implementation of a light management plan, as well as offsetting in the form of onsite native eelgrass transplants and reconstructed tidal marsh habitats north of the widened causeway, migration-related changes in juvenile salmon productivity were assessed as negligible. **Addressed in responses to IR5-18 and IR5-22:** Further discussions about terminal placement's potential effects on the migratory behaviour of juvenile salmon is available in the VFPA's responses to IR5-18 and IR5-22.	
LFN-16.4	Requested that resident herring stocks at Roberts Bank be studied, and potential Project impacts on resident herring stock be assessed. Recommended that QARS (Q'ul-Lhanumutsun Aquatic Resources Society) may be suitable to assist in collecting data and informing research. Concerned that resident cannot be assessed the same way as migratory species, and there could be key components missing. Stated that herring is species of importance to Lyackson First Nation, and access to herring is increasingly reduced. Stated that herring are extremely sensitive to noise.	31-Aug-2014, Lyackson First Nation Traditional Use Study 28-Oct-2014, Preliminary EIS Results Workshop #3 18-Nov-2014, Email 10-Dec-2014, Health & Aboriginal Rights Workshop – Lyackson First Nation and Lake Cowichan First Nation 23-Jul-2015, Meeting with Lyackson First Nation and Lake Cowichan First Nation	**28-Oct-2014, Workshop:** Explained that field studies were conducted on herring and information is available on their use of the area; the effect to herring was evaluated. Stated that the Project is anticipated to be beneficial to herring, in general, largely because eelgrass beds are increasing and also some predator-prey relationships may change. For example, there may be less species feeding on herring. A negative residual effect on herring is not anticipated. **10-Dec-2014, Workshop:** Responded that there are underwater noise specialists involved in RBT2 to assess effects on marine creatures. A separate underwater noise study is underway. Field studies were conducted on herring and information is available on their use of the area; the effect to herring was evaluated. The Project is anticipated to be beneficial to herring, in general, largely because eelgrass beds are increasing and also some predator-prey relationships may change. For example, there may be less species feeding herring. A negative residual effect on herring is not anticipated. Effects on herring are negligible. The EIS provides a description of key effects of the Project on herring such as noise. Committed to follow-up with experts and get back to Lyackson First Nation with additional information.	**Addressed in EIS Appendix 7.2-B (#81):** Pacific herring is considered as a representative species in the forage fish sub-component of the marine fish assessment, as presented in the EIS. Qualitative and empirical evidence indicates that there will be minor decreases in forage fish productive potential driven by loss of subtidal sand habitat and disturbance of Pacific herring from underwater noise. Pacific herring are expected to experience a short-term decrease in productive potential (i.e., -2%) due to direct mortality from construction activities (i.e., entrainment) and minor acoustic effects (if either vibratory or impact pile driving is used), and long-term minor decreases due to reduction in the availability and quality of subtidal and intertidal sand habitat. **Addressed in EIS Appendix 7.2-B (#61):** The scope and methods of the underwater noise study are summarised in the EIS section, and detailed in the supporting appendix. Underwater noise considers the level of underwater sound in the marine environment. An assessment was undertaken to determine potential changes in underwater noise as a result of the Project and focused on construction and operation activities that would produce underwater noise. Modelling was undertaken to predict future underwater noise as a result of construction activities, such as dredging, pile driving, vibro-densification, and movements of support vessels, and operation activities, such as movements of container ships and tug boats associated with terminal approach and departure, and berthing and unberthing. The assessment concludes that: • Underwater noise levels during construction are predicted to be comparable on average to existing levels measured at Roberts Bank, with the exception of	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 9.8 Underwater Noise 9.8.2 Assessment of Purpose and Approach 9.8.6 Methods Appendix 9.8-A Construction and Terminal Activity Underwater Noise Modelling Study Technical Report Appendix 9.8-B Regional Commercial Vessel Traffic Underwater Noise Modelling Study Technical Report 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component 13.2.1 Sub-components 13.4.1 Information Sources, Desktop and Field Studies 13.5.3 Existing Conditions, Forage Fish 13.5.3.3 Pacific Herring 13.6 Future Conditions with the Project

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
		12-Nov-2015, Meeting with Lyackson First Nation and Lake Cowichan First Nation	**01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **26-Jan-2015, Email from the VFPA:** The concern about resident herring stocks has been addressed in the EIS and the required studies have been undertaken on this species. Given that this work has been undertaken, the port authority will not require additional studies to be done or data to be collected by QARS. In terms of sharing the information collected to date on herring, the port authority will be providing Lyackson and Lake Cowichan with the EIS upon its submission and, upon your review, should you wish to meet specifically on this, the port authority would be happy to do so. **23-Jul-2015, Meeting:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided the MSA to Chief and Council, which included MSA Appendix 5-B. **18-Apr-2017, Email from the VFPA:** Provided an update on the herring survey. The dive team surveyed the large native eelgrass bed on the north side of the causeway, starting where herring spawn were reported to have been observed a week ago. No spawn or spawn residue was observed. Two more transects were completed and again, no spawn or residue was observed. We are confident that whatever spawn might have been there a week or two ago is no longer present. The boots-on-the-ground team surveying the inter-causeway area at low tide found evidence of spawn in the intertidal eelgrass bed adjacent to the tug basin (see attached photos); two small patches with eggs were found (~2m x 0.5 m; and 5m x 2m long) but there appears to be egg residue over a larger area. The eggs are very patchy, about 1-2 layers thick, and do not appear to be fresh.	some periods when certain activities, such as dredging, pile-driving, vibro-densification, or construction support vessel movement, would occur. • Overall, average underwater noise from Project construction and operation activities is expected to be comparable to average existing levels of underwater noise due to existing high levels, but will at times exceed existing conditions. Underwater noise related to conservative levels of Project commercial vessel movements is predicted to increase over existing underwater noise levels for only approximately 3% of a year for vessel berthing and unberthing, and for approximately 2% of a year for vessel approach and departure. • Future cumulative increases in commercial vessel traffic in the region are expected to make a relatively small incremental contribution to overall underwater noise levels. This prediction reflects the existing high levels of vessel traffic within the study area and the already-dominant contribution of commercial vessel traffic noise to the acoustic environment. The results of the underwater noise assessment were considered in the assessments of marine fish, marine mammals, and coastal birds. An interaction between Project-related underwater noise and marine invertebrates is not anticipated, and therefore was not assessed. **Addressed in MSA Appendix 5-B (#40):** The assessment of potential effects of marine shipping associated with the Project on resident and migratory herring is included in MSA Section 8.1. Potential effects on the food chain as a result of effects on herring are considered in MSA Section 8.2, in terms of the 'availability of prey' indicator. **Addressed in response to IR4-18:** As noted in the VFPA's response to IR4-18, as requested by the Review Panel, in response to anecdotal reports by a member of the public of herring spawn on eelgrass on the north side of the Roberts Bank causeway in early April 2017, the VFPA conducted a survey to document presence and distribution of herring spawning activity at Roberts Bank. Survey results are in agreement with existing conditions described in EIS Section 13.5.3.3, and confirm that while the LAA does support some spawn, it does not appear to be an important herring spawning area. Adherence to EMPs (see EIS Section 33.3) will reduce the potential that herring will be affected by changes to water quality and sediment, or underwater noise during Project construction activities that will occur outside the fisheries-sensitive window. Notwithstanding the above, a potential for interaction with the Project has been identified and a residual effect has been assessed as not significant (see EIS Section 13.8.1).	Table 13-6 Desktop and Field Studies Related to Marine Fish to Support the Assessment Table 13-10 Summary of Roberts Bank Ecosystem Model Productivity Results for Marine Fish 13.6.3 Potential Effect - Changes in Productivity Table 13-12 Marine Fish Productivity Summary (Prior to Mitigation) Based on Weight of Evidence 13.8.1 Residual Effect – Characterisation of Productivity Loss 33.3 Construction Environmental Management Plans **MSA** Appendix 5-B Aboriginal Issues and Interests 8.1 Marine Fish and Fish Habitat 8.2 Marine Mammals **Information Requests** Response to Sufficiency Information Request #18 (IR4-18 of CEAR Document #1051)
LFN-16.5	Concerned with impacts to herring, and subsequent impacts to the SRKW who use herring as a food source. Commented that herring are very important to SRKW at different times of the year based on first-hand knowledge. Requested completeness information on 'resident	15-Jun-2015, Letter to the CEA Agency (CEAR Document #258) 23-Jul-2015, Meeting with Lyackson First Nation and Lake	**23-Jul-2015, Meeting:** Recorded comment for consideration by the Project team. **13-Oct-2015, Letter from the CEA Agency:** *"The Agency has requested additional information on some of these items in its letter of July 31, 2015 to Port Metro Vancouver [the VFPA] (pages 2-5, #6, 10 and 11).* *The Agency did not request additional information regarding herring since there is already information provided in the EIS.*	**Addressed in IR#6:** A detailed description of predator-prey interactions for fish populations in the area, with particular consideration for spawning and/or rearing stages can be found within the Existing Conditions subsections within each respective VC assessment (EIS Sections 12.5, 13.5, and 14.5). Additionally, with respect to the ecosystem model described in EIS Section 10.3, a detailed description of predator-prey interactions for fish populations, with particular consideration for spawning and/or rearing stages can be found specifically within the following: 1) how the ecosystem model was structured and the choice of functional groups (e.g., adult and juvenile stages for Chinook, chum, and salmon); 2) the diet matrix (i.e., proportion of a species diet consumption);	**EIS** 10.3 Overview of Assessing Ecosystem Productivity 12.0 Marine Invertebrates 12.5 Existing Conditions 13.0 Marine Fish 13.5 Existing Conditions 14.- Marine Mammals 14.5 Existing Conditions

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	herring stock analysis and impacts of the project on predator prey scope.' Stated that although the EIS discusses herring in a general sense, it does not capture or assess it specifically to effects relative to Species at Risk – SRKW – or predator-prey interactions in that specific fish-based food chain.	Cowichan First Nation 12-Nov-2015, Meeting with Lyackson First Nation and Lake Cowichan First Nation 04-Oct-2017, Meeting	*The Panel will determine whether it requires additional information or clarification with respect to herring to inform its sufficiency review."* **12-Nov-2015, Meeting:** Stated that it is understood that Chinook feed on herring and that link is considered in the EIS ecosystem modelling. In the VFPA's response to IR-7.31.15-06, there are 8 or 9 sub-questions and an overview of the model. Information in the EIS is considered complete. Stated that results show herring will not be affected by the Project. Stated that observation based on a number of areas, marine mammal experts, empirical modelling, and professional judgement. SRKW feed primarily on salmon. Herring may form a small part of their diet, but effects are negligible.	and 3) mixed trophic impacts (MTI) analyses (i.e., a measure of the direct and indirect impact of any group in an ecosystem on all other groups), described in EIS Appendices 10-B and 10-C. **Addressed in EIS Appendix 7.2-B (#92):** Project-related adverse residual effects to SRKWs (and all toothed whales) are expected to be not significant. The Project contribution of effects above existing conditions is very small and is not anticipated to adversely affect individuals or affect critical habitat features (acoustic environment, the availability of prey, and water and sediment quality) when needed by SRKWs for their life functions of foraging, mating, resting, or socialising. Destruction of SRKW critical habitat from Project construction and operation is not anticipated, and the Project will not limit the survival or recovery of SRKWs. Cumulative effects to baleen whales and seals and sea lions are expected to be not significant. However, due to their Endangered status and lack of recovery of the population, the VFPA has assumed that past activities and projects, including those described in the recovery strategy issued by DFO, have had a significant adverse effect on SRKWs. Therefore, the Project, in combination with past projects and activities that have been carried out, and certain and reasonably foreseeable projects that will be carried out, will result in a continued significant cumulative effect to SRKWs. **Addressed in EIS Section 14.5.1:** As noted in EIS Section 14.5.1, recent science suggests Chinook salmon comprise over 70% of the SRKW's annual diet and 80% to 90% of their summer (July to August) diet. Annual consumption of Chinook salmon is supplemented 15% by other salmonids (i.e., 10% chum, 5% coho), and 15% by groundfish (i.e., 3% halibut, 3% sablefish, 3% lingcod, 3% dover sole, 3% gonatid squid).	14.9 Determination of Significance of Residual Adverse Effects Appendix 10-B Roberts Bank Ecopath with Ecosim and Ecospace Model Parameter Estimates Appendix 10-C Roberts Bank Ecosystem Model Development and Key Run **Information Requests** Response to Information Request #6 (IR-7.31.15-06 of CEAR Document #314)
LFN-16.6	Stated that white sturgeon is a concern as it is a primary species for Lyackson in the Lower Mainland and is *SARA* listed. Concerned with how sturgeon will be assessed in the EIS.	12-Aug-2012, Meeting 28-Oct-2014, Preliminary EIS Results Workshop #3 23-Jul-2015, Meeting with Lyackson First Nation and Lake Cowichan First Nation	**12-Aug-2012, Meeting:** Recorded comment for consideration by the Project team. **28-Oct-2014, Workshop:** Answered that the TAG looked at sturgeon. However, records show that sturgeon does not occur around the terminal at Roberts Bank, and therefore is not a good candidate as a focal species. Responded that the conclusion that sturgeon was not in the area was an outcome of the TAG process. TAG member knowledge was used to identify species occurring at Roberts Bank and primary species considered to be important drivers from an ecosystem perspective. The TAG summary contains more information. Stated that there are other species that occur that are being assessed, for which the effects of the Project would be expected to affect similarly to sturgeon. In that sense, they will be assessed, but sturgeon are not an explicit VC or sub-component. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **23-Jul-2015, Meeting:**	**Addressed in response to IR5-15:** In the response to IR5-15, issued by the Review Panel on June 6, 2017 (CEAR Document #975), the VFPA specifically discusses existing conditions related to sturgeon and describes the status and management practices associated with the species. Rationale as to how sturgeon were assessed through the use of Chinook and chum salmon as representative species, as well as similarities between species as they pertain to existing conditions (e.g., life history and habitat requirements), the mechanisms through which the Project may affect sturgeon, as well as effectiveness of mitigation, are presented in the VFPA's response to AIR-12.04.15-09, including Appendix AIR9-A Table 2; and in the VFPA's response to IR5-15. The response to IR5-15 demonstrates that sturgeon species were adequately represented in the assessment of effects of the Project. The assessment findings presented in the response do not change the assessment effects laid out in the EIS. Appendix IR3-A provides the Productive Capacity Technical Advisory Group Summary Report.	**EIS** 13.0 Marine Fish **Information Requests** Response to Additional Information Request #9 (AIR 12.04.15-09 of CEAR Document #388) Sufficiency Information Request Package 3 Preamble to IR3-01 to IR3-24 (CEAR Document #984) Appendix IR3-A Productive Capacity Technical Advisory Group Summary Report (CEAR Document #984) Response to Sufficiency Information Request #15 (IR5-15 of CEAR Document #1078)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			Recorded comment for consideration by the Project team.		
LFN-16.7	Concerned about the impacts of vessel traffic on local fishery, biofilm.	04-Apr-2017, Meeting with Administrative Staff	**04-Apr-2017, Meeting:** Recorded comment for consideration by the Project team.	**Addressed in EIS Section 16.0:** As noted in EIS Section 16.0, all Project construction and operation activities are expected to interact at an undetectable level with the ongoing productivity of commercial, recreational, and Aboriginal fisheries. While decreases in productive potential are anticipated for some species that support commercial, recreational, and Aboriginal fisheries based on ecosystem modelling, these decreases represent only a small percentage of average species returns, and are not expected to be measurable compared to natural variability at the population level for species relevant to these fisheries. Project-related effects, therefore, are not anticipated to compromise the ongoing productivity of commercial, recreational, or Aboriginal fisheries, and are expected to be negligible. Therefore, the Project is not expected to contribute to cumulative effects on these fisheries. **Addressed in EIS Section 11.0:** During Project construction and operation, changes in productivity of eelgrass, biofilm, and biomat are predicted to be negligible (i.e., not measurable or detectable).	**EIS** 11.0 Marine Vegetation 16.0 Ongoing Productivity of Commercial, Recreational and Aboriginal Fisheries
LFN-16.8	Concerned with the impacts of shipping traffic on salmon. Stated that no projects should be approved until the salmon recover. Stated that Lyackson cannot exercise their cultural practices associated with salmon.	04-Oct-2017, Meeting	**04-Oct-2017, Workshop:** Recorded comment for consideration by the Project team.	**Addressed in EIS Section 13.0:** Overall, marine fish are expected to experience a minor decrease in productivity in the future with the Project. Minor decreases in productivity are anticipated during the construction and operation phases for all marine fish sub-components, with the exceptions of negligible changes in productivity for certain species, including adult Chinook and chum salmon (representative species for sockeye and other Pacific salmon species) and lingcod, and an increase in productivity for shiner perch during the operation phase. Productivity decreases can be partially mitigated through the implementation of EMPs and the creation of habitat. Residual effects are anticipated for flatfish and forage fish as a result of permanent loss of subtidal sand habitat associated with the terminal footprint and disturbance from underwater noise. The assessment concludes there are no significant adverse effects from the Project, as marine fish productivity or long-term integrity would not be compromised. The Project is not expected to result in measurable incremental adverse cumulative effects to marine fish. **Addressed in MSA Section 8.1:** An assessment was undertaken to evaluate the potential effects of Project-associated marine shipping on marine fish and fish habitat (including marine vegetation and marine invertebrates) within the marine shipping area and located within the Salish Sea. Intertidal habitat (including shorelines and marine vegetation), shellfish (including bivalves and Dungeness crab), Pacific herring, and Pacific salmon were selected as sub-components. Potential effects of vessel wake-generated waves on marine fish and fish habitat were characterised as negligible, because only 2% of coastline in the LAA is within the wake-related zone of influence, and because wake-generated wave heights at shorelines are predicted to be well within the range of natural wave conditions. Fish and fish habitat are already adapted to the natural conditions; therefore, any wake-related influences would not be distinguishable from existing conditions. Similarly, potential effects of underwater noise were also considered to be negligible because noise associated with Project-associated marine vessel activity	**EIS** 13.0 Marine Fish **MSA** 8.1 Marine Fish and Fish Habitat

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				and future cumulative shipping activities would not exceed injury thresholds for fish species or the Pacific salmon species behavioural threshold. Further, while noise-induced behavioural changes are possible for Pacific herring, potential effects would be localised to within 20 m of a container ship and of short duration (as the ship passes by) and are therefore not anticipated to affect the integrity of populations within the LAA.	
LFN-16.9	Questioned the assessment results based on ambiguous assumptions, inadequate baseline data, and lack of First Nations' involvement in the significance decisions. Stated that it is not clear how First Nation input was considered in the assessment. Stated that proposed mitigation measures and plans have not been developed in consultation with Lyackson. Requested that prior to any Project approval, a commitment is made that adequate funding is provided for Lyackson and other concerned and potentially impacted First Nations to be involved in developing and reviewing the proposed avoidance and mitigation measures that effectively incorporate community input to address outstanding concerns.	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Section 7.2:** EIS Section 7.2 describes the VFPA's consultation efforts related to EIS development. **Further information provided in response to IR-7.31.15-08:** The VFPA's response to IR-7.31.15-08 provides a description of where and how ITK has been used to support the selection of VCs, baseline descriptions, the assessment of effects including the identification of mitigation measures, and in the determination of significance of adverse environmental effects. MSA IR-02.24.16-4 discusses the application of ITK in the MSA. **Addressed in IR10-02:** The VFPA's response to IR10-02, as requested by the Review Panel, provides further information concerning how available Indigenous knowledge was incorporated into the EIS and MSA. **Addressed in IR10-12:** The VFPA's response to Additional Information Requirements #12 (IR10-12) as requested by the Review Panel, further discusses the VFPA's proposed approach to engagement and consultation with Indigenous peoples during and after the environmental review.	**EIS** 7.2 Aboriginal Groups Engagement and Consultation **Information Requests** Response to Information Request #8 (IR-7.31.15-08 of CEAR Document #314) Response to Additional Information Request #4 (MSA IR-02.24.16-4 of CEAR Document #388) Response to Sufficiency Information Request #02 (IR10-02) Response to Sufficiency Information Request #12 (IR10-12)

Table 17: Marine Invertebrates – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-17.1	Asked what depths gravid female Dungeness Crabs are located.	28-Oct-2014, Preliminary EIS Results Workshop #3	**28-Oct-2014, Workshop:** Estimated that it would extend from the subtidal (0 m) to −40 m depth. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Section 12.0 Marine Invertebrates.	**Addressed in EIS Section 12.5.3.4:** Brooding habitats for gravid female crabs are characterised by homogeneous sandy substrate that is highly permeable and well oxygenated, and are used for many years (O'Clair et al. 1996, Scheding et al. 2001, Stone and O'Clair 2002). In Alaska, brooding aggregations have been identified at depths ranging from approximately −10 m CD (O'Clair et al. 1996) to approximately −26 m CD (Stone and O'Clair 2002). Very little data exist for gravid female habitat distribution or preference in B.C. in general, and the Fraser River estuary in particular.	**EIS** 12.0 Marine Invertebrates 12.5.3.4 Key Habitat Features
LFN-17.2	Requested more information about sea pens, information on Project effects to sea pens, and transplanting plans.	06-Jun-2014, Valued Components Workshop #1 28-Oct-2014, Preliminary EIS Results Workshop #3	**06-Jun-2014, Workshop:** Provided information about orange sea pens, and the studies being carried out around them. Responded that sea pens are a poorly understood species, and there have not been many studies on it to-date. Shared that the VFPA's thinking so far is that they act as a biological habitat for other species, and that their burrowing action oxygenates the sediment, allowing for more worms to be present. Noted the studies are preliminary work at this time, a part of which is speculation, though it is safe to say that they provide habitat for a variety of other species. **28-Oct-2014, Workshop:** Stated that the VFPA is finishing a pilot study, and preliminary results indicate sea pens are doing well. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **07-Feb-2018, Letter from the VFPA:** Starting in 2014, the Project team conducted a pilot study to test a method for transplanting orange sea pens, which involved transplant of 1,200 orange sea pens to three sites within the LAA for the Project. Please find attached a report titled Orange Sea Pen Transplant Pilot and Monitoring Program. The results of the study show that the pilot sea pen transplant was successful, with stable densities and evidence of recruitment at two of the three transplant sites. This report will be submitted to the Review Panel shortly with the VFPA's response to IR5-05.	**Addressed in EIS Appendix 7.2-B (#73):** Orange sea pens are a soft coral species that depend on habitat with strong tidal outflows and oceanic currents for food delivery. Sea pen beds provide habitat for many benthic (bottom dwelling) species and likely play a role in maintaining productive near-shore communities for clams, sea stars, marine worms, Dungeness crabs, and several fish species. Orange sea pens were assessed as a sub-component of the marine invertebrate VC. The assessment concludes that a decrease in the productivity of orange sea pens due to direct mortality and changes in habitat availability is expected as a result of permanent loss of subtidal sand habitat associated within the terminal footprint. This decrease can be partially mitigated through the implementation of EMPs, including the collection and transplantation of orange sea pens to nearby undisturbed sites identified as suitable through habitat modelling. While the Project is predicted to cause losses of productivity of orange sea pens, the scale of change is minor in the context of natural variability and will not compromise the population integrity or ecological function. The residual effect was determined to be not significant. **Addressed in response to IR5-05:** The VFPA's response to IR5-05 provides the Orange Sea Pen Transplant Pilot and Monitoring Program report (Appendix IR5-05-A). In summary, the pilot sea pen transplant was successful. Stable densities, and evidence of recruitment, at two of the three transplant sites demonstrate that not only can environmental conditions successfully be used to predict habitat suitability for orange sea pens across a larger study area, but also attests to the ecological viability of transplantation as a potential mitigation method. As noted in EIS Section 12.0, the VFPA stated that the proposed Project would result in a moderate reduction in orange sea pen productivity, and that the level of confidence in this assessment was considered to be moderate. The VFPA's response to IR5-06 discusses the confidence in the rating. In summary, the moderate confidence ranking was rooted in four main points (each of which are described below): • The success of the orange sea pen pilot transplant and monitoring program (see IR5-05); • Remaining orange sea pen productivity with the Project (before mitigation) is considerable (45%) such that the population will persist at Roberts Bank; • Reproductive and larval biological characteristics of orange sea pens, which confer a high ability to replenish stocks; and • Coral transplants are common and successful elsewhere.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 12.0 Marine Invertebrates 12.6.3 Potential Effect – Changes in Productivity Table 12-8 Summary of Roberts Bank Ecosystem Model Productivity Results for Marine Invertebrates Table 12-10 Habitat Suitability (ha) for Orange Sea Pens in the Local Assessment Area in Future Cases With and Without Roberts Bank Terminal 2 12.7.2 Mitigation #1 for Direct Mortality 12.8.1 Residual Effect – Characterisation of Productivity Losses 12.9.2 Significance Determination Table 12-15 Summary of Determination of Significance of Residual Effects for Marine Invertebrates **Information Requests** Response to Sufficiency Information Requirements #05 (IR5-05 of CEAR Document #1145) Response to Sufficiency Information Requirements #06 (IR5-06 of CEAR Document #1145)
LFN-17.3	Concerned with black crabs and concerned that the Project will	29-Oct-2014, Preliminary EIS Results Workshop #4	**29-Oct-2014, Workshop:** Recorded comment for consideration by the Project team.	**Addressed in EIS Appendix 7.2-B (#74):** Potential Project-related effects on Dungeness crabs are described in the EIS. An Edible Shellfish Study was undertaken to quantify bivalve shellfish and Dungeness	**EIS** Appendix 7.2-B Aboriginal Issues and Interests

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	exacerbate existing conditions.		**09-Jul-2015, Email from the VFPA:** *"In response to reports from Aboriginal groups regarding blackening of Dungeness crab and concerns related to potential contamination, [the VFPA] arranged for Hemmera to undertake testing of Dungeness crab tissue. [The VFPA] also provided Aboriginal groups with crab sampling kits in an effort to obtain sample crab for testing… A summary of key information contained in the memorandum is provided on the following page."* The memo provided the conclusions of the studies: • There is no evidence of coal contamination, based on the results of sensitive tissue chemistry analysis testing for PAHs, metals, and trace elements; • Consumption risks are acceptably low and pose no risk to human health; and • The underlying cause of the blackened shells is determined to be shell disease (a common condition due to bacterial infection of existing lesions/damage in the crab shells). **12-Apr-2018, Letter from the VFPA:** Stated that since your concerns were raised, the Project team has conducted further work on these topics to respond to information requests from the Review Panel, to better understand potential effects and suggested mitigation, and to gain deeper understanding of the viewpoints of Indigenous groups and stakeholders. Provided the following documents review: • IR4-33 - Crab Hepatopancreas Additional Study Summary • IR4-34 - Black Crab Additional Studies Summary Stated that the VFPA is interested in hearing views regarding options to mitigate potential effects to crabs and crabbing in the Project area.	crab soft tissue contaminant concentrations. The results of this study are provided in the EIS in the marine invertebrates and human health sections. In late 2014, samples of crab were collected by Indigenous crab harvesters concerned about contamination, and the VFPA has submitted these for tissue testing for various substances of concern, including PAHs, metals, and fungus. Preliminary observational results indicate that the cause of black colouration of crabs is consistent with shell disease, and not likely related to contamination from coal dust (EIS Appendix 27-C, Section 4.76). The detailed results of laboratory tests will be shared with Indigenous groups when available. **Addressed in responses to IR4-33 and IR4-34:** Further information concerning the VFPA's investigations into 'blackened' crabs is provided in IR4-34. In summary, black lesions were observed on four of the five crabs collected by Indigenous harvesters. The black lesions were concluded to be consistent with chitinolytic shell disease, generically referred to as 'shell disease', a condition common to crab and other crustaceans. This disease is caused by a bacterial or fungal infection of an area where the outer layer of the shell has been previously damaged. Shell disease has not been linked to contamination. The disease is not specific to the Roberts Bank area and is present across the Pacific Northwest, including Alaska and B.C. and in Atlantic Canada. In response to IR4-33, issued by the Review Panel on March 31, 2017, the VFPA provided results of the study. In summary: A crab hepatopancreas study was conducted at Roberts Bank to determine the concentrations of contaminants of concern in crab hepatopancreas in the LAA. In June 2017, Dungeness crab were collected from five traps placed at each of the three study locations (15 traps total). Twelve adult male crabs were harvested from each of the three sites (36 crabs total). Samples were submitted under chain of custody to analytical laboratories accredited by the Canadian Association for Laboratory Accreditation (CALA) for the analysis requested. The analysis was completed in August 2017. Collectively, the results of a statistical comparison across sites indicate that the average concentrations of polychlorinated biphenyls (PCBs), coal indicator elements, arsenic compounds, and PAHs measured in hepatopancreas from crab collected from the RBT2 and intermediate transfer pit sites are not statistically higher than those measured in crab from the Canoe Passage reference site. This suggests that existing sediment and water quality in and around the existing terminal and proposed RBT2 terminal are not contributing to contaminant concentrations in crab hepatopancreas that are higher than levels found in crab hepatopancreas from the Canoe Passage reference site.	12.0 Marine Invertebrates 12.4.1 Desktop and Field Studies Table 12-4 Marine Invertebrates Studies to Support the Assessment 12.5.3 Existing Conditions, Dungeness Crabs 12.6.2 Future Conditions with the Project, Negligible Effects 27.0 Human Health 27.6.4 Potential Effect # 3 – Adverse Health Effects due to Stress and Annoyance - Perceived Contamination Appendix 27-C Shellfish Harvesting Potential and Contaminant-related Consumption Risks at Roberts Bank **Information Requests** Response to Sufficiency Information Requirements #33 (IR4-33 of CEAR Document #1078) Response to Sufficiency Information Requirements #34 (IR4-34 of CEAR Document #1051) **Memorandum Re: Summary Report – Roberts Bank Dungeness Crab Health Studies**
LFN-17.4	Asked whether the shellfish closure is a result of effects from the two causeways, or a result of other upland effects. Concerned about shellfish closures in relation to the Project, including: • Interested in when a study was last conducted on the conditions of shellfish.	29-Oct-2014, Preliminary EIS Results Workshop #4 10-Dec-2014, Health & Aboriginal Rights Workshop – Lyackson First Nation and Lake Cowichan First Nation	**29-Oct-2014, Workshop:** Responded that it is a sanitary closure in relation to potential effluent in that area. Stated that follow-up is needed with Environment Canada since they are responsible for sanitary closures. **10-Dec-2014, Workshop:** Committed to looking into Lyackson's inquiry about depuration. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **01-May-2017, Email from the VFPA:**	**Addressed in EIS Appendix 7.2-B (#75):** No bivalve harvesting is currently allowed within the LAA or RAA of marine invertebrates, due to both Sanitary and Biotoxin Shellfish Closures imposed by DFO over concerns regarding discharges from sanitary, stormwater, or industrial sources. DFO is the proper authority to determine the validity of shellfish closures. Assessment of the effectiveness of shellfish depuration is outside of the scope of this environmental assessment. **Addressed in EIS Appendix 7.2-B (#134):** The focus of the Shellfish Harvesting Potential and Contaminant Related Consumption Risks study was port-related contaminants at Roberts Bank, and the information gathered on contaminants in crab muscle and edible bivalve tissues for the areas sampled at Roberts Bank were specifically intended to capture worst-case conditions based on historical and current port activities. Bivalve shellfish samples	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 12.0 Marine Invertebrates 12.5.2 Existing Conditions, Bivalve Shellfish **Information Requests** Response to Sufficiency Information Requirements #33 (IR4-33 of CEAR Document #1078) Response to Sufficiency Information Requirements #34

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	• Concerned about permanent closure of the area, because the studies indicate the conditions at Roberts Bank are not improving. • Interested if shellfish depuration would successfully remove all contaminants from shellfish in the Project area.		Shellfish – Shellfish Sampling and Analysis Study Hemmera, on behalf of the VFPA, plans on conducting a study in May or June 2017 to measure contaminant levels in shellfish collected at Roberts Bank. The study will consist of collection of Dungeness crab and Macoma clams from three locations at Roberts Bank, and laboratory analysis for a suite of contaminants including PCBs, PAHs, and trace elements. This study, in conjunction with past shellfish studies, will further strengthen the existing understanding of shellfish contaminant levels at Roberts Bank. Following this email, the VFPA also sent a Field Studies Notification.	were collected in intertidal areas at Roberts Bank, from the BC Ferries Terminal in the south to Canoe Passage in the north, and included Boundary Bay as a reference site. The Dungeness crab study area encompassed shallow subtidal areas at Roberts Bank, from the BC Ferries Terminal in the south towards Canoe Passage in the north, including a reference site near Canoe Passage. For both bivalve shellfish and crab, areas closer to the Westshore Terminals were the focus of sampling. The study focused on determining whether historical and current port activities on Roberts Bank are resulting in contaminant uptake to safe or unsafe levels. **Addressed in responses to IR4-33 and IR4-34:** Further information concerning the VFPA's investigations into 'blackened' crabs is provided in IR4-34. In summary, black lesions were observed on four of the five crabs collected by Indigenous harvesters. The black lesions were concluded to be consistent with chitinolytic shell disease, generically referred to as 'shell disease', a condition common to crab and other crustaceans. This disease is caused by a bacterial or fungal infection of an area where the outer layer of the shell has been previously damaged. Shell disease has not been linked to contamination. The disease is not specific to the Roberts Bank area and is present across the Pacific Northwest, including Alaska and B.C. and in Atlantic Canada. In response to IR4-33, issued by the Review Panel on March 31, 2017, the VFPA provided results of the study. In summary: A crab hepatopancreas study was conducted at Roberts Bank to determine the concentrations of contaminants of concern in crab hepatopancreas in the LAA. In June 2017, Dungeness crab were collected from five traps placed at each of the three study locations (15 traps total). Twelve adult male crabs were harvested from each of the three sites (36 crab total). Samples were submitted under chain of custody to analytical laboratories accredited by the Canadian Association for Laboratory Accreditation (CALA) for the analysis requested. The analysis was completed in August 2017. Collectively, the results of a statistical comparison across sites indicate that the average concentrations of PCBs, coal indicator elements, arsenic compounds, and PAHs measured in hepatopancreas from crab collected from the RBT2 and intermediate transfer pit sites are not statistically higher than those measured in crab from the Canoe Passage reference site. This suggests that existing sediment and water quality in and around the existing terminal and proposed RBT2 terminal are not contributing to contaminant concentrations in crab hepatopancreas that are higher than levels found in crab hepatopancreas from the Canoe Passage reference site.	(IR4-34 of CEAR Document #1051)
LFN-17.5	Concerned that the displacement of 19 crab licence holders to other areas, could cause significant effect on the resource in other areas; in particular areas the Lyackson have a one-fifth interest in the Hul'q'umi'num Fisheries Limited Partnership, Commercial Aboriginal Fisheries Enterprise created under the Pacific Integrated	29-Oct-2014, Email	**29-Oct-2014:** Recorded comments for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **12-Apr-2018, Letter from the VFPA:** Stated that since your concerns were raised, the Project team has conducted further work on these topics to respond to information requests from the Review Panel, to better understand potential effects and suggested mitigation, and to gain deeper understanding of the viewpoints of Indigenous groups and stakeholders.	**Addressed in EIS Appendix 7.2-B (#117):** Marine commercial use, or the use of marine waters and resources to generate revenue, has been identified as an important economic factor in local and regional communities, and for Indigenous groups. The marine commercial use assessment included four sub-components: • Seafood harvesting; • Marine fish harvesting; • Guided sport fishing; and • Marine-based tourism. Potential effects on marine commercial use include displacement of commercial crab harvesting during construction and operation, resulting in a potential change of harvesting area, total harvest, and revenue, due to the Project footprint and the proposed expansion of the area closed to commercial crabbing.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 21.0 Marine Commercial Use 21.6 Future Conditions with the Project – Potential Project-related Effects

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	Commercial Fisheries Initiative. Concerned that displacement of 19 licences could reduce access to crab for food, social, or ceremonial purposes. Concerned that there is a socio-economic effect on the fishers. Concerned that there is no limit placed on the fishery; it is a year-round fishery and the price for the product has doubled, increasing potential interest and action to harvest at greater rates and volumes.		Provided the RBT2 Crab Mitigation Summary Overview, which detailed the following: • Mitigation measures to avoid or reduce effects to crab as outlined in the EIS, and • Additional crab harvesting related mitigation measure suggestions under review. Stated that the VFPA is interested in hearing views regarding options to mitigate potential effects to crabs and crabbing in the Project area.	The VFPA will work with DFO to engage commercial crab harvesters to identify and implement feasible mitigation measures, and will implement construction and operation EMPs related to construction phase communication, construction monitoring, and crab salvages effects from displacement of commercial crab harvesting during construction and operations. The Project is anticipated to result in a negligible effect to marine fish harvesting, guided sport fishing, and marine-based tourism. These negligible effects are related to changes in area, access, resource availability, and harvesting revenues. The Project is expected to result in a residual effect of changes to seafood harvesting area, harvest, and revenue. The residual effect is determined to be not significant, as Dungeness crab are known to move substantial distances to baited traps, and harvest activity can be moved to another open area. Other planned or reasonably foreseeable projects and activities would also displace crab harvesting, and this effect would combine with that of the Project to result in an incremental cumulative effect on commercial crab fishing. This adverse incremental cumulative effect is determined to be not significant.	
LFN-17.6	Stated that the Project is anticipated to further impact Tsawwassen First Nation's access to shellfish within the Roberts Bank area, and so Lyackson is concerned that members of this community will be pushed to the Southern Gulf islands for their harvest, with the potential of conflicts between families within the shared territory.	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Appendix 7.2-B (#119):** The EIS describes potential effects on fishing activity (EIS Sections 21.0 and 24.0) and effects in other areas (e.g., Boundary Bay) that are not otherwise directly affected by the Project but that may be affected by displacement are considered in EIS Section 32.2. Mitigation measures to reduce effects on outdoor recreation include: • Working with DFO to engage with recreational crab harvesters to identify and implement feasible mitigation measures; and • Implementation of construction EMPs related to construction phase communication and crab salvages. Mitigation measures to reduce effects on marine commercial use include: • Working with DFO to engage with commercial crab harvesters to identify and implement feasible mitigation measures; and • Implementation of construction and operation EMPs related to construction phase communication, construction monitoring and crab salvages. **Addressed in IR10-07:** The VFPA's response to IR10-07, as requested by the Review Panel, further discusses potential economic implications of any permanent or temporary displacement related to the navigational closure.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 21.0 Marine Commercial Use 21.7.1 Seafood harvesting - Mitigation Measure #1 - Changes in Area, Harvest and Revenue 24.0 Outdoor Recreation 24.7.1 Recreational Seafood Harvesting Mitigation Measure #1 – Changes in Harvesting Area Use and Displacement 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Land and Resources for Traditional Purposes **Information Requests** Response to Sufficiency Information Request #07 (IR10-07)
LFN-17.7	Stated that Lyackson is working to repair clam gardens for use by the community.	23-Jul-2015, Meeting with Lyackson First Nation and Lake	**23-Jul-2015, Meeting:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:**	**Addressed in MSA Appendix 5-B (#35):** The assessment of marine fish and fish habitat (MSA Section 8.1) includes consideration of potential effects on marine invertebrates, including bivalve shellfish.	**MSA** Appendix 5-B Aboriginal Issues and Interests 8.1 Marine Fish and Fish Habitat

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	Concerned that marine shipping activities will harm this effort.	Cowichan First Nation	Provided a copy of the MSA, which included MSA Appendix 5-B summarising the comments from Indigenous groups and the responses provided by the VFPA.	As noted in MSA Section 8.1.6.1, available data suggest that predicted wake wave heights arriving at shorelines within the LAA are well within the range of natural wave conditions, and are not distinguishable from the spectrum of wind-generated waves, except in non-calm conditions. Therefore, regardless of increased frequency of wake-related waves, any disturbance to marine fish and fish habitat (inclusive of marine vegetation and marine invertebrates) will not be distinguishable from existing conditions and, consequently, is considered to be negligible.	8.1.1 Component Overview 8.1.5.4 Marine Invertebrates 8.1.6.1 Negligible Effects
LFN-17.8	Stated that Lyackson's preliminary impact assessment has concluded that dredging and pollution from Project construction and operations in the Tl'uqtinus area is considered likely to increase adverse effects on shellfish.	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Appendix 7.2-B (#184 & #185):** As presented in the EIS, the Project is not expected to result in adverse residual effects on Tl'uqtinus and the mouth of the Fraser River. The Project is not located on the Fraser River and no Project-related effects are predicted on the Fraser River.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 12.0 Marine Invertebrates 12.5.2 Existing Conditions, Bivalve Shellfish
LFN-17.9	Stated that Lyackson questions the VFPA's conclusion that potential decreases in crab productivity as a result of the Project is not expected to measurably affect the Lyackson First Nations' current use of crabs in the area.	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in IR10-07:** The VFPA's response to IR10-07, as requested by the Review Panel, further discusses potential economic implications of any permanent or temporary displacement related to the navigational closure.	**Information Requests** Response to Sufficiency Information Request #07 (IR10-07)
LFN-17.10	Questioned the assessment results based on ambiguous assumptions, inadequate baseline data, and lack of First Nations' involvement in the significance decisions. Stated that it is not clear how First Nation input was considered in the assessment. Stated that proposed mitigation measures and plans have not been developed in consultation with Lyackson.	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Section 8.1.8:** To determine the significance of residual adverse effects, the assessment considered the nature of each residual effect and the context within which it is expected to occur. The existing (or expected) condition of each VC was compared with the future conditions predicted to result from the Project. The anticipated future condition of each VC with the Project was compared to a threshold of significance defined for that specific VC. The threshold of significance is the point beyond which the integrity of the VC may be compromised and the residual effect is considered to be significant. If the future condition of the VC with the Project does not exceed the defined threshold, the effect is considered to be not significant. If the future condition of the VC with the Project does exceed the defined threshold, the effect is considered to be significant. When defining the threshold of significance, the assessment included consideration of existing standards, guidelines, or objectives that have been established by government through regulation or applicable regional land and resource use management plans or other mechanisms, where available and suitable for determining significance. If no appropriate government-established threshold was available, the significance threshold was defined using the professional judgement of the Project team and current scientific knowledge about the VC. The rationale for the significance threshold used in the assessment and for the determination of significance is provided for each VC. Each assessment also considered the likelihood that each predicted residual effect would occur.	**EIS** 8.1.8 Determination of Significance of Residual Adverse Effects **Information Requests** Response to Information Request #7 (IR-7.31.15-07 of CEAR Document #314) Response to Information Request #8 (IR-7.31.15-08 of CEAR Document #314) Response to Additional Information Request #4 (MSA IR-02.24.16-4 of CEAR Document #388) Response to Sufficiency Information Request #2 (IR10-02)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				The level of confidence in each residual effect prediction considers the level of uncertainty associated with both the significance and likelihood determinations. Each assessment section presents the nature and source of any uncertainty that lowers the level of confidence in the residual effect prediction. **Addressed in response to IR-7.31.15-07:** The VFPA's response to IR-7.31.15-07 further discusses significance criteria, specifically in the context of the approach described in the EIS using multiple lines of evidence. **Addressed in response to IR-7.31.15-08:** The VFPA's response to IR-7.31.15-08 Provides a description of where and how ITK has been used to support the selection of VCs, baseline descriptions, the assessment of effects, including the identification of mitigation measures, and in the determination of significance of adverse environmental effects. **Addressed in response to MSA IR-02.24.16-4:** The VFPA's response to MSA IR-02.24.16-4 discusses the application of ITK in the MSA. **Addressed in IR10-02:** The VFPA's response to IR10-02, as requested by the Review Panel, provides further information concerning how available Indigenous knowledge was incorporated into the EIS and MSA.	

Lyackson First Nation

Table 18: Marine Mammals – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-18.1	Concerned with cumulative effects of increased marine shipping from multiple projects and potential impacts to Steller sea lions	23-Jul-2015, Meeting with Lyackson First Nation and Lake Cowichan First Nation	**23-Jul-2015, Meeting:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#89):** The assessment considers the potential effects on marine mammals of marine vessel traffic associated with Project construction and operation, including the potential for physical disturbance due to a Project-related vessel strike. As described in the EIS, as a result of mitigation measures during construction and operation, no detectable or measurable residual adverse effects from vessel strikes are predicted for marine mammals. The marine mammal assessment considers the potential for cumulative effects with respect to the potential residual effect (i.e., increased underwater noise produced by container ships and support tugs during Project operation), in combination with other projects and activities within the RAA, including underwater noise from incremental marine vessel traffic outside VFPA jurisdiction. Cumulative effects to baleen whales and seals and sea lions are expected to be not significant. **Addressed in MSA Appendix 5-B (#23):** The approach to the cumulative effects assessment is provided in MSA Section 6.0. Cumulative effects are expected to be not significant for seals, sea lions, baleen whales, and toothed whales, other than SRKWs. The VFPA has assumed that past activities and projects, including those described in the recovery strategy issued by DFO, have had a significant adverse effect on SRKWs. As such, Project-associated vessel activity, in combination with existing and future vessel activity, is expected to continue to result in a significant cumulative effect to SRKWs.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 14.0 Marine Mammals 14.10 Cumulative Effects Assessment **MSA** Appendix 5-B Aboriginal Issues and Interests 8.2 Marine Mammals 8.2.9.1 Cumulative Effect #1 – Behavioural Effects Due to Underwater Noise 8.2.9.2 Mitigation Measures for Cumulative Effects 8.2.9.3 Assessment of Residual Cumulative Effects and Significance Determination
LFN-18.2	Asked whether vessel strikes to whales will be addressed in the EIS. Concerned that vessels could strike marine mammals, particularly at night when visibility is low.	27-May-2014, Technical Working Group Meeting #3 23-Jul-2015, Meeting with Lyackson First Nation and Lake Cowichan First Nation	**27-May-2014, Meeting:** Responded that vessel strikes are generally not an issue with container ships and the types of whales in the area. However, this will be considered and addressed in more detail in the EIS. **23-Jul-2014, Meeting:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#89):** The assessment considers the potential effects on marine mammals of marine vessel traffic associated with Project construction and operation, including the potential for physical disturbance due to a Project-related vessel strike. As described in the EIS, as a result of mitigation measures during construction and operation, no detectable or measurable residual adverse effects from vessel strikes are predicted for marine mammals. **Addressed in MSA Section 8.2:** MSA Section 8.2 presents an assessment of potential effects to marine mammals. Potential effects on marine mammals related to Project-associated vessel transit activities include behavioural disturbance and acoustic masking due to changes to the acoustic environment and physical disturbance from vessel strikes. These effects are expected to be not significant for marine mammals. **Addressed in response to IR5-41:** The VFPA's response to IR5-41, as requested by the Review Panel, discusses the combination of lines of evidence used to support conclusions regarding the frequency and effects of vessel strikes on marine mammals in the marine shipping area. In summary, it was concluded that incremental effects of vessel strikes from RBT2-associated vessel traffic would be moderate in magnitude and occur infrequently above and beyond strikes occurring during existing conditions, and were determined to be not significant. These predictions were based on the multiple lines of evidence as described in the response.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 14.0 Marine Mammals 14.6 Future Conditions with the Project 14.6.2 Potential Effects of the Project on Southern Resident Killer Whales 14.6.3 Potential Effects of the Project on North Pacific Humpback Whale 14.6.4 Potential Effects of the Project on Steller Sea Lions Table 14-19 Injury and Disturbance Radii for Steller Sea Lions during Impulsive Construction Noise 14.10 Cumulative Effects Assessment **MSA** 8.2 Marine Mammals **Information Requests** Response to Sufficiency Information Request #41 (IR5-41 of CEAR Document #1159)

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-18.3	Requested that EIS include potential impacts from other vessels such as whale watching.	03-Jul-2014, Valued Components Workshop #2	**03-Jul-2014:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Section 8.2 on marine mammals.	**Addressed in EIS Section 14.0 and MSA Section 8.2:** As noted in EIS Section 8.1.4, descriptions of existing pre-Project conditions relevant to each VC and IC were developed based on existing information, field studies, data analysis, and modelling. The description of existing conditions considered how ICs and VCs have been already affected by other projects and activities that have been carried out. The assessment of potential effects on marine mammals (both in EIS Section 14.0 and MSA Section 8.2) includes an assessment of cumulative effects. This assessment includes consideration of the cumulative effects of additional vessel traffic on marine mammals.	**EIS** 8.1.4 Description of Existing Conditions 14.0 Marine Mammals **MSA** 8.2 Marine Mammals 8.2.9 Cumulative Effects Assessment
LFN-18.4	Asked about the VFPA's ECHO (Enhancing Cetacean Habitat and Observation) Program.	28-Oct-2014, Preliminary EIS Results Workshop #3	**28-Oct-2014, Workshop:** Noted that the Port is initiating a regional program called ECHO, and inviting a number of stakeholders, shippers, and vessel traffic operators to take part, to try to address potential cumulative effects of underwater noise on marine mammals. (Post meeting note: More information about the ECHO Program may be found here: http://www.portvancouver.com/environment/water-land-wildlife/marine-mammals/) **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **10-May-2017, Email from the VFPA:** Provided the ECHO Program annual report for 2016.	**Addressed in EIS Appendix 7.2-B (#88):** The methods used to study underwater noise and the results of the assessment of potential underwater noise-related effects on marine mammals are described in the EIS. The ECHO Program has been established by the VFPA, in collaboration with government agencies, Indigenous groups, marine industry users, non-government organisations, and scientific experts, to better understand and manage the potential impacts to cetaceans (whales, porpoises, and dolphins) from commercial vessel activities throughout the southern coast of B.C. Further information about ECHO can be found at: http://www.portmetrovancouver.com/en/environment/initiatives/marine-mammals **Addressed in IR4-10:** As noted in the VFPA's response to IR4-10, in 2014, the VFPA-led ECHO Program was developed as a collaborative initiative aimed at better understanding and managing the impact of shipping activities on at-risk whales throughout the southern coast of B.C. The VFPA-led ECHO Program engages and involves key regional interested parties to maximise program success and help ensure that mitigation and management measures developed through the program are informed by social, cultural, economic, and environmental sustainability interests. The ECHO Program is guided by the advice and input of an advisory working group, and supported by a federal government advisory committee and associated technical committees. Through engagement and consultation with stakeholders, including Indigenous groups, the ECHO Program has initiated or supported short-term projects, scientific studies, and educational initiatives to fill knowledge gaps necessary to inform the development of credible, science-based threat reduction solutions and management options to reduce cumulative effects of shipping to at-risk whales in the region.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 9.0 Physical Setting 9.8 Underwater Noise 9.8.2 Assessment Purpose and Approach Appendix 9.8-A Construction and Terminal Activity Underwater Noise Modelling Study Appendix 9.8-B Regional Commercial Vessel Traffic Underwater Noise Modelling Study 14.0 Marine Mammals 14.4.4 Information Sources, Critical Habitat Feature - Acoustic Environment Table 14-7 Marine Mammal Modelling Studies Contributing to Project-related Predictions 14.6 Future Conditions with the Project 14.10 Cumulative Effects Assessment **Information Requests** Response to Sufficiency Information Request #10 (IR4-10 of CEAR Document #1051)
LFN-18.5	Concerned that the SRKW data does not accurately describe where whales are observed. Stated that SRKW are seen regularly in the area traversed by the ferries to/from Nanaimo, which is not reflected on the density map.	28-Oct-2014, Preliminary EIS Results Workshop #3 29-Oct-2014, Email 10-Dec-2014, Health & Aboriginal Rights Workshop – Lyackson First	**28-Oct-2014, Workshop:** Stated that the VFPA takes into account a lot of sightings, whale watching, from ferries; basically, anyone who is a citizen of B.C. can call in a sighting. During the TAG process, the TAG concluded that this is the best/biggest data set available on killer whales. Stated that using this type of information is not going to be perfect, because there are more people in certain areas compared to others, but	**Addressed in EIS Section 14.4:** Numerous literature and data sources were consulted for information on marine mammals, including the following: • Publicly available ITK (LGL Limited and Tsawwassen Fisheries 2012, 2013), workshops with Indigenous groups, and ITK obtained from Project-specific studies related to Current Use (described in EIS Section 32.0); • Marine mammals in the Roberts Bank area have been studied for over three decades. Previous studies that are considered relevant in this assessment include books, academic journals, consultant technical reports, government technical reports, and other scientific literature, which reflect this growing body of knowledge; • Previous environmental assessments and monitoring reports (e.g., DP3 and ambient noise measurements (Stantec 2010): underwater noise predictive modelling study to determine the	**EIS** 14.0 Marine Mammals 14.4 Information Sources **Information Requests** Response to Sufficiency Information Request #10 (IR4-10 of CEAR Document #1051)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	Suggested that the VFPA refer to a new technology that has been developed for finding whales to avoid and reduce vessel strikes, particularly at night. Suggested that the VFPA consider PLOS (Camera Thermal detection) One whale monitoring technology in the assessment, for mitigation from underwater noise impacts, as referenced in the following article: http://www.plosone.org/article/info%3Adoi%2F10.1371%2Fjournal.pone.0071217 Asked how the information provided to the VFPA related to new underwater noise technology was considered in the assessment.	Nation and Lake Cowichan First Nation	this is the best available current data source with thousands of data points to understand how animals are using a broad area. This is a really good data set, but it does have limitations. Stated that studying marine mammals is very challenging. They are underwater most of the time. Figuring out where they is not always easy. Using hydrophones can be a challenge, and one needs to understand the distribution over a very large area. Stated that using the technologies that Lyackson First Nation is referring to is actually pretty tricky because they can only hear so far. Once the whale is so far away from the microphone, it cannot be picked up. Detecting marine mammals is always a challenge and the VFPA decided to go with the input of our experts. They felt that this was the biggest, most robust dataset that was available, and, based on their recommendation, this what we used; it is inclusive of a lot of information over quite a large area. **29-Oct-2014:** Recorded comment for consideration by the Project team. **10-Dec-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Section 14.0 on marine mammals. **05-Jun-2017:** Committed to follow-up with a response. [See Additional Information column].	extent of the area of disturbance for SRKWs in the vicinity of the vibro-densification and dredging activities (Jacques Whitford AXYS and JASCO Research Ltd. 2007a, 2007b, Jacques Whitford AXYS et al. 2007); and surveys for marine mammals conducted before and during construction from 2003 to 2008 (Triton Environmental Consultants Ltd. 2004, Stantec 2010); and • Databases (e.g., B.C. Conservation Data Centre, Committee on the Status of Endangered Wildlife in Canada (COSEWIC) Wildlife Species Database, Species at Risk Public Registry, BC Cetacean Sightings Network, and OM Sighting Network). The VFPA also initiated a TAG process in 2011 to gather input from experts on SRKWs to address known data gaps. **Additional information provided by the VFPA:** The TAG, including DFO, advised that the BC Cetacean Sighting Network Data was the best large long-term dataset to determine the occurrence of SRKW in the Salish Sea. During the development of EIS, the VFPA also deployed a hydrophone at the proposed terminal site to detect SRKW when they were present in the Project area, 24 hours a day, in order to supplement the sighting network data. The VFPA has committed to implementing mitigation measures during the construction period to protect SRKW from acoustic disturbance, including trained marine mammal observers, underwater noise monitoring, and detection of SRKW with hydrophones. Technologies, such as thermal imaging described above, are being explored by the VFPA as a potential mitigation measure during periods of darkness and low visibility; however, the ability of these technologies to detect killer whales is not well understood. The VFPA is committed to continue to explore new technologies to mitigate potential underwater noise disturbance during the construction period. **Further information provided in response to IR4-10:** In 2016, the ECHO Program conducted a desktop study identifying three quiet ship classifications and three propeller technologies shown to reduce underwater noise in support of new criteria for the EcoAction Program. Effective January 1, 2017, the EcoAction Program includes new incentive criteria to provide harbour due rate discounts for quieter ships (i.e., ship classification society quiet vessel notations, cavitation/wake flow reduction technologies), making Canada the first country in the world, and Port of Vancouver the first port, with a marine underwater noise reduction incentive. Since the VFPA launched its new EcoAction underwater noise reduction criteria in 2017, 12 vessels took actions to reduce their underwater noise levels and received a bronze level incentive resulting in reduced harbour due rates. As it relates to RBT2, container ships calling on RBT2 that qualify under the EcoAction Program by meeting incentive criteria for reducing underwater noise levels, informed by ECHO initiatives, will reduce potential effects to at-risk whales. These reductions in underwater noise would occur in the southern coast of B.C. due to both marine shipping associated with the Project along shipping lanes, and when container ships are calling at RBT2.	
LFN-18.6	Stated that a basking shark and grey whale have been sighted off the eastern shore of Valdes Island, and should be included in the assessment.	27-May-2014, Technical Working Group Meeting #3 23-Jul-2015, Meeting with Lyackson First Nation and Lake Cowichan First Nation	**27-May-2014, Meeting:** Responded that with respect to the potential basking shark sighting, we understand this to be a rare sighting and based on this input are looking at available information on basking sharks. Though the VFPA is not currently considering shark species as a VC or focal species in the environmental assessment, we are considering the potential for an interaction and potential effect to sharks.	**Addressed in MSA Section 8.2:** An assessment of the potential environmental effects from marine shipping associated with the proposed Project on basking sharks and grey whales was completed, using humpback whales as a representative species (refer to MSA Section 8.2.6.3). Potential effects on marine mammals from Project-associated vessel transit activities include behavioural disturbance and acoustic masking due to changes to the acoustic environment and physical disturbance from vessel strikes. These effects are expected to be not significant for marine mammals.	**EIS** Appendix 8-A Valued Component Selection Rationale **MSA** 8.1 Marine Fish and Fish Habitat 8.1.5 Existing Conditions 8.2 Marine Mammals 8.2.6.3 Potential Effect #2 – Physical Disturbance from Vessel Strikes

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			23-Jul-2015, Meeting: Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Section 8.2 Marine Mammals.		
LFN-18.7	Questioned the assessment results based on ambiguous assumptions, inadequate baseline data, and lack of First Nations' involvement in the significance decisions. Stated that it is not clear how First Nation input was considered in the assessment. Stated that proposed mitigation measures and plans have not been developed in consultation with Lyackson.	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Section 8.1.8:** To determine the significance of residual adverse effects, the assessment considered the nature of each residual effect and the context within which it is expected to occur. The existing (or expected) condition of each VC was compared with the future conditions predicted to result from the Project. The anticipated future condition of each VC with the Project was compared to a threshold of significance defined for that specific VC. The threshold of significance is the point beyond which the integrity of the VC may be compromised and the residual effect is considered to be significant. If the future condition of the VC with the Project does not exceed the defined threshold, the effect is considered to be not significant. If the future condition of the VC with the Project does exceed the defined threshold, the effect is considered to be significant. When defining the threshold of significance, the assessment included consideration of existing standards, guidelines, or objectives that have been established by government through regulation or applicable regional land and resource use management plans or other mechanisms, where available and suitable for determining significance. If no appropriate government-established threshold was available, the significance threshold was defined using the professional judgement of the Project team and current scientific knowledge about the VC. The rationale for the significance threshold used in the assessment and for the determination of significance is provided for each VC. Each assessment also considered the likelihood that each predicted residual effect would occur. The level of confidence in each residual effect prediction considers the level of uncertainty associated with both the significance and likelihood determinations. Each assessment section presents the nature and source of any uncertainty that lowers the level of confidence in the residual effect prediction. **Addressed in response to IR-7.31.15-07:** The VFPA's response to IR-7-31.15-07 further discusses significance criteria, specifically in the context of the approach taken in the EIS using multiple lines of evidence. **Addressed in response to IR-7.31.15-08:** The VFPA's response to IR-7.31.15-08 provides a description of where and how ITK has been used to support the selection of VCs, baseline descriptions, the assessment of effects, including the identification of mitigation measures, and in the determination of significance of adverse environmental effects. **Addressed in response to MSA IR-02.24.16-4:** The VFPA's response to MSA IR-02.24.16-4 discusses the application of ITK in the MSA. **Addressed in IR10-02:** The VFPA's response to IR10-02, as requested by the Review Panel, provides further information concerning how available Indigenous knowledge was incorporated into the EIS and MSA.	**EIS** 8.0 Effects Assessment Methods 8.1.8 Determination of Significance of Residual Adverse Effects **Information Requests** Response to Information Request #7 (IR-7.31.15-07 of CEAR Document #314) Response to Information Request #8 (IR-7.31.15-08 of CEAR Document #314) Response to Additional Information Request #4 (MSA IR-02.24.16-4 of CEAR Document #388) Response to Sufficiency Information Request #2 (IR10-02)
LFN-18.8	Referred to the Eastern Pacific Humpback Whale being representative of other species, and expressed particular	30-Apr-2014, Meeting 27-May-2014, Technical Working Group Meeting	**30-Apr-2014, Meeting:** Committed to follow up with Lyackson regarding effects on marine mammals. **27-May-2014, Meeting:**	**Addressed in EIS Appendix 7.2-B (#87):** The EIS describes the models used to support the assessment of potential effects on marine mammals, and discusses uncertainty, and level of confidence in the effect predictions. The marine mammal sub-component, baleen whales, including grey whale, are represented by humpback whales in the marine mammal's assessment.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 14.0 Marine Mammals

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	concern about the grey whale. Stated that grey whales have been noted in Boundary Bay and on the east side of Valdes Island.	#3 Meeting 12-Aug-2014, Meeting 28-Oct-2014, Preliminary EIS Results Workshop #3 23-Jul-2015, Meeting with Lyackson First Nation and Lake Cowichan First Nation	Stated that that is good information for us to have. We know that grey whales are in the area and are very similar to humpback whales. By assessing the potential effect of the Project on humpback whales, we will also be able to understand the potential effect on grey whales. **12-Aug-2014, Meeting:** The VFPA noted that Lyackson had mentioned the grey whale at Lyackson Bay. Lyackson stated that they were just mentioning it for the VFPA. **28-Oct-2014, Workshop:** Responded the potential for vessel strikes is being assessed when the vessels enter VFPA jurisdiction. When vessels are in VFPA jurisdiction they are travelling much slower and are escorted by a pilot. Additionally, baleen whales are only very rarely observed in the area, and that is why it can be said with a high level of confidence that the risk for potential vessel strikes is very low. Stated that no baleen whales were observed from the Port. All the baleen whales occur sporadically in the inside waters. They do occur, but it is not fairly common, and that includes the grey whale. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Section 14.0 Marine Mammals. **23-Jul-2015, Meeting:** Recorded comment for consideration by the Project team.	While the scope of the Project, as set out in the *EIS Guidelines*, includes vessel traffic within VFPA jurisdiction, the scope of assessment is not limited to VFPA jurisdiction. The EIS provides an assessment of potential Project-related effects to the maximum spatial extent of where they are expected to occur. The LAA encompasses the area in which Project-related effects (direct or indirect) to marine mammals could potentially occur. This boundary was established based on the zone of audibility for all representative species from modelled underwater noise from Project construction and operation. **Addressed in response to IR5-34:** Further information provided in the VFPA's response to IR5-34, as requested by the Review Panel, specifically in terms of the adequacy of the representativeness of humpbacks for grey whales.	Table 14-7 Marine Mammal Modelling Studies Contributing to Project-related Predictions 14.1 Component Overview and Regulatory Setting 14.2 Selection of Marine Mammals Valued Component 14.3 Assessment Boundaries 14.5 Existing Conditions Figure 14-1 Local and Regional Assessment Areas for Southern Resident Killer Whale Figure 14-2 Local and Regional Assessment Areas for Humpback Whales and Steller Sea Lions **Information Requests** Response to Sufficiency Information Request #34 (IR5-34 of CEAR Document #1078)
LFN-18.9	Stated that Lyackson and Lake Cowichan are hoping to hunt seals in the future, and are interested in protecting the ability to undertake this activity.	23-Jul-2015, Meeting with Lyackson First Nation and Lake Cowichan First Nation	**23-Jul-2015, Meeting:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B summarising the comments from Indigenous groups and the responses provided by the VFPA.	**Addressed in MSA Appendix 5-B (#81):** Concern is noted. The VFPA acknowledges that reported Current Use in a given area does not necessarily reflect past levels of use or desired future use by Indigenous groups, and this is reflected in the assessment wherever relevant as indicated by an Indigenous group. The assessment of potential adverse effects on Aboriginal and treaty rights is primarily based on the results of the Current Use analysis and effects assessment, as well as the results of the Indigenous group consultation undertaken for the Project. The assessment of Current Use does not limit the assessment of Aboriginal and treaty rights. The assessment of rights includes all Aboriginal and treaty rights, regardless of whether they are being currently exercised. **Addressed in EIS Section 32.2.6.2:** The Project is not expected to affect the Current Use of marine mammals for harvesting purposes, which, based on information reviewed, is not presently occurring. The Project is also not expected to affect existing ceremonial uses related to this resource. **Addressed in Response to IR10-26:**	**MSA** Appendix 5-B Aboriginal Issues and Interests 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4 Existing Conditions 9.5.11 Potential Adverse Impacts on Asserted or Established Aboriginal and Treaty Rights 14.0 Marine Mammals

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				The VFPA's response to IR10-26, as requested by the Review Panel, discusses potential effects of the proposed Project on the reasonably foreseeable future Current Use activities that have been identified by Indigenous groups.	32.2.6.2 Potential Effect 2: Changes in Availability of Preferred Current Use Resources **Information Requests** Response to Sufficiency Information Request #26 (IR10-26)
LFN-18.10	Concerned about impacts to marine mammals due to pollution, disposal of dredgeate, increased noise, vibration, sensory disturbance, and vessel strikes.	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Section 14.0:** Interactions between Project components and activities and marine mammals were considered and the following potential adverse effects were identified: • Changes in acoustic environment as a result of underwater noise from dredging, pile-driving, vibro-densification, and tug and vessel movements during construction, and container ship and tug movements during operation, resulting in potential acoustic injury, behavioural disturbance, or acoustic masking; • Changes to the availability of prey from changes to fish habitat; and • Vessel strikes. Changes in water or sediment quality are not anticipated to have an adverse effect on marine mammals. Project-related adverse residual effects to marine mammals are expected to be not significant, based on the following: • Future underwater noise levels with the Project are comparable to levels currently measured at Roberts Bank and mitigation would be implemented to reduce construction-related effects; population modelling predicted no statistical difference in the effects of underwater noise on SRKW life functions and subsequent population-level effects, between existing conditions and future conditions with the Project, and future conditions with the Project in combination with future certain and foreseeable projects; • The availability or productivity of Pacific salmon prey (i.e., Chinook salmon) is not anticipated to decrease from Project-related reductions in habitat availability; and • The likelihood of a Project-related container ship, tug, or support vessel strike resulting in marine mammal injury or mortality is very low. Potential effects can be avoided or reduced during construction through the implementation of mitigation measures outlined in EMPs. Potential effects from increases in underwater noise during operation are expected to be infrequent compared to existing conditions, and of short-term duration, reversible, and low-to-moderate magnitude. In addition, the Project is not anticipated to have an adverse effect on SRKW critical habitat features when needed for SRKW life functions. The Project would not limit the survival or population recovery of SRKWs. However, due to their Endangered status and lack of recovery of the SRKW population, the VFPA has assumed past activities and projects, including those described in the recovery strategy issued by DFO, have had a significant adverse effect on SRKWs. Therefore, the Project, in combination with past projects and activities that have been carried out, and certain and reasonably foreseeable projects that will be carried out, would result in a continued significant cumulative effect to SRKWs. Cumulative effects to baleen whales and seals and sea lions are expected to be not significant.	**EIS** 14.0 Marine Mammals 14.9 Determination of Significance of Residual Adverse Effects 14.10.4 Significance Determination for Residual Adverse Cumulative Effects
LFN-18.11	Asked about the VFPA's conclusions related to marine mammals.	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Appendix 7.2-B (#92):** Project-related adverse residual effects to SRKWs (and all toothed whales) are expected to be not significant. The Project contribution of effects above existing conditions is very small and is not anticipated to adversely affect individuals or affect critical habitat features (acoustic environment, the availability of prey, and water and sediment quality) when needed by SRKWs for their life functions of foraging, mating, resting, or socialising. Destruction of SRKW critical habitat from Project construction and operation is not anticipated, and the Project will not limit the survival or recovery of SRKWs.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 14.0 Marine Mammals 14.9 Determination of Significance of Residual Adverse Effects

Table 19: Marine Shipping Addendum

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-19.1	Asked whether container ships pick up pilots in Victoria and if there will be sufficient pilots available to facilitate additional traffic due to the Project.	15-Apr-2014, Technical Working Group Meeting #2	**15-Apr-2014, Workshop:** Responded that every foreign vessel picks up a pilot in Victoria, until they berth. Ships are under the direction of a B.C. coast pilot while in B.C. waters.	**Addressed in EIS Section 4.0:** As noted in EIS Section 4.4.2.1, all container ships destined for RBT2 will arrive from either ocean transit, or from the Puget Sound area, pick up a Coastal Marine Pilot at the Victoria pilot boarding station, and will travel toward the Project in the international shipping lanes leading to the Greater Vancouver area. For departures from RBT2, the vessel will drop an on-board pilot off at Victoria, and continue on to ocean transit, or to the Puget Sound area.	**EIS** 4.4.2.1 Container Ship Manoeuvres
LFN-19.2	Requested clarification on the scope and intent of consultation related to marine shipping. Requested more information about the big picture effects of marine shipping in their territory. Sought clarification on jurisdiction in the marine shipping area. Sought clarification on whether the Project's approval considers marine shipping. Concerned with the way marine shipping is being proposed.	26-Apr-2016, Meeting 04-Apr-2017, Meeting 03-May-2017, Meeting	**26-Apr-2016, Meeting:** Responded that the VFPA is gathering information on marine shipping and this information will be passed to the federal government, to those with jurisdiction (such as Transport Canada and the Coast Guard). **04-Apr-2017, Meeting:** Explains how marine shipping is outside of the Project scope and the port authority's jurisdiction. **03-May-2017, Meeting:** Clarified that the marine shipping area is Transport Canada's jurisdiction, with some other federal agencies such as Environment Canada and DFO having certain responsibilities. Responded that the Panel will be assessing both the Project and marine shipping, but the decision by the Minister to approve or reject the Project will consider the Project only; the Project is what the proponent (the port authority) can actually control.	**Addressed in the *Updated EIS Guidelines*:** On April 17, 2015, the CEA Agency issued *Updated EIS Guidelines* that included the addition of environmental effects of marine shipping associated with the Project, beyond the scope of the Project (VFPA jurisdiction) to the 12 nautical mile limit of Canada's territorial sea. In October 2015, the VFPA submitted to the CEA Agency the MSA. The VFPA understands that marine shipping associated with the Project outside of Port of Vancouver's jurisdiction is not formally considered to be part of the Project for the purposes of the Minister's decision whether the Project is likely to cause significant adverse environmental effects. However, the MSA provides information to the federal government regarding the potential effects of marine shipping associated with the Project, which can be used to inform programs or activities within federal jurisdiction.	***Updated EIS Guidelines***
LFN-19.3	Concerned that the scientists who undertook the air quality assessment for the MSA were not objective and questioned results that say there are no impacts. Asked whether the scientists hired to undertake the air quality assessment were independent and expressed interest in a third-party review of the assessment. Asked if the person undertaking the current use assessment is a First Nation person and expressed suspicion with its conclusions.	03-May-2017, Meeting	**03-May-2017, Meeting:** Responded that the air quality assessment was completed by an independent expert with over 40 years of experience. Clarified that the EIS does not say there are no changes, effects, or impacts; the scientists compared current and predicted future conditions with and without the Project to see if changes would be significant to a species or element of the environment. For example, in regards to SRKW, the EIS acknowledged they are already significantly affected and will continue to be significantly affected. Stated thresholds for air quality are set at the federal, provincial, Fraser River regional, and Metro Vancouver regional level. The assessment compiled all of the criteria and applied the most stringent of them. Responded the person who undertook the Current Use assessment is not an Indigenous person.	**Addressed in EIS Section 1.4:** During Project planning, preliminary design, and preparation of the EIS, the VFPA gathered and integrated information from a wide range of sources, including the following: • Academic experts; • Federal authorities with specialist or expert scientific information, advice, and knowledge relating to projects of this nature; • Other levels of government with expert and specialist knowledge; • Indigenous groups; • Communities; • Existing information relevant to the Project, including ITK; and • Professional practitioners (e.g., registered professional biologists, air quality specialists, geomorphologists). **Additional information provided by the VFPA:** While the environmental assessment of the Project will inform the decisions made by the Federal and Provincial governments, the EIS itself comprises a science-based rigorous assessment. Further, the Project is undergoing a federal environmental assessment by an independent review panel, under *CEAA 2012*. The entire EIS, including the air quality and Current Use assessments, will be subject to an independent review.	**EIS** 1.4 Use of Information

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-19.4	Asked who determines thresholds and significance levels for: • Air Quality; • Atmospheric Noise; • Underwater Noise; • Light; • Human Health (i.e., shellfish contamination); • Marine Fish (salmon); and • Current Use. Expressed concern that the port authority has assessed impacts against a threshold that a First Nation may not agree with. Disagreed with assessment conclusions saying there are no significant effects and noted having observed effects.	03-May-2017, Meeting	**03-May-2017, Meeting:** Recorded comment for consideration by the Project team.	**Additional information provided by the VFPA:** The *Updated EIS Guidelines* as issued by the CEA Agency directs the proponent (the VFPA) to provide sufficient data and analysis on any potential changes to the environment to permit a thorough evaluation of the environmental effects of the Project by a Review Panel. The Review Panel is currently undertaking an assessment of the environmental effects of the Project in a manner consistent with the requirements of *CEAA 2012* and the Final Terms of Reference (CEAR Document #176). The Review Panel will prepare and submit a report to the federal environment Minister, who will in turn make a determination of the significance of potential environmental effects. If the Minister decides that the Project is likely to cause significant adverse environmental effects, the Minister must refer to the Governor-in-Council the matter of whether those effects are justified in the circumstances and the decision of whether the Project should be approved. Since the beginning of the environmental assessment process for RBT2, Indigenous groups have, and will continue to have, opportunities to participate in, review, and comment on the potential effects of the Project, with records of comments being hosted publicly on the CEA Agency Registry.	***Updated EIS Guidelines*** **FINAL Roberts Bank Terminal 2 Project Review Panel Terms of Reference (CEAR Document #176)**
LFN-19.5	Expressed concern with the ability of the relevant authorities such as Transport Canada and the Canadian Coast Guard to enforce regulations related to water quality. Referenced meeting with Transport Canada and the Canadian Coast Guard and that the concern related to enforcement of regulations persists.	03-May-2017, Meeting	**03-May-2017, Meeting:** Referred to regulations such as the Ballast Water Exchange and noted ships are required to provide their report 96 hours before entering a Canadian port. Noted the port authority cannot speak to compliance records.	**Addressed in TC IR-02 to TC IR-06:** Additional information regarding enforcement and compliance related to marine water quality was provided by Transport Canada in their responses to Review Panel information requests TC IR-02 to TC IR-06. Available on the CEA Agency Registry at: https://www.ceaa-acee.gc.ca/050/documents/p80054/119300E.pdf.	**Review Panel Information Request to Transport Canada** TC IR-02 – Marine Water Quality – Chronic Oiling TC IR-03 – Marine Water Quality – Anti-Fouling Agents TC IR-04 – Marine Water Quality – Ballast Water TC IR-05 – Marine Water Quality – Bilge Water TC IR-06 – Marine Water Quality - Sewage
LFN-19.6	Concerned about temporal scale of existing conditions, that it should include data from before development of Roberts Bank and the causeway. Disagreed with the use of an assessment baseline starting at present and said it should be 50, if not 100 years ago; stated it is not good enough.	03-Jul-2014, Valued Components Workshop #2 03-May-2017, Meeting 04-Oct-2017, Meeting	**03-Jul-2014, Workshop:** Stated that the historical context is important. Trying to look at this assessment not in isolation of the actual availability of historical trends around resources and fish, and crab, and invertebrates, the trends over time of availability, and abundance, and location. It is a critical piece that obviously links to the assessment not only around commercial, but as you say around other aspects of Indigenous marine use. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **03-May-2017, Meeting:** Clarified that this is Lyackson First Nation's view for all sections of the assessment.	**Addressed in AIR-12.04.15-13:** In the EIS, the existing conditions (at around the time of EIS writing) (baseline) reflect the conditions of the environment as modified by past development. Further discussion of how the VFPA considered the effects of past, present, and future projects is provided in AIR-12.04.15-13, including in that responses' schedules focused on applicable VCs.	**Information Requests** Response to Additional Information Request #13 (AIR-12.04.15-13 of CEAR Document #388)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			04-Oct-2017, Meeting: Recorded comment for consideration by the Project team.		
LFN-19.7	Stated all of Lyackson First Nation's concerns regarding marine shipping are outstanding to date. Expressed opposition to the Project until shipping is resolved; noted not wanting there to be any additional ships. Suggested not proceeding with the project until Lyackson First Nation's concerns are mitigated satisfactorily and until the government figures out how to deal with outstanding and existing issues.	03-May-2017, Meeting	**03-May-2017, Meeting:** Stated it is a methodology issue and referred to commitment to follow-up with additional information on topics raised today. Referred to Lyackson First Nation's previous letter to the Review Panel and commented it is the appropriate avenue to take regarding steps the government can take to address outstanding concerns.		
LFN-19.8	Concerned with cumulative effects from marine shipping and criticised the approach to assessing cumulative effects.	23-Jul-2015, Meeting with Lyackson First Nation and Lake Cowichan First Nation	**23-Jul-2015, Meeting:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B summarising the comments from Indigenous groups and the responses provided by the VFPA.	**Addressed in MSA Appendix 5-B (#23):** The approach to the cumulative effects assessment is provided in MSA Section 6.0. Each IC and VC assessment section considers cumulative changes and cumulative effects to which the Project contributes. This entails consideration of residual effects of routine marine shipping associated with the Project, if any such effects are predicted, in combination with effects of other projects and activities that have been or will be carried out.	**MSA** Appendix 5-B Aboriginal Issues and Interests 6.0 Effects Assessment Approach 6.7 Cumulative Effects Assessment 7.1 through 9.4 (All IC and VC assessments) 9.5 Current Use of Lands and Resources for Traditional Purposes, and Aboriginal and Treaty Rights
LFN-19.9	Concerned about increased vessel traffic. Stated that Elders have said they do not tend to frequent the Project area anymore, to avoid traffic. Stated First Nation people do not feel comfortable going out in the marine shipping area because they are afraid of collisions with vessels.	10-Dec-2014, Health & Aboriginal Rights Workshop – Lyackson First Nation and Lake Cowichan First Nation 03-May-2017, Meeting	**10-Dec-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **03-May-2017, Meeting:** Responded the Current Use section of the MSA addresses the concern related to vessel collisions.	**Addressed in EIS Appendix 7.2-B (#206) and (#219):** A quantitative risk assessment of potential accidents and malfunctions related to marine vessel traffic, including the risk of a collision between a container ship and small craft (i.e., fishing and recreational vessels), was undertaken and is described in EIS Section 30.0 and EIS Appendix 30-A. The EIS considers the effects of Project-related traffic on Current Use and Aboriginal rights, and the cumulative effects of the Project in combination with other projects OR activities, including existing and incremental marine vessel traffic. According to EIS Section 32.2.6.4, while container ship traffic at Roberts Bank is expected to increase, the risk of an incident is very low or negligible. Consequently, the Project is not expected to impact the ability of Lyackson to exercise the right to the use of travelways to preferred harvesting areas. **Addressed in MSA Section 9.5:** MSA Section 9.5 considers the Current Use by Indigenous peoples, including intangible cultural heritage considerations, and in the marine shipping area. The section also considers potential impacts on the ability to exercise asserted or established Aboriginal or treaty rights in the marine shipping area, including in the context of potential accidents and malfunctions.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 30.0 Potential Accident and Malfunctions 30.4.4 Vessel Collision Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment 32.2.6.4 Potential Effect 4: Changes in Quality of Current Use Experience **MSA** Appendix 5-B Aboriginal Issues and Interests 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				Potential effects on Current Use as a result of Project-associated vessel transit activities are considered negligible before mitigation for access to preferred Current Use locations, due to Project-associated ship wake, the availability and quality of preferred Current Use resources, and the quality of the Current Use experience (i.e., cultural practices) tied to those aspects of Current Use. Residual effects on access to preferred Current Use locations due to Project associated container ship pass-bys, and on cultural practices tied to that aspect of Current Use, are considered negligible after the implementation of mitigation. Considering the conclusions of the Current Use assessment, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the marine shipping area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location. These mitigation measures for addressing potential incremental effects on Current Use are expected to also be effective at addressing the potential incremental impact to the exercise of Aboriginal and treaty rights. No additional mitigation measures have therefore been suggested for the potential incremental impact to the exercise of Aboriginal and treaty rights.	9.5.4 Existing Conditions 9.5.5.1 Negligible Effects of Vessel Transit on Current Use Access to Preferred Current Use Locations Quality of Current Use experience 9.5.5.2 Potential Effects of Vessel Transit on Current Use 9.5.6 Suggested Mitigation Measures 10.0 Potential Accidents or Malfunctions 10.5.9 Human Health 10.5.10 Marine Commercial Use 10.5.11 Outdoor Recreation 10.5.13 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights
LFN-19.10	Expressed concern about current impacts of large vessel traffic and anchorages within Lyackson's territory. Requested notification of anchored vessels in its traditional territory. Requested information about vessels transiting in its traditional territory. Requested copies of inspection reports for all large vessels. Requested meaningful consultation on vessel anchorages. Demanded contact information of agencies responsible for anchorages. Demanded government to sign UNDRIP and institute free, informed and prior consent with respect to vessel traffic. Requested accommodation for anchorages in its territory. Demanded that government address impacts of noise, light, and water pollution. Requested that government collaborate with Lyackson to develop regulations regarding noise, light, and water pollution.	15-Mar-2017, Letter to Panel (CEAR Document #948)	The VFPA understands that this comment is directed to the Panel. The VFPA has reviewed this letter and has no additional information to provide.		

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	Requested a comprehensive sea floor survey to assess impacts caused by large vessel anchorages. Requested a cumulative impacts study prior to any new projects being approved. Requested a funded and effective emergency response plan be developed in collaboration with First Nations.				

Lyackson First Nation

Table 20: Marine Vegetation – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-20.1	Interested in whether eelgrass transplants undertaken as mitigation will displace other types of vegetation already found to be in the transplant location.	28-Oct-2014, Preliminary EIS Results Workshop #3	**28-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#70):** Following terminal construction, there is an opportunity to transplant up to three hectares of native eelgrass within the Roberts Bank study area as a mitigation measure. The proposed transplant site overlaps with an existing stand of sparse eelgrass (i.e., less than 30% cover). The existing presence of eelgrass at this location is an indication of suitable conditions for establishment and growth of eelgrass.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 9.0 Physical Setting 9.5 Coastal Geomorphology 9.5.6 Existing Conditions 11.0 Marine Vegetation 11.2.1 Sub-components Figure 11-2 Roberts Bank Marine Vegetation Habitat Map (2012) 11.6 Future Conditions with the Project 17.0 Mitigation for Marine Biophysical Valued Components 17.3. 2 Offsetting Potential Effects, Offsetting Framework Figure 17-1 Overview of Proposed Onsite Habitat Concept Locations
LFN-20.2	Concerned with the disruption of nearshore habitat, including within the tug basin. Asked about the distribution of current eelgrass beds, and where potential proposed beds would go. Asked if crest protection will create an opportunity for flow in the area to re-establish itself.	07-Oct-2014, Preliminary EIS Results Workshop #1 and #3 28-Oct-2014, Preliminary EIS Results Workshop #3	**07-Oct-2014, Workshop:** Responded that potential beds are proposed along the edges of the existing eelgrass bed (motions to area on slide 21), in order to expand it further. Stated that regarding the potential habitat restoration, the VFPA does not know at this time. At present, it has not been looked at as an engineering solution, to put some habitat in there, but it is certainly something that can be considered. Noted that the engineering regarding all of the various habitat mitigation concepts began only one week earlier. Stated that regarding flow and crest protection, the crest protection is made of rock riprap and its purpose is to keep sediment from flowing into the deeper, dredged area of the tug basin, avoiding the need for continual dredging. The location/design of the existing tug basin has resulted in an area of stagnant water, due to the inability of water to get around the corner of the existing crest protection, to flow out. As a result, it is essentially a dead-zone. An early option for the expanded tug basin (refers to slide 13 of the Alternative Means presentation) saw the proposed expansion encroaching into a productive area, so the hydrologists suggested the tug basin instead be expanded into the area of already stagnant water, along the backside of DP3.	**Addressed in EIS Appendix 7.2-B (#67):** Eelgrass and biofilm are both considered in the effects assessment as sub-components of the marine vegetation VC. The existing conditions for eelgrass and biofilm (including ecological function) in the Roberts Bank area and the potential effects of the Project on these marine vegetation sub-components are described in the EIS. Eelgrass and biofilm have specific habitat preferences and occur where these conditions exist. Native eelgrass at Roberts Bank occurs in areas containing finer sediments in the higher intertidal zone. Biofilm is found on mudflats within the upper intertidal zone. Expansion of the tug basin is not expected to affect the distribution of eelgrass in the inter-causeway area. **Addressed in EIS Appendix 7.2-B (#198):** Onsite habitat is intended to soften the perimeter of the Project's shoreline to be more ecologically representative of the existing estuary, to create similar habitat to those that will be affected by the Project, and to create habitat that generally enhances the productivity of the Roberts Bank ecosystem. Eelgrass beds are highly productive habitats in the Roberts Bank ecosystem, serving numerous critical functions, such as food, shelter, and rearing habitat for numerous species. Approximately three hectares of native eelgrass will be established through transplants in the inter-causeway area. The onsite habitat concepts presented in EIS Section 17.0 have been presented to Indigenous groups, the community, stakeholders, and the public in open houses and small group meetings that took place in the fall of 2014. The feedback received from Indigenous groups has been considered in the finalisation of the EIS.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 11.0 Marine Vegetation 11.5.1 Existing Conditions, Eelgrass 11.5.5 Existing Conditions, Biofilm 11.6 Future Conditions with the Project 17.0 Mitigation for Marine Biophysical Valued Components 17.3.2 Offsetting Potential Effects, Offsetting Framework

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			Explained that the crest protection built before DP3 is at a different elevation, which has resulted in water being blocked, and the construction of new crest protection at the proper elevation will enable water to flow around. **28-Oct-2014, Workshop:** Responded that information on historic eelgrass distribution is limited, but information on eelgrass expansion near development shows that eelgrass has expanded. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.		
LFN-20.3	Stated that beautifying the causeway as part of RBT2 is important to Lyackson First Nation. Requested planting along the causeway to compensate for the loss in marine habitat. Requested retaining walls along the causeway with natural plants growing, like a green wall. The plants would face the ocean side and have beach soil to encourage natural plant growth.	08-Oct-2014, Preliminary EIS Results Workshop #2 24-Feb-2016, Phone call	**08-Oct-2014, Workshop:** Responded that it is currently a proposed mitigation measure. Stated that this was done for DP3 with limited success. There is very shallow soil in that area. The plants that they planted did not take. Recognised that if it was important to Lyackson First Nation, the VFPA will consider it and see if anything can be done to make it work this time. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **24-Feb-2016, Phone call:** Recorded comment for consideration by the Project team.	**Addressed in EIS Appendix 7.2-B (#124):** Noted that a vegetation buffer is no longer being considered: The use of a vegetation buffer along the causeway as a proposed mitigation measure for effects on daytime visual resources was excluded from further assessment after consideration of feedback received during consultation with Indigenous groups, as well as inter-disciplinary input on technical feasibility. It was concluded that a vegetation buffer would have limited, if any, effectiveness as mitigation for adverse effects on visual resources, and could result in a predation risk to shorebirds from raptors. Past experience with a vegetation buffer on the causeway have been unsuccessful due to soil conditions.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 25.0 Visual Resources 25.7 Mitigation Measures
LFN-20.4	Asked about the implications of the anticipated increase in non-native eelgrass. Asked if an undesired increase in productivity would be mitigated.	28-Oct-2014, Preliminary EIS Results Workshop #3	**28-Oct-2014, Workshop:** Responded that the VFPA is currently trying to understand what is going to happen, so that those conversations can be had. It is noted that non-native eelgrass can also be beneficial, and supports a wide variety of species. An increase in non-native eelgrass is anticipated, which will be good for fish. A slight decrease in native eelgrass is anticipated, for which we would apply mitigation, which would also be good for fish. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#70):** The EIS provides a description of the marine vegetation sub-components, including eelgrass, intertidal marsh, macroalgae (seaweed), biomat, and biofilm, and the importance of each to maintaining the physical form and function of the Roberts Bank ecosystem. Non-native eelgrass and English cordgrass (*Spartina anglica*) are considered to be a less desirable species. Following terminal construction, there is an opportunity to transplant up to three hectares of native eelgrass within the Roberts Bank study area as a mitigation measure. The proposed transplant site overlaps with an existing stand of sparse eelgrass (i.e., less than 30% cover). The existing presence of eelgrass at this location is an indication of suitable conditions for establishment and growth of eelgrass.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 9.0 Physical Setting 9.5 Coastal Geomorphology 9.5.6 Existing Conditions 11.0 Marine Vegetation 11.2.1 Sub-components Figure 11-2 Roberts Bank Marine Vegetation Habitat Map (2012) 11.6 Future Conditions with the Project 17.0 Mitigation for Marine Biophysical Valued Components 17.3.2 Offsetting Potential Effects, Offsetting Framework

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
					Figure 17-1 Overview of Proposed Onsite Habitat Concept Locations
LFN-20.5	Commented that it would be helpful to have someone speak to the success of eelgrass transplants more fulsomely, and provide a more detailed response.	28-Oct-2014, Preliminary EIS Results Workshop #3	**28-Oct-2014, Workshop:** Stated that the VFPA is working with an eelgrass expert who has been involved in all of the eelgrass transplants in this area over the past 20 years. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#201):** Onsite eelgrass habitat creation is proposed through transplanting in an area approximating three hectares. Based on the review of previous habitat creation programs (e.g., DP3), eelgrass transplants are considered to be an effective means of increasing productivity of marine vegetation. The VFPA will implement a Follow-up Program, which will include monitoring to confirm that all offsetting measures meet intended objectives and function as designed. Monitoring will include methods and success measures to confirm that offsetting measures have been effective. The *Fisheries Act* Authorization will require that functional objectives are met. **Additional information provided by VFPA:** Lyackson First Nation was invited to a Knowledge Sharing Workshop on 30-Apr-2015, where eelgrass transplanting was discussed. This included a presentation of successful eelgrass transplants from an eelgrass expert. The workshop was conducted as part of the VFPA's Habitat Enhancement Program. A representative of Q'ul-lhanumutsun Aquatic Resources Society attended the meeting on behalf of Lyackson First Nation.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 17.0 Mitigation for Marine Biophysical Valued Components 17.3.2 Offsetting Potential Effects, Offsetting Framework 17.6 Mitigation for Marine Biophysical Valued Components, Monitoring and Reporting
LFN-20.6	Concerned about whether or not biomat and biofilm should be considered as a Species at Risk, given their rarity, and the lack of knowledge about them. Concerned about effects on biofilm and marsh. Interested in the relationship between biomat and biofilm and the existing causeway.	30-Apr-2014, Meeting 08-Oct-2014, Preliminary EIS Results Workshop #2 28-Oct-2014, Preliminary EIS Results Workshop #3 10-Dec-2014, Health & Aboriginal Rights Workshop – Lyackson First Nation and Lake Cowichan First Nation	**30-Apr-2014, Meeting:** Committed to follow up with Lyackson regarding the widening of the causeway and the terminal's effect on biofilm and migratory birds, and the effects of RBT2 operations on fisheries. **08-Oct-2014, Workshop:** Responded that the extent of the biofilm and biomat has been quantified for Roberts Bank. There is quite a bit of biofilm and biomat in the inter-causeway area. Both of them are basically a matrix of sediment particles; biomat is more of a cyanobacteria, a green algae, whereas biofilm is comprised of primary producers, smaller photosynthesising microscopic organisms, which birds eat. Shared that the marine vegetation presentation will likely include a habitat map, showing the extent of biofilm and biomat, as well as present information about Project-related changes. Referred to a hyperspectral survey carried out for the marine vegetation assessment, to identify the areas where there's photosynthetic activity. **28-Oct-2014, Workshop:** Responded that in some cases, there is a residual effect to biofilm. If there is a residual effect, then the VFPA will need to understand: 'is there another project or activity that would also have a similar residual effect that would occur at the same time and same place?' We have gone through the project and activity list that the VFPA understands are planned in the future, and that is not the case; there are no	**Addressed in EIS Appendix 7.2-B (#65):** Designation of species at risk is conducted by provincial and federal governments according to established processes. The assessment addresses potential Project-related effects to currently designated species at risk, as well as other environmental attributes, such as biofilm and biomat, considered important to the Roberts Bank ecosystem. Biofilm, a thin dense layer of microscopic photosynthetic algae and bacteria, sediment, and organic matter, is found within the upper intertidal zone and is an important food source for invertebrates, fish, and bird species (including migratory western sandpiper and dunlin). Biomat is described as microbial mat, which can take different forms and be composed of a variety of single and multi-cellular organisms, which for the purposes of the marine vegetation effects assessment, is defined as blue-green algae and associated diatoms. Biomat, located in the upper intertidal area of Roberts Bank, is a primary producer and is likely consumed by higher trophic levels. Biofilm, biomat, and intertidal marsh are considered in the effects assessment as sub-components of the marine vegetation VC. The existing conditions (including ecological function) for biomat and biofilm in the Project area and the potential effects of the Project on these marine vegetation sub-components, as well as on coastal birds, are described in the EIS. The assessment concludes that, overall, net productivity of marine vegetation is expected to increase with the Project, without mitigation, and would be further increased with the implementation of EMPs and the creation of habitat. During Project construction and operation, changes in the productivity of biofilm and biomat would be negligible (i.e., not measurable or detectable), while increases in the productivity of intertidal marsh are expected. The Project is expected to temporarily influence community composition of biofilm during freshet from terminal footprint-related changes in salinity. Biofilm community composition is expected to return to existing conditions outside of the annual freshet period. As described in the EIS, the temporary, reversible changes in the biofilm community assemblage from salinity changes during freshet are not predicted to affect shorebirds.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 11.0 Marine Vegetation 11.5.4 Existing Conditions, Biomat 11.5.5 Existing Conditions, Biofilm 11.6. Future Conditions with the Project 11.6.4 Potential Effect – Changes in Biofilm Assemblage Composition 15.0 Coastal Birds 15.7.2 Potential Effect – Changes in Productivity

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			other projects or activities that would cause a similar effect that would occur at the same time, at same place as RBT2. **10-Dec-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.		

Table 21: Marine Water Quality – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-21.1	Concerned that the causeway will cause a change in the hydrological environment, leading to a silt plume. Concerned that silt plume will mix with a potential spill, and affect Lyackson on Valdes Island or Lulu Island.	12-Nov-2015, Meeting with Lyackson First Nation and Lake Cowichan First Nation	**12-Nov-2015, Meeting:** Responded that the cumulative effects assessment related to sediment can be found in EIS Section 9.6 and accidents and malfunctions would assess interactions (EIS Section 33.0).	**Addressed in EIS Appendix 7.2-B (#48):** Coastal geomorphology considers the physical processes such as waves and currents that change or maintain the physical environment of coastal areas. An assessment was undertaken to determine potential changes to coastal geomorphology as a result of the Project. The assessment consisted of three study approaches to determine the potential effects of changes to natural processes from the Project footprint in subtidal and intertidal areas. Studies were informed by dialogue with the Coastal Geomorphology TAG. The results of the coastal geomorphology assessment were considered in the assessments of surficial geology and marine sediment, marine water quality, marine vegetation, marine invertebrates, marine fish, marine mammals, coastal birds, ongoing productivity of commercial, recreational, and Aboriginal fisheries, and archaeological and heritage resources. The Project layout and configuration has been modified to reduce the potential for a number of adverse changes to geomorphology during Project construction and operation. For example, developing the terminal almost entirely within the subtidal zone of Roberts Bank will largely avoid changes to geomorphology. Changes to coastal geomorphology are not expected from terminal development activities, but are related to the terminal footprint itself. The footprint will interact with tidal currents and wind-generated waves resulting in alterations to sediment transport, sediment erosion and deposition, and water flow exchange in the construction and operation phases. During causeway construction, drainage channels are expected to form on the tidal flats adjacent to the causeway. This change will occur during construction only, and will be temporary and reversible. The VFPA will ensure the study and management of potential channel formation related to drainage of tidal waters through the causeway dyke during the construction phase. Changes will be incorporated in detailed design, as required. Changes from the expansion of the tug basin include the conversion of local tidal flats to subtidal waters. Although the formation of additional tidal channels is not anticipated, a small increase in the size of an existing channel is likely. No incremental cumulative changes in coastal geomorphology are anticipated to result from the Project in combination with other projects and activities. **Addressed in EIS Section 9.6:** As noted in EIS Section 9.6, changes to surficial geology and marine sediment during Project construction activities are expected to be minimal or undetectable relative to natural variability. Changes in sediment contaminant levels are not expected. The terminal footprint is predicted to alter tidal currents and interactions with Fraser River waters. Initially, it is predicted to cause seabed erosion and sediment deposition near the terminal. Subsequently, it is predicted to increase fine sediment deposition on portions of the tidal flat within the range of existing natural variability. No incremental cumulative changes in surficial geology and marine sediment quality are anticipated to result from the Project in combination with other projects and activities.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 9.5 Coastal Geomorphology 9.5.6 Existing Conditions 9.5.8 Future Conditions with the Project Table 9.5-6 Predicted Morphological Changes from the Project Footprint Figure 9.5-35 Approximate Spatial Extent of Potential Changes Associated with the Project Footprint 9.6 Surficial Geology and Marine Sediment 33.0 Potential Accidents and Malfunctions

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-21.2	Concerned that the pollution caused by the existing and proposed industrial development is creating a dead zone for marine life in the inter causeway area. Concerned with increased risk of accidents and malfunctions such as spills and leaks from ships, as well as planned discharge of treated sewage and stormwater effluent will further result in impacts to marine resources.	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Sections 11.5, 12.5, 13.5, and 15.5:** As noted in EIS Sections 11.5, 12.5, 13.5, and 15.5, the inter-causeway area has considerable ecological value and is used by a diversity of organisms for various life functions, including spawning, rearing, and foraging. **Addressed in EIS Section 30.0:** EIS Section 30.0 presents an assessment of potential accidents and malfunctions, including a ship impact and spill scenario. The Project does not involve the shipment of fuel and therefore the assessment considered the potential spill of fuel required for container ship operation. The assessment concluded that a spill from the fuel tanks of a container ship in the berth area could result in adverse residual effects to marine vegetation, marine invertebrates, marine fish, and marine mammals, as well as marine commercial use, outdoor recreation, and land and water use. With the exceptions of SRKWs, coastal birds, and Current Use, these residual effects were considered not significant. However, due to the extremely low probability of such a ship impact and spill scenario, all residual effects were considered unlikely. **Addressed in EIS Section 9.7:** As noted in EIS Section 9.7, stormwater and treated wastewater effluent and discharge during Project operation would be managed according to standard management practices and regulations. Operation activities are not expected to adversely affect marine water quality.	**EIS** 9.7 Marine Water Quality 11.0 Marine Vegetation 11.5 Existing Conditions 12.0 Marine Invertebrates 12.5 Existing Conditions 13.0 Marine Fish 13.5 Existing Conditions 15.0 Coastal Birds 15.5 Existing Conditions 30.0 Potential Accidents and Malfunctions
LFN-21.3	Stated that with marsh close to highway, they are concerned with water quality and with changes to depth due to the existing terminals.	29-Aug-2017, Follow Up Program Workshop with Cowichan Nation Alliance, Lyackson First Nation and Malahat First Nation	**29-Aug-2017, Workshop:** Committed to providing more information regarding any studies on bathymetry or depth changes in on the north versus south sides of the BC Ferries Terminal. **20-Feb-2018, Email from the VFPA:** Provided the notes from the Follow-up meeting, which included a post-meeting note to address this question: *"VFPA is not aware of any studies on the quality of fresh water run-off from the foreshore of the BC Ferries causeway specifically. However, water properties at Roberts Bank including the inter-causeway area have been the focus of many scientific investigations, including studies led by VPFA to characterise baseline conditions for the DP3 Project, and as follow-up monitoring conducted as part of the DP3 Adaptive Management Strategy. A summary of these studies, along with results from the Roberts Bank Terminal 2 (RBT2) Project baseline studies can be found in Appendix 9.6-A (Sediment and Water Quality Characterisation Studies) of the EIS.* *While the primary focus of past studies has been on marine and estuarine intertidal waters, water quality sampling was completed in a tidally influenced*

Table 22: Mitigation for Marine Biophysical Valued Components (including Onsite Habitat Concepts)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-22.1	Requested more information on proposed mitigation measures, particularly those impacting the food fishery season.	15-Apr-2014, Technical Working Group Meeting #2 10-Dec-2014, Health & Aboriginal Rights Workshop – Lyackson First Nation and Lake Cowichan First Nation	**15-Apr-2014, Meeting:** Responded that the VFPA is still in the early stages of examining effects and does not have this information. **10-Dec-2014, Workshop:** Stated that mitigation measures will be listed in the EIS. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Section 32.2 regarding Current Use of Lands and Resources for Traditional Purposes and mitigation measures. **12-Apr-2018, Letter from the VFPA:** Stated that since your concerns were raised, the Project team has conducted further work on these topics to respond to information requests from the Review Panel, to better understand potential effects and suggested mitigation, and to gain deeper understanding of the viewpoints of Indigenous groups and stakeholders. Provided the RBT2 Crab Mitigation Summary Overview, which detailed the following: • Mitigation measures to avoid or reduce effects to crab as outlined in the EIS, and • Additional crab harvesting related mitigation measure suggestions under review. Stated that the VFPA is interested in hearing views regarding options to mitigate potential effects to crabs and crabbing in the Project area.	**Addressed in EIS Section 32.2.7:** Mitigation measures pertaining to Current Use by Indigenous groups are presented in the EIS. Specifically related to food fish, mitigation measures include, but are not limited to: • Work with DFO to ensure necessary consultations with Indigenous crabbers (for domestic or food, social, or ceremonial purposes) concerning the proposed expansion of the area closed to commercial and recreational crabbing; • Support Indigenous crabbing for domestic or food, social, or ceremonial purposes within the area closed to commercial and recreational crabbing; • Develop a communications protocol to inform appropriate Indigenous groups of planned or unplanned events related to Project construction or operation that may affect Current Use access; and • Work with appropriate Indigenous groups to develop and implement a communications mechanism that will support dialogue between the VFPA and appropriate Indigenous groups on topics of concern that arise during construction and initial operation phases.	**EIS** 32.2 Current Use of Lands and Resources for Traditional Purposes 32.2.7 Mitigation Measures

Lyackson First Nation

Table 23: Noise and Vibration – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-23.1	Stated that Lyackson members can feel a vibration on Valdes Island at irregular intervals and hours. Suggested that it would be helpful to know who to call when the noise is heard, so as to identify the cause. The impact of underwater noise and vibration should also be examined in the context of human health. Stated that Lyackson is impacted by noise and vibration from current vessel traffic, which is audible and cause vibrations to be felt in the sandstone of Le'eyqsun. Stated that Lyackson members have reported that the "wedge" shape of Le'eyqsun appears to make it particularly vulnerable to the transmission of noise and vibration, with reports that the sandstone captures noises from ship at berth (sounds like screws of a ship). Stated that the existing terminal is currently causing a low frequency sound that can be heard and felt for hours on the east coast of Valdes, particularly in the bay where the Lyackson camp is located but also 100 feet from shoreline. Stated that this sound would be amplified with the proposed Project, given that it is further north from the existing terminal.	15-Apr-2014, Technical Working Group Meeting #2 30-Apr-2014, Meeting 28-Oct-2014, Preliminary EIS Results Workshop #3 10-Dec-2014, Health & Aboriginal Rights Workshop – Lyackson First Nation and Lake Cowichan First Nation 01-Nov-2016, Letter to Panel (CEAR Document #733)	**15-Apr-2014, Meeting:** Stated that there are underwater noise specialists involved in RBT2. Presented goals of the noise and vibration studies; a residential survey intended to help identify concerns; the purpose, components, and methodology of a study that helped identify issues related to noise and vibrations; background vibration levels recorded below the threshold of human perception; and effects of meteorology on sound propagation. **30-Apr-2014, Meeting:** Committed to follow up with Lyackson regarding what can be done about the mysterious noise heard, and vibrations felt, at irregular intervals and hours of the day on Valdes Island **08-Oct-2014, Preliminary EIS Results Workshop #2:** The VFPA described the existing conditions related to noise and vibration and anticipated future changes resulting from the Project components and activities. **28-Oct-2014, Workshop:** Stated that vibration will be discussed in greater detail in the EIS. Responded that an assessment of underwater noise from the Project will be included in the EIS. Also, potential effects from in-air noise and vibration as they relate to human health will also be included in the EIS. Stated that the VFPA is aware that different vessels make different sounds; some of them are not maintained as well as others, which can result in them being noisier. **10-Dec-2014, Workshop:** Committed to following up on who to call when noise is heard. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **05-Aug-2015, Email from the VFPA:** Provided Lyackson with Information Sheets related to the Project. The information sheet on noise and vibration included the contact information for the Community Feedback Line. **06-Dec-2017, Email from the VFPA:** Provided information on the VFPA's Community Feedback Line: *"Enquiries can be directed by email to community.feedback@portvancouver.com, or by phone at 604-665-9004. VFPA asks that callers be as specific as possible, including the date and time, location or address block, the vessel name if visible, the location or area the vessel is anchored in, and the callers contact information."*	**Addressed in EIS Appendix 7.2-B (#43):** The noise and vibration assessment considers the noise anticipated to result from the Project in combination with other existing sources of noise, as well as the total future noise, including noise from the Project in combination with noise from existing sources and from other certain and reasonably foreseeable projects and activities. The human health assessment considers the potential health effects experienced by community members as a result of cumulative noise as well. The conclusion of the health assessment as it relates to noise is that a minority of households would experience small increases in noise during construction or operation. The increase would generally be below the range of human perception, and adverse health effects related to noise are considered not significant, as predicted exposure levels do not exceed health thresholds. Confidence in the assessment is high because models used conservative assumptions and have been validated against studies or monitoring data. **Addressed in IR7-06:** IR7-06 presents an update of the ongoing discussion with Lyackson First Nation regarding the source of the noise referred to in EIS Section 32.2.4.7. The VFPA will continue to support efforts led by Transport Canada and others to better understand the current effects of vessels along the marine shipping route, and to determine the most likely cause of the noise experienced by Lyackson, and potential steps to address it. **Additional information provided by the VFPA:** As noted in the EIS Table of Commitments, the VFPA will continue to update and make available media information material, as part of its public information commitment. As part of this commitment, the VFPA will implement a mechanism for two-way dialogue and communications about port-related issues in Delta and continue to maintain the VFPA Community Feedback Line to register and respond to feedback and complaints (604.665.9004).	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 9.3 Noise and Vibration 9.3.7 Existing Conditions 9.3.9 Future Conditions with the Project; 9.3.6 Methods 9.3.10 Future Conditions with the Project and Other Certain and Reasonably Foreseeable Projects and Activities 9.8 Underwater Noise 13.0 Marine Fish 13.6.3 Future Conditions with the Project, Potential Effect - Changes in Productivity 14.0 Marine Mammals 14.6 Future Conditions with the Project 15.0 Coastal Birds 15.7.2 Future Conditions with the Project, Potential Effect - Changes in Productivity 27.0 Human Health 27.6 Future Conditions With the Project - Potential Project-Related Effects 27.6.3 Potential Effect #2 – Adverse Health Effects Related to Noise 27.6.4 Potential Effect # 3 – Adverse Health Effects Due to Stress and Annoyance 27.6.5 Potential Effect # 4 – Adverse Health Outcomes due to Changes in Health Inequity 27.7.2 Mitigation Measures, Mitigation Measure #2 - Measures to Address Noise-related Effects Table 35-2 Proposed Mitigation Measures and Commitments **Information Requests** Response to Sufficiency Information Request #06 (IR7-06 of CEAR Document #1125)

LFN-24.1	Expressed mistrust of data sources (DFO) for recreational fishing and requested a study on recreational fishing by the VFPA.	03-Jul-2014, Valued Components Workshop #2	**03-Jul-2014, Workshop:** Stated that if there are additional sources of information that would help improve that confidence in the data, the VFPA would like to see it and take it into consideration. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#103):** Numerous literature and data sources, in addition to DFO, were consulted for information on commercial, recreational, and Aboriginal fisheries, as described in the EIS, in addition to consultation with Indigenous groups and publicly available Indigenous traditional marine use or harvest data reports. Further detail on the rationale for the scope, methods, and information sources used in the assessment of ongoing productivity of commercial, recreational, and Aboriginal fisheries is provided in the EIS.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries 16.2 Selection of Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries Valued Component 16.4 Information Sources 16.5.2 Existing Conditions, Recreational Fisheries

Table 25: Port Operations

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-25.1	Asked about the VFPA's jurisdiction and what control the VFPA has for movements over land.	15-Apr-2014, Technical Working Group Meeting #2	**15-Apr-2014, Workshop:** Responded that the VFPA has a responsibility to ensure the unimpeded access of vessels up and down the Fraser River, and in and out of VFPA terminals at Roberts Bank and Burrard Inlet. The VFPA has responsibilities for navigational hardware and anchorages, and ensures the vessels flow freely and follow regulations. Further, both the lands and waters encompassed by the solid red lines in the slide presentation, belong to the federal Crown. Stated that the VFPA exists as a port authority under the *Canada Marine Act* with intent to further Canada's trade objectives. The VFPA is the interface between water and land transportation networks. Port regulations cover a narrow range of issues.	**Addressed in EIS Section 1.0:** The VFPA's territorial jurisdiction includes the federal and other lands that it manages, together with the navigable waters over which it has navigable jurisdiction. The VFPA's jurisdiction covers hundreds of kilometres of shoreline and extends from Point Roberts at the Canada-U.S.A. border through Burrard Inlet to Port Moody and Indian Arm, and from the mouth of the Fraser River, eastward to the Fraser Valley, north along the Pitt River to Pitt Lake, and includes the north and middle arms of the Fraser River. A map of the VFPA's jurisdiction can be found at the following link: http://www.portmetrovancouver.com/port-dashboard/jurisdictional-map/. The effects of truck and train traffic beyond the Roberts Bank causeway is outside the VFPA's jurisdiction and not within the scope of the Project environmental assessment as defined by the *EIS Guidelines*, and the VFPA does not have any control over traffic outside the VFPA's jurisdictional limits. **Addressed in EIS Appendix 7.2-B (#218):** The VFPA will ensure the Infrastructure Developer and Terminal Operator will work with federal and provincial regulatory authorities and local governments, including B.C. Ministry of Transportation and Infrastructure, City of Delta, BC Ferries, and Tsawwassen First Nation to develop the land-based portion of the Land and Marine Traffic Management Plan. The plan will provide for public and worker safety and the timely exchange of information regarding traffic management during Project construction, including traffic control measures, short-term traffic interruptions, and temporary road restrictions and re-routing with Tsawwassen First Nation, City of Delta, Delta Police Department, Delta Fire and Emergencies Services, and B.C. Ambulance Services. The Gateway Transportation Collaboration Forum (GTCF) was established in 2014 to identify and prioritise development of transportation and related infrastructure necessary for supporting continued gateway growth and to provide overall net benefits to host communities. It brings together Transport Canada, the B.C. Ministry of Transportation and Infrastructure, TransLink, the Greater Vancouver Gateway Council, and the VFPA to collaboratively pursue infrastructure solutions and funding opportunities under the New Building Canada Plan. The GTCF builds on the success of past initiatives, including the Roberts Bank Rail Corridor Program, South Fraser Perimeter Road, North Shore and South Shore Trade Area projects, Ashcroft Terminal's Expansion Project, and the Regional Transportation Management Centre. It was not created in relation to, nor is it in any way solely focused on, the Project. The GTCF consists of four trade areas, including the Roberts Bank Trade Area.	**EIS** 1.3.2.2 Mandate and Jurisdiction 2.0 Project Overview 2.2.7 Project Context, Roberts Bank as a Terminal Location Appendix 7.2-B Aboriginal Issues and Interests 9.2 Air Quality 9.3 Noise and Vibration 23.0 Services and Infrastructure 27.0 Human Health 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Land and Resources for Traditional Purposes 33.0 Environmental Management Program 33.3.7 Environmental Management Program, Land and Marine Traffic Management Plan 35.0 Effects Assessment Summaries Table 35-2 Proposed Mitigation Measures and Commitments ***Updated EIS Guidelines***
LFN-25.2	Asked what happens if vessels arrive early. Concerned with vessels anchoring around the Gulf Islands, on which Lyackson First Nation said they have not been consulted. Lyackson First Nation understood from Transport Canada that it is an overflow parking lot when there is not space at the Port of Vancouver. Asked if RBT2 would result in	15-Apr-2014, Technical Working Group Meeting #2 21-Nov-2016, Email 03-May-2017, Meeting	**15-Apr-2014, Meeting:** Stated that container ships operate on a schedule, much like an airline. It is very rare for a container ship to have to anchor. There are scheduled berth windows. Ships come from across the Pacific, and can adjust their speed to meet their commitments to avoid having to wait for a berth. Ships arriving from Asia typically go to Seattle, Tacoma, and Vancouver. We often see the same ship every 5 or 6 weeks.	**Addressed in EIS Section 4.0:** Container ships operate on a scheduled service, and adjust their speeds as required to arrive at the terminal within their assigned arrival window; thus, anchorage is not a normal requirement and there are no plans or requirements for off-terminal anchoring of container ships waiting for a berth at the new RBT2 marine terminal. Exceptions to this could occur in the event of an extreme storm event in the Pacific, resulting in refuge anchorage requirement for safety reasons, or to accommodate unexpected ship-specific maintenance, personnel, or operation issues that may arise. The assessment of marine shipping associated with the Project is based on a routine vessel transit scenario. Because anchorage only occurs in rare circumstances, anchorage is not assessed as an activity related to marine shipping associated with the Project.	**EIS** 4.0 Activity Description 4.2.2.1 Container Ship Manoeuvres **MSA** 4.2.2.2 Anchorage **Information Requests** Response to Sufficiency Information Request #01 (IR5-01 of CEAR Document #1078) **CEAR Document #982 From Transport Canada to the Review Panel re: Response to**

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	increased or decreased anchorage use. Stated that Lyackson has experienced an increase in offshore freighters parked within a nautical mile off the west shore of Valdes island, within whale migration and herring spawning habitat. Noted that they have noticed these freighters pumping out waste water.		**23-Nov-2016, Email from the VFPA:** Stated that island anchorages are outside the VFPA's jurisdiction, and the correct authority for these comments is the Pacific Pilotage Authority. Provided the contact information of the chief executive officer at the Pacific Pilotage Authority. **03-May-2017, Meeting:** Responded that much of the anchorage use in the recent past is related to the bulk shipping of grain. The port authority referred to the difficulties associated with the bulk shipping of grain in the supply chain and bumper crops. Stated that RBT2 would not result in a reduction of anchorage use. Referenced the MSA which referred to anchorage data from Deltaport in 2012/13, which showed 270 ship calls a year, and anchorage use 2-3 times. Container vessels operate on a berth window schedule so anchoring rarely occurs, except in instances of weather, medical or mechanical issues. (Correction: The anchorage use was incorrectly stated as 2-3 times per year. It is actually 3-4 times per year).	**Addressed in MSA Section 4.2.2.2:** As described in EIS Section 4.4.2.1, there are no plans, or foreseen terminal operating requirements, for off-terminal anchoring of container ships waiting for a berth at the new RBT2 marine terminal. Container ships operate on a scheduled service, usually between Asia and the west coast, and adjust their speeds as required to arrive at the terminal within their assigned arrival window; thus, anchorage is not a normal requirement. Exceptions to this could occur in the event of an extreme storm event in the Pacific, resulting in a refuge anchorage requirement for safety reasons, or to accommodate unexpected ship-specific maintenance, personnel, or operation issues that may arise. Container ship anchorages for Deltaport Terminal in 2012 and 2013 have been rare, with a frequency range of three to four per year out of an approximate annual total of 270 ship calls to Deltaport Terminal in each of those years. The same frequency can be assumed for RBT2, resulting in approximately one non-routine container ship anchorage every three to four months for RBT2. These vessels would use existing anchorages in English Bay, or in the Gulf Islands as determined by the pilot and the port authority having jurisdiction (e.g., Nanaimo Port Authority). Further information concerning containership anchoring is available in CEAR Document #982 from Transport Canada and IR5-01.	**Information Requests issued by the Review Panel on May 10, 2017 (CEAR Document #962)**
LFN-25.3	Asked about the CBSA process for screening containers and specifically addressing the issue of invasive species.	07-Oct-2014, Preliminary EIS Results Workshop #1	**07-Oct-2014, Workshop:** Stated that the Canada Border Services Agency (CBSA) would be the agency best able to respond to that question, and the VFPA will share your question or concern with them to get a more fulsome response. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#100):** The VFPA was the first port in North America to prohibit in-port ballast water exchange without prior mid-ocean exchange, a practice which became the basis of government requirements now enforced by Transport Canada. To prevent the invasion of foreign species into local waters, international regulations, through the IMO, are managed by Transport Canada. All commercial deep sea vessels are required to carry out a ballast water exchange prior to entering Canadian waters. This is done outside the exclusive economic zone of 200 nautical miles and in water deeper than 2,000 m. By requiring vessels to complete this ballast 'flush' well outside Canadian waters, the aim is to prevent any foreign organisms from entering into the local ecosystem. The U.S.A. has similar requirements, and vessels arriving from the Puget Sound area need to forward the completed U.S. forms to Canadian authorities prior to entry into Canadian waters. Import containers are generally not opened at the terminal. The CBSA inspects the contents of a percentage of import containers off-terminal in Richmond, and in the future will be done at the facility on Tsawwassen First Nation land currently being developed. All ships use rat guards on their mooring lines to ensure that rats and other rodents do not crawl up or down the mooring lines between the ship and the wharf. The VFPA is a part of the B.C. Spartina Working Group, which maps, tests eradication methods, and supports the removal of invasive English cordgrass from the Fraser River estuary.	**EIS** 4.0 Project Description 4.4.2 Operation-phase Activities Appendix 7.2-B Aboriginal Issues and Interests 9.7 Marine Water Quality 9.7.8 Future Conditions with the Project

Table 26: Potential Accidents or Malfunctions

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-26.1	Asked whether the accidents and malfunctions section includes rail incidents.	07-Oct-2014, Preliminary EIS Results Workshop #1	**07-Oct-2014, Workshop:** Stated that information on the response for rail-related incidents would be included in the EIS. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Section 30.0 Potential Accidents or Malfunctions.	**Addressed in EIS Section 30.0:** The assessment of potential accidents or malfunctions considered a wide variety of potential incidents that incorporate both marine- and land-based Project components, as well as construction and operation activities. Examples of the land-based accidents or malfunctions considered include motor vehicle accidents, train derailments and collisions, fires and explosions, on-land spills, and container handling incidents. Two operational worst-case plausible road and rail scenarios were identified and assessed: a fuel truck accident on Roberts Bank Way North involving a diesel spill, and a yard locomotive derailment on the widened causeway, also involving a diesel spill. In both cases, due to Project-specific conditions and existing and anticipated practices and procedures, the probability of such an incident is considered very low. As the spill associated with each of the land-based scenarios would occur at a distance away from the marine environment, no potential interactions with marine biophysical VCs were identified. Further, no residual adverse effects were identified with respect to socio-economic VCs, including services and infrastructure, and human health. For more information, please see EIS Section 30.0.	**EIS** 30.0 Potential Accidents or Malfunctions 30.4 Potential Marine-based Accidents and Malfunctions 30.5 Potential Land-based Accidents and Malfunctions
LFN-26.2	Concerned that the 'polluter pays' scenario is not always effective. Asked who is responsible if a ship sinks and how the pollution will be cleaned up.	07-Oct-2014, Preliminary EIS Results Workshop #1	**07-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#207):** The EIS describes the parties who would be notified and assume responsibility as On Scene Commander for spill clean-up in the event of a marine spill within VFPA jurisdiction, including Roberts Bank. These parties include the Canadian Coast Guard and the Western Canada Marine Response Corporation. The VFPA's role following a spill would be to maintain situational awareness and coordinate the incident response. **Addressed in EIS Appendix 7.2-B (#208):** Generally, the owner of the vessel from which the spill originates is responsible, in accordance with the *Marine Liability Act*. There is more information on liability on Transport Canada's website, which explains liability and compensation for oil spill clean-up and damages, including funds available for clean-up: http://www.tc.gc.ca/eng/marinesafety/menu-4100.htm#m. Additional sources information on funds available for clean-up are available at the following link: https://www.tc.gc.ca/eng/marinesafety/oep-ers-regime-funds-1119.htm.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 30.0 Potential Accidents or Malfunctions 30.3.3 VFPA Practices and Procedures
LFN-26.3	Concerned with a potential container ship interaction with a Kinder Morgan Tanker (or Westpac LNG, Malahat LNG, Woodfibre LNG, coal shipping from Texada).	12-Nov-2015, Meeting with Lyackson First Nation and Lake Cowichan First Nation	**12-Nov-2015, Meeting:** Responded that each intermediate VC is in a cumulative effects table. Cumulative effects were assessed based on construction or operations, and a cumulative effects assessment was not conducted for a potential spill, as it was determined that a potential spill is not likely to occur. The likelihood of two spills occurring at the same time is very low.	**Addressed in MSA Section 10.3.2.2:** As noted in MSA Section 10.3.2.2, EIS Appendix 30-A and MSA Appendix 10-A provide the evaluation of the potential for a collision between a container vessel and each of four types of marine vessels in the marine shipping area: crude tankers, other tankers (product and chemical), bulk carriers, and other container ships. After considering a series of variables, including the outcome that a spill is associated with the collision, the analysis found the following: • Minimum return period (at 95% confidence level) for collisions of RBT2-bound container ships with other traffic in the marine shipping area of 133 years; • Container ship-tanker collision return periods of over 10,000 years and those for laden crude oil tankers even lower, due to the fact that only outbound crude oil tankers are expected to be laden with crude oil; and • Minimum return period for a container ship collision with another container ship is approximately 250 years. A collision does not necessarily lead to a spill. Worldwide data indicate collisions resulting in spills are less likely. The analysis in EIS Appendix 30-A (Tables 3-14 and 3-15, at full RBT2 traffic plus other foreseeable marine facilities) found the following:	**MSA** 10.3.2.2 Collisions In-transit Appendix 10-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment: Marine Shipping Supplemental Report **EIS** Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				• Minimum return periods (at 95% confidence level) for a collision between RBT2-bound container ships and other container ships that results in a spill (of fuel oil) are approximately 10,000 years; and • Minimum return periods (at 95% confidence level) for a collision between RBT2-bound container ships and laden crude oil tankers that result in a crude oil spill are over 800,000 years.	
LFN-26.4	Concerned with accidents or spills associated with machinery and equipment failure, particularly when there are construction and industrial activities going on in the same area.	07-Oct-2014, Preliminary EIS Results Workshop #1	**07-Oct-2014, Workshop:** Stated that the probabilities for the marine incidents are determined by the quantitative risk assessment, and the way that study arrived at probabilities was by looking at local, regional, national, and international incident data. The VFPA combed through all the available records to see what has happened, and where, and under what circumstances. That helped the VFPA to define potential incident rates, and there was also consultation with local container ship pilots, tug operators and fishing vessel operators. Additional detail will be available in that appendix to the EIS. For the terminal and causeway incidents, the VFPA looked at local data, and compared that to national averages, to see whether it is safe to assume that what has happened at this site before is similar to what is likely to occur for RBT2, to assess whether just because a particular incident has not happened at Roberts Bank before, does not mean it is never going to happen. On the longer list of potential incidents that were considered, there were some things that could happen three times a year, but they did not make this list of plausible worst-case scenarios because they did not have the worst-case factor, in terms of consequence. The full list will be included in EIS Sections 30.4 and 30.5, so Lyackson First Nation will be able to see every little gas tank refuelling incident that the VFPA looked at. There just will not be an assessment of the environmental effects of those incidents, but they will be acknowledged and discussed.	**Addressed in EIS Section 30.0:** EIS Section 30.0 considers the potential for marine- and land-based incidents involving malfunctions (i.e., machinery and equipment failure) during the Project's construction and operation phases. Two operational worst-case plausible road and rail scenarios were identified and assessed: a fuel truck accident on Roberts Bank Way North involving a diesel spill, and a yard locomotive derailment on the widened causeway, also involving a diesel spill. In both cases, due to Project-specific conditions and existing and anticipated practices and procedures, the probability of such an incident is considered very low. As the spill associated with each of the land-based scenarios would occur at a distance away from the marine environment, no potential interactions with marine biophysical VCs were identified. Further, no residual adverse effects were identified with respect to socio-economic VCs, including services and infrastructure, and human health.	**EIS** 30.0 Potential Accidents or Malfunctions 30.4 Potential Marine-based Accidents and Malfunctions 30.5 Potential Land-based Accidents and Malfunctions Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment
LFN-26.5	Commented that First Nations have valid questions outside of the scope of the assessment, and Lyackson First Nation will hold the Crown accountable for these (i.e., tanker traffic and container traffic outside of the VFPA's jurisdiction)	07-Oct-2014, Preliminary EIS Results Workshop #1	**07-Oct-2014, Workshop:** CEA Agency response: Responded that the CEA Agency has asked the VFPA to provide additional clarity around its jurisdiction, given all the comments received, particularly from First Nations, on the terms of reference. Stated that once the CEA Agency has clarity from the VFPA about care and control, then the CEA Agency will look at options in terms of questions that have come up around marine impacts from shipping.	**Addressed in *Updated EIS Guidelines*:** As described in the *Updated EIS Guidelines*, an assessment of the potential effects of marine shipping associated with the Project outside of VFPA jurisdiction was requested by the CEA Agency. The MSA assessed the potential effects on physical, biophysical, and human environments resulting from marine shipping associated with the Project, including the potential for accidents and malfunctions. Lyackson First Nation was provided a copy of this report, which is also available on the CEA Agency website. **Addressed in EIS Appendix 7.2-B (#212):** The VFPA maintains routine situational awareness through its Operations Centre, which is on task 24 hours per day, 7 days per week. Port activities are monitored via camera	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 30.0 Potential Accidents or Malfunctions ***Updated EIS Guidelines***

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				feeds and a fleet of dedicated patrol vessels. Through its port surveillance activities and vessel inspections, the Operations Centre safeguards the Port environment, enforces safety practices and procedures, and in the event of a marine incident, assumes a coordinating role in port-related emergency response situations, working closely with first responders, the community, and stakeholders. Federal legislation provides a regulatory framework for the prevention and management of marine related accidents and malfunctions. The *Canada Shipping Act, 2001*, for example, incorporates international shipping conventions developed by the IMO and implemented by Canada, such as the International Regulations for Preventing Collisions at Sea 1972 and the International Convention for the Prevention of Pollution from Ships (MARPOL) standards for the prevention of pollution from ships. Provisions of the Act that are particularly relevant to the prevention of accidents and malfunctions include the management and control of oil or oily water mixtures and marine pollutants in packaged form, and the requirement for shipboard oil pollution emergency plans and environmental response arrangements. The EIS includes an assessment of potential effects of accidents and malfunctions related to the Project. EIS Section 30.0 includes a summary of the responsibilities of various parties, including the VFPA, in the event of an accident or malfunction.	
LFN-26.6	Stated that Roberts Bank is a sensitive area, and spills and accidents are a concern.	03-Jul-2014, Valued Components Workshop #2 10-Dec-2014, Health & Aboriginal Rights Workshop – Lyackson First Nation and Lake Cowichan First Nation	**03-Jul-2014, Workshop:** Stated that the topic of accidents and malfunctions will be covered in Aboriginal Group Fall 2014 Consultation. **07-Oct-2014, Preliminary EIS Results Workshop #1:** Presented and sought feedback on the approach to assessing effects of accidents and malfunctions. Solicited input on plausible worst-case scenarios. **10-Dec-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#204):** Potential spills of deleterious materials (e.g., hydrocarbons) and their environmental effects are discussed in the EIS. Plausible worst-case scenarios involving a marine vessel, motor vehicle, and train accident, each assumed to result in a spill of deleterious materials, are assessed. The regulatory management framework, standard practices, and Project-specific measures to reduce the risk of accidents or malfunctions, including spills, as well as the emergency response and mitigation measures to be implemented in the event of a spill are described. Three worst-case scenarios involving hydrocarbon spills were assessed: a container ship impact incident at the terminal, a tanker truck accident on Roberts Bank Way North, and a yard locomotive derailment on the widened causeway. The assessment determined that a ship impact scenario involving a marine spill of heavy fuel oil at the terminal would result in adverse residual effects to all marine biophysical VCs, as well as marine commercial use, outdoor recreation, and land and water use. While the residual effects on SRKWs, coastal birds, and Current Use were considered significant, due to the extremely low probability of such a scenario, all residual effects were considered unlikely. Since the diesel spill in each of the land-based scenarios would occur away from the marine environment, no potential interactions with marine biophysical VCs were identified. Further, no residual adverse effects were identified with respect to socio-economic VCs, including services and infrastructure and human health. As with any activity, the potential for unplanned incidents during Project construction and operation exists. The VFPA, its tenants, contractors, operators, and intermodal partners are committed to continue to improve port-wide operational practices and procedures to ensure the safety of workers and the public, and protection of the environment. The composition and number of hazardous goods containers handled at Deltaport Terminal in 2012 was reviewed during the development of the Quantitative Risk Assessment (see Table B-4 (Appendix B) of EIS Appendix 30-A). The estimated probability and potential consequences of a range of accidents or malfunctions, including spills of deleterious materials from ships during Project construction and operation, are described in the EIS.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 30.0 Potential Accidents or Malfunctions Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment Appendix B - Tables

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-26.7	Concerned about the potential detrimental effects in the event of a potential tsunami, where silt and pollutants from the causeway, new port facility, equipment, infrastructure, containers and products could move across the Strait to the Gulf Islands. Stated that the VFPA's geomorphology assessment has not adequately assessed silt moving from the Fraser towards Lyackson in the event of an accidental spill. Stated that in response to Lyackson's expressed concern, the Proponent has responded that big storm events would dilute and flush away contaminates before they enter the environment and therefore it would not be captured. This response is concerning to Lyackson.	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Section 31.0:** As noted in EIS Section 31.0, due to the unpredictability and uncertainty associated with submarine landslides and tsunamis, and their expected low probability of occurrence at the Project site, measures to protect the Project during such events would be further defined in the detail design phase. **Addressed in response to IR2-19:** The effects of the environment on the Project described in EIS Section 31.2.4 considered the worst-case scenario of a 4 m tsunami as they were based on tsunamis ranging between 1 m to 4 m in wave height. The rationale for this range and for the low likelihood of a tsunami occurring in the vicinity of Roberts Bank is described in EIS Sections 9.1.3.4 and 31.2.4.2. However, in the unlikely event that a tsunami did occur, the most probable wave height is estimated to be 1 m or less, which would not affect the stability of the Project's wharf or perimeter dykes. **Addressed in response to IR2-19a:** The VFPA's response to IR2-19a discusses, at the Review Panel's request, 1 m and 4 m tsunami scenarios and their effect on RBT2. Although an extremely unlikely event, should a 4 m tsunami-induced wave occur, the wave could partially overtop the terminal surface during high tide conditions. The wave crest would be below the terminal surface elevation +8.75 m (i.e., 8.75 m is higher than the combined water height during a higher high tide condition of 4.1 m plus a 4.0-m tsunami-induced wave), but upon impacting the terminal face, water would still overtop the wharf face, carrying enough energy to possibly disrupt terminal operations. Damage to the terminal structure from a 4-m tsunami-induced wave could range from minor to serious, which in an extreme case, may not be technically or economically feasible to repair. Depending on the orientation that the wave hits the terminal, containers and equipment on the terminal surface could be dislodged and moved. Due to the width of the terminal, however, it is unlikely that any terminal assets would be dislodged and carried into the marine environment. In addition to the movement of mobile assets (i.e., containers and equipment), the storm drain system could be temporarily overwhelmed (i.e., water levels would subside shortly after the wave inundation), some electrical systems could be affected if manholes were filled with water, and higher currents from the wave could also dislodge some of the dyke armour. Water quality is not anticipated to be affected by the terminal operations itself, as products on the terminal are containerised and, since rain is common in this region, contaminants are not expected to accumulate on the terminal surface. As with a 1-m tsunami-induced wave, the nature and magnitude of environmental effects would depend on the extent of tsunami-related damage to the Project. Effects to the environment would not be unique to the Project, as a tsunami with the capacity to damage the Project would likely result in adverse environmental effects throughout the Fraser River delta. **Addressed in EIS Section 30.0:** EIS Section 30.0 considers accidents and malfunctions related to the Project. Based on the results of the quantitative risk assessment conducted for Project vessel movements during Project operation, the potential for a container ship collision resulting in a spill is extremely low (i.e., return period greater than one in 1,000 years). However, due to the level of interest expressed by Indigenous groups and the public during the Project's consultation and engagement process, this type of incident was considered as a plausible worst-case scenario. The Project does not involve the shipment of fuel and therefore the assessment considered the potential spill of fuel required for container ship operation. The assessment concluded that a spill from the fuel tanks of a container ship in the berth	**EIS** 9.1.3 Geotechnical Considerations 9.1.3.4 Tsunamis 30.0 Potential Accidents or Malfunctions 31.0 Effects of the Environment on the Project 31.2.4.2 Mitigation Effects of a Tsunami **Information Requests** Response to Sufficiency Information Request #19 (IR2-19 of CEAR Document #961) Response to Sufficiency Information Request #19a (IR2-19a of CEAR Document #1145)

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				area could result in adverse residual effects to marine vegetation, marine invertebrates, marine fish, and marine mammals, as well as marine commercial use, outdoor recreation, and land and water use. With the exceptions of SRKWs, coastal birds, and Current Use, these residual effects were considered not significant. However, due to the extremely low probability of such a ship impact and spill scenario, all residual effects were considered unlikely,	
LFN-26.8	Concerned about the risk of spills, collisions, or other accidents including contamination in the area of Tl'uqtinus and Le'eyqsun.	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in Section 30.0:** EIS Section 30.0 considers accidents and malfunctions related to the Project. Based on the results of the quantitative risk assessment conducted for Project vessel movements during Project operation, the potential for a container ship collision resulting in a spill is extremely low (i.e., return period greater than one in 1,000 years). However, due to the level of interest expressed by Indigenous groups and the public during the Project's consultation and engagement process, this type of incident was considered as a plausible worst-case scenario. The Project does not involve the shipment of fuel and therefore the assessment considered the potential spill of fuel required for container ship operation. The assessment concluded that a spill from the fuel tanks of a container ship in the berth area could result in adverse residual effects to marine vegetation, marine invertebrates, marine fish, and marine mammals, as well as marine commercial use, outdoor recreation, and land and water use. With the exceptions of SRKWs, coastal birds, and Current Use, these residual effects were considered not significant. However, due to the extremely low probability of such a ship impact and spill scenario, all residual effects were considered unlikely.	**EIS** 30.0 Potential Accidents or Malfunctions
LFN-26.9	Concerned about potential interactions and accidents between ships from the existing Roberts Bank terminal and other vessels, including derelict vessels. Stated that loss of containers currently presents a hazard at sea, as they may collide with land and cause collisions with vessels. Stated that the Project would be adding to these adverse effects.	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 10.0:** EIS Appendix 30-A and MSA Appendix 10-A provide the evaluation of the potential for a collision between a container vessel and each of four types of marine vessels in the marine shipping area: crude tankers, other tankers (product and chemical), bulk carriers, and other container ships. After considering a series of variables, including the outcome that a spill is associated with the collision, the analysis found the following: • Minimum return period (at 95% confidence level) for collisions of RBT2-bound container ships with other traffic in the marine shipping area of 133 years; • Container ship-tanker collision return periods of over 10,000 years and those for laden crude oil tankers even lower, due to the fact that only outbound crude oil tankers are expected to be laden with crude oil; and • Minimum return period for a container ship collision with another container ship is approximately 250 years. As noted in MSA Section 10.3.2.1, the risk of loss overboard from ship motions in semi-protected water such as the marine shipping area is negligible, based on World Shipping Council estimates.	**MSA** 10.3.2.1 Loss Overboard of Containers from Ships In-transit in Semi-protected Waters Appendix 10-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment
LFN-26.10	Requested that prior to any Project approval, a commitment is made for adequate funding to be provided for Lyackson to be involved in developing and reviewing proposed EMPs for water and sediment that effectively incorporate community	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and has no additional information to provide.

	input to address outstanding concerns. Requested that prior to any Project approval, a commitment is made that adequate funding will be provided for Coast Guard, Pilotage Authority, and Transport Marine to work with Lyackson to develop environmental response planning.				

Lyackson First Nation

Table 27: Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Land and Resources for Traditional Purposes

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-27.1	Stated that Lyackson First Nation does not consider its rights to be any lesser than Tsawwassen First Nation or Musqueam First Nation	03-Jul-2014, Valued Components Workshop #2	**03-Jul-2014, Workshop:** Recorded comment for consideration by the Project team.	**Addressed in EIS Section 32.2.4.7:** EIS Section 32.2.4.7 describes Lyackson First Nation's potential or established Aboriginal or treaty rights as they were presented to the VFPA by Lyackson First Nation, as required by the *Updated EIS Guidelines* issued by the CEA Agency. The VFPA did not compare the rights of Lyackson First Nation against the rights of any other Indigenous group.	**EIS** 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2.4.7 Lyackson First Nation
LFN-27.2	Disagreed with the assessment that there will be no discernible impact to Current Use. Commented that positive effects related to employment from the Project alone will create negative effects to access to traditional subsistence food sources.	10-Dec-2014, Health & Aboriginal Rights Workshop – Lyackson First Nation and Lake Cowichan First Nation	**10-Dec-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#174):** The methods used to assess the potential effects of the Project on Current Use are consistent with existing federal guidance, including the *EIS Guidelines* issued by the CEA Agency. The rationale for the determination of negligible residual effects to Current Use is included in the EIS. **Addressed in EIS Appendix 7.2-B (#130):** As discussed throughout EIS Section 27.0, the Project is expected to result in both positive effects (such as economic benefits) and adverse health effects (such as potential effects on cultural activities such as subsistence food harvesting), and the distribution of these effects may vary across population groups. This raises the concept of health inequity: the extent to which the distribution of positive and adverse health effects is fair and equitable. Concerns related to health inequity are addressed in EIS Section 27.0; however, the assessment of potential effects on health inequity does not rank the relative importance of the various determinants of health (e.g., purchasing power and cultural activities). Cultural aspects related to subsistence gathering are considered in EIS Section 32.2. As concluded in EIS Section 32.2.6, the Project is not expected to have an effect on the Current Use of or access to marine resources for traditional purposes by Lyackson First Nation.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 27.0 Human Health 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2.4.7 Lyackson First Nation 32.2.6 Future Conditions With the Project - Potential Project-Related Effects 32.2.6.4 Potential Effect 4: Changes in Quality of Current Use Experience 32.3.2.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups
LFN-27.3	Stated that Lake Cowichan First Nation and Lyackson First Nation are seeking to have the village site at Tl'uqtinus returned to them through treaty negotiations. Concerned that the EIS does not account for present, future, and near-future use and occupancy on the lower Fraser River.	10-Dec-2014, Health & Aboriginal Rights Workshop – Lyackson First Nation and Lake Cowichan First Nation 23-Jul-2015, Meeting with Lyackson First Nation and Lake Cowichan First Nation	**10-Dec-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **23-Jul-2015, Meeting:** Recorded comment for consideration by the Project team.	**Addressed in EIS Appendix 7.2-B (#184):** As presented in the EIS, the Project is not expected to result in adverse residual effects on Tl'uqtinus and the mouth of the Fraser River, or the area of Le'eyqsun and its surrounding foreshore and waters.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 8.0 Effects Assessment Methods 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes
LFN-27.4	Commented that time provided for Lyackson First Nation to complete a traditional use study for RBT2 was limited.	08-Oct-2014, Preliminary EIS Results Workshop #2	**08-Oct-2014, Workshop:** Recorded comment for consideration by the Project team.	**Addressed in EIS Appendix 7.2-B (#175):** The VFPA provided funding to the specified Indigenous groups to support consultation. Additionally, the VFPA provided funding to support completion of traditional use studies to these Indigenous groups and all groups provided a traditional use study. Further information, provided during fall	**EIS** Appendix 7.2-B Aboriginal Issues and Interests

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	Concerned about the narrow scoping of the Project and traditional use study, and now they are not able to provide Current Use information. Stated that there should be a large caveat on the written technical knowledge base for Lyackson - that information is not available. Stated that environmental assessment timelines allow for limited timeframes and ability to go back and forth with elders. Stated that Lake Cowichan and Lyackson have no data on Current Use in the marine shipping area, and require additional funding and time to complete a study. Requested that the VFPA tour the marine shipping area with elders in order to identify important areas.	10-Dec-2014, Health & Aboriginal Rights Workshop – Lyackson First Nation and Lake Cowichan First Nation 23-Jul-2015, Meeting with Lyackson First Nation and Lake Cowichan First Nation	**10-Dec-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **23-Jul-2015, Meeting:** Explained that the VFPA's approach to Current Use is to use existing information. Stated that the VFPA is putting together profiles. Stated that the VFPA provided Lake Cowichan First Nation with the draft Current Use section already (by email on 24-Jun-2015). Stated that the Lyackson First Nation draft Current Use sections will be going out shortly. The VFPA is sharing the draft for input from Indigenous groups. **27-Jul-2015, Letter from the VFPA:** Provided the draft of the MSA: Lyackson First Nation Current Use – Summary of Existing Conditions. Requested comments from Lyackson First Nation on the draft.	2014 consultation and in writing, has been incorporated into the EIS. The VFPA will continue to consult with appropriate Indigenous groups and there will be further opportunities to provide information through the CEA Agency process. **Addressed in MSA Appendix 5-B (#67):** The VFPA has engaged with each of the Indigenous groups listed in the *Updated EIS Guidelines* and provide drafts of Current Use existing conditions sections, and to request any additional Current Use information that the Indigenous group may wish to provide. The revised Current Use summary, following incorporation of any additional input from Indigenous groups is provided in MSA Section 9.5. The VFPA has acknowledged the challenges of participating in consultation during summer months, and has extended timelines to accommodate the provision of additional information from Indigenous groups. The VFPA has provided funding to Indigenous groups participating in consultation, and considers the amount of funding offered to be adequate and proportionate to the level of effort required by each Indigenous group to participate, given the scope of work. The VFPA increased the funding provided in some circumstances in response to specific requests. **Additional information provided by the VFPA:** **09-Apr-2014, Letter from the VFPA:** Noted that as part of the development of the EIS, the VFPA is seeking information on current traditional use by Lyackson First Nation. Stated that the VFPA values Lyackson First Nation's participation and involvement in the provision of current traditional use information to inform the EIS currently scheduled for submission to regulators in early 2015. Acknowledged that such involvement requires time and capacity in order to fully participate and identified funding to facilitate the provision of this information. **07-Aug-2014, Email from Lyackson First Nation:** Stated that they feel assured they can accomplish their respective use and occupancy studies by the end of August. **18-August-2014:** Offered funding for a traditional use study. **19-August-2014:** Accepted funding. **31-August-2014:** Lyackson First Nation provided a traditional use study to the VFPA.	32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes **MSA** 5.0 Aboriginal Groups Engagement and Consultation 5.1.2 Consultation Objectives 5.1.4 Aboriginal Groups Engagement and Consultation Methods Appendix 5-B Aboriginal Issues and Interests 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4.17 Existing Conditions, Lyackson First Nation
LFN-27.5	Stated that the "Lyackson Knowledge and Use Study Report (2014)" for this Project indicated that the Project is likely to have adverse effects on their use and occupancy as a result of disturbance to lands and waters by shipping traffic, Project construction and operation. Stated the Project is likely to have adverse effects on a range of documented Lyackson use and occupancy values, including cultural, spiritual, habitation, transportation, subsistence, and environmental features around	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Section 32.3.2.2:** The EIS acknowledges that a key source relied upon to describe the asserted rights and Current Use of the Lyackson First Nation in the vicinity of the Project was a Project-specific study, entitled Lyackson First Nation Knowledge and Use: Existing Data Summary Report for Port Metro Vancouver's Proposed Roberts Bank Terminal 2 Project (Candler et al. 2014). As concluded in EIS Section 32.2.6, the Project is not expected to have an effect on the Current Use of or access to marine resources for traditional purposes by Lyackson First Nation. As concluded in EIS Section 32.2.6.4, while container ship traffic at Roberts Bank is expected to increase, the risk of an incident is very low or negligible. Consequently, the Project is not expected to impact the ability of the Lyackson First Nation to exercise the right to the use of travelways to preferred harvesting areas.	**EIS** 32.2.4.7 Lyackson First Nation 32.2.6 Future Conditions With the Project - Potential Project-Related Effects 32.2.6.4 Potential Effect 4: Changes in Quality of Current Use Experience 32.3.2.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	Le'eyqsun and Tl'uqtinus and surrounding foreshore and waters.				
LFN-27.6	Concerned that the Project will further add to the already existing impacts to the Lyackson food fish, since the Project at Roberts Bank would stop the last leg of the food fish gathering. Concerned that increased shipping traffic will increase the potential for introduction of invasive species, which further threatens the native fisheries.	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Appendix 7.2-B (#100):** The VFPA was the first port in North America to prohibit in-port ballast water exchange without prior mid-ocean exchange, a practice which became the basis of government requirements now enforced by Transport Canada. To prevent the invasion of foreign species into local waters, international regulations, through the IMO, are managed by Transport Canada. All commercial deep sea vessels are required to carry out a ballast water exchange prior to entering Canadian waters. This is done outside the exclusive economic zone of 200 nautical miles and in water deeper than 2,000 m. By requiring vessels to complete this ballast 'flush' well outside Canadian waters, the aim is to prevent any foreign organisms from entering into the local ecosystem. The U.S.A. has similar requirements, and vessels arriving from the Puget Sound area need to forward the completed U.S. forms to Canadian authorities prior to entry into Canadian waters.	**EIS** 13.0 Marine Fish
LFN-27.7	Concerned with the Project likely damaging the First Nation's highways (i.e., waterways) with long-term and long-reaching effect to the First Nation community. Stated that current shipping traffic is creating safety concerns for Lyackson members that travel in small crafts between Le'eyqsun and Tl'uqtinus, leading to the avoidance of preferred areas in and around these locations. Stated that the large vessel wakes from the Project would further impair Lyackson members' abilities to use small crafts at preferred harvesting areas and preferred water routes between Le'eyqsun and the mouth of the Fraser. Questioned the VFPA's assessment given that it was conducted based on inadequate baseline data, based on assumptions and without involving First Nations in the significance decisions. It is not clear how Lyackson's input was considered in the assessment. Stated that proposed mitigation measures and plans have not been developed in consultation with First Nations.	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Section 7.2:** EIS Section 7.2 discusses the VFPA's extensive engagement and consultation of Indigenous groups before and during EIS development. Since submission of the EIS, the VFPA has continued to consult with Indigenous groups to clarify information on the Project and EIS; provide additional information; and discuss potential environmental effects from the Project, potential impacts on their ability to exercise asserted Aboriginal or treaty rights and related interests, and potential mitigation and accommodation. **Further information provided in the response to IR-7.31.15-08:** The VFPA's response to IR-7.31.15-08 provides a description of where and how ITK has been used to support the selection of VCs, baseline descriptions, the assessment of effects, including the identification of mitigation measures, and in the determination of significance of adverse environmental effects. The VFPA's response to MSA IR-02.24.16-4 discusses the application of ITK in the MSA. **Addressed in response to IR7-21:** As requested by the Review Panel, IR7-21 discusses the potential effects of waves generated by Project-associated vessels during calm conditions on small craft engaged in activities in open water at various points and various distances from shore throughout the marine shipping area. For all segments discussed in the MSA, vessel wakes from Project-associated vessels are not expected to introduce new navigational hazards for small-craft operators. **Addressed in IR10-06 and IR10-13:** The VFPA's responses to IR10-06 and IR10-13, as requested by the Review Panel, provide additional information concerning the rationale for the current use effects assessment conclusions. **Addressed in response to IR13-20:** The VFPA's forthcoming response to IR13-20 will further discuss Project-related changes to the wave environment and their potential effects on current use activities, access, and navigation.	**EIS** 7.2 Aboriginal Groups Engagement and Consultation **Information Requests** Response to Information Request #8 (IR-7.31.15-08 of CEAR Document #314) Response to Additional Information Request #4 (MSA IR-02.24.16-4 of CEAR Document #388) Response to Sufficiency Information Request #21 (IR7-21 of CEAR Document #1049) Response to Sufficiency Information Request #06 (IR10-06) Response to Sufficiency Information Request #13 (IR10-13) Response to Sufficiency Information Request#20 (IR13-20)

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-27.8	Stated that increased industrialisation of Roberts Bank and the Georgia Strait to date has resulted in cultural disruption to Lyackson members. Stated that changes in quality of current cultural use experiences identified by Lyackson includes: risks to safety due to increased vessel traffic, reduced quantity, quality, and health concerns associated with traditional food resources, changed sense of place and reduced opportunities to transmit traditional knowledge. Stated that sensory disturbances from light, noise, vibration further interacts directly with Lyackson cultural values. Stated that the Project will impact Lyackson's cultural values.	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in IR10-06 and IR10-13:** The VFPA's responses to IR10-06 and IR10-13, as requested by the Review Panel, provide additional information concerning the rationale for the current use effects assessment conclusions.	**Information Requests** Response to Sufficiency Information Requirements #06 (IR10-06) Response to Sufficiency Information Request #13 (IR10-13)
LFN-27.9	Agreed with Parks Canada's comments on completeness related to Indigenous Traditional Knowledge. Agreed with DFO's comments on completeness.	15-Jun-2015, Letter to the CEA Agency (CEAR Document #258)	The VFPA has reviewed this letter and has no additional information to provide.		

Lyackson First Nation

Table 28: Project Overview and Description

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-28.1	Asked about the effects from increasing shipments of coal.	15-Apr-2014, Technical Working Group Meeting #2	**15-Apr-2014, Workshop:** Responded that RBT2 is about container traffic only. However, the VFPA will be considering coal ships as part of existing conditions description and future conditions assessment in the EIS. The VFPA is working with Westshore to get a sense of the number of ships going to Westshore Terminals in the future. We are illustrating some of the numbers we have received to date. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#6):** The proposed Project is a container terminal and does not include any coal-related elements. There are no plans to modify the Project to handle bulk oil or coal. The Project will not contribute to coal dust. Coal dust from Westshore Terminals (the existing coal terminal at Roberts Bank) was included in the examination of air quality existing conditions and air quality cumulative effects assessment. The human health assessment considered the potential for contamination of edible shellfish related to Project activities resulting in re-suspension of historical deposits of coal in sediments. The assessment concluded that there were no risks to human health related to re-suspension of sediments containing coal.	**EIS** 4.0 Project Description Appendix 7.2-B Aboriginal Issues and Interests 9.2 Air Quality 27.0 Human Health
LFN-28.2	Asked whether or not the VFPA would consider taking oil from trucks or trains at this terminal. Asked what would happen if the scope of the project changed and what regulatory approvals would be required.	06-Jun-2014, Valued Components Workshop #1	**06-Jun-2014, Workshop:** Responded that the VFPA will get back to Lyackson First Nation on this matter. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#6):** There are no plans to modify the Project to handle bulk oil or coal. **Additional information provided by the VFPA:** If the VFPA sought to make a material change to the scope of the project, the VFPA would advise the Review Panel and the CEA Agency. Any changes to the regulatory approvals or authorisations required for the project would be determined by federal and provincial regulators depending on the nature of those changes.	**EIS** 4.0 Project Description Appendix 7.2-B Aboriginal Issues and Interests 9.2 Air Quality 27.0 Human Health
LFN-28.3	Asked why the northwest terminal corner design is rounded.	07-Oct-2014, Preliminary EIS Results Workshop #1	**07-Oct-2014, Workshop:** Responded that the velocity of water at the edge of the terminal is great, and by curving the end of the landmass, water will be enabled to pass by more smoothly, which will result in there being less sediment stirred up.	**Addressed in EIS Section 5.4.1.3:** The results of coastal geomorphic studies indicated that rounding the northwest corner of the terminal would have the greatest positive effect in terms of decreasing the areal extent of footprint-related effects (i.e., scour induced by flow acceleration around the west side of the terminal). Rounding the corner on a 120-m radius would reduce the scour area as compared to the square corner. The optimised configuration incorporated into the preliminary Project design is a 120-m radius rounded corner, as previously described in EIS Section 4.0 Project Description and as shown on Figure 5-4.	**EIS** 5.0 Alternative Means of Carrying out the Project
LFN-28.4	Asked how the size of container ships compares to tankers anticipated for the YVR airport fuel delivery project.	07-Oct-2014, Preliminary EIS Results Workshop #1	**07-Oct-2014, Workshop:** Responded that the VFPA is unsure about the difference in size of vessels for the projects, but the size of vessels currently calling at DP3 are too large to go up the Fraser River, and the VFPA anticipates that the ships that will call at RBT2 in the future will be even larger.	**Additional information provided by the VFPA:** The Vancouver Airport Fuel Delivery Project is proposing an option to build a deep-water fixed marine terminal. In this option, the berth would be built to accommodate Panamax-class tankers, and potentially larger Aframax (245 m) and Suez max-class tankers (285 m). For more information see: https://www.vancouverairportfuel.ca/ The Project design, as well as vessel types and sizes, is described in EIS Section 4.0. The Project design provides for the maximum simultaneous moorage of one Maersk Triple-E Class ship, approximately 400 m in length with the capacity for 18,000 twenty-foot equivalent units (TEUs), and two Panamax 2104-class vessels, approximately 366 m in length with capacities of 12,000 TEUs each.	**EIS** 4.0 Project Description

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-28.5	Requested clarification and additional information about the tug basin components.	07-Oct-2014, Preliminary EIS Results Workshop #1	**07-Oct-2014, Workshop:** Responded that the tug basin is being expanded for more tugs, and includes a floating platform for the tugs to tie to, and a wall made of riprap for protection.	**Addressed in EIS Appendix 7.2-B (#1):** The engineering design of the Project components, as well as construction phase activities are described in detail in EIS Section 4.0. EIS Section 5.0 provides a summary of alternative design options that were considered, and the rationale for the selected option. The proposed Project includes an expanded tug basin to accommodate a second tug operations contractor. An expansion of the existing tug basin would accommodate additional tug boats, necessary to efficiently and safely assist in the arrival and departure of ships calling at the new terminal. The expansion would allow for separate access gangways and pontoon floats, and would include sufficient moorage for the existing and an additional tug operation contractor.	**EIS** 4.0 Project Description 4.4.1 Construction-phase Activities 4.2.2 Project Component Details, Widened Causeway 4.2.3 Expanded Tug Basin 5.0 Alternative Means of Carrying out the Project Appendix 7.2-B Aboriginal Issues and Interests
LFN-28.6	Stated that the VFPA had explained the plan to create a dip in the causeway to help with habitat. Asked whether it is possible to narrow the entire causeway.	07-Oct-2014, Preliminary EIS Results Workshop #1	**07-Oct-2014, Workshop:** Responded that the causeway has been made as narrow as possible already, without having to relocate the two yards required for operations to the mainland, which is undesirable because it is agricultural land. Explained that the narrow 'dip' is the area between the two rail yards—a larger one where trains get split into their 3,000 foot lengths in order to enter the intermodal yard, and a smaller one for distributed power unit locomotives (the ones in the middle and at the end of trains).	**Addressed in EIS Section 4.0:** The engineering design of the Project components, as well as construction phase activities are described in detail in EIS Section 4.0. **Addressed in EIS Section 5.0:** The consideration of alternative design configurations and construction approaches resulted in the preferred Project design presented and assessed in EIS Section 5.0. As noted in EIS Section 5.7, the widened causeway without the lagoon was determined to be the preferred option as it will minimise intertidal habitat loss amongst the alternatives considered, and will have the least amount of indirect habitat change from altered coastal geomorphic processes. The widened causeway was further optimised by varying widths to minimise effects to the known biofilm intertidal habitat at the east end of the causeway	**EIS** 4.0 Project Description 5.0 Alternative Means of Carrying out the Project
LFN-28.7	Requested a diagram of the containment dyke area.	29-Oct-2014, Preliminary EIS Results Workshop #4	**29-Oct-2014, Workshop:** Responded that there is the causeway, and there is a dyke being put outside the causeway. Stated that the toe of the dyke, the bottom of the dyke, is below the surface of the intertidal area, so a trench is dug to start building the dyke up inside it, and that is the toe of the dyke. Stated that originally, the VFPA thought they were just putting the dyke on top of the sediments, and there would not be any excavation. Now the VFPA realises that there is going to be some excavation, so that is an area that will be tested.	**Addressed in EIS Section 4.0:** EIS Figures 4-10 through 4-20 depict the containment dykes throughout the construction process. **Addressed in Project Construction Update (CEAR # 1210),** As requested by the RBT2 Review Panel, the VFPA submitted the Project Construction Update (PCU) on June 12, 2018 (CEAR #1210), providing • Detailed revised Project description, including a revised construction schedule; • Revised Project interaction matrix; • Preliminary details pertaining to the management and timing of dredging activities and the discharge of sediment-laden water; and • Revised assessment of environmental effects as required by the Project modifications. Sections 1.0 and 2.0 of the PCU describe the changes to the environmental impact statement (EIS), including updates to specific construction activities, the construction schedule, and relevant Project Description figures and appendices. In PCU Section 3.0, changes or effects resulting from the construction updates on intermediate and valued components (ICs and VCs) are described. Overall, these changes to the environmental assessment resulting from construction updates can generally be summarised as follows: • Reductions in potential adverse changes or effects on ICs, biophysical VCs, social VCs, and Current Use; and • Increases in positive interactions with socio-economic VCs. These beneficial changes to ICs and VCs occur at the level of interactions or potential effects, and in most cases are slight changes, and thus do not affect the overall	**EIS** 4.0 Project Description **Information Requests** From the Vancouver Fraser Port Authority to the Review Panel re: Project Construction Update (See Reference Document #995) – CEAR #1210

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				conclusions made in the EIS, including proposed mitigation, residual effect characterisations, significance determinations or cumulative effects, as applicable, with one exception. The only component predicted to have a change to residual effects is land and water use, with a reduction of a residual effect on access to TFN community lease lands from a measurable non-significant residual effect to a negligible residual effect, due to elimination of the ITP and associated activities.	

Lyackson First Nation

Table 29: Project Benefits

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-29.1	Interested in a job fair for Project opportunities in the near future, to allow adequate time to prepare and plan for training programs.	10-Dec-2014, Health & Aboriginal Rights Workshop – Lyackson First Nation and Lake Cowichan First Nation	**10-Dec-2014, Workshop:** Stated that the VFPA will consider this request, but would not be ready to do this at this time. Stated that in 2 years' time at the earliest. **12-May-2016, Email from the VFPA:** Attached a letter and information sheet regarding Project employment opportunities.	**Addressed in EIS Appendix 7.2-B (#215):** The VFPA proposes to assist Indigenous groups in accessing potential economic opportunities resulting from the Project, including contracting opportunities as well as construction employment opportunities. To support Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs. To support the development and implementation of plans to facilitate access to such Project-related benefits, the VFPA will continue engagement, initiated in December 2014. Opportunities for Indigenous training and employment opportunities related to the Project are described in EIS Section 32.3.3.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.3.3 Mitigation Measures 34.0 Benefits to Canadians 34.2 Benefits of the Project 35.0 Effects Assessment Summaries Table 35-2 Proposed Mitigation Measures and Commitments
LFN-29.2	Concerned with the lack of benefits to First Nations due to their inability to practice their rights and exercise their interests.	04-Apr-2017, Meeting with Administrative Staff	**25-May-2017, Letter from the VFPA:** Reiterated offer to discuss a mutual benefits agreement. Requested Lyackson's confirmation that they wish to move forward with consultation. **04-Apr-2017, Meeting:** Provided information about the Legacy Benefits Fund and requested input from Lyackson on the draft proposal. Noted that these are shared benefits and provided examples of how the funding may be used to the benefit of all groups. Added that input is being sought from Indigenous groups on what is being proposed in terms of benefits and that Lyackson First Nation is welcome to provide input. **07-Feb-2018:** Offered Lyackson First Nation funding to support the involvement of Lyackson First Nation in activities related to negotiating a mutual benefits agreement for the Project. **09-Mar-2018:** The VFPA re-sent the funding agreement by email to Lyackson. **13-Mar-2018, Letter from the VFPA:** Revised offer to Lyackson First Nation for funding to support the involvement of Lyackson First Nation in activities related to negotiating a mutual benefits agreement for the Project. **24-Apr-2018:** Lyackson First Nation accepted the funding. **30-May-2018, Email from VFPA:** Followed up with Lyackson First Nation to arrange a meeting regarding the negotiation of a mutual benefits agreement.	**Addressed in EIS Appendix 7.2-B (#215):** The VFPA proposes to assist Indigenous groups in accessing potential economic opportunities resulting from the Project, including contracting opportunities as well as construction employment opportunities. To support Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs. To support the development and implementation of plans to facilitate access to such Project-related benefits, the VFPA will continue engagement, initiated in December 2014. Opportunities for Indigenous training and employment opportunities related to the Project are described in EIS Section 32.3.3.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.3.3 Mitigation Measures 34.0 Benefits to Canadians 34.2 Benefits of the Project 35.0 Effects Assessment Summaries Table 35-2 Proposed Mitigation Measures and Commitments

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-29.3	Stated that the VFPA offered Lyackson benefits, accommodation, and access to training, employment, and contracting. Stated that while appreciated, the presented opportunities do not accommodate or compensate for the loss of Lyackson's ability to practice socio-economic practises that are linked to the First Nation's traditional culture and values of environmental sustainability.	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and notes it is directed to the Panel.		

Lyackson First Nation

Table 30: Social and Economic Setting

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-30.1	Commented that the socio-economic study should assess population growth between 2011 and 2026, and the effect of that growth on Delta, a largely agricultural community.	29-Oct-2014, Preliminary EIS Results Workshop #4	**29-Oct-2014, Workshop:** Stated that the population assessment is a critical piece to most of the socio-economic VCs examined. Stated that it was actually one of the first assessments undertaken, and though it is not presented here, it will be included in the EIS. Modelling was used to consider potential in-migration and population fluctuations as a result of jobs and business requirements that may be generated by the Project. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Section 18.4.2:** In support of the EIS, a study of potential population effects due to the Project was carried out to determine if there would be in-migration of Project-associated workers into the local area, which could potentially result in population-driven changes in community infrastructure and services demand, as well as local government expenditures. Building on available information, a study was designed for the IC assessment of population with the intent of using predicted results to inform the assessments presented in EIS Sections 22.0 and 23.0. As noted in EIS Section 18.4.7, the operation-phase horizon year of 2026, Metro Vancouver's population is forecasted to be 2,914,896, an increase of 22.8% (or 541,859 persons) from the 2011 Census year (see Table 18.4-6). Demographic aspects of this increase on Delta is also discussed in EIS Section 18.4.7. **Addressed in EIS Appendix 7.2-B (#114):** An overview of the multiple components that make up the larger socio-economic assessment is provided in EIS Section 18.0. The assessment of potential Project-related effects on the economic development VC concluded that the Project will be consistent with the economic development objectives of the City of Delta. An assessment of potential Project-related effects on traditional activities is provided in EIS Section 32.2.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 18.0 Social and Economic Setting 18.4.7 Expected Conditions 21.0 Marine Commercial Use 26.0 Land and Water Use 26.7.2 Potential Effect #1 – Consistency with Land Use Planning Designations 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Land and Resources for Traditional Purposes

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-31.1	Asked whether copper and arsenic are naturally occurring or from industrial usage.	08-Oct-2014, Preliminary EIS Results Workshop #2 28-Oct-2014, Preliminary EIS Results Workshop #3	**08-Oct-2014, Workshop:** Stated that the VFPA had only a few samples of where there has been elevated copper and arsenic. There is a report that supports this and summarises all of the data, which will be an appendix to the EIS to provide that fulsome dataset. Copper and arsenic are elevated in only a couple samples out of 100. Typically, it is from storm drains or some type of industrial application or just naturally from rocks. Rocks and geological formations are naturally high in metals. More information on this can be found in the EIS. **28-Oct-2014, Workshop:** Responded that the copper is naturally occurring and has been there a very long time and seems to be a natural phenomenon. Whatever lives in the area is used to it and adapted to it. Answered that studies have been done to assess effects to human health, which will be discussed in a later presentation. **19-Apr-2016, Letter from the VFPA:** Provided notes from the 28-Oct-2014 meeting, which included the following post meeting note: Confirmed that copper is found naturally in sediments. This has been detected and studied, for example for the DP3 Adaptive Management Strategy program.	**Addressed in EIS Section 9.6.6.3:** While most of the sediment samples exhibited a copper concentration greater than the interim sediment quality guideline (ISQG), this is attributed to the presence of geological-origin, naturally occurring concentrations. Elevated copper levels are consistent with observations for previous studies in areas relevant to the Project, and throughout the Fraser River estuary (EIS Section 9.6.6.2). Copper levels in the Project activity areas are therefore not considered to be contaminated relative to natural conditions.	**EIS** 9.0 Physical Setting 9.6 Surficial Geology and Marine Sediment
LFN-31.2	Expressed an interest in receiving more information about the disposal at sea (DAS) plans for the Project. Asked about dredging and DAS: • Whether there are windows for DAS. • Whether a Maintenance Dredging Plan is a requirement. • Asked how assessment conclusions can be reached without yet knowing if or how much dredging will be required.	08-Oct-2014, Preliminary EIS Results Workshop #2 28-Oct-2014, Preliminary EIS Results Workshop #3 22-Sep-2016, Meeting 04-Apr-2017, Meeting with Administrative Staff	**08-Oct-2014, Workshop:** Stated that the VFPA will adhere to both the fisheries window and the crab window for DAS activities. **28-Oct-2014, Workshop:** Stated that at this point, maintenance dredging may or may not be required. If it is required, a maintenance dredging plan would need to be developed. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **22-Sep-2016, Meeting:** Stated that more information would be provided on DAS shortly. **26-Jun-2017, Letter from the VFPA:** The concerns brought forward by Lyackson First Nation with regard to Dungeness crabs and DAS highlighted the need for the VFPA to re-evaluate our planned construction approach and use of the intermediate transfer pit as a part of the Project. The Project team has been actively exploring alternative construction methods to address concerns raised by Indigenous	**Addressed in EIS Appendix 7.2-B (#55):** Dredging and DAS-related activities are described in the EIS and considered in the assessment of potential effects on marine physical and biophysical components. As described in the EIS, the physical and chemical characteristics of sediment that will be affected by construction activities, including sediment that will be re-suspended during dredging activities, were investigated and results were compared to recommended quality guidelines and regulatory criteria. DAS activities will occur subject to Environment Canada's DAS permit requirements under the *Canadian Environmental Protection Act, 1999*. Outcomes from the marine water quality assessment regarding total suspended sediment concentrations associated with dredging and dumping activities informed the assessment of marine vegetation, marine invertebrates, marine fish, marine mammals, coastal birds, ongoing productivity of commercial, recreational, and Aboriginal fisheries, and outdoor recreation. **Addressed in EIS Appendix 7.2-B (#76):** As required in the *EIS Guidelines* (part 2, section 13), the EIS presents a detailed analysis of the significance of the residual environmental effects on VCs, consistent with the approach described in the CEA Agency's Reference Guide Determining Whether a Project is Likely to Cause Significant Adverse Environmental Effects. **Addressed in Project Construction Update (CEAR # 1210),** As requested by the RBT2 Review Panel, the VFPA submitted the Project Construction Update (PCU) on June 12, 2018 (CEAR #1210), providing	**EIS** 4.0 Project Description 4.4.1 Project Activities, Construction Phase Activities Table 4-5 Source and Quantities of Material Requiring Disposal at Sea Figure 4-21 Intermediate Transfer Pit and Disposal at Sea Candidate Locations Appendix 7.2-B Aboriginal Issues and Interests 8.0 Effects Assessment Methods Table 8-1 Intermediate Component and Valued Component Linkages 9.0 Physical Setting 9.6 Surficial Geology and Marine Sediment 9.6.5 Methods 9.6.6 Existing Conditions

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			groups and regulatory agencies since the development of the EIS in 2014. After undertaking a thorough investigation that included further engineering work, consideration of new locally available dredging equipment, and relaxation of the *Coasting Trade Act* as a result of approving the Comprehensive Economic and Trade Agreement, the port authority determined that the Project could proceed without the use of an intermediate transfer pit. In addition, the elimination of the intermediate transfer pit, along with other changes, will result in a Project that does not require a DAS permit.	• Detailed revised Project description, including a revised construction schedule; • Revised Project interaction matrix; • Preliminary details pertaining to the management and timing of dredging activities and the discharge of sediment-laden water; and • Revised assessment of environmental effects as required by the Project modifications. Sections 1.0 and 2.0 of the PCU describe the changes to the environmental impact statement (EIS), including updates to specific construction activities, the construction schedule, and relevant Project Description figures and appendices. In PCU Section 3.0, changes or effects resulting from the construction updates on intermediate and valued components (ICs and VCs) are described. Overall, these changes to the environmental assessment resulting from construction updates can generally be summarised as follows: • Reductions in potential adverse changes or effects on ICs, biophysical VCs, social VCs, and Current Use; and • Increases in positive interactions with socio-economic VCs. These beneficial changes to ICs and VCs occur at the level of interactions or potential effects, and in most cases are slight changes, and thus do not affect the overall conclusions made in the EIS, including proposed mitigation, residual effect characterisations, significance determinations or cumulative effects, as applicable, with one exception. The only component predicted to have a change to residual effects is land and water use, with a reduction of a residual effect on access to TFN community lease lands from a measurable non-significant residual effect to a negligible residual effect, due to elimination of the ITP and associated activities.	9.6.8 Future Conditions with the Project Appendix 9.6-C Roberts Bank Terminal 2 Technical Report, Dredging Studies – Dispersion Modelling 9.7 Marine Water Quality 11.0 Marine Vegetation 11.6.3 Potential Effect – Changes in Productivity 12.0 Marine Invertebrates 12.6 Future Conditions with the Project 13.0 Marine Fish 13.6.3 Potential Effect – Changes in Productivity **Information Requirements** From the Vancouver Fraser Port Authority to the Review Panel re: Project Construction Update (See Reference Document #995) – CEAR #1210
LFN-31.3	Stated that Lyackson's assessment indicates that the Project will cause physical disruption and disturbance to already contaminated sediments adjacent to the existing port facilities sediment. Stated that the Project will further impact water movement in and around the mouth of the Fraser, which in turn will result in impacts to marine resources upon which Lyackson members rely for their continued practice of interests and rights. Concerned that the additional 167 hectares hard surfaces created by the proposed Project will cause oils and contaminants running off	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Section 9.6:** As noted in EIS Section 9.6.6.2, the physical and chemical characteristics of sediment in areas near and relevant to the Project have been studied recently. Results of these studies are summarised in EIS Table 9.6-3, and additional details are provided in EIS Appendix 9.6-B. No appreciable sediment contamination was observed in Project areas. In general, sediment samples met the DAS screening criteria with limited minor exceptions. Only one of 92 samples contained cadmium at a concentration greater than the DAS Lower Level criterion. Similarly, one sample contained arsenic at a concentration greater than its respective CCME ISQG (Canadian marine sediment quality guidelines). Both the average and upper 95th percentile concentrations for cadmium and arsenic were much lower than their respective screening criteria, however, and are more reflective of actual conditions. The single values are likely to be statistical outliers and are not reflective of the actual exposure potential. While most of the sediment samples exhibited a copper concentration greater than the ISQG, this is attributed to the presence of geological-origin, naturally occurring concentrations. Elevated copper levels are consistent with observations for previous studies in areas relevant to the Project, as described above, and throughout the Fraser River estuary (EIS Section 9.6.6.2). Copper levels in Project activity areas are therefore not considered to be contaminated relative to natural conditions. **Addressed in EIS Section 9.7:** EIS Section 9.7 presents activities that are anticipated to cause sediment re-suspension, leading to changes in total suspended solids and turbidity. Because the sediments in the areas of interest are not contaminated (EIS Section 9.6.6), no	**EIS** 4.2.1 Project Description, Marine Terminal 4.4.2 Operation-phase Activities 6.5 Legislation, Policies, and Initiatives 9.6 Surficial Geology and Marine Sediment 9.6.6.2 Characteristics of Surficial Sediments in the Fraser River Estuary and Local Study Area 9.7 Marine Water Quality 9.7.8.1 Construction Phase

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	and building up in critical fisheries areas.			appreciable change in concentrations of water column contaminants or nutrients is anticipated. As a result of the terminal footprint and anticipated changes in the distribution of fresh water from the Fraser River and marine water from the Strait of Georgia, localised changes in salinity and turbidity are predicted. These changes are anticipated to be within the natural range currently experienced on the intertidal flats. **As noted in EIS Section 9.7.8.2:** Potential operation-phase changes to marine water quality from wastewater (sewage) and stormwater discharges could include contamination by deleterious substances. Wastewater (sewage) will be collected, treated as required, then discharged from the new terminal site as described in EIS Section 4.4.2. Stormwater collected across the general terminal area and water from the terminal washdown will be collected and passed through oil interceptors. Stormwater collected in fuelling areas and oil-filled electrical transformer areas will pass through oil-water separators prior to discharge from the terminal, as described in EIS Section 4.2.1. All collected water will be managed according to regulatory requirements and guidelines (as outlined in EIS Section 6.5 and supporting appendices). As such, effluents from the terminal are not expected to alter marine water quality conditions within the local study area during the operation phase.	

Lyackson First Nation

Table 32: Traffic / Transportation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-32.1	Commented that the Gateway Transportation Collaboration Forum does not appear to have First Nations participation.	07-Oct-2014, Preliminary EIS Results Workshop #1	**07-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Additional information provided by the VFPA:** The Gateway Transportation Collaboration Forum, established in summer 2014, is a collaborative effort to ensure the Vancouver gateway is ready to manage growing trade. It consists of Transport Canada, the B.C. Ministry of Transportation and Infrastructure, the VFPA, TransLink, and the Greater Vancouver Gateway Council. Oversight of the Gateway Transportation Collaboration Forum is provided by a Steering Committee, consisting of senior executives from the partner organisations. Its responsibility is to understand stakeholder interests and issues, collaborate on advancing priority infrastructure projects, evaluate and prioritise projects, and identify and pursue viable funding sources. Since its inception, the Gateway Transportation Collaboration Forum has engaged local governments and Indigenous groups in the process of identifying bottlenecks and potential transportation solutions. Launched in 2016, Greater Vancouver Gateway 2030 is the Gateway Transportation Collaboration Forum's strategy for smart infrastructure investment to remove bottlenecks impeding the growth of trade, while addressing the community impacts of goods movement and population growth. The nearly 40 transportation projects proposed as part of Greater Vancouver Gateway 2030 will provide national, provincial, regional, and local benefits. By removing capacity constraints and freight bottlenecks to get Canadian goods to market, these projects will help grow the economy, create well-paying jobs and support liveable, green communities with improvements to safety, mobility, and air quality. The VFPA, as part of the Gateway Transportation Collaboration Forum, submitted nine funding applications to the National Trade Corridors Fund in fall 2017. The process of developing these applications included engagement with Indigenous groups, local governments, and industry stakeholders, including letters and other shows of support from one First Nation, several local governments, and many stakeholders. In May and June 2018, the federal government announced funding commitments of more than $200 million towards several Greater Vancouver Gateway 2030 projects. The focus of the Gateway Transportation Collaboration Forum is now securing funding from other partners for these projects, working with local government staff to undertake technical studies, engaging with Indigenous groups, communities and stakeholders, and advancing project design and planning for project construction. For more information, please visit vancouvergateway.ca.	**EIS** 2.0 Project Overview 2.2.7 Project Context, Roberts Bank as a Terminal Location Appendix 7.2-B Aboriginal Issues and Interests 9.2 Air Quality 9.3 Noise and Vibration 23.0 Services and Infrastructure 27.0 Human Health 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Land and Resources for Traditional Purposes 33.0 Environmental Management Program 33.3.7 Environmental Management Program, Land and Marine Traffic Management Plan 35.0 Effects Assessment Summaries Table 35-2 Proposed Mitigation Measures and Commitments

Table 33: Underwater Noise – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
LFN-33.1	Asked about the science behind underwater noise and how noise is measured and experienced underwater. Asked about the effects of underwater noise on herring, other fish, and marine mammals.	15-Apr-2014, Technical Working Group Meeting #2 27-May-2014, Technical Working Group Meeting #3 03-Jul-2014, Valued Components Workshop #2 08-Oct-2014, Preliminary EIS Results Workshop #2 28-Oct-2014, Preliminary EIS Results Workshop #3 10-Dec-2014, Health & Aboriginal Rights Workshop – Lyackson First Nation and Lake Cowichan First Nation 01-Nov-2016, Letter to Panel (CEAR Document #733)	**15-Apr-2014, Meeting:** Stated that there are underwater noise specialists involved in RBT2 to assess effects on marine creatures. A separate underwater noise study is underway. **03-Jul-2014, Workshop:** Explained the most challenging topic for the team is underwater noise. Stated that it is known if sound levels are particularly high, marine mammals will avoid the area. Some modelling is being done to better understand the effect of noise, seeking to understand, for example, depending on the noise, will they avoid the area, or will it have an impact on their ability to communicate with each other and/or find their prey. Stated that there have been 25 studies, most of which were guided by the TAG, on which there were two DFO recovery team members. **08-Oct-2014, Workshop:** Described the existing conditions related to noise and vibration and anticipated future changes resulting from the Project components and activities. **28-Oct-2014, Workshop:** Described the preliminary results of underwater noise conditions and provided an opportunity for feedback. Explained that the VFPA conducted extensive state-of-art field and modelling studies for RBT2. Stated that existing underwater noise conditions relatively high, primarily due to commercial vessel traffic, including ferry traffic. Stated that RBT2 will produce underwater noise (construction and operation). Stated that preliminary results of studies indicate RBT2 noise levels will be minor to moderate Explained that the distance that sound waves travel underwater depends on the ocean bottom, water temperature and salinity, low frequency or high frequency. Stated that sound moves faster in water than in air and that the intensity (sound energy per area per unit of time) is expressed in decibels (dB), and that the intensity of sound decreases as it moves away from its source. Responded that while the mechanisms of sound propagation over land and over water are similar, there is less scientific knowledge about sound propagation over water in various weather conditions. For the technical report related to sound propagation over water, we reviewed literature on the topic and used computer modelling, to help address concerns of	**Addressed in EIS Appendix 7.2-B (#61):** The scope and methods of the underwater noise study are summarised in the EIS section, and detailed in the supporting appendix. Underwater noise considers the level of underwater sound in the marine environment. An assessment was undertaken to determine potential changes in underwater noise as a result of the Project and focused on construction and operation activities that would produce underwater noise. Modelling was undertaken to predict future underwater noise as a result of construction activities, such as dredging, pile driving, vibro-densification, and movements of support vessels, and operation activities, such as movements of container ships and tug boats associated with terminal approach and departure, and berthing and unberthing. **Addressed in EIS Appendix 7.2-B (#81, #87):** Qualitative and empirical evidence indicates that there will be minor decreases in forage fish productive potential driven by loss of subtidal sand habitat and disturbance of Pacific herring from underwater noise. The assessment concludes that: • Underwater noise levels during construction are predicted to be comparable on average to existing levels measured at Roberts Bank, with the exception of some periods when certain activities, such as dredging, pile-driving, vibro-densification, or construction support vessel movement, would occur. • Overall, average underwater noise from Project construction and operation activities is expected to be comparable to average existing levels of underwater noise due to existing high levels, but will at times exceed existing conditions. Underwater noise related to conservative levels of Project commercial vessel movements is predicted to increase over existing underwater noise levels for only approximately 3% of a year for vessel berthing and unberthing, and for approximately 2% of a year for vessel approach and departure. • Future cumulative increases in commercial vessel traffic in the region are expected to make a relatively small incremental contribution to overall underwater noise levels. This prediction reflects the existing high levels of vessel traffic within the study area and the already-dominant contribution of commercial vessel traffic noise to the acoustic environment. The results of the underwater noise assessment were considered in the assessments of marine fish, marine mammals, and coastal birds. An interaction between Project-related underwater noise and marine invertebrates is not anticipated, and therefore was not assessed. **Addressed in MSA Appendix 5-B (#43):** Potential effects, including effects of underwater noise, from marine shipping associated with the Project on marine fish and marine mammals are assessed in MSA Sections 8.1 and 8.2, respectively. MSA Section 9.5 assesses the cultural aspects of potential effects to marine fish and marine mammals. **Addressed in response to IR4-10:** As noted in the VFPA's response to IR4-10, in 2014, the VFPA-led ECHO Program was developed as a collaborative initiative aimed at better understanding and managing the impact of shipping activities on at-risk whales throughout the southern coast of B.C. The VFPA-led ECHO Program	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 9.8 Underwater Noise Appendix 9.8-A Construction and Terminal Activity Underwater Noise Modelling Study Technical Report Appendix 9.8-B Regional Commercial Vessel Traffic Underwater Noise Modelling Study Technical Report 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component 13.2.1 Sub-components 13.4.1 Information Sources, Desktop and Field Studies 13.5.3 Existing Conditions, Forage Fish 13.6 Future Conditions with the Project 14.0 Marine Mammals 15.0 Coastal Birds 15.7 Future Conditions with the Project **MSA** Appendix 5-B Aboriginal Issues and Interests 8.1 Marine Fish and Fish Habitat 8.1.6 Potential Interactions and Effects 8.1.6.1 Negligible Effects 8.2 Marine Mammals 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.5.1 Negligible Effects of Vessel Transit on Current Use **Information Requests** Response to Sufficiency Information Request #10 (IR4-10 of CEAR Document #1051)

			Tsawwassen residents of reported higher noise levels during certain conditions. Confirmed that underwater noise is a potential effect to marine fish, and notes all of the marine fish sub-components are being evaluated in the context of underwater noise. Responded that sound is transmitted differently underwater than in the air. **10-Dec-2014, Workshop:** Recorded comment consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	engages and involves key regional interested parties to maximise program success and help ensure that mitigation and management measures developed through the program are informed by social, cultural, economic, and environmental sustainability interests. The ECHO Program is guided by the advice and input of an advisory working group, and supported by a federal government advisory committee and associated technical committees. Through engagement and consultation with stakeholders, including Indigenous groups, the ECHO Program has initiated or supported short-term projects, scientific studies, and educational initiatives to fill knowledge gaps necessary to inform the development of credible, science-based threat reduction solutions and management options to reduce cumulative effects of shipping to at-risk whales in the region.	
LFN-33.2	Questioned the VFPA's conclusions given that it was conducted based on inadequate baseline data, based on assumptions and without involving First Nations in the significance decisions. Stated that it is not clear how Lyackson's input was considered in the assessment. Stated that proposed mitigation measures and plans have not been developed in consultation with First Nations.	01-Nov-2016, Letter to Panel (CEAR Document #733)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Section 7.2:** EIS Section 7.2 discusses the VFPA's extensive engagement and consultation of Indigenous groups before and during EIS development. Since submission of the EIS, the VFPA has continued to consult with Indigenous groups to clarify information on the Project and EIS; provide additional information; and discuss potential environmental effects from the Project, potential impacts on their ability to exercise asserted Aboriginal or treaty rights and related interests, and potential mitigation and accommodation. **Further information provided in IR-7.31.15-08:** The VFPA's response to IR-7.31.15-08 provides a description of where and how ITK has been used to support the selection of VCs, baseline descriptions, the assessment of effects, including the identification of mitigation measures, and in the determination of significance of adverse environmental effects. **Addressed in response to MSA IR-02.24.16-4:** Discusses the application of ITK in the MSA. **Addressed in IR10-02:** The VFPA's response to IR10-02, as requested by the Review Panel, provides further information concerning how available Indigenous knowledge was incorporated into the EIS and MSA.	**EIS** 9.8 Underwater Noise **Information Requests** Response to Information Request #8 (IR-7.31.15-08 of CEAR Document #314) Response to Additional Information Request #4 (MSA IR-02.24.16-4 of CEAR Document #388) Response to Sufficiency Information Requirements #2 (IR10-02)
LFN-33.3	Stated that it is unacceptable for RBT2 to add to underwater noise.	03-May-2017, Meeting	**03-May-2017, Meeting:** Responded that the VFPA recognises the concerns related to underwater noise and has assessed all aspects and understands the biology clearly. Referred to two teams of underwater modellers and marine biologists working on the issue. Noted there will be an independent review by DFO (as part of the ongoing Review Panel process).	**Addressed in EIS Section 9.8:** EIS Section 9.8 presents an assessment of underwater noise. The overall assessment is considered to provide a conservative evaluation of potential changes in the acoustic environment resulting from the Project. Underwater noise levels during construction are predicted to be comparable on average to existing levels measured at Roberts Bank, with the exception of some periods when certain activities, such as dredging, pile-driving, vibro-densification, or construction support vessel movement, would occur. Overall, average underwater noise from Project construction and operation activities is expected to be comparable to average existing levels of underwater noise, due to existing high levels, but would at times exceed existing conditions. Underwater noise related to conservative levels of Project commercial vessel movements is predicted to increase over existing underwater noise levels for approximately 3% of a year for vessel berthing and unberthing, and for approximately 2% of a year for vessel approach and departure.	**EIS** 9.8.3 Summary of Information Sources **Information Requests** Response to Sufficiency Information Requirements #10 (IR4-10 of CEAR Document #1051)

Lyackson First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				Future cumulative increases in commercial vessel traffic in the region are expected to make a relatively small incremental contribution to overall underwater noise levels. This prediction reflects the already dominant contribution of vessel traffic noise to the acoustic environment. **Addressed in response to IR4-10:** As noted in the VFPA's response to IR4-10, in 2014, the VFPA-led ECHO Program was developed as a collaborative initiative aimed at better understanding and managing the impact of shipping activities on at-risk whales throughout the southern coast of B.C. The VFPA-led ECHO Program engages and involves key regional interested parties to maximise program success and help ensure that mitigation and management measures developed through the program are informed by social, cultural, economic, and environmental sustainability interests. The ECHO Program is guided by the advice and input of an advisory working group, and supported by a federal government advisory committee and associated technical committees. Through engagement and consultation with stakeholders, including Indigenous groups, the ECHO Program has initiated or supported short-term projects, scientific studies, and educational initiatives to fill knowledge gaps necessary to inform the development of credible, science-based threat reduction solutions and management options to reduce cumulative effects of shipping to at-risk whales in the region.

PENELAKUT TRIBE: ISSUES, VIEWS, AND CONCERNS RELATED TO THE PROPOSED PROJECT AND MARINE SHIPPING ASSOCIATED WITH THE PROJECT

Penelakut Tribe

Table 1: Air Quality – Intermediate Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-1.1	Asked for clarification on the assertion that air quality is expected to improve while climate emissions increase. Requested additional information on the new air emission standards.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Responded that air quality improves with a decrease in emissions for criteria air contaminants as well as for some traces in organic compounds. Greenhouse gas emissions will be higher in terms of global emissions, so that is what is meant by an improvement in air quality as well as an increase in climate emissions. There will be decreases in emissions both overall and on a per-truck basis because of new, more stringent emission standards for on-road vehicles. The assessment only considers emission reduction measures that have been confirmed. There may well be additional reduction measures in the future that would further contribute to lowering emissions. Future reductions in emissions can be estimated based on expected equipment turnover. The Vancouver Fraser Port Authority's (VFPA) truck licensing system restricts the engine age and emissions standards of vehicles that are allowed to enter VFPA terminals. By 2015, all trucks that access VFPA marine terminals will be required to achieve a 2007 engine emission performance or better. The International Maritime Organization (IMO) is implementing the North American Emission Control Area (ECA), which will be coming into effect in January 2015, requiring the sulphur content in fuel to be no higher than 0.1% for vessels.	**Addressed in EIS Section 9.2.7.1:** Regulatory initiatives for air quality and their incorporation into the assessment of future emissions are described in EIS Section 9.2.7.1. **Addressed in EIS Appendix 7.2-B (#42):** An assessment was carried out to predict potential changes in air quality as a result of Roberts Bank Terminal 2 (RBT2 or Project). The results of the air quality assessment were used in the assessments of human health and current use of land and resources for traditional purposes (Current Use). The assessment modelled Project-related fuel combustion and fugitive dust emission sources during the construction phase, and fuel combustion emission sources during the operation phases, and compared future conditions with the Project to modelled existing conditions and future expected conditions. Existing conditions considered emissions from marine vessels, trains, trucks, vehicles, and cargo handling equipment from the existing Westshore Terminals, Deltaport Terminal, and BC Ferries Terminal, while emissions from industrial, commercial, and residential sources within Delta were represented through measured air quality levels in Tsawwassen. A general trend of decreasing concentrations of contaminants has been observed and is expected to continue in the Lower Fraser Valley for some criteria air contaminants, as well as for some trace organic contaminants. Predicted maximum concentrations were used to conservatively estimate existing conditions and potential changes from the Project. Estimated emissions and predicted ambient concentrations did not account for the inclusion of shore power as part of the Project, which is expected to decrease future emissions from ships at berth, ultimately improving future air quality compared to predicted concentrations. The predicted concentrations also did not account for the switch to the use of liquefied natural gas (LNG) fuel for ferry vessels at the BC Ferries Terminal. The assessment concludes that: • Air quality in the region will improve in the future, with or without the Project, as a result of improvements in engine technologies as older equipment is replaced by newer equipment at the three existing marine terminals, and the use of cleaner fuels. • Cumulative changes, incorporating the Project and other certain and reasonably foreseeable projects and activities, are predicted to be small relative to expected improvements in future ambient air quality levels. • Project construction activities are predicted to cause a small increase in concentrations of some contaminants, but will be mitigated through the use of emission reduction measures to limit fugitive dust emissions and a monitoring program to guide construction activity in the event that ambient air concentration exceed defined criteria threshold levels. • Criteria air contaminant (i.e., carbon monoxide, nitrogen oxides, sulphur dioxide, particulate matter, and ground-level ozone) and trace organic contaminants (i.e., formaldehyde and other contaminants related to fuel combustion) levels are predicted to be below ambient air quality criteria on land, with limited exceptions. The exceptions for predicted nitrogen dioxide levels near the causeway are considered to be an artificially caused by the conservative methods used in the air quality assessment, and are not expected to actually exceed established ambient air quality criteria. • The Project is expected to have a negligible effect on future ozone levels. • Although Project activities would emit black carbon, black carbon is expected to decrease in the future with the Project due to equipment fleet turnover at existing Roberts Bank terminals to newer engines that meet more stringent emission standards for particulate matter. The Project is not expected to result in any significant adverse effect on human health, including from changes in air quality because air quality is expected to improve. The benefits of existing emission reduction initiatives are realised in the existing emissions monitored at local air quality stations in Metro Vancouver. Future benefits to air quality, such as improvements in engine technology and fuel quality, are described based on their anticipated level of benefit to future air quality emissions, in EIS Section 9.2.7. Through its ongoing Air Action Program*, the VFPA is constantly looking at addressing air quality and climate change, by focusing on the use of technologies and the promotion of operational efficiencies to reduce air emissions from port operations, such as those mitigation measures suggested during consultation. Key components of the Air	**Environmental Impact Statement (EIS, CEAR Document #181)** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 9.0 Physical Setting 9.2 Air Quality 9.2.5 Methods Appendix 9.2-A Air Quality Study Main Report Appendix A - Emissions Inventory Appendix B – Existing Air Quality Appendix C - Air Dispersion Modelling Appendix F - Ships Underway 9.2.6 Existing Conditions Table 9.2-4 Air Quality Criteria for Criteria Air Contaminants Table 9.2-5 Air Quality Criteria for Toxic Organic Contaminants 9.2.7 Expected Conditions 9.2.7.1 Regulatory Initiatives 9.2.8 Future Conditions with the Project 9.2.9 Future Conditions with the Project and Other Projects and Activities Appendix 9.2-A Air Quality Study Appendix H – Westshore Coal Dust Assessment

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				Action Program include the EcoAction Program, the Northwest Ports Clean Air Strategy, the Landside Air Emissions Inventory, and environmental requirements through the Truck Licensing Program. Information regarding the VFPA's Air Action Program can be found at http://www.portmetrovancouver.com/en/environment/initiatives/Air.aspx. *The Air Action program was renamed to Air, Energy and Climate Action. As part of the Deltaport Third Berth Project (DP3), the VFPA funded the establishment of the Tsawwassen Air Quality Monitoring Station. The location of the station, at Pebble Hill Reservoir located at 411 Milsom Wynd in Delta, was chosen by the Delta Air Quality Monitoring Technical Working Group (composed of representatives from Corporation of Delta, Environment Canada, Metro Vancouver, Tsawwassen First Nation, and the VFPA). The station is comprised of state-of-the-art monitoring equipment including ozone and particulate monitoring technologies. Since this station is part of Metro Vancouver's regional air quality monitoring network, results from the station can be viewed in real-time at www.bcairquality.ca/readings. **Additional information provided by the VFPA:** The analysis of the data from this station indicates that there has been a reduction in both sulphur dioxide (SO_2) and fine particulate matter ($PM_{2.5}$) concentrations measured at this monitoring station after the implementation of the requirements for low sulphur fuels from ships under ECA regulations. For 2010, the levels of carbon monoxide, SO_2, $PM_{2.5}$, and ground-level ozone meet the most stringent of Canadian, provincial, and regional ambient air quality standards or objectives. **Additional response provided by the VFPA:** During operation, Project-related exposures to air emissions are not predicted to result in measurable health effects. During construction, a moderate health effect is predicted for a small area over water between the Westshore and RBT2 terminals, where public access is not likely. Therefore, health effects during construction are unlikely to occur. Air quality will be monitored during construction and operation, and there would be adaptive measures should Project emissions result in exceedance of ambient air quality objectives/criteria.

Table 2: Alternative Means of Carrying out the Project

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-2.1	Asked about the process of determining whether the Project is feasible, and whether the decision was made based on only economic and technical factors, or if environmental or cultural impacts were considered.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Responded that in going through the process of selecting the Project location and design, the VFPA has considered environmental effects throughout the design process, and many changes have been made along the way. Stated that the design that has been selected is conceivably acceptable to environmental regulators. Stated that the Panel will determine whether the effects of the Project can be mitigated sufficiently.	**Addressed in EIS Appendix 7.2-B (#2):** The VFPA's approach for identifying and selecting alternatives was undertaken internally. As part of this process, the VFPA reviewed and considered Indigenous input provided as part of the environmental assessment processes for prior projects at Roberts Bank. Alternatives to the Project are described in EIS Section 5.0. The VFPA considered the following alternatives for creating container capacity to meet the forecasted demand, both within and outside of its jurisdiction: • Incremental capacity and efficiency increases are underway or in planning at Deltaport Terminal and Centerm. These projects will help meet short-term container demand to the early 2020s, but would not meet forecasted longer-term requirements. • Lease tenures on properties adjacent to the Vanterm property will persist until at least the late 2020s, and converting them to containers would displace other trade-related activities. If improvements at Vanterm were feasible, expansion would not be anticipated until sometime after 2030, and therefore would not meet the need to deliver additional container capacity required by the mid-2020s. • Larger container ships, such as those visiting Deltaport Terminal, Centerm, and Vanterm, cannot be accommodated in the Fraser River channel due to draught requirements and length (ability to turn around in the river). Fraser Surrey Docks is not expected to be a major source of container capacity to meet demand beyond 2018. • Conversion of the Lynnterm terminal to handle containers is not technically or financially feasible, due to road constraints and conflict with current handling operations. • Development of the VFPA's Fraser Richmond properties to provide large-scale container capacity is not technically feasible due to road and rail capacity constraints and issues with larger container ships in the Fraser River channel. • Planned expansions at the Fairview Terminal in Prince Rupert will help meet short-term west coast container demand to the early 2020s, but will not meet forecasted longer-term requirements. The results of the VFPA's analysis concludes that the Project is the only technically and financially feasible option to meet long-term demand for container capacity on Canada's west coast. Feasibility of the Project will also be determined by the outcome of the environmental assessment process, and the decisions by provincial and federal ministers of the environment. **Addressed in response to IR1-06:** Technical feasibility criteria used to evaluate alternatives to the location, orientation, layout and configuration of the marine terminal at Roberts Bank was based on whether potential environmental effects were deemed to be acceptable by regulators. Generally, alternatives located in subtidal habitat (i.e., deeper waters) were considered favourable as the potential for environmental effects in shallower, intertidal waters would increase the potential for effects to marine invertebrate and fish habitats, and pose a risk to obtaining the permits required for the Project (i.e., Fisheries Act Authorization). Economic feasibility criteria considered construction costs and schedule (including dredge, fill, and soil improvement requirements), as well as operational costs associated with downtime from weather/navigation constraints, yard efficiencies, and maintenance dredging. Options W1 and W2 of the terminal, located west of the existing Roberts Bank terminals were considered to be technically and economically feasible (Table IR1-06-2). An assessment of environmental effects of these alternatives is provided in the VFPA's response to IR1-07.	**EIS** 5.0 Alternative Means of Carrying out the Project 5.3.1 Increase Capacity and Efficiency of Existing Container Terminals within VFPA Jurisdiction 7.0 Engagement and Consultation 7.2.1 Aboriginal Groups Engagement and Consultation, Engagement and Consultation Process Overview Appendix 7.2-B Aboriginal Groups Issues and Interests Table **Information Requests** Response to Sufficiency Information Request #06 (IR1-06 of CEAR Document #897) Response to Sufficiency Information Request #07 (IR1-07 of CEAR Document #897)

PT-2.2	Requested additional information and asked about the Port Alberni Trans-shipment Hub concept.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Responded that the Port Alberni Port Authority has put forth a proposal that would see the creation of a transshipment container terminal where containers would be unloaded from vessels and transferred to barges for shipping. From there the containers would be [barged to Vancouver and] unloaded from the barges at a terminal and transferred for intermodal transport by truck and rail. It is a concept that has been publicly presented, but its current status is uncertain with respect to economic viability and willingness-interest from industry; it would require a major shift in the way containers are handled on the west coast of North America, [and would still require additional terminal capacity in Vancouver].		**EIS** 5.0 Alternative Means of Carrying out the Project 5.3 Location of Marine Terminal within British Columbia Alternatives Appendix 7.2-B Aboriginal Groups Issues and Interests Table

Table 3: Archaeological and Heritage Resources – Valued Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-3.1	Requested more information on beach weirs and historic tidal channels. Concerned that the Archaeological Overview Assessment only considers fish weirs for sturgeon and does not consider other types (i.e., salmon).	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Recorded comment for consideration by Project team. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#154):** Ethnographic information including Indigenous Traditional Knowledge (ITK) suggests that salmon were traditionally caught using methods other than those using wooden stakes. These methods, trawl nets and harpooning, are not likely to have left archaeological evidence if they were used. The potential effects are to "fish trap stakes" in general and consider other species of fish in addition to sturgeon (i.e., salmon).	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 28.0 Archaeological and Heritage Resources 28.5.1.2 Ethnography
PT-3.2	Concerned about the exclusion of Cowichan Nation Alliance member nations from the scope of the Archaeological Overview Assessment.	04-Mar-2014, Letter to the VFPA from Cowichan Tribes on behalf of Cowichan Nation Alliance 22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**04-Mar-2014:** Recorded comment for consideration by Project team. **06-May-2014, Letter from the VFPA:** Stated that the purpose of the Archaeological Overview Assessment is not to provide a detailed ethnographic history, but an ethnographic overview of the study area. However, the ethnography section has been revised and also includes a listing of all First Nations that have a potential claim to the study area, according to GeoBC's Consultative Areas Database. The Cowichan Nation Alliance provided the Brealey report to the VFPA in confidence. The VFPA requested permission from the Cowichan Nation Alliance to provide the report to Millennia Research Limited but was denied. Therefore, this information is not included in the Archaeological Overview Assessment. **22-Oct-2014, Workshop:** Stated that Tsawwassen First Nation, Musqueam First Nation, and Hwlitsum provided the VFPA with information about fish weir use on the intertidal flat and that this preliminary assessment was written before more recent information had been received. The VFPA has read the report prepared by Dr. Kennedy and submitted by the Cowichan Nation Alliance regarding historical use, and recalled that information about Halalt use of traps for salmon was provided. The VFPA apologised that information is not reflected in the presentation, and explained this presentation had been prepared prior to reading the report. The scope of the Archaeological Overview Assessment is not meant to cover proof of claim. There is a section covering Current Use that includes a very comprehensive discussion of the interests and use of the Cowichan Nation Alliance, which is much broader than this assessment, which considers the potential physical disturbance of archaeological sites. The VFPA committed to take the feedback and information shared and provide it to the teams working on the assessment and writing the reports.	**Addressed in EIS Appendix 7.2-B (#151):** The purpose of the archaeological and heritage resources assessment was to determine whether there is potential for archaeological and heritage resources to exist in the assessment area, and to determine any Project-related effects on these resources, if they are present. The assessment was supported by an Archaeology Overview Assessment, which included an ethnographic overview of the area and a review of the potential for undocumented heritage sites to exist in the local assessment area (LAA). The results of the archaeological and heritage resources assessment were considered in EIS Section 32.0. The LAA included the physical footprint of the Project plus a 100 m buffer zone, as well as a zone of coastal-geomorphological influence. The regional assessment area (RAA) considered a four kilometre (km) area around the Project area. No archaeological sites were identified in the LAA, either using the B.C. Archaeology Branch's online heritage registry or through the Archaeological Overview Assessment. If archaeological or historical materials remain in the intertidal area, it is likely that they have been preserved in the sediment layers, if not affected by previous construction. The Project may affect archaeological resources, namely, fish trap stakes, if present in the Project area. Direct effects could result from Project-related construction activities, and indirect effects could result from changes to sediment deposition or erosion. Through mitigation, including excavation of test trenches prior to construction activities and the implementation of an Archaeological Monitoring and Management Plan, potential damage to archaeological resources would be avoided and the opportunity for future archaeological study would be protected. The Project is not expected to result in significant residual effects to archaeological and heritage resources. The Project is not expected to result in any incremental cumulative effects to archaeological and heritage resources. A description of the past use of the Roberts Bank area by Indigenous groups is provided in EIS Section 32.0. The presentation of information on past use of the area in the assessment of archaeological and heritage resources is tailored to those Indigenous groups whose past uses are directly linked to the type of	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 28.0 Archaeological and Heritage Resources 28.2 Selection of Archaeological and Heritage Resources VC 28.3 Assessment Boundaries 28.4 Information Sources 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Land and Resources for Traditional Purposes

				physical archaeological resources that have the potential to be present in the study area, and have the potential to be affected by the Project. The scope or methods of the archaeological and heritage resources assessment are described in EIS Section 28.0.	
PT-3.3	Concerned with archaeological impacts to Tl'uqtinus.	18-Aug-2014, Meeting with Penelakut Tribe 27-Aug-2015, Letter to the VFPA from Penelakut Tribe 09-Nov-2015, Meeting with Penelakut Tribe	**18-Aug-2014, Meeting:** Recorded comment for consideration by Project team. **27-Aug-2015:** Recorded comment for consideration by Project team. **02-Oct-2015, Letter from the VFPA to Penelakut Tribe:** Requested to meet with Penelakut to discuss comments received on the draft EIS. Explained that the document shared by the VFPA on July 27, 2015 included a draft summary of CNA's current use in the marine shipping study area, and therefore did not include accidents and malfunctions or potential effects. Noted that these topics will be addressed in the Report to be submitted to the Canadian Environmental Assessment Agency ("CEAA") in the fall of 2015. **09-Nov-2015, Meeting:** Responded that in regards to *Tl'uqtinus*, the RBT2 assessment is not predicting any effects near *Tl'uqtinus*. Explained that EIS Appendix 7.2-B responds to those questions. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Section 32.3.2.2:** *Tl'uqtinus*, as well as other Fraser River sites noted by Cowichan Nation Alliance as being traditional lands, are located away from potential Project-related effects; therefore, there are no predicted interactions between Project activities and use of these areas. **Addressed in EIS Appendix 7.2-B:** As presented in the EIS, the Project is not expected to result in adverse residual effects on *Tl'uqtinus* and the mouth of the Fraser River, or the area of Le'eyqsun and its surrounding foreshore and waters.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes

Table 4: Coastal Birds – Valued Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-4.1	Asked whether there is potential for wildlife to confuse day for night due to lights.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Stated that this was considered for birds, and more information would be provided in a later presentation on light. **12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2:** Presented on coastal birds, stating that effects from disturbance (noise, light, vessel movement) can be effectively mitigated. Presented mitigations measures to address lighting impacts, valances to minimise light trespass. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#45):** The potential changes in light that may be caused by the Project, and the potential effects of those changes on valued components (VCs) and on Current Use are considered in the EIS. The results of the light assessment informed the assessments of marine fish, coastal birds, visual resources, and human health, and Current Use. The assessment focused on two aspects of light: • Light trespass, the amount of light that strays from its intended purpose onto neighbouring areas; and • Sky glow, the unwanted illumination of the night sky that affects the visibility of stars. The assessment concluded that: • Overall, the Project is not expected to change the general light environment of the Lower Mainland and the Gulf Islands and no measurable incremental cumulative changes related to light are expected. • Project-related lighting is expected to result in a minimal increase in light trespass levels. • Increases in sky glow levels are expected, but are not anticipated to result in a noticeable change from existing conditions. Suggested mitigations were considered in the effects assessment. Mitigation measures to address effects on visual resources and coastal birds consist of implementation of Environmental Management Plans, including Light Management Plans, for construction and operation phases. The Light Management Plans will describe measures to reduce excess lighting and sky glow, including: • Orienting lights downwards and away from residential and marine areas; • Using shielding to minimise light trespass; • Controlling light levels and limiting light use to areas where activities are occurring; • Where possible, using fixtures that emit light at wavelengths shown to minimise disorienting effects to birds; • During construction, ensuring dredge lighting system shields light from spilling outside the basic working footprint of the dredge; and • During operation, establishing a centralised lighting control system to select lighting where required. **Addressed in EIS Appendix 7.2-B (#99):** A review of documented effects of both natural and artificial light on birds is provided in EIS Section 15.7.2.1. The EIS considers the potential effects of artificial light on coastal birds, including the potential for increased risk of predation on shorebirds by nocturnal raptors (i.e., owls). Overall, the Project is not expected to compromise the productive potential of the local area to support coastal bird productivity, or change to species' viability. The assessment concludes there are no significant adverse residual effects from the Project to coastal birds. The Project is not expected to result in measurable incremental adverse cumulative effects to coastal birds. **Addressed in MSA Section 8.3:** Potential effects of artificial light from shipping traffic in the marine shipping area. The MSA notes that nocturnal feeding marine birds can be attracted to artificial light sources, such as ship lighting, and that mortality is known to occur. For the LAA, no collisions with vessels have been recorded, which indicates that collisions with vessels are most likely infrequent and, if they do occur, do so on a small scale (in terms of the number of birds).	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 9.0 Physical Setting 9.4 Light 9.4.4 Relevant Guidelines 13.0 Marine Fish 13.6.3 Future Conditions with the Project, Potential Effect - Changes in Productivity, 13.7.5 Mitigation Measures, Mitigation #4 for Changes in the Light Environment 15.0 Coastal Birds 15.7.2.1 Mechanisms Affecting Productivity 25.0 Visual Resources 25.7.2 Mitigation Measures, Mitigation Measure #2 – Lighting Design and Operation – Light Management Plans 27.0 Human Health 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Land and Resources for Traditional Purposes 33.3.5 Construction EMP, Light Management Plan 33.4.3 Operation EMP, Light Management Plan **Marine Shipping Addendum (MSA, CEAR Document #316)** 8.3 Coastal Birds **Information Requests** Response to Sufficiency Information Request #02 (IR9-02)

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				Addressed in response to IR9-02: The VFPA's forthcoming response to IR9-02, as requested by the Review Panel, will further discuss mitigation measures related to artificial light for migratory and non-migratory birds and avian species.	
PT-4.2	Asked if Tundra and Trumpeter Swans use the Project area, and whether or not they were considered in the assessment. Added that swans were historically numerous, then disappeared.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Responded that swans have been in the area, and that long-term use of that area by the species is understood.	**Addressed in EIS Appendix 7.2-B (#93):** The Fraser River estuary is an important area to many coastal birds because of the abundant food sources. The Roberts Bank area supports an abundance and diversity of bird species. An assessment was undertaken to determine the effects of the Project on coastal birds. The assessment of coastal birds focused on seven sub-components: • Shorebirds, represented by Pacific dunlin and western sandpiper; • Waterfowl, represented by American wigeon and brant (which is a proxy for swans); • Herons, represented by great blue heron; • Diving birds, represented by surf scoter and western grebe; • Raptors, represented by bald eagle, barn owl and peregrine falcon; • Gulls and terns, represented by Caspian tern and glaucous-winged gull; and • Passerines, also known as songbirds, represented by barn swallow. The use of the Fraser River estuary and the Project area by trumpeter swan and tundra swan is described in the EIS, under the waterfowl section (EIS Section 15.5.4). Overall, the Project is not expected to compromise the productive potential of the local area to support coastal bird productivity, or change to species' viability. The assessment concludes there are no significant adverse residual effects from the Project to coastal birds. The Project is not expected to result in measurable incremental adverse cumulative effects to coastal birds.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 15.0 Coastal Birds 15.2 Selection of Coastal Birds Valued Component 15.5.4 Existing Conditions, Waterfowl 15.7.2 Future Conditions with the Project, Potential Effect – Changes in Productivity Appendix 15-B Shorebird Foraging Opportunity during Migration Appendix 15-C Overwintering Dunlin Foraging Opportunity
PT-4.3	Asked why humans had not been considered in the Shorebird Opportunity Model.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Responded that interactions are addressed separately in the EIS. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Section 15.0:** The focus of the Shorebird Opportunity Model (EIS Appendix 15-B) was on shorebird access to food sources and the capacity of the LAA to support existing and future shorebird populations (with the project). Although humans may interact with shorebirds, the food resources upon which shorebirds depend are largely in the intertidal zone where the potential for shorebird-human interactions are minimal.	**EIS** 15.0 Coastal Birds 15.2 Selection of Coastal Birds Valued Component 15.5.4 Existing Conditions, Waterfowl 15.7.2 Future Conditions with the Project, Potential Effect – Changes in Productivity Appendix 15-B Shorebird Foraging Opportunity during Migration Appendix 15-C Overwintering Dunlin Foraging Opportunity

Table 5: Coastal Geomorphology – Intermediate Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-5.1	Stated that elders in 1990 asked for flow to be maintained through the causeway. Commented that sand appears to have accumulated on the north side of the causeway. Asked about the long-term environmental impacts of the existing causeway.	01-Nov-2013, Meeting with Cowichan Nation Alliance 22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**01-Nov-2013, Meeting:** Responded that work completed by a coastal geomorphologist and by a fisheries biologist determined that by breaching the causeway more damage would be done. Responded that work was completed to look at flow through the causeway and it was determined that while it was conceptually okay, in practice it would create a bigger issue (i.e., it would remove the mudflat if you removed the causeway). The reason why the terminal is situated further out from the mudflats is because building a terminal near the mudflat would have a negative impact. The further out the terminal is built, the less impact to the mudflat. **07-Jan-2014, Letter from the VFPA to Penelakut Tribe:** The potential effects of opening the causeway were assessed by Northwest Hydraulic Consultants Ltd. in June 2005. Based on the tidal influence in the area, it was determined that there would be no benefit with regard to introducing flows through the causeway (e.g., the amount of water that would flow through the opening would be very small compared to the tidal exchange in the inter-causeway area), and such an opening may actually result in new channel formation and concurrent erosion of existing eel grass. **22-Oct-2014, Workshop:** Presented information on coastal geomorphology, including the existing conditions and the anticipated future changes as a result of the Project.	**Additional information provided by the VFPA:** An independent technical study, "Potential Effects of Opening the Causeway," was undertaken for the Vancouver Port Authority in 2005 to clarify issues related to physical processes and hydraulic behaviour in the inter-causeway area of Roberts Bank. This report determined that there is a substantial risk that a new opening in the causeway could initiate a new sequence of morphological changes on the tidal flats, which could adversely affect the existing habitat conditions. Furthermore, the assessed opening would be expected to have only a minimal contribution to flushing flows in the inter-causeway area. The report is available on the Project website: http://www.robertsbankterminal2.com/wp-content/uploads/RBT2-Potential-Effects-of-Opening-the-Causeway-June-2005-NHC-Memo-January-2014.pdf. Based on the findings of this report, and the evaluation of adding a flow passage channel, the VFPA does not propose to open the Roberts Bank causeway. Further information concerning this study is available in the VFPA's response to IR1-13. **Addressed in the EIS Appendix 7.2-B (#52):** EIS Section 9.5 describes existing conditions on Roberts Bank, including the past influences of the Roberts Bank causeway and BC Ferries Terminal causeway on the Roberts Bank ecosystem. The potential effects of the Project on ocean currents (hydrodynamics), wave climate, and local seabed scour and deposition (morphodynamics) were investigated using the TELEMAC numerical modelling system. Since no reasonably foreseeable projects or activities were identified during the assessment that will influence or change the conditions of coastal geomorphology within proximity of the Project, an assessment of future incremental cumulative changes to coastal geomorphology was not undertaken. **Addressed in response to IR2-09:** Additional clarification is provided in the VFPA's response to IR2-09, which describes how sand was deposited on the north side of the causeway during the initial causeway construction activities in 1969. These sediments have persisted and are not the result of ongoing coastal geomorphology processes.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 9.5 Coastal Geomorphology 9.5.5 Methods 9.5.6 Existing Conditions 9.5.9 Future Conditions with the Project and Other Projects and Activities Appendix 9.5-B Rationale for Exclusion of Other Certain and Reasonably Foreseeable Projects in the Cumulative Change Assessment of Coastal Geomorphology **2005 Memorandum Concerning Potential Effects of Opening the Roberts Bank Causeway** http://www.robertsbankterminal2.com/wp-content/uploads/RBT2-Potential-Effects-of-Opening-the-Causeway-June-2005-NHC-Memo-January-2014.pdf. **Information Requests** Response to Sufficiency Information Request #13 (IR1-13 of CEAR Document #897) Response to Sufficiency Information Request #09 (IR2-09 of CEAR Document #961)
PT-5.2	Asked how the Project affects the water. Asked for further clarification related to changes in geomorphology associated with the proposed Project. Asked what the environment will look like with changes in accretion and siltation.	01-Nov-2013, Meeting with Cowichan Nation Alliance 22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**01-Nov-2013, Meeting:** Recorded comment for follow-up. **22-Oct-2014, Workshop:** Responded that the environment will experience only very slow change. Stated that there is not expected to be a lot difference with the addition of the proposed Project. Referred to the image on slide 31 of the presentation that illustrated where a difference is expected. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#48):** Coastal geomorphology considers the physical processes such as waves and currents that change or maintain the physical environment of coastal areas. An assessment was undertaken to determine potential changes to coastal geomorphology as a result of the Project. The assessment consisted of three study approaches to determine the potential effects of changes to natural processes from the Project footprint in subtidal and intertidal areas. Studies were informed by dialogue with the Coastal Geomorphology Technical Advisory Group (TAG). The results of the coastal geomorphology assessment were considered in the assessments of surficial geology and marine sediment, marine water quality, marine vegetation, marine invertebrates, marine fish, marine mammals, coastal birds, ongoing productivity of commercial, recreational, and Aboriginal fisheries, and archaeological and heritage resources. The Project layout and configuration have been modified to reduce the potential for a number of adverse changes to geomorphology during Project	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 9.5 Coastal Geomorphology 9.6 Surficial Geology and Marine Sediment 9.7 Marine Water Quality 9.7.8 Future Conditions with the Project 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Lands and Resources for Traditional Purposes 35.0 Effects Assessment Summaries

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				construction and operation. For example, developing the terminal almost entirely within the subtidal zone of Roberts Bank will largely avoid changes to geomorphology. Changes to coastal geomorphology are not expected from terminal development activities, but are related to the terminal footprint itself. The footprint will interact with tidal currents and wind-generated waves resulting in alterations to sediment transport, sediment erosion and deposition, and water flow exchange in the construction and operation phases. During causeway construction, drainage channels are expected to form on the tidal flats adjacent to the causeway. This change will occur during construction only, and will be temporary and reversible. The VFPA will ensure the study and management of potential channel formation related to drainage of tidal waters through the causeway dyke during the construction phase. Changes will be incorporated in detailed design, as required. Changes from the expansion of the tug basin include the conversion of local tidal flats to subtidal waters. Although the formation of additional tidal channels is not anticipated, a small increase in the size of an existing channel is likely. No incremental cumulative changes in coastal geomorphology are anticipated to result from the Project in combination with other projects and activities. **Addressed in response to IR2-08:** As outlined in the VFPA's response to IR2-08, ongoing geomorphic processes have resulted in changes to the Fraser River delta foreslope (located in deeper water at the outer edge of the tidal flats) in the vicinity of the proposed terminal. Construction of RBT2 will result in armouring of a 1,700 m long section of the foreslope down to -30 m chart datum (CD), and will effectively halt any erosion of the foreslope in that area that may be occurring at present. **Addressed in responses to IR2-07 and IR2-09:** As outlined in the VFPA's responses to IR2-07 and IR2-09, topographic changes on the tidal flats have been evaluated, including changes to existing tidal channels. These changes are related to ongoing geomorphic processes as well as changes related to previous construction of the causeway and existing terminals. Widening of the causeway and development of RBT2 is not predicted to change drainage patterns or the morphology of the tidal flats in this area north of the causeway in the future with the Project. **Addressed in response to IR2-16:** Clarification concerning the assessment of changes to coastal geomorphology that may occur in relation to the construction and operation of the proposed Project is provided in the VFPA's response to IR2-16. The response confirmed that all Project components have been assessed in accordance with the requirements of the *Updated EIS Guidelines* for the local study area, which extends from the BC Ferries Terminal to Canoe Passage. **Addressed in response to IR2-17:** The VFPA's response to IR2-17 includes additional clarification concerning the expected extents of changes to coastal geomorphology related to the proposed Project. Changes to coastal geomorphology and hydrodynamic conditions in areas on the south side of the existing Roberts Bank causeway, including the inter-causeway area and areas south of the BC Ferries Terminal, that are related to the Project components on the north side of the causeway are not anticipated because areas on the south side are	**Information Requests** Response to Sufficiency Information Request #07 (IR2-07 of CEAR Document #961) Response to Sufficiency Information Request #08 (IR2-08 of CEAR Document #961) Response to Sufficiency Information Request #09 (IR2-09 of CEAR Document #961) Response to Sufficiency Information Request #16 (IR2-16 of CEAR Document #961) Response to Sufficiency Information Request #17 (IR2-17 of CEAR Document #961)

				hydrodynamically isolated from the north side of the Roberts Bank causeway by deep water and the presence of the existing causeways. The only Project component expected to influence coastal geomorphology or hydrodynamics in the inter-causeway area is the expanded tug basin, which is expected to result in localised changes to the existing coastal landforms in that area.	
PT-5.3	Concerned that Canoe Pass is getting closed off because of the current terminal configuration and corresponding build-up of sand.	01-Nov-2013, Meeting with Cowichan Nation Alliance	**01-Nov-2013, Meeting:** Recorded comment for onsideration by the Project team. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#49):** Field studies, air photo review, and modelling of sediment deposition at Roberts Bank (including Canoe Passage) were undertaken during the Project assessment, as described in the EIS. A Canoe Passage discharge channel location and sediment distribution (e.g., bar formation or buildup of sand) were modelled to assess variation pre and post-terminal construction. Potential changes associated with the configuration of RBT2 were assessed in relation to Roberts Bank, including the Canoe Passage discharge channel. Project-related changes to coastal geomorphological processes on Roberts Bank are predicted to be associated with the terminal footprint. However, the Project is not anticipated to alter sediment dynamics or water movement in and around the mouth of the Fraser River. Changes are anticipated around the terminal and within the intertidal zone shoreward of the terminal. The effects of these changes on VCs are considered in the EIS.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table

PT-6.1	Asked whether potential negative impacts on other industries are assessed in the economic development valued component.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:**
			Responded that the impacts on other industries was assessed in the EIS.
			01-Apr-2015, Letter from the VFPA to Penelakut Tribe:
			Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.
				Addressed in EIS Appendix 7.2-B (#113):
				The economic development assessment evaluated potential Project-related effects on local and regional economies, and focused on:
				• Business revenues associated with the direct supply of materials, goods, and services to the Project for construction and operation;
				• Business revenues associated with supply of inputs to the businesses that are directly supplying goods and services to the Project;
				• Induced revenues for businesses related to household spending by workers employed as a result of the Project;
				• Construction sand supply and consumption; and
				• Consistency with economic development plans.
				The economic development assessment concluded that:
				• The Project is expected to result in the following positive effects on economic development in Metro Vancouver:
				  ○ During the 5.5 year construction phase:
				  ▪ $837 million in additional gross revenues to businesses in Metro Vancouver
				  ▪ $238 million in induced household spending in Metro Vancouver
				  ○ During operation:
				  ▪ $31 million annually in materials, good, and services contracting revenue to the economy of Metro Vancouver
				  ▪ $71 million of annual induced household spending in in Metro Vancouver
				• The Project is expected to result in an increase in materials, goods, and services contracting revenues for Indigenous businesses located in Metro Vancouver.
				• The Project is expected to result in negligible effects on construction sand availability and price.
				• The Project is consistent with economic development strategies in Metro Vancouver's Regional Growth Strategy, the economic development objectives of the City of Delta, and the general directions set out in the Tsawwassen Land Use Plan of Tsawwassen First Nation.
				• The Project is expected to result in positive effects to economic development in Metro Vancouver; therefore, the Project is not expected to result in measurable adverse residual effects. The Project is not expected to result in incremental adverse cumulative effects on economic development.
				• The economic development assessment includes assessment of potential adverse effects on local sand supply, resulting from the Project-related demand, as well as potential adverse effects on labour market balance (including wage inflation or labour shortages). Further details on rationale for the scope, methods, and conclusions are provided in EIS Section 20.0.

			12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2: Members of the Cowichan Nation Alliance were provided with the opportunity to discuss socio-economic VCs. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **29-Apr-2016, Meeting:** Provided an "Employment Opportunities Information Sheet." The information sheet highlighted opportunities during construction and operations.		34.2 Benefits of the Project 35.0 Effects Assessment Summaries Table 35-2 Proposed Mitigation Measures and Commitments ***Updated Guidelines for the Preparation of an Environmental Impact Statement* (*Updated EIS Guidelines*; CEAR Document #177)**
PT-6.3	Concerned about the labour market and economic development studies excluding Aboriginal members and/or communities located outside the Metro Vancouver region.	11-Dec-2014, Health & Aboriginal Rights Workshop – Cowichan Nation Alliance	**11-Dec-2014, Workshop:** Recorded comment for consideration by Project team. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **19-Apr-2016, Letter from the VFPA to Penelakut Tribe:** Shared meeting notes from the 11-Dec-2014 meeting, which included the following post-meeting note: As noted in the response for issue ID# 111 of RBT2 EIS Appendix 7.2-B, the local assessment area (LAA) for labour market and economic development was defined as Metro Vancouver. Cowichan community members living in Metro Vancouver will be reflected in the aggregate data for this region. The LAA was structured to capture the Project's potential labour market and economic development effects that will occur locally and are measureable or detectable. While there may be members of Aboriginal groups located outside of Metro Vancouver that participate in one or more aspects of Project employment, or other economic effects, the effects on the labour market and economies of these Aboriginal groups were not considered to be measureable or detectable.	**Addressed in the EIS Appendix 7.2-B (#111):** The LAA for labour market and economic development was defined as Metro Vancouver. Cowichan community members living in Metro Vancouver will be reflected in the aggregate data for this region. The LAA was structured to capture the Project's potential labour market and economic development effects that will occur locally and are measureable or detectable. While there may be members of Indigenous groups located outside of Metro Vancouver that participate in one or more aspects of Project employment, or other economic effects, the effects on the labour market and economies of these Indigenous groups were not considered to be measureable or detectable. **Addressed in EIS Appendix 7.2-B (#112):** Opportunities for training and employment opportunities related to the Project are described in EIS Section 32.3.3. As accommodation for any potential effects to specified Indigenous groups' ability to exercise their Aboriginal rights, the VFPA proposes to assist these Indigenous groups in accessing opportunities resulting from the Project. In addition to making contracting opportunities available to specified Indigenous groups, the VFPA will ensure that construction employment opportunities are also made available. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs. Through ongoing engagement, the VFPA will seek input from these Indigenous communities with respect to plans to ensure access to Project-related benefits. The VFPA has consulted and will continue to engage with Indigenous groups regarding opportunities to benefit economically and socially from the Project.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 18.0 Social and Economic Setting 18.4 Population 19.0 Labour Market 19.3.1 Spatial Boundaries 20.0 Economic Development 20.3.1 Spatial Boundaries 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.3.3 Mitigation Measures 34.0 Benefits to Canadians 34.2 Benefits of the Project 35.0 Effects Assessment Summaries Table 35-2 Proposed Mitigation Measures and Commitments

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			01-Apr-2015, Letter from the VFPA to Penelakut Tribe: Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.		
PT-6.4	Requested to discuss the financial case for RBT2. Requested a presentation on the financial structure of RBT2 – how you enter into an agreement with an operator, how you obtain your revenues, not just the financial report. Asked what the VFPA expects revenue from the Project to be once it is operational, and the business arrangement with the terminal operator. Asked about the VFPA's revenues for the Project.	18-Aug-2014, Meeting with Penelakut Tribe 11-Nov-2015, Meeting with Penelakut Tribe 26-Sep-2016, Meeting with Penelakut Tribe 01-Dec-2016, Meeting with Penelakut Tribe	**18-Aug-2014, Meeting:** Recorded comment for follow-up. **10-Sep-2014, Email from the VFPA:** Shared the 2013 VFPA Financial Report. Stated that it is the VFPA's understanding that the report (attached), and others on the website, will provide the type of information Penelakut is seeking. **11-Nov-2015, Meeting:** Stated that all the financial information the VFPA can provide is in EIS Section 20.0 and in the Executive Summary. **26-Sep-2016, Meeting:** Recorded comment for follow-up. **01-Dec-2016, Meeting:** Explained that lease information is confidential. As for the fees, they are also confidential as part of the lease negotiation.	**Addressed in MSA Appendix 5-B (#5):** The economics of the Project are included in EIS Section 2.0. Information about the VFPA's financials, updated annually, is provided on the VFPA's website. **Additional information provided by the VFPA:** **Revenue Streams for Canada Port Authorities** The VFPA earns its revenues through port fees charged to port users and rents charged to tenants who occupy the federal lands that it manages within its jurisdiction. Although the actual rents we charge are confidential, we look to the local real estate market to guide the amount of rent we charge for the use of our lands. Our standard form lease would require that rent for industrial and commercial tenures is reviewed every three years. Canadian Port Authorities pay an annual stipend to the federal government based on its gross revenue. A payment in lieu of property taxes for vacant lands and waters is also made to bordering municipalities within its jurisdiction. Canadian Port Authorities do not have authority to collect taxes and do not receive any funding from governments. **Market and Concession Process for RBT2** The VFPA is undertaking two separate procurements for the terminal operator and for the infrastructure developer. This approach was selected due to the suitable allocation of economic risk and return for each party, as well as the provision of financial accountability during Project development and operation. Through the terminal operator procurement process, the terminal operator will provide the port authority with regular payment of rent, as well as ongoing fees and charges, the form and amount of which will be one of the key selection criteria in the procurement process, which is currently underway. The infrastructure developer will be responsible for the designing, building, financing, and maintaining the terminal land and related infrastructure. Once the Project is constructed, and subject to ongoing availability and function of the terminal, the port authority will make regular payments to the infrastructure developer over the upcoming decades, to compensate them for designing, building, financing, and maintaining the terminal. Any profit the VFPA earns on this project will be primarily reinvested in infrastructure and other improvements in the gateway for the benefit of all Canadians. **Additional information on port authority finances** For additional information on the port authority's financial information please review the VFPA's Financial Report https://www.portvancouver.com/about-us/statistics/	**EIS** 2.0 Project Overview 20.0 Economic Development **MSA** Appendix 5-B Aboriginal Issues and Interests

Penelakut Tribe

Table 7: Effects Assessment Methods (including Cumulative Effects)

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-7.1	Proposed that certain central terms be defined to ensure consistent use and understanding throughout the Project review process – namely "cumulative effect," "cumulative environmental effect," "mitigation," and "report".	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"The Canadian Environmental Assessment Agency (Agency) has developed a glossary of terms used in the context of the* Canadian Environmental Assessment Act, 2012 *(CEAA 2012) and it is available at: http://www.ceaa-acee.gc.ca/default.asp?Lang=en&n=E7F0FC59-1&offset=&toc=hide. In addition, CEAA 2012 defines the term "mitigation measures" as measures for the elimination, reduction or control of the adverse environmental effects of a designated project, and includes restitution for any damage to the environment caused by those effects through replacement, restoration, compensation or any other means."* *For the purposes of Crown consultation, if members of the Cowichan Nation Alliance would like to provide information to the Review Panel about the impacts of any aspect of the Project, including marine shipping, the Review Panel will receive this information as directed in Section 3.9."*	**Additional information provided by the VFPA:** In developing the EIS, the VFPA relied on federal guidance documents (such as noted by the CEA Agency in their April 17, 2015 letter (CEAR Document #278)). The EIS also includes a glossary (summary of definitions) applicable specifically to the EIS.	
PT-7.2	Stated that in order to comprehensively assess the full extent of Project impacts, it is essential that the Review Panel consider cumulative effects that are measured against a pre-industrial baseline; this is necessary to understand the extent to which the environment and the ability of Aboriginal peoples to exercise Aboriginal and Treaty rights has already been compromised. Recommended that the draft ToR include a non-exhaustive list of projects and activities that should be included to ensure their impacts are considered e.g. the Tsawwassen Ferry Terminal, the Deltaport Terminal Road and Rail Improvement Project, the South Fraser Perimeter Road, the Tsawwassen First Nation Industrial Land Development, the Tsawwassen Mills and Power Centre and the Deltaport Third Berth Project.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"A list of projects has been provided in the Environmental Impact Statement (EIS) Guidelines http://www.ceaa-acee.gc.ca/050/documents/p80054/97463E.pdf on page 31 and includes the following direction to the Proponent: "The EIS will include a narrative discussion of existing projects in the vicinity of the proposed project, including but not limited to the Tsawwassen Ferry Terminal, Deltaport Terminal Road and Rail Improvement Project, South Fraser Perimeter Road, Tsawwassen First Nation Industrial Land Development, Tsawwassen Mills and Power Centre and Deltaport Third Berth."* *On page 32 of the EIS Guidelines request that* "This narrative discussion should include historical data, where available and applicable, to assist interested parties to understand the potential effects of the project and how they may be addressed." *Also, if members of the Cowichan Nation Alliance have information relating to the state of the environment as it relates to the Project, including effects, we invite you to contact the proponent with any pre- industrial baseline information or data you may have, including Aboriginal traditional knowledge."*	**Addressed in response to AIR-12.04.15-13:** In the EIS, the existing conditions (baseline) reflect the conditions of the environment as modified by past development. Further discussion of how the VFPA considered the effects of past, present, and future projects is provided in completeness-phase AIR-12.04.15-13, including in that responses' schedules focused on applicable VCs.	**Information Requests** Response to Additional Information Request #13 (AIR-12.04.15-13 of CEAR Document #388)

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-7.3	Stated that Cowichan Nation Alliance anticipates there will be a significant need for ongoing environmental monitoring of the integrity of the Fraser River estuary upon consideration of the growing number of developments in that area. Recommended express direction to the Review Panel to consider the value of ongoing monitoring. Recommended amendment to section 3.2 to of the ToR to address this concern.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"Your comment has been considered. However, the Agency encourages you to provide any information or concerns you have related to the Fraser River estuary to the Review Panel for their consideration as part of the environmental assessment."*	**Addressed in EIS Section 33.5:** Similar to the Adaptive Management Strategy for DP3, as described in EIS Section 33.5, the VFPA is committed to developing and implementing a Follow-up Program for the Project. The purpose of the Follow-up Program is to verify the accuracy of residual effect predictions made in the EIS, and determine the effectiveness of any measures taken to mitigate the adverse environmental effects of the Project. To ensure the Program's elements adequately reflect conditions of Project approvals, final designs, and construction or operation approaches, as well as public, Indigenous group, and regulator feedback received during the review of the EIS, the VFPA will lead the development of the Follow-up Program after the submission of the EIS. The Follow-up Program will include: • An evaluation of the adequacy of existing data to provide a benchmark against which to test Project-related effects; • A monitoring design drawing on the measurable parameters identified to be field-tested; • A methodological approach for using field-collected data to measure and verify the accuracy of the effects predicted in the EIS; • A reporting framework that defines frequency of reporting, distribution and feedback mechanisms; and • Details of the VFPA's approach to adaptive management for the Project through construction and operation. The Follow-up Program will be developed in consultation with federal agencies, including the CEA Agency, Fisheries and Oceans Canada (DFO), and Environment and Climate Change Canada (ECCC). Complete drafts of the RBT2 Follow-up Program will be made available prior to the start of field measurements to ensure parties consulted on the program and approving agencies have an opportunity to evaluate and approve the program. Feedback from Indigenous groups regarding the draft program will be sought through the VFPA's ongoing engagement initiatives.	**EIS** 33.5 Roberts Bank Terminal 2 Follow-up Program
PT-7.4	Stated that the Review Panel's identification and recommendation of mitigation measures aimed at addressing potential impacts to Aboriginal and Treaty rights is a significant aspect of the Project review. As such, it is critical that the Review Panel be directed to consider all relevant factors when undertaking this task. For example, the Review Panel's consideration should not be restricted solely to the information received pursuant to section 3.5, but should also include the Review Panel's analysis of the section 2.1 factors, including the Review Panels' assessment of the effects of the Project on asserted and established Aboriginal and Treaty rights, including cumulative effects and the significance of those effects. Stated that it is also important that section 3.7 reflect the importance of considering impacts to	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"Section 3.7, now Section 3.11, has been revised to direct the Review Panel to use information received throughout the environmental assessment, which allows it to use information collected under any section of the Terms of Reference.* *Please see page 3 of the "Aboriginal Consultation and EA Handout" http://www.ceaa-acee.gc.ca/050/documents/p80054/100180E.pdf for further details. If the Cowichan Nation Alliance has information or opinions on proposed mitigation during the EA process, the Review Panel would welcome that information. The Review Panel has been mandated to provide in its report rationale, conclusions and*		

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	Aboriginal and Treaty rights independent of the Review Panel's recommendation of mitigation measures. Recommended that the Review Panel specify the degree to which each recommended mitigation measure will avoid or minimise the potential adverse effects of the Project on Aboriginal and Treaty rights. This aspect of the analysis is fundamental to the determination of whether a particular mitigation measure is suitable, whether additional accommodation of Aboriginal and Treaty rights is warranted, and may ultimately influence whether the Project should proceed. Recommended amendments to section 3.7 of the draft ToR to address this concern.		*recommendations on the environmental assessment including any mitigation measures and follow up programs. Section 3.11 allows the Review Panel to make recommendations, which will be considered by the Crown, on avoiding or mitigating environmental effects related to potential impacts on potential or established Aboriginal or Treaty rights.* *At the end of the process it is up to the federal government to decide whether or not to adopt the recommendations contained in the Review Panel's report."*		
PT-7.5	Asked whether the EwE Model Study Area predicts Project impacts south of the American border.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Responded that the answer varies based on the VC in question, but there may be some localised effects. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#101):** The ecosystem model is described in the EIS. The model incorporated predator-prey relationships (biotic factors) and environmental factors within the marine environment. No productivity changes, as determined by the ecosystem model, are anticipated outside of Canadian waters, as productivity-related effects result from construction activities, the Project footprint itself, and indirect localised changes to coastal processes around the terminal.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 10.0 Biophysical Setting 10.3 Overview of Assessing Ecosystem Productivity Appendix 10.3-A Roberts Bank Ecopath with Ecosim and Ecospace Model Parameter Estimates Appendix 10.3-B Roberts Bank Ecosystem Model Development and Key Run Appendix 10.3-C Roberts Bank Spatial Ecosystem Model Sensitivity Analysis Appendix 10-D Roberts Bank Spatial Ecosystem Model Sensitivity Analysis
PT-7.6	Asked about the third party review of the EwE model: who is conducting the review, what the review consists of, and why the review is being conducted.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Stated that a VFPA-commissioned third party is conducting the review who is experienced in the study of marine ecosystems and modelling, and speculated that he will be looking at the inputs, the results, and assessing whether or not they are valid and based on correct information. Explained that David Preikshot (the independent reviewer) has a PhD in Fisheries Science at UBC.	**Additional information provided by the VFPA:** In January 2014, the federal Minister of Environment referred the Project for an environmental assessment by an independent review panel. The entire EIS, including the EwE (Ecopath with Ecosim and Ecospace) model, also referred to as the Roberts Bank ecosystem model, is subject to review by the Review Panel. The independent review of the EwE model commissioned by the VFPA (as noted in the previous column) was undertaken prior to finalisation of the EIS. The results of the review informed and were incorporated into the model as it is presented in the EIS. **Addressed in Information Request Package 3 Preamble in Support of Responses to IR3-01 to IR3-24:** As noted in the Preamble in Support of Responses to IR3-01 to IR3-24, the VFPA has actively responded to questions about the	**Information Requests** Response to Information Request #6 (IR-7.31.15-06 of CEAR Document #314) Information Request Package 3 Preamble in Support of Responses to IR3-01 to IR3-24 – Roberts Bank Ecosystem Model (CEAR Document #928) **From the VFPA to the Review Panel re: Answers to preliminary technical questions submitted during the completeness phase from DFO, NRC, and Environment**

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				application of the Roberts Bank ecosystem model, including through completeness information request responses (see IR-7.31.15-06) and in separate, agency-specific engagement. DFO and Natural Resources Canada (NRC) provided written questions to the VFPA based on a preliminary review of the EIS on November 19, 2015, ahead of an in-person meeting on November 23, 2015. The meeting included representatives from the VFPA, NRC, DFO, ECCC, and other federal agencies. Following this large-scale engagement, a series of more topic-specific meetings were held with individual and/or combinations of agencies through December 2015 and February 2016. Involving DFO, NRC, ECCC, and the VFPA, the meetings provided clarity on topics such as hydrology, sediment modelling, and ecosystem modelling questions posed by the agencies. The VFPA provided a cumulative submission of responses to the agencies in March and May 2016, and these questions and responses were posted to the CEA Agency's registry on September 28, 2016 (CEAR Document #547). In December 2016, the Canadian Science Advisory Secretariat of the DFO Science Branch released its independent review of the Roberts Bank ecosystem model (CEAR Document #900). Numerous federal experts conducted the review, including from DFO and the Canadian Wildlife Service. The general conclusions of the review support how the model was established and agreed that input parameter estimates were adequate for the Roberts Bank ecosystem. Importantly, the DFO Science Branch (with input from NRC) concluded "the EwE model, as implemented in this project and reviewed here, is a useful first-order framework to organise information and derive initial estimates of how the system may respond to perturbations" (CEAR Document #900, p.20).	**and Climate Change Canada, concerning the ecosystem modelling to support the RBT2 environmental review (NOTE: Updated September 28, 2016) (CEAR Document #547)**
PT-7.7	Asked about the funding for the ecosystem productivity model and whether the model is objective.	03-Jul-2014, Aboriginal Groups Valued Components Workshop #2	**03-Jul-2014, Workshop:** Explained that the VFPA is working with the University of British Columbia's Fisheries Centre (now the Institute for the Oceans and Fisheries), a leader in ecosystem modelling and the key developer of the EwE approach. Stated that in the environmental assessment application will have all the different assumptions used, all the data sources and why the technical team picked those, for people to critique and give the VFPA feedback on. Stated that the VFPA is trying to be as transparent and open as possible.	**Addressed in Information Request Package 3 Preamble in Support of Responses to IR3-01 to IR3-24:** The VFPA obtained input on selecting the appropriate approach to assessing productivity at Roberts Bank through the Productive Capacity TAG process. The TAG process recommended use of the EwE model, which is well documented in the scientific literature and has been widely used to quantitatively describe marine food webs, fisheries policy exploration (regulatory decisions on managing fisheries), ecosystem-based fisheries management, and a joint B.C.-Canada environmental assessment. The EwE model was developed at the Institute for the Oceans and Fisheries, and more than 400 ecosystem models applying the software have been published. Thirteen of these publications describe marine areas in B.C., six of which are located in the Strait of Georgia. More information on this model can be found at http://www.ecopath.org/. Additional information concerning the VFPA's selection and use of the EwE model in the environmental assessment is available in Information Request Package 3 Preamble in Support of Responses to IR3-01 to IR3-24.	**Information Requests** Information Request Package 3 Preamble in Support of Responses to IR3-01 to IR3-24 – Roberts Bank Ecosystem Model (CEAR Document #928)
PT-7.8	Noted stark disagreement between the Cowichan Nation Alliance and the VFPA about	11-Dec-2014, Health & Aboriginal Rights	**11-Dec-2014, Workshop:**	**Additional information provided by the VFPA:**	**EIS**

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	how cumulative effects are assessed and applied to impacts to Rights. Expressed concern with the cumulative effects studies.	Workshop – Cowichan Nation Alliance 29-Aug-2017, Follow Up Program Workshop with Cowichan Nation Alliance, Lyackson First Nation, and Malahat First Nation	Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests, including concerns around cumulative effects, and provided the VFPA's responses. **29-Aug-2017, Workshop:** Committed to provide information from the EIS and information requests related to cumulative effects studies for RBT2. **20-Feb-2018, Email from the VFPA to Penelakut Tribe:** The VFPA provided draft meeting notes from the 29-Aug-2017 Follow-up Program Workshop. A post-meeting note was included regarding cumulative effects: *"Section 8.1.9 of the RBT2 EIS describes the cumulative effects assessment methodology for the RBT2 environmental impact assessment. An assessment of future cumulative effects was conducted when an adverse residual effect was predicted to occur to a valued component (VC) due to a Project-related interaction. For an intermediate component (IC), an assessment of future cumulative change was conducted to assess when Project-induced changes to an IC may combine cumulatively with changes caused by other projects and activities that will be carried out. Assessment of future cumulative effects for VCs and future cumulative change for ICs can be found in the following sections of the EIS:* *ICs:* • *Air Quality: Section 9.2.9* • *Noise and Vibration: Section 9.3.10* • *Light: Section 9.4.9* • *Coastal Geomorphology: Section 9.5.9* • *Surficial Geology and Marine Sediment: Section 9.6.9* • *Marine Water Quality: Section 9.7.9* • *Underwater Noise: Section 9.8.8* *Biophysical VCs:* • *Marine Vegetation: Section 11.10* • *Marine Invertebrates: Section 12.10* • *Marine Fish: Section 13.10* • *Marine Mammals: Section 14.10* • *Coastal Birds: Section 15.11* *Socio-Economic VCs:*	The *EIS Guidelines* issued by the CEA Agency do not require a cumulative effects assessment with respect to the ability of Indigenous groups to exercise their asserted or established treaty or Aboriginal rights. **Addressed in EIS Appendix 7.2-B (#27):** The methods used to assess the potential effects of the Project, including mitigation measures, residual effects, and cumulative effects, are described in EIS Section 8.0. The environmental assessment for the Project was developed to meet the requirements specified in the *EIS Guidelines* and is consistent with existing guidance documents, including the "Operational Policy Statement Assessing Cumulative Environmental Effects Under the *Canadian Environmental Assessment Act 2012*" and "Determining Whether a Project is Likely to Cause Significant Adverse Environmental Effects," the "Cumulative Effects Assessment Practitioners' Guide," and the "Guideline for the Selection of Valued Components and Assessment of Potential Effects," among others. Descriptions of existing pre-Project conditions relevant to each VC and IC were developed based on existing information, field studies, data analysis, and modelling. The description of existing conditions considered how ICs and VCs have been already affected by other projects and activities that have been carried out. Expected conditions were also determined where substantial changes are expected to occur to a VC or IC in the future prior to Project construction or operation, such as from changes in regulation or as a result of other projects or activities currently underway. Potential Project-related effects that may persist after the implementation of mitigation measures are called residual effects. The EIS identifies Project-related residual effects and their significance. The determination of significance is specific to each VC and the EIS presents the rationale for the significance thresholds applied. Where measurable residual effects to a VC have been predicted to result from the Project, a cumulative effects assessment was conducted to determine whether Project-related residual effects are likely to interact cumulatively with the effects of other projects and activities. Similarly, where Project-induced changes to an IC were expected, the potential for those changes to combine cumulatively with changes caused by other projects and activities was assessed. Where the Project was predicted to contribute to cumulative effects, additional mitigation measures were considered. The VFPA then determined the significance and likelihood of any adverse residual cumulative effects following the implementation of mitigation measures. Where it was determined that potential adverse effects could occur, technically and economically feasible mitigation measures to avoid, reduce, or offset potential adverse effects to an acceptable level have been proposed. The design and implementation of proposed mitigation measures considers input received from regulators, Indigenous groups, local government, and the public. The methods used to assess the potential effects of the Project, including mitigation measures, residual effects and cumulative effects, are described in the EIS.	Appendix 7.2-B Aboriginal Groups Issues and Interests Table 8.0 Effects Assessment Methods 8.1 Environmental Assessment Methods 8.1.6 Mitigation Measures 8.1.7 Characterisation of Residual Effects and Context 8.1.8 Determination of Significance of Residual Adverse Effects 8.1.9 Cumulative Effects Assessment ***Updated EIS Guidelines***

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			• *Marine Commercial Use: Section 21.11* • *Visual Resources: Section 25.10* • *Land and Water Use: Section 26.10* • *Human Health: Section 27.10* • *Cumulative Effects Assessment: Section 28.10* *Information requests related to cumulative effects for RBT2 include:* • *IR #13 – Cumulative Effects Assessment* • *AIR #13 – Cumulative Effects Assessment"*	The VFPA has consulted with Indigenous groups regarding Project components and activities, selection of VCs, the potential effects of the Project, proposed mitigation measures, and potential changes to the environment related to the Project. Indigenous groups were also provided draft community profiles and rights and Current Use information for their review and comments. Feedback received was incorporated into the EIS.	
PT-7.9	Concerned about the use of representative species in the assessment.	03-Jul-2014, Aboriginal Groups Valued Components Workshop #2	**03-Jul-2014, Workshop:** Provided participants with a handout showing ICs, VCs, and species represented by each VC. Discussed how representative species are used in environmental assessments. Explained that for example for the VC marine fish, there are a number of representative focal species and sub-components, more for ease of organisation than anything. For marine fish there are five sub-components, and of those, 13 focal species are covered. Explained why those focal species were selected and some of the studies that supported our selection. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#25):** ICs, VCs, and VC sub-components are identified in EIS Section 8.0. EIS Section 8.0 describes the overall 3-step VC selection process, including the rationale for focusing the assessment on VC sub-components. The rationale for selection of specific ICs, VCs, and VC sub-components is described in each assessment section. For example, discussion regarding sub-component selection relative to species of importance to Indigenous groups, including eulachon and sturgeon, is captured in EIS Section 13.0. **Addressed in EIS Section 8.0:** Subsequent to VC selection, VC sub-components were identified to further structure and streamline the assessment as appropriate. For example, for biophysical VCs, sub-component species or groups were chosen for the ability to represent other species that are similar in nature, occupy comparable types of habitats, serve similar ecological roles, or could otherwise be affected by the Project in an analogous way. In selecting representative species, or in some cases species groups, consideration was given to species of specific importance to regulatory agencies, Indigenous groups, and the public, as identified by community knowledge and ITK, and during consultation and engagement, and assessment planning. **Addressed in Information Request Package 5 – Response to Information Requests Relating to Representative Species:** Representative species are considered in terms of the biological and ecological similarities they share with other species within the sub-component, and for potential similarities in how the Project may interact with and affect them. In some cases, biological attributes may differ within a sub-component grouping, but their interactions with the Project and mechanisms contributing to potential effects from the Project are considered to be analogous. As a result, the VFPA selected representative species for each sub-component for which sufficient information is known, in order to provide an assessment that considers all potential interactions and Project-related effects. For example, substantial information exists for the southern resident killer whale (the representative species used for toothed marine mammals) and much less so for the transient killer whale. While there are some biological differences between the two, they are considered the same species; both rely on underwater noise for prey detection; and potential Project effects and mitigation measures are the same. In this example, it would be both impractical and	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 8.0 Effects Assessment Methods **Information Requests** Information Request Package 5 – Response to Information Requests Relating to Represented Species

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				inefficient to undertake an assessment on both species as the conclusions of the assessment would be the same. Moreover, in selecting representative species, or in some cases species groups, consideration was given to species of specific importance to regulatory agencies, Indigenous groups, and the public, as identified by community knowledge and ITK, and during consultation and engagement, and assessment planning. This approach was taken as it would be impractical to characterise existing conditions and assess effects on every species that may frequent the Roberts Bank area. In this way, the use of VCs, sub-components, or representative species improves the effectiveness and efficiency of assessment by focusing on the key Project interactions.	
PT-7.10	Stated that the broad drafting of the VCs risks insufficient coverage of environmental components of importance to the Cowichan Nation Alliance. Requested that the following species be listed under the relevant Valued Component heading: i. Marine vegetation: green seaweed ii. Coastal terrestrial vegetation: bull rush, reeds, cranberries, blueberries, camas iii. Marine fish: Coho, Spring, Chum, Pink, Chinook, and Sockeye Salmon, eulachon, herring, cod, halibut, flounder and sturgeon iv. Marine invertebrates: red sea urchin, sea cucumber, and mussels v. Marine mammals: harbour seal vi. Migratory birds: Brant geese, canvasback duck, Common Merganser, and Mallard.	09-May-2014, Letter from Cowichan Tribes acting in alliance with the Stz'uminus, Penelakut, Hwlitsum and Halalt communities	**09-May-2014:** Recorded comment for consideration by Project team. **06-Jun-2014 and 03-Jul-2014, Workshops:** Aboriginal Groups Valued Components Workshop #1 and #2 provided an opportunity for Indigenous groups to comment on the VCs.	**Addressed in EIS Volume 3:** i. Marine vegetation: Green seaweed (EIS Section 11.0 has been included as the marine vegetation sub-component macroalgae, which includes *Ulva* spp., as well as other brown algal species (bull kelp, rockweed). ii. Coastal terrestrial vegetation: bull rush, reeds, cranberries, blueberries, camas (EIS Section 11.0). This was considered when selecting marine vegetation sub-components (EIS Section 11.2.1). As the Project is located in the marine environment and Project-related interactions with terrestrial vegetation species are not anticipated, these species were not incorporated into the effects assessment (without an interaction, there is no potential for an effect on these species). iii. Marine fish: coho, spring, chum, pink, Chinook, and sockeye salmon, eulachon, herring, cod, halibut, flounder, and sturgeon (EIS Section 13.0). • All Pacific salmon were considered in the assessment under the sub-component Pacific salmon. Chum and Chinook were selected as representative species for the five salmon species, as they are more estuarine dependent (any predicted effects to chum and Chinook are representative of effects to the other species). Refer to EIS Section 13.2.1 for more information. • Eulachon was assessed through representative forage fish species (see EIS Sections 13.6.2.1 and 13.6.3.3). Eulachon was not selected as a representative species as it is rare within the marine fish LAA based on surveys conducted at Roberts Bank and Sturgeon Bank in past years (EIS Section 13.2). • Pacific herring was included in the assessment as a representative species under the forage fish sub-component. • Lingcod was included in the assessment as a representative species under the reef fish sub-component. Rock cod were assessed through their representation by rockfish, as discussed in EIS Section 13.5.2. • Starry flounder was included in the assessment as a representative species under the flatfish sub-component. Pacific halibut are not typically found in estuarine	**EIS** 11.0 Marine Vegetation 11.2.1 Sub-components 12.0 Marine Invertebrates 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component 13.2.1 Sub-components 13.5.2 Selection of Marine Fish Valued Component 14.0 Marine Mammals 14.2.1 Sub-components 15.0 Coastal Birds 15.2.1 Sub-components

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				environments (including the Fraser River estuary) and therefore would not interact with and be adversely affected by the Project. • Sturgeon were assessed through the use of Chinook and chum salmon representative species. Sturgeon was not selected as a representative species as it is also rare within the marine fish LAA. Refer to EIS Section 13.2.1 for more information. iv. Marine invertebrates: red sea urchin, sea cucumber, and mussels (EIS Section 12.0). • Red sea urchin and sea cucumbers were assessed through the use of Dungeness crab representative species. Red sea urchin and sea cucumbers were considered when selecting marine invertebrate sub-components, but were not selected as representative species as their typical habitat is not an estuarine sand-dominated environment like Roberts Bank. As such, Project-related effects to these species are anticipated to be very limited. • Mussels (specifically the bay mussel (*Mystilus trossulus*)) was included in the assessment under the bivalve shellfish sub-component. v. Marine mammals: harbour seal (EIS Section 14.0). • Harbour seal was considered and included in the marine mammals' effects assessment under the seals and sea lions sub-component. vi. Migratory birds: Brant geese, canvasback duck, Common Merganser, and Mallard (EIS Section 15.0). Brant was included in the coastal birds' effects assessment as a representative species of the waterfowl sub-component. American Wigeon represented Mallard, while common merganser and canvasback duck are represented within the diving bird sub-component. These latter two species were not selected as representative species as they are not common at Roberts Bank, nevertheless, any potential effects to these species are assessed through more common species (that have been selected as representative species). Refer to EIS Section 15.2.1 for more information.	
PT-7.11	Requested more information on the scope and purpose of field studies.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Stated that the studies have been undertaken, and will be included in the EIS for review. Each IC and VC section of the EIS contains information on field studies that were undertaken in support of the EIS.	**Additional information provided by the VFPA:** In 2012, the VFPA initiated field, desktop (i.e. literature review), and modelling studies to inform the understanding of existing conditions at Roberts Bank. Building on available information, these studies were designed to address known data gaps, as well as issues and interests of Indigenous groups, stakeholders, and the public, as well as to provide baseline information to assess Project-related effects as part of the environmental assessment. Some Technical Data Reports are appendices to EIS sections, while others are available publicly on the RBT2 website: http://www.robertsbankterminal2.com/environmental-assessment/technical-data-reports/	**RBT2 Project website** http://www.robertsbankterminal2.com/environmental-assessment/technical-data-reports/

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-7.12	Requested a rationale for excluding Cowichan Nation Alliance participation in the TAG process. As described further in Section 7.4, the TAG process focused on four key areas identified by [the VFPA]: 1. Coastal Geomorphology, 2. Productive Capacity, 3. Biofilm and Shorebirds, and 4. Southern Resident Killer Whales. Requested a rationale for how the four key areas represent the breadth of Aboriginal interests on Roberts Bank. Stated that First Nations participated in the Technical Working Group process during the Deltaport Third Berth evaluation and deserve a place at the Technical Tables. Asked which technical gaps exist within this process due to inadequate Aboriginal participation.	26-Oct-2016, Letter to Panel from Penelakut Tribe (CEAR Document #615)	**01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in responses to IR-7.31.15-08 and MSA IR-02.24.16-4:** How ITK was utilised in the EIS and MSA is described in the VFPA's response to IR-7.31.15-08 and MSA IR-02.24.16-4. During the scoping phase of the environmental assessment, specific feedback was sought from Indigenous groups on a list of proposed VCs and sub-components. As described in EIS Appendix 7.2-A, a VC selection and rationale document was sent to Indigenous groups for review and feedback in April 2014. An additional opportunity for input on VC and sub-component selection was provided through participation by Indigenous groups in VC selection workshops held in June and July of 2014. In addition to these specific opportunities to provide feedback on VC and sub-component selection, as engagement activities continued, relevant information provided by Indigenous groups was taken into consideration (as described in EIS Section 7.2). **Addressed in EIS Appendix 7.2-B (#23):** The VFPA established the TAG process in 2012 to engage and consult with leaders in the technical and scientific community to provide guidance on four key topic areas – southern resident killer whales, biofilm and shorebirds, coastal geomorphology, and productive capacity. The TAG Terms of Reference and Summary Reports are available on the Project website: http://www.robertsbankterminal2.com/information-centre/project-documents/. The following Indigenous groups were invited to contribute to the TAG process: • Tsawwassen First Nation; • Musqueam First Nation; • Semiahmoo First Nation; • Tsleil-Waututh Nation; • Stó:lō Nation; and • Stó:lō Tribal Council. The TAG process was also discussed in meetings with Indigenous groups, and summary reports on the TAG process were provided to all Indigenous groups for review and comment. Additional information provided by the VFPA: Summary Reports are also available as appendices to the following IR responses: • Package 2 Preamble - Appendix IR2-A Coastal Geomorphology Technical Advisory Group Summary Report • Preamble in Support of Responses to IR3-01 to IR3-24 - Appendix IR3-A Productive Capacity Technical Advisory Group Summary Report • Appendix IR5-29-B Biofilm & Shorebirds Technical Advisory Group Summary Report • Appendix IR5-29-C Southern Resident Killer Whales Technical Advisory Group Final Report	**EIS** Appendix 7.2-A Consultation Activities by Aboriginal Group Appendix 7.2-B Aboriginal Groups Interests and Issues Table 7.3.3.2 Consultation **Information Requests** Response to Information Request #8 (IR-7.31.15-08 of CEAR Document #314) Response to Additional Information Request #4 (MSA IR-02.24.16-4 of CEAR Document #386) Revised Responses to Information Request Package 2 (CEAR Document #961) Responses to Information Request Package 3 (CEAR Document #984) Response to Information Request #5 (IR56-29 of CEAR Doc #1185)

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-7.13	Requested information about the process whereby it was determined that a VC was of interest to Aboriginal groups. Asked which VCs were identified by Aboriginal groups. Requested list of specific VCs that were selected based on Community Knowledge and ATK. Stated that candidate VCs of interest to Aboriginal groups were excluded if the following two additional questions were not answered affirmatively: "Does the candidate VC occur near or within the Project Area?" and "Could the Project interact with the candidate VC?" Asked how Community Knowledge and ATK was incorporated to answer these two additional questions.	26-Oct-2016, Letter to Panel from Penelakut Tribe (CEAR Document #615)	The VFPA has reviewed this letter and provides the following information.	**Addressed in responses to IR-7.31.15-08 and MSA IR-02.24.16-4:** How ITK was utilised in the EIS and MSA, including when it was used to inform VC selection, is described in IR-7.31.15-08 and MSA IR-02.24.16-4. During the scoping phase of the environmental assessment, specific feedback was sought from Indigenous groups on a list of proposed VCs and sub-components. As described in EIS Appendix 7.2-A, a VC selection and rationale document was sent to Indigenous groups for review and feedback in April 2014. An additional opportunity for input on VC and sub-component selection was provided through participation by Indigenous groups in VC selection workshops held in June and July of 2014. In addition to these specific opportunities to provide feedback on VC and sub-component selection, as engagement activities continued, relevant information provided by Indigenous groups was taken into consideration (as described in EIS Section 7.2).	**EIS** 7.2 Aboriginal Groups Engagement and Consultation Appendix 7.2-A Consultation Activities by Aboriginal Group **Information Requests** Response to Information Request #8 (IR-7.31.15-08 of CEAR Document #314) Response to Additional Information Request #4 (MSA IR-02.24.16-4 of CEAR Document #386)
PT-7.14	Requested the threshold criteria which were adopted with respect to determination of significance of residual adverse cumulative effects. Stated that they need to understand what the thresholds as they dictate the classification of "significance."	26-Oct-2016, Letter to Panel from Penelakut Tribe (CEAR Document #615)	The VFPA has reviewed this letter and provides the following information.	**Addressed in EIS Section 8.0:** To determine the significance of residual adverse effects, the assessment considered the nature of each residual effect and the context within which it is expected to occur. The existing (or expected) condition of each VC was compared with the future conditions predicted to result from the Project. The anticipated future condition of each VC with the Project was compared to a threshold of significance defined for that specific VC. The threshold of significance is the point beyond which the integrity of the VC may be compromised, and the residual effect is considered to be significant. If the future condition of the VC with the Project does not exceed the defined threshold, the effect is considered to be not significant. If the future condition of the VC with the Project does exceed the defined threshold, the effect is considered to be significant. When defining the threshold of significance, the assessment included consideration of existing standards, guidelines, or objectives that have been established by government through regulation or applicable regional land and resource use management plans or other mechanisms, where available and suitable for determining significance. If no appropriate government-established threshold was available, the significance threshold was defined using the professional judgement of the Project team and current scientific knowledge about the VC. The rationale for the significance threshold used in the assessment and for the determination of significance is provided for each VC.	**EIS** 8.0 Effects Assessment Methods 8.1.8 Determination of Significance of Residual Adverse Effects
PT-7.15	Asked if the cumulative effect of a 6% increase in container vessel traffic will become the tipping-point that results in measurable and undesirable impacts when all project-based vessel traffic increases are taken into consideration located within both B.C. and the State of Washington. Only southern resident killer whales were deemed to be near such a threshold.	13-Jan-2016, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #385)	**12-May-2016, Letter from the CEA Agency to Cowichan Nation Alliance (CEAR Document #398):** *"The Agency requested additional information on the projects used in the cumulative effects assessment in additional information request "#7 Reasonably Foreseeable Projects and Activities".* *In addition, the Panel will determine whether it requires additional information or clarification*	**Addressed in MSA Section 6.7:** As noted in MSA Section 6.7, each assessment section in MSA Sections 7.0, 8.0, and 9.0 includes an assessment of potential additional future cumulative interactions between the residual effects anticipated for the VC (or residual changes for an IC), if any, and effects associated with additional marine shipping activity in the marine shipping area in 2030 related to reasonably foreseeable projects and activities. Projected future marine shipping traffic volumes are provided in MSA Table 4-7. These traffic volumes are associated with certain and reasonably foreseeable projects and	**MSA** 6.7 Cumulative Effects Assessment Appendix 6-A Certain and Reasonably Foreseeable Projects and Associated Activities Considered in the Marine Shipping Cumulative Effects Assessments

		26-Oct-2016, Letter to Panel from Penelakut Tribe (CEAR Document #615)	*with respect to this information to inform its sufficiency review."*	activities listed in MSA Appendix 6-A. The significance determination for any residual cumulative effects is made using the same significance threshold as defined for the assessment of residual effects. Potential interactions with future certain or reasonably foreseeable marine-based projects are limited to increases in vessel traffic associated with those projects. The MSA concludes that no adverse cumulative effects are anticipated, with the exception of potential effects to southern resident killer whales. Consistent with the conclusions reached in the EIS, the MSA concludes that southern resident killer whales have already been significantly adversely affected by past projects and activities; therefore, cumulative effects are expected to remain significant. Further information concerning how significance criteria was utilised in the MSA is further discussed in MSA IR-02.24.16-7.	7.0 Physical Environment Effects Assessments 8.0 Marine Biophysical Environment Effects Assessments 9.0 Human Environment Effects Assessments **Information Requests** Response to Additional Information Request #7 (MSA IR-02.24.16-7 of CEAR Document #386)
PT-7.16	Noted that identified rockfish predators include dolphins and porpoises, pinnipeds, southern resident killer whales, bald eagles, gulls and terns, juvenile and adult salmon, dogfish, large demersal fish, lingcod, rockfish, skate, and starry flounder. Requested a more accurate list. Asked why human withdrawals (i.e., fishing) were excluded.	26-Oct-2016, Letter to Panel from Penelakut Tribe (CEAR Document #615)	**01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#101):** The Roberts Bank ecosystem model is described in the EIS. The model incorporated predator-prey relationships (biotic factors) and environmental factors within the marine environment, and does not incorporate anthropogenic influences such as fishing. Since changes are determined by comparing productivity in the future with the Project, to the future without the Project, the level of human influence is deemed to be the same with and without the Project, and humans are not included in the food web.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table
PT-7.17	Concerned that information can be manipulated in the assessment to minimise the appearance of impacts to certain species. For example: • Assessments average things out over populations and a period of time, and underrepresent the effect. • Species will have different baseline biomass depending on the time of the year.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Stated that results have not been averaged, and that the team fully understands a lot of species are there temporarily. Explained that this presentation is a high level summary and more detail and specificity will be provided in the EIS. For context, many birds are there for short periods of time. Even though they are there in large numbers for a few weeks, the biomass their presence amounts to over the course of a year is small, which is the timeframe used for the model; the model incorporates seasonal information.	**Additional information provided by the VFPA:** As is noted in the VFPA's response to preliminary questions from DFO and NRC in 2015, question 2.17 Time Steps (2.2.6), annual averages are used to include both spatial and temporal variation in biomass estimates for Roberts Bank. This allows comparisons across highly seasonal and endemic groups. Annual averages are a standard metric for ecological questions and are necessary when conducting an ecosystem level assessment (Harvey 2013, Mackinson and Daskalov 2008, and Preikshot 2013). Understanding that there is variability within any estimate, sensitivity analyses were conducted to examine model performance with a range of input biomasses, centred on the initial value (see question 2.7 (Use of Confidence Limits in RB Model) for more information on this) (CEAR Document #547).	**CEAR Document #547 from the VFPA to the Review Panel Re: Answers to Preliminary Technical Questions Submitted During the Completeness Phase from DFO, NRC And Environment and Climate Change Canada, Concerning the Ecosystem Modelling to Support the RBT2 Environmental Review**
PT-7.18	Concerned that the threshold of impacts are a subjective assessment based on biovariability.	09-Nov-2015, Meeting with Penelakut Tribe	**09-Nov-2015, Meeting:** Recorded comment for consideration by Project team.	**Addressed in EIS Section 8.0:** To determine the significance of residual adverse effects, the assessment considered the nature of each residual effect and the context within which it is expected to occur. The existing (or expected) condition of each VC was compared with the future conditions predicted to result from the Project. The anticipated future condition of each VC with the Project was compared to a threshold of significance defined for that specific VC. The threshold of significance is the point beyond which the integrity of the VC may be compromised, and the residual effect is considered to be significant. If the future condition of the VC with the Project does not exceed the defined threshold, the effect is considered to be not significant. If the future condition of the VC with the Project does	**EIS** 8.1.8 Determination of Significance of Residual Adverse Effects **Information Requests** Response to Information Request #7 (IR-7.31.15-07 of CEAR Document #314) Response to Sufficiency Information Request #11 (IR5-11 of CEAR Document #1153)

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				exceed the defined threshold, the effect is considered to be significant. When defining the threshold of significance, the assessment included consideration of existing standards, guidelines, or objectives that have been established by government through regulation or applicable regional land and resource use management plans or other mechanisms, where available and suitable for determining significance. If no appropriate government-established threshold was available, the significance threshold was defined using the professional judgement of the Project team and current scientific knowledge about the VC (including, when available, scientific data concerning natural ecosystem variability). The rationale for the significance threshold used in the assessment and for the determination of significance is provided for each VC. **Addressed in responses to IR-7.31.15-07 and IR5-11:** Further information concerning how natural variability was considered in the EIS is discussed in the VFPA's responses to IR-7.31.15-07 and IR5-11.	
PT-7.19	Stated that the Project will have a huge impact on the Roberts Bank area and disagrees with assessment conclusions.	01-Dec-2016, Chief & Council Meeting with Penelakut	**01-Dec-2016, Meeting:** Recorded comment for consideration by Project team.	**Additional information provided by the VFPA:** As a result of extensive studies and assessment, the VFPA is confident that potential adverse effects can be fully or partially avoided or reduced through Project design and the implementation of environmental management programs. Where Project-related effects cannot be fully avoided or reduced, offsetting measures, such as the creation and enhancement of habitat, will be applied. A robust monitoring and follow-up program will be implemented to assess the effectiveness of mitigation measures. The *Updated EIS Guidelines* as issued by the CEA Agency directs the proponent (the VFPA) to provide sufficient data and analysis on any potential changes to the environment to permit a thorough evaluation of the environmental effects of the project by a Review Panel. The Review Panel is currently undertaking an assessment of the environmental effects of the project in a manner consistent with the requirements of the *CEAA, 2012* and the Final Terms of Reference. The Review Panel will prepare and submit a report to the federal environment Minister, who will in turn make a determination of the significance of potential environmental effects. If the Minister decides that the Project is likely to cause significant adverse environmental effects, the Minister must refer to the Governor-in-Council the matter of whether those effects are justified in the circumstances and the decision of whether the Project should be approved. Since the beginning of the environmental assessment process for RBT2, Indigenous groups have, and will continue to have opportunities to participate in, review and comment on the potential effects of the Project, with records of comments being hosted publicly on the CEAA Registry.	***Updated EIS Guidelines*** **FINAL Roberts Bank Terminal 2 Project Review Panel Terms of Reference (CEAR Document #176)**
PT-7.20	Requested that there be a section in the EIS for "mitigation through project alteration" Stated that they want to know how the Project can be altered to avoid impact to Penelakut's community.	26-Sep-2016, Meeting with Penelakut	**26-Sep-2016, Meeting:** Recorded comment for consideration by Project team.	**Additional information provided by the VFPA:** In keeping with the VFPA's mandate to provide a high level of environmental protection, well-planned mitigation measures based on a thorough understanding of the ecological function of the affected environment are key components to preventing and reducing potential Project effects.	

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				For the Project, the VFPA has adopted the use of the following mitigation hierarchy to address Project-related effects to marine biophysical VCs: 1. Avoid potential adverse effects; 2. Reduce or minimise potential adverse effects that cannot be avoided; and 3. Offset potential adverse effects that cannot be avoided, minimised, or reduced. Measures have been incorporated into Project design and construction scheduling to avoid potential effects to VCs. As examples, the terminal has been located in subtidal waters to avoid overlap with sensitive intertidal habitats, designed with a rounded corner on the northwest side to reduce effects of sediment scour and deposition, and designed with fish refuge habitat in the concrete caissons that would form the berth face.	
PT-7.21	Requested a more concise rationale for dismissing changes of up to 30% in productivity as minor and for changes of up to 60% as moderate.	10-Jun-2015, Letter to the CEA Agency from Penelakut Tribe (CEAR Document #210)	**13-Oct-2015, Letter from the CEA Agency to Penelakut Tribe (CEAR Document #310):** *"The Agency has requested additional information on this item in its letter of July 31, 2015 to [the VFPA] (page 3, #7)."*	**Addressed in response to IR-7.31.15-07:** Designating a category for a sub-component involved a weight of evidence approach. The results of the Roberts Bank ecosystem model were provided in terms of per cent change (within the range of 0% to 100%) and difference in biomass (tonnes, or t) between future scenarios with and without the Project. These results were categorised into the common classification system (in EIS Tables 11-17, 12-8, 13-10, and 15-10), but were not used alone to determine productivity changes to sub-components and representative species/groups. All available lines of evidence (including results from the Roberts Bank ecosystem model, literature, other models, and professional opinion) were synthesised and integrated into the common classification system (described in detail in each of the VC sections and summarised for all sub-components and representative species or groups in EIS Table 17-3). Once all available lines of evidence were considered, the conclusions of productivity change for each sub-component and representative species may have differed from the results based on the Roberts Bank ecosystem model alone. EIS Tables 11-21, 12-11, 13-12, and 15-11 outline the various lines of evidence and common classification category conclusions for all VCs and sub-components.	**Information Requests** Response to Information Request #7 (IR-7.31.15-07 of CEAR Document #314)
PT-7.22	Stated that the EIS is not sufficient to assess environmental effects and requires an assessment of cumulative effects on current use activities of Aboriginal groups. Stated that together, the impacts which have been determined to be negligible may add up to a measurable negative effect.	26-Oct-2016, Letter to Panel from Penelakut Tribe (CEAR Document #615)	The VFPA has reviewed this letter and provides the following information.	**Addressed in EIS Section 32.0:** EIS Section 32.0 presents a Current Use effects assessment that considered potential effects on: • Access to preferred Current Use locations; • Availability of preferred Current Use resources; • Quality of preferred Current Use resources; and • Quality of Current Use experience. Following implementation of mitigation, adverse residual Project-related effects are expected to be negligible. Therefore, the Project is not expected to contribute to cumulative effects.	

Penelakut Tribe

Table 8: Engagement and Consultation

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-8.1	Stated that Cowichan Nation Alliance has yet to receive sufficient information regarding the framework that will guide Crown consultation to address potential impacts on Aboriginal and Treaty rights, and that will ensure the Crown discharges its constitutional duties prior to making any decisions about the Project. Recommended that Canada work with Aboriginal groups to develop a detailed consultation plan that includes a process and forum for groups to address issues arising from potential impacts to Aboriginal and Treaty rights from the Project.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"The Crown sent letters to Cowichan Tribes, Stz'uminus First Nation, Penelakut First Nation, Halalt First Nation on January 7, 2014 with a proposed Consultation Workplan and invited comments or questions from the First Nations about the Crown's consultation process and proposed approach for discussing and addressing issues arising from potential impacts to Aboriginal and Treaty rights from the Project. We welcome a discussion on the proposed Consultation Workplan with any of the First Nations. To date, we have not received any feedback on the proposal."*		
PT-8.2	Stated that the Review Panel clearly does not have a mandate to discharge all of the Crown's consultation obligations toward Aboriginal groups, as evidenced by section 3.4 of Draft ToR: the Review Panel is prohibited from deciding constitutional issues that engage Aboriginal rights including (a) the validity of potential or established Aboriginal or Treaty rights asserted by an Aboriginal group or the strength of such claims; (b) the scope of the Crown's duty to consult an Aboriginal group; (c) whether the Crown has met its duty to consult or accommodate in respect of rights recognized and affirmed by section 35; (d) whether the Project would be an infringement of potential or established Aboriginal or Treaty rights; and (e) any matter of Treaty interpretation (historic and modern). While the Review Panel will receive information about any potential adverse impacts of the Project on potential or established Aboriginal or Treaty rights and related interests, and may recommend mitigation measures to avoid or minimize those impacts, the scope of this mandate does not involve an ongoing dialogue with Aboriginal groups as is demonstrated by the prohibited issues identified above. The Review Panel has no authority to render conclusions regarding the extent to which the Project might infringe Aboriginal or Treaty rights and does not	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"Noted. The Terms of Reference has been amended to provide additional clarity about the role of the Review Panel and of the federal Crown in Section 3.7 which now reads* "Through these Terms of Reference, the Review Panel is given the mandate to collect information on behalf of the Crown as outlined in Section 3.9 to 3.11. The federal government maintains the duty to consult throughout the environmental assessment process and will be responsible for the items detailed in section 3.8, where necessary.""		

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	have a mandate to consider accommodation measures beyond mitigation measures. Accordingly, the Crown must provide another forum for these critical issues to be addressed.				
PT-8.3	Requested more information regarding how the noted constitutional issues will be decided, and at what stage of the process. Asked if, for example, the Crown will engage in consultation regarding accommodation measures other than Project mitigation measures during the Project review, or following the Review Panel's issuance of its report.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"The Crown will request Aboriginal groups identify any outstanding impacts to potential or established Aboriginal or Treaty rights once the Review Panel's report has been made public and the Crown will consult as appropriate with Aboriginal groups on proposed measures for addressing outstanding impacts.* *Additional information on the integration of Aboriginal consultation into the environmental assessment (EA) process was provided to the Cowichan Nation Alliance with federal officials on November 27, 2014, and is available online in the "Aboriginal Consultation and EA Handout" http://www.ceaa-acee.gc.ca/050/documents/p80054/100180E.pdf and in the "Review Panel and Aboriginal Consultation Process Diagrams Handout" http://www.ceaa-acee.gc.ca/050/documents/p80054/100179E.pdf"*		
PT-8.4	Emphasised the Crown's legal obligation to provide a clear and transparent outline of how Crown consultation will be undertaken. It is essential that a reasonable amount of time be provided for this process, and in light of the very brief prescribed timeline under which the Project review must proceed, it is essential that Crown consultation commence at an early stage. Stated that the Crown must recognise that the simple fact that the *CEAA 2012* prescribes that the Minister render a decision on the Project within 24 months from the day on which the environmental assessment was referred to the Review Panel (with the possibility of an additional three-month extension) cannot operate to terminate consultation where substantive issues remain to be discussed between the parties. Stated that it is difficult to imagine that the time set aside for post Review Panel report activities will be sufficient to undertake meaningful Crown- Aboriginal consultation.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"The Crown intends for consultation to be ongoing throughout the entire EA process, and it will be integrated into the EA to the extent possible. We have heard key concerns from members of the Cowichan Nation Alliance and will consider them going forward.* *Additional information on the EA and consultation process is contained in the consultation work plan and handouts referenced in the response above. Issues of concern to Aboriginal groups that are outside the EA process, and any potential outstanding issues identified after the Review Panel report, should be identified and discussed with the Agency.* *Timelines for the federal government's administration of the EA are a legislated requirement under CEAA 2012. However the Agency strives to facilitate and accommodate the participation of Aboriginal groups whenever possible within these legislated timelines.* *Consultation is an ongoing dialogue between the Crown and Aboriginal groups, and should the Project be allowed to proceed subject to conditions in an EA decision statement, consultation with potentially impacted Aboriginal groups would carry on into the permitting phase and beyond depending on what, if any, issues remained outstanding at the time of the EA decision."*		
PT-8.5	Commented that participation funding offered by the VFPA is insufficient.	01-Nov-2013, Meeting 12-Nov-14, Cowichan Nation Alliance EIS Workshop #2	**Cowichan Nation Alliance:** 09-Jan-2014: Offered funding for group Traditional Use study. 24-Apr-2014: Accepted funding for group Traditional Use study.	**Addressed in EIS Appendix 7.2-B (#19):** The VFPA has provided or offered funding support to ensure the ongoing participation of Indigenous groups involved in the Project's consultation processes.	**EIS** 7.0 Engagement and Consultation

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	Stated that Penelakut's requests to the VFPA for capacity have been denied or ignored. Requested funding to hire a professional to review technical information and attend meetings. Requested funding to cover all VFPA referrals. Requested funding for travel to and from Penelakut for meetings and workshops with the VFPA. Criticised participation funding agreement as insufficient. Stated that Penelakut will not be able to participate properly without additional funding. Requested funding to support Follow-up Program discussions.	18-Aug-2014, Meeting with Penelakut Tribe 26-Aug-2014, Email from Penelakut Tribe 28-Aug-2014, Meeting with Cowichan Nation Alliance 24-Feb-2015, Email 17-Oct-2015, Phone 20-Aug-2015, Meeting 07-Jul-2017, Meeting with Penelakut Tribe 29-Aug-2017, Follow Up Program Workshop with Cowichan Nation Alliance, Lyackson First Nation and Malahat First Nation	**Penelakut Tribe:** 06-Jan-2014: Offered funding for participation in the consultation program. 19-Feb-2015: Accepted funding for participation in the consultation program. 22-Aug-2014: Offered funding for fall 2014 consultation activities. 19-Oct-2014: Accepted funding for fall 2014 consultation activities. 11-May-2015: Offered funding for Continued Participation in Project-related consultation activities including Marine Shipping study. 12-May-2015: Accepted funding for continued participation in Project-related consultation activities including Marine Shipping study. 07-Mar-2016: Offered funding to support ongoing involvement in consultation activities. 16-Mar-2016: Accepted funding to support ongoing involvement in consultation activities. 22-Nov-2016: Offered funding for December 1st, 2016 Chief and Councillor meeting. 28-Nov-2016: Accepted funding for December 1st, 2016 Chief and Councillor meeting. 21-Jun-2017: Offered funding for participation in MBA discussions. No signed offer returned. 24-Oct-2017: Offered additional funding for participation in consultation activities for the RBT2 Project. 27-Oct-2017: Accepted additional funding for Participation in consultation activities for the RBT2 Project. 01-Dec-2017: Offered again the funding for participation in MBA discussions. 14-Dec-2017: Accepted funding for participation in MBA discussions.	Additional agreements were also initiated to support the development of studies regarding the Current Use. As a result of these engagement and consultation activities, Indigenous groups have provided traditional use information relating to the Project area. VFPA participation funding agreements have been negotiated between the VFPA and Indigenous groups, either individually or through associations representing the Indigenous groups. The VFPA has provided participation funding to 12 Indigenous groups or associations representing these groups: Tsawwassen First Nation; Musqueam First Nation; Semiahmoo First Nation; Tsleil-Waututh Nation; Cowichan Tribes; Penelakut Tribe; Halalt First Nation; Stz'uminus First Nation; Lake Cowichan First Nation; Lyackson First Nation; Metis Nation British Columbia; and Hwlitsum First Nation.	7.2 Aboriginal Engagement and Consultation Appendix 7.2-A Consultation Activities by Aboriginal Group Appendix 7.2-B Aboriginal Groups Interests and Issues Table
PT-8.6	Stated that at the 2014 workshop the VFPA committed to providing responses to questions. Concerned that all questions are not being responded to. Referred to the difficulty of finding the answers to questions raised today from tens of thousands of pages of materials in the Environmental Impact Statement.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2 11-Dec-2014, Health & Aboriginal Rights Workshop – Cowichan Nation Alliance	**12-Nov-2014, Workshop:** Reiterated that the purpose of the meeting is to present the information available so far, and to get feedback. Acknowledged that not all of the questions posed today will be able to be immediately answered, but that they are being noted so as to be addressed and responded to. Referred to Appendix 7.2-B which will list all concerns raised, provide a response, and describe where to find additional information in the EIS. **11-Dec-2014, Workshop:** Responses to questions that have not yet been responded to will be included in the EIS, once assessment information has been finalised.	**Addressed in EIS Appendix 7.2-B:** All issues raised by Cowichan Tribes and responses provided by the VFPA can be found in EIS Appendix 7.2-B, including references to the specific sections in the EIS. **Additional information provided by the VFPA:** IR10-01 provides responses to all comments and concerns raised by all members of the Cowichan Nation Alliance regarding the Project and marine shipping from October 2012 up to December 31, 2017.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table **Information Requests** Response to Sufficiency Information Request #1 (IR10-01)

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			01-Apr-2015, Letter from the VFPA to Penelakut Tribe: Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **06-May-2015, RBT2 EIS Orientation Workshop:** In response to this concern, the VFPA provided an EIS orientation presentation in order to provide an overview of the EIS and provide an opportunity for questions about the structure and organisation of the EIS. **19-Apr-2016, Letter from the VFPA to Cowichan Tribes:** Provided the notes from the following workshops: • 06-Jun-14 Aboriginal Groups Valued Components Workshop #1; • 03-Jul-14 Aboriginal Groups Valued Components Workshop #2; • 07-Oct-14 Aboriginal Groups Workshop #1; • 08-Oct-14 Aboriginal Groups Workshop #2; • 22-Oct-14 Cowichan Nation Alliance Workshop #1; • 28-Oct-14 Aboriginal Groups Workshop #3; • 29-Oct-14 Aboriginal Groups Workshop #4; and • 12-Nov-14 Cowichan Nation Alliance Workshop #2.		
PT-8.7	Commented that answers are not sufficient regarding impacts on Penelakut's s. 35 fishing, hunting and gathering rights and title in the local assessment area.	12-Dec-2014, Email from Penelakut Tribe	**11-Feb-2015, Email from the VFPA to Penelakut Tribe:** Explained that Penelakut's questions will be responded to in the upcoming weeks either by letter or email, or done so within the EIS. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Section 32.2:** The assessment of Current Use was carried out in accordance with the *EIS Guidelines*. The assessment concludes that after the implementation mitigation, a negligible residual effect is anticipated. A determination of significance is not made on negligible residual effects, as the effect is not measurable or detectable. The assessment of impacts on rights can be found in EIS Section 32.2.	**EIS** 32.2 Current Use of Land and Resources for Traditional Purposes
PT-8.8	Stated that consultation has been inadequate and not meaningful. Expressed frustration and dissatisfaction with consultation process. Stated that there has been a lack of consultation regarding impacts on s. 35 fishing, hunting and gathering rights. Stated that Penelakut has not been taken seriously and Penelakut's input has been minimised. Stated that Penelakut wants to meet with VFPA decision makers to have a real and meaningful conversation about actual accommodation for the community. Stated that real consultation includes accommodation (financial compensation for infringement of rights in the area).	13-Aug-2014, Email from Penelakut Tribe 18-Aug-2014, Meeting with Penelakut Tribe 20-Aug-2014, Email from Penelakut Tribe 26-Aug-2014, Email from Penelakut Tribe 05-Jan-2015, Letter from Penelakut Tribe 09-Jan-2015, Email from Penelakut Tribe 24-Feb-2015, Email from Penelakut Tribe 01-Dec-2016, Chief & Council Meeting with Penelakut Tribe	**14-Aug-2014, Email and call from the VFPA to Penelakut Tribe:** Arranged a meeting for 18-Aug-2014 to discuss concerns. **20-Aug-2014, Email from the VFPA to Penelakut Tribe:** Committed to taking Penelakut concerns raised at 18-Aug-2014 meeting back to the VFPA. **22-Aug-2014, Letter from the VFPA to Penelakut Tribe:** Provided participation funding agreement and schedule of consultation activities for Penelakut's early reference. **06-Feb-2015, Email from the VFPA to Penelakut Tribe:** Clarified that the EIS does not attempt to prove Current Use but rather it assesses Current Use as described by Penelakut. Stated that the VFPA and its representatives have approached consultation with Penelakut in good faith and with respect, with the intention of meeting the duty to consult with your community and resolving concerns related to the Project. The VFPA will continue to engage with Penelakut in this manner.	**Addressed in EIS Section 7.2:** EIS Section 7.2 Aboriginal Groups Engagement and Consultation describes the engagement and consultation process undertaken with Indigenous groups. **Addressed in IR10-11:** The VFPA's response to Information Requirements #IR10-11 as requested by the Review Panel describes how Indigenous groups will be involved in the development, implementation and management of the RBT2 follow-up program. **Addressed in IR10-12:** The VFPA's response to Additional Information Requirements #12 (IR10-12) as requested by the Review Panel, further discusses the VFPA's proposed approach to engagement and consultation with Indigenous peoples during and after the environmental review.	**EIS** 7.0 Engagement and Consultation 7.2.2 Pre-EIS Submission Consultation Process Appendix 7.2-A Consultation Activities by Aboriginal Group Appendix 7.2-B Aboriginal Groups Interests and Issues Table 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			11-Feb-2015, Email from the VFPA to Penelakut Tribe: Stated that with respect to your concerns related to the preliminary assessment of impacts and the VFPA's responses to your questions raised to date in consultation meetings, please be assured that Penelakut's questions will be responded to in the upcoming weeks either by letter/email or done so within the EIS. Questions not answered during consultation are answered in EIS Appendix 7.2-B. Comments regarding meaningful consultation are addressed in EIS Appendix 7.2-B (#15). **29-Mar-2015, Email from the VFPA to Penelakut Tribe:** *"[The VFPA] is committed to continued consultation with your community and as such, is proposing that we meet, at your earliest convenience, to discuss the items outlined in your email. In advance of meeting, I wanted to respond to some of your comments which we can cover in more detail in person.* *With respect to your understanding of consultation, [the VFPA] is in agreement that consultation should involve meaningful engagement between two parties, two way sharing of information including information requested to understand the potential impacts of the proposed project, discussion of how to avoid and mitigate any potential impacts that are identified, and that your concerns are addressed. Please be assured that [the VFPA] recognizes that aboriginal rights are specific to each aboriginal group and are not necessary limited and defined by regulatory requirements.* *In your email you suggest a fresh start and note that the process to date has felt adversarial with no real engagement with your community. [The VFPA] wishes to continue consultation with Penelakut Tribe in a mutually respectful, inclusive and meaningful way. We are hoping to work with you and the community to achieve this and are happy to plan and implement activities that are the most effective forms of community engagement. We do not share your feelings regarding the nature of consultation to date but do wish to move forward with Penelakut in a positive way."* **01-Dec-2016, Meeting:** Stated that the VFPA does take Penelakut's concerns seriously and is looking at how to minimise impacts and benefit the community. Requests often need to be taken back for consideration; there is no instant answer on big issues and topics. The VFPA will consider anything Penelakut says and work with Penelakut to find areas where Penelakut can see real benefits to the community.		**Information Requests** Response to Sufficiency Information Request #11 (IR10-11) Response to Sufficiency Information Request #12 (IR10-12)
PT-8.9	Stated that Penelakut's request for a meeting around mitigating the impacts of the Project on Penelakut's rights have been refused. Stated that Penelakut does not support the Project and will not consent to it	12-Dec-2014, Email from Penelakut Tribe 24-Feb-2015, Email from Penelakut Tribe	**11-Feb-2015, Email from the VFPA to Penelakut Tribe:** Responded that the VFPA does not agree with this perspective. Stated that the VFPA has been and remains committed to working with Penelakut to address concerns related to the Project, to provide Penelakut with available information and to respond to questions.	**Addressed in EIS Appendix 7.2-B (#15):** Since January 2011, the VFPA has consulted with Indigenous groups regarding Project planning, components and activities, selection of VCs, the potential effects of the Project, proposed mitigation measures, and potential changes to the environment related to the Project.	**EIS** 7.0 Engagement and Consultation 7.2.2 Pre-EIS Submission Consultation Process

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	going ahead in core territory until concerns are properly dealt with.		**01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	The VFPA also held technical workshops with Indigenous groups at which the VFPA and technical specialists engaged directly with members of Indigenous groups, discussing specific areas of Indigenous interest and reviewing related technical topics. The intent of the fall 2014 workshops, as described in EIS Section 7.2.2 and detailed in EIS Appendix 7.2-A, was to provide preliminary EIS results and proposed mitigations and obtain feedback in a simplified presentation and plain language format. Materials were provided to Indigenous groups approximately two weeks in advance of workshops, to provide time to read the material so that questions and comments could be raised in the workshops. The VFPA also provided an opportunity to provide further comment following the workshops. Most questions asked during consultation are addressed in this appendix. Some questions, comments and requests were addressed at the workshops or through follow up communications. The process identified for responding to Indigenous interests and/or issues is provided in the EIS. The VFPA continues to be open to hear concerns and will notify Indigenous groups when the EIS is submitted. **Additional information provided by the VFPA:** The VFPA and Penelakut continue to have regular discussions to resolve this issue. In July 2017, the VFPA and Penelakut Tribe started discussions regarding a potential mutual benefits agreement.	Appendix 7.2-A Consultation Activities by Aboriginal Group Appendix 7.2-B Aboriginal Groups Interests and Issues Table
PT-8.10	Requested clarification of the VFPA's role in the RBT2 environmental assessment and associated potential land dispositions, particularly as it relates to the Crown's duty to consult and accommodate.	06-Jan-2016, Letter to the VFPA from Penelakut Tribe	**15-Mar-2016, Letter from the VFPA to Penelakut Tribe:** The CEA Agency is the Crown consultation coordinator. The VFPA is conducting Indigenous consultation and engagement as directed by the CEA Agency. On completion of the environmental assessment, if the Project were to proceed, it would require a VFPA project permit. The VFPA would consult and, where appropriate accommodate, Indigenous groups prior to issuing a project permit. Any land dispositions from the Province of B.C. aimed at facilitating the Project, and the associated Indigenous consultation, are the responsibility of the Provincial Crown, in this case the Ministry of Transportation and Infrastructure, the VFPA expects to support the Ministry of Transportation and Infrastructure in Indigenous consultation as required.	**Addressed in EIS Section 1.3:** The VFPA is the proponent of the Project and has developed the EIS and MSA to meet the requirements of the *EIS Guidelines* issued by the CEA Agency. The VFPA's role in the environmental assessment is to support the ongoing review by providing requested information.	**EIS** 1.0 Introduction 1.3 Proponent Description
PT-8.11	Asked how they will be included in the VFPA's reference to "thriving communities" in the vision of sustainability.	01-Dec-2016, Chief & Council Meeting - Penelakut	**01-Dec-2016, Meeting:** Stated that it was a complex process to define what we mean by 'sustainability' and the Sustainability Report provides examples such as the port authority being the first to have an environmental department, requirements for mid-ocean ballast discharge, and the first work in the world to help quiet the ships down. Noted that it also includes thriving communities for the	**Additional information provided by the VFPA:** In 2014, with the input of many stakeholders, the VFPA led the development of a definition of sustainability for the Vancouver gateway, concluding that sustainability is not just about the environment, it is also about ensuring the port is here for future generations and the long-term prosperity of the country is preserved.	

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			port, and those living around it, and economic prosperity through trade. Stated that the vision is to be world's most sustainable port and we believe we can do the things we are asked to do in a sustainable way. Noted that the VFPA is here today to discuss this and what Penelakut Tribe thinks would be appropriate mitigation for the impacts. Stated that part of the RBT2 team's job is to understand the impacts, and when we understand what they are we can mitigate.	The VFPA defines a sustainable port as one that delivers economic prosperity through trade, maintains a healthy environment, and enables thriving communities. Within the three sustainability themes, there are ten focus areas and 22 success statements. For additional information about the VFPA's vision, please visit: https://www.portvancouver.com/about-us/sustainability/

Table 9: Environmental Assessment and Permitting Process

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-9.1	Asked if it would be a harmonised process with the Province.	05-Mar-2013, Meeting with Cowichan Nation Alliance	**05-Mar-2013, Meeting:** Noted that the process has yet to be determined. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#8):** On November 5, 2014, the B.C. Environmental Assessment Office (EAO) confirmed the Project is reviewable under Part 8 of the Reviewable Projects Regulation, B.C. *Environmental Assessment Act*. On December 19, 2014, the B.C. Minister of Environment issued an order under s. 14 of the Act establishing the Province's procedures and methods for conducting the environmental assessment for the Project. The Minister ordered that the scope of the Project is as defined by the CEA Agency in the *EIS Guidelines*; the scope of the assessment must include factors established by the federal Minister and potential adverse environmental, economic, social, heritage, and health effects, including cumulative effects, and practicable means to mitigate such potential adverse environmental effects, and potential adverse effects on Indigenous groups; the EAO will principally rely on the environmental assessment to be conducted by the federal review panel and on consultation conducted by the CEA Agency with Indigenous groups, whose interests are potentially affected by the Project; and the EAO must make a recommendation to the Minister within 30 days of receiving notice of the decision from the federal Minister. The information presented in the EIS is intended to satisfy both federal and provincial environmental assessment requirements. More information regarding the federal environmental assessment for the Project can be found on the CEA Agency website at www.ceaa-acee.gc.ca, Reference Number: 80054. More information regarding the provincial environmental assessment for the Project can be found on the EAO's Project Information Centre (e-PIC) website at http://a100.gov.bc.ca/appsdata/epic/html/deploy/epic_project_home_410.html	**EIS** 6.0 Environmental Assessment and Permitting Process 6.2 Provincial Involvement and Process Appendix 7.2-B Aboriginal Groups Interests and Issues Table
PT-9.2	Concerned that the EIS meets DFO standards not First Nation standards.	03-Jul-2014, Aboriginal Groups Valued Components Workshop #2	**03-Jul-2014, Workshop:** Acknowledged the concern and stated that the Project team is trying to understand other perspectives and wants to make sure that we understand what the effects are to fisheries.	**Addressed in EIS Section 1.0:** The environmental assessment for the Project was developed to meet the requirements specified in the *EIS Guidelines* prepared by the CEA Agency. Indigenous groups have the opportunity to review the EIS and in that context, raise this comment to the CEA Agency and other agencies as appropriate.	**EIS** 1.1 Purpose of the Environmental Impact Statement
PT-9.3	Noted that the draft Panel Terms of Reference is inconsistent with its reference to "Project". Stated that there are references to "project" and "designated Project". Recommended that all references to the proposed ... project be referred to as the "Project".	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"Your comment has been incorporated."*		
PT-9.4	Stated that the draft Terms of Reference (ToR) should direct the Review Panel to explicitly assess potential Project impacts on Aboriginal and Treaty rights and culture. We note	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"The Terms of Reference provide direction to the Review Panel regarding its role and mandate in conducting the EA. In*		

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	that the list of factors as set out at section 2.1 provides that the Review Panel must account for the "environmental effects" of the Project, of which term is defined at section 5(1) of the *CEAA 2012* to include effects to Aboriginal peoples and their use of lands and resources for traditional purposes; however, in light of the significance of potential impacts to Aboriginal and Treaty rights from the Project, a more direct reference in the list of factors is warranted.	Cowichan Nation Alliance (CEAR Document #126)	Part 3- Mandate of the Panel *in the Terms of Reference, direction has been provided to the Review Panel on collecting information on behalf of the Crown as it relates to potential impacts of the project to potential or established Aboriginal or Treaty rights."*		
PT-9.5	Stated that the draft ToR fails to provide explicit requirements and guidance for assessing socio-economic impacts in relation to Aboriginal people. Noted that the list of factors provides that the Review Panel must account for the "environmental effects" of the Project, which is defined at section 5(1) of the *CEAA 2012* to include health and socio- economic conditions; however we submit that the Review Panel would benefit from clear guidance on this issue.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"The Agency is currently considering guidance on this topic."*		
PT-9.6	Stated that it is essential that the Review Panel only recommend mitigation measures that are capable of achieving their stated purposes, and capable of demonstrating measurable success. Accordingly, Cowichan Nation Alliance recommended language that requires the Review Panel to put forward only those recommendations that are capable of demonstrating success in mitigating any significant adverse environmental effects. Recommended amendments to section 2.1 the draft ToR to address this concern.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"Section 2.1 provides direction directly from CEAA 2012 and as mentioned above, the legislation provides clarity about what is meant by mitigation.* *The information related to the success of past project mitigation measures should be included in the EIS as discussed above.* *Your comment on possible environmental effects or impacts to potential or established Aboriginal or Treaty rights has been considered and language has been added to section 3.9 as it relates to the Review Panel's mandate in relation to Aboriginal consultation."*		
PT-9.7	Stated that the scope of factors to be considered in the environmental assessment should not be limited by the content of the EIS guidelines. A review panel should give the requisite authority and discretion to decide for themselves the proper scope of the factors that they are considering, as this will fall under their expertise.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"The purpose of the EIS Guidelines is for the proponent to identify the information requirements for the preparation of the EIS. The EIS Guidelines specify the nature, scope and extent of the information required for the EIS. Note that the EIS Guidelines set out the minimum information requirements – it is the proponent's responsibility to provide any additional information as required by the Agency or the*		

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	Recommended amendments to section 2.3 of the draft ToR to address this concern.		*Review Panel, once it has been established, for the assessment of the environmental effects of the Project.* *Under CEAA 2012, the scope of the factors to be taken into account in the environmental assessment by the Review Panel are those in section 19(1)* a) *to* i). *The Minister may require that any other matter relevant to the EA be taken into account by the Review Panel under section 19 (1)* j)*."*		
PT-9.8	Stated that the Review Panel should not be limited to considering information provided solely by the participants – government agencies and departments may also have valuable information to contribute. Recommended amendments to Section 3.5 of the draft ToR to address this concern.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"Your comment has been considered and Section 3.5 has been amended to direct that the "Review Panel shall accept as part of its record and review:" Federal authorities and government are already considered participants in the Review Panel process and henceforth covered by this Section."*		
PT-9.9	Stated that Panel members should have knowledge or experience relevant to the anticipated impacts of the Project on Aboriginal and Treaty rights. Recommended amendments to section 4.1 of the draft ToR to address this concern.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"Cowichan Nation Alliance members are welcome to submit potential panel candidates to the Agency. Panel Members must be unbiased and free from conflict of interest relative to the Project and have knowledge or experience relevant to the anticipated environmental effects of the project. Please provide suggested names and CVs to [provided contact information]."*		
PT-9.10	Stated that it is critical that those parties that provide the Panel Members with support in a procedural, technical, administrative or advisory manner be unbiased and free from any conflict of interest relative to the Project and, where applicable, have knowledge or experience relevant to the anticipated environmental effects and impacts of the Project. Requested addition to the end of section 4.5: The Secretariat will be unbiased and free from conflict of interest relative to the Project.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"Your proposed change has been made."*		
PT-9.11	Requested addition to the end of section 4.18: Any federal authority that assists the Review Panel will be unbiased and free from conflict of interest relative to the Project and will have knowledge or experience relevant to the anticipated environmental effects and impacts of the Project.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"Federal experts participate in environmental assessments in accordance with the mandate and areas of responsibility of their departments. Public servants are guided in their work and professional conduct by the Values and Ethics Code for the Public Service."*		

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-9.12	Stated that it is possible the Review Panel will not be capable of fulfilling its mandate and submit its report to the Minister within 14 months. Recommended that section 4.13 expressly confirm that the Review Panel must ultimately take the time that it requires to properly and completely discharge it mandate subject to the CEAA 2012, which allows the Minister to modify the statutory limits imposed on a review panel (CEAA 2012, subsection 38 (4)). Recommended amendments to section 4.13 of the draft ToR to address this concern.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"CEAA 2012 has legislated timelines for the completion of an EA by Review Panel. The Review Panel must fulfill its mandate and provide a report to the Minister within the timelines set out in the legislation and as directed in the Terms of Reference."*		
PT-9.13	Stated that the Review Panel should be required to give more than 30 days' notice of tis public hearing, as many participants must prepare and reschedule other commitments in order to participate. Accordingly, notice of a minimum of 90 days should be required. Stated that the timing and location of the public hearing is of critical importance to our communities; we require an opportunity to comment on the draft document setting out the schedule and location of public hearing prior to finalisation by the Review Panel. Recommended amendments to section 4.22 of the draft ToR to address this concern.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"The Terms of Reference provides a minimum timeframe for the notice of the start of public hearings.* *The Review Panel is responsible for developing procedures for the conduct of the public hearing, including timing, location, format and other logistics. The Panel may, at its discretion, make draft hearing procedures available for comment.* *If members of the Cowichan Nation Alliance have suggestions on the timing or notification required for public hearings, they may provide that information to the Review Panel once it is established."*		
PT-9.14	Stated that the draft ToR should direct the Review Panel to explicitly include their identification of potential impacts on Aboriginal and Treaty rights and culture in the report. Noted that the list of required coverage in the Review Panel's report includes an identification of those conclusions that relate to the environmental effects defined in section 5 of the CEAA 2012, which includes effects to aboriginal peoples and their use of lands and resources for traditional purposes; however, in light of the significance of potential impacts to Aboriginal and Treaty rights from the Project, a more direct	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"The Review Panel has been directed to collect and summarize information provided to it by Review Panel participants about any potential impacts on potential or established Aboriginal or Treaty rights in its report (section 3.10).* *The Minister of the Environment has requested the Review Panel provide its conclusions and recommendations in relation to any environmental effects of the Project on Aboriginal people as set out in section 5 of CEAA 2012 as it is responsible for conducting the EA on the designated project.* *The Crown will maintain the duty to consult throughout the EA process and will conduct an assessment of what the potential project impacts are to the exercise of potential or established Aboriginal or Treaty rights. The Crown has already communicated the preliminary depth of consultation*		

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	reference to the list of required coverage for the report is warranted. Recommended amendments to section 4.27 of the draft ToR to address this concern.		*assessment letters dated January 7th, 2014 as referenced in the first response in this table.* *The Crown will communicate a revised depth of consultation assessment once the Review Panel has issued its report and is willing to discuss this assessment with Cowichan Nation Alliance members at this time. Cowichan Nation Alliance members are encouraged to raise any potential environmental effects, and/or impacts of the Project on potential or established Aboriginal or Treaty rights to the Review Panel to ensure the Crown has a robust understanding of your concerns at the point that the Review Panel issues its report."*		
PT-9.15	Stated that section 4.28 obliges the Review Panel to include in its report "information it has received with respect to the justifiability of those significant adverse environmental effects". If the report is to recognise arguments that seek to justify significant adverse effects, the report must, as a matter of fairness and completeness, recognise arguments that such effects are not justified. Otherwise, the Minister will receive a biased report. Recommended amendments to section 4.28 of the draft ToR to address this concern.	22-Sep-2014, Letter to the CEA Agency from Cowichan Tribes on behalf of Cowichan Nation Alliance (CEAR Document #126)	**17-Apr-2015, Letter from the CEA Agency to Cowichan Tribes (CEAR Document #278):** *"Please see the additional clarity on justification related to likely significant adverse environmental effects added in Section 3.5 which states* "In accordance with sections 47 and 52 of CEAA 2012, if the Minister decides that the project is likely to cause significant adverse environmental effects, the Minister will refer the matter to the Governor in Council (Cabinet) who must decide whether those environmental effects are justified in the circumstances." *The Review Panel will not make the determination on whether likely significant adverse environmental effects may be justified, but if, taking into account the implementation of any mitigation measures, the Review Panel concludes that the project is likely to cause significant adverse environmental effects, the Panel may include in its report information that it has received with respect to whether those significant adverse environmental effects are justified in the circumstances."*		
PT-9.16	Stated that the Penelakut Tribe has a general concern with the VFPA's failure to update its EIS materials on the basis of new information provided by Penelakut. Stated that the MSA should have incorporated new information provided by Penelakut about its marine uses. Instead, the MSA refers back to and relies on the incomplete information provided in the EIS. Penelakut is working with the VFPA to correct this. Asked what the VFPA's response in the MSA "VFPA is considering the new information provided by Penelakut Tribe" means.	08-Dec-2015, Letter to the CEA Agency from Penelakut Tribe (CEAR Document #347) 29-Apr-2016, Meeting with Penelakut Tribe	**12-May-2016, Letter from the CEA Agency to Penelakut Tribe (CEAR Document #401):** *"Penelakut can submit information you wish to correct about your Nation directly to the Panel once they have set out procedures for receiving information. Alternatively, the Agency encourages [the VFPA] and Penelakut to work together to resolve any disagreement in information [the VFPA] has provided about Penelakut."* **30-Jun-2016, Letter from the VFPA to Penelakut Tribe:** *"As noted in the table accompanying the port authority's letter of April 25, 2016, the specific information regarding Penelakut's use of Roberts Bank "as recently as this spring" and in "recent sockeye runs" identified in the comment (and submitted by Penelakut to the port authority by letter dated August 27, 2015) was not available to the port authority at the time the EIS was filed.* *Information relating to Penelakut's recent use of the Project area was included and considered in the Marine Shipping Addendum and in the port authority's responses to Information Requirements issued by [the CEA Agency] and is therefore part of the official record for the Panel's review"*		

Penelakut Tribe

Table 10: Environmental Management Program

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-10.1	Asked if the lessons learned from eelgrass transplants that took place as part of Deltaport Third Berth have been taken into account for RBT2. Noted that eelgrass is very important to Cowichan Tribes. Interested in and request information about the follow-up monitoring work that took place as part of Deltaport Third Berth.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1 27-Jan-2017, Meeting with Penelakut Tribe	**22-Oct-2014, Workshop:** Responded that the VFPA recently hosted a workshop that brought together eelgrass experts from the west coast to share knowledge and experience. Noted that prior to 1986 there were a lot of challenges, but since then transplants have had a success rate of over 90%. **27-Jan-2017, Meeting:** Offered to bring a technical expert to a future meeting who can speak to the Adaptive Management Strategy that was part of DP3. **29-Aug-2017, Follow Up Program Workshop with Cowichan Nation Alliance, Lyackson First Nation and Malahat First Nation:** The VFPA met with members of the Cowichan Nation Alliance to discuss the Follow-up Program and lessons learned from DP3.	**Addressed in EIS Appendix 7.2-B (#201):** Onsite eelgrass habitat creation is proposed through transplanting in an area approximating 3 ha. Based on the review of previous habitat creation programs (e.g., DP3), eelgrass transplants are considered to be an effective means of increasing productivity of marine vegetation. The VFPA will implement a Follow-up Program, which will include monitoring to confirm that all offsetting measures meet intended objectives and function as designed. Monitoring will include methods and success measures to confirm that offsetting measures have been effective. The *Fisheries Act* Authorization will require that functional objectives are met.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 17.0 Mitigation for Marine Biophysical Valued Components 17.3.2 Offsetting Potential Effects, Offsetting Framework 17.6 Mitigation for Marine Biophysical Valued Components, Monitoring and Reporting
PT-10.2	Stated that no Aboriginal involvement with the Scientific Advisory Committee (SAC) and monitoring was a failure to consult with Aboriginal communities for the Deltaport Third Berth Project. Noted the SAC would be a good opportunity to have Aboriginal Traditional Knowledge included and to have First Nations input on the selection of committee members. Added "we would like engagement in the governance of the monitoring program."	29-Aug-2017, Follow Up Program Workshop with Cowichan Nation Alliance, Lyackson First Nation and Malahat First Nation	**29-Aug-2017, Workshop:** Noted input on governance for the Follow-up Program and stated that it will be considered in the planning for the RBT2 Follow-up Program governance structure for further discussion in future Follow-up Program meetings.	**Addressed response to in IR10-11:** The VFPA's response to IR10-11, as requested by the Review Panel, describes how Indigenous groups will be involved in the development, implementation, and management of the RBT2 Follow-up Program.	**Information Requests** Response to Sufficiency Information Request #11 (IR10-11)
PT-10.3	Stated that they do not believe that the environmental assessment process is effective at assessing risk. Stated that there is no ability to predict outcomes until actual inputs from after a project is built are used in the assessment. Noted they never agreed with the VFPA assessment on level of impact and expect the impacts to be larger. Expressed concern with how the assessment was conducted by the VFPA's consultants. Stated that they want to see a third party environmental monitor involved	27-Jan-2017, Meeting with Penelakut 29-Aug-2017, Follow-up Program Workshop with Cowichan Nation Alliance, Lyackson First Nation and Malahat First Nation	**27-Jan-2017, Meeting:** Referred to prior development at Roberts Bank (DP3) and noted follow-up studies were undertaken to assess actual versus predicted impacts and the assessment was shown to be fairly accurate. **29-Aug-2017, Workshop:** The VFPA met with members of the Cowichan Nation Alliance to discuss the Follow-up Program and lessons learned from DP3. The VFPA sought input into the Program through asking the following questions at the workshop:	**Additional information provided by the VFPA:** As a result of extensive studies and assessment, the VFPA is confident potential adverse effects can be fully or partially avoided or reduced through Project design and the implementation of environmental management programs. Where Project-related effects cannot be fully avoided or reduced, offsetting measures, such as the creation and enhancement of habitat, will be applied. **Addressed in EIS Section 33.5:** Similar to the Adaptive Management Strategy for DP3 as described in EIS Section 33.5, the VFPA is committed to developing and implementing a Follow-up Program for the Project. The purpose of the Follow-up Program is to verify the accuracy of residual effect predictions made in the EIS, and determine the effectiveness of any measures taken to mitigate the adverse environmental effects of the Project.	**EIS** 33.5 Follow-up Program

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	in Follow-up Program implementation that is not involved in the original findings. Suggested the monitoring program be separated from the VFPA jurisdiction.		• What is important to you (Cowichan Nation Alliance) and your community?; • What elements would you (Cowichan Nation Alliance) like to see monitored?; and • How would you (Cowichan Nation Alliance) like to be involved moving forward? Noted comments on monitoring and stated that they will be considered in Follow-up Program planning.	To ensure the program's elements adequately reflect conditions of Project approvals, final designs, and construction or operation approaches, as well as public, Indigenous group, and regulator feedback received during the review of the EIS, the VFPA will lead the development of the Follow-up Program after the submission of the EIS. The Follow-up Program will include: • An evaluation of the adequacy of existing data to provide a benchmark against which to test Project-related effects; • A monitoring design drawing on the measurable parameters identified to be field-tested; • A methodological approach for using field-collected data to measure and verify the accuracy of the effects predicted in the EIS; • A reporting framework that defines frequency of reporting, distribution, and feedback mechanisms; and • Details of the VFPA's approach to adaptive management for the Project through construction and operation. The Follow-up Program will be developed in consultation with federal agencies, including the CEA Agency, DFO, and ECCC. Complete drafts of the RBT2 Follow-up Program will be made available prior to the start of field measurements to ensure parties consulted on the program and approving agencies have an opportunity to evaluate and approve the program. Feedback from Indigenous groups regarding the draft program will be sought through the VFPA's ongoing engagement initiatives.	

Penelakut Tribe

Table 11: Human Health – Valued Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-11.1	Concerned about the determination that the Project is not expected to result in detectable effects on human health.	11-Dec-2014, Health & Aboriginal Rights Workshop - Cowichan Nation Alliance	**11-Dec-2014, Workshop:** Recorded comment for consideration by Project team. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#149):** The following are highlights of the human health assessment: • Seven potential mechanisms for human health effects were assessed: air emissions, noise and vibration, shellfish contamination, stress and annoyance, employment and income, food security, and health inequity. • Potential Project-related effects on human health are expected to be fully or partially mitigated through the implementation of environmental management plans and additional mitigation measures. • The Project is not expected to result in any significant adverse residual effects on human health. • The Project is not expected to result in measurable incremental residual cumulative effects to human health. With mitigation, all potential Project-related effects are expected to be negligible (not measurable), with the exception of residual effects on human health related to exposure to air emissions during construction, and exposure to noise during construction and operation. These effects are predicted to be not significant. A rationale for the determination is provided in EIS Section 27.0.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 8.0 Effects Assessment Methods 27.0 Human Health 27.6 Future Conditions with the Project – Potential Project-Related Effects 27.7 Mitigation Measures 27.8 Characterisation of Residual Effects and Context 27.9 Determination of Significance of Residual Adverse Effects
PT-11.2	Stated that the EIS states: "Despite the importance of understanding traditional food consumption, limited data are available on subsistence harvesting in the local assessment area" (EIS p. 27-35). This represents a clear information gap and should be identified as such in the EIS. Stated that the EIS should provide an explanation of the steps taken by the proponent, to obtain information on subsistence harvesting in the local assessment area and a rationale for proceeding to assess impacts to food security of Aboriginal people despite the absence of this information.	10-Jun-2015, Letter to the CEA Agency from Penelakut Tribe (CEAR Document #210)	**13-Oct-2015, Letter from the CEA Agency to Penelakut Tribe (CEAR Document #310):** *"The Agency has requested additional information on this item in its letter of July 31, 2015 to [the VFPA] (page 15, #31)."*	**Addressed in responses to IR-7.31.15-31 and AIR-12.04.15-31:** The VFPA's responses to IR-7.31.15-31 and AIR-12.04.15-31 present a summary of baseline reliance on country foods for each Indigenous group. The summary draws on the original information sources used for the development of EIS Section 32.0, including technical studies, as well as correspondence and meeting minutes from engagement with specific Indigenous groups. EIS Section 32.2, examines potential Project-related and cumulative effects that are relevant to traditional food consumption and nutritional health. These potential effects are related to access to preferred locations for harvesting preferred food resources, availability of preferred food resources, and quality of preferred food resources. Based on information considered in EIS Section 32.2, there are no anticipated residual effects to most traditional food sources, including marine vegetation, marine fish, coastal birds, marine mammals, and most marine invertebrates, including bivalve shellfish and Dungeness crab.	**Information Requests** Response to Information Request #31 (IR-7.31.15-31 of CEAR Document #314) Response to Additional Information Request #31 (AIR-12.04.15-31 of CEAR Document #388)
PT-11.3	Stated that the EIS is not sufficient to assess environmental effects and requires an assessment of human health impacts that is based on the Penelakut Tribe's shellfish consumption rates instead of on the consumption rates relied upon in the EIS. Rationale: On January 4, 2016, the Penelakut Tribe advised the VFPA that Penelakut shellfish consumption rates were significantly higher than the rates relied on in the EIS for the assessment of human health impacts from contamination. Stated that Penelakut Tribe has provided the VFPA with information about shellfish consumption rates of Penelakut members, which are	26-Oct-2016, Letter to Panel from Penelakut Tribe (CEAR Document #615) 14-Nov-2017, Letter to Panel from Penelakut Tribe (CEAR Document #1092)	**04-Feb-2016, Letter from the VFPA to Penelakut Tribe:** *"In [the VFPA]'s meeting with [Cowichan Nation Alliance] on June 17, 2015, Penelakut Tribe informed [the VFPA] that it relies on the Roberts Bank area for crab harvesting due to contamination present in areas closer to their communities. Penelakut Tribe advised that they secured a total catch of about 2,700 to 3,000 lbs of crab for food, social and ceremonial purposes in this area in April 2015. [The VFPA] included this new information in the [MSA], submitted in October 2015 (see pp. 9.5-107 to 9.5-108)."*	**Addressed in responses to IR-7.31.15-29 and AIR-12.04.15-29:** The VFPA's responses to IR-7.31.15-29 and AIR-12.04.15-29 further discuss potential environmental effects of the Project on the cultural heritage of Indigenous peoples, including proposed mitigation and a determination of significance. **Addressed in responses to IR-7.31.15-30 and AIR-12.04.15-30:** The VFPA's responses to IR-7.31.15-30 and AIR-12.04.15-30 presents additional rationale for the conclusions of the effects assessment for the Current Use by Indigenous peoples where the conclusions are reported as 'no effect' or 'negligible'. **Addressed in responses to IR-7.31.15-31 and AIR-12.04.15-31:** The VFPA's responses to IR-7.31.15-31 and AIR-12.04.15-31 demonstrate how the Current Use assessment (EIS Section 32.2.4) identifies, for each Indigenous group in the LAA, information that these groups have chosen to share with the VFPA, including harvesting locations, timing, frequency, and access or methods, and current consumption reliance. The responses review how such information was gathered through a review of Current Use studies, as well as direct solicitation of information from Indigenous groups, and interviews to collect ITK.	**Information Requests** Response to Information Request #29 (IR-7.31.15-29 of CEAR Document #314) Response to Additional Information Request #29 (AIR-12.04.15-29 of CEAR Document #388) Response to Information Request#30 (IR-7.31.15-30 of CEAR Document #314) Response to Additional Information Request #30 (AIR-12.04.15-30 of CEAR Document #388) Response to Information Request #31 (IR-7.31.15-31 of CEAR Document #314)

Table 12: Labour Market – Valued Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information

PT-12.1	Asked if the Project is expected to have a negative impact on any other types of employment.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:**
			Responded that the VFPA looked at labour market balance as an indicator, and conducted analyses to consider what the effect of the Project's employment and procurement would be, in relation to the availability of workers for other industries.
			01-Apr-2015, Letter from the VFPA to Penelakut Tribe:
			Provided a copy of the EIS Section 19.0 Labour Market.
				Addressed in EIS Section 19.0:
				The Project is expected to result in the following positive effects on the labour market in Metro Vancouver:
				• During the 5.5 year construction phase:
				  ○ 4,150 person-years of direct employment, worth $494 million in wages;
				  ○ 9,724 person-years of total direct, indirect, and induced employment, worth approximately $824 million in wages;
				• During operation:
				  ○ 835 person-years of annual direct employment connected to terminal operations, worth approximately $138 million in wages annually;
				  ○ 1,412 person-years of annual total direct, indirect, and induced employment, worth $169 million in wages annually;
				  ○ A slight lowering of the unemployment rate in Metro Vancouver;
				  ○ A positive effect on the participation rate; and
				  ○ A small boost to median incomes in Delta and Metro Vancouver.
				Training opportunities associated with construction and operation are anticipated to generate positive effects for the Project's direct workforce. Positive changes in employment and labour income are anticipated for the Indigenous population in Metro Vancouver during Project construction and operation. The Project is not expected to result in measurable adverse residual effects to the labour market.

Table 13: Light – Intermediate Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-13.1	Concerned that the light study did not consider the night sky with cloud cover as this increases the light effects over the water. Concerned about how the locations for monitoring light effects were selected, with specific reference to Galiano Island and Valdes Island.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Responded that the assessment teams for visual resources and light are different. The team carrying out the light assessment work (at night) took a subset of the points of reception (PORs) from the visual resources (day) assessment, because there is less variation expected from point to point. Stated that for both the day and night assessments, PORs were concentrated in areas in closer proximity to the Project site. The POR on Valdes was added later through consultation. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#47):** Measurements of sky glow depend on the visibility of the stars, and were taken on nights with no or low cloud cover, where possible. The rationale for the assessment methods is included in EIS Section 9.4 and the technical report. The rationale for selection of the PORs is included in EIS Section 9.4. The light assessment included a POR on Galiano Island and on Valdes island. The measurements taken from, and predictions made for, these PORs are intended to be representative of surrounding areas.	**EIS** 9.0 Physical Setting 9.4 Light 9.4.2 Assessment Purpose and Approach 9.4.5 Methods Appendix 9.4-A Roberts Bank Terminal 2 Light Assessment Study, Study Methods Appendix 7.2-B Aboriginal Groups Interests and Issues Table
PT-13.2	Asked if RBT2 would be subject to, or exempt from, Delta bylaws around light, and if not, whether the VFPA would be willing to meet or match their requirements anyway.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Recorded comment for follow-up. Post meeting note shared with Cowichan Nation Alliance in draft meeting notes: There are not any standards or bylaws for light such as there are for noise, for example. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#99 and #45):** A process is underway to change the current outdoor lighting fixtures at the Deltaport Terminal to light-emitting diodes (LEDs). LEDs are more directional and easier to control in terms of where light is focused. It is anticipated that the change to LEDs will reduce both light trespass and sky glow from the Deltaport Terminal, provided good lighting design practices are followed (specifically, the use of full cut-off light fixtures to limit up-light and only lighting areas that are required to be lit). The lighting on one crane at Deltaport has been fully replaced with LED lights, offering a point of comparison with the older lights. **Addressed in EIS Section 33.0:** The Light Management Plans for construction and operation phases will be developed prior to the respective phases. The Light Management Plans will describe measures to reduce excess lighting and sky glow, including: • Orienting lights downwards and away from residential and marine areas; • Using shielding to minimise light trespass; • Controlling light levels and limiting light use to areas where activities are occurring; • Where possible, using fixtures that emit light at wavelengths shown to minimise disorienting effects to birds; • During construction, ensuring dredge lighting system shields light from spilling outside the basic working footprint of the dredge; and • During operation, establishing a centralised lighting control system to select lighting where required. Feedback on applicable environmental management plan sub-plans will be solicited from Indigenous groups potentially affected by the Project.	**EIS** 9.0 Physical Setting 9.4 Light 9.4.4 Relevant Guidelines Appendix 9.4-A Roberts Bank Terminal 2 Light Assessment Study Appendix 7.2-B Aboriginal Groups Interests and Issues Table 33.0 Environmental Management Program

Table 14: Marine Commercial Use – Valued Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-14.1	Concerned that the Project could negatively impact fishermen and their livelihoods.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Presented information on the preliminary assessment of potential Project effects and cumulative effects on Commercial, Recreational, Aboriginal (CRA) Fisheries and any proposed mitigation, as well as receive feedback on the draft findings and proposed mitigation. The presentation includes: executive summary, sub-components, indicators, assessment boundaries, the local and regional assessment areas, information sources, an overview of each of the fisheries (CRA), existing conditions for Pacific Salmon, Groundfish, Forage Fish, and Shellfish, expected conditions at Project commencement, potential Project-related effects, proposed mitigation measures, anticipated residual effects, the preliminary determination of significance, and anticipated cumulative effects. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#117):** Marine commercial use, or the use of marine waters and resources to generate revenue, has been identified as an important economic factor in local and regional communities, and for Indigenous groups. The marine commercial use assessment included four sub-components: • Seafood harvesting; • Marine fish harvesting; • Guided sport fishing; and • Marine-based tourism. Potential effects on marine commercial use include displacement of commercial crab harvesting during construction and operation, resulting in a potential change of harvesting area, total harvest, and revenue, due to the Project footprint and the proposed expansion of the area closed to commercial crabbing. The VFPA will work with DFO to engage commercial crab harvesters to identify and implement feasible mitigation measures; and will implement construction and operation environmental management plans related to construction phase communication, construction monitoring, and crab salvages effects from displacement of commercial crab harvesting during construction and operations. The Project is anticipated to result in a negligible effect to marine fish harvesting, guided sport fishing, and marine-based tourism. These negligible effects are related to changes in area, access, resource availability, and harvesting revenues. The Project is expected to result in a residual effect of changes to seafood harvesting area, harvest, and revenue. The residual effect is determined to be not significant, as Dungeness crab are known to move substantial distances to baited traps, and harvest activity can be moved to another open area. Other planned or reasonably foreseeable projects and activities would also displace crab harvesting, and this effect would combine with that of the Project to result in an incremental cumulative effect on commercial crab fishing. This adverse incremental cumulative effect is determined to be not significant.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 12.0 Marine Invertebrates 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries 21.0 Marine Commercial Use 21.6 Future Conditions with the Project – Potential Project-related Effects 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Land and Resources for Traditional Purposes 32.2.6 Future Conditions With the Project - Potential Project-related Effects

Table 15: Marine Fish – Valued Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-15.1	Concerned that the Project will affect migrating salmon that return from the South to the Fraser River through Canoe Passage. Concerned about mitigation for natural migration patterns that are in the Project area and the impacts to salmon being made that we do not understand yet along with other animal's natural migration.	03-Jul-2014, Aboriginal Groups Valued Components Workshop #2 18-Aug-2014, Meeting with Penelakut Tribe 22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1 27-Jan-2017, Meeting with Penelakut Tribe 07-Jul-2017, Meeting with Penelakut Tribe	**03-Jul-2014, Workshop:** Responded that the Regional Study Area has been extended to Hope, which will capture a large portion of that migration and that is actually where the DFO sub-areas stop. Stated that a real effort was made to capture some, if not all, of the migration. Stated that sockeye hold more in the North arm and South arm, but that there are species of Chinook and chum that hold around Canoe Passage, so that area is being included. Canoe Passage is a fairly small distributary of the Fraser but there is still holding there. Sockeye in particular are coming out and heading north, with the exception of the Harrison Lake stock, which DFO thinks might be migrating south. **18-Aug-2014, Meeting:** Noted the comment and stated that this will be addressed in the EIS. **22-Oct-2014, Workshop:** Responded that the options for onsite habitat mitigation do consider fish passage. The primary intent is to soften the shoreline to make it more amenable to salmonid use. Stated that juvenile salmon use eelgrass beds and tidal marsh habitat. Stated that the mitigation measures primarily consider juvenile salmon outmigration and rearing. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **27-Jan-2017, Meeting:** Recorded comment for consideration by the Project team. **07-Jul-2017, Meeting:** Suggested a meeting with the VFPA's technical team to discuss mitigation measures. **27-Nov-2017:** The VFPA held a Follow-up Program meeting with its technical experts and discussed impacts to salmon. Confirmed that the VFPA looked at juvenile salmon and collected information at Roberts Bank to inform the EIS. Stated that it informed the effects assessment.	**Addressed in EIS Appendix 7.2-B (#78):** Field studies, air photo review, and modelling were undertaken during the coastal geomorphology assessment at Roberts Bank, including Canoe Passage. Changes are anticipated around the terminal and within the intertidal zone shoreward of the terminal. The potential effects of these changes on marine fish are considered in the EIS. An assessment was undertaken to determine the effects of the Project on the productivity of marine fish, including Pacific salmon. The assessment of marine fish, as well as marine vegetation and invertebrates upon which fish depend, consider seasonal influences, and potential Project-related changes on these influences. Terminal footprint-related changes to coastal process such as currents and freshwater-marine water mixing near and shoreward of the terminal are anticipated. Project-related changes in salinity and turbidity are discussed with respect to marine water quality. A discussion of the potential effects of these changes on marine fish, including different fish life stages, is presented in the marine fish assessment. **Addressed in EIS Section 13.6.3.1:** The potential effect on the migration behaviour of juvenile salmon from terminal placement and causeway widening was assessed qualitatively. Two effects mechanisms—changes in the light environment and changes in habitat availability—were considered to have the potential to influence migration behaviour of juvenile salmon and result in a minor decrease of juvenile salmon productivity pre-mitigation. With implementation of mitigation measures, including adherence to juvenile salmon fisheries-sensitive window, implementation of a light management plan, as well as offsetting in the form of onsite native eelgrass transplants and reconstructed tidal marsh habitats north of the widened causeway, migration-related changes in juvenile salmon productivity were assessed as negligible. **Addressed in responses to IR5-18 and IR5-22:** Further discussions about terminal placement's potential effects on the migratory behaviour of juvenile salmon is available in the VFPA's responses to IR5-18 and IR5-22.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.0 Physical Setting 9.5 Coastal Geomorphology 9.5.8 Future Conditions with the Project 9.7 Marine Water Quality 9.7.8 Future Conditions with the Project 13.0 Marine Fish 13.6 Future Conditions with the Project 13.6.3 Potential Effect - Changes in Productivity Table 13-6 Desktop and Field Studies Related to Marine Fish to Support the Assessment Table 13-10 Summary of Roberts Bank Ecosystem Model Productivity Results for Marine Fish **Information Requests** Response to Sufficiency Information Request #18 (IR5-18 of CEAR Document #1153) Response to Sufficiency Information Request #22 (IR5-22 of CEAR Document #1153)

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-15.2	Stated that sockeye salmon have not been assessed in the EIS and is an information gap. Stated that the Cowichan Nation Alliance is not satisfied with the explanation provided as to why sockeye is excluded from the assessment. Stated that field studies were conducted at the wrong time of the year. Concerned that there will be negative impacts on sockeye as a result of the Project. Stressed the importance of sockeye to the Cowichan Nation Alliance. Requested for peer review of the work pertaining to sockeye. Reiterated their concerns regarding the impact of the Project on migrating fish and disagreement that the VPFA consultants did not find evidence of sockeye salmon in the local assessment area. Noted they have been fishing in the area for thousands of years and expressed concern that sockeye is not being looked at.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2 11-Dec-2014, Health & Aboriginal Rights Workshop – Cowichan Nation Alliance 05-Jan-2015, Letter from Penelakut Tribe 29-Aug-2017, Follow Up Program Workshop with Cowichan Nation Alliance, Lyackson First Nation and Malahat First Nation	**12-Nov-2014, Workshop:** Responded that the VCs were defined based on the findings of the fieldwork. Referred to trawls being done in the area to determine what species are present in the area; different species can occur in the area, but Chinook and chum have more of a presence. Responded that the VFPA understands the importance of the species (sockeye) and more details specific to sockeye can be provided. **11-Dec-2014, Workshop:** Responded that the VFPA thought more information about how sockeye had been considered had been provided to the Cowichan Nation Alliance, and apologised if they have not yet received anything. The EIS will describe more fully how salmon have been assessed. **06-Feb-2015, Email from the VFPA to Penelakut Tribe:** Stated that concerns raised in your letter relate to the assessment of sockeye, and in particular the importance to Indigenous groups, and the impact of the terminal footprint. Noted that sockeye has been considered and will be addressed within the EIS. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **29-Aug-2017, Workshop:** Noted concerns regarding fish, and will include this as ongoing topic for further discussion on representative species and ways to address concerns raised.	**Addressed in EIS Appendix 7.2-B (#107):** Sockeye salmon was not selected as a representative species within the Pacific salmon sub-component, as studies indicate that juvenile sockeye salmon do not use the Roberts Bank area in high abundance, relative to chum and Chinook salmon (which have been selected as representative species in the assessment). Since chum and Chinook are the most estuarine-dependent species of salmon, the potential for Project-related interactions with these species is greatest. Results of the assessment based on these two species represent a more conservative approach, given the life histories and habitat use of chum and Chinook. Therefore, potential Project-related effects on sockeye salmon are considered within the assessment through the assessment on the sub-component Pacific salmon, as represented by chum and Chinook. **Additional information provided by the VFPA:** Minor decreases in productivity are anticipated during the construction and operation phases for all marine fish sub-components, with the exceptions of negligible changes in productivity for certain species, including adult Chinook and chum salmon (representative species for sockeye and other Pacific salmon species) and lingcod, and an increase in productivity for shiner perch during the operation phase. Productivity decreases can be partially mitigated through the implementation of environmental management plans and the creation of habitat. Residual effects are anticipated for flatfish and forage fish as a result of permanent loss of subtidal sand habitat associated with the terminal footprint and disturbance from underwater noise. The assessment concludes there are no significant adverse effects from the Project, as marine fish productivity or long-term integrity would not be compromised. The Project is not expected to result in measurable incremental adverse cumulative effects to marine fish. Sockeye salmon are considered in the assessment of marine commercial use as the primary species of salmon sought in the assessment area. The economic component of sockeye fishing is addressed in EIS Section 21.0. A field sampling program for salmon was conducted at Roberts Bank in 2012 and 2013. While it is possible that 2012 to 2013 seasonal surveying for the Project did not capture all salmon species present at Roberts Bank, historical survey data add to the weight of evidence, suggesting a realistic representation of species composition and abundance at Roberts Bank. **Addressed in responses to IR5-15 and AIR-12.04.15-09:** In its response to IR5-15, the VFPA specifically discusses existing conditions related to sockeye salmon and describes the status and management practices associated with the species. Rationale as to how sockeye salmon were assessed	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.0 Physical Setting 9.5 Coastal Geomorphology 9.5.8 Future Conditions with the Project 9.7 Marine Water Quality 9.7.8 Future Conditions with the Project 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component 13.3.1 Spatial Boundaries 13.4.1 Information Sources, Desktop and Field Studies 13.5.1 Existing Conditions, Pacific Salmon 13.6 Future Conditions with the Project Table 13-6 Desktop and Field Studies Related to Marine Fish to Support the Assessment Table 13-10 Summary of Roberts Bank Ecosystem Model Productivity Results for Marine Fish 13.6.3 Potential Effect - Changes in Productivity **Information Requests** Response to Additional Information Request #09 (AIR-12.04.15-09 of CEAR Document #388) Response to Sufficiency Information Request #15 (IR5-15 of CEAR Document #1078)

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				via use of Chinook and chum as representative species, as well as similarities between species as they pertain to existing conditions (e.g., life history and habitat requirements), the mechanisms through which the Project may affect sockeye, as well as effectiveness of mitigation, are presented in the VFPA's response to AIR-12.04.15-09, including Appendix AIR9-A Table 2; and in the VFPA's response to IR5-15. **Addressed in EIS Section 13.3:** The marine fish LAA encompasses an area of approximately 5,416 ha. In determining LAA boundaries, consideration was given to the nature and characteristics of marine fish, and potential exposure of marine fish to various Project influences (e.g., total suspended solids (TSS), sedimentation, and underwater sound levels). Also taken into account were social and cultural considerations, such as community knowledge and ITK, and current land and resource use by Indigenous groups and others. The RAA, which covers an area of approximately 52,456 ha, was established to provide a regional context for the assessment of Project-related effects. The RAA was also established to encompass the area within which the residual effects of the Project on marine fish may combine with the effects of other projects and activities to potentially result in a cumulative effect. Marine and freshwater RAA boundaries were determined based on DFO Pacific Fisheries Management Area limits (see EIS Figure 12-3).	
PT-15.3	Stated that the EIS should consider salmon pooling at the mouth of the Fraser River and investigate Project-related impacts on sockeye salmon in this area. Stated that fishermen report that Canoe Pass is an important holding area for sockeye.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Recorded comment for consideration by Project team. Referred to trawls being done in the area to determine what species are present in the area; different species can occur in the area, but Chinook and chum have more of a presence. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Section 13.0:** While there is evidence that adult sockeye pass through the estuary annually en route to the Fraser River to spawn, available information indicates that most stocks enter the Fraser River with little or no delay (i.e., perhaps one day); hence, any potential interaction between the Project and migrating or passing individual adult sockeye salmon would be limited to approximately several days per year. A potential exception is a portion of the late-run timing group, which typically holds in the outer estuary for several weeks prior to starting upriver migration; however, since 1995, large segments of the late-run sockeye have ceased their holding behaviour and entered the Fraser River three to six weeks earlier than historically observed. As noted in EIS Section 13.2.1, there is no scientific evidence that waters at or near Roberts Bank represent holding areas for adult sockeye. **Addressed in response to IR5-15:** In its response to IR5-15, the VFPA specifically discusses existing conditions related to sockeye and describes the status and management practices associated with the species. The response also further assesses potential effects of the Project on sockeye directly. As further described in the response to IR5-15, based on existing literature, there is no formally defined holding area	**EIS** 13.0 Marine Fish **Information Requests** Response to Sufficiency Information Request #15 (IR5-15 of CEAR Document #1078)

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				within the Fraser River estuary for returning adult sockeye. It appears that the brackish layer or plume within which adult sockeye may hold can extend as far north as Gibsons Landing, as far west and south as the Gulf Islands (from Gabriola Island near Nanaimo to Saturna Island at Boundary Passage), and as far east at Point Roberts area. However, since 1995, sockeye holding behaviour appears to have ceased.	
PT-15.4	Asked why people have not been included as one of the species that eats chum salmon in the food web example (slides 12-13, Marine Fish Presentation at 2014 Cowichan Nation Alliance Workshop #2).	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Responded that the approach undertaken seeks to understand the ecosystem from a natural perspective, and human interactions are addressed in a different way. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#101):** The Roberts Bank ecosystem model is described in the EIS. The model incorporated predator-prey relationships (biotic factors) and environmental factors within the marine environment, and does not incorporate anthropogenic influences such as fishing. Since changes are determined by comparing productivity in the future with the Project, to the future without the Project, the level of human influence is deemed to be the same with and without the Project, and humans are not included in the food web. However, the existing conditions for species included in the model are reflective of existing harvesting levels by humans; therefore, human interaction within the model is implicit. **Addressed in response to IR3-09:** Dungeness crab fishing at Roberts Bank was investigated using the Roberts Bank ecosystem model in the VFPA's response to IR3-09. Salmon harvesting was not considered, because salmon harvesting occurs over large geographic areas, with only a small proportion of the salmon catch coming from areas in the periphery of or adjacent to Roberts Bank. As such, salmon fishing was considered unlikely to influence model results. Results from the Roberts Bank ecosystem model re-run showed that when Dungeness crab fishing was considered, results were generally the same when compared to those described in the EIS.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 10.0 Biophysical Setting 10.3 Overview of Assessing Ecosystem Productivity Appendix 10.3-A Roberts Bank Ecopath with Ecosim and Ecospace Model Parameter Estimates Appendix 10.3-B Roberts Bank Ecosystem Model Development and Key Run Appendix 10.3-C Roberts Bank Spatial Ecosystem Model Sensitivity Analysis Appendix 10-D Roberts Bank Spatial Ecosystem Model Sensitivity Analysis **Information Requests** Response to Sufficiency Information Request #09 (IR3-09 of CEAR Document #984)
PT-15.5	Concerned that a spill could travel into mouth of Fraser River and impact migratory salmon species.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Recorded comment for consideration by Project team. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in Appendix 7.2-B (#185):** The Project is not located on the Fraser River and no Project-related effects are predicted on the Fraser River.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 30.0 Potential Accidents or Malfunctions Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment Appendix B - Tables
PT-15.6	Asked whether fish are being redirected away from Canoe Pass because of ships and whether that impact will increase with RBT2.	01-Nov-2013, Meeting with Cowichan Nation Alliance	**01-Nov-2013, Meeting:** Recorded comment for follow-up. **07-Jan-2014, Letter from the VFPA to Penelakut Tribe:** A review of historical and recent air photos, in addition to modelling of sediment deposition at	**Additional information provided by the VFPA:** There is no known evidence that existing shipping activity is affecting movement patterns of fish at Roberts Bank. In MSA Section 8.1, potential effects of underwater noise were considered to be negligible because noise generated by Project-associated marine vessel activity and future	**MSA** 8.1 Marine Fish

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			Roberts Bank (including Canoe Passage) is underway. Historic Canoe Passage discharge channel locations and sediment distribution (e.g., bar formation or build-up of sand) will be documented to assess natural variation pre- and post-terminal construction, and potential changes as a result of the proposed terminal configuration will be assessed. Fish and fish habitat suitability studies are currently underway to assess current fish distribution and abundance, and potential changes in fish presence as a result of the proposed Project will be assessed. Potential changes resulting from the Project during both construction and operations phases will be included in the assessment. Potential effects on marine fish migration behaviour from changes in the light environment and changes in habitat availability are assessed in the EIS. With mitigation, including implementation of a light management plan, and onsite offsetting in the form of eelgrass transplants and tidal marsh creation, changes in productivity of marine fish associated with these rearing habitats is assessed as negligible	cumulative shipping activities would not exceed injury thresholds for fish species or the Pacific salmon species behavioural threshold. Further, while noise-induced behavioural changes are possible for Pacific herring, potential effects would be localised to within 20 m of a container ship and of short duration (as the ship passes by) and are therefore not anticipated to affect the integrity of populations within the LAA.	
PT-15.7	Stated that the only way to mitigate for impacts to their fishing grounds is to not move ahead with the Project. Suggested that the VFPA not build the Project in response to the VFPA's request for input related to reducing, minimising, or eliminating impacts from the Project.	01-Dec-2016, Chief & Council Meeting – Penelakut 27-Jan-2017, Meeting with Penelakut	**01-Dec-2016, Meeting:** Stated that the VFPA would like to understand how Penelakut would like to be included, and noted the objective of the Project team is to understand impacts and mitigate them. Asked for Penelakut's input on what appropriate mitigation for impacts from the Project would be. Stated that not building the terminal does not address the economic prosperity aspect of sustainability. **27-Jan-2017, Meeting:** Recorded comment.	**Addressed in EIS Section 13.0:** Minor decreases in productivity are anticipated during the construction and operation phases for all marine fish sub-components, with the exceptions of negligible changes in productivity for certain species, including adult Chinook and chum salmon (representative species for sockeye and other Pacific salmon species) and lingcod, and an increase in productivity for shiner perch during the operation phase. Productivity decreases can be partially mitigated through the implementation of environmental management plans and the creation of habitat. Residual effects are anticipated for flatfish and forage fish as a result of permanent loss of subtidal sand habitat associated with the terminal footprint and disturbance from underwater noise. The assessment concludes there are no significant adverse effects from the Project, as marine fish productivity or long-term integrity would not be compromised. The Project is not expected to result in measurable incremental adverse cumulative effects to marine fish.	**EIS** 13.0 Marine Fish ***Updated EIS Guidelines*** **FINAL Roberts Bank Terminal 2 Project Review Panel Terms of Reference (CEAR Document #176)**
PT-15.8	Requested confirmation on whether there will be a no go zone for fishing vessels on the ocean around the Terminal 2 footprint and the rules that will be put in place in the area for non-Terminal marine vessels.	12-Dec-2014, Email from Penelakut Tribe	**11-Feb-2015, Email from VPFA to Penelakut Tribe:** Attached information regarding no go zones for fishing vessels. Attached two maps of current navigational restrictions in the area. Attached a map showing the proposed expanded navigational closure area for RBT2, and stated that	**Addressed in EIS Section 21.7:** The VFPA is proposing that the existing navigational closure areas in the vicinity of Roberts Bank (as described in EIS Section 21.1) for both commercial and recreational crab harvesting be expanded to help sustain navigation safety during Project construction and operation phases (EIS Figure 21-8). These are proposed expansions and their spatial extent and allowed activities will be further defined	**EIS** 21.0 Marine Commercial Use 21.1 Component Overview and Regulatory Setting 21.6 Future Conditions with the Project – Potential Project-related Effects

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			practices and procedures at the VFPA are pursuant to Section 56 of the *Canada Marine Act* and are designed to promote safe and efficient navigation within the local waters of the VFPA and to protect the marine environment.	through the VFPA's discussions with DFO and the other applicable authorities. The VFPA will work with DFO to ensure that the necessary consultations with crab harvesters and Indigenous groups occur in order to consider these proposed expansions.	21.7 Future Conditions with the Project - Potential Project-Related Effects Figure 21-8 Proposed Navigational Closure Expansion
PT-15.9	Concerned that the Project will impact their ability to fish. Noted that the South and North Arms of the Fraser River, and Canoe Pass and Roberts Bank area are heavily used for salmon fishing and all fishing methods are used including troll, gill net and seine. Stated that the importance of Roberts Bank as an area to access fish is stressed and reiterated. Concerned that the Project will impact their Food, Social and Ceremonial (FSC) licensing in the area. Stated that Penelakut relies on salmon for FSC and does not want the Project to impact salmon stocks.	01-Dec-2016, Chief & Council Meeting - Penelakut	**01-Dec-2016:** Recorded comment for consideration by Project team.	**Addressed in EIS Section 32.2:** The Current Use effects assessment presented in EIS Section 32.2 considered potential effects on: • Access to preferred Current Use locations; • Availability of preferred Current Use resources; • Quality of preferred Current Use resources; and • Quality of Current Use experience. Interactions between Project components and activities and Current Use were considered, as were potential effects and proposed measures to avoid, reduce, or otherwise address the potential effects. Mitigation measures proposed include, but are not limited to: • Develop a communications protocol to inform appropriate Indigenous groups of planned or unplanned events related to Project construction or operation that may affect Current Use access; and • Work with appropriate Indigenous groups to develop and implement a communications mechanism that will support dialogue between the VFPA and appropriate Indigenous groups on topics of concern that arise during construction and initial operation phases. Following implementation of the mitigation summarised in the table above, adverse residual Project-related effects are expected to be negligible. Therefore, the Project is not expected to contribute to cumulative effects.	**EIS** 32.2 Current Use of Lands and Resources for Traditional Purposes
PT-15.10	Stated that the EIS identifies that construction of the Project will create elevated concentrations of total suspended solids (TSS) in the local assessment area. The EIS states that "Effects of TSS on Pacific salmon productivity are more likely to be behavioural than injurious, and are therefore difficult to quantify. Both adult and juvenile salmon species will thus likely avoid areas of high TSS concentrations, thereby limiting exposure" (EIS p. 13-86). Given this avoidance behaviour, the EIS should include an assessment of whether avoidance behaviour will have an effect on migratory paths of pacific salmon, in particular the sockeye salmon that migrate through Canoe Passage. Further, the EIS should provide an assessment of the impact of avoidance behaviour on the Aboriginal sockeye fishery.	10-Jun-2015, Letter to the CEA Agency from Penelakut Tribe (CEAR Document #210) 26-Oct-2016, Letter to Panel from Penelakut Tribe (CEAR Document #615)	**13-Oct-2015, Letter from the CEA Agency to Penelakut Tribe (CEAR Document #310):** *"The Agency did not request additional information for this item since there is already some information provided in the EIS. The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in EIS Section 13.6.2.1:** EIS Section 13.6.2.1 predicts a negligible change in Pacific salmon productivity, given salmon are anadromous and adapted to naturally high background TSS levels as well as large seasonal variations in TSS. Also, dredging and discharge of supernatant are unlikely to affect juvenile salmon as: (i) they typically inhabit surface waters, and therefore are not expected to occur at depths predicted to experience the greatest Project-related TSS concentrations; and (ii) the TSS plume is not expected to extend onto the tidal flats (where juvenile salmon have been documented in high numbers) except for short durations and at low concentrations.	**EIS** 13.0 Marine Fish 13.6.2.1 Changes in Water Quality

Penelakut Tribe

Table 16: Marine Invertebrates – Valued Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-16.1	Concerned about effects on crabs, particularly in relation to black material observed in crabs harvested in the area. Crab harvesting in the RBT2 Project area results in black (coal polluted crabs), which are not edible. Asked how the VFPA can remediate lands first to deal with coal.	01-Nov-2013, Meeting with Cowichan Nation Alliance 12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**01-Nov-2013, Meeting:** Responded that crabs are part of the baselines studies and the VFPA is looking at current conditions of the baseline studies. **12-Nov-2014, Workshop:** Referred to the black crab study being carried out separately from the environmental assessment. Two black crab samples have been collected, and are currently waiting to be tested. The VFPA will be able to provide an update once that has happened. Tsawwassen First Nation collected the crab samples for this study. **07-Jan-2014, Letter from the VFPA to Penelakut Tribe:** Stated that the proposed Project is being designed to exclusively handle containers. There will not be an increase in coal shipments as a result of the Project. The VFPA has undertaken shellfish studies in the Roberts Bank area to assess contamination, and proposes to study crab tissues to assess whether the black material is coal dust, a fungus, or other substance. **07-Aug-2014, Email from the VFPA to Penelakut Tribe:** Provided information on a study that the VFPA is undertaking related to black material observed in Dungeness crabs previously harvested from the Fraser River estuary. This black material has been noticed by Tsawwassen and Musqueam First Nation crabbers in DFO Fisheries Management Areas 28 and 29 and as such we are working with these communities in the collection of crabs for testing. Provided details on the purpose, methodology, study area, and timeframe. **09-Jul-2015, Email from the VFPA to Penelakut Tribe:** Followed up to previous communications and the Dungeness Crab field study notification of August 2014. Attached a letter and memorandum regarding the studies undertaken by Hemmera in response to reports from Indigenous groups to the VFPA regarding blackening of Dungeness crab and concerns related to potential contamination. The memo included a summary of findings. The results of both studies were the same: • There is no evidence of coal contamination, based on the results of sensitive tissue chemistry analysis testing for PAHs, metals, and trace elements;	**Addressed in EIS Section 27.0 and EIS Appendix 27-C:** Addresses potential effects of contaminant-related consumption risks of Dungeness crab, where contaminant analysis of crab tissue and the completion of a human health risk assessment was completed to support the development of the RBT2 environmental assessment. The leg muscle tissue did not contain detectable PAH concentrations, in spite of the use of sensitive laboratory analytical methods. Only arsenic was present in concentrations of potential concern and, consequently, was carried forward in a quantitative human health risk assessment; it was concluded that arsenic-associated health risks from the consumption of Dungeness crab tissue are acceptably low. A second study paralleled the above in terms of methods and analysis, but involved collaboration with Indigenous groups to provide samples of crabs as well microscopic examination of the tissue structures (i.e., histologic) of blackened areas. Again, results yielded no evidence of crab contamination related to coal dust, based on sensitive tissue chemistry analysis testing for PAHs, metals, and trace elements. Results of microscopic examination point to localised physical damage of the exoskeleton and the bacterial shell disease as the underlying cause of blackening. **Addressed in EIS Appendix 7.2-B (#74):** Potential Project-related effects on Dungeness crabs are described in the EIS. An Edible Shellfish Study was undertaken to quantify bivalve shellfish and Dungeness crab soft tissue contaminant concentrations. The results of this study are provided in the EIS in the marine invertebrates and human health sections. In late 2014, samples of crab were collected by Indigenous crab harvesters concerned about contamination, and the VFPA has submitted these for tissue testing for various substances of concern, including PAHs, metals, and fungus. Preliminary observational results indicate that the causes of black colouration of crabs is consistent with shell disease, and not likely related to contamination from coal dust (EIS Appendix 27-C, Section 4.76). The detailed results of laboratory tests will be shared with Indigenous groups when available.	**EIS** 12.0 Marine Invertebrates 12.4.1 Desktop and Field Studies Table 12-4 Marine Invertebrates Studies to Support the Assessment 12.5.3 Existing Conditions, Dungeness Crabs 12.6.2 Future Conditions with the Project, Negligible Effects 27.0 Human Health 27.6.4 Potential Effect # 3 – Adverse Health Effects due to Stress and Annoyance - Perceived Contamination Appendix 27-C Shellfish Harvesting Potential and Contaminant-related Consumption Risks at Roberts Bank **Information Requests** Response to Sufficiency Information Request #33 (IR4-33 of CEAR Document #1078) Response to Sufficiency Information Request #34 (IR4-34 of CEAR Document #946) **Memorandum Re: Summary Report – Roberts Bank Dungeness Crab Health Studies**

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			• Consumption risks are acceptably low and pose no risk to human health; and • The underlying cause of the blackened shells is determined to be shell disease (a common condition due to bacterial infection of existing lesions/damage in the crab shells). **12-Apr-2018, Letter from the VFPA to Penelakut Tribe:** Stated that since concerns were raised, the Project team has conducted further work on these topics to respond to information requests from the Review Panel, to better understand potential effects and suggested mitigation, and to gain deeper understanding of the viewpoints of Indigenous groups and stakeholders. Provided the following documents review: • IR4-33 - Crab Hepatopancreas Additional Study Summary; and • IR4-34 - Black Crab Additional Studies Summary. Stated that the VFPA is interested in hearing views regarding options to mitigate potential effects to crabs and crabbing in the Project area.	**Addressed in responses to IR4-33 and IR4-34:** Further information concerning the VFPA's investigations into 'blackened' crabs is provided in the response to IR4-34. In summary, black lesions were observed on four of the five crabs collected by Indigenous harvesters. The black lesions were concluded to be consistent with chitinolytic shell disease, generically referred to as 'shell disease', a condition common to crab and other crustaceans. This disease is caused by a bacterial or fungal infection of an area where the outer layer of the shell has been previously damaged. Shell disease has not been linked to contamination. The disease is not specific to the Roberts Bank area and is present across the Pacific Northwest, including Alaska and B.C. and in Atlantic Canada. In its response to IR4-33, the VFPA provided results of the study. In summary: A crab hepatopancreas study was conducted at Roberts Bank to determine the concentrations of contaminants of concern in crab hepatopancreas in the LAA. In June 2017, Dungeness crab were collected from five traps placed at each of the three study locations (15 traps total). Twelve adult male crabs were harvested from each of the three sites (36 crab total). Samples were submitted under chain of custody to analytical laboratories accredited by the Canadian Association for Laboratory Accreditation (CALA) for the analysis requested. The analysis was completed in August 2017. Collectively, the results of a statistical comparison across sites indicate that the average concentrations of PCBs, coal indicator elements, arsenic compounds, and PAHs measured in hepatopancreas from crab collected from the RBT2 and ITP sites are not statistically higher than those measured in crab from the Canoe Passage reference site. This suggests that existing sediment and water quality in and around the existing terminal and proposed RBT2 terminal are not contributing to contaminant concentrations in crab hepatopancreas that are higher than levels found in crab hepatopancreas from the Canoe Passage reference site.	
PT-16.2	Requested more information on sea pens. Asked what is known about the impact and role of orange sea pens in the area. Asked what the per cent decrease in productivity is expected to be.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Stated that sea pens are known to exist in the area; however, from a scientific and ecological perspective, they are poorly understood. The first studies were done in 2002-2003, and more field studies were more recently undertaken in 2011 using an underwater remote vehicle.	**Addressed in EIS Section 12.0:** As noted in EIS Section 12.0, the VFPA stated that the proposed Project would result in a moderate reduction in orange sea pen productivity, and that the level of confidence in this assessment was considered to be moderate.	**EIS** 12.0 Marine Invertebrates **Information Requests** Response to Information Request #24 (IR-7.31.15-24 of CEAR Document #314)

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	Asked if the orange sea pen test transplant area has been determined yet to be either successful or unsuccessful. Concerned with the impact of a loss of sea pens on habitat and other species.		Additional recent studies have included people going underwater to count sea pens, to map their distribution, and to identify other species associated with them. One study sought to understand them better in the context of water flows and sediments and other studies looked at transplanting sea pens. If the transplant was not viable or unreliable, the effects would be characterised in a worst-case scenario. In this current status of the assessment, it is anticipated that there will be a moderate impact on the orange sea pens in the area if transplanting is unsuccessful. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Section 12.0 Marine Invertebrates. **07-Feb-2018, Email from the VFPA to Penelakut Tribe:** *Starting in 2014, the Project team conducted a pilot study to test a method for transplanting orange sea pens, which involved the transplant of 1,200 orange sea pens to three sites within the LAA for the Project. Please find attached a report titled Orange Sea Pen Transplant Pilot and Monitoring Program. The results of the study show that the pilot sea pen transplant was successful, with stable densities and evidence of recruitment at two of the three transplant sites. This report will be submitted to the Review Panel shortly with the VFPA's response to IR5-05.*	**Addressed in response to IR-7.31.15-24:** The VFPA's response to IR-7.31.15-24 presents the inter-relations between orange sea pens and other marine species and the predicted effects to other marine species from the Project-related loss of orange sea pen habitat. **Addressed in response to IR5-05:** The VFPA's response to IR5-05 provides the Orange Sea Pen Transplant Pilot and Monitoring Program report (Appendix IR5-05-A). In summary, the pilot sea pen transplant was successful. Stable densities, and evidence of recruitment, at two of the three transplant sites demonstrate that not only can environmental conditions successfully be used to predict habitat suitability for orange sea pens across a larger study area, but also attests to the ecological viability of transplantation as a potential mitigation method. **Addressed in response to IR5-06:** The VFPA's response to IR5-06 discusses the confidence in the effect rating for orange sea pens. In summary, the moderate confidence ranking was rooted in four main points (each of which are described below): • The success of the orange sea pen pilot transplant and monitoring program (see IR5-05); • Remaining orange sea pen productivity with the Project (before mitigation) is considerable (45%) such that the population will persist at Roberts Bank; • Reproductive and larval biological characteristics of orange sea pens, which confer a high ability to replenish stocks; and • Coral transplants are common and successful elsewhere. **Addressed in response to IR5-07:** The VFPA's response to IR5-07 provides an assessment of the potential ecological effects on other components of the environment such as marine invertebrates and marine fish resulting from a decrease in the orange sea pen population due to the proposed Project activities. As noted in the response to IR5-07, the conclusion of no significant effects to marine invertebrates and fish remain unchanged.	Response to Sufficiency Information Request #05 (IR5-05 of CEAR Document #1145) Response to Sufficiency Information Request #06 (IR5-06 of CEAR Document #1145) Response to Sufficiency Information Request #07 (IR5-07 of CEAR Document #1145)
PT-16.3	Referred to the food webs showing biomass in the future with and without the Project (slides 17-18 of Marine Invertebrates presentation at Cowichan Nation Alliance Workshop #2), and the bubbles changing in size.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Recorded comment for consideration by Project team.	**Addressed in EIS Section 10.0:** The VFPA used an ecosystem-based approach to assess Project-related effects to the productivity of marine biophysical VCs. Modelling of ecosystem productivity was one of several tools used to inform effects assessments.	**EIS** 10.0 Biophysical Setting Appendix 10-C Roberts Bank Ecosystem Model Development and Key Run

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	Requested the exact number of anticipated change for each of the species.		**01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included information on the biophysical setting in Section 10.0.	Productivity is a measure of the amount of plant and animal biological material (or biomass) produced within an area over a given amount of time. A predator-prey food web for the Roberts Bank ecosystem was developed to represent the linkages and interactions between marine vegetation, invertebrates, fish, mammals, and coastal bird species that influence the productivity of the ecosystem. The model calculates productivity changes to 58 functional groups to represent the complex interactions of this ecosystem; productivity changes to each of these groups calculated by the model are presented in EIS Appendix 10-C. The results are presented as changes to biomass in the groups, not species' abundance (number of individuals). The model was also used to predict the productivity of proposed on-site habitat that would be created to offset expected Project-related effects on the productivity of marine biophysical VCs.	
PT-16.4	Concerned with the potential for RBT2 to constrain crabbing areas. Stated that fishing will be confined to a smaller area and there is concern regarding crowding. Stated that their use of the Roberts Bank area has increased recently because crabs in proximity to Penelakut are contaminated by the Crofton Mill. Stated that they rely on crab taken from the RBT2 area to support its food, social and ceremonial fishery and its traditional way of life. Stated that Penelakut harvests crabs in the LAA, and as such, the EIS should determine that there is a significant impact to Penelakut's rights as was done for Musqueam First Nation and Tsawwassen First Nation, and provide accommodation. Stated that Penelakut relies on crab taken from the RBT2 area to support its food, social and ceremonial fishery and its traditional way of life. Stated that much of Penelakut Territory is subject to Fisheries and Oceans Canada consumption advisories due to Dioxin contamination. As a result, RBT2 is the only area within Penelakut Territory where the Penelakut people feel confident that the crab they obtain can be eaten in its entirety. Expressed interest in meeting to discuss the proposed commercial crab closure noting it is a highly constrained fishing area.	17-Jun-2015, Meeting with Cowichan Nation Alliance 04-Jan-2016, Letter to the VFPA from Penelakut Tribe 26-Oct-2016, Letter to Panel from Penelakut Tribe (CEAR Document #615) 01-Dec-2016, Chief & Council Meeting – Penelakut Tribe 07-Jul-2017, Meeting with Penelakut Tribe	**17-Jun-2015, Meeting:** Recorded comment for consideration by Project team. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **01-Dec-2016, Meeting:** Recorded comment for consideration by Project team. **04-Feb-2016, Letter from the VFPA to Penelakut Tribe:** In the VFPA's meeting with Cowichan Nation Alliance on June 17, 2015, Penelakut Tribe informed the VFPA that it relies on the Roberts Bank area for crab harvesting due to contamination present in areas closer to their communities; Penelakut Tribe advised that they secured a total catch of about 2,700 to 3,000 lbs of crab for food, social, and ceremonial purposes in this area in April 2015. The VFPA included this new information in the MSA, submitted in October 2015 (see pp. 9.5-107 to 9.5-108). Penelakut Tribe's January 4, 2016 letter includes reference to an Indigenous Fisheries Strategy agreement with DFO that covers the Project area; the VFPA requests that Penelakut Tribe send a copy of the agreement and any other information relating to marine resource harvesting in areas potentially affected by the Project.	**Addressed in EIS Appendix 7.2-B (#117):** Marine commercial use, or the use of marine waters and resources to generate revenue, has been identified as an important economic factor in local and regional communities, and for Indigenous groups. The marine commercial use assessment included four sub-components: • Seafood harvesting; • Marine fish harvesting; • Guided sport fishing; and • Marine-based tourism. Potential effects on marine commercial use include displacement of commercial crab harvesting during construction and operation, resulting in a potential change of harvesting area, total harvest, and revenue, due to the Project footprint and the proposed expansion of the area closed to commercial crabbing. The VFPA will work with DFO to engage commercial crab harvesters to identify and implement feasible mitigation measures, and will implement construction and operation environmental management plans related to construction phase communication, construction monitoring, and crab salvages effects from displacement of commercial crab harvesting during construction and operations. The Project is anticipated to result in a negligible effect to marine fish harvesting, guided sport fishing, and marine-based tourism. These negligible effects are related to changes in area,	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 12.0 Marine Invertebrates 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries 21.0 Marine Commercial Use 21.6 Future Conditions with the Project – Potential Project-related Effects 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Land and Resources for Traditional Purposes 32.2.6 Future Conditions With the Project - Potential Project-Related Effects **Information Requests** Response to Sufficiency Information Request #07 (IR10-07)

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			28-Jul-2016, Issues Workshop – Island Nations: The VFPA hosted an issues workshop where concerns raised about project impacts to crab where discussed along with proposed mitigation measures. Explained that the EIS section for current use/rights considers the navigational closure area. FSC harvesters can access this closure area to crab without floats; commercial and other harvesters cannot. That closure area would be expanded to accommodate the new terminal and would increase in size. The idea would be that VFPA would work with DFO to continue the practice to only allow FSC crabbing within that area. We also have identified other consultation mechanisms to continue engagement with Aboriginal groups regarding monitoring/follow up programs regarding resources relied upon by Aboriginal groups. We have identified the opportunity for future VFPA-Aboriginal group collaboration. **07-Jul-2017, Meeting:** Committed to schedule a meeting with Penelakut Tribe to discuss mitigation for the commercial crab closure. **12-Apr-2018, Letter from the VFPA to Cowichan Tribes:** Stated that since your concerns were raised, the Project team has conducted further work on these topics to respond to information requests from the Review Panel, to better understand potential effects and suggested mitigation, and to gain deeper understanding of the viewpoints of Indigenous groups and stakeholders. Provided the RBT2 Crab Mitigation Summary Overview, which detailed the following: • Mitigation measures to avoid or reduce effects to crab as outlined in the EIS; and • Additional crab harvesting related mitigation measure suggestions under review. Stated that the VFPA is interested in hearing views regarding options to mitigate potential effects to crabs and crabbing in the Project area.	access, resource availability, and harvesting revenues. The Project is expected to result in a residual effect of changes to seafood harvesting area, harvest, and revenue. The residual effect is determined to be not significant, as Dungeness crab are known to move substantial distances to baited traps, and harvest activity can be moved to another open area. Other planned or reasonably foreseeable projects and activities would also displace crab harvesting, and this effect would combine with that of the Project to result in an incremental cumulative effect on commercial crab fishing. This adverse incremental cumulative effect is determined to be not significant. **Addressed in response to IR10-07:** The VFPA's response to IR10-07, as requested by the Review Panel, further discusses potential economic implications of any permanent or temporary displacement related to the navigational closure.	
PT-16.5	Stated that the EIS does not explain how or whether the reduction in sea pen productivity may affect fish, other macro-invertebrate species or Dungeness crab. If this was not considered, the EIS should state this. If no effect is predicted, the rationale for this finding should be provided.	10-Jun-2015, Letter to the CEA Agency from Penelakut Tribe (CEAR Document #210)	**13-Oct-2015, Letter from the CEA Agency to Penelakut Tribe (CEAR Document #310):** *"The Agency has requested additional information on this item in its letter of July 31, 2015 to [the VFPA] (page 12, #24)."*	**Addressed in response to IR5-07:** The VFPA's response to IR5-07 provides an assessment of the potential ecological effects on other components of the environment such as marine invertebrates and marine fish resulting from a decrease in the orange sea pen population due to the proposed Project activities. As noted in the response to IR5-07, the conclusion of no	**Information Requests** Response to Sufficiency Information Request #07 (IR5-07 of CEAR Document #1145)

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				significant effects to marine invertebrates and fish remain unchanged.	
PT-16.6	Stated that the Proponent should be required to provide quantitative information about marine invertebrate abundance. Questioned the quality of the study.	14-Nov-2017, Letter to Panel from Penelakut Tribe (CEAR Document #1092)	The VFPA has reviewed this letter and provides the following information.	**Addressed in EIS Section 12.0:** EIS Section 12.4 presents information sources used in the marine invertebrate effects assessment, which includes quantitative sources concerning abundance. Additionally, abundance data is also presented in Technical Data Reports presented in the appendices supporting the VFPA's response to AIR-12.04.15-10, including: • RBT2 TDR MI-1: Infaunal and Epifaunal Invertebrate Communities • RBT2 TDR MI-2: Juvenile Dungeness Crabs • RBT2 TDR MI-3: Orange Sea Pens • RBT2 TDR MI-4: Dungeness Crab Productivity Additional information is included in EIS Appendix 27-C.	**EIS** 12.0 Marine Invertebrates 12.4 Information Sources Appendix 27-C: Shellfish Harvesting Potential and Contaminant-Related Consumption Risks at Roberts Bank **Information Requests** Response to Additional Information Request #10 (AIR-12.04.15-10 of CEAR Document #388)

Table 18: Marine Shipping Addendum

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-18.1	Concerned with cumulative effects to Aboriginal rights associated with marine shipping. Stated that increases in shipping will result in "death by a thousand cuts". Concerned that the draft Current Use Summary does not include effects from malfunctions or accidents, as well as cumulative environmental effects.	17-Jun-2015, Meeting with Cowichan Nation Alliance 09-Sep-2015, Letter to the VFPA from Cowichan Tribes on behalf of Cowichan Nation Alliance	**17-Jun-2015, Meeting:** Recorded comment for follow-up. **02-Oct-2015, Letter from the VFPA to Penelakut Tribe:** Explained that the document shared by the VFPA on July 27, 2015 included a draft summary of CNA's current use in the marine shipping study area, and therefore did not include accidents and malfunctions or potential effects. Noted that these topics will be addressed in the Report to be submitted to the Canadian Environmental Assessment Agency ("CEAA") in the fall of 2015. **09-Nov-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the MSA for the proposed Project, which included its assessment of cumulative effects in MSA Section 6.0.	**Addressed in MSA Appendix 5-B (#23):** The approach to the cumulative effects assessment is provided in MSA Section 6.0. Each IC and VC assessment section considers cumulative changes and cumulative effects to which the Project contributes. This entails consideration of residual effects of routine marine shipping associated with the Project, if any such effects are predicted, in combination with effects of other projects and activities that have been or will be carried out. MSA Section 9.5 describes how Current Use activities have been affected by other projects and activities that have been carried out. As residual effects to Current Use as a result of marine shipping associated with the Project are not predicted, an assessment of future cumulative effects was not carried out. Taking a precautionary approach, the assessment of potential impacts to Indigenous groups' ability to exercise asserted or established Aboriginal and treaty rights as a result of Project-associated shipping was based on the assumption that traditional use presently occurring in the marine shipping area (i.e., Current Use) is an expression of the exercise of Aboriginal or treaty rights. Where traditional use was not identified as occurring at present within the marine shipping area, but similar use was identified as practiced in the past in the marine shipping area, asserted as an Aboriginal right, or protected under treaty, this use was assumed to be potentially exercisable as an Aboriginal or treaty right, and subject to potential impacts as a result of Project-associated shipping in much the same way as potential effects on Current Use. Considering the conclusions of the Current Use assessment, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the marine shipping a without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location. These mitigation measures for addressing potential incremental effects on Current Use are expected to also be effective at addressing the	**MSA** Appendix 5-B Aboriginal Issues and Interests 6.0 Effects Assessment Approach 6.7 Cumulative Effects Assessment 7.1 through 9.4 (All IC and VC assessments) 9.5 Current Use of Lands and Resources for Traditional Purposes, and Aboriginal and Treaty Rights

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				potential incremental impact to the exercise of Aboriginal and treaty rights. No additional mitigation measures have therefore been suggested for the potential incremental impact to the exercise of Aboriginal and treaty rights.	
PT-18.2	Stated that Canada, B.C., Parks and First Nations are working to establish the National Marine Conservation Initiative in the Gulf Islands. Concerned with impacts from shipping to this initiative and conservation areas.	17-Jun-2015, Meeting with Cowichan Nation Alliance	**17-Jun-2015, Meeting:** Recorded comment for consideration by Project team. **09-Nov-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the MSA for the proposed Project, which included MSA Appendix 5-B listing all the issues and interests raised by Indigenous groups and the VFPA's response.	**Addressed in MSA Appendix 5-B (#26):** The conservation areas within the marine shipping area are described in MSA Section 2.1.2 and shown on MSA Figure 2-2. The extent to which potential effects of marine shipping associated with the Project are predicted to occur within conservation areas is addressed within each relevant IC or VC section.	**MSA** 2.0 Geographic Setting 2.1.2 Species at Risk and Conservation Areas Figure 2-2 Conservation Areas in and near the Marine Shipping Area Appendix 5-B Aboriginal Issues and Interests
PT-18.3	Concerned with the impacts of marine shipping to short fishing openings.	17-Jun-2015, Meeting with Cowichan Nation Alliance	**17-Jun-2015, Meeting:** Recorded comment for consideration by Project team. Noted that the VFPA is not involved in setting the regulations for Aboriginal fisheries. **09-Nov-2015, Letter from the VFPA to Cowichan Tribes:** Provided a copy of the MSA for the proposed Project, which included MSA Appendix 5-B listing all the issues and interests raised by Indigenous groups and the VFPA's response.	**Addressed in MSA Section 9.2:** Potential effects of vessel transit from Project-associated shipping on commercial fish and seafood harvesting marine area displacement, access, fish and seafood availability, and gear damage or loss would not be measurable from existing conditions and are therefore considered to be negligible. Potential consequential effects on harvest and associated revenues of commercial fishing and seafood enterprises are also considered to be negligible. When all lines of evidence are considered, the effect of vessel transit on commercial fishing and seafood harvesting is considered to be negligible.	**MSA** 9.2 Marine Commercial Use 9.2.5.1 Negligible Effects
PT-18.4	Stated that the MSA should include an inventory, in tabular form, of Penelakut traditional and cultural resource use sites and their general location relative to International Shipping Lanes.	08-Dec-2015, Letter to the CEA Agency from Penelakut Tribe (CEAR Document #347) 26-Oct-2016, Letter to Panel from Penelakut Tribe (CEAR Document #615)	**12-May-2016, Letter from the CEA Agency to Penelakut Tribe (CEAR Document #401):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review.* *The Crown will be using the Review Panel process to the extent possible to collect information about potential impacts to the exercise of Penelakut Tribe's rights from the Project and marine shipping associated with the Project and we encourage you to provide your perspective on this topic to the Review Panel."*	**Addressed in response to IR10-21:** The VFPA's response to IR10-21, as requested by the Review Panel, discusses potential Project effects to sites of physical and cultural importance to Indigenous peoples.	**Information Requests** Response to Sufficiency Additional Information Request #21 (IR10-21)
PT-18.5	Stated that the MSA should provide a rationale for the prediction that the proposed mitigation will address the anticipated adverse effects, including examples of where such measures have proved to mitigate effects.	08-Dec-2015, Letter to the CEA Agency from Penelakut Tribe (CEAR Document #347) 26-Oct-2016, Letter to Panel from Penelakut Tribe (CEAR Document #615)	**12-May-2016, Letter from the CEA Agency to Penelakut Tribe (CEAR Document #401):** *"The Agency requested additional information on this topic in AIR #13 Aboriginal and Treaty Rights and Related Interests.* *In addition, the Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in response to MSA IR-02.24.16-13:** Table MSA IR13-1 includes a summary of mitigation measures raised by Indigenous groups related to potential adverse impacts of the Project, including marine shipping associated with the Project, on potential or established Aboriginal and treaty rights and related interests. The specific measures noted in the Table MSA IR13-1 were those raised during consultation on marine shipping associated with the Project, but may relate to the Project or marine shipping.	**Information Requests** Response to Additional Information Request #13 (MSA IR-02.24.16-13 of CEAR Document #386)

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				Addressed in response to IR10-09: The VFPA's response to IR10-09, as requested by the Review Panel, provides further discussion of proposed mitigation measures to reduce the potential effects of the proposed Project on the access, availability, and quality of preferred Current Use resources and the quality of the Current Use experience.	
PT-18.6	Stated that Penelakut should have seen the entire MSA not just portions of the report.	19-Oct-2015, Letter to the VFPA from Penelakut Tribe	**09-Nov-2015, Letter from the VFPA to Penelakut Tribe – Letter 1:** The VFPA shared a summary of Cowichan Nation Alliance's Current Use in the marine shipping area with Penelakut Tribe to verify that information relating to Cowichan Nation Alliance's Current Use was represented correctly and completely in the MSA. The MSA has been submitted to the CEA Agency and a hard copy will be provided to Penelakut Tribe for review. Penelakut Tribe will have the opportunity to review and comment on the entirety of the MSA during a comment period led by the CEA Agency. **09-Nov-2015, Letter from the VFPA to Penelakut Tribe – Letter 2:** Provided Penelakut Tribe's copy of the MSA for the proposed Project, which was submitted by the VFPA to the CEA Agency on October 26, 2015.		
PT-18.7	Concerned with the increase in shipping traffic and impacts to small fishing vessels in a very intensive fishing area. Penelakut is already experiencing food insecurity due to contamination in other areas, and relies heavily on areas traversed by marine shipping. Stated that vessel traffic associated with construction and operation of the terminal will increase navigational conflicts for Penelakut Tribe members engaged in marine harvesting at Roberts Bank	03-Jul-2015, Email from Penelakut Tribe 26-Oct-2016, Letter to Panel from Penelakut Tribe (CEAR Document #615)	**03-Jul-2015:** Provided information on the Project traffic, stating that "The estimated 520 container ship movements per year would estimate roughly 2 to 4% of the total anticipated traffic in 2030 depending on the specific area of the Marine Shipping Area considered." Explained that these figures are based on Automatic Identification System (AIS) marine traffic data, which includes all vessels with satellite tracking.	**Addressed in MSA Section 4.0:** MSA Section 4.0 contains vessel traffic numbers related to vessel traffic occurring outside the VFPA's jurisdiction. **Addressed in response to IR4-04:** The VFPA's response to IR4-04 provides updated vessel movements for all marine shipping area segments in 2012 and projected movements in 2030. **Addressed in MSA Section 9.2:** Potential effects of vessel transit from Project-associated shipping on commercial fish and seafood harvesting marine area displacement, access, fish and seafood availability, and gear damage or loss would not be measurable from existing conditions and are therefore considered to be negligible. Potential consequential effects on harvest and associated revenues of commercial fishing and seafood enterprises are also considered to be negligible. When all lines of evidence are considered, the effect of vessel transit on commercial fishing and seafood harvesting is considered to be negligible. **Addressed in MSA Section 10.0:** The assessment of potential accidents or malfunctions considers a variety of potential effects related to two plausible worst-case scenarios selected based on the	**MSA** 4.0 Activity Description Appendix 5-B Aboriginal Issues and Interests 9.1 Human Health 9.2 Marine Commercial Use 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights **Information Requests** Response to Sufficiency Information Request #04 (IR4-04 of CEAR Document #1051)

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				analysed probabilities of occurrence, higher risk areas, and possible consequences: • A collision between a container ship and a small vessel within an existing shipping lane, resulting in damage to the vessel and/or gear as well a serious injury or fatality; and • A powered grounding of a container ship on a hard substrate, resulting in a spill of 7,500 m^3 of heavy fuel oil. In both cases, the identified residual adverse effects are unlikely to occur, because of the very low probability of the accident scenarios.	
PT-18.8	Asked for more information about the assumptions about increase in ship movements.	03-Jul-2015, Email from Penelakut Tribe	**03-Jul-2015, Email from the VFPA:** The AIS is a vessel tracking system that automatically provides updates on a vessel's position and other relevant ship voyage data to a marine vessel traffic operator. It is mandated under the Navigation Safety Regulations and applies to the following vessels: 1. Every ship of 150 tons or more that is carrying more than 12 passengers and engaged on an international voyage shall be fitted with an AIS. 2. Every ship, other than a fishing vessel, of 300 tons or more that is engaged on an international voyage shall be fitted with an AIS. 3. Every ship, other than a fishing vessel, of 500 tons or more that is not engaged on an international voyage shall be fitted with an AIS AIS data used in our reporting was obtained from the Canadian Coast Guard. With respect to the vessel movement estimates, there is data from 2012 showing approximately 9,000 - 21,000 vessel movements per year in the marine shipping a (approximately 9,000 in Haro Strait, 19,000 near Victoria, and 21,000 in the Strait of Georgia). The variation in movements across areas reflects local variations such as ferry traffic and container ship movements to U.S. or Canadian (or both) ports. Based on this 2012 data, an increase of 520 vessel movements associated with RBT2 would account for up to 6% of the total vessel traffic in 2012. Again, total vessel traffic does not include vessels that are not captured by AIS (fishing boats, small recreational traffic). [For comparison, we had reported the 2030 figures as approximately 12,000 per year near Haro Strait, 23,700 near Victoria and 22,400 in the Strait of Georgia.] These numbers are all preliminary at this point, and final numbers will be published in the MSA.	**Addressed in MSA Section 4.0:** MSA Section 4.0 contains vessel traffic numbers related to vessel traffic occurring outside the VFPA's jurisdiction. **Addressed in response to IR4-04:** The VFPA's response to IR4-04 provides updated vessel movements for all marine shipping area segments in 2012 and projected movements in 2030.	**MSA** 4.0 Activity Description **Information Requests** Response to Sufficiency Information Request #04 (IR4-04 of CEAR Document #1051)

Penelakut Tribe

Table 19: Marine Vegetation – Valued Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-19.1	Concerned with the potential effects of the Project on eelgrass habitat for crabs and other species.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1 28-Jul-2016, Issues Workshop – Island Nations	**22-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **28-Jul-2016, Workshop:** Explained that the EIS predicted a negligible effect on eelgrass overall. There is a negligible effect which is offset through transplants. The placement of the terminal will also create a wave shadow causing more optimal conditions for eelgrass growth. We don't believe there will be eelgrass mediated effects to crabs.	**Addressed in EIS Appendix 7.2-B (#68):** Potential effects on eelgrass habitat, as well as on crabs and other species that use eelgrass habitat, are described in the EIS. Eelgrass beds are highly productive habitats in the Roberts Bank ecosystem, serving numerous critical functions, such as food, shelter, and rearing habitat for numerous species. Eelgrass is a sub-component of the marine vegetation assessment. The assessment concludes that changes in productivity of eelgrass are predicted to be negligible (i.e., not measurable or detectable). Increases in productivity of eelgrass are anticipated with the implementation of standard management practices and environmental management plans, and the creation of onsite habitat. Approximately three hectares of native eelgrass will be established through transplants in the inter-causeway area.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 11.0 Marine Vegetation 11.6.3 Potential Effect – Changes in Productivity 11.7.2 Reduction and Off-setting Measures 12.0 Marine Invertebrates 12.6.3 Potential Effect – Changes in Productivity 12.7.2 Mitigation #1 for Direct Mortality
PT-19.2	Concerned with the conclusions of significance for biofilm including for the cumulative effects assessment. Asked about the certainty of confidence modelling and whether it is possible to see the results from an independent third party review on the marine vegetation effects assessment.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Responded that the confidence for biofilm is relatively high. Studies were not limited to modelling; the Roberts Bank ecosystem model is not being relied upon for the confidence prediction. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses **24-Apr-2017, Email from the VFPA to Cowichan Tribes:** The VFPA is conducting a study in April and May 2017 to assess the spatial and temporal variability of biofilm community composition at Roberts Bank. Biofilm is a thin (~2 mm), dense layer of predominantly organic substances (e.g., diatoms, bacteria, and organic detritus) found on the surface of shallow freshwater, marine, and estuarine sediments. Biofilm is known to form an important component of the western sandpiper diet at Roberts Bank during the northward migration. This study, in conjunction with past biofilm studies conducted in 2012, 2013, 2014, and 2016, will strengthen the existing understanding of biofilm community dynamics at Roberts Bank, and may inform future monitoring programs at Roberts Bank.	**Addressed in EIS Appendix 7.2-B (#63):** In January 2014, the federal Minister of Environment referred the Project for an environmental assessment by an independent review panel. The entire EIS, including the marine vegetation assessment, will be subject to an independent review. The scope and methods of the marine vegetation study are presented in EIS Section 11.0. The assessment of marine vegetation focused on eelgrass, intertidal marsh, macroalgae, biomat, and biofilm. Studies were informed by engagement with the Shorebirds-Biofilm TAG and regulatory agencies. The LAA included Roberts Bank, and the RAA included Roberts Bank, Roberts Bank North, the lower Fraser River, Canoe Passage, and Boundary Bay. Existing conditions were characterised for representative species for each of eelgrass, intertidal marsh, macroalgae, biomat, and biofilm. Existing conditions for marine vegetation are influenced by previous developments, including the development of the Roberts Bank and BC Ferries terminals, the dynamic natural environment, and species that forage on marine vegetation. Overall, net productivity of marine vegetation is expected to increase with the Project, without mitigation, and would be further increased with the implementation of environmental management plans and the creation of habitat. The overall productivity increase is due to sheltering of the intertidal zone shoreward of the terminal, which would optimise physical conditions for marine vegetation. During Project construction and operation, changes in productivity of eelgrass, biofilm, and biomat are predicted to be negligible (i.e., not measurable or detectable), while increases in productivity of intertidal marsh is expected. Productivity of rockweed, a macroalgae, is predicted to decrease during construction and operation. This decrease can	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 11.0 Marine Vegetation **Information Requests** Response to Sufficiency Information Request #4 (IR8-04 of CEAR Document #1110)

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				be mitigated through the creation of onsite subtidal rock reef habitat. The Project is expected to temporarily influence community composition of biofilm during freshet from terminal footprint-related changes in salinity but is expected to return to existing conditions outside of the annual freshet period. The assessment concludes that there are no significant adverse residual effects from the Project to marine vegetation, as it will continue to maintain its existing ecological functions. The Project is not expected to result in any incremental cumulative effects to marine vegetation. **Additional information provided by the VFPA:** The VFPA's response to IR8-04 presents the results of studies undertaken in 2017 related to biofilm dynamics. The studies' results complement the findings of the EIS and add to the overall understanding of biofilm science. In summary, the results align with the following conclusions in the EIS, specifically that: • Ongoing salinity monitoring continues to show that under existing conditions there is large variation in salinity across Roberts Bank due to variable Fraser River flow and tidal mixing; • Biofilm is abundant across the existing salinity gradient, found in both freshwater- and marine-influenced locations; and • The Project will not affect the availability or quality of food available to migrating western sandpipers.	
PT-19.3	Asked for clarification on the statement that biomat and biofilm are relatively new to science. Asked if there could be other things that the biologists are not aware of.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Stated that biofilm is relatively new to science in that it was first discovered at Roberts Bank in 2003, in association with work being undertaken for the DP3 project. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses **24-Apr-2017, Email from the VFPA to Cowichan Tribes:** The VFPA is conducting a study in April and May 2017 to assess the spatial and temporal variability of biofilm community composition at Roberts Bank. Biofilm is a thin (~2 mm), dense layer of predominantly organic substances (e.g., diatoms, bacteria, and organic detritus) found on the surface of shallow freshwater, marine, and estuarine sediments. Biofilm is known to form an important component of the western sandpiper diet at Roberts Bank during the northward migration. This study, in conjunction with past biofilm studies conducted in 2012, 2013, 2014, and 2016, will strengthen the existing understanding of biofilm	**Addressed in EIS Section 11.0 and EIS Appendix 7.2-B (#65):** Biofilm, a thin dense layer of microscopic photosynthetic algae and bacteria, sediment, and organic matter, is found within the upper intertidal zone and is an important food source for invertebrates, fish, and bird species (including migratory western sandpiper and dunlin). Biomat is described as microbial mat, which can take different forms and be composed of a variety of single and multi-cellular organisms, which for the purposes of the marine vegetation effects assessment, is defined as blue-green algae and associated diatoms. Biomat, located in the upper intertidal area of Roberts Bank, is a primary producer and is likely consumed by higher trophic levels. **Additional information provided by the VFPA:** The VFPA's response to IR8-04 presents the results of studies undertaken in 2017 related to biofilm dynamics. The studies' results complement the findings of the EIS and add to the overall understanding of biofilm science. In summary, the results align with the following conclusions in the EIS, specifically that: • Ongoing salinity monitoring continues to show that under existing conditions there is large variation in salinity across Roberts Bank due to variable Fraser River flow and tidal mixing;	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 11.0 Marine Vegetation 11.5.4 Existing Conditions, Biomat 11.5.5 Existing Conditions, Biofilm 11.6. 			community dynamics at Roberts Bank, and may inform future monitoring programs at Roberts Bank.	• Biofilm is abundant across the existing salinity gradient, found in both freshwater- and marine-influenced locations; and • The Project will not affect the availability or quality of food available to migrating western sandpipers.	
PT-19.4	Concerned about the role of offsetting within the determination of residual effects. Requested more information related to habitat offsetting.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Stated that the potential effect would be site-specific to RBT2. This presentation does not discuss any offsetting work that the VFPA would consider in conjunction with the Project. This assessment looks at whether there are any potential effects, and considers how they could be avoided or mitigated. If they cannot be avoided or mitigated and there is a residual effect that is when offsetting would be considered. The VFPA is undertaking an extensive program for offsetting. For marine vegetation, there are two potential Project-related effects. The first is decreased productivity, for which mitigation measures (including offsetting) are anticipated to result in there being no residual effects. The VFPA referred to slide 17 (of Marine Vegetation presentation, Cowichan Nation Alliance Workshop #2), which is a table of the marine vegetation sub-component species and their expected difference in productivity between future conditions without the Project and future conditions with the Project. There is an onsite habitat mitigation program, where work would be expected to be conducted right at and near the terminal. It is anticipated that work will be successful. Some measures may be able to be done in advance, and we will know whether or not they are successful. There is also a commitment to monitor. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#28):** Project-related effects on marine biophysical VCs that cannot be fully mitigated through avoidance or reduction or other mitigation measures will be addressed through offsetting. Offsetting proposed for this Project is focused on the creation and enhancement of biophysical habitats that currently support species of the Roberts Bank ecosystem. The concepts proposed are consistent with current legislation and policy and are based on well-established techniques that have been successfully implemented at Roberts Bank, elsewhere in B.C., and in the Pacific Northwest. The EIS includes a description of onsite habitat concepts to offset potential decreases in productivity, including the identification of beneficial habitat types for each of the VC sub-components, and representative species and groups where applicable. **Addressed in EIS Appendix 7.2-B (#198):** Onsite habitat is intended to soften the perimeter of the Project's shoreline to be more ecologically representative of the existing estuary, to create similar habitat to those that will be affected by the Project, and to create habitat that generally enhances the productivity of the Roberts Bank ecosystem. The five habitat types considered for onsite offsetting include: • Intertidal marsh: Important for shoreline stabilisation, gas and nutrient regulation, contaminant filtering, and nutrient supply, as well as providing structural habitat used for shelter and food by organisms. Some of the species that use intertidal marsh habitat at Roberts Bank include bivalve shellfish, Dungeness crabs, juvenile Chinook salmon, shiner perch, sand lance, and waterfowl. Approximately 15 ha of intertidal marsh is proposed along the widened causeway and in the S-bend of the new terminal. • Sandy gravel beach: Provides spawning area for forage fish, including surf smelt, Pacific herring, and sand lance. Two sandy gravel beaches, totalling approximately 4.5 ha, are proposed along the widened causeway. The beaches are intended to provide attachment-type habitat and substrate suitable for marine vegetation and invertebrates, and to benefit some of their predators (e.g., juvenile Chinook salmon, waterfowl, and American wigeon). • Mudflat: Plays a role in dissipating wave energy and supports large numbers of birds and fish. Mudflats also support biofilm, an important component of the food web in estuarine and coastal ecosystems. Approximately 4.5 ha of mudflats is proposed along the widened causeway and in the S-Bend of the new terminal. Biofilm,	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 17.0 Mitigation for Marine Biophysical Valued Components 17.3 Offsetting Potential Effects 17.3.2 Offsetting Potential Effects, Offsetting Framework

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				invertebrates, waterfowl, and shorebirds will benefit from this habitat. • Subtidal rock reefs: Support rockfish populations and assist in meeting fisheries management objectives to alleviate historic declines of regional populations. The creation of approximately two hectares of reef habitat will benefit macroalgae vegetation, and provide refuge, feeding, and spawning habitat for invertebrates, fish, and birds. • Eelgrass: Eelgrass beds are highly productive habitats in the Roberts Bank ecosystem, serving numerous critical functions, such as food, shelter, and rearing habitat for numerous species. Approximately three hectares of native eelgrass will be established through transplants in the inter-causeway area. The onsite habitat concepts presented in EIS Section 17.0 have been presented to Indigenous groups, the community, stakeholders, and the public in open houses and small group meetings that took place in the fall of 2014. The feedback received from Indigenous groups has been considered in the finalisation of the EIS.	
PT-19.5	Concerned that the assessment excludes marine vegetation that is culturally important to Cowichan Nation Alliance and could be impacted by the Project. Requested that 'coastal terrestrial vegetation' be identified as a distinct Valued Component.	09-May-2014, Letter from Cowichan Tribes acting in alliance with the Stz'uminus, Penelakut, Hwlitsum and Halalt communities	**09-May-2014:** Recorded comment for consideration by the Project team. **06-Jun-2014 and 03-Jul-2014, Workshops:** The VFPA hosted two workshops for Indigenous groups on the VCs providing them with an opportunity to comment on the proposed VCs. For coastal terrestrial vegetation, there is no interaction with the Project and the terrestrial environment, either directly or indirectly, due to the marine-based nature of the Project, and therefore no effects are anticipated.	**Addressed in EIS Section 8.0:** The process for selecting VCs is described in EIS Section 8.0. Rationale for not selecting terrestrial vegetation as a VC is provided in EIS Appendix 8-A. Terrestrial vegetation on the Roberts Bank causeway to the track tie-in location (a less than 1 ha area with in the British Columbia Rail (BCR) right-of-way) is characteristic of highly disturbed sites. Terrestrial vegetation of ecological value does not occur proximal to the Project. Additionally, the Project area does not contain any wetlands above the high water level. Wetlands below high water level are included in the marine vegetation VC.	**EIS** 8.0 Effects Assessment Methods Appendix 8-A Valued Component Selection Rationale Table 8-A2 Rationales for Candidate Component Exclusion Decisions and Other Considerations

Table 20: Mitigation for Marine Biophysical Valued Components (including Onsite Habitat Concepts)

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-20.1	Asked what the rationale is for including fish refugia in the caisson design.	01-Nov-2013, Meeting with Cowichan Nation Alliance	**01-Nov-2013, Meeting:** Recorded comment for follow-up. **07-Jan-2014, Letter from the VFPA to Penelakut Tribe:** The upper portions of the caissons are not filled with ballast rock, only water. In previous projects, such as DP3, a decision was made to provide an opening into every 2nd or 3rd caisson to allow fish and marine creatures to seek refuge inside this water filled area of the caisson. This fish refugia concept was carried over in the design for the proposed Project. It is an accepted DFO habitat development concept.	**Addressed in EIS Sections 4.0 and 13.0:** A mitigation opportunity for marine fish during operation of the terminal includes provision of refuge habitat in the caissons. To increase the availability and connectivity of refuge habitat for marine fish, and to provide a diversity of potential food sources, design options for the caisson face have been considered (EIS Section 4.0) and are described further in EIS Section 13.7.1.3.	**EIS** 4.0 Project Description 13.0 Marine Fish 13.7.1.3 Caisson Fish Habitat
PT-20.2	Asked what the mortality rate during crab salvage efforts would be during molting season.	28-Jul-2016, Issues Workshop – Island Nations	**28-Jul-2016, Workshop:** Stated that mortality related to construction activities has not been quantified. Assumptions would have to be made around density, which could be done; the VFPA is hoping that the mitigation will be good enough in that crabs will be trapped and removed from the construction area, and timing windows would be respected to reduce mortality.	**Addressed in response to IR5-04:** The VFPA's response to IR5-04 discusses the planned approach for crab salvage during the construction of RBT2. Salvages are planned for all Project activities that have the potential to cause direct mortality to legal-sized male and gravid female Dungeness crabs. A list and schedule of proposed Project activities is provided in Table IR5-04-1; the activities for which Dungeness crab mortality or injury may occur are indicated, and for those activities that may cause mortality or injury, plans for salvages are also indicated.	**Information Requests** Response to Sufficiency Information Request #4 (IR5-04 of CEAR Document #1209)

Penelakut Tribe

Table 21: Noise and Vibration – Intermediate Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information

PT-21.1	Concerned about potential noise effects from shunting to wildlife and humans.
	Stated that members are affected and interrupted by the shunting.
	Asked if the numbers (of noise events) presented are an expected average over a 24-hour period.
		22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:**
			Recorded comment for consideration by Project team.
			01-Apr-2015, Letter from the VFPA to Penelakut Tribe:
			Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.
			19-Apr-2016, Letter from the VFPA to Cowichan Tribes:
			Shared meeting notes from the 22-Oct-2014 workshop, which included the following post-meeting note: Stated that the number of noise events is predicted on a per-hour basis.
				Addressed in EIS Appendix 7.2-B (#43):
				The potential changes in noise and vibration that may be caused by the Project, and the potential effects of those changes on biophysical VCs and human health are considered in the EIS. Mitigation measures to address noise-related effects are also described in the EIS.
				The noise and vibration assessment examined potential changes in noise and vibration as a result of the Project. The results of the noise and vibration assessment were used in the assessments of coastal birds, marine commercial use, outdoor recreation, human health, and Current Use.
				The assessment considered the potential changes in noise and vibration that may result from the Project and the potential cumulative changes in noise and vibration that are likely to result from the Project in combination with other certain and reasonably foreseeable projects and activities, including incremental marine vessel traffic.
				The assessment considers noise and vibration from trains, as a source contributing to existing conditions, as well as a potential Project-related source of noise and vibration and a potential source of cumulative change in noise and vibration.
				Mitigation measures related to noise are included in the human health assessment (EIS Section 27.9.2).
				The assessment considered Project-related sources of noise and vibration, including construction equipment, container ships at berth, container handling activities, and movement of trains and trucks on the terminal and causeway. The assessment focused on continuous noise, low frequency noise, transient and impulsive noise, and ground-borne vibration.
				The assessment concluded that:
				• Project-related changes in annual average noise levels in communities near the Project are expected to be minor and, for the most part, not perceptible.
				• The Project, in combination with other certain and reasonably foreseeable projects and activities, is expected to result in minimal incremental cumulative changes to noise in areas close to road and rail corridors.
				• Some changes in noise conditions that could be perceptible include:
				  ○ Increased noise during periods of peak construction activity.
				  ○ The number of intermittent noises during operation would increase, but the noise levels would be the same or lower than from the existing Roberts Bank terminals.
				  ○ Increased noise in marine areas is expected to be perceptible close to the terminal.
				  ○ The construction and operation of the marine terminal and causeway is not expected to result in perceptible increases in levels of ground-borne vibration.
				Suggested mitigations were considered in the development of proposed mitigation for Project-related changes in noise. Noise Management Plans would be developed for construction and operation phases and would integrate with the VFPA's existing noise monitoring programs.
				Mitigation of construction-related noise would include:
				• Scheduling of higher-noise generating activities during weekdays, and during the daytime;
				• Shutdown of equipment and vehicles when not in use;
				• Utilisation of equipment that produces less noise; and

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				• Awareness and training for construction crews. Mitigation for operation-related noise would include: • Optimised tonality of equipment alarms to limit audibility on shore while meeting safety requirements; • Operator awareness and training; and • Regular maintenance of equipment (e.g., lubrication of pulleys and other moving parts, replacement of deteriorated exhaust mufflers, maintaining efficiencies of engines through servicing).	
PT-21.2	Noted that Penelakut has a village site at the north end of Galiano Island at Porlier Pass. Asked if studies were done on the west side of Porlier Pass and the Gulf Island passages.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2	**12-Nov-2014, Workshop:** Referred to the work carried out by acoustician that determined the areas identified in the slide is where noise is expected to go. Stated that sound does not necessarily travel with currents. Rather, it bounces off of surfaces. There is likely to be noise in that area, but not Project noise, which is what the slides are referring to. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#44):** The spatial boundaries for the noise and vibration assessment, and the rationale for their selection, is included in EIS Section 9.3. The marine study area includes all marine areas within 10 km of the proposed terminal, including areas at the mouth of the Fraser River and Canoe Passage, north of the northern tip of Westham Island. The spatial boundaries for the noise and vibration assessment, and the rationale for their selection, is included in EIS Section 9.3.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.0 Physical Setting 9.3 Noise and Vibration

Table 22: Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries – Valued Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-22.1	Stated that the EIS has not considered potential impacts to the following fisheries: eulachon, sturgeon, shrimp and octopus. The rationale for not considering these impacts is that the CRA assessment focuses on "fisheries that are most likely to interact with the Project or for which there is sufficient site-specific data of presence and habitat use at Roberts Bank to permit an assessment" (EIS p. 16-7). Stated that this is not a sufficient rationale to justify the failure to assess specific fisheries. Stated that for each of the eulachon, sturgeon, shrimp and octopus fishery, the proponent should explain specifically why impacts were not assessed. Asked if it is because there is no likely interaction with the Project, or if is it because there is not sufficient data. Stated that if it is because there is not sufficient data, then what the rationale for not obtaining sufficient data is. Concerned with potential impacts to sturgeon from the Project.	10-Jun-2015, Letter to the CEA Agency from Penelakut Tribe (CEAR Document #210) 09-Nov-2015, Meeting with Penelakut Tribe 26-Oct-2016, Letter to Panel from Penelakut Tribe (CEAR Document #615)	**13-Oct-2015, Letter from the CEA Agency to Penelakut Tribe (CEAR Document #310):** *"The Agency did not request additional information for this item since there is already some information/rationale provided in the EIS. The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."* **09-Nov-2015:** Recorded comment for consideration by Project team.	**Addressed in Information Request Package 5 – Response to Information Requests Relating to Represented Species:** Representative species are considered in terms of the biological and ecological similarities they share with other species within the sub-component, and for potential similarities in how the Project may interact with and affect them. In some cases, biological attributes may differ within a sub-component grouping, but their interactions with the Project and mechanisms contributing to potential effects from the Project are considered to be analogous. As a result, the VFPA selected representative species for each sub-component for which sufficient information is known, in order to provide an assessment that considers all potential interactions and Project-related effects. For example, substantial information exists for the southern resident killer whale (the representative species used for toothed marine mammals) and much less so for the transient killer whale. While there are some biological differences between the two, they are considered the same species; both rely on underwater noise for prey detection; and potential Project effects and mitigation measures are the same. In this example, it would be both impractical and inefficient to undertake an assessment on both species as the conclusions of the assessment would be the same. Moreover, in selecting representative species, or in some cases species groups, consideration was given to species of specific importance to regulatory agencies, Indigenous groups, and the public, as identified by community knowledge and ITK, and during consultation and engagement, and assessment planning. This approach was taken as it would be impractical to characterise existing conditions and assess effects on every species that may frequent the Roberts Bank area. In this way, the use of VCs, sub-components, or representative species improves the effectiveness and efficiency of assessment by focusing on the key Project interactions. Eulachon, sturgeon, shrimp, and octopus are assessed via representative species in EIS Sections 12.0 and 13.0. • Eulachon were assessed through representative forage fish species. • Sturgeon were assessed through the use of Chinook and chum salmon representative species. • Shrimp were assessed through the use of Dungeness crab representative species. • Octopus were assessed through the use of Dungeness crab representative species.	**EIS** 12.0 Marine Fish 13.0 Marine Invertebrates **Information Requests** Information Request Package 5 – Response to Information Requests Relating to Represented Species

Table 23: Port Operations

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-23.1	Asked where ships currently re-fuel in the VFPA's jurisdiction.	01-Nov-2013, Meeting with Cowichan Nation Alliance	**01-Nov-2013, Meeting:** Recorded comment for follow-up. **07-Jan-2014, Letter from the VFPA to Penelakut Tribe:** Container ships cannot re-fuel at Roberts Bank. Container ships are on a tight schedule and will arrange to pick up fuel at a location where they will be at berth for a longer time (home port) and where fuel is less expensive, usually in Asia. Vessels within the VFPA's jurisdiction that need to re-fuel will typically take on fuel in Burrard Inlet, alongside at berth or at one of the designated anchorages in the inlet. The fuel is delivered to the vessels by barge, either from the Stanovan Marine Terminal (Chevron) in Burnaby or the Shellburn Marine Terminal (Shell Canada), also in Burnaby. Tugs used to guide the container ships during arrival and departure, bunker at the Chevron marine fuelling station in Burrard inlet.	**Addressed in EIS Section 4.4.2.1:** Facilities to support bunkering of ships do not exist at Roberts Bank, nor does the Project include any facilities to support bunkering. Container ships usually bunker at one of their home ports.	**EIS** 4.4.2.1 Container Ship Manoeuvres
PT-23.2	Concerned about traffic and increased use of anchorages around the Gulf Islands. Concerned about increased number of large ships anchoring in Cowichan Tribes territory. Stated that increased shipping traffic from the proposed Project would likely increase the frequency of these freighters anchoring in Cowichan Bay. Concerned with sewage effluent and ships moored and anchored south of Penelakut and north of Thetis Island. Stated that ships are dumping effluent and it is impacting their beaches. Stated that they are there for two weeks and does not know why they would not be in the Fraser River. Asked if the ships at anchorage around Penelakut Island are waiting to enter the Port of Vancouver. Requested confirmation whether the anchorages referred to in the VFPA's October 2, 2015 letter are anchorage at the direction of the VFPA or all anchorage of ships bound to and from the Delta Port terminal. Requested data for a broader range of years. Stated that Penelakut has seen a submission by Gabriolans Against Freighter Anchorages identifying concerns with overflow anchorage along the coast of Gabriola Island. Asked what the VFPA's response is to the concerns set out in that letter. Questioned the exclusion of anchorages from the assessment.	17-Jun-2014, Technical Working Group Meeting #4 27-Aug-2015, Letter to the VFPA from Penelakut Tribe 19-Oct-2015, Letter to the VFPA from Penelakut Tribe 27-Jan-2017, Meeting with Penelakut Tribe 07-Jul-2017, Meeting with Penelakut Tribe 07-Nov-2017, Cowichan Nation Alliance Meeting with Federal Agencies 14-Nov-2017, Letter to the Panel from Penelakut Tribe (CEAR Document #1092) 18-April-2017, Chief & Council Meeting – Cowichan Nation Alliance	**17-Jun-2014, Meeting:** Recorded comment for consideration by Project team. **27-Aug-2015:** Recorded comment for consideration by Project team. **02-Oct-2015, Letter from the VFPA to Penelakut Tribe:** Referred Cowichan Nation Alliance to Section 3.3.2 of the Marine Shipping Overview document sent to Cowichan Nation Alliance on May 26, 2015: There are no plans, or foreseen terminal operating requirements, for off-terminal anchoring of container ships waiting for a berth at the new RBT2 marine terminal. Container ships operate on a scheduled service, usually between Asia and the west coast, and adjust their speeds as required to arrive at the terminal within their assigned arrival window; thus, anchorage is not a normal requirement. Exception to this could occur in the event of an extreme storm event in the Pacific Ocean, resulting in a refuge anchorage requirement for safety reasons or to accommodate unexpected ship-specific maintenance personnel, or operation issues that may arise. Container ship anchorages for Deltaport Terminal in 2012 and 2013 were	**Addressed in EIS Appendix 7.2-B:** The scope of the Project, as defined in the *EIS Guidelines* issued by the CEA Agency, includes vessel movements within VFPA jurisdiction, including approach, berthing, unberthing, and departure from the terminal. The assessment does not include the anchoring of ships in the Gulf Island area. The MSA includes an assessment of the impacts of Project-associated marine shipping outside the VFPA's jurisdiction. For questions regarding island anchorages, please contact the CEO of the Pacific Pilotage Authority at [email address]. **Addressed in MSA Appendix 5-B (#3):** Anchorage is discussed in MSA Section 4.0. Container ships operate on a scheduled service, and adjust their speeds as required to arrive at the terminal within their assigned arrival window; thus, anchorage is not a normal requirement and there are no plans or requirements for off-terminal anchoring of container ships waiting for a berth at the new RBT2 marine terminal. Exceptions to this could occur in the event of an extreme storm event in the Pacific, resulting in refuge anchorage requirement for safety reasons, or to accommodate unexpected ship-specific maintenance, personnel, or operation issues that may arise. The assessment of marine shipping associated with the Project is based on a routine vessel transit scenario. Because anchorage only occurs in rare circumstances,	**EIS** 4.4.2.1 Container Ship Manoeuvres Appendix 7.2-B Aboriginal Groups Interests and Issues Table **MSA** 4.0 Activity Description 4.2.2.2 Anchorage Appendix 5-B Aboriginal Issues and Interests **Information Requests** Response to Sufficiency Information Request #01 (IR5-01 of CEAR Document #1078) **TC IR-07 of CEAR Document #982 from Transport Canada to the Review Panel re: Response to Information Requests issued by the Review Panel on May 10, 2017** **Interim Protocol for the Use of Southern B.C. Anchorages. Available at:**

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	Stated that the VPFA ought to disclose how many of the vessels bound for or departing from Roberts Bank have anchored in the past, and where, and its estimates for how this number may increase with the increased shipping associated with RBT2 or its justification for why this is number is not anticipated to increase despite the increased shipping associated with RBT2. Reiterated their concerns and frustrations with the number of anchorages in the Gulf Islands and the cumulative impacts to the Aboriginal communities. Noted that decommissioning anchorages to remove the impacts to their beaches and aquaculture endeavors would be mitigation they would like to see.		rare, with a frequency range of three to four per year out of an approximate annual total of 270 ship calls to Deltaport Terminal in each of those years. The same frequency can be assumed for marine shipping associated with RBT2, resulting in approximately three to four unforeseen container ship anchorages per year. As defined in the *EIS Guidelines*, issued by the CEA Agency, the scope of the Project includes marine transportation within the VFPA's jurisdiction. Ship traffic through the Gulf Islands is outside of the scope of the Project. The MSA includes an assessment of potential effects associated with marine shipping outside the VFPA's jurisdiction. The spatial boundaries are included in the noise and vibration (EIS Section 9.3) and underwater noise (EIS Section 9.8) assessments. Project-related changes to noise and vibration, both above water and underwater, are not expected to extend from the Project area into this area. The appropriate authority for comments related to island anchorages is the Pacific Pilotage Authority (contact information provided). **19-Oct-2015:** Recorded comment for consideration by Project team. **09-Nov-2015, Letter from the VFPA to Cowichan Tribes:** The data provided by the VFPA regarding container ship anchorages for Deltaport in 2012 and 2013 pertained to anchorages occurring within the VFPA's jurisdiction. The VFPA does not have information on anchorages occurring outside the VFPA's jurisdiction. For additional information regarding anchorages occurring around the Gulf Islands, including concerns with overflow anchorage along the coast of Gabriola Island, you may contact the Pacific Pilotage Authority [contact name and information provided]. The VFPA has not prepared a response to the letter submitted by Gabriolans Against Freighter Anchorages, as this letter was addressed to the CEA Agency and concerns anchorages occurring outside the VFPA's jurisdiction. **30-Nov-2016, Email from the VFPA to Penelakut Tribe:** Provided Penelakut with a map of the VFPA's jurisdictional boundaries.	anchorage is not assessed as an activity related to marine shipping associated with the Project. **Additional information provided in response to IR5-01:** The VFPA's response to IR5-01 generally discusses aspects of anchorage outside of the VFPA's jurisdiction. Notably, it references detailed information regarding anchorages in Transport Canada's response to Panel information request TC IR-07 from Transport Canada to the Review Panel. Transport Canada's response to information request TC IR-07 tabulates detailed information regarding anchorages and minimum, mean, and maximum number of days in Appendix D (Pacific Pilotage Authority Anchorage Usage Data 2012 – 2016 for the Pacific Pilotage Authority Marine Shipping Area). As shown in these tables, a total of 124 anchorages occurred between 2012 and 2016 for container vessels destined for VFPA jurisdiction, and the mean number of anchorage days was 2.69, with a minimum of 0.05 days and a maximum of 83.64 days. **Additional information provided by the VFPA:** Information regarding an interim protocol for the use of Southern B.C. Anchorages can be found on Transport Canada's website. The following text is an excerpt from the *Interim Protocol for the Use of Southern B.C. Anchorages webpage*: An interim protocol for the use of Southern B.C. anchorages has been developed by Transport Canada in collaboration with the Chamber of Shipping of BC, the Shipping Federation of Canada, the Pacific Pilotage Authority, the VFPA, and the Port of Nanaimo (working group members). It also takes into account comments provided to Transport Canada by coastal communities about the impact of increased use of anchorages in their surrounding waters. Drafts of the interim protocol were also shared with coastal communities and Indigenous groups. Under the protocol, the VFPA assigns anchorages as equitably as possible, subject to individual anchorage size restrictions, using their computerised queueing system, which takes into account the dimensions of the vessel and specific anchorage usage over the previous 30 days. The objective of this approach is to balance the usage, so that no single anchorage is in constant use, and that that there is an equitable rotation of use through all suitable anchorages. Noise and Lights: All vessels, while at anchor, should minimise noise levels and light usage in consideration of local residents. The following guidelines apply:	**https://www.tc.gc.ca/en/services/marine/ports-harbours/interim-protocol-use-southern-bc-anchorages.html**

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			27-Jan-2017, Meeting: Responded that the Pacific Pilotage Authority would know best about what ships are anchoring where. **20-Jun-2017, Letter from the VFPA:** Provided Penelakut Tribe with a memo on the use of Gulf Island Anchorages. "Historically, the vast majority of commercial vessels that anchor in the Gulf Islands have been bulk carriers (mostly grain, but some coal, potash and sulphur), while the remaining few are container vessels. Use of these anchorages by vessels bound for the Port of Vancouver depends on the fluidity of the supply chain… The Gulf Islands are outside of the Vancouver Fraser Port Authority's jurisdiction and the port authority does not have direct influence when it comes to managing ships that would want to anchor in these areas…" **18-April-2017, Meeting:** Recorded comment for consideration. **07-Jul-2017, Meeting:** Committed to follow-up with Transport Canada on Penelakut Tribe's questions regarding anchorage and ship numbers. Stated that the VFPA would ask if Transport Canada can attend a meeting with Penelakut Tribe to discuss. **07-Nov-2017, Meeting:** Cowichan Nation Alliance met with federal agencies, including the CEA Agency, Transport Canada, ECCC, Health Canada, DFO, NRC, and the Canadian Coast Guard. Transport Canada committed to connect Cowichan Nation Alliance with a representative of Transport Canada to discuss anchorage concerns further. **16-Nov-2017, Email from the CEA Agency to Penelakut Tribe:** Provided draft meeting notes from the 07-Nov-2017 meeting, which included a link to IR5-01 that discusses aspects of anchorage outside of the VFPA's jurisdiction and TC IR-07.	Noise: • Generator usage should be reduced to the minimum required generator(s) to operate essential services and systems; • External doors and hatches to machinery spaces must be kept closed as often as possible; and • Use of power tools and chipping hammers must be kept to a minimum and is not permitted on deck on weekends, nor between 1900 and 0700 hours on weekdays. Lights: • While the vessel is to be lit in compliance with the Collision Regulations, deck lights must be kept to a minimum, and • Lighting used to illuminate. Concerns with any of the specifics related to the responsibilities of ships at anchor (e.g., noise, light) within the protocol, can be reported to the VFPA Operations Centre. The VFPA Operations Centre will relay the complaints to the vessel agent with a copy to the Chamber of Shipping of BC, the Shipping Federation of Canada, and Transport Canada with the request to follow up with the vessel. The Interim Protocol is a temporary and voluntary measure that addresses some of the concerns Canada and the Port have heard in recent years. The Oceans Protection Plan, National Anchorage Framework will be undertaking the studies and consultation necessary to develop principles that determine the location and management practices for anchorages outside of ports in the future. In 2017, Transport Canada announced the Oceans Protection Plan's Anchorages initiative. The Anchorages Initiative will engage governments, marine industry, Indigenous groups, community organisations, and stakeholders to: • Develop a process to identify potential anchorage locations; • Analyse and respond to environmental, economic, cultural, safety and security concerns now and over the long-term; • Draft a "best practices at anchor" manual; and • Propose oversight/management options for anchorage locations outside the port authority's boundaries. The comprehensive review will use an evidence-based approach, and includes hearing feedback on issues from Indigenous groups, coastal communities, other levels of governments, and industry. Results and lessons learned from the Interim Protocol will help inform the national Anchorages Initiative.	

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-23.3	Related concerns regarding: • Pollution impacts from anchoring ships to shellfish; • Ships not following proper bilge water regulations; • Invasive species of clams being introduced and varnish clams disappearing; and • Invasive species of mussels (blue) being introduced to Penelakut territory. Asked about requirements for vessels to empty their bilges. Stated that invasive species introduced from vessels at anchor directly impacts their economic development opportunities related to aquaculture.	17-Jun-2014, Technical Working Group Meeting #4 01-Dec-2016, Chief and Council Meeting - Penelakut	**17-Jun-2014, Meeting:** There are regulations currently in place that prevent the discharge of bilge water in VFPA jurisdiction. Similarly, vessels that enter VFPA jurisdiction are not permitted to release raw sewage effluent. If required, untreated sewage can be discharged at least 12 miles (19.3 km) from shore with the ship moving faster than 4 knots. If sewage is comminuted (i.e., blended or pulverised), discharges can take place 3 miles (4.8 km) from shore. For ships equipped with approved treatment plants there are also limits to the permissible coliform counts **01-Dec-2016, Meeting:** Stated that vessels are required to empty their ballast water 200 nautical miles (500 km) offshore in water that is at least 2,000 m deep	**Addressed in EIS Section 13.6.2.1:** Potential operation-phase changes from wastewater (sewage) and stormwater discharges, and discharges from ships (bilge water and ballast water) are not expected to affect marine vegetation due to the distant location of discharges into subtidal waters, the incorporation of management and treatment measures described in EIS Section 4.2.1, and the implementation of regulatory requirements and guidelines (refer to EIS Section 9.7.8 for more information). **Addressed in EIS Appendix 7.2-B (#100):** The VFPA was the first port in North America to prohibit in-port ballast water exchange without prior mid-ocean exchange, a practice which became the basis of government requirements now enforced by Transport Canada. To prevent the invasion of foreign species into local waters, international regulations, through the IMO, are managed by Transport Canada. All commercial deep sea vessels are required to carry out a ballast water exchange prior to entering Canadian waters. This is done outside the exclusive economic zone of 200 nautical miles and in water deeper than 2,000 m. By requiring vessels to complete this ballast 'flush' well outside Canadian waters, the aim is to prevent any foreign organisms from entering into the local ecosystem. The U.S.A. has similar requirements, and vessels arriving from the Puget Sound area need to forward the completed U.S. forms to Canadian authorities prior to entry into Canadian waters. Import containers are generally not opened at the terminal. Canada Border Services Agency inspects the contents of a percentage of import containers off-terminal in Richmond, and in the future will be done at the facility on Tsawwassen First Nation land currently being developed. All ships use rat guards on their mooring lines to ensure that rats and other rodents do not crawl up or down the mooring lines between the ship and the wharf. The VFPA is a part of the B.C. *Spartina* Working Group, which maps, tests eradication methods, and supports the removal of invasive English cordgrass from the Fraser River estuary.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.7 Marine Water Quality 9.7.8 Future Conditions with the Project 13.0 Marine Fish 13.6.2.1 Changes in Water Quality

Table 24: Potential Accidents or Malfunctions

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-24.1	Asked who is responsible for the cost of clean-up in the event of a spill and who is responsible for compensation of lost food sources for First Nations people. Stated that the VFPA should be held accountable, not just the shipper. Asked how the VFPA is bolstering WCMRC capacity to respond. Asked whether the VFPA contributes to WCMRC. Asked if Canada's compensation regime for impacts from a major container vessel casualty from its containers, debris, and/or wreckage fully compensate for natural resource damages, as well as to Cowichan Nation Alliance subsistence (non-commercial) and traditional fisheries. If yes, what are these compensation avenues?	07-Oct-2014, Aboriginal Groups Workshop #1 22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1 13-Jan-2016, Letter to the CEA Agency from Cowichan Tribe on behalf of Cowichan Nation Alliance (CEAR Document #385)	**07-Oct-2014, Workshop:** Explained that with WCMRC, each vessel (i.e. the shipping company), the terminal operator (the company responsible for the loading and unloading of ships), and the company responsible for constructing the project in the first place, must have a formal agreement with WCMRC, and pay into the fund/service, and then WCMRC responds to the spills. **22-Oct-2014, Workshop:** Stated that the framework of responsibility is based on the polluter pays principle. Each vessel, the terminal operator (the company responsible for the loading and unloading of ships), and the company responsible for constructing the project, must have a formal agreement with Western Canada Marine Response Corporation (WCMRC), and pay into the fund/service, and then WCMRC responds to the spills. Stated that the VFPA would be responsible for the safe access and transit to or from the site, and implementing changes to navigation patterns to keep people clear of a potential spill. Increased traffic and risk of collision is considered in the assessment. The review panel will need to consider the VFPA's role in such an incident. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response. **12-May-2016, Letter from the CEA Agency to Cowichan Nation Alliance (CEAR Document #398):** *The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review.*	**Addressed in EIS Appendix 7.2-B (#207):** The EIS describes the parties who would be notified and assume responsibility as On Scene Commander for spill clean-up in the event of a marine spill within VFPA jurisdiction, including Roberts Bank. These parties include the Canadian Coast Guard and the WCMRC. The VFPA's role following a spill would be to maintain situational awareness and coordinate the incident response. **Addressed in EIS Appendix 7.2-B (#208):** Generally, the owner of the vessel from which the spill originates is responsible, in accordance with the *Marine Liability Act*. There is more information on liability on Transport Canada's website, which explains liability and compensation for oil spill clean-up and damages, including funds available for clean-up: http://www.tc.gc.ca/eng/marinesafety/menu-4100.htm#m. Additional sources information on funds available for clean-up are available at the following link: http://www.tc.gc.ca/eng/marinesafety/oep-ers-regime-funds-1119.htm **Additional information provided by the VFPA:** The *Canada Shipping Act (2001)* is Transport Canada's regulatory framework surrounding marine pollution and its enforcement. In the case of a report of pollution in the water, including oil or fuel spills, Canada operates under the National Spill Response Protocol, which specifies that the Canadian Coast Guard is responsible for ensuring the clean-up of ship sourced spills of oil and other pollutants. While the VFPA is not the lead agency when it comes to spill response, it provides assistance often in the form of working with first responders and other agencies, providing information on a situation through the 24/7 operations centre, security cameras, patrol boats, and drone. As per a 2009 letter of understanding, the VFPA can be called upon by the Coast Guard to conduct an initial inspection in response to a pollution report in our federal jurisdiction. On the west coast, the Canadian Coast Guard contracts spill clean-up to WCMRC. This is also the agency that ships or terminal operators are required to call if they discover they have been the source of a spill.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 30.0 Potential Accidents or Malfunctions 30.3.3 Port Metro Vancouver Practices and Procedures Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment
PT-24.2	Concerned that the assessment for accidents and malfunctions should consider extreme weather events, not only ideal/normal weather patterns.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Responded that the VFPA is taking a conservative and worst-case scenario approach, so weather extremes are considered. The worst weather condition might also be overlaid with the timing of something such as spawning season, for the purposes of the assessment.	**Addressed in EIS Appendix 7.2-B (#213):** A description of how local conditions and natural hazards, such as severe or extreme weather conditions and weather-related events, could adversely affect the Project, and how these in turn, could affect the environment, is presented in EIS Section 31.0. Project design and management measures capable of mitigating the effects of extreme weather conditions on the Project also will effectively address any potential effects associated with ideal/normal weather patterns. As described in EIS Section 9.1, climate is recognised as one of the primary drivers in shaping the Roberts Bank ecosystem. The influence of weather patterns typical for	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.0 Physical Setting 9.1 Climate, Coastal Conditions, and

Geotechnical Considerations 31.0 Effects of the Environment on the Project 31.2.1 Extreme Weather and Weather-related Events
PT-24.3	Requested a list of hazardous materials/dangerous goods that are shipped in containers. Asked if there has been an assessment done on which hazardous materials are currently being handled in the Port.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1 01-Dec-2016, Chief & Council Meeting - Penelakut	**22-Oct-2014, Workshop:** Responded the Port has records and statistics on the contents of containers Noted that more information on the contents of containers would be provided in the EIS. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response. **01-Dec-2016, Meeting:** Committed to follow-up and provide information about the nature of hazardous materials shipped in containers. **22-Jun-2017, USB:** Provided a USB stick with EIS Section 30.0, including EIS Appendix 30-A, Table B-4, which lists the composition and number of Hazardous and Noxious Substances Containers at Deltaport in 2012.	**Addressed in MSA Appendix 5-B (#109):** The potential for an accident involving a spilled container, and hazardous contents of containers, is addressed in MSA Section 10.0. Details on the types of hazardous materials shipped in containers are provided in EIS Appendix 30-A (Table G-3 in Appendix G). Regulations for securing containers, and for the transport of dangerous goods, are set by the IMO http://www.imo.org/en/About/Conventions/ListOfConventions/Pages/International-Convention-for-the-Safety-of-Life-at-Sea-(SOLAS),-1974.aspx. The International Maritime Dangerous Goods Code is the international code that establishes where dangerous goods should be loaded on a ship. Some should be loaded below deck, others should be loaded on deck, some dangerous goods need to be separated by certain distances from other types of goods, and some dangerous goods need to be segregated in different holds from other goods. The implementation of the Code is mandatory under the International Convention for the Safety of Life at Sea (SOLAS) and the International Convention for the Prevention of Pollution from Ships (MARPOL 73/78).	**EIS** Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment **MSA** 10.0 Potential Accidents or Malfunctions
PT-24.4	Asked if shipping of hydrocarbons in containers has been included in the assessment, as hydrocarbons are being increasingly shipped by rail, resulting in incidents. Asked if there is an increase in the movement of coal contemplated in the Project.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Responded that there have not been plans or projections for a change in the distribution of contents of containers. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#6):** The proposed Project is a container terminal and does not include any coal-related elements. There are no plans to modify the Project to handle bulk oil or coal.	**EIS** 4.0 Project Description Appendix 7.2-B Aboriginal Groups Interests and Issues Table
PT-24.5	Concerned about the increased tanker traffic including oil spills, spill response, vessel safety, invasive species and cumulative effects.	01-Nov-2013, Meeting with Cowichan Nation Alliance 01-Dec-2016, Chief & Council Meeting - Penelakut	**01-Nov-2013, Meeting:** Recorded comment for follow-up. **07-Jan-2014, Letter from the VFPA to Penelakut Tribe:** The proposed Project is being designed to exclusively handle containers. There will be no additional tankers as a result of the Project. The proposed Project will undergo a thorough and independent environmental assessment, which will include a component that will look at	**Addressed in EIS Appendix 7.2-B (#204):** Potential spills of deleterious materials (e.g., hydrocarbons) and their environmental effects are discussed in the EIS. Plausible worst-case scenarios involving a marine vessel, motor vehicle, and train accident, each assumed to result in a spill of deleterious materials, are assessed. The regulatory management framework, standard practices, and Project-specific measures to reduce the risk of accidents or malfunctions, including spills, as well as the emergency response and mitigation measures to be implemented in the event of a spill are described. Three worst-case scenarios involving hydrocarbon spills were assessed: a container ship impact incident at the terminal, a tanker truck accident on Roberts Bank Way	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 30.0 Potential Accidents or Malfunctions Appendix 30-A Marine Vessel Incidence Prediction Inputs to the

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			potential cumulative effects and potential for spills. **01-Dec-2016, Meeting:** Stated that the federal government's recent decision to approve the TMX project is referenced and it is noted that safety is a big part of the work, permitting, and consultation to be done on the project. Traffic from the TMX project was included in the cumulative effects study for RBT2.	North, and a yard locomotive derailment on the widened causeway. The assessment determined that a ship impact scenario involving a marine spill of heavy fuel oil at the terminal would result in adverse residual effects to all marine biophysical VCs, as well as marine commercial use, outdoor recreation, and land and water use. While the residual effects on southern resident killer whales, coastal birds, and Current Use were considered significant, due to the extremely low probability of such a scenario, all residual effects were considered unlikely. Since the diesel spill in each of the land-based scenarios would occur away from the marine environment, no potential interactions with marine biophysical VCs were identified. Further, no residual adverse effects were identified with respect to socio-economic VCs, including services and infrastructure and human health. As with any activity, the potential for unplanned incidents during Project construction and operation exists. The VFPA, its tenants, contractors, operators, and intermodal partners are committed to continue to improve port-wide operational practices and procedures to ensure the safety of workers and the public, and protection of the environment. The composition and number of hazardous goods containers handled at Deltaport Terminal in 2012 was reviewed during the development of the Quantitative Risk Assessment (see Table B-4 (Appendix B) of EIS Appendix 30-A). The estimated probability and potential consequences of a range of accidents or malfunctions, including spills of deleterious materials from ships during Project construction and operation, are described in the EIS.	Quantitative Risk Assessment
PT-24.6	Concerned that bunker fuel or cargo spill would be distributed by ocean currents - not just in shipping lanes.	09-Sep-2015, Letter to the VFPA from Cowichan Tribes on behalf of Cowichan Nation Alliance	**02-Oct-2015, Letter from the VFPA to Penelakut Tribe:** The document shared by the VFPA on July 27, 2015 included a draft summary of Cowichan Nation Alliance's Current Use in the marine shipping study area, and therefore did not include accidents and malfunctions or potential effects. These topics will be addressed in the report to be submitted to the CEA Agency in the fall of 2015. For more information regarding factors considered in the assessment of effects of marine shipping associated with the Project, please see the Marine Shipping Overview document shared with Cowichan Nation Alliance on May 26, 2015, or the *Updated EIS Guidelines*, issued by the CEA Agency on April 17, 2015.	**Addressed in MSA Appendix 5-B (#104):** The assessment of potential accidents or malfunctions (MSA Section 10.0), considers the effects of a plausible worst-case spill scenario on the environment. The plausible worst-case scenario assessed is a powered grounding of a container ship resulting in a release of heavy fuel oil. The location of the plausible worst-case spill scenario is in Boundary Passage near the south end of South Pender Island. MSA Section 10.0 includes a description of the applicable mitigation for a plausible worst-case spill scenario. **Addressed in MSA Section 10.0:** The assessment for the plausible worst-case spill scenario concluded that, with the exception of human health, measurable residual adverse effects are predicted for all VCs. In all cases, the identified residual adverse effects of a spill are unlikely to occur, because of the very low probability of an accident or malfunction that could result in a spill. With the exceptions of residual effects on marine mammals (southern resident killer whale), marine commercial use (guided sport fishing and marine-based tourism sub-components), outdoor recreation, archaeological and heritage resources, and Current Use, adverse residual effects were considered not significant. A serious residual adverse impact on the ability of Indigenous groups to exercise Aboriginal and treaty rights in areas overlapping or near the hypothetical spill area would be expected in the event of such a spill.	**MSA** Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents or Malfunctions 10.3.3 Identification of Plausible Worst-case Accident or Malfunction Scenarios 10.4 Mitigation
PT-24.7	Concerned with the safety of those participating in Tribal Journeys. Concerned with the safety of small boats, including harvesters.	17-Jun-2015, Meeting with Cowichan Nation Alliance 09-Nov-2015, Meeting with Penelakut Tribe	**17-Jun-2015:** Recorded comment for consideration by Project team. **09-Nov-2015:** Recorded comment for consideration by Project team. **09-Nov-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous	**Addressed in EIS Appendix 7.2-B (#206):** A quantitative risk assessment of potential accidents and malfunctions related to marine vessel traffic, including the risk of a collision between a container ship and small craft (i.e., fishing and recreational vessels), was undertaken and is described in EIS Section 30.0, as well as EIS Appendix 30-A. Data collected by DFO between 2008 and 2012 for vessels in DFO sub-areas encompassing Canadian and U.S. waters transited by ships bound for Roberts Bank was reviewed. These data indicated that daily fishing vessel numbers in the area are low (i.e., no vessels per sub-area on most days; maximum of six vessels on one day in the largest sub-area). On this basis, the quantitated risk assessment estimated the	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 30.0 Potential Accident and Malfunctions 30.4.4 Vessel Collision Appendix 30-A Marine Vessel Incidence Prediction Inputs to the

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			issues and interests and provided the VFPA's response.	return period for a collision involving a container ship and a fishing vessel as 1 in 50 years, equivalent to a 'very low' probability in this assessment. A Land and Marine Traffic Management Plan is included in the Environmental Management Program (EIS Section 33.0) in order to mitigate potential marine vessel traffic issues. **Addressed in MSA Sections 9.5 and 10.0:** MSA Section 9.5 considers the risk of collision and perceptions of safety in the assessments of access to preferred Current Use locations, and quality of Current Use experience. The assessment of potential accidents or malfunctions (MSA Section 10.0) includes consideration of a plausible worst-case collision scenario between a container ship and a smaller vessel such as a fishing vessel. Potential effects of such an event are assessed for the following VCs: marine commercial use, outdoor recreation, and human health, as well as Current Use. MSA Section 9.5 considers cultural practices, such as the acquisition of traditional foods and the transmission of traditional knowledge. Perceptions of safety, as well as access to preferred harvesting locations and visual or auditory disturbances, are covered in the assessment of potential changes to the following: • Access to preferred Current Use locations; and • Quality of Current Use experience. **Addressed in response to IR10-15:** The VFPA's response to IR10-15, as requested by the Review Panel, further discusses potential effects to the quality of the Current Use experience resulting from marine shipping associated with the Project.	Quantitative Risk Assessment **MSA** Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents or Malfunctions **Information Requests** Response to Sufficiency Information Request #15 (IR10-15)
PT-24.8	Asked if there will be timely and adequate rescue and tow of a disabled container vessel that is undertaken by a tug of adequate. If yes will these be commercial tugs of opportunity or a dedicated response tug operated by trained and experienced crew for high seas rescue.	13-Jan-2016, Letter to the CEA Agency from Cowichan Tribe on behalf of Cowichan Nation Alliance (CEAR Document #385) 26-Oct-2016, Letter to Panel from Penelakut Tribe (CEAR Document #615)	**12-May-2016, Letter from the CEA Agency to Cowichan Nation Alliance (CEAR Document #398):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Additional information provided by the VFPA:** Transport Canada is the federal lead in regulating marine shipping in Canada, and other federal departments such as the Canadian Coast Guard, ECCC, DFO, and NRC have key roles that enhance marine safety and security, influence marine shipping activities, and help protect the marine environment. Transport Canada's response to the Review Panel's April 4, 2018 Information Requests provides a whole-of-government overview of activities undertaken by the Government of Canada related to spill management.	**Transport Canada Response to the Review Panel's April 4, 2018 Information Requests (CEAR Document #1204)**
PT-24.9	Asked if there will be timely and adequate salvage capability provided for a container vessel threatened or stricken with structural failure and needing hull patching and/or container cargo removal? If yes, will the salvage services be from a company sourced internationally, or will services be provided by a salvor representative whose office resides in B.C. and has repositioned equipment	13-Jan-2016, Letter to the CEA Agency from Cowichan Tribe on behalf of Cowichan Nation Alliance (CEAR Document #385) 26-Oct-2016, Letter to Panel from Penelakut Tribe (CEAR Document #615)	**12-May-2016, Letter from the CEA Agency to Cowichan Nation Alliance (CEAR Document #398):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Additional information provided by the VFPA:** Transport Canada is the federal lead in regulating marine shipping in Canada, and other federal departments such as the Canadian Coast Guard, ECCC, DFO, and NRC have key roles that enhance marine safety and security, influence marine shipping activities, and help protect the marine environment. 	strategically located for rapid deployment? What will the timelines be for each salvage service (stability analysis, fire-fighting, hull patching, towing, cargo/fuel removal, shore clean-up) within the marine study area?				
PT-24.10	Asked if there will be planning and collaboration by Transport Canada with the Cowichan Nation Alliance on potential places of refuge within our Traditional Territory Stated that if yes, what are Transport Canada's intentions and approaches?	13-Jan-2016, Letter to the CEA Agency from Cowichan Tribe on behalf of Cowichan Nation Alliance (CEAR Document #385) 26-Oct-2016, Letter to Panel from Penelakut Tribe (CEAR Document #615)	**12-May-2016, Letter from the CEA Agency to Cowichan Nation Alliance (CEAR Document #398):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Additional information provided by the VFPA:** Transport Canada's response to information request TC IR-07 discusses planning and collaboration in the development of new places of refuge. In its response, Transport Canada notes it "recently led a review and update of the Pacific regional POR [place of refuge] plan. The plan provides guidance in regional POR planning and decision-making for federal, provincial, First Nations, municipal and non- government partners, and includes a more comprehensive and cooperative mechanism for risk assessment and decision-making. As the federal government retains responsibility for marine shipping, if the urgency of the situation requires immediate action, Transport Canada and Canadian Coast Guard will initiate action under the *Canada Shipping Act, 2001* and engage with other partners (e.g., Province of BC, Public Safety Canada, Parks Canada, Environment and Climate Change Canada, First Nations, municipalities) as soon as possible thereafter using the plan, including the Incident Command System and Unified Command. Under the Oceans Protection Plan, places of refuge engagement will be expanded to the rest of the Pacific coast to enhance the plan with new sub-regional annexes, including for the South Coast, summarising the navigation criteria, in balance with the environmental, socio-economic and cultural values of First Nations and local communities that may be exposed to some risk from a POR decision. These new annexes will modify and/or update current pre-surveyed places of refuge, from the existing regional plan dated 2009. It should be noted that "pre-surveyed" doesn't mean "pre-designated". Actual assignment of a place of refuge anchorage is undertaken in accordance with this plan, using a cooperative risk assessment and decision-making process whenever time and operational imperatives allow. Engagement with other First Nations and coastal communities will ensure these annexes are developed in a balanced and fully informed manner."	**TC IR-07 (CEAR Document #982) from Transport Canada to the Review Panel re: Response to Information Requests issued by the Review Panel on May 10, 2017**
PT-24.11	Asked if there are regions and periods whereby sea conditions for daylight oil spill and/or container-debris response are not safe or ineffective within our Traditional Territory. If yes, what would be the frequency of limiting factors such as: waves, wind, fog, currents, etc. within the marine study area?	13-Jan-2016, Letter to the CEA Agency from Cowichan Tribe on behalf of Cowichan Nation Alliance (CEAR Document #385) 26-Oct-2016, Letter to Panel from Penelakut Tribe (CEAR Document #615)	**12-May-2016, Letter from the CEA Agency to Cowichan Nation Alliance (CEAR Document #398):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Additional information provided by the VFPA:** Transport Canada is the federal lead in regulating marine shipping in Canada, and other federal departments such as the Canadian Coast Guard, ECCC, DFO, and NRC have key roles that enhance marine safety and security, influence marine shipping activities, and help protect the marine environment. 	for mitigation to be based on worst-case analysis rather than relying on statistical analysis to render consequences and preparedness lower as "credible" or "plausible" worst-case scenarios? For risk determination and emergency preparedness purposes, what direction does Transport Canada provide to the shipping industry and for federal impact assessments in defining the nature, scale and scope of major vessel casualty's consequences?	Nation Alliance (CEAR Document #385) 26-Oct-2016, Letter to Panel from Penelakut Tribe (CEAR Document #615)	*respect to this information to inform its sufficiency review."*	Transport Canada is the federal lead in regulating marine shipping in Canada, and other federal departments such as the Canadian Coast Guard, ECCC, DFO, and NRC have key roles that enhance marine safety and security, influence marine shipping activities, and help protect the marine environment. Transport Canada's response to the Review Panel's April 4, 2018 Information Requests provides a whole-of-government overview of activities undertaken by the Government of Canada related to spill management.	**Requests (CEAR Document #1204)**
PT-24.13	Asked if heavy fuel oils (bunker) used by the project's container vessels - if spilled in BC's marine temperate waters - submerge (over wash) and/or sink anywhere within the marine study area? If yes, then what is the current capability within industry and government with regards to having specialized equipment and trained personnel to realistically track and recover such oil? How is this specialized equipment and operations evaluated by regulatory agencies?	13-Jan-2016, Letter to the CEA Agency from Cowichan Tribe on behalf of Cowichan Nation Alliance (CEAR Document #385) 26-Oct-2016, Letter to Panel from Penelakut Tribe (CEAR Document #615)	**12-May-2016, Letter from the CEA Agency to Cowichan Nation Alliance (CEAR Document #398):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in MSA Section 10.4:** MSA Appendix 10-B provides qualitative evaluations of the physical fate and transport of potential spills. The evaluation focuses on the Boundary Passage region where the probability of an accident or malfunction and associated spill to the marine environment is greater and the environmental consequence likely higher. The identified residual adverse environmental effects are unlikely to occur, because of the very low probability of the accident scenarios. MSA Section 10.4 discusses existing emergency response mechanisms and arrangements with Response Organisations within the spatial extent of marine shipping associated with the Project. MSA Section 10.4.4.1 specifically discusses the capabilities of WCMRC, the Response Organisation within the marine shipping area. WCMRC maintains a team of full-time and part-time employees, and trains on average 150 to 200 marine contractors and fishers in spill response each year. In addition to formal training, WCMRC conducts a program of equipment deployment and desktop exercises over the three-year certification cycle. WCMRC meets the equipment requirements for certified Response Organisations by maintaining the following: • A dedicated fleet of specialised oil spill response vessels, with a combined skimming capacity of 468 tonnes/hour; • More than 35,500 m of boom; • The capacity to clean-up 1,500 m of shoreline/day; • 8,100 tonnes of primary storage capacity; • Four sweep systems for on-water oil collection; • Incident Command Post kits containing all the materials and equipment required to establish and operate a complete Incident Command Post. Three of these kits are currently stored in trailers ready to be mobilised in Burnaby, Duncan, and Prince Rupert, B.C.; • A communications network that includes fixed and portable repeaters and a mobile communications vehicle for supporting remote operations; • Equipment or Office warehouses in Burnaby, Duncan, and Prince Rupert; and • Equipment caches in Haida Gwaii, Kitimat, Shearwater, Port Hardy, Campbell River, Sunshine Coast, Port Alberni, Nanaimo, Deltaport, Fraser River, and Esquimalt.	**MSA** 10.4 Mitigation Measures 10.4.4.1 Western Canada Marine Response Corporation Capabilities Appendix 10-B Marine Fate of Shipping Spill-type Accidents

	management, workforce establishment, hazardous material management, etc. If yes, when, where, and by who?	26-Oct-2016, Letter to Panel from Penelakut Tribe (CEAR Document #615)		Transport Canada's response to the Review Panel's April 4, 2018 Information Requests provides a whole-of-government overview of activities undertaken by the Government of Canada related to spill management.	
PT-24.21	Asked if there will be financial risks for participants in Unified Command (agencies and First Nations) once a ship-owner (the Responsible Party) reaches its legal limit of financial responsibility that results in the incident's management and further expenditures being transferred to government. If yes, what are these risks?	13-Jan-2016, Letter to the CEA Agency from Cowichan Tribe on behalf of Cowichan Nation Alliance (CEAR Document #385) 26-Oct-2016, Letter to Panel from Penelakut Tribe (CEAR Document #615)	**12-May-2016, Letter from the CEA Agency to Cowichan Nation Alliance (CEAR Document #398):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Additional information provided by the VFPA:** Transport Canada is the federal lead in regulating marine shipping in Canada, and other federal departments such as the Canadian Coast Guard, ECCC, DFO, and NRC have key roles that enhance marine safety and security, influence marine shipping activities, and help protect the marine environment. Transport Canada's response to the Review Panel's April 4, 2018 Information Requests provides a whole-of-government overview of activities undertaken by the Government of Canada related to spill management.	**Transport Canada Response to the Review Panel's April 4, 2018 Information Requests (CEAR Document #1204)**
PT-24.22	Asked if the federal and provincial government will be receptive to a formalized government-to-government arrangement with the Cowichan Nation Alliance to guide in major vessel waterway management, cumulative impact assessments, and vessel casualty preparedness and response. If yes, what is the forum in which this can be done?	13-Jan-2016, Letter to the CEA Agency from Cowichan Tribe on behalf of Cowichan Nation Alliance (CEAR Document #385) 26-Oct-2016, Letter to Panel from Penelakut Tribe (CEAR Document #615)	**12-May-2016, Letter from the CEA Agency to Cowichan Nation Alliance (CEAR Document #398):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Additional information provided by the VFPA:** Transport Canada is the federal lead in regulating marine shipping in Canada, and other federal departments such as the Canadian Coast Guard, ECCC, DFO, and NRC have key roles that enhance marine safety and security, influence marine shipping activities, and help protect the marine environment. Transport Canada's response to the Review Panel's April 4, 2018 Information Requests provides a whole-of-government overview of activities undertaken by the Government of Canada related to spill management.	**Transport Canada Response to the Review Panel's April 4, 2018 Information Requests (CEAR Document #1204)**
PT-24.23	Stated that there are discrepancies in the the EIS and that Penelkaut Tribe is required to cross the international shipping lanes to harvest crab and fish at Roberts Bank, to visit T'lqitnus. Concerned that increased freighter creates increased hazards to the small vessels needed to cross that corridor. Stated that marine shipping traffic will also increase navigational conflicts for Penelakut Tribe members travelling to marine harvesting sites at Roberts Bank, as this requires crossing the Salish Sea and the shipping lanes.	27-Aug-2015, Letter from Penelakut Tribe 26-Oct-2016, Letter to Panel from Penelakut Tribe (CEAR Document #615)	**02-Oct-2015, Letter from the VFPA to Penelakut Tribe:** Requested to meet with Penelakut to discuss comments received on the draft EIS. Stated that eh content discrepancies in the EIS will be incorporated into the MSA before submission to the CEA Agency. Explained that the document shared by the VFPA on July 27, 2015 included a draft summary of CNA's current use in the marine shipping study area, and therefore did not include accidents and malfunctions or potential effects. Noted that these topics will be addressed in the Report to be submitted to the Canadian Environmental Assessment Agency ("CEAA") in the fall of 2015. **09-Nov-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the MSA for the proposed Project, which included MSA Appendix 5-B listing	**Addressed in MSA Appendix 5-B (#73):** MSA Section 9.5 considers the risk of collision and perceptions of safety in the assessments of access to preferred Current Use locations, and quality of Current Use experience. The assessment of potential accidents or malfunctions (MSA Section 10.0) includes consideration of a plausible worst-case collision scenario between a container ship and a smaller vessel such as a fishing vessel. Potential effects of such an event are assessed for the following VCs: marine commercial use, outdoor recreation, and human health, as well as Current Use. MSA Section 9.5 considers cultural practices, such as the acquisition of traditional foods and the transmission of traditional knowledge. Perceptions of safety, as well as access to preferred harvesting locations and visual or auditory disturbances, are covered in the assessment of potential changes to the following: Access to preferred Current Use locations; and Quality of Current Use experience. **Addressed in MSA Section 9.5:** MSA Section 9.5 considers the Current Use by Indigenous peoples, including intangible cultural heritage considerations, and in the marine shipping area. The section also considers potential impacts on the ability to exercise asserted or established Aboriginal or treaty rights in the marine shipping area, including in the context of potential accidents and malfunctions.	**MSA** Appendix 5-B Aboriginal Issues and Interests 9.5 Current Use of Lands and Resources for Traditional Purposes, and Aboriginal and Treaty Rights 9.5.1.1 Potential Impacts on Asserted or Established Aboriginal and Treaty Rights 9.5.5 Potential Interactions and Effects of Vessel Transit on Current Use

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			all the issues and interests raised by Indigenous groups and the VFPA's response.	Potential effects on Current Use as a result of Project associated vessel transit activities are considered negligible before mitigation for access to preferred Current Use locations, due to Project-associated ship wake, the availability and quality of preferred Current Use resources, and the quality of the Current Use experience (i.e., cultural practices) tied to those aspects of Current Use. Residual effects on access to preferred Current Use locations due to Project associated container ship pass-bys, and on cultural practices tied to that aspect of Current Use, are considered negligible after the implementation of mitigation. Considering the conclusions of the Current Use assessment, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the marine shipping area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location. These mitigation measures for addressing potential incremental effects on Current Use are expected to also be effective at addressing the potential incremental impact to the exercise of Aboriginal and treaty rights. No additional mitigation measures have therefore been suggested for the potential incremental impact to the exercise of Aboriginal and treaty rights.	
CT-24.24	Stated that an accident or malfunction at the terminal could result in additional impacts on substrates, marine vegetation and marine invertebrates. An accident or malfunction that results in mortality of valued marine species.	26-Oct-2016, Letter to Panel from Penelakut Tribe (CEAR Document #615)	The VFPA has reviewed this letter and provides the following information.	**Addressed in EIS Section 30.0:** EIS Table 30-8 summarises the potential residual effects to VCs that could occur as a result of an interaction with each of the plausible worst-case accident or malfunction scenarios. No adverse residual effects are anticipated with respect to either the road worst-case scenario or the rail worst-case scenario. Although the potential for significant residual adverse effects to marine mammals, coastal birds, and Current Use was identified with respect to the marine worst-case scenario (i.e., an allision involving a container ship at RBT2 of sufficient energy to puncture the hull and damage a fuel tank), due to its 'extremely low' probability, these effects are considered unlikely. Given that none of the residual adverse effects identified in this assessment are considered likely, they were not considered in the assessment of potential cumulative effects of the Project.	**EIS** 30.0 Potential Accident and Malfunctions

Table 25: Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Lands and Resources for Traditional Purposes

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-25.1	Concerned that the community profile for Cowichan Tribes does not include their Aboriginal interests in the mainland, including the Project area. Concerned that the description of Cowichan Nation Alliance's members' historical village (Tl'uqtinus) and use of the area is inaccurate and not respectful. Stated that Cowichan Nation Alliance will review the information and identify information gaps. Provided a list of recommended revisions to EIS Section 32.0. Concerned with the VFPA's understanding of Penelakut's asserted rights and title. Stated that the community profile fails to properly identify Penelakut's use and occupancy of the Roberts Bank area. Requested that the VFPA redact information contained in the EIS. Requested a written report reassessing the potential impacts of RBT2 on the Penelakut Tribe. Criticised that the description of Penelakut Tribe in the EIS as inaccurate and insufficient. Disagreed with EIS conclusions that impacts to Penelakut rights will be insignificant. Stated that Penelakut anticipated that the VFPA would amend the EIS to include an appropriate description of Penelakut's territory, but this has not happened. Enclosed a description of Penelakut to be used when considering who Penelakut Tribe is and how the project may impact Penelakut.	11-Dec-2014, Health & Aboriginal Rights Workshop – Cowichan Nation Alliance 15-Jan-2015, Letter from the Cowichan Nation Alliance 27-Aug-2015, Letter to the VFPA from Penelakut Tribe 09-Nov-2015, Meeting with Penelakut Tribe 04-Jan-2016, Letter to the VFPA from Penelakut Tribe 04-May-2016, Letter to the VFPA from Penelakut Tribe	**11-Dec-2014, Workshop:** Stated that the information presented is an excerpt from the Kennedy (2014) report. Stated that the information could be made clearer. Requested additional clarification in writing from the Cowichan Nation Alliance. **25-Mar-2015, Letter from the VFPA to the Cowichan Nation Alliance:** Responded to the Cowichan Nation Alliance's requested revisions and demonstrated how they had been considered in the draft. **02-Oct-2015, Letter from the VFPA to Penelakut Tribe:** Requested to meet with Penelakut to discuss comments received on the draft EIS. Stated that in regards to content discrepancies related to use of marine resources and terrestrial locations by the Cowichan Nation Alliance and Penelakut Tribe, the suggested alterations will be incorporated into the [MSA] before submission to the CEA Agency. **09-Nov-2015, Meeting:** Apologised that description is not accurate. The assessment in the EIS was conducted on the basis of the information provided to the VFPA prior to filing of the EIS, and the summary was provided to Penelakut for review before submission to the CEA Agency. Offered to forward information from Penelakut to the CEA Agency. Requested that Penelakut provide additional information if it is available. Stated that the VFPA does not define or assess rights and title, and does not have control over depth of consultation. The CEA Agency determines consultation requirements. Stated that the VFPA has provided money for participation and continues to meet with Penelakut to discuss concerns and benefits. Asked how Penelakut would like to see the consultation process unfold. **04-Feb-2016, Letter from the VFPA:** In your letter, you express concern with the community profile for Penelakut Tribe in EIS Section 32.1.1.10. This section was intended to provide background information on each Indigenous group, including the location of reserves, communities, and traditional territories, and maps where available. The community profile for Penelakut Tribe provides a reference to Figure 32.5 in the EIS, which depicts both the "core" and "marine" traditional territory collectively asserted by the Hul'qumi'num Treaty Group. EIS Figure 32.5 is also referred to in EIS Section 32.2.4.5, where it is stated that the Hul'qumi'num Treaty Group traditional territory "fully	**Addressed in EIS Appendix 7.2-B (#178):** The VFPA provided draft summaries of past and current use and community information within EIS Section 32.0 for review by each Indigenous group and comments received were incorporated. EIS Section 32.1.1.5 presents Stz'uminus First Nation's community profile information. EIS Section 32.2.4.5 presents information in relation to Tl'uqtinus. **Additional information provided by the VFPA:** On April 24, 2014, the VFPA and Cowichan Nation Alliance, which at that time consisted of Cowichan Tribes, Penelakut Tribes, Halalt First Nation, Stz'uminus First Nation, and Hwlitsum First Nation, signed a funding agreement to support a RBT2-specific use study. On July 11, 2014, the VFPA provided Penelakut Tribe with a draft of the Community Profile Extract for the opportunity to review and provide comments. On October 16, 2014, the Cowichan Nation Alliance provided the VFPA with a report titled *Port Metro Vancouver: Roberts Bank Terminal 2: Cowichan Nation Alliance Current and Planned Use.* The VFPA met the Cowichan Nation Alliance on December 11, 2014 to provide information regarding the assessment of potential Project effects and cumulative effects on Aboriginal and Treaty Rights and Related Interests and Current Use of Lands and Resources for Traditional Purposes; and to identify any additional information to inform the assessment. The presentation and discussion included content regarding the proposed methodology for this assessment, the VFPA's understanding of existing conditions, based on the information provided by the Cowichan Nation Alliance, and preliminary conclusions of the assessment. On December 9, 2014, the VFPA provided the Cowichan Tribes with an advance draft of the existing conditions section for "Potential or Established Aboriginal and Treaty Rights and Related Interests, and including current use of lands and resources for traditional purposes" of the EIS. The VFPA requested that Cowichan Tribes confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final EIS. Comments on the draft sections were received from the Cowichan Nation Alliance on January 15, 2015. On March 25, 2015, the VFPA provided the Cowichan Nation Alliance with a table outlining all Cowichan Nation Alliance's comments on the draft sections, responses to each comment from the VFPA, and a description of subsequent changes made to the sections in the EIS.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.1.1.10 Penelakut Tribe 32.2.3 Information Sources 32.2.3.1 Project-Specific Studies 32.2.4.5 Cowichan Nation Alliance (Cowichan Tribes, Halalt First Nation, Penelakut Tribe, Stz'uminus First Nation) 32.4 References

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			overlaps the LAAs for the marine vegetation, marine invertebrates, marine fish, and coastal birds VCs, and the marine mammals LAA portion north of the international border" (p. 32-71). The purpose of EIS Section 32.2.4.5 was to present a summary of use and occupation in relation to the Project area, in order to address the information requirements laid out in EIS Sections 9.1.8 (emphasising Current Use) and 9.2 (emphasising rights) of the *EIS Guidelines*. EIS Section 32.2.4.5 included information available to the VFPA at the time of EIS submission regarding the Penelakut Tribe's use and occupancy in relation to the Project area. This section includes reference to the importance of the Fraser River estuary, Tl'uqtinus, and several other sites in the Roberts Bank area to Cowichan Nation Alliance member nations, as well as Cowichan Nation Alliance's expressed desire to resume harvesting at several sites. The EIS represents the VFPA's perspective on the predicted degree of effect the Project may have on Current Use, and Aboriginal right based on the information available to the VFPA at the time the EIS was submitted. In the VFPA's meeting with Cowichan Nation Alliance on June 11, 2015, Penelakut Tribe informed the VFPA that it relies on the Roberts Bank area for crab harvesting due to contamination present in areas closer to their communities, Penelakut Tribe advised that they secured a total catch of about 2,700 to 3,000 lbs of crab for food, social and ceremonial purposes in this area in April 2015. The VFPA included this new information in the MSA, submitted in October 2015 (see pp. 9.5-107 to 9.5-108). Penelakut Tribe's January 4, 2016 letter includes reference to an Aboriginal Fisheries Strategy agreement with DFO that covers the Project area, the VFPA requests that Penelakut Tribe send a copy of the agreement and any other information relating to marine resource harvesting in areas potentially affected by the Project. Additional information pertaining to Penelakut Tribe Current Use, provided in Penelakut Tribe's January 4,2016 letter to the VFPA, as well as the information in the above paragraph, will be incorporated in the VFPA's updated responses to AIR-12.04.15-29, AIR-12.04.15-30, and AIR-12.04.15-31. Upon submittal of these documents to the CEA Agency, it will be the VFPA's understanding that all relevant information pertaining to Penelakut Tribe Current Use in the Roberts Bank area will have been provided to the CEA Agency. If Penelakut Tribe would like any additional information on the record for the Panel to consider, it can be sent to the Crown Consultation Coordinator at the CEA Agency. Please copy the VFPA on any correspondence to this effect. The VFPA looks forward to working with Penelakut Tribe to ensure all relevant information is included in the federal Panel review of the Project.		

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			30-Jun-2016, Letter from the VFPA: Provided responses to the concerns raised in Penelakut Tribe's letter of 04-May-2016. The port authority response to IR-7.31.15-2 (enclosed) responds to your concern regarding the description of Penelakut traditional territory in the EIS. This response confirms that the traditional territory for the Cowichan Nation Alliance, or the Statement of Intent boundary for the Hul'qumi'num Treaty Group, was used as the basis of all analysis in the EIS pertaining to Penelakut. The response to IR-7.31.15-2 is posted on the CEA Agency registry and is part of the official record. In addition, Penelakut may submit information directly to the Review Panel to be posted on the public registry and considered by the Review Panel in its assessment of the Project. The summary of Current Use for Penelakut in the EIS was prepared using information submitted by the Cowichan Nation Alliance on behalf of Penelakut, including: • Cowichan Nation Alliance Current and Planned Use: Roberts Bank Terminal 2 (Hwitsum Consulting 2014); and • Port Metro Vancouver: Roberts Bank Terminal 2: Cowichan Nation Occupation and Use (Bouchard and Kennedy Research Consultants 2014). Penelakut was provided opportunities to review and respond to the content pertaining to Penelakut in the EIS. Penelakut commented on the draft materials, and the EIS was revised in response to comments from Penelakut. As noted in the table accompanying the port authority's letter of April 25, 2016, the specific information regarding Penelakut's use of Roberts Bank "as recently as this spring" and in "recent sockeye runs" identified in the comment (and submitted by Penelakut to the port authority by letter dated August 27, 2015) was not available to the port authority at the time the EIS was filed. Information relating to Penelakut's recent use of the Project area was included and considered in the MSA and in the port authority's responses to information requests issued by the CEA Agency and is therefore part of the official record for the Panel's review.		
PT-25.2	Stated that they disagree that the Project is not anticipated to have impacts on the exercise of asserted rights of the Cowichan Nation Alliance to harvest marine fish, invertebrates, and mammals, and coastal birds and ducks. Stated that the Project will change the use of the area and open the ocean to industrial use and have impacts. Criticised the statements that say there is no reported current use of resources by the Cowichan Nation Alliance within the Project assessment area. Cultural protocols are part of	11-Dec-2014, Health & Aboriginal Rights Workshop - Cowichan Nation Alliance 09-Nov-2015, Meeting with Penelakut Tribe 01-Dec-2016, Chief & Council Meeting with Penelakut Tribe	**11-Dec-2014, Workshop:** Responded that the EIS is the VFPA's assessment, and the Minister of Environment will make the final decision based on the Review Panel's report. Stated that if there are mistakes or omissions in the information, it is helpful for the VFPA to know as soon as possible. **09-Nov-2015, Meeting:** Stated that the VFPA made its assessment on the information available. Stated that if Penelakut has more information, the VFPA will need to look at it and reassess if required.	**Addressed in EIS Appendix 7.2-B (#157):** The methods used to assess the potential effects of the Project, including both residual effects of the Project and cumulative effects, are described in EIS Section 8.0. These methods are consistent with existing federal guidance. Based in part on the findings of the assessment of marine biophysical VCs, potential Project-related effects on resource harvesting of traditional species are assessed in EIS Section 32.0.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 8.0 Effects Assessment Methods 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	the reason there are apparent gaps in information around current use. Stated that the Cowichan Nation Alliance will supply additional information articulating why there is information unavailable for current use.	27-Jan-2017, Meeting with Penelakut Tribe	**01-Dec-2016, Meeting:** Recorded comment for follow-up. **27-Jan-2017, Meeting:** Stated that the Review Panel will want to hear Penelakut's point of view and what impacts Penelakut thinks there will be from the Project.	**Addressed in responses to IR-7.31.15-08 and MSA IR-02.24.16-4:** How ITK was utilised in the EIS and MSA is described in the VFPA's responses to IR-7.31.15-08 and MSA IR-02.24.16-4. The VFPA's response to IR10-02, as requested by the Review Panel, provides tables similar to those presented in CEAR Document #572 and CEAR Document #930 to summarise how all available ITK was incorporated into the EIS and MSA.	**Information Requests** Response to Information Request #8 (IR-7.31.15-08 of CEAR Document #314) Response to Additional Information Request #4 (MSA IR-02.24.16-4 of CEAR Document #386) Response to Sufficiency Information Request #02 (IR10-02)
PT-25.3	Stated that the VFPA is always stating that the Project will have no impacts and is not interested in mitigating effects.	11-Dec-2014, Health & Aboriginal Rights Workshop - Cowichan Nation Alliance	**11-Dec-2014, Workshop:** Stated that the VFPA is open to hearing suggestions for mitigation measures.	**Addressed in EIS Appendix 7.2-B (#5):** The EIS considers clear, enforceable measures that are technically and economically feasible that would mitigate any adverse effects of the Project, as required by the *EIS Guidelines*. The approach to considering mitigation measures for adverse effects is described in EIS Section 8.0. The proposed approach for mitigation to address Project-related effects to marine biophysical VCs is described in EIS Section 17.0. **Addressed in EIS Appendix 7.2-B (#197):** The VFPA has adopted the use of the following mitigation hierarchy to address Project effects: 1. Avoidance, such as through Project placement and design, and adherence to fisheries-sensitive windows; 2. Reduction, such as through the implementation of standard management practices and Environmental Management Plans; and 3. Offsetting, which involves the creation and enhancement of biophysical habitats that support species of the Roberts Bank ecosystem. Marine sub-components or representative species that undergo decreases in productivity will be offset to the extent feasible using onsite offsetting.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 8.0 Effects Assessment Methods 8.1.6 Mitigation Measures 17.0 Mitigation for Marine Biophysical Valued Components 17.1 Avoiding Potential Effects 17.2 Reducing Potential Effects 17.3.2 Offsetting Framework 17.5 Mitigation Summary for Potential Marine Biophysical Valued Component Productivity Losses
PT-25.4	Concerned that the timing and funding offered by the VFPA to support a TUS study was inadequate. Stated that the VFPA was not provided with the whole breadth of information related to current use, given the timeline and funding provided.	11-Dec-2014, Health & Aboriginal Rights Workshop - Cowichan Nation Alliance	**11-Dec-2014, Workshop:** Explained that if the Current Use study had not been provided to the VFPA, the authors would have been relying on other sources of information, and there may not have been any content in the Current Use report. Stated that there is a lot of value to what is provided by Indigenous groups. If there are major concerns with the way information is being presented in terms of conclusions or content, the VFPA invites Cowichan Nation Alliance to comment.	**Addressed in EIS Appendix 7.2-B (#175):** The VFPA provided funding to the specified Indigenous groups to support consultation. Additionally, the VFPA provided funding to support completion of traditional use studies to these Indigenous groups and all groups provided a traditional use study. Further information, provided during fall 2014 consultation and in writing, has been incorporated into the EIS. The VFPA will continue to consult with appropriate Indigenous groups and there will be further opportunities to provide information through the CEA Agency process.	**EIS** 7.0 Engagement and Consultation Appendix 7.2-B Aboriginal Groups Interests and Issues Table 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-25.5	Concerned that current use assessment precludes an assessment of future use. Stated that commercial harvesting, government regulations and legislations have made participation in commercial fishing challenging. Stated that Cowichan Nation Alliance plans to be fishing in the Project area in the future. Stated that the Cowichan Nation Alliance will supply information about how they see future use fitting into the assessment. Stated that current use is not something that exists on a balance sheet. It ebbs and flows over time. Concerned that the EIS process is not creating accurate information.	11-Dec-2014, Health & Aboriginal Rights Workshop – Cowichan Nation Alliance 05-Jan-2015, Letter to the VFPA from Penelakut Tribe	**11-Dec-2014, Workshop:** Stated that the rights portion (EIS Section 32.0) of the assessment incorporates past use as well as interest in future use. **05-Jan-2015:** Recorded comment for consideration by Project team. **11-Feb-2015, Email from the VFPA to Penelakut Tribe:** Responded that Penelakut's questions will be responded to in the upcoming weeks either by letter/email or done so within the Environmental Impact Statement. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#174):** The methods used to assess the potential effects of the Project on Current Use are consistent with existing federal guidance, including the *EIS Guidelines* issued by the CEA Agency. The rationale for the determination of negligible residual effects to Current Use is included in the EIS. Information sources used in EIS Section 32.0 are listed in EIS Section 32.2.3, with Project-specific studies appearing in EIS Section 32.2.3.1. A full list of references cited appears in EIS Section 32.4. **Addressed in response to IR10-26:** The VFPA's response to IR10-26, as requested by the Review Panel, discusses potential effects of the proposed Project on the reasonably foreseeable future Current Use activities that have been identified by Indigenous groups.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Lands and Resources for Traditional Purposes 32.2.3 Information Sources 32.2.3.1 Project-Specific Studies. 32.3 Potential Adverse Impacts on Aboriginal and Treaty Rights and Related Interests Analysis 32.4 Existing Conditions ***Updated EIS Guidelines*** **Information Requests** Response to Sufficiency Information Request #26 (IR10-26)
PT-25.6	Concerned that Draft Report of Current Use does not include cumulative effects.	09-Sep-2015, Letter to the VFPA from Cowichan Tribes on behalf of Cowichan Nation Alliance	**02-Oct-2015, Letter from the VFPA to Penelakut Tribe:** *"The document shared by the VFPA on July 27, 2015 included a draft summary of [Cowichan First Nation's] current use in the marine shipping study area, and therefore did not include accidents and malfunctions or potential effects. These topics will be addressed in the Report to be submitted to the [CEA Agency] in the fall of 2015. For more information regarding factors considered in the assessment of effects of marine shipping associated with the Project, please see the Marine Shipping Overview document shared with [Cowichan First Nation] on May 26, 2015, or the updated EIS guidelines, issued by [the CEA Agency] on April 17, 2015."*	**Addressed in MSA Appendix 5-B (#23):** The approach to the cumulative effects assessment is provided in MSA Section 6.0. Each IC and VC assessment section considers cumulative changes and cumulative effects to which the Project contributes. This entails consideration of residual effects of routine marine shipping associated with the Project, if any such effects are predicted, in combination with effects of other projects and activities that have been or will be carried out. MSA Section 9.5 describes how Current Use activities have been affected by other projects and activities that have been carried out. As residual effects to Current Use as a result of marine shipping associated with the Project are not predicted, an assessment of future cumulative effects was not carried out.	**MSA** Appendix 5-B Aboriginal Issues and Interests 6.0 Effects Assessment Approach 6.7 Cumulative Effects Assessment 7.1 through 9.4 (All IC and VC assessments) 9.5 Current Use of Lands and Resources for Traditional Purposes, and Aboriginal and Treaty Rights
PT-25.7	Concerned that the Draft Report of Current Use does not include effects from malfunctions or accidents.	09-Sep-2015, Letter to the VFPA from Cowichan Tribes on behalf of Cowichan Nation Alliance	**02-Oct-2015, Letter from the VFPA to Penelakut Tribe:** *"The document shared by the VFPA on July 27, 2015 included a draft summary of [Cowichan First Nation's] current use in the marine shipping study area, and therefore did not include accidents and malfunctions or potential effects. These topics will be addressed in the Report to be submitted to the [CEA Agency] in the fall of 2015. For more information regarding factors considered in the assessment of effects of marine*	**Addressed in MSA Appendix 5-B (#87):** MSA Section 10.0 includes consideration of a collision scenario between a container ship and a smaller vessel such as a fishing vessel. Potential effects of such an event are assessed for VCs marine commercial use, outdoor recreation, human health, and Current Use. MSA Section 9.5 considers the risk of collision and perceptions	**MSA** Appendix 5-B Aboriginal Issues and Interests 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			shipping associated with the Project, please see the Marine Shipping Overview document shared with [Cowichan First Nation] on May 26, 2015, or the updated EIS guidelines, issued by [the CEA Agency] on April 17, 2015."	of safety. MSA Section 10.0 considers plausible worst-case spill scenarios. **Addressed in MSA Section 10.0:** MSA Section 10.5.13 assesses the potential effects on Current Use and potential impacts on the ability to exercise asserted or established Aboriginal and treaty rights resulting from accidents or malfunctions arising from marine shipping associated with the Project. The assessment for the plausible worst-case spill scenario concluded that, with the exception of human health, measurable residual adverse effects are predicted for all VCs. In all cases, the identified residual adverse effects of a spill are unlikely to occur, because of the very low probability of an accident or malfunction that could result in a spill. With the exceptions of residual effects on marine mammals (southern resident killer whale), marine commercial use (guided sport fishing and marine-based tourism sub-components), outdoor recreation, archaeological and heritage resources, and Current Use, adverse residual effects were considered not significant. A serious residual adverse impact on the ability of Indigenous groups to exercise Aboriginal and treaty rights in areas overlapping or near the hypothetical spill area would be expected in the event of such a spill. The plausible worst-case collision scenario has the potential to result in measurable residual adverse effects on human health, marine commercial use, outdoor recreation, Current Use, and asserted or established Aboriginal and treaty rights. In all cases, the identified residual adverse effects of a collision are unlikely to occur, because of the very low probability of collision. The assessment concluded that residual adverse effects are expected to be not significant for marine commercial use and outdoor recreation, but significant for human health. For Current Use, the residual effect could range from not significant to significant, depending on the capacity of the affected Indigenous group to continue to undertake Current Use. In the event of a collision between a vessel engaged in traditional use activities and a container ship, a minor to serious adverse residual impact on the ability of the affected Indigenous group to exercise Aboriginal and treaty rights associated with those activities would be expected. The identified residual adverse effects of a collision are unlikely to occur, because of the very low probability of collision.	9.5.4 Existing Conditions 9.5.5.1 Negligible Effects of Vessel Transit on Current Use 9.5.5.2 Potential Effects of Vessel Transit on Current Use 10.0 Potential Accidents or Malfunctions 10.5.9 Human Health 10.5.10 Marine Commercial Use 10.5.11 Outdoor Recreation 10.5.13 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights
PT-25.8	Concerned that Draft Report of Current Use emphasizes Cowichan activities in the international shipping lanes only.	09-Sep-2015, Letter to the VFPA from Cowichan Tribes on behalf of Cowichan Nation Alliance	**02-Oct-2015, Letter from the VFPA to Cowichan Tribe:** *"Your letter additionally includes an expression of concern related to the VFPA's definition of the [marine shipping area]. The [marine shipping area] is defined to include activities that take place between the 12 nautical mile limit of Canada's territorial sea to the limit of the VFPA's care and control. The [marine shipping area] is defined more broadly*	**Addressed in MSA Section 9.5:** The spatial boundaries for the assessment are summarised in MSA Table 9.5-1 and shown in MSA Figure 9.5-1 through MSA Figure 9.5-11. The LAA for each Indigenous group was selected to conservatively define the area within which Project-associated shipping has the potential to affect the Current Use activities of that	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			than the international shipping lane, and is intended to include areas that could potentially be impacted by marine shipping associated with RBT2. It includes the trans-boundary inland marine waters in this area, as well as numerous islands and islets belonging to either the Gulf Islands or San Juan Islands."	Indigenous group. The RAA for each Indigenous group was established to provide a regional context for that Indigenous group for the assessment of effects from Project-associated shipping.	
PT-25.9	Stated that the EIS identifies "Outdoor Recreation" and "Labour Market" as "Valued Components", saying "Valued components are the focus of the environmental assessment for the purposes of evaluating Project-related effects". But the EIS classifies "Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes" as an "Other effects assessment" undertaken "in addition to the assessment of intermediate and valued components". Explain the rationale for this distinction: Why is the Protection of Aboriginal Rights not a VC? Asked why cumulative effects on the ability of First Nations to exercise Aboriginal rights was not identified as a VC.	26-Oct-2016, Letter to Panel from Penelakut Tribe (CEAR Document #615)	The VFPA has reviewed this letter and provides the following information.	**Addressed in EIS Section 32.1:** Section 32.1 of the EIS explains that the assessment of the current use of lands and resources for traditional purposes (Current Use) is subject to different requirements in the EIS Guidelines than the assessment of potential impacts on the exercise of asserted or determined Aboriginal and treaty rights (pp. 32-1 to 32-2). **Additional information provided by the VFPA:** The identification of a component as a VC is based on the definition of environmental effects in Section 5 of CEAA 2012, not on whether a component is valued. The distinction between the assessment of environmental effects defined under Section 5 of CEAA 2012 versus the assessment of potential impacts to Aboriginal and treaty rights comes down to statutory versus common law requirements, which are reflected in the structure of the EIS Guidelines. Section 5 of CEAA 2012 identifies factors for which environmental effects must be assessed under that statute, including under subsection 5(1)(c), which relates to the effects of a change to the environment on Aboriginal people. If residual effects to these factors are identified, the significance of these residual effects must be determined, and cumulative effects assessed, per Section 19(1) of CEAA 2012. The EIS Guidelines identified how Section 5 environmental effects were to be assessed in sections 10.1, 11.1, 12.1, and 13.1. The requirements for the assessment of Section 5 environmental effects (statutory requirements) do not apply to the assessment of rights. Rather, the requirements for the assessment of potential impacts to the exercise of rights stems from common law requirements relating to the Crown's duty to consult and accommodate. The EIS Guidelines lays out the requirements for the rights assessment in sections 9.2, 10.2, 11.2, 12.2 of the Guidelines, which are different from those relating to Section 5 factors (as above, sections 9.1, 10.1, 11.1, 12.1, 13.1). The determination of significance and assessment of cumulative effects, while required for Section 5 factors per Section 19(1) of CEAA 2012, are not required for rights. While Current Use is a Section 5 CEAA 2012 factor (under subsection 5(1)(c)), and was accordingly assessed using the VC methodology to meet the requirements of the EIS Guidelines, the VC methodology was not applied to the rights assessment; however, because the Current Use	**EIS** 32.1 Component Overview and Regulatory Setting

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				and rights assessments were embedded within the same EIS chapter, but subject to different assessment methods, the chapter was not referred to as a "VC" assessment, even though a part of the chapter was assessed using the VC methodology, and the results drawn forward for application to the rights assessment.	
PT-25.10	Concerned that data collection in the Local Assessment Area has been manipulated to deny the reality of the planned infringements.	12-Dec-2014, Email from Penelakut Tribe	**11-Feb-2015, Email from the VFPA to Penelakut Tribe:** Responded that the VFPA does not agree with this perspective. Stated that the VFPA has been and remains committed to working with Penelakut to address concerns related to the Project, to provide Penelakut with available information and to respond to questions.	**Addressed in EIS Section 1.4:** During Project planning, preliminary design, and preparation of the EIS, the VFPA gathered and integrated information from a wide range of sources, including the following: • Academic experts; • Federal authorities with specialist or expert scientific information, advice, and knowledge relating to projects of this nature; • Other levels of government with expert and specialist knowledge; • Indigenous groups; • Communities; • Existing information relevant to the Project, including ITK; and • Professional practitioners (e.g., registered professional biologists, air quality specialists, geomorphologists). **Additional information provided by the VFPA:** The Project is undergoing a federal environmental assessment by an independent review panel, under *CEAA, 2012*.	**EIS** 1.4 Use of Information
PT-25.11	Stated that the conclusions of the VFPA's experts that the impacts on the marine environment will be either non-existent or immaterial is at odds with the fact that the terminal will displace at least 117 hectares of marine area that was previously a useable fishing/marine resource. Stated that the impact is always determined to be negligible, and presentations do not acknowledge the impact that will occur. Stated that it is Penekalut's view there is an obvious net loss of area upon which to exercise Aboriginal title or rights as a result. Concerned that despite providing the VFPA with new information about Penelakut's practices in the LAA and RAA, the VFPA continues to say that there will be no measurable impacts on the ability of Penelakut Tribe to exercise asserted aboriginal rights as a result of RBT2.	12-Nov-2014, Cowichan Nation Alliance EIS Workshop #2 27-Aug-2015, Letter from Penelakut Tribe 04-Jan-2016, Letter from Penelakut Tribe	**12-Nov-2014, Workshop:** Shared preliminary results from the environmental assessment, provided information about the proposed mitigation of Project effects, and sought input from members of the Cowichan Nation Alliance. **02-Oct-2015, Letter from the VFPA to Penelakut Tribe:** Requested to meet with Penelakut to discuss comments received on the draft EIS. Explained that the document shared by the VFPA on July 27, 2015 included a draft summary of CNA's current use in the marine shipping study area, and therefore did not include accidents and malfunctions or potential effects. Noted that these topics will be addressed in the Report to be submitted to the Canadian Environmental Assessment Agency ("CEAA") in the fall of 2015. **09-Nov-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the MSA for the proposed Project, which included MSA Appendix 5-B listing all the issues and interests raised by Indigenous groups and the VFPA's response. **04-Feb-2016, Letter from the VFPA:** "The EIS represents [the VFPA's] perspective on the predicted degree of effect the Project may have on current	**Addressed in EIS Section 8.0:** The methods used to assess the potential effects of the Project, including mitigation measures, residual effects, and cumulative effects, are described in EIS Section 8.0. The environmental assessment for the Project was developed to meet the requirements specified in the *EIS Guidelines* and consistent with existing guidance documents, including the Operational Policy Statement Assessing Cumulative Environmental Effects Under the *Canadian Environmental Assessment Act, 2012* and Determining Whether a Project is Likely to Cause Significant Adverse Environmental Effects, the Cumulative Effects Assessment Practitioners' Guide, and the Guideline for the Selection of Valued Components and Assessment of Potential Effects, among others.	**EIS** 8.0 Effects Assessment Methods 8.1 Environmental Assessment Methods 8.1.6 Mitigation Measures 8.1.7 Characterisation of Residual effects and Context 8.1.8 Determination of Significance of Residual Adverse Effects 8.1.9 Cumulative Effects Assessment

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			use of lands and resources for traditional purposes, and Aboriginal rights based on the information available to [the VFPA] at the time the EIS was submitted. In [the VFPA]'s meeting with [Cowichan Nation Alliance] on June 17, 2015, Penelakut Tribe informed [the VFPA] that it relies on the Roberts Bank area for crab harvesting due to contamination present in areas closer to their communities, Penelakut Tribe advised that they secured a total catch of about 2,700 to 3,000 lbs of crab for food, social and ceremonial purposes in this area in April 2015. [The VFPA] included this new information in the [MSA], submitted in October 2015 (see pp. 9.5 107 to 9.5-108). Penelakut Tribe's January 4, 2016 letter includes reference to an Aboriginal Fisheries Strategy agreement with Fisheries and Oceans Canada that covers the Project area, [the VFPA] requests that Penelakut Tribe send a copy of the agreement and any other information relating to marine resource harvesting in areas potentially affected by the Project. Additional information pertaining to Penelakut Tribe current use of lands and resources for traditional purposes, provided in Penelakut Tribe's January 4, 2016 letter to [the VFPA], as well as the information in the above paragraph, will be incorporated in [the VFPA's] updated response to Additional Information Requests #29, 30 and 31 from the [CEA Agency]. Upon submittal of these documents to [the CEA Agency], it will be [the VFPA's] understanding that all relevant information pertaining to Penelakut Tribe current use of lands and resources for traditional purposes in the Roberts Bank area will have been provided to [the CEA Agency]."		
PT-25.12	Stated that the Penelakut Tribe is comprised of descendants of the historic Cowichan Nation, with a Traditional Territory that encompasses the Project site. Stated that the EIS misrepresents this when it states: "The Penelakut Tribe's asserted traditional territory is located on the central side of Vancouver Island and includes Penelakut Island, Galiano Island, Tent Island, and the area near the mouth of the Chemainus River" (s. 32.1.1.10, EIS p. 32-14).	10-Jun-2015, Letter to the CEA Agency from Penelakut Tribe (CEAR Document #210)	**13-Oct-2015, Letter from the CEA Agency to Penelakut Tribe (CEAR Document #310):** *"The Agency has requested additional information on this item in its letter of July 31, 2015 to [the VFPA] (page 1, #2). Additionally, the Penelakut Tribe could ensure that the correct information is available for the Panel by providing this information directly to the Panel Secretariat at RobertsBank@ceaa-acee.gc.ca."*	**Addressed in response to IR-7.31.15-02:** As noted in the VFPA's response to IR-7.31.15-02, the VFPA provided, in July 2014, maps of each traditional territory, where asserted or established, to the applicable Indigenous group, along with a community profile, for review and comment. In November and December 2014, the VFPA provided each Indigenous group with the summary of existing conditions for that Indigenous group presented in EIS Section 32.2.4 and requested that each Indigenous group review and comment on that summary. Again, maps of traditional territories used as the basis for the spatial boundaries and the assessment were provided to each Indigenous group with their applicable summary. The steps outlined above were followed for the Penelakut Tribe. The VFPA consulted the Penelakut Tribe directly and through the Cowichan Nation Alliance. Opportunities to comment on the territory map were provided to Penelakut Tribe both directly and through the Cowichan Nation Alliance, as part of the July 2014 and November to December 2014 requests for review and comment. The territorial boundary used in the assessment for the Penelakut Tribe, and for the Cowichan Nation Alliance, was the Statement of Intent boundary submitted to the	**Information Requests** Response to Information Request #2 (IR- 7.31.15-02 of CEAR Document #314)

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				BC Treaty Commission by the Hul'qumi'num Treaty Group, of which the Penelakut Tribe and other members of the Cowichan Nation Alliance are or have been a member. During the process outlined above, the VFPA received comments from Penelakut Tribe and the Cowichan Nation Alliance and these comments were incorporated; however, the VFPA did not receive any comments from Penelakut Tribe or the Cowichan Nation Alliance indicating that a different traditional territory other than the one asserted by the Hul'qumi'num Treaty Group should e used as the basis of the assessment.	
PT-25.13	Given that the Penelakut Tribe harvests crabs in the LAA, the EIS should include a rationale for the conclusion that the Penelakut Tribe will not be impacted by the potential adverse effect during construction and operation on access to preferred or domestic FSC crab harvesting locations in the marine invertebrates LAA. Further, the EIS should provide a rationale for why no accommodation should be provided to the Penelakut Tribe for this effect as a mitigation measure (Table 32-6, EIS p. 32-120). Finally, the EIS should provide a rationale for why the potential adverse effect, during construction and operation, on access to preferred or domestic FSC crab harvesting locations in the marine invertebrates LAA does not amount to a potential impact on the Penelakut Tribe aboriginal right to harvest crab (s. 32.3.2.2 , EIS p. 32-136).	10-Jun-2015, Letter to the CEA Agency from Penelakut Tribe (CEAR Document #210)	**13-Oct-2015, Letter from the CEA Agency to Penelakut Tribe (CEAR Document #310):** *"The Agency has requested additional information on this item in its letter of July 31, 2015 to [the VFPA] (page 14, #30)."*	**Addressed in response to IR-7.31.15-30:** The VFPA's responses to IR-7.31.15-30 and AIR-12.04.15-30 provide rationale for the conclusions of the effects assessment for the Current Use by Indigenous peoples.	**Information Requests** Response to Information Request #30 (IR-7.31.15-30 of CEAR Document #314) Response to Additional Information Request #30 (AIR-12.04.15-30 of CEAR Document #388)
PT-25.14	Stated that the EIS should include a description and a map of Penelakut (Hul'q'umi'num Fisheries Society) Aboriginal and commercial fishing areas and a description of their relative importance.	08-Dec-2015, Letter to the CEA Agency from Penelakut Tribe (CEAR Document #347) 26-Oct-2016, Letter to Panel from Penelakut Tribe (CEAR Document #615)	**12-May-2016, Letter from the CEA Agency Letter from the CEA Agency to Penelakut Tribe (CEAR Document #401):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review.* *The Crown will be using the Review Panel process to the extent possible to collect information about potential impacts to the exercise of Penelakut Tribe's rights from the Project and marine shipping associated with the Project and we encourage you to provide your perspective on this topic to the Review Panel."*	**Addressed in EIS Section 32.2.4.5:** EIS Section 32.2.4.5 discusses marine resource use by the Cowichan Nation Alliance (Cowichan Tribes, Halalt First Nation, Penelakut Tribe, Stz'uminus First Nation), including fish and invertebrate harvesting.	**EIS** 32.2.4.5 Cowichan Nation Alliance (Cowichan Tribes, Halalt First Nation, Penelakut Tribe, Stz'uminus First Nation)
PT-25.15	Stated that the CEA Agency did not provide enough information for us to know how the CEA Agency arrived at the determination that the depth of consultation required with Penelakut Tribe is at the moderate end of the consultation spectrum. From Penelakut Tribe's point of view, however, this determination is wrong.	08-Dec-2015, Letter to the CEA Agency from Penelakut Tribe (CEAR Document #347) 04-Apr-2016, Letter to the CEA	**12-May-2016, Letter from the CEA Agency (CEAR Document #401)** *The Crown is still working on your request to re-assess the preliminary depth of consultation for Penelakut.* **15-Sep-2016, Letter from the CEA Agency (CEAR Document #911):** *"As requested, the Agency has reconsidered the preliminary depth of consultation assessment for Penelakut. The depth of*		

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	Stated that in January 2013, the Cowichan Nation Alliance provided its claim of aboriginal title to Tl'uqtinus lands, which demonstrates that they had a village on the south Arm of the Fraser River, which they accessed regularly via Canoe pass. Requested that the Consultation Plan be updated to reflect a change in consultation scope.	Agency from Penelakut Tribe 27-Jul-2016, Letter to the CEA Agency from Penelakut Tribe	*consultation assessment is an iterative process based on two main factors: (i) potential or established Aboriginal rights; and (ii) potential adverse impacts of a project on those rights. This preliminary assessment allows the Agency to determine the appropriate depth of consultation for a proposed project, and the consultation activities that are commensurate with that depth, and is revised throughout the environmental assessment as new information is acquired…* *Taking into account our preliminary understanding of the strength of claim and potential seriousness of adverse impacts of the Project and associated shipping set out below, the Agency has made a policy decision to revise its preliminary depth of consultation assessment and consult with Penelakut at the deeper end of the consultation spectrum."*		
PT-25.16	Stated that the EIS is not sufficient to assess environmental effects and requires an assessment of the impacts of RBT2 on the Penelakut Tribe's current use of land and resources that uses spatial boundaries that are consistent with the marine portion of the Penelakut Tribe's Core Territory.	26-Oct-2016, Letter to Panel from Penelakut Tribe (CEAR Document #615)	The VFPA has reviewed this letter and provides the following information.	**Addressed in response to IR-7.31.15-02:** As noted in the VFPA's response to IR-7.31.15-02, the VFPA provided, in July 2014, maps of each traditional territory, where asserted or established, to the applicable Indigenous group, along with a community profile, for review and comment. In November and December 2014, the VFPA provided each Indigenous group with the summary of existing conditions for that Indigenous group presented in EIS Section 32.2.4 and requested that each Indigenous group review and comment on that summary. Again, maps of traditional territories used as the basis for the spatial boundaries and the assessment were provided to each Indigenous group with their applicable summary. The steps outlined above were followed for Penelakut Tribe. The VFPA consulted Penelakut Tribe directly and through the Cowichan Nation Alliance. Opportunities to comment on the territory map were provided to Penelakut Tribe both directly and through the Cowichan Nation Alliance, as part of the July 2014 and November to December 2014 requests for review and comment. The territorial boundary used in the assessment for Penelakut Tribe, and for the Cowichan Nation Alliance, was the Statement of Intent boundary submitted to the BC Treaty Commission by the Hul'qumi'num Treaty Group, of which Penelakut Tribe and other members of the Cowichan Nation Alliance are or have been a member. During the process outlined above, the VFPA received comments from Penelakut Tribe and the Cowichan Nation Alliance and these comments were incorporated; however, the VFPA did not receive any comments from Penelakut Tribe or the Cowichan Nation Alliance indicating that a different traditional territory other than the one asserted by the Hul'qumi'num Treaty Group should be used as the basis of the assessment.	**Information Requests** Response to Information Request #2 (IR- 7.31.15-02 of CEAR Document #314)
PT-25.17	Stated that Penelakut Tribe will provide a Shellfish Consumption Study to the VFPA. Provided a shellfish report, "Risk Assessment of Shellfish Consumption in Coastal Communities	09-Nov-2015, Meeting with Penelakut Tribe	**09-Nov-2015, Meeting:** Accepted the "Risk Assessment of Shellfish Consumption in Coastal Communities in British Columbia (aka Shellfish Safety Project) – Report Prepared for Penelakut First Nation	**Addressed in EIS Section 21.0:** Potential Project effects on marine commercial use include potential displacement of commercial crab harvesting during construction and operation, resulting in	**EIS** 12.0 Marine Invertebrates

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	in British Columbia (aka Shellfish Safety Project) – Report Prepared for Penelakut First Nation December 2015" to the VFPA. Stated that the report demonstrates that the shellfish consumption rates for the Penelakut Tribe are about double the consumption rates relied on in the EIS. Stated that following Canada's revised assessment of the scope of consultation, Penelakut Tribe will be requesting funding from the VFPA to cover the cost of providing cumulative impacts mapping on the Penelakut Tribe's fishing and crabbing areas and will advise of the VFPA's response. Stated that Penelakut members have a greater dependence on shellfish than other communities and referenced a shellfish consumption study demonstrating a higher level of dependence than expected. Stated that Penelakut is a marine-resource dependent community and there are cumulative impacts in their territory. Stated that Penelakut relies on crab for FSC and they are worried about impacts to crab stocks. Stated they want to discuss a cumulative effects assessment. Provided a cost estimate from for a marine based cumulative impacts assessment within Penelakut Core Territory to the VFPA. Concerned that the VFPA is applying the wrong spatial boundaries to assessing impacts to the Penelakut Tribe. Stated that a firm understanding of available shellfish areas in Penelakut Territory is needed to inform how the impacts to shellfishing at Roberts Bank will impact Penelakut Aboriginal rights and current shellfishing practices. Provided a proposal for Cumulative Impacts Study to VFPA. Committed to revise proposal to remove references to the RBT2 Project. Stated that Penelakut agrees with the focus of the study being Dungeness crab. Stated that Penelakut is concerned with the study being managed and the property of the VFPA therefore is concerned with it being undertaken through the VFPA RFP process.	04-Jan-2016, Letter from Penelakut Tribe 04-Apr-2016, Letter to the CEA Agency from Penelakut Tribe 29-Apr-2016, Meeting with Penelakut Tribe 04-May-2016, Meeting with Penelakut Tribe 27-Jul-2016, Letter from Penelakut Tribe to VFPA 27-Jul-2016, Letter from Penelakut Tribe to the CEA Agency 26-Sep-2016, Meeting with Penelakut Tribe 26-Oct-2016, Letter from Penelakut Tribe to the CEA Agency 01-Dec-2016, Chief & Council Meeting – Penelakut Tribe 27-Jan-2017, Meeting with Penelakut Tribe 20-Apr-2017, Meeting with Penelakut Tribe 02-Aug-2017, Meeting with Penelakut Tribe 22-Aug-2017, Email from Penelakut Tribe 29-Aug-2017, Email from Penelakut Tribe	December 2015" provided by Penelakut Tribe for review and consideration by the Project team. **04-Feb-2016, Letter from the VFPA:** *"In [the VFPA's] meeting with CNA on June 17, 2015, Penelakut Tribe informed [the VFPA] that it relies on the Roberts Bank area for crab harvesting due to contamination present in areas closer to their communities, Penelakut Tribe advised that they secured a total catch of about 2,700 to 3,000 lbs of crab for food, social and ceremonial purposes in this area in April 2015. [The VFPA] included this new information in the Marine Shipping Supplemental Report, submitted in October 2015 (see pp. 9.5-107 to 9.5-108).* *Penelakut Tribe's January 4, 2016 letter includes reference to an Aboriginal Fisheries Strategy agreement with Fisheries and Oceans Canada that covers the Project area, [the VFPA] requests that Penelakut Tribe send a copy of the agreement and any other information relating to marine resource harvesting in areas potentially affected by the Project. Additional information pertaining to Penelakut Tribe current use of lands and resources for traditional purposes, provided in Penelakut Tribe's January 4, 2016 letter to [the VFPA], as well as the information in the above paragraph, will be incorporated in [the VFPA's] updated response to Additional Information Requests #29, 30 and 31 from the Canadian Environmental Assessment Agency ("CEAA")."* **29-Apr-2016, Meeting:** Committed to discuss Penelakut's request internally and suggested a follow-up meeting date. The VFPA asked Penelakut Tribe to send information on budget and timing Committed to reviewing the cumulative effects mapping completed by West Moberly Nation for Site C. **04-May-2016, Meeting:** Requested more information regarding the purpose of the study and what aspect of the RBT2 assessment the proposed study would support, along with how it fits within the Project's TOR. **13-May-2016, Email from the VFPA:** Provided a draft Consultation Plan for Penelakut's review which included "Discuss Penelakut's request for cumulative effects mapping study". **30-Jun-2016, Letter from VFPA to Penelakut Tribe:** *"In the port authority and Penelakut's meeting of April 29, 2016, Penelakut requested funding from the port authority for a cumulative effects Mapping Project. Further to this meeting, Penelakut provided the port authority with information regarding scope and cost associated with the Mapping Project on May 5, 2016. The port authority has considered the request from Penelakut, and has determined that assessment of cumulative effects associated with past developments (that may interact with the residual effects of the Project) has been completed and can be found in the RBT2 EIS. Supplemental* information can be found in *the port*	a change of harvesting area, total harvest, and revenue, due to the Project footprint and the proposed expansion of the area closed to commercial crabbing. The Project is expected to result in a residual effect of changes to seafood harvesting area, harvest, and revenue. The residual effect is determined to be not significant, as Dungeness crab are known to move substantial distances to baited traps, and harvest activity can be moved to another open area. Other planned or reasonably foreseeable projects and activities would also displace crab harvesting, and this effect would combine with that of the Project to result in an incremental cumulative effect on commercial crab fishing. This adverse incremental cumulative effect is determined to be not significant. **Addressed in EIS Section 12.0:** Potential Project-related effects on Dungeness crabs are assessed in EIS Section 12.6.3.3. Mitigation is described in EIS Section 12.7. To minimise direct mortality and physical injury effects of construction activities, dredging guidelines have been established by DFO for the protection of marine resources. To protect gravid Dungeness crab females, the guidelines include a fisheries-sensitive window from October 15 to March 30 below −5 m CD. In concordance with this window, dredging is scheduled to occur only from April 1 to October 14 at depths below −5.0 m CD. Where possible, Dungeness crabs will be salvaged prior to dredging and infilling containment dykes (i.e., terminal and causeway). The salvages will use crab traps or SCUBA divers to capture individuals and relocate them to nearby suitable areas undisturbed by the Project. This mitigation was used for DP3, and is considered to be effective at minimising the number of individuals exposed to and affected by construction activities. **Addressed in MSA Section 9.5:** MSA Section 9.5 describes how Current Use activities have been affected by other projects and activities that have been carried out. As residual effects to Current Use as a result of marine shipping associated with the Project are not predicted, an assessment of future cumulative effects was not carried out. Taking a precautionary approach, the assessment of potential impacts to Indigenous groups' ability to exercise asserted or established Aboriginal and treaty rights as a result of Project-associated shipping was based on the assumption that traditional use presently occurring in the marine shipping area (i.e., Current Use) is an expression of the exercise of Aboriginal or treaty rights. Where traditional use was not identified as occurring at present within the marine shipping area, but similar use was identified as practiced in the past in the marine	12.5.3 Existing Conditions, Dungeness Crabs 12.6.2 Future Conditions with the Project, Negligible Effects 12.6.3.3 Changes in Productivity of Dungeness Crabs 12.7 Mitigation Measures 21.0 Marine Commercial use **MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes, and Aboriginal and Treaty Rights

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
	Provided feedback on the Penelakut Tribe Shellfish Study Funding Agreement. Noted the revised Penelakut Tribe Shellfish Study Funding Agreement did not reflect their comments regarding time constraints on the Project and requested additional information in regards to the number of RFP. Confirmed that Penelakut Tribe found a second company to provide a proposal for the RFP. Stated that Penelakut is still awaiting a proposal from the second company bidding on the RFP. Provided the VFPA with proposals, from Madrone Environmental Services LTD and EDI for the VFPA's review. Requested a quote from QARS for the shellfish study in addition to the quotes Penelakut currently has. Requested to modify the Shellfish Study Funding Agreement to include the other members of the Cowichan Nation Alliance (CNA). Committed to contacting the VFPA following a meeting the next day with CNA to discuss a scope, cost and timeline for a CNA shellfish study to replace the current Penelakut shellfish study. Confirmed that the CNA met and discussed revised scope for the Penelakut study. Requested that additional funding be added for each additional member Nation participating in the study – Halalt, Stz'uminus and Cowichan Tribes. Advised that they had not yet received a quote from QARS.	14-Sep-2017, Letter from Penelakut Tribe to VFPA 31-Oct-2017, Email from Penelakut Tribe 09-Nov-2017, Email from Penelakut Tribe 21-Dec-2017, Email from Penelakut Tribe	*authority's response to the Agency's IR #13 and Additional IR #13.4.* *The cumulative effects assessment takes into consideration the potential residual effects of the Project in combination with the effects of other projects and activities that have been or will be carried out, including effects on local and Indigenous communities. The methods used to assess the potential effects of the Project, including both residual effects of the Project and cumulative effects, are described in the EIS in Section 8.0 Effects Assessment Methods, and these methods are consistent with existing federal guidance."* **26-Sep-2016, Meeting:** Recorded comment for consideration by Project team. **03-Nov-2016, Letter from the VFPA to Penelakut Tribe:** *"Currently, a component of the draft RBT2 Consultation Plan is in further discussion related to Penelakut Tribe's request to undertake a cumulative effects study as outlined in your letter to the port authority on July 27, 2016. While we consider the proposed study to be outside the scope of the RTB2 environmental assessment, we do wish to discuss a possible study and related terms that the port authority would be willing to support. We wish to discuss this with you in an effort to find a mutually acceptable way forward that will demonstrate our commitment to working productively with Penelakut as well as contribute in a positive manner to the Penelakut community."* **01-Dec-2016, Meeting:** Explained that the VFPA cannot address past impacts but will work with Penelakut to understand the impacts from the Project and discuss ways in which those can be addressed. **27-Jan-2017, Meeting** Noted that Penelakut and the VFPA have yet to reach agreement on the study scope. Stated that the scope originally proposed was specific to shellfish. Noted that when an agreement on scope is established, the VFPA could send it to three consultants/contractors. The VFPA committed to provide funding for the study. **20-Apr-2017, Meeting:** Discussed the RFP process for the Cumulative Impacts Study. Explained that this wouldn't be a RBT2 study. Stated that the intention is to look throughout Penelakut Tribe territory to identify areas for harvesting. Stated it could feed into aquaculture revitalization funding – could define areas where Penelakut could have improvement or new locations.	shipping area, asserted as an Aboriginal right, or protected under treaty, this use was assumed to be potentially exercisable as an Aboriginal or treaty right, and subject to potential impacts as a result of Project-associated shipping in much the same way as potential effects on Current Use. Considering the conclusions of the Current Use assessment, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the marine shipping area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location. These mitigation measures for addressing potential incremental effects on Current Use are expected to also be effective at addressing the potential incremental impact to the exercise of Aboriginal and treaty rights. No additional mitigation measures have therefore been suggested for the potential incremental impact to the exercise of Aboriginal and treaty rights. **Additional information provided by the VFPA:** The VFPA and Penelakut Tribe have been discussing the terms of a shellfish study since late 2015. In 2018, the scope of the study changed to include the other members of the Cowichan Nation Alliance. Subsequently, Penelakut Tribe advised the VFPA that the study would now involve Penelakut Tribe alone. The VFPA and Penelakut Tribe have agreed to a proposal from Trailmark Systems and participation funding has been provided to complete the shellfish study by January 2019. The VFPA is continuing to work with Penelakut Tribe in relation to the study.	

Penelakut Tribe

			25-Jul-2017, Phone call: Penelakut and the VFPA discussed the RFP for the study via phone call. **02-Aug-2017, Meeting:** Penelakut and the VFPA discussed the RFP for the study again. **21-Aug-2017, Letter from the VFPA to Penelakut Tribe:** The VFPA provided Penelakut Tribe with a Shellfish Study Funding Agreement. **22-Aug-2017, Emails between the VFPA and Penelakut Tribe:** Penelakut provided comments on the funding agreement and VFPA undertook to revise the agreement. VFPA suggested text from the agreement could be used for the study scope in the RFP and Penelakut agreed. **28-Aug-2017, Email from the VFPA:** VFPA provided Penelakut Tribe with a revised Penelakut Tribe Shellfish Study Funding Agreement based on feedback from Penelakut. **05-Sep-2017, Email from the VFPA:** The VFPA confirmed they require three quotes for RFPs but would allow for two quotes for the Shellfish Study. The VFPA indicated flexibility in terms of the timeframe for the study to be completed to allow for it to be undertaken in a manner Penelakut has indicated it needs to be done. **19-Oct-2017, Letter from VFPA to Penelakut Tribe:** *"Thank you for your letter of September 14, 2017 regarding the Penelakut Tribe Shellfish Study, in your letter you request that the Vancouver Fraser Port Authority ("VFPA") waive the requirement for obtaining two quotes in Penelakut Tribe Shellfish Study Agreement dated August 27, 2017 ("the Agreement").* *As discussed through negotiation of the agreement, the VFPA had originally asked that Penelakut Tribe obtain three quotes for the study, and ultimately the VFPA and Penelakut Tribe agreed to a minimum of two quotes. The VFPA does not believe a contract of this value is appropriate to award on a sole source basis when there is adequate time to select a qualified contractor and to complete the work.* *As almost two months have passed since the Agreement was signed, the VFPA agrees to extend the time outlined in the agreement to provide Penelakut Tribe an additional three months to provide the Shellfish Study."* **25-Oct-2017, Email from the VFPA:** Requested an update from Penelakut on the progress of the RFP. **08-Nov-2017, Email from the VFPA:** Requested an update from Penelakut on the progress of the RFP.		

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			05-Jan-2018, Email from the VFPA: Requested a meeting to discuss next steps regarding the Shellfish study. **21-Feb-2018, Email from the VFPA:** Requested an update from Penelakut on their internal review of the proposals. **01-Mar-2018, Phone call:** The VFPA suggested moving forward to select a researcher or to have discussions related to additional knowledge/input from the other Cowichan Nation Alliance members. Noted they will require information from CNA on the study prior to increasing funding for an increased study scope. **14-Mar-2018, Phone call:** The VFPA noted there are currently two quotes for the study and asked if Penelakut would be getting an additional quote. Noted that if no additional quote is going to be requested they would like a update on the outcome of Penelakut's evaluation of the current proposals. **05-May-2018, Email from the VFPA:** Followed-up with Penelakut Tribe to discuss the proposal by Trailmark. Confirmed a meeting to discuss the proposal on 22-May-2018. **22-May-2018, Email from the VFPA:** Noted that the VFPA called Penelakut Tribe as per their discussions, but Penelakut Tribe was not available. Rescheduled the call for 25-May-2018. **04-Jun-2018, Email from the VFPA:** The VFPA provided edits on the Trailmark Shellfish Study proposal to Penelakut Tribe. **06-Jun-2018, Phone call:** Confirmed that Penelakut Tribe received the VFPA's edits to the Shellfish Study proposal.		

Penelakut Tribe

Table 26: Project Overview and Description

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-26.1	Requested to know how much of Roberts Bank is taken up by the Project. Requested the dimensions and area of the proposed Terminal 2.	05-Mar-2013, Meeting with Cowichan Nation Alliance 12-Dec-2014, Email from Penelakut Tribe	**05-Mar-2013, Meeting:** Committed to following up. **07-Jan-2014, Letter from the VFPA to Penelakut Tribe:** The total marine footprint of the terminal will be approximately 117 ha. The orientation of the proposed terminal has been designed to facilitate the berthing of container ships, and to minimise disturbance to marine physical components (e.g., water and sediment) processes. The environmental assessment will include an analysis of potential effects on water areas. **11-Feb-2015, Email from the VFPA:** Provided information on the Project area, stating that the entire Project area is 186 ha.	**Addressed in EIS Appendix 7.2-B (#1):** The engineering design of the Project components, as well as construction phase activities are described in detail in EIS Section 4.0. EIS Section 5.0 provides a summary of alternative design options that were considered, and the rationale for the selected option. The proposed Project consists of three main components: 1. A new three-berth marine container terminal; 2. A widened causeway to accommodate additional road and rail infrastructure; and 3. An expanded tug basin to accommodate a second tug operations contractor. The marine terminal would be located immediately west of the existing Roberts Bank terminals, approximately 5.5 km from the east end of the causeway. The terminal would be rectangular in shape, approximately 1,700 m long and 700 m wide, and would support moorage of three container ships on the south side, container storage in the centre, and rail intermodal yards on the north side. The total usable above-water area of the marine terminal would be 108 ha. The Roberts Bank causeway would be widened to link existing road and rail networks to the marine terminal and to accommodate additional road and rail infrastructure. Widening would range from 0 m to approximately 140 m at the widest point. **Addressed in Project Construction Update:** As requested by the RBT2 Review Panel, the VFPA submitted the Project Construction Update (PCU) on June 12, 2018. The report updates EIS Table 4-1, presenting minor changes to the Project footprint.	**EIS** 4.0 Project Description 4.4.1 Construction-phase Activities 4.2.2 Project Component Details, Widened Causeway 4.2.3 Expanded Tug Basin 5.0 Alternative Means of Carrying out the Project Appendix 7.2-B Aboriginal Groups Interests and Issues Table **Project Construction Update (PCU; CEAR Document #1210)**

Table 27: Project Benefits

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-27.1	Asked what is being proposed for accommodation. Recalled that accommodation for the Deltaport Third Berth (DP3) Project was extended to Musqueam and Tsawwassen, with other nations receiving participation funding only. Asked about the revenue from the Project. Interested in discussions around a Mutual Benefits Agreement.	01-Nov-2013, Meeting with Cowichan Nation Alliance 11-Dec-2014, Health & Aboriginal Rights Workshop – Cowichan Nation Alliance 16-Jan-2015, Letter to the VFPA from Cowichan Tribes on behalf of Cowichan Nation Alliance 10-Nov-2015, Meeting with Cowichan Nation Alliance 18-Apr-2017, Chief & Council Meeting - Cowichan Nation Alliance	**01-Nov-2013, Meeting:** Stated that the VFPA will provide the Cowichan Nation Alliance with more information regarding economic opportunities at a later date. **11-Dec-2014, Workshop:** Noted interest in joint venture partnership and revenue sharing. Stated that this will be an ongoing discussion. **10-Nov-2015, Meeting:** Recorded comment for consideration by Project team. **18-Apr-2017, Meeting:** Discussed the development of a mutual benefits agreement with Cowichan Nation Alliance and asked for input on what could be included – business, contracting, employment, etc. **16-Jun-2017, Letter from the VFPA to Penelakut Tribe:** Stated that further to the meeting of April 20, 2017 and in response to Penelakut Tribe's request for funding, and to support the involvement of Penelakut Tribe in activities related to negotiating a Mutual Benefits Agreement for the Project, the VFPA will provide Penelakut Tribe with funding on the terms and conditions set out in this letter.	**Addressed in EIS Appendix 7.2-B (#112):** Opportunities for training and employment opportunities related to the Project are described in EIS Section 32.3.3. As accommodation for any potential effects to specified Indigenous groups' ability to exercise their Aboriginal rights, the VFPA proposes to assist these Indigenous groups in accessing opportunities resulting from the Project. In addition to making contracting opportunities available to specified Indigenous groups, the VFPA will ensure that construction employment opportunities are also made available. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs. Through ongoing engagement, the VFPA will seek input from these Indigenous communities with respect to plans to ensure access to Project-related benefits. The VFPA has consulted and will continue to engage with Indigenous groups regarding opportunities to benefit economically and socially from the Project. **Additional information provided by the VFPA:** Stz'uminus First Nation, Halalt First Nation, and Cowichan Tribes have agreed to negotiate a Mutual Benefits Agreement collectively. Penelakut Tribe is negotiating with the VFPA separately. Discussions include opportunities for skills, training, employment and contracting. Discussions regarding Legacy Benefits are also ongoing.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table
PT-27.2	Interested in skills training and employment opportunities. Concerned with the challenges of accessing employment opportunities due to location and educational attainment. Requested for an early list of procurement and employment opportunities. Concerned with the current lack of Project-specific employment information and asked if that information will be determined before the RFP is issued for the terminal operator.	01-Nov-2013, Meeting with Cowichan Nation Alliance 17-Jun-2014, Technical Working Group Meeting #4 03-Jul-2014, Aboriginal Groups Valued Components Workshop #2 11-Dec-2014, Health & Aboriginal Rights Workshop – Cowichan Nation Alliance	**01-Nov-2013, Meeting:** Referred to the InterVISTAS Study and how there is information on the jobs contained within that report. Stated that all jobs will not be unionised and that the VFPA cannot even say there will be a union at the RBT2 terminal. That is not a VFPA decision. These are early days and we are about 7 to 10 years out from being finished. There is an opportunity to identify jobs and skills needed to build it. Talked about support businesses, direct and indirect jobs such as: trucking, logistics centres, and rail business. There is an opportunity to identify jobs and to look at long-term opportunities around employment. Committed to prepare a written response regarding job opportunities, skills, and training.	**Addressed in EIS Appendix 7.2-B (#215):** During a five-and-a-half-year construction period, the Project would generate significant employment benefits for B.C. Project construction would generate a total of 12,719 person-years of direct, indirect, and induced employment of B.C. workers, and approximately $1 billion in wages: • 4,150 person-years of direct employment, with wages of $494 million; • 6,264 person-years of indirect employment, with wages of $374 million; and • 2,305 person-years of induced employment, with wages of $129 million. Of the Project's direct spending on materials, goods, and services for construction,	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.3.3 Mitigation Measures 34.0 Benefits to Canadians

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
		10-Nov-2015, Meeting with Cowichan Nation Alliance 18-Apr-2017, Chief & Council Meeting - Cowichan Nation Alliance	**07-Jan-2014, Letter from the VFPA to Penelakut Tribe:** Terminal workers are expected to be unionised through the International Longshore and Warehouse Union (ILWU), although a limited number of non-union positions may be made available. As with all large construction projects, certain positions will utilise unionised labour (e.g., electricians). However, there will likely be a number of positions that do not meet this requirement. A list of foreseeable employment opportunities is currently being developed as part of the economic and socio-community impact assessment. However, final numbers of expected positions will not be available until a detailed design and construction schedule has been completed and pending Project regulatory approval. **17-Jun-2014, Workshop:** Stated that skills and training requirements will be considered under the proposed labour market VC, and the VFPA is interested in discussing this in more detail. A discussion is needed on the importance of flagging training relevant to upcoming Project-related jobs. The VFPA is aware of the importance of giving communities time to prepare for employment opportunities. **03-Jul-2014, Workshop:** Stated that the VFPA is trying to access the historical data, in relation to Indigenous versus non-Indigenous employment related to port activities. Stated that the VFPA does have data on what we call labour force characteristics (age, educational level, skill training level, in what particular industries the Indigenous workforce is working). This helps us profile the Indigenous population generally within our study area, which is the area that we are concerned about. Stated that ultimately the goal is to be able to present what we call benefit enhancement recommendations, that is linked integrally to the labour market strategy that will be put forward through the Project, that not only talks quantitatively about how many jobs, but also how, and what sort of target initiatives could be put forward to enable certain segments of the population to take advantage. **11-Dec-2014, Workshop:** Asked for information on the benefits and opportunities the Cowichan Nation Alliance may be interested and noted that discussions are just beginning. **10-Nov-2015, Meeting:** Recorded comment for consideration by Project team. **12-May-2016, Letter from the VFPA to Cowichan Tribes:** Enclosed an Information Sheet specific to Employment. Stated that the VFPA would like to meet to discuss employment opportunities related to the Project.	approximately $862 million, or an average of $157 million per year, would be spent on materials, goods, and services in B.C. An additional $482 million would be spent on production inputs to make or provide the direct materials, goods, and services. The total gross revenues for businesses in B.C. supplying materials, goods, and services for Project construction is estimated as $1.3 billion, with $837 million of this revenue accruing to businesses in Metro Vancouver. During the operation phase, Project activities on the marine terminal, widened causeway, and expanded tug basin would generate an annual total of 1,553 person-years of direct, indirect, and induced employment, and total wages of approximately $185 million: • 928 person-years of direct employment connected to terminal operations, with wages of approximately $153 million; • 625 person-years of indirect and induced employment to support terminal operations, with wages of approximately $32 million. During the operation phase, the annual average goods and services revenues for B.C. due to terminal operations spending are estimated at $23.3 million with an additional $10.0 million in goods and services revenues for upstream supply industries. The total gross revenues for businesses supplying B.C. materials, goods, and services for terminal operations are estimated as $33.3 million annually. Approximately $31 million of this revenue would accrue to businesses in Metro Vancouver. The VFPA proposes to assist Semiahmoo First Nation, Tsleil-Waututh Nation, Stz'uminus First Nation, Cowichan Tribes, Halalt First Nation, Lake Cowichan First Nation, Lyackson First Nation, Penelakut Tribes, Hwlitsum, and Métis Nation British Columbia in accessing potential economic opportunities resulting from the Project, including contracting opportunities as well as construction employment opportunities. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs. To support the development and implementation of plans to facilitate access to such Project-related benefits, the VFPA will continue engagement, initiated in December 2014. Opportunities for Indigenous training and	34.2 Benefits of the Project 35.0 Effects Assessment Summaries Table 35-2 Proposed Mitigation Measures and Commitments

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
				employment opportunities related to the Project are described in EIS Section 32.3.3. **Addressed in EIS Appendix 7.2-B (#112):** As accommodation for any potential effects to specified Indigenous groups' ability to exercise their Aboriginal rights, the VFPA proposes to assist these Indigenous groups in accessing opportunities resulting from the Project. In addition to making contracting opportunities available to specified Indigenous groups, the VFPA will ensure that construction employment opportunities are also made available. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs. Through ongoing engagement, the VFPA will seek input from these Indigenous communities with respect to plans to ensure access to Project-related benefits. **Additional information provided by the VFPA:** Stz'uminus, Halalt First Nation, and Cowichan Tribes have agreed to negotiate a Mutual Benefits Agreement collectively. Penelakut Tribe is negotiating with the VFPA separately. Discussions include opportunities for skills, training, employment and contracting.	

Penelakut Tribe

Table 28: Surficial Geology and Marine Sediment – Intermediate Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-28.1	Asked about the effects of truck traffic on sediment along the causeway with respect to contaminants.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#202):** There is not anticipated to be a Project interaction between air emissions from truck traffic on the causeway, and uptake of contaminants in soils, plants, or species relying on soils and plants. Rationale for this conclusion is included in EIS Appendix 27-A.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 27.0 Human Health Appendix 27-A Air Quality HHRA Technical Report
PT-28.2	Asked about potential heavy metals, PCBs, hydrocarbons, contaminants, and pollutants in sediment along the causeway and around the Project area. Asked which contaminants the sediment samples tested for and for the baseline results. Asked if the conclusions of the assessment are based on the averages of those samples. Concerned about the potential effects on clams and other shellfish.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** There were approximately 57 different metals the samples were tested for, and stated that the full list will be in noted in the EIS. Slide 10 says the assessment is focused on areas where there will be disturbance. The results have not been rolled into an average. The EIS will include a detailed table that shows results for each of the data points. There were no PCBs or hydrocarbons present in the areas that were surface sampled. Sampling at the actual terminal site was of a higher intensity because that is where the greatest disturbance is expected, because of disposal at sea (DAS) and dredging activities. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#55):** As described in the EIS, the physical and chemical characteristics of sediments that will be affected by construction activities, including sediments that will be re-suspended during dredging activities, were investigated and results were compared to recommended quality guidelines and regulatory criteria. Baseline levels of heavy metals and other contaminants along the causeway are included in EIS Section 9.6. Specific listings of studied contaminants—and how the analyses were completed—are available in EIS Appendix 9.6-A. Overall, sediment quality within the study area is within the range of levels expected in an estuarine environment and without local contamination sources. Outcomes from the marine water quality assessment regarding total suspended sediment concentrations associated with dredging and dumping activities informed the assessment of marine vegetation, marine invertebrates, marine fish, marine mammals, coastal birds, ongoing productivity of commercial, recreational, and Aboriginal fisheries, and outdoor recreation. The shellfish consumption human health risk assessment in EIS Appendix 27-C addresses this scenario by examining tissue contaminant concentrations in existing areas of Roberts Bank with higher concentrations of coal dust contaminants. Any construction-related sediment re-suspension will result in sediment contaminant concentrations that are lower than the assessed existing conditions since (i) once re-suspended, the re-settled sediments will be a mixture of the historical deposits and new sediment contributions from Fraser River outflows; and (ii) there is no plausible mechanism for the geochemical focusing of the contaminants of potential concern as a result of the re-suspension scenario. **Addressed in EIS Section 12.6.2.1:** While contaminants are present at Roberts Bank, they are closely associated with fine sediment and have therefore accumulated in locations outside those that will be disturbed by Project activities, such as the upper intertidal zone north of the causeway. No appreciable sediment contamination was observed in Project areas. Because sediments that will be re-suspended and deposited as a result of construction phase activities are not contaminated, changes in contaminant concentrations bioavailable to the food chain are not anticipated. Overall, contaminant re-suspension is not considered to affect marine invertebrate productivity because: (i) there are no Project-related inputs of contaminants in the LAA; (ii) no appreciable sediment contamination was observed in Project areas; and (iii) where contaminants are present, concentrations are either below applicable thresholds in sediments or below consumption thresholds in bivalve shellfish and Dungeness crab tissue based on rigorous human health risk assessment (EIS Sections 12.5.2.5 and 12.5.3.5). Project-related contamination is therefore unlikely to occur.	**EIS** 9.6 Physical Setting, Surficial Geology and Marine Sediment Appendix 9.6-A Sediment and Water Quality Characterization Studies 12.5.2 Bivalve Shellfish 12.5.3 Dungeness Crabs 12.6.2.1 Changes in Water Quality Appendix 27-C Human Health Risk Assessment

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-28.3	Concerned with the potential effects of disposal at sea on the sea bed. Concerned with any disposal at sea proposed in proximity to Porlier Pass.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1 29-Apr-2016, Meeting with Penelakut Tribe	**22-Oct-2014, Workshop:** Explained that the DAS would occur at 3 locations along the -45 m contour line directly off the berth face of the planned terminal. Stated that the VFPA is working on that matter and it will be included in the EIS. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#55):** Dredging and DAS-related activities are described in the EIS and considered in the assessment of potential effects on marine physical and biophysical components. As described in the EIS, the physical and chemical characteristics of sediments that will be affected by construction activities, including sediments that will be re-suspended during dredging activities, were investigated and results were compared to recommended quality guidelines and regulatory criteria. DAS activities will occur subject to Environment Canada's DAS permit requirements under the *Canadian Environmental Protection Act, 1999*. Outcomes from the marine water quality assessment regarding total suspended sediment concentrations associated with dredging and dumping activities informed the assessment of marine vegetation, marine invertebrates, marine fish, marine mammals, coastal birds, ongoing productivity of commercial, recreational, and Aboriginal fisheries, and outdoor recreation. See EIS Section 9.6.8 and EIS Appendix 9.6-C for more information. **Addressed in Information Request Package 3 Preamble in Support of Responses to IR3-25 to IR3-40:** As noted in in Information Request Package 3 Preamble in Support of Responses to IR3-25 to IR3-40, based on information provided by ECCC (CEAR Document #564), discharge of supernatant containing unsettled fines from the containment dykes during filling is not expected to be subject to DAS permitting. **Addressed in PCU:** As requested by the Review Panel, the VFPA submitted the PCU on June 12, 2018, providing: • Detailed revised Project description, including a revised construction schedule; • Revised Project interaction matrix; • Preliminary details pertaining to the management and timing of dredging activities and the discharge of sediment-laden water; and • Revised assessment of environmental effects as required by the Project modifications. PCU Sections 1.0 and 2.0 describe the changes to the EIS, including updates to specific construction activities, the construction schedule, and relevant Project Description figures and appendices. In PCU Section 3.0, changes or effects resulting from the construction updates on ICs and VCs are described. Overall, these changes to the environmental assessment resulting from construction updates can generally be summarised as follows: • Reductions in potential adverse changes or effects on ICs, biophysical VCs, social VCs, and Current Use; and • Increases in positive interactions with socio-economic VCs. These beneficial changes to ICs and VCs occur at the level of interactions or potential effects, and in most cases are slight changes, and thus do not affect the overall conclusions made in the EIS, including proposed mitigation, residual effect characterisations, significance determinations, or cumulative effects, as applicable, with one exception. The only component predicted to have a change to residual effects is land and water use, with a reduction of a residual effect on access to Tsawwassen First Nation community lease lands from a measurable non-significant residual effect to a negligible residual effect, due to elimination of the ITP and associated activities.	**EIS** 4.0 Project Description 4.4.1 Project Activities, Construction Phase Activities Table 4-5 Source and Quantities of Material Requiring Disposal at Sea Figure 4-21 Intermediate Transfer Pit and Disposal at Sea Candidate Locations Appendix 7.2-B Aboriginal Groups Interests and Issues Table 8.0 Effects Assessment Methods Table 8-1 Intermediate Component and Valued Component Linkages 9.0 Physical Setting 9.6 Physical Setting, Surficial Geology and Marine Sediment 9.6.5 Methods 9.6.6 Surficial Geology and Marine Sediment, Existing Conditions 9.6.8 Future Conditions with the Project Appendix 9.6-C Roberts Bank Terminal 2 Technical Report, Dredging Studies – Dispersion Modelling 9.7 Physical Setting, Marine Water Quality **Information Requests** Information Request Package 3 Preamble in Support of Responses to IR3-25 to IR3-40 – General and Disposal at Sea-related Project Construction Update (CEAR Document #928) **PCU (CEAR Document #1210)**

Table 29: Underwater Noise – Intermediate Component

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
PT-29.1	Asked if above-ground noise is transmitted under water.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1	**22-Oct-2014, Workshop:** Above ground noise is not anticipated to propagate into the water to result in behavioural effects to marine mammals and was determined to be a negligible effect.		
PT-29.2	Stated that different species experience different perceptions of noise. Asked how much is known about the different ways species perceive noise. Asked about the effect of impulsive noise events on fish and other marine species.	22-Oct-2014, Cowichan Nation Alliance EIS Workshop #1 12-Nov-2014 Cowichan Nation Alliance EIS Workshop #2	**22-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. **12-Nov-2014, Workshop:** This topic was discussed during a presentation on underwater noise and vibration. The presentation summarised: • Human generated underwater noise can affect fish and marine mammals (assessed separately as VCs) with representative species for each VC that may experience noise differently; • The VFPA conducted extensive state-of-art field and modeling studies for RBT2, using most up to date science on how different species hear and respond to underwater noise, conducted new studies on what levels of underwater noise may affect southern resident killer whales; • Existing underwater noise conditions relatively high, primarily due to commercial vessel traffic, including ferry traffic; • RBT2 will produce underwater noise (construction and operations); no impulsive noise is planned during construction (i.e., impact piling not anticipated, only vibratory piling); and • Preliminary results of studies indicate RBT2 noise levels will be minor to moderate. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#61):** The scope and methods of the underwater noise study are summarised in the EIS section, and detailed in the supporting appendix. Underwater noise considers the level of underwater sound in the marine environment. An assessment was undertaken to determine potential changes in underwater noise as a result of the Project and focused on construction and operation activities that would produce underwater noise. Modelling was undertaken to predict future underwater noise as a result of construction activities, such as dredging, pile driving, vibro-densification, and operation activities, such as movements of container ships and tug boats associated with terminal approach and departure, and berthing and unberthing. The assessment concludes that: • Underwater noise levels during construction are predicted to be comparable on average to existing levels measured at Roberts Bank, with the exception of some periods when certain activities, such as dredging, pile-driving, vibro-densification, or construction support vessel movement, would occur. • Overall, average underwater noise from Project construction and operation activities is expected to be comparable to average existing levels of underwater noise due to existing high levels, but will at times exceed existing conditions. Underwater noise related to conservative levels of Project commercial vessel movements is predicted to increase over existing underwater noise levels for only approximately 3% of a year for vessel berthing and unberthing, and for approximately 2% of a year for vessel approach and departure. • Future cumulative increases in commercial vessel traffic in the region are expected to make a relatively small incremental contribution to overall underwater noise levels. This prediction reflects the existing high levels of vessel traffic within the study area and the already-dominant contribution of commercial vessel traffic noise to the acoustic environment. The results of the underwater noise assessment were considered in the assessments of marine fish, marine mammals, and coastal birds. An interaction between Project-related underwater noise and marine invertebrates is not anticipated, and therefore was not assessed.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.8 Underwater Noise 9.8.2 Assessment of Purpose and Approach 9.8.6 Underwater Noise, Methods Appendix 9.8-A Construction and Terminal Activity Underwater Noise Modelling Study Technical Report Appendix 9.8-B Regional Commercial Vessel Traffic Underwater Noise Modelling Study Technical Report 13.0 Marine Fish 13.6 Future Conditions with the Project 14.0 Marine Mammals 14.6 Future Conditions with the Project 15.0 Coastal Birds 15.7 Future Conditions with the Project
PT-29.3	Requested more information on the types of mitigations implemented for underwater noise.	03-Jul-2014, Aboriginal Groups Valued Components Workshop #2	**03-Jul-2014, Workshop:** Recorded comment for follow-up. **12-Nov-2014, Workshop:** This topic was discussed during a presentation on underwater noise and vibration. The presentation summarised mitigation	**Addressed in EIS Section 33.3.7:** The Underwater Noise Management Plan will describe measures to manage underwater noise and over-pressure waves generated during pile driving and other construction activities as necessary to avoid or reduce potential effects on marine mammals, diving coastal birds, and aquatic life. Key components of the plan will	**EIS** 33.3.7 Underwater Noise Management Plan

Penelakut Tribe

#	Interest / Concern Raised	Date(s)/Methods Raised	Response	Additional Information	Document and Section providing Additional Information
			measures to address potential effects of underwater noise during construction. • Project placement and design; • Best management practices and standards; • Industry practices; • Equipment maintenance and noise reduction; • Timing or seasonal windows; • Marine mammal observers and hydrophone; • Monitoring of zones of potential injury or disturbance; and • Onsite juvenile Chinook habitat restoration. **01-Apr-2015, Letter from the VFPA to Penelakut Tribe:** Provided a copy of the EIS, which included information on the Underwater Noise Management Plan.	include use of underwater noise reduction and dampening methods and technologies. The plan will incorporate measures described in Best Management Practices for Pile Driving and Related Operations, prepared by the B.C. Marine and Pile Driving Contractors Association and DFO (2003). Compliance monitoring parameters for underwater noise will be addressed as part of the Construction Compliance Monitoring Plan.	

APPENDIX IR10-01-C11

MÉTIS NATION BRITISH COLUMBIA: ISSUES, VIEWS, AND CONCERNS RELATED TO THE PROPOSED PROJECT AND MARINE SHIPPING ASSOCIATED WITH THE PROJECT

Table 1: Air Quality – Intermediate Component

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
MNBC-1.1	Asked if air quality test results spike in July and August when the temperature is hotter.	08-Oct-2014, Preliminary EIS Workshop #2	**08-Oct-2014, Workshop:** Responded that air quality is a very general term, and we need to talk in terms of specific pollutants. Ozone tends to spike in the spring and early summer. That is partly because of an increase in the amount ozone from the upper part of the atmosphere (the stratosphere) being brought down. Sometimes a spike in ozone will also be observed on hot days at the end of July and in August. That is only one pollutant; for example, a spike in SO_2 or particulate would not necessarily be expected. Particulate matter sometimes spikes because of matter that is being brought across the ocean from China and India; there have been studies to show that spikes in the whole Pacific Northwest region sometimes have nothing to do with local sources. Spikes also occur in the spring and summer time from forest fires; some of the biggest air quality impacts in the last few years in the Lower Fraser Valley were from forest fires, over which there is no control. That has been observed at the T39 station in Tsawwassen, where in 2010 the highest readings that exceeded the air quality objectives came during an air quality advisory caused by forest fires in the general region, which had nothing to do with emissions in the Valley.	**Addressed in EIS Section 9.2:** EIS Section 9.2 presents modelled results of the Roberts Bank Terminal 2 Project's (RBT2 or Project) effects to air quality, including results related to criteria air contaminants, trace organic contaminants, greenhouse gases, and black carbon. The overall assessment is considered to provide a conservative evaluation of potential changes in air quality resulting from the Project. The implementation of shore power is expected to decrease predicted future emissions during Project operation. The combination of Project-related emissions with emissions from other certain and reasonably foreseeable projects and activities is expected to make a small incremental contribution to overall air quality levels. Future cumulative ambient air quality concentrations are predicted to be below air quality criteria on land, including populated areas.	**Environmental Impact Statement (EIS, CEAR Document #181)** 9.0 Physical Setting 9.2 Air Quality 9.2.5 Methods
MNBC-1.2	Asked whether the study results and predictions take into account federal government and other regulatory CO_2 initiatives.	08-Oct-2014, Preliminary EIS Workshop #2	**08-Oct-2014, Workshop:** Responded that initiatives undertaken by the federal government with respect to greenhouse gases are not expected to affect emissions from any of the equipment related to the Project. Noted there may be initiatives in the future, but they have not been accounted for because the details are unavailable. Any such initiatives would likely be aimed at improving fuel economy. Speculated that in the future container vessels may switch from current fuels to liquefied natural gas (LNG), but it is noted related information is not yet firm enough to depend upon reliably for inclusion in the assessment modelling.	**Addressed in EIS Section 9.2.7.1:** Regulatory initiatives and their incorporation in the assessment of future emissions are described for marine engines, cargo handling equipment, and on-road vehicles in EIS Section 9.2.7.1. The calculation of future emissions in 2025 considered technology changes, activity levels, and such regulatory initiatives. Shipping industry and related greenhouse gas initiatives are discussed in the VFPA's responses to IR6-31 and IR6-34. As noted in the response to IR6-31, the International Marine Organization (IMO), responsible for regulating the global shipping sector, mandates improved energy efficiency for ships through the Energy Efficiency Design index (EEDI) and the Ship Energy Efficiency Management Plan (SEEMP). The response to IR6-34 discusses the other mitigation measures applicable to marine shipping.	**EIS** 9.2 Air Quality 9.2.7.1 Regulatory Initiatives **Information Requests** Response to Sufficiency Information Request #31 (IR6-31 of CEAR Document #1188) Response to Sufficiency Information Request #34 (IR6-34 of CEAR Document #1188)
MNBC-1.3	Suggested to rephrase the statement about air quality improving to say that impacts are expected to be small and decrease as innovations and improvements allows. Stated that the VFPA assumption that cleaner fuels and engine technologies will keep up with population growth and project expansion is not a trend we have seen historically, and it should not be used as an excuse to ignore air quality.	15-Jun-2015, Letter to the CEA Agency from Métis Nation British Columbia (CEAR Document #252)	**13-Oct-2015, Letter from the CEA Agency (CEAR Document #309):** *"The Agency did not request additional information for this item since there is already information provided in the EIS. The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in EIS Appendix 7.2-B (#42):** An assessment was carried out to predict potential changes in air quality as a result of the Project. One of the conclusions of the assessment is that air quality in the region will improve in the future, with or without the Project, as a result of improvements in engine technologies as older equipment is replaced by newer equipment at the three existing marine terminals, and the use of cleaner fuels.	**EIS** 9.2 Air Quality Appendix 7.2-B Aboriginal Issues and Interests

Table 2: Alternative Means of Carrying out the Project

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
MNBC-2.1	Asked why the area in between the existing causeways is not a suitable option for Project location, noting the area has several advantages compared to the proposed site (already damaged, ship movement from wave reaction would be minimal, tidal effect is minimal).	07-Oct-2014, Preliminary EIS Workshop #1	**07-Oct-2014, Workshop:** Stated that the option was considered, but was determined not to be feasible because of the amount of dredging that would be required, to enable ships to get in and manoeuvre. There was also concern that flow coming off and dropping into the berth pocket would create something called dendritic channels, which could lead to significant and additional erosion in the area. As a result, the preferred means is in deeper water. Referred to a letter sent from Fisheries and Oceans Canada (DFO) around the time of the Deltaport Third Berth Project (DP3) review that essentially said the area was not a viable alternative for the reasons described. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Table 5-10 on Alternative Means.	**Addressed in EIS Section 4.0:** The engineering design of the Project components, as well as construction phase activities addressed in EIS Section 4.0. See Project website for more information: http://www.robertsbankterminal2.com/wp-content/uploads/RBT2-Potential-Effects-of-Opening-the-Causeway-June-2005-NHC-Memo-January-2014.pdf. **Addressed in EIS Section 5.0:** The W1 (0 m) terminal layout is the preferred configuration for a terminal at Roberts Bank due to fewer direct and indirect environmental effects relative to other alternatives considered. In addition to reducing impacts in the intertidal area, the W1 (0 m) alternative was determined to have the least amount of dredging required. Following selection of Option W1 (0 m) as the preferred alternative, further engineering studies were conducted to optimise the preliminary terminal design, which resulted in rounding the northwest corner to further reduce Project-related effects of bed scour post construction. The optimised configuration incorporated into the preliminary Project design is shown on EIS Figure 5-4. The reduction of Project-related effects as a result of this optimisation is discussed in EIS Section 5.4.1.3. The widened causeway without the lagoon was determined to be the preferred option as it will minimise intertidal habitat loss amongst the alternatives considered, and will have the least amount of indirect habitat change from altered coastal geomorphic processes. The widened causeway was further optimised by varying widths to minimise effects to the known biofilm intertidal habitat at the east end of the causeway. The preferred alternative for the intermodal yard is on the marine terminal. The preferred alternative for the rail tie-in is to have one of the two tracks join the main rail network outside the Vancouver Fraser Port Authority's (VFPA's) jurisdiction to reduce intertidal habitat loss (by approximately 0.32 hectares (ha)) with a narrower width at the northeast end of the causeway. The tie-in to the existing road corridor at Roberts Bank Way North via a new overpass and access road to the marine terminal was the only technically and feasible alternative considered. The preferred option for the location of the tug basin is to expand the existing tug basin with a configuration adjacent to the existing Deltaport Terminal. If the tug basin was placed on the north shore of RBT2, the footprint would affect higher-valued intertidal habitat than at the existing Roberts Bank tug basin location, and the shoreward tug basin expansion layout at the existing tug basin would result in a higher potential for alterations in tidal flow and the potential for water ponding between the tug basin and Deltaport Terminal. For construction, no alternatives for dredging, temporary sand storage, or construction of supporting land were considered technically or economically feasible. The caisson wharf structure is the preferred alternative to pile and deck wharf due to the reduced noise effects, public opinion, improved seismic performance, and costs. Disposal of sediments at the Project-specific location is the preferred alternative to reduce transportation-related effects and costs. Lastly, as tug wharves constructed using the fill or pile and deck options would result in greater effects to habitat from a larger footprint, the floating pontoons and piles option is preferred. The preferred alternative for each category is described in detail in EIS Section 4.0. The detailed assessment of the preferred alternative (i.e., the Project) is presented in subsequent sections of the EIS. Additional information concerning alternatives and alternative means is provided as part of the VFPA's responses to IR1-06 to IR1-11.	**EIS** 4.0 Project Description 4.2 Project Component Details 4.2.2 Widened Causeway 4.2.3 Expanded Tug Basin 4.4.1 Construction-phase Activities 5.0 Alternative Means of Carrying out the Project Description 5.7 Identification of the Preferred Means Table 5-10 Summary of Preferred Alternative Means **Information Requests** Response to Sufficiency Information Request #6 (IR1-06 of CEAR Document #897) Response to Sufficiency Information Request #7 (IR1-07 of CEAR Document #897) Response to Sufficiency Information Request #8 (IR1-08 of CEAR Document #897) Response to Sufficiency Information Request #9 (IR1-09 of CEAR Document #897) Response to Sufficiency Information Request #10 (IR1-10 of CEAR Document #897) Response to Sufficiency Information Request #11 (IR1-11 of CEAR Document #897)

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
MNBC-2.2	Concerned that terminal design will create tide-rips and start a whirlpool, create back eddies when tide goes in and out, and in turn impact fishing activities. Asked whether running a line from Westshore Terminals to RBT2 and filling in the area to connect the terminals was considered.	23-May-2014, Meeting with Métis Nation British Columbia	**23-May-2014, Meeting:** Stated that EIS Section 5.0 provides a summary and analysis of the various layouts that were considered and the anticipated effects of the options that were deemed to be technically and economically feasible. Stated that EIS Section 9.5 provides the analysis of coastal geomorphologic processes that will be influenced by the terminal layout, including changes to waves and currents and indirect changes to water quality. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Section 5.0 on Alternative Means of Carrying out the Project and Section 9.5 on Coastal Geomorphology.	**Addressed in EIS Section 9.5:** As noted in EIS Section 9.5.8, tidal currents in the Strait of Georgia flood to the northwest and ebb to the southeast in deep water. The tidal flow direction is altered over shallower waters so that at Roberts Bank the flow is dominantly onshore–offshore on the tidal flats. RBT2 will be positioned across this dominant flow direction and will divert both flooding and ebbing water to the west around the end of the structure. The development of whirlpools that impact fishing activities as a result of changed tidal flows was not predicted. The consideration of alternative design configurations and construction approaches resulted in the preferred Project design presented and assessed in EIS Section 5.0. A number of location, orientation, layout, and configuration alternatives were considered and assessed for the marine terminal (including berth pocket and marine approach areas), causeway, rail and road corridors, and the tug basin. The effects of feasible alternatives were considered based on their potential to directly or indirectly affect natural and human environment components. The anticipated effects were considered key factors when comparing and determining preferred means.	**EIS** 5.0 Alternative Means of Carrying out the Project 9.0 Physical Setting 9.5 Coastal Geomorphology 9.5.8 Coastal Geomorphology, Future Conditions with the Project

Table 3: Coastal Birds – Valued Component

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
MNBC-3.1	Concerned that expansion of the terminal at Roberts Bank could interfere with bird migration, as the terminal is on the migration route of many birds. Such interference could result in restricting the right to hunt migratory birds. Bird habitat generally might also be affected, with resulting rights impacts.	11-Sep-2015, Letter from Métis Nation of Greater Victoria	**13-Oct-2015, Letter from the VFPA:** *"Information shared in your memo related to Métis Aboriginal rights and environmental concerns will be incorporated into the final [MSA] to be submitted to the [CEA Agency].* *[The VFPA] will provide a response to many of the specific concerns expressed in your letter in the [MSA].* **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Section 15.0 Coastal Birds.	**Addressed in EIS Section 15.0:** EIS Section 15.0 presents the results of the assessment of potential Project-related and cumulative effects on coastal birds. The assessment indicates that the Project has the potential to result in minor decreases in overall bird productivity and to contribute to bird disturbance. Mitigation measures proposed for disturbance (e.g., sound attenuation devices, lighting valances, vessel speed limits) are expected to address potential disturbance effects, and no residual effects are predicted. With regard to productivity, during construction minor decreases are predicted for all sub-components, while during operation minor decreases are predicted only for waterfowl and diving birds. Mitigation measures proposed for potential productivity losses include implementation of construction Environmental Management Plans (EMPs), Light Management Plan, Underwater Noise Management Plan, Land and Marine Traffic Management Plan, working collaboratively with appropriate transportation and regulatory authorities to reduce mortality by vehicle collisions, and offsetting through the creation of eelgrass, tidal marsh, sandy gravel beach, mudflat, and subtidal rocky reef habitat. **Addressed in EIS Section 32.0:** The assessment of current use of lands and resources for traditional purposes (Current Use; EIS Section 32.0) includes an assessment of potential effects on Current Use activities related to harvesting of marine birds. As discussed in EIS Section 32.2.4.8, Métis Nation British Columbia has identified coastal bird harvesting sites within the coastal birds local assessment area (LAA), as well as in other areas. Minor decreases in overall bird productivity are predicted as a result of the Project; however, EIS Section 32.2.6.2 concludes that these predicted decreases are not expected to affect the ability of the Métis Nation British Columbia to harvest these species in preferred areas. Other wildlife species identified as being harvested by Métis Nation British Columbia are terrestrial and freshwater resources, and would be located in upland areas. Current Use in these areas is not expected to be affected by the Project. Consequently, the Project is not expected to impact the ability of the Métis Nation British Columbia to exercise the right to harvest wildlife, including coastal birds.	**EIS** 15.0 Coastal Birds 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes

Table 4: Coastal Geomorphology – Intermediate Component

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
MNBC-4.1	Commented on changes in flow in Canoe Pass, and an initiative to dig it out to increase flow. Stated that decreased flow has been detrimental to marshland in the area.	08-Oct-2014, Preliminary EIS Workshop #2	**08-Oct-2014, Workshop:** Stated that the blockage at the end of Canoe Passage is not being addressed as part of the Project. However, the VFPA will record this issue and try to determine if there is enough information available to consider it. Responded that in regards to the marshland, the marine vegetation section in the EIS studied the changes over time. In the context of coastal geomorphology, changes to marsh habitat that far away would not change the conclusions in the Project area. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#49):** Field studies, air photo review, and modelling of sediment deposition at Roberts Bank (including Canoe Passage) were undertaken during the Project assessment, as described in the EIS. A Canoe Passage discharge channel location and sediment distribution (e.g., bar formation or build-up of sand) were modelled to assess variation pre and post-terminal construction. Potential changes associated with the configuration of RBT2 were assessed in relation to Roberts Bank, including the Canoe Passage discharge channel. Project-related changes to coastal geomorphic processes on Roberts Bank are predicted to be associated with the terminal footprint. However, the Project is not anticipated to alter sediment dynamics or water movement in and around the mouth of the Fraser River. Changes are anticipated around the terminal and within the intertidal zone shoreward of the terminal. The effects of these changes on valued components (VCs) are considered in each VC section the EIS.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 9.5 Coastal Geomorphology 9.5.6 Existing Conditions 9.5.8 Future Conditions with the Project Table 9.5-6 Predicted Morphological Changes from the Project Footprint Figure 9.5-35 Approximate Spatial Extent of Potential Changes Associated with the Project Footprint

Table 5: Economic Development – Valued Component

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
MNBC-5.1	Requested details on the sampling methods used to determine the numbers for direct employment. Stated that in one of the source reports, InterVISTAS 2012 VFPA Economic Impact Study: Final Report, the primary sampling for direct employment derived from interviews with over 400 businesses. Asked what the selection criteria were for these businesses, what the confidence level is for this number and how this influences the findings in the Environmental Impact Statement. Stated that the data collection method needs to be clearly identified and the reliability of the data stated.	29-Oct-2016, Letter to Panel from Métis Nation British Columbia (CEAR Document #656)	The VFPA has reviewed this letter and provides the following additional Information.	**Additional information provided by the VFPA:** The InterVISTAS 2012 VFPA Economic Impact Study: Final Report is available publicly here: http://www.robertsbankterminal2.com/wp-content/uploads/2012-port-metro-vancouver-economic-impact-study.pdf The study's methods are described in Section 3 of the report and its various appendices. The report's Appendix 3: Employment Survey provides an overview of the methods used in sampling, including a broad selection criteria of port-related businesses. As noted in the appendix, the VFPA provided to InterVISTAS Consulting a list of port contacts and tenants, referred to the Yellow Pages phone directory and previous studies at the port to supplement the list provided by the VFPA. As noted in EIS Section 20.4, multiple secondary sources were used to inform the assessment.	**EIS** 20.0 Economic Development 20.4 Information Sources Appendix 20-A - Economic Impact Roberts Bank Terminal 2 Technical Report
MNBC-5.2	Asked if the changes in employment, income, and local revenue generation affect the Aboriginal population, and if so, how. Stated that without an analysis of the impact of the project on the Aboriginal labour force and Aboriginal businesses, it is difficult to reasonably assess the impact from employment income to the health of Aboriginal populations in the local assessment area and the regional assessment area.	29-Oct-2016, Letter to Panel from Métis Nation British Columbia (CEAR Document #656)	The VFPA has reviewed this letter and provides the following additional Information.	**Addressed in response to IR10-28:** The VFPA's response to IR10-28, as requested by the Review Panel, provides further discussion of anticipated effects on the participation of Indigenous Peoples in the labour market resulting from changes in the environment from the proposed Project and marine shipping associated with the Project.	**Information Requests** Response to Sufficiency Information Request #28 (IR10-28)

Table 6: Effects Assessment Methods (including Cumulative Effects)

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
MNBC-6.1	Asked about whether cumulative effects will be assessed as part of the marine shipping work.	09-Jun-2015, Meeting with Métis Nation British Columbia	**09-Jun-2015, Meeting:** Stated that a cumulative effects assessment will be conducted. The VFPA is using data from existing ship movements in addition to 7 to 8 projects predicted for the future. Effects from shipping associated with RBT2 will be similar to the effects associated with current traffic through this area, but qualified this statement by noting that the effects assessment has not yet been conducted. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in MSA Appendix 5-B (#23):** The approach to the cumulative effects assessment is provided in MSA Section 6.0. Each intermediate component (IC) and VC assessment section considers cumulative changes and cumulative effects to which the Project contributes. This entails consideration of residual effects of routine marine shipping associated with the Project, if any such effects are predicted, in combination with effects of other projects and activities that have been or will be carried out.	**Marine Shipping Addendum (MSA, CEAR Document #316)** Appendix 5-B Aboriginal Issues and Interests 6.0 Effects Assessment Approach 6.7 Cumulative Effects Assessment 7.1 through 9.4 (All IC and VC assessments) 9.5 Current Use of Lands and Resources for Traditional Purposes, and Aboriginal and Treaty Rights
MNBC-6.2	Stated that the marine fish and fish habitat category is extremely broad, and the sub-components selected are poorly justified. Many of the sub-components of the over-riding VCs are missing details surrounding the adverse effects of the project on these components. Stated that adverse effects should be clearly conveyed. Eelgrass and Dungeness crabs are two sub-components of valued components for which there is no synopsis of anticipated adverse effects.	16-Dec-2015, Letter to the CEA Agency from Métis Nation British Columbia (CEAR Document #369)	**12-May-2016, Letter from the CEA Agency (CEAR Document #403):** *"The Agency did not request additional information regarding VC selection since there is already some information provided in the marine shipping addendum, in Table 8.1-1.* *The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in EIS Section 8.0:** Subsequent to VC selection, VC sub-components were identified to further structure and streamline the assessment as appropriate. For example, for biophysical VCs, sub-component species or groups were chosen for the ability to represent other species that are similar in nature, occupy comparable types of habitats, serve similar ecological roles, or could otherwise be affected by the Project in an analogous way. In selecting representative species, or in some cases species groups, consideration was given to species of specific importance to regulatory agencies, Indigenous groups, and the public, as identified by community knowledge and Indigenous traditional knowledge (ITK), and during consultation and engagement, and assessment planning. **Addressed in Information Request Package 5 – Response to Information Requests Relating to Represented Species:** Biophysical VCs, sub-component species or groups were chosen for their ability to represent other species that are similar in nature, occupy comparable types of habitats, serve similar ecological roles, or could otherwise be affected by the Project in an analogous way. Representative species are also considered in terms of the biological and ecological similarities they share with other species within the sub-component, and for potential similarities in how the Project may interact with and affect them. In some cases, biological attributes may differ within a sub-component grouping, but their interactions with the Project and mechanisms contributing to potential effects from the Project are considered to be analogous. As a result, the VFPA selected representative species for each sub-component for which sufficient information is known, in order to provide an assessment that considers all potential interactions and Project-related effects. For example, substantial information exists for the southern resident killer whale (the representative species used for toothed marine mammals) and much less so for the transient killer whale. While there are some biological differences between the two, they are considered the same species; both rely on underwater noise for prey detection; and potential Project effects and mitigation measures are the	**EIS** 8.0 Effects Assessment Methods 11.0 Marine Vegetation 12.0 Marine Invertebrates **Information Requests** Information Request Package 5 – Response to Information Requests Relating to Represented Species (CEAR Document #1153)

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				same. In this example, it would be both impractical and inefficient to undertake an assessment on both species as the conclusions of the assessment would be the same. Moreover, in selecting representative species, or in some cases species groups, consideration was given to species of specific importance to regulatory agencies, Indigenous groups, and the public, as identified by community knowledge and ITK, and during consultation and engagement, and assessment planning. This approach was taken as it would be impractical to characterise existing conditions and assess effects on every species that may frequent the Roberts Bank area. In this way, the use of VCs, sub-components, or representative species improves the effectiveness and efficiency of assessment by focusing on the key Project interactions. **Addressed in EIS Sections 11.0 and 12.0:** As noted in EIS Section 11.0, during Project construction and operation, changes in productivity of eelgrass are predicted to be negligible (i.e., not measurable or detectable). As noted in EIS Section 12.0, while the Project is predicted to cause losses of productivity of Dungeness crabs the scale of change is minor in the context of natural variability and would not compromise the population integrity or ecological function. The assessment concludes there are no significant adverse residual effects from the Project to marine invertebrates.	
MNBC-6.3	Stated that based on the provided guidelines, baseline conditions should include resilience measures. Stated that resilience measures are not addressed for several of the valued components (VC) or VC [sub-] components in the addendum including intertidal marshes, and Dungeness crabs.	16-Dec-2015, Letter to the CEA Agency from Métis Nation British Columbia (CEAR Document #369)	**12-May-2016, Letter from the CEA Agency (CEAR Document #403):** *"The Agency did not request additional information regarding this since there is already some information provided in the marine shipping addendum, in section 6.6.* *The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in MSA Section 6.6:** As noted in MSA Section 6.6, the context within which the residual effects are expected to occur is described for each VC. Context considers the integrity of the VC, including how it has been affected by natural processes and by other projects and activities that have been carried out, and is rated in terms of the VC's sensitivity to future changes that may be caused by marine shipping associated with the Project, its resilience, and its ability to recover from adverse effects.	**MSA** 6.0 Effects Assessment Approach 6.6 Residual Effects Assessment
MNBC-6.4	Stated that the guideline states that if "little or no information is available, specific studies will be designed to gather further information on species interrelations to the ecosystem," but noted that the addendum has multiple occurrences where insufficient data exists, and no additional study is explored. Stated that the existing information is inadequate to meet the guideline specifications. Additional investigations should be considered.	16-Dec-2015, Letter to the CEA Agency from Métis Nation British Columbia (CEAR Document #369)	**12-May-2016, Letter from the CEA Agency (CEAR Document #403):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in section 17 of the *Updated EIS Guidelines*:** Section 17 of the *Updated EIS Guidelines* notes: *"It is likely that a Tier 1 approach (Qualitative; description based on expert opinion and traditional and local knowledge) will be an appropriate level of detail in most cases. For select environmental effects and locations where there may be a higher risk of environmental effects, a Tier 2 approach (Semiquantitative; measured site-specific data and existing site information) would likely be an appropriate level of detail."* Consistent with the direction provided in the *Updated EIS Guidelines*, a description of information sources for each marine biophysical VC is provided in MSA Sections 8.1.4, 8.2.4, and 8.3.4.	**MSA** 8.1 Marine Fish and Fish Habitat 8.1.4 Information Sources 8.2 Marine Mammals 8.2.4 Information Sources 8.3 Marine Birds 8.3.4 Information Sources ***Updated Guidelines for the Preparation of an Environmental Impact Statement* (*Updated EIS Guidelines*; CEAR Document #177)**

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
MNBC-6.5	Stated that Métis Nation British Columbia understands the importance of environmental modelling and that models are beneficial and important in predicting future conditions in the area; however, Métis Nation British Columbia stated a belief that there are limitations to what they can predict. Asked how the models were selected to predict future conditions for this proposed project. Inquired whether the VFPA has used them before and if so, how accurate their predictions were in the past. Asked how these models were calibrated and/or evaluated.	21-Oct-2014, Letter from Métis Nation British Columbia	**21-Oct-2014:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Section 10.3.3:** As noted in EIS Section 10.3.3, productive potential is a key concept in relation to the Roberts Bank ecosystem model. The Roberts Bank ecosystem model was one of several lines of evidence used to assess potential Project effects, and other lines of evidence were used to address potential effects from construction phase activities. The Roberts Bank ecosystem model output predicts change in productivity using biomass (measured in tonnes) and production (measured in tonnes per year). Predicted changes in biomass are changes in the productive potential of the ecosystem, and not actual increases or decreases. For example, the model output of –1.6 tonnes (t) of biomass for rockfish suggests that, with the Project, the study area could support 9% fewer rockfish than it could without the Project. It cannot be interpreted as 9% of rockfish biomass will be lost as a result of the Project. The difference between potential and realised production may be dependent on how close to carrying capacity a species is, which in turn is dependent on life history, habitat utilisation patterns, and the trophic level of each group. The VFPA obtained input on selecting the appropriate approach to assessing productivity at Roberts Bank through the Productive Capacity Technical Advisory Group (TAG) process. The TAG process recommended uses of the Ecopath and Ecosim (EwE) model, which is well documented in the scientific literature and has been widely used to quantitatively describe marine food webs, fisheries policy exploration (regulatory decisions on managing fisheries), ecosystem-based fisheries management, and a joint B.C.-Canada environmental assessment. The EwE model was developed at the University of British Columbia's Fisheries Centre, and more than 400 ecosystem models applying the software have been published. Thirteen of these publications describe marine areas in B.C., six of which are for the Strait of Georgia. More information on this model can be found at http://www.ecopath.org/. **Addressed in responses to IR3-01 to IR3-24:** Additional information concerning the VFPA's selection and use of the model in the EIS is available in Information Request Package 3 Preamble in Support of Responses to IR3-01 to IR3-24 – Roberts Bank Ecosystem Model. As advised by the Productive Capacity TAG, the Roberts Bank ecosystem model results described in the EIS addressed uncertainty in several ways and on several levels. The VFPA undertook specific model validation and accuracy studies to evaluate the performance of Roberts Bank ecosystem model results. Both a visual validation (EIS Appendix 10-C) of model forecasts and the percent correct classification (PCC) accuracy statistic were presented (CEAR Document #547). Both the visual validation and PCC analysis indicate the model is robust and accurately forecasts the present distributions of habitat forming species at Roberts Bank. In response to questions posed by DFO (CEAR Document #547), the VFPA undertook additional accuracy studies on the Roberts Bank ecosystem model (see VFPA's response to IR3-21). These additional accuracy studies also demonstrate that the model is robust and accurately forecasts productivity at Roberts Bank. Inclusive of the validation method presented in the response to IR3-21, four separate validation and accuracy analyses were performed by the VFPA on the Roberts Bank ecosystem model, all of which demonstrate the model is robust at forecasting productivity at Roberts Bank, and this provides high confidence in Roberts Bank ecosystem model results. Sensitivity analysis is the mechanism the EwE model uses to address potential uncertainty. Numerous sensitivity analyses were undertaken in the Roberts Bank ecosystem model and all are included in EIS Appendix 10-D. Sensitivity analyses were designed to evaluate how potential uncertainty within input variables may affect model results. In summary, a 'key run' of the model was developed (which identified changes in productivity with and without the Project) and evaluated using model sensitivity analyses that included the following: i. Sensitivity to vulnerability setting; ii. Sensitivity to inclusion of abiotic factors; iii. Sensitivity to abiotic factor over/under-estimate; and	**EIS** 10.3 Overview of Assessing Ecosystem Productivity 10.3.3 Ecosystem Model Process Appendix 10-C Roberts Bank Ecosystem Model Development and Key Run **Information Requests** Information Request Package 3 Preamble in Support of Responses to IR3-01 to IR3-24 – Roberts Bank Ecosystem Model (CEAR Document #928)

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				iv. Sensitivity to input assumptions (Monte Carlo analyses where the model is run thousands of times using randomly different values for biotic variables). The sensitivity analyses show the Roberts Bank ecosystem model forecasts are robust to uncertainty in various input data. In response to earlier concerns on confidence limits used in the EIS, the VFPA (CEAR Document #547, question 2.7) increased the confidence limits in the Roberts Bank ecosystem model and as indicated by the DFO Science Branch (CEAR Document #900, p. 20): "the model may be robust to wide ranges of uncertainty in the input variables and parameters".	
MNBC-6.6	Stated that the new CEA Agency guidelines say offshore effects must be considered, but are not determinative (which is unfortunate). Asked if Métis Nation British Columbia submits land use information, what use will be made of it.	11-Sep-2015, Letter from Métis Nation of Greater Victoria	**13-Oct-2015, Letter from the VFPA:** *"The local study area for the Current Use and rights assessment includes the marine shipping area. The marine shipping area is defined to include activities that take place between the 12 nautical mile limit of Canada's territorial sea to the limit of the VFPA's care and control (referenced Figure 1, appended to the letter). The marine shipping area is intended to include any areas that could potentially be impacted by marine shipping associated with RBT2. Land use information outside the marine shipping area can be included as context in the regional study area for the Current Use section of the MSA."*		

Table 7: Engagement and Consultation

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
MNBC-7.1	Commented that there is not enough time to adequately understand the information being presented, and will need to go back and explain the information to the community. Stated that more consultation is needed.	08-Oct-2014, Preliminary EIS Workshop #2	**08-Oct-2014, Workshop:** Stated that it is helpful to think of the information being presented as a preview, and noted that the meeting participants are the first people to see these results. Stated that it is hoped that this will enable better understanding of the full information, which will be made available when the EIS is submitted in early 2015, and hopefully make it more digestible. **06-May-2015, EIS Orientation Workshop:** The VFPA hosted an EIS orientation workshop to: • Provide an update regarding the environmental assessment process and next steps (the CEA Agency); • Provide an overview of and an orientation to the EIS; and • Provide an opportunity for questions about the structure and organisation of the EIS. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#15):** Since January 2011, the VFPA has consulted with Indigenous groups regarding Project planning, components, and activities, selection of VCs, the potential effects of the Project, proposed mitigation measures, and potential changes to the environment related to the Project. The VFPA also held technical workshops with Indigenous groups at which the VFPA and technical specialists engaged directly with members of Indigenous groups, discussing specific areas of Indigenous interest and reviewing related technical topics. The intent of the fall 2014 workshops, as described in EIS Section 7.2.2 and detailed in EIS Appendix 7.2-A, was to provide preliminary EIS results and proposed mitigation measures and obtain feedback in a simplified presentation and plain language format. Materials were provided to Indigenous groups approximately two weeks in advance of workshops, to provide time to read the material so that questions and comments could be raised in the workshops. The VFPA also provided an opportunity to provide further comment following the workshops. Most questions asked during consultation are addressed in EIS Appendix 7.2-B. Some questions, comments, and requests were addressed at the workshops or through follow-up communications. **Additional information provided by the VFPA:** Since submitting the EIS in March of 2015 and the MSA in October 2015, the CEA Agency and subsequently the Review Panel have provided multiple opportunities for public comment on the Project, the EIS, and the MSA. All comments provided are posted publicly on the RBT2 Registry, maintained by the CEA Agency: http://www.ceaa-acee.gc.ca/050/evaluations/proj/80054?culture=en-CA	**EIS** 7.0 Engagement and Consultation 7.2.2 Pre-EIS Submission Consultation Process Appendix 7.2-A Consultation Activities by Aboriginal Group Appendix 7.2-B Aboriginal Groups Interests and Issues Table
MNBC-7.2	Requested funding to support their review.	23-May-2014, Meeting with Métis Nation British Columbia	**09-Apr-2014, Letter:** Offered funding for a Traditional Use Study (TUS). **02-Jul-2014, Report:** Métis Nation British Columbia provided a TUS to the VFPA. **29-May-2014, Letter:** Offered funding for ongoing participation. **02-Jun-2014, Letter:** Accepted funding. **22-Aug-2014, Letter:** Offered funding for fall 2014 consultation activities. **15-Jan-2015, Letter:** Accepted funding. **11-May-2015, Letter:** Offered funding for participation in Project-related consultation activities including the MSA. **12-May-2015, Letter:** Accepted funding.	**Addressed in EIS Appendix 7.2-B (#19):** The VFPA has provided or offered funding support to ensure the ongoing participation of Indigenous groups involved in the Project's consultation processes. Additional agreements were also initiated to support the development of studies regarding Current Use. As a result of these engagement and consultation activities, Indigenous groups have provided traditional use information relating to the Project area. The VFPA participation funding agreements have been negotiated between the VFPA and Indigenous groups, either individually or through associations representing the Indigenous groups. The VFPA has provided participation funding to 12 Indigenous groups or associations representing these groups: Tsawwassen First Nation; Musqueam First Nation; Semiahmoo First Nation; Tsleil-Waututh Nation; Cowichan Tribes; Penelakut Tribe; Halalt First Nation; Stz'uminus First Nation; Lake Cowichan First Nation; Lyackson First Nation; Metis Nation British Columbia; and Hwlitsum.	**EIS** 7.0 Engagement and Consultation 7.2 Aboriginal Engagement and Consultation Appendix 7.2-A Consultation Activities by Aboriginal Group

			07-Mar-2016, Letter: Offered funding to support ongoing involvement in consultation activities. **08-Mar-2016, Letter:** Accepted funding. **24-Oct-2017, Letter:** Offered additional funding for participation in consultation activities for the Project. **26-Oct-2017, Letter:** Accepted additional funding. **09-Feb-2018, Letter:** Offered funding for participation in negotiation discussions of a mutual benefits agreement. **20-Feb-2018, Letter:** Accepted funding.		
MNBC-7.3	Asked what forms of consultation have already taken place with other Métis groups, and other Aboriginal groups. Asked if consultation is required with US agencies or Aboriginal groups.	11-Sep-2015, Letter from Métis Nation of Greater Victoria	**13-Oct-2015, Letter from the VFPA:** *"The VFPA has met with Métis Nation British Columbia since early 2014 regarding the Project. As part of these discussions, the VFPA has shared information related to the Project, environmental studies, and potential impacts; and Métis Nation British Columbia has shared Current Use information and Métis Nation British Columbia's potential issues and concerns associated with the Project.* *Details on consultation with Indigenous groups to date can be found in EIS Section 7.0. The EIS can be accessed online at the following link: http://www.ceaa-acee.gc.ca/050/document-eng.cfm?document=101482* *The VFPA has not consulted with agencies in the U.S.A. The VFPA has engaged and consulted with Indigenous groups as directed by the CEA Agency in the Updated EIS Guidelines, and has not directly engaged with Indigenous groups in the U.S.A. Where available, information related to Indigenous groups in the U.S.A. has been considered in the MSA."*	**Addressed in EIS Section 7.0:** Details on consultation with Indigenous groups to date can be found in EIS Section 7.0. The EIS can be accessed online at the following link: http://www.ceaa-acee.gc.ca/050/document-eng.cfm?document=101482 **Additional information provided by the VFPA:** The CEA Agency is responsible for Crown consultation under the CEA Agency process, including identification of Indigenous groups for inclusion in the *EIS Guidelines*. The VFPA has engaged and consulted with Indigenous groups as listed in the *Updated EIS Guidelines*. Where available, information related to Indigenous groups in the U.S.A. has been considered in MSA.	**EIS** 7.0 Engagement and Consultation

Table 8: Environmental Assessment and Permitting Process

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
MNBC-8.1	Stated that there are a few areas of the Environmental Assessment that require clarification: (1) The term Aboriginal is used inconsistently. At times this inconsistency results in insufficient data for describing the environments (for example health) of distinct Aboriginal peoples. At other times, it causes confusion as to whether or not the term Aboriginal is being used inclusively and in accordance with Section 35 of the *Constitution Act*.	29-Oct-2016, Letter to Panel from Métis Nation British Columbia (CEAR Document #656)	The VFPA understands that this comment is directed to the Review Panel. The VFPA has reviewed this letter and has no additional information to provide.		
MNBC-8.2	Stated that there are a few areas of the Environmental Assessment that require clarification: (2) The Socio-Economic Effects Assessment provides quantifiable projections of, for example, benefits to the labour market and businesses of the general population. When the Assessment focuses on the economic and labour market benefits for Aboriginal populations in the LAA and RAA there are no quantifiable projections and only vague, unsubstantiated statements about potential benefits. The anticipated economic benefits to the general population could widen the economic gap between Aboriginal businesses and labour market, especially if the noted barriers to fulsome participation are not addressed by the VFPA.	29-Oct-2016, Letter to Panel from Métis Nation British Columbia (CEAR Document #656)	The VFPA has reviewed this letter and provides the following additional Information.	**Addressed in EIS Appendix 7.2-B (#112):** Opportunities for training and employment opportunities related to the Project are described in EIS Section 32.3.3. As accommodation for any potential effects to specified Indigenous groups' ability to exercise their Aboriginal rights, the VFPA proposes to assist these Indigenous groups in accessing opportunities resulting from the Project. In addition to making contracting opportunities available to specified Indigenous groups, the VFPA will ensure that construction employment opportunities are also made available. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs. Through ongoing engagement, the VFPA will seek input from these Indigenous communities with respect to plans to ensure access to Project-related benefits. The VFPA has consulted and will continue to engage with Indigenous groups regarding opportunities to benefit economically and socially from the Project.	**EIS** 20.0 Economic Development 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.3.3 Mitigation Measures 35.0 Effects Assessment Summaries Table 35-2 Proposed Mitigation Measures and Commitments

Table 9: Environmental Management Program

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
MNBC-9.1	Stated that waste management plans should also include non-hazardous waste material, including trash and refuse generated through the construction and operation phases to ensure that gulls, crows, and other wildlife are not attracted to trash onsite. Lidded bins and frequent waste removal, as well as clean-up protocols will help offset this issue. Stated that animals that find something accessible and of interest may spread inedible waste materials across the project site, and into surrounding waters.	15-Jun-2015, Letter to the CEA Agency from Métis Nation British Columbia (CEAR Document #252)	**13-Oct-2015, Letter from the CEA Agency (CEAR Document #309):** *"The Agency did not request additional information for this item since there is already some information provided in the EIS. The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in EIS Section 33.3.13:** A Hazardous Materials and Waste Management Plan will describe how hazardous materials used and wastes generated during Project construction are to be managed. **Additional information provided by the VFPA:** The VFPA will ensure that non-hazardous waste management practices (that avoid human-wildlife conflicts) are included in the Hazardous Materials and Waste Management Plan.	**EIS** 33.3.13 Hazardous Materials and Waste Management Plan
MNBC-9.2	Asked which "other Aboriginal groups" are included in the communications plan. Asked how the VFPA is determining which other Aboriginal groups will be included in this plan? (Reference to section 33.3.16 of EIS).	29-Oct-2016, Letter to Panel from Métis Nation British Columbia (CEAR Document #656)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** The VFPA will determine interested parties through consultation as the plan is developed.	

Table 10: Human Health – Valued Component

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
MNBC-10.1	Asked about the health data for Métis. Asked which studies have been considered to articulate the health profile of Métis in the local assessment area. Stated that the First Nations Regional Health Longitudinal Study is an excellent analysis of First Nations health. However, the EIS states that "The First Nations Regional Health Longitudinal Study, a nation-wide survey, is governed by First Nations communities across the country and provides health data on Aboriginal groups." Noted that this statement is misleading. The study mentions Métis a total of five times. Each of these references occur in the title of a cited document. Stated that "The First Nations Regional Health Longitudinal Study" provides no health data on the Métis. Noted that this information is missing even though there are studies available for Métis health. This is one among several instances of the confusing use of the term Aboriginal. Asked what the mortality rates are for Métis. Requested that the VFPA clarify the use of the term "Aboriginal" in this section and others of the EIS. The EIS Health Profile of Indigenous Groups in the LAA claims that "collectively, the Aboriginal population in Western Canada (Status and Non-status Indians) had higher mortality rates from cancer (in general) and respiratory system diseases compared to the general population of Canada." This use of Indigenous to include only Status and Non-status Indians is misleading.	29-Oct-2016, Letter to Panel from Métis Nation British Columbia (CEAR Document #656)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** The VFPA acknowledges in Section 2.4 of EIS Appendix 27-A that the Indigenous population is defined in different ways in national (Health Canada) and provincial health data sources for mortality rates in Indigenous populations. These definitions are not inclusive of Métis, and therefore in the specific case of mortality rates due to air quality related health effects, Métis mortality rates are captured within the data for non-Indigenous population, shown in Table 1 and Table 2 of EIS Appendix 27-A. The human health effects assessment findings applicable to Indigenous groups, as described in EIS Section 27.6 and in the response to IR-7.31.15-28, are inclusive of Métis. Indigenous groups, as defined by the *EIS Guidelines* and as used throughout the EIS, is considered to be inclusive of Métis. The Project is not expected to result in any significant adverse effects on human health. The Project is not expected to result in measurable incremental residual cumulative effects to human health.	**EIS** 7.2 Aboriginal Groups Engagement and Consultation 27.0 Human Health 27.4 Information Sources 27.5 Existing Conditions 27.5.1.2 Health Profile of Aboriginal Groups in the Local Assessment Area 27.6 Future Conditions with the Project – Potential Project-Related Effects Appendix 27-A Air Quality HHRA Technical Report **Information Requests** Response to Information Request #28 (IR-7.31.15-28 of CEAR Document #314)
MNBC-10.2	Asked how the EIS and the VFPA are identifying and defining an "appropriate Aboriginal group?" Inquired whether there are inappropriate Aboriginal groups in reference to Section 27.7.4 of EIS.	29-Oct-2016, Letter to Panel from Métis Nation British Columbia (CEAR Document #656)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** EIS Section 27.7.4 does not refer to "appropriate Aboriginal groups" but rather that employment, training, and contracting opportunities are appropriate to mitigate the adverse health inequity effect.	**EIS** 27.0 Human Health 27.7.4 Mitigation Measure #4 – Measures to Address Health Inequity

Table 11: Light – Intermediate Component

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
MNBC-11.1	Asked if there are any regulations on lighting, for e.g., limits on how much you are allowed to light up the sky? If there is not, why not?	08-Oct-2014, Preliminary EIS Workshop #2	**08-Oct-2014, Workshop:** Stated that there are not any standards, threshold, or bylaws for light like there are for noise, for example. The assessment relies on CIE classification (Note: CIE stands for 'Commission internationale de l'éclairage', which translates to the International Commission on Illumination) to describe what happens with regard to change, but there is no regulated limit. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#46):** There are no specific federal or provincial regulatory requirements or limits associated with light trespass and sky glow. The VFPA cannot speculate on why such regulations have not been established.	**EIS** 9.0 Physical Setting 9.4 Light 9.4.4 Relevant Guidelines Appendix 7.2-B Aboriginal Groups Issues and Interests Table Appendix 9.4-A Roberts Bank Terminal 2 Light Assessment Study
MNBC-11.2	Asked about mitigation for light pollution, including periods of time where lights are turned off. Stated that lights from greenhouses in Delta have affected the ability of hawks and owls to hunt, and lights make it difficult for harvesters and hunters. Commented on a pink skyglow coming from the Port, visible at Point Upwood (bottom of Texada by Sabine Channel). Suggested working with Westshore and Deltaport to try different kinds of lights and LEDs in different locations on the terminal to see what improvements could be made immediately.	07-Oct-2014, Preliminary EIS Workshop #1 08-Oct-2014, Preliminary EIS Workshop #2	**07-Oct-2014, Workshop:** Stated that tomorrow's agenda includes presentations and information about mitigation for light, as well as noise and vibration. **08-Oct-2014, Workshop:** Referred back to this question, and responded to say there is a lot of existing research about how birds are more or less attracted to different wavelengths (colours) of light. As a result, in conversations about mitigation for birds, a recommendation has been made to use the type of light bulb that birds are least attracted to. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#99):** The EIS considers the potential effects of artificial light on coastal birds, including the potential for increased risk of predation on shorebirds by nocturnal raptors (i.e., owls). A Light Management Plan will be included in the Construction EMP and the Operation EMP, to reduce potential artificial light-related effects on coastal birds. **Addressed in EIS Appendix 7.2-B (#45):** The potential changes in light that may be caused by the Project, and the potential effects of those changes on VCs and on Current Use are considered in the EIS. The results of the light assessment informed the assessments of marine fish, coastal birds, visual resources, and human health, and Current Use. The assessment focused on two aspects of light: • Light trespass, the amount of light that strays from its intended purpose onto neighbouring areas; and • Sky glow, the unwanted illumination of the night sky that affects the visibility of stars. The assessment concluded that: • Overall, the Project is not expected to change the general light environment of the Lower Mainland and the Gulf Islands and no measurable incremental cumulative changes related to light are expected. • Project-related lighting is expected to result in a minimal increase in light trespass levels. • Increases in sky glow levels are expected, but are not anticipated to result in a noticeable change from existing conditions. Suggested mitigation measures were considered in the effects assessment. Mitigation measures to address effects on visual resources and coastal birds consist of implementation of EMPs, including Light Management Plans, for construction and operation phases. The Light Management Plans will describe measures to reduce excess lighting and sky glow, including:	**EIS** 9.4 Light 9.4.4 Relevant Guidelines 9.4.8Future Conditions with the Project 13.0 Marine Fish 15.0 Coastal Birds 15.7.2 Future Conditions with the Project - Potential Effect - Changes in 25.0 Visual Resources 25.6 Future Conditions with the Project - Potential Project-related Effects 25.7.2 Mitigation Measures, Mitigation Measure #2 – Lighting Design and Operation – Light Management Plans 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Land and Resources for Traditional Purposes 32.2.1 Indicators **Information Requests** Response to Sufficiency Information Request #2 (IR9-02)

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				• Orienting lights downwards and away from residential and marine areas; • Using shielding to minimise light trespass; • Controlling light levels and limiting light use to areas where activities are occurring; • Where possible, using fixtures that emit light at wavelengths shown to minimise disorienting effects to birds; • During construction, ensuring dredge lighting system shields light from spilling outside the basic working footprint of the dredge; and • During operation, establishing a centralised lighting control system to select lighting where required. **Addressed in EIS Appendix 7.2-B (#99):** A process is underway to change the current outdoor lighting fixtures at the Deltaport Terminal to light-emitting diodes (LEDs). LEDs are more directional and easier to control in terms of where light is focused. It is anticipated that the change to LEDs will reduce both light trespass and sky glow from the Deltaport Terminal, provided good lighting design practices are followed (specifically, the use of full cut-off light fixtures to limit up-light and only lighting areas that are required to be lit). The lighting on one crane at Deltaport has been fully replaced with LED lights, offering a point of comparison with the older lights. **Addressed in response to IR9-02:** The VFPA's forthcoming response to IR9-02, as requested by the Review Panel, will further discuss mitigation measures related to artificial light for migratory and non-migratory birds and avian species.	
MNBC-11.3	Concern from harvesters related to fry and the potential for increased light unnaturally attracting them to (or keeping them in) the vicinity of Project resulting in increased predation from other animals.	03-Aug-2016, Issues Workshop – Métis Nation British Columbia, Semiahmoo First Nation, Tsleil-Waututh Nation	**03-Aug-2016, Workshop:** Confirmed that the issue is addressed in the EIS. Explained that the EIS is divided into pathways (mechanisms) for effects; light is one of those mechanisms. With regard to effects to predation and movement, stated that there is not a huge body of evidence to draw from. The assessment is inconclusive in that it can be beneficial in some circumstances for some species, and detrimental for others. It is not clear what the exact effects would be on every species. The EIS speaks to both the pros and cons of light interaction. Noted that a light management plan was written into the mitigation, which involves limiting light exposure to the extent possible at night.	**Addressed in Response to IR5-25:** As noted in the VFPA's response to IR5-25, effects of lighting and shading on juvenile salmon can be positive and negative and are highly variable and dependent on species. Lighting or shading may negatively affect movement patterns and migration timing of juvenile salmon. Changes in the light environment may also influence foraging success (i.e., increase foraging opportunities under lit conditions, or reduce prey availability due to shading), and risk to predation (although predatory response to changes in the light environment varies depending on species). Positive and negative influences on juvenile salmon behaviour were considered in the assessment of effects from Project-related changes in the light environment, and assessment conclusions are summarised below. In the Project's LAA, changes in the light environment are predicted to occur during Project operation in the subtidal zone due to marine terminal placement (and associated lighting infrastructure). In contrast, the light environment in the intertidal zone is not predicted to differ from existing conditions following causeway widening (see EIS Section 9.4.8.2). Thus, the results of the assessment of Project effects concluded a minor loss in juvenile salmon productivity pre-mitigation (see EIS Section 13.6.3.1), attributed partially to potential lighting-related effects on migration of those salmon species that are shore-tied (such as chum), and may preferentially swim along the shoreline during their outmigration to estuarine rearing habitats (see response to IR5-18), and presumed increase in predation risk (e.g., by seals). As marine terminal placement is proposed to occur in the subtidal zone away from habitats optimal for juvenile salmon rearing, lighting-related effects on juvenile salmon foraging behaviour in the intertidal zone are not anticipated. During Project construction, lighting-related effects at nighttime will be temporary in nature and localised within a relatively small area of disturbance; also, most construction activities are scheduled to occur during the day. Mitigation measures proposed will result in no residual effects on juvenile salmon from Project-related changes in the light environment. Project effects are avoided through placement of the terminal in the subtidal zone, which will minimise the	**Information Requests** Response to Sufficiency Information Request #25 (IR5-25 of CEAR Document #1153)

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				influence of lighting on intertidal habitats, including eelgrass beds, which represent optimal rearing habitats for out-migrating juvenile salmon. Onsite offsetting in the form of native eelgrass transplants and tidal marsh creation, will increase food supply and provide additional refuge for juvenile salmon moving along the causeway perimeter (see EIS Section 13.7.6). Lastly, implementation of a light management plan will further mitigate potential changes in the light environment, such that no residual change in Pacific salmon productivity is anticipated.	
MNBC-11.4	Expressed concerns regarding light effects on owls and other raptors. Noted there is a decline in the barn owl population but uncertainty of their proximity to the terminal.	03-Nov-2017, Meeting with Métis Nation British Columbia	**03-Nov-2017, Meeting:** Noted that the VFPA did a study on light and birds. Committed to follow up on light effects on birds.	**Addressed in EIS Appendix 7.2-B (#95):** It is recognised that nocturnal behaviour of birds varies in response to lighting conditions. A review of documented effects of both natural and artificial light on birds is provided in the EIS. The potential effects on coastal birds of changes in artificial light related to the Project are considered in the EIS. A Light Management Plan will be included in the Construction EMP and the Operation EMP, to reduce artificial light-related effects on coastal birds. **Addressed in Response to IR9-02:** The VFPA's forthcoming response to IR9-02, as requested by the Review Panel, will further discuss mitigation measures related to artificial light for migratory and non-migratory birds and avian species.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 15.0 Coastal Birds 15.7 Future Conditions with the Project 15.7.2 Potential Effect- Changes in Productivity 15.8.3 Mitigation #2 – Measures to Address Productivity Loss due to Changes in Habitat Quality 33.0 Environmental Management Program 33.3 Construction Environmental Management Plan 33.3.5 Light Management Plan 33.4 Operation Environmental Management Plan 33.4.3 Light Management Plan **Information Requests** Response to Sufficiency Information Request #2 (IR9-02)

Table 12: Marine Commercial Use – Valued Component

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
MNBC-12.1	Stated that the commercial fishery assessment should include at least 10 years of data.	03-Jul-2014, Meeting with Métis Nation British Columbia	**03-Jul-2014, Meeting:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Section 21.0 on Marine Commercial Use.	**Addressed in EIS Section 21.0:** EIS Sections 21.4 and 21.15 present information sources used in the marine commercial use section, which collectively draw on a wide variety of time series as data input. Further information on fisheries data is presented in EIS Section 16.0. DFO data on Indigenous fisheries extends as far back as 2009, and recreational fisheries to 1986 and commercial to 1996. The Cohen Inquiry report, which canvassed data extending back to the 1920s, is referenced in Section 32.0.	**EIS** 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries 21.0 Marine Commercial Use 21.4 Information Sources 21.15 References 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes
MNBC-12.2	Concerned about potential closure of food fishing. Asked whether that area is going to remain open for food fishing and will it be available to Nations to access that through permits, or will it just be closed off.	07-Oct-2014, Preliminary EIS Workshop #1	**07-Oct-2014, Workshop:** A representative of the CEA Agency responded that she can take that back to DFO and flag it for them now, and get that into the system for them to consider. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Section 21.0 on Marine Commercial Use.	**Addressed in EIS Section 21.0:** As noted in EIS Section 21.0, it is anticipated that crab harvesting for food, social, and ceremonial (FSC) or Indigenous domestic purposes would continue in the current navigational closure and in an expanded navigational closure during Project construction and operation. Continued harvesting for FSC or Indigenous domestic purposes in a proposed navigational closure expansion could reduce the degree to which Dungeness crab are attracted toward commercial traps that are re-located from the closure expansion, and thereby affect the commercial harvest. This factor is, however, expected to have a minor effect at most as the level of FSC harvesting capacity and activity (and its associated number of baited traps) is much lower compared to commercial harvesting capacity and activity.	**EIS** 21.0 Marine Commercial Use

Table 13: Marine Fish – Valued Component

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
MNBC-13.1	Concerned with the proposed location with respect to Dungeness crab, and oysters, which have re-established on rocks at the proposed site after being gone for many years.	07-Oct-2014, Preliminary EIS Workshop #1	**07-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Section 12.0 on Marine Invertebrates. **26-Jun-2017, Letter from the VFPA:** *"The concerns brought forward by Métis Nation British Columbia with regard to Dungeness Crabs and disposal at sea (DAS) highlighted the need for the VFPA ("the port authority") to re-evaluate our planned construction approach and use of the intermediate transfer pit (ITP) as a part of the Project. The Project team has been actively exploring alternative construction methods to address concerns raised by Indigenous groups and regulatory agencies since the development of the EIS in 2014.* *After undertaking a thorough investigation that included further engineering work, consideration of new locally available dredging equipment, and relaxation of the Coasting Trade Act as a result of approving the Canadian European Trade Agreement, the port authority determined that the Project could proceed without the use of an ITP. In addition, the elimination of the ITP, along with other changes will result in a Project that does not require a DAS permit."* **12-Apr-2018, Letter from the VFPA:** Stated that since your concerns were raised, the Project team has conducted further work on these topics to respond to information requests from the Review Panel, to better understand potential effects and suggested mitigation, and to gain deeper understanding of the viewpoints of Indigenous groups and stakeholders. Provided the RBT2 Crab Mitigation Summary Overview, which detailed the following: • Mitigation measures to avoid or reduce effects to crab as outlined in the EIS; and	**Addressed in EIS Section 12.0:** Potential impacts to Dungeness crab and oysters are assessed in EIS Sections 12.0 and 12.6.3. In relation to Dungeness crabs, qualitative and empirical evidence indicates there will be minor decreases in crab productivity from direct mortality during the construction phase. During the operation phase and in the longer term, key mechanisms negatively influencing Dungeness crab productivity relate to footprint losses of high-suitability subtidal sand habitat and negative biotic interactions through a reduced prey base (bivalves). While the decrease predicted by the ecosystem model (-3%, -9 t) is negligible, as changes less than 5% are judged to fall within the uncertainty of the model), sensitivity analyses indicate this value may be underestimated by 2%. Further, because construction activities were not incorporated into the ecosystem model, associated effects are deemed to be underestimated in the model. Overall, considering all lines of evidence, a minor adverse effect is expected for this sub-component In relation to bivalve shellfish, qualitative and empirical evidence indicate there will be minor decreases in bivalve productivity from direct mortality during the construction phase. During the operation phase, key mechanisms reducing shellfish productivity relate to permanent losses in both subtidal and intertidal sand habitat from the Project footprint and fining of intertidal sand through changes in coastal processes. While bivalves possess biological attributes that facilitate re-colonisation (i.e., high fecundity, broadcast spawning, pelagic larvae), reduction of the amount and quality of infaunal bivalve habitat in the LAA is expected to limit recovery. Food web interactions are considered to be positive or neutral. The ecosystem model predicts a decrease in infaunal bivalve productive potential (-8%, -519 t), which aligns with empirical predictions. Increases in epifaunal bivalve productivity (i.e., Pacific oyster and bay mussel) are expected, however, due to increased hard substrate surface area with development of RBT2. Overall, a minor adverse effect is expected for this sub-component. Measures to avoid, reduce, or offset potential effects include: • Placement of terminal in subtidal waters; • Reduced footprint of causeway widening; • Rounded northwest terminal corner to reduce scour; • Incorporation of rocky shoreline in terminal perimeter; • Implementation of construction and operation EMPs related to construction work windows, crab salvages, orange sea pen transplants, and maintaining water and sediment quality; and • Creation of habitat including eelgrass, intertidal marsh, mudflat, and sandy gravel beach.	**EIS** 12.0 Marine Invertebrates 12.6.3 Potential Effect – Changes in Productivity

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
			• Additional crab harvesting related mitigation measure suggestions under review. Stated that the VFPA is interested in hearing views regarding options to mitigate potential effects to crabs and crabbing in the Project area.		
MNBC-13.2	Concerned with impacts from changes in water flow to fry and fish movement out of the Fraser and Canoe Pass. Stated that behind Roberts Bank is a holding area for the fry. Asked how this has been studied.	08-Oct-2014, Preliminary EIS Workshop #2	**08-Oct-2014, Workshop:** Stated that there has been an extensive amount of work done with respect to juvenile salmon fry and habitat use along the causeway and within the local study area, which will be presented in an upcoming workshop. Stated that the VFPA does recognise that there is ongoing change, and that it is a very dynamic environment. The VFPA has picked assessment years that reflect that, and it is not just looking at the day construction starts, and the day operation starts, but rather the period that is most representative for the long-term. Confirmed that the marine fish presentation is planned for an upcoming workshop, which should address the question. **28-Oct-2014, Preliminary EIS Workshop #3:** Hosted a presentation on coastal geomorphology. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#49):** Field studies, air photo review, and modelling of sediment deposition at Roberts Bank (including Canoe Passage) were undertaken during the Project assessment, as described in the EIS. A Canoe Passage discharge channel location and sediment distribution (e.g., bar formation or buildup of sand) were modelled to assess variation pre and post-terminal construction. Potential changes associated with the configuration of RBT2 were assessed in relation to Roberts Bank, including the Canoe Passage discharge channel. Project-related changes to coastal geomorphic processes on Roberts Bank are predicted to be associated with the terminal footprint. However, the Project is not anticipated to alter sediment dynamics or water movement in and around the mouth of the Fraser River. Changes are anticipated around the terminal and within the intertidal zone shoreward of the terminal. The effects of these changes on VCs are considered in the EIS. **Addressed in EIS Section 13.0:** As noted in EIS Section 13.0, in studies undertaken in 2012 and 2013, juvenile salmon were shown to occupy with no clear preference multiple habitats at Roberts Bank (i.e., salt marsh, eelgrass beds, unvegetated sandflats, and rip-rap), and to access those habitats aided by the tides. As demonstrated in EIS Section 9.5, the Project is not anticipated to result in incremental cumulative changes to coastal geomorphology (including tidal mixing and water circulation) at Roberts Bank; juvenile salmon movements within and between intertidal rearing habitats are expected to continue to be influenced by the tidal and water flow regime at Roberts Bank. Roberts Bank will continue to provide rearing and refuge habitats for juvenile salmon, including during ebbing tides. After mitigation, the marine fish assessment presented in the EIS concludes there are no significant adverse effects from the Project, as marine fish productivity or long-term population integrity would not be compromised. The Project is not expected to result in measurable incremental adverse cumulative effects to marine fish.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 9.0 Physical Setting 9.5 Coastal Geomorphology 9.5.8 Future Conditions with the Project 9.7 Marine Water Quality 9.7.8 Future Conditions with the Project 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component 13.2.1 Sub-components 13.4 Information Sources 13.4.1 Desktop and Field Studies 13.5 Existing Conditions 13.5.1 Pacific Salmon 13.6 Future Conditions with the Project Table 13-6 Desktop and Field Studies Related to Marine Fish to Support the Assessment Table 13-10 Summary of Roberts Bank Ecosystem Model Productivity Results for Marine Fish 13.6.3 Potential Effect - Changes in Productivity
MNBC-13.3	Concerned with impacts from the Project to Métis Nation British Columbia members fishing and crabbing at Roberts Bank.	23-May-2014, Meeting with Métis Nation British Columbia 06-Jun-2014, Valued Components Workshop #1	**23-May-2014, Meeting:** Stated there would need to be a crab closure, although the specifics of such a closure have yet to be defined. Responded the EIS would capture where any closure would need to occur and what the impact of that would be. **06-Jun-2014, Workshop:** Recorded comment for consideration by the Project team. **07-Oct-2014, Workshop:**	**Addressed in EIS Section 32.0:** Information from the Métis Nation British Columbia TUS was incorporated into EIS Section 32.0 Current Use. **Addressed in EIS Section 16.0.** All Project construction and operation activities are expected to interact at an undetectable level with the ongoing productivity of commercial, recreational, and Aboriginal fisheries. While decreases in productive potential are anticipated for some species that support commercial, recreational, and Aboriginal fisheries based on ecosystem modelling, these decreases represent only a small percentage of average species returns, and are not expected to be measurable compared to natural variability at the population level for species relevant to these fisheries. Project-related effects, therefore, are not anticipated to compromise the ongoing productivity of commercial, recreational, or Aboriginal fisheries, and are expected to be negligible. Therefore, the Project is not expected to contribute to cumulative effects on these fisheries. **Addressed in EIS Section 21.0:**	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries 21.0 Marine Commercial Use 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
			Marine invertebrates were discussed during Aboriginal Groups Preliminary EIS Workshop #1. **29-Oct-2014, Workshop:** Marine commercial use discussed during Aboriginal Groups Workshop #4. Information provided by Métis Nation British Columbia was shared with marine fish, marine commercial use, & commercial, recreational, and Aboriginal fisheries discipline leads. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **12-Apr-2018, Letter from the VFPA:** Stated that since your concerns were raised, the Project team has conducted further work on these topics to respond to information requests from the Review Panel, to better understand potential effects and suggested mitigation, and to gain deeper understanding of the viewpoints of Indigenous groups and stakeholders. Provided the RBT2 Crab Mitigation Summary Overview, which detailed the following: • Mitigation measures to avoid or reduce effects to crab as outlined in the EIS; and • Additional crab harvesting related mitigation measure suggestions under review. Stated that the VFPA is interested in hearing views regarding options to mitigate potential effects to crabs and crabbing in the Project area.	Project-related effects on the fishing industry are assessed in EIS Section 21.0. Depending on the type of licence held by the Métis Nation British Columbia member, s/he would be captured within the data reported in Commercial Fish and Seafood Harvesting or Aboriginal Commercial Fish and Seafood Harvesting. **Addressed in EIS Appendix 7.2-B (#117):** Marine commercial use, or the use of marine waters and resources to generate revenue, has been identified as an important economic factor in local and regional communities, and for Indigenous groups. The marine commercial use assessment included four sub-components: seafood harvesting; marine fish harvesting; guided sport fishing; and marine-based tourism. Potential effects on marine commercial use include displacement of commercial crab harvesting during construction and operation, resulting in a potential change of harvesting area, total harvest, and revenue, due to the Project footprint and the proposed expansion of the area closed to commercial crabbing. The VFPA will work with DFO to engage commercial crab harvesters to identify and implement feasible mitigation measures and will implement construction and operation EMPs related to construction phase communication, construction monitoring, and crab salvages effects from displacement of commercial crab harvesting during construction and operation. The Project is anticipated to result in a negligible effect to marine fish harvesting, guided sport fishing, and marine-based tourism. These negligible effects are related to changes in area, access, resource availability, and harvesting revenues. The Project is expected to result in a residual effect of changes to seafood harvesting area, harvest, and revenue. The residual effect is determined to be not significant, as Dungeness crab are known to move substantial distances to baited traps, and harvest activity can be moved to another open area. Other planned or reasonably foreseeable projects and activities would also displace crab harvesting, and this effect would combine with that of the Project to result in an incremental cumulative effect on commercial crab fishing. This adverse incremental cumulative effect is determined to be not significant.	

Table 14: Marine Invertebrates – Valued Component

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
MNBC-14.1	Expressed an interest in crab mitigation	03-Nov-2017, Meeting with Métis Nation British Columbia	**03-Nov-2017, Meeting:** Committed to provide information on proposed crab mitigation when available. **12-Apr-2018, Letter from the VFPA:** Stated that since your concerns were raised, the Project team has conducted further work on these topics to respond to information requests from the Review Panel, to better understand potential effects and suggested mitigation, and to gain deeper understanding of the viewpoints of Indigenous groups and stakeholders. Provided the RBT2 Crab Mitigation Summary Overview, which detailed the following: • Mitigation measures to avoid or reduce effects to crab as outlined in the EIS; and • Additional crab harvesting related mitigation measure suggestions under review. Stated that the VFPA is interested in hearing views regarding options to mitigate potential effects to crabs and crabbing in the Project area.	**Addressed in EIS Section 12.0:** During construction and operation, the Project is expected to result in a net decrease in marine invertebrate productivity, both before and after mitigation is implemented. Increases in productivity of infaunal and epifaunal invertebrate communities and decreases in productivity for bivalve shellfish, Dungeness crab, and orange sea pens are predicted. Short-term productivity losses are due to direct mortality and losses of available habitat within the Project footprint. Productivity decreases can be partially mitigated through the implementation of EMPs, including crab salvages and transplanting of orange sea pens, and through the creation of eelgrass, intertidal marsh, mudflat, and sandy gravel beach habitats. While the Project is predicted to cause losses of productivity of bivalve shellfish, Dungeness crabs and orange sea pens, the scale of change is minor in the context of natural variability and would not compromise the population integrity or ecological function. The assessment concludes there are no significant adverse residual effects from the Project to marine invertebrates. The Project is not expected to result in any incremental adverse cumulative effects to marine invertebrates. **Addressed in responses to IR5-04 and IR7-34:** Further information concerning proposed crab salvages is provided in the VFPA's response to IR5-04. Salvages are planned for all Project activities that have the potential to cause direct mortality to legal-sized male and gravid female Dungeness crabs. Further information concerning crab mitigation is provided in the VFPA's response to IR7-34, including technically and economically feasible mitigation measures that could address the potential effects on commercial harvesters, and provides information about the engagement activities held to date with stakeholders and Indigenous groups that could be affected by the proposed expansion of the navigational closure and displacement from crab harvest areas.	**EIS** 12.0 Marine Invertebrates **Information Requests** Response to Sufficiency Information Request #4 (IR5-04 of CEAR Document #1209) Response to Sufficiency Information Request #34 (IR7-34 of CEAR Document #1172)

Table 15: Marine Mammals – Valued Component

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
MNBC-15.1	Concerned with use of Kinder Morgan data for whales and whale strikes, commenting that data and mitigations for this project were perceived to be insufficient.	09-Jun-2015, Meeting with Métis Nation British Columbia	**09-Jun-2015, Meeting:** Clarified that the conclusions from TMX (Trans Mountain Expansion Project) reports are not being used, only the data. The VFPA will make conclusions based on the effects from RBT2. Stated that RBT2 has different effects from TMX due to different cargo, ships, frequency, etc.	**Addressed in response to IR5-41:** The VFPA's response to IR5-41 discusses the use of TMX data in the assessment of whale strikes. As it is not possible to undertake a quantitative strike risk analysis (see DFO's response to DFO IR-12 of CEAR Document #988), it is not possible to predict the risk of a strike during existing conditions or from the incremental contribution of RBT2-associated vessel traffic, or any project with associated shipping. In the absence of this information, a qualitative approach was taken in the MSA using multiple lines of evidence regarding the frequency and potential effects of vessel strikes from RBT2-associated container ship traffic on humpback whales in the marine shipping area. These multiple lines of evidence included the following: • Cetacean encounter study completed to inform the assessment of tanker traffic associated with the Trans Mountain Expansion Project (Stantec 2015); • Current status and population growth rate of humpback whales in B.C.; and • Current state of knowledge regarding vessel strikes of humpback whales in B.C.	**Information Requests** Response to Sufficiency Information Request #41 (IR5-41 of CEAR Document #1159)
MNBC-15.2	Concerned that increased marine traffic, especially marine noise, could harm orcas and other marine mammals, leading to irreparable loss of the beauty and spiritual significance of the area.	11-Sep-2015, Letter from Métis Nation of Greater Victoria	**13-Oct-2015, Letter from the VFPA:** *"Information shared in your memo related to Métis Aboriginal rights and environmental concerns will be incorporated into the final [MSA] to be submitted to the [CEA Agency].* *[The VFPA] will provide a response to many of the specific concerns expressed in your letter in the [MSA].* **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Section 8.2 on Marine Mammals.	**Addressed in MSA Section 8.2:** Potential effects on marine mammals related to incremental Project-associated vessel transit activities include behavioural disturbance and acoustic masking due to changes to the acoustic environment, and physical disturbance from vessel strikes. These effects are expected to not be significant for marine mammals. Incremental marine shipping associated with the Project is not anticipated to have an adverse effect on either southern resident killer whales or North Pacific humpback whale critical habitat features when needed for life functions, or on the survival or recovery of southern resident killer whales, North Pacific humpback whales, or Steller sea lions. Cumulative effects are expected to be not significant for seals, sea lions, baleen whales, and toothed whales, other than southern resident killer whales. The VFPA has assumed that past activities and projects, including those described in the recovery strategy issued by DFO, have had a significant adverse effect on southern resident killer whales. As such, Project-associated vessel activity, in combination with existing and future vessel activity, is expected to continue to result in a significant cumulative effect to southern resident killer whales. **Addressed in responses to IR5-41 and IR5-47:** The VFPA's responses to IR5-41 and IR5-47, further discuss marine mammal strike risk and potential underwater noise effects to southern resident killer whales at Swiftsure Bank, specifically. The overall effects assessment conclusions presented in the MSA remain the same. **Additional information from the VFPA:** In 2014, the VFPA-led Enhancing Cetacean Habitat and Observation (ECHO) Program was developed as a collaborative initiative aimed at better understanding and managing the impact of shipping activities on at-risk whales throughout the southern coast of B.C. The VFPA-led ECHO Program engages and involves key regional interested parties to maximise program success and help ensure that mitigation and management measures developed through the program are informed by social, cultural, economic, and environmental sustainability interests. The ECHO Program is guided by the advice and input of an advisory working group, and supported by a federal government advisory committee and associated technical committees. Through engagement and consultation with stakeholders, the ECHO Program has initiated or supported short-term projects, scientific studies, and educational initiatives to fill knowledge gaps necessary to inform the development of credible, science-based threat reduction solutions and management options to reduce cumulative effects of shipping to at-risk whales in the region.	**MSA** 8.2 Marine Mammals **Information Requests** Response to Sufficiency Information Request #41 (IR5-41 of CEAR Document #1159) Response to Sufficiency Information Request #47 (IR5-47 of CEAR Document #1145)

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
MNBC-15.3	Noted there is concern regarding traffic and whales, specifically related to their Victoria members. Interested in learning more about the ECHO Program.	03-Nov-2017, Meeting with Métis Nation British Columbia	**03-Nov-2017, Meeting:** Committed to follow up with Métis Nation British Columbia to organise a meeting with members in Victoria. **24-Nov-2017, Email from the VFPA:** Asked Métis Nation British Columbia to provide possible dates for the ECHO presentation. **21-Feb-2018, Meeting on ECHO Program with Métis Nation of Greater Victoria:** Met with representatives from Métis Nation of Greater Victoria to discuss the ECHO Program.	**Addressed in EIS Appendix 7.2-B (#92):** Project-related adverse residual effects to southern resident killer whales (and all toothed whales) are expected to be not significant. The Project contribution of effects above existing conditions is very small and is not anticipated to adversely affect individuals or affect critical habitat features (acoustic environment, the availability of prey, and water and sediment quality) when needed by southern resident killer whales for their life functions of foraging, mating, resting, or socialising. Destruction of southern resident killer whale critical habitat from Project construction and operation is not anticipated, and the Project will not limit the survival or recovery of southern resident killer whales. However, due to their Endangered status and lack of recovery of the population, the VFPA has assumed that past activities and projects, including those described in the recovery strategy issued by DFO, have had a significant adverse effect on southern resident killer whales. Therefore, the Project, in combination with past projects and activities that have been carried out, and certain and reasonably foreseeable projects that will be carried out, will result in a continued significant cumulative effect to southern resident killer whales. The incremental contribution of the Project is not anticipated to contribute to cumulative effects. **Addressed in response to IR4-10:** As noted in the VFPA's response to IR4-10, in 2014, the VFPA-led ECHO Program is a collaborative initiative aimed at better understanding and managing the impact of shipping activities on at-risk whales throughout the southern coast of B.C. The VFPA-led ECHO Program engages and involves key regional interested parties to maximise program success and help ensure that mitigation and management measures developed through the program are informed by social, cultural, economic, and environmental sustainability interests. The ECHO Program is guided by the advice and input of an advisory working group, and supported by a federal government advisory committee and associated technical committees. Through engagement and consultation with stakeholders, including Indigenous individuals, the ECHO Program has initiated or supported short-term projects, scientific studies, and educational initiatives to fill knowledge gaps necessary to inform the development of credible, science-based threat reduction solutions and management options to reduce cumulative effects of shipping to at-risk whales in the region. Further information about ECHO Program can be found at: https://www.portvancouver.com/environment/water-land-wildlife/echo-program/.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table **Information Requests** Response to Sufficiency Information Request #10 (IR4-10 of CEAR Document #1051)

Table 16: Marine Shipping Addendum

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
MNBC-16.1	Concerned that increased shipping (resulting in increased pollution, marine noise, spills, and wake) might affect the health of fish and shellfish populations, thereby restricting the exercise of fishing rights.	11-Sep-2015, Letter from Métis Nation of Greater Victoria	**13-Oct-2015, Letter from the VFPA:** *"Information shared in your memo related to Métis Aboriginal rights and environmental concerns will be incorporated into the final [MSA] to be submitted to the [CEA Agency].* *[The VFPA] will provide a response to many of the specific concerns expressed in your letter in the [MSA].* **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Section 8.1 on Marine Fish and Fish Habitat.	**Addressed in MSA Section 8.1:** An assessment was undertaken to evaluate the potential effects of Project-associated marine shipping on marine fish and fish habitat (including marine vegetation and marine invertebrates) within the marine shipping area and located within the Salish Sea. Potential effects of vessel wake-generated waves on marine fish and fish habitat were characterised as negligible, because only 2% of coastline in the LAA is within the wake-related zone of influence, and because wake-generated wave heights at shorelines are predicted to be well within the range of natural wave conditions. Fish and fish habitat are already adapted to the natural conditions; therefore, any wake-related influences would not be distinguishable from existing conditions. Similarly, potential effects of underwater noise were also considered to be negligible because noise associated with Project-associated marine vessel activity and future cumulative shipping activities would not exceed injury thresholds for fish species or the Pacific salmon species behavioural threshold. Further, while noise-induced behavioural changes are possible for Pacific herring, potential effects would be localised to within 20 metres of a container ship and of short duration (as the ship passes by) and are therefore not anticipated to affect the integrity of populations within the LAA. MSA Section 9.5 presents an assessment of Current Use. As noted in MSA Section 9.5.11, considering the conclusions of the Current Use assessment, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the marine shipping area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location. These mitigation measures for addressing potential incremental effects on Current Use are expected to also be effective at addressing the potential incremental impact to the exercise of Aboriginal and treaty rights. No additional mitigation measures have therefore been suggested for the potential incremental impact to the exercise of Aboriginal and treaty rights.	**EIS** 8.1 Marine Fish and Fish Habitat 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.11 Potential Impacts on Asserted or Established Aboriginal and Treaty Rights
MNBC-16.2	Concerned that depending on the kinds of goods shipped, toxic spills could affect coastal plant and animal populations, degrading the ecosystem, and thus restricting the exercise of other harvesting rights.	11-Sep-2015, Letter from Métis Nation of Greater Victoria	**13-Oct-2015, Letter from the VFPA:** *"Information shared in your memo related to Métis Aboriginal rights and environmental concerns will be incorporated into the final [MSA] to be submitted to the [CEA Agency].* *[The VFPA] will provide a response to many of the specific concerns expressed in your letter in the [MSA].* **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B	**Addressed in MSA Appendix 5-B (#109):** The potential for an accident involving a spilled container, and hazardous contents of containers, is addressed in MSA Section 10.0. Details on the types of hazardous materials shipped in containers are provided in EIS Appendix 30-A (Table G-3 in Appendix G). Regulations for securing containers, and for the transport of dangerous goods, are set by the IMO http://www.imo.org/en/About/Conventions/ListOfConventions/Pages/International-Convention-for-the-Safety-of-Life-at-Sea-(SOLAS),-1974.aspx The International Maritime Dangerous Goods Code is the international code that establishes where dangerous goods should be loaded on a ship. Some should be loaded below deck, others should be loaded on deck, some dangerous goods need to be separated by certain distances from other types of goods, and some dangerous goods need to be segregated in different holds from other goods. The implementation of the Code is mandatory under the SOLAS and the International Convention for the Prevention of Pollution from Ships (MARPOL 73/78). **Addressed in MSA Section 10.3.2.1:** Containers may be lost overboard in the event of a collision or grounding and could conceivably release hazardous and noxious substances (HNS) to the environment. While removal of containers lost overboard would involve a salvage operation, the combination of low collision or grounding accident frequencies with the low percentage of HNS containers at risk of being lost overboard (approximately 0.7% for Deltaport in 2012; see EIS Appendix 30-A), and the requirement for the container being compromised to release its contents, led to the assessment that the frequency of spills of HNS substances from containers lost overboard is low enough to not require further consideration as a plausible accident or malfunction arising from marine shipping associated with the Project. **Additional information provided by the VFPA:**	**EIS** Appendix 30-A, Table B-4 Composition and Number of HNS Containers at Deltaport in 2012 (TSI 2013) **MSA** Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents or Malfunctions 10.3.2.1 Loss Overboard of Containers from Ships In-transit in Semi-protected Waters

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
			that summarised Indigenous issues and interests and provided the VFPA's responses.	In 2017, the top ten container cargos accounting for approximately 73% of total inbound and outbound container cargo were household goods; lumber; woodpulp; specialty crops, construction, and materials; industrial, auto, and vehicle parts; basic metals; meat, fish, and poultry; and waste paper.	

Table 17: Marine Vegetation – Valued Component

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
MNBC-17.1	Commented that the existing eelgrass bed is a lot larger than indicated, that it reaches the terminal.	07-Oct-2014, Preliminary EIS Workshop #1	**07-Oct-2014, Workshop:** Recorded comment for consideration by Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Section 11.0 on Marine Vegetation.	**Addressed in EIS Section 11.0:** Assesses potential effects of the Project on marine vegetation and presents a characterisation of existing conditions. The characterisation of existing conditions regarding eelgrass is presented in EIS Section 11.5.1. Native eelgrass occurs at Boundary Bay and Roberts Bank, generally between -1.5 m chart datum (CD) and +1.5 m CD in fine and very fine sand. Distribution seaward into the subtidal zone is limited by light availability (a function of light attenuation caused by absorption and scattering), while landward it is limited by desiccation and wave energy. Non-native eelgrass occurs at Sturgeon and Roberts banks and Boundary Bay between +2 m CD and +3 m CD in relatively muddier areas that remain wetted during low tide. Distribution seaward is limited by competition with native eelgrass, and landward by desiccation. EIS Figure 11-2 presents the Roberts Bank Marine Vegetation Map (2012). The eelgrass bed was delineated through a combination of aerial imagery (orthophotos, hyperspectral survey), towed underwater video surveys, and field sampling, ensuring both intertidal and subtidal portions were captured. As noted in EIS Section 11.5.1.5, there is notable inter-annual variability in both native and non-native eelgrass, which may account for this anecdotal observation.	**EIS** 11.0 Marine Vegetation 11.5.1 Eelgrass 11.5.1.5 Spatial and Temporal Variation of Eelgrass
MNBC-17.2	Asked whether invasive plants have been looked at in the area, and whether or not they were considered in the model.	28-Oct-2014, Preliminary EIS Workshop #3	**28-Oct-2014, Workshop:** Responded that yes invasive plants have been studied, but that the VFPA would have to get back to Métis Nation British Columbia with respect to if invasive species were considered in the model. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Section 11.0:** EIS Section 11.0 presents information concerning the existing conditions of marine vegetation in the LAA, including invasive marine species. **Additional information provided by the VFPA:** The EwE model was not used to predict potential effects to invasive species. More information is available at https://www.tc.gc.ca/eng/marinesafety/oep-environment-ballastwater-alienspecies-1055.htm. **Addressed in EIS Appendix 7.2-B (#100):** The VFPA was the first port in North America to prohibit in-port ballast water exchange without prior mid-ocean exchange, a practice which became the basis of government requirements now enforced by Transport Canada. To prevent the invasion of foreign species into local waters, international regulations, through the IMO, are managed by Transport Canada. All commercial deep sea vessels are required to carry out a ballast water exchange prior to entering Canadian waters. This is done outside the exclusive economic zone of 200 nautical miles and in water deeper than 2,000 metres. By requiring vessels to complete this ballast 'flush' well outside Canadian waters, the aim is to prevent any foreign organisms from entering into the local ecosystem. The U.S.A. has similar requirements, and vessels arriving from the Puget Sound area need to forward the completed U.S. forms to Canadian authorities prior to entry into Canadian waters. Import containers are generally not opened at the terminal. Canada Border Services Agency inspects the contents of a percentage of import containers off-terminal in Richmond, and in the future will be done at the facility on Tsawwassen First Nation land currently being developed. All ships use rat guards on their mooring lines to ensure that rats and other rodents do not crawl up or down the mooring lines between the ship and the wharf. The VFPA is a part of the B.C. Spartina Working Group, which maps, tests eradication methods, and supports the removal of invasive English cordgrass from the Fraser River estuary.	**EIS** 4.0 Project Description 4.4.2 Operation-phase Activities Appendix 7.2-B Aboriginal Groups Issues and Interests Table 9.7 Marine Water Quality 9.7.8 Future Conditions with the Project 11.0 Marine Vegetation

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
MNBC-17.3	Concerned that expansion of the terminal at Roberts Bank could interfere with other plant and animal life, for example by destroying beaches, reefs and eelgrass beds (e.g. the latter could interfere with herring spawning grounds).	11-Sep-2015, Letter from Métis Nation of Greater Victoria	**13-Oct-2015, Letter from the VFPA:** *"Information shared in your memo related to Métis Aboriginal rights and environmental concerns will be incorporated into the final [MSA] to be submitted to the [CEA Agency].* *[The VFPA] will provide a response to many of the specific concerns expressed in your letter in the [MSA].* **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS.	**Addressed in EIS Executive Summary:** The conclusion of the comprehensive environmental assessment conducted by the VFPA is that, after the implementation of mitigation, RBT2 is not expected to result in any significant adverse residual effects on any of the VCs assessed. In addition, no significant adverse cumulative effects are anticipated, with the exception of a significant cumulative effect to southern resident killer whales. Due to their endangered status and a lack of recovery of the population, the VFPA has assumed that southern resident killer whales have already been significantly adversely affected and therefore cumulative effects are expected to remain significant. As a result of extensive studies and assessment, the VFPA is confident potential adverse effects can be fully or partially avoided or reduced through Project design and the implementation of environmental management programs. Where Project-related effects cannot be fully avoided or reduced, offsetting measures, such as the creation and enhancement of habitat, will be applied. A robust monitoring and follow-up program will be implemented to assess the effectiveness of mitigation measures.	**EIS** Executive Summary 11.0 Marine Vegetation 12.0 Marine Invertebrate 13.0 Marine Fish 13.5.3.3 Pacific Herring 13.8.1 Residual Effect – Characterisation of Productivity Loss 14.0 Marine Mammals 15.0 Coastal Birds 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries 33.3 Construction Environmental Management Plans
MNBC-17.4	Expressed uncertainty about the prospect for the success of vegetation planted along the causeway noting poor soil. Suggested that the resources could be better used for another mitigation.	08-Oct-2014, Preliminary EIS Workshop #2	**08-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#124):** Notes that a vegetation buffer is no longer being considered: The use of a vegetation buffer along the causeway as a proposed mitigation measure for effects on daytime visual resources was excluded from further assessment after consideration of feedback received during consultation with Indigenous groups, as well as inter-disciplinary input on technical feasibility. It was concluded that a vegetation buffer would have limited, if any, effectiveness as mitigation for adverse effects on visual resources, and could result in a predation risk to shorebirds from raptors. Past experience with a vegetation buffer on the causeway have been unsuccessful due to soil conditions.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 25.0 Visual Resources 25.7 Mitigation Measures

Table 18: Mitigation for Marine Biophysical Valued Components (including Onsite Habitat Concepts)

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
MNBC-18.1	Referenced EIS, Section 15.5.6.2 Piscivorous Species and stated that there is no clear explanation as to where and how compensation will be employed for any of the impacts. Stated that there is just mention of compensation or mitigation serving to offset or alleviate impacts. Stated that at a minimum the reader could be addressed to section 33.0. Additional, compensation commitments should be referenced in sections 12, 13, and 17 where DP3 compensation is explained.	15-Jun-2015, Letter to the CEA Agency from Métis Nation British Columbia (CEAR Document #252)	**13-Oct-2015, Letter from the CEA Agency (CEAR Document #309):** *"The Agency did not request additional information for this item since there is already some information provided in the EIS. The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review.* *An offsetting plan is presented in Section 17: Mitigation for Marine Biophysical Valued Components."*	**Addressed in EIS Section 15.0:** Decreases to the productivity potential for waterfowl and diving birds are expected to be minor. Effects to waterfowl can be mitigated through the creation of eelgrass, mudflat, and intertidal marsh habitats. Effects to diving birds can be partially offset through the creation of onsite eelgrass and subtidal rock reef habitats, which would create habitat for their prey, which include mussels and other invertebrates. EIS Section 17.0 describes the mitigation framework for avoiding, reducing, or offsetting potential adverse effects to marine biophysical VCs. Proposed onsite habitat concepts, including for piscivorous bird species-supporting eelgrass and subtidal rock reef habitats, are presented in EIS Section 17.3.2.2.	**EIS** 15.0 Coastal Birds 15.5.6 Diving Birds 15.5.6.2 Piscivorous Species 17.0 Mitigation Framework For Marine Biophysical Valued Components 17.3.2.2 Onsite Habitat Concepts

Table 19: Outdoor Recreation – Valued Component

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
MNBC-19.1	Stated that there are a lot of fishers who use the area (Roberts Bank).	22-Jun-2016, Meeting with Métis Nation British Columbia	**22-Jun-2016, Meeting:** Stated that the VFPA could set up a meeting with a fish expert to answer questions. The VFPA followed-up with Métis Nation British Columbia and did not hear back. **03-Aug-2016, Issues Workshop:** Discussed key concerns raised by Indigenous groups—salmon, eulachon, crab, fisheries. The VFPA responded to Métis Nation British Columbia concerns related to impacts of light on fish, and other Indigenous groups raised concerns around the methodology of representative species, cumulative effects, geomorphology, and other matters.	**Addressed in EIS Sections 21.0 and 24.0:** Fishing at Roberts Bank is captured in EIS Sections 21.0 and 24.0. The Project is anticipated to result in a negligible effect to marine fish harvesting, guided sport fishing, and marine-based tourism. These negligible effects are related to changes in area, access, resource availability, and harvesting revenues. The Project is expected to result in a residual effect of changes to seafood harvesting area, harvest, and revenue. The residual effect is determined to be not significant, as Dungeness crab are known to move substantial distances to baited traps, and harvest activity can be moved to another open area. Other planned or reasonably foreseeable projects and activities would also displace crab harvesting, and this effect would combine with that of the Project to result in an incremental cumulative effect on commercial crab fishing. This adverse incremental cumulative effect is determined to be not significant. As noted in EIS Section 24.0, recreational crab harvesters that currently use the western side of the Roberts Bank terminals would be required to move to other areas. Following mitigation, the residual effect of displacement is determined to be negligible. The Project is not expected to result in measurable adverse residual effects to outdoor recreation. The Project is not expected to result in any incremental cumulative effects to outdoor recreation.	**EIS** 21.0 Marine Commercial Use 24.0 Outdoor Recreation

Table 20: Port Operations

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
MNBC-20.1	Asked about the process for changing ballast and regulations under Transport Canada, and how they enforce regulations. Referred to rats that showed up when the first terminal opened, noting Delta and the Lower Mainland are starting to have all sorts of rats from Europe now because they came in from containers.	07-Oct-2014, Preliminary EIS Workshop #1	**07-Oct-2014, Workshop:** Stated that ships have to exchange the ballast roughly 200 miles offshore. What was exchanged needs to be recorded in their log book, and they need to complete and file a form that is presented and submitted to the Canadian Coast Guard before they are allowed to come in and do a ballast exchange or discharge at the terminal. The process is governed by the *Transportation Act*. If they do not file the forms, they are more than likely prohibited from coming in and doing a ballast discharge. Stated that these questions would be best answered by Transport Canada. Stated that the process for RBT2 would be no different from what's being done out at Deltaport today, by the Canada Border Services Agency. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#100):** The VFPA was the first port in North America to prohibit in-port ballast water exchange without prior mid-ocean exchange, a practice which became the basis of government requirements now enforced by Transport Canada. To prevent the invasion of foreign species into local waters, international regulations, through the IMO, are managed by Transport Canada. All commercial deep sea vessels are required to carry out a ballast water exchange prior to entering Canadian waters. This is done outside the exclusive economic zone of 200 nautical miles and in water deeper than 2,000 metres. By requiring vessels to complete this ballast 'flush' well outside Canadian waters, the aim is to prevent any foreign organisms from entering into the local ecosystem. The U.S.A. has similar requirements, and vessels arriving from the Puget Sound area need to forward the completed U.S. forms to Canadian authorities prior to entry into Canadian waters. Import containers are generally not opened at the terminal. Canada Border Services Agency inspects the contents of a percentage of import containers off-terminal in Richmond, and in the future will be done at the facility on Tsawwassen First Nation land currently being developed. All ships use rat guards on their mooring lines to ensure that rats and other rodents do not crawl up or down the mooring lines between the ship and the wharf. The VFPA is a part of the B.C. Table 21: Potential Accidents or Malfunctions

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
MNBC-21.1	Asked whether the clean-up fund for an accident involving a container ship would be the same fund used for an accident involving an oil tanker.	07-Oct-2014, Preliminary EIS Workshop #1	**07-Oct-2014, Workshop:** Responded that she doesn't have information on the value of the fund.	**Addressed in EIS Appendix 7.2-B (#208):** Generally, the owner of the vessel from which the spill originates is responsible, in accordance with the *Marine Liability Act.*	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 30.0 Potential Accidents or Malfunctions
MNBC-21.2	Commented that they do not agree that there is no potential for Project interactions with oil tankers, as the terminal faces a shipping lane and oil tankers come up and down the coast.	07-Oct-2014, Preliminary EIS Workshop #1	**07-Oct-2014, Workshop:** Stated that none of the EIS scenarios involve a collision with an oil tanker, and the reason is that the spatial area for this assessment is ships travelling within VFPA jurisdiction, and the route for approaching container ships does not allow for interaction with oil tankers, within this assessment. Responded that the quantitative risk assessment takes a broader scope, and does look at that potential for interaction, but within this section of the EIS, it is narrowed down to plausible worst-case scenarios that are relevant to the scope of the assessment and Project, and in the VFPA's jurisdiction. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in MSA Section 10.3.2.2:** Collisions In-transit considers container ship collisions with tankers. As noted in the section, container ship-tanker collisions are calculated to have return periods of over 10,000 years and those for laden crude oil tankers even lower, due to the fact that only outbound crude oil tankers are expected to be laden with crude oil. A collision does not necessarily lead to a spill. Minimum return periods (at 95% confidence level) for a collision between RBT2-bound container ships and laden crude oil tankers that result in a crude oil spill are over 800,000 years. MSA Section 10.0 identified plausible worst-case scenarios to assess. The scenarios were selected based on the probability of events occurring (using ship incident data collected over several years) and the environmental consequences of those events. For the MSA, collisions and associated spills in the marine shipping area will have the highest probability of occurrence where the probability of an encounter between ships is highest, based on the relative risk of overtaking, head-on, and crossing encounters. The most likely encounter locations in the marine shipping area are near East Point on Saturna Island at the eastern entrance to Boundary Passage, and near Turn Point on Stuart Island at the entrance to Haro Strait at the southwest end of Boundary Passage. This area was selected as Plausible Accident or Malfunction #1.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 30.0 Potential Accidents or Malfunctions Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment Appendix B Tables **MSA** 10.0 Potential Accidents or Malfunctions 10.3.2.2 Collisions In-transit 10.3.3.1 Plausible Accident or Malfunction #1: Hard Grounding Resulting in a Spill

Table 22: Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Lands and Resources for Traditional Purposes

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
MNBC-22.1	Concerned that a Métis Nation British Columbia member who is also a commercial fisher would be displaced by the project footprint. Asked if the 19 people with commercial licences have been spoken to.	29-Oct-2014, Preliminary EIS Workshop #4	**29-Oct-2014, Workshop** Recorded comment for follow-up. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which includes EIS Section 21.0.	**Addressed in EIS Section 21.0:** As noted in EIS Section 21.0, it is anticipated that crab harvesting for FSC or Indigenous domestic purposes would continue in the current navigational closure and in an expanded navigational closure during Project construction and operation. Continued harvesting for FSC or Indigenous domestic purposes in a proposed navigational closure expansion could reduce the degree to which Dungeness crab are attracted toward commercial traps that are re-located from the closure expansion, and thereby affect the commercial harvest. This factor is, however, expected to have a minor effect at most as the level of FSC harvesting capacity and activity (and its associated number of baited traps) is much lower compared to commercial harvesting capacity and activity. **Addressed in response to IR7-34:** As noted in the VFPA's response to IR7-34, the VFPA is committed to continue working with DFO, commercial crab harvesters, and Indigenous groups to share information and provide opportunities for questions and discussion. A summary of consultation and engagement activities that have been undertaken post-EIS submission and are ongoing with Indigenous groups and regulatory agencies is provided in the response to IR7-34.	**EIS** 21.0 Marine Commercial Use **Information Requests** Response to Sufficiency Information Request #34 (IR7-34 of CEAR Document #1172)
MNBC-22.2	Asked whether the Métis will be included in the Current Use/ Aboriginal and Treaty Rights sections.	27-May-2014, Technical Working Group #3	**27-May-2014, Meeting:** Responded that the Métis will be included in the Current Use or Aboriginal and treaty rights sections. **02-Jul-2014:** Métis Nation British Columbia provided a TUS to the VFPA. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which includes EIS Section 32.0 on Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes.	**Addressed in EIS Section 32.0:** Métis have been included in Section 32.0 Current Use. Key sources relied upon to describe the asserted rights and Current Use of Métis in the vicinity of the Project were a Project-specific study, entitled Métis Use & Occupancy Study: Port Metro Vancouver Roberts Bank Terminal 2 Project (MNBC 2014).	**EIS** 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes
MNBC-22.3	Asked what is the Métis Use & Occupancy Study and does it only relate to the mainland.	11-Sep-2015, Letter from Métis Nation of Greater Victoria	**13-Oct-2015, Letter from the VFPA:** *"Métis Nation British Columbia is a more appropriate organisation to speak to this study, which was undertaken by Métis Nation British Columbia and provided to the VFPA in support of the environmental assessment for the RBT2 Project."*	**Additional information provided by VFPA:** The Metis Use and Occupancy Study for the proposed Project was completed by Métis Nation British Columbia and submitted to VFPA on 02-Jul-2014.	
MNBC-22.4	Asked what kinds of western or Indigenous science have been done around the project. Asked if such studies were publicly available. Asked what they say about the risks of the project, or about mitigation.	11-Sep-2015, Letter from Métis Nation of Greater Victoria	**13-Oct-2015, Letter from the VFPA:** *"The VFPA has submitted a comprehensive EIS for the Project to the CEA Agency and the B.C. Environmental Assessment Office. The EIS documents four years of extensive scientific study and consultation with regulators, Indigenous groups, local government, and the public to assess the potential environmental, economic, social,*		

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
			heritage, and health effects of the terminal's construction and operation."		
MNBC-22.5	Stated their harvesters are concerned with continuing to be able to harvest at Roberts Bank.	03-Nov-2017, Meeting with Métis Nation British Columbia	**03-Nov-2017, Meeting:** Recorded comment for consideration of the Project team.	**Addressed in EIS Appendix 7.2-B (#120):** In the marine commercial use assessment, a residual effect is considered significant when all of the following conditions are met: • The effect occurs to a known area of commercial marine-based activity or potential; • The effect displaces or excludes commercial marine-based activities from a known use area; • There are associated adverse harvest or revenue effects due to the displacement; and • The displaced commercial marine-based activity cannot move to known alternative activity areas due to regulatory reasons. The Project is expected to result in a residual effect of changes to seafood harvesting area, harvest, and revenue. This residual effect is determined to be not significant, however, as Dungeness crab are known to move substantial distances to baited traps, and harvest activity can be moved to another open area. The potential for an adverse effect related to changes in access to preferred Current Use locations for crab is discussed in EIS Section 32.2.6. With the implementation of mitigation measures (EIS Section 32.2.7), residual Project-related effects on Current Use are expected to be negligible (EIS Section 32.2.8).	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 21.0 Marine Commercial Use 21.7 Future Conditions with the Project – Potential Project-related Effects 21.10 Determination of Significance of Residual Adverse Effects Table 21-10 Summary of Determination of Significance of Residual Effects for Marine Commercial Use 24.0 Outdoor Recreation 24.6 Future Conditions with the Project – Potential Project-related Effects 32.2 Current Use of Lands and Resources for Traditional Purposes 32.2.6 Future Conditions with the Project – Potential Project-related Effects 32.2.7 Mitigation Measures 32.2.8 Characterisation of Residual Effects and Context
MNBC-22.6	Expressed that the Métis Nation British Columbia still occupy and use the area in and around the Project extensively for traditional activities. Identified harvest sites in the region surrounding the Project. Expressed that government-set hunting restrictions is the main obstacle to Métis harvesting food for themselves and their families. Indicated that there are numerous bird, mammal and aquatic species hunting sites for Métis harvesters around the Project and in the surrounding regions. Indicated that berries, food plants, medicinal or ceremonial plants, specialty wood, firewood, earth materials and drinking water are harvested around the Project site and in the surrounding regions.	16-Nov-2017, Letter to Panel from Métis Nation British Columbia (CEAR Document #1099)	The VFPA has reviewed the letter and provides the following additional information.	**Addressed in EIS Section 32.0:** Métis Nation British Columbia is included in the assessment of Current Use, EIS Section 32.0. **Addressed in EIS Appendix 7.2-B (#15):** Since January 2011, the VFPA has consulted with Indigenous groups regarding Project planning, components and activities, selection of VCs, the potential effects of the Project, proposed mitigation measures, and potential changes to the environment related to the Project. The VFPA also held technical workshops with Indigenous groups at which the VFPA and technical specialists engaged directly with members of Indigenous groups, discussing specific areas of Indigenous interest and reviewing related technical topics. The intent of the fall 2014 workshops, as described in EIS Section 7.2.2 and detailed in EIS Appendix 7.2-A, was to provide preliminary EIS results and proposed mitigations and obtain feedback in a simplified presentation and plain language format. Materials were provided to Indigenous groups approximately two weeks in advance of workshops, to provide time to read the material so that questions and comments could be raised in the workshops. The VFPA also	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 32.2 Current Use of Lands and Resources for Traditional Purposes 32.2.4.8 Métis Nation British Columbia **Information Requests** Response to Sufficiency Information Request #06 (IR10-06)

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
	Indicated that there are cabins, temporary overnight sites, Métis burial sites and other cultural sites in the regions surrounding the Project. Indicated that many more use and occupancy interviews are required to accurately represent the interests and activities of the Métis in the Project area.			provided an opportunity to provide further comment following the workshops. Most questions asked during consultation are addressed in EIS Appendix 7.2-B. Some questions, comments, and requests were addressed at the workshops or through follow-up communications. **Addressed in response to IR10-06:** The VFPA's response to IR10-06, as requested by the Review Panel, provides additional information concerning the rationale for the Current Use effects assessment conclusions.	

Table 23: Project Overview and Description

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
MNBC-23.1	Asked whether steel is going to be hanging in the water on the berth face, and if so, if it will be zinc-treated or electrified, like BC Ferries, to protect it from salt corrosion.	07-Oct-2014, Preliminary EIS Workshop #1	**07-Oct-2014, Workshop:** Responded that the berth face will not have steel exposed.		
MNBC-23.2	Asked whether there will be a boat ramp in the expanded tug basin for emergency haul-outs (like there used to be) for safety reasons.	07-Oct-2014, Preliminary EIS Workshop #1	**07-Oct-2014, Workshop:** Stated that the preliminary design does not include a boat ramp.	**Additional information provided by the VFPA:** The Project does not include a boat ramp.	
MNBC-23.3	Concerned with traffic on Deltaport Way to the South Fraser Perimeter Road and in particular, with safety on these roads.	23-May-2014, Meeting with Métis Nation British Columbia	**23-May-2014, Meeting:** Responded that expansion of Deltaport Way would fall under the Ministry of Transportation and Infrastructure's jurisdiction, and they would have to decide whether or not to expand. Committed to respond to Métis Nation British Columbia with information about why expansion of Deltaport Way is not within the scope of RBT2 and what collaboration is being done with the Ministry of Transportation and Infrastructure to address traffic congestion. Follow up on comment re: including a truck staging area. **07-Oct-2014, Preliminary EIS Workshop #1:** Provided more information on Gateway Transportation Collaboration Forum (GTCF). Provided information on the scope of the Project. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#216):** As defined in the *EIS Guidelines*, the scope of the Project includes marine, road, and rail transportation within the VFPA's jurisdiction. The scope of the assessment is the potential effects of the Project components and activities included within the scope of the Project wherever they occur, including effects that extend beyond the VFPA's jurisdiction. The scope of assessment is different for the various components being assessed, depending on the range of potential effects for each component. The effects of truck and train traffic beyond the Roberts Bank causeway is not within the scope of the environmental assessment as defined by the *EIS Guidelines*. However, incremental truck traffic travelling outside of VFPA jurisdiction, but within the assessment areas of various VCs is an activity considered in the assessment of cumulative effects. The federal *Railway Safety Act* promotes the safety and security of the public and personnel, and the protection of property and the environment, in railway operations within the legislative authority of the Canadian government.	**EIS** 2.0 Project Overview 2.2 Project Context 2.2.7 Roberts Bank as a Terminal Location Appendix 7.2-B Aboriginal Groups Issues and Interests Table 9.2 Air Quality 9.3 Noise and Vibration 20.0 Economic Development 23.0 Services and Infrastructure 27.0 Human Health 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Land and Resources for Traditional Purposes 33.0 Environmental Management Program 33.3 Construction Environmental Management Plan 33.3.7 Land and Marine Traffic Management Plan 35.0 Effects Assessment Summaries Table 35-2 Proposed Mitigation Measures and Commitments
MNBC-23.4	Asked why the northwest corner of the terminal has been rounded.	23-May-2014, Meeting with Métis Nation British Columbia	**23-May-2014, Meeting:** Stated that EIS Section 5.0 outlines that the preferred layout was optimised by rounding the northwest corner to minimise scour effects, and EIS Section 9.5 provides the analysis of coastal geomorphic processes of the optimised rounded corner design.	**Addressed in EIS Section 5.4.1.3:** The results of coastal geomorphic studies indicated that rounding the northwest corner of the terminal would have the greatest positive effect in terms of decreasing the areal extent of footprint-related effects (i.e., scour induced by flow acceleration around the west side of the terminal). Rounding the corner on a 120-m radius would reduce the scour area as compared to the square corner. The optimised configuration incorporated into the preliminary Project design is a 120-m radius rounded corner, as previously described in EIS Section 4.0 and as shown on EIS Figure 5-4.	**EIS** 5.0 Alternative Means of Carrying out the Project

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
			01-Apr-2015, Letter from the VFPA: Provided a copy of the EIS, which included EIS Section 5.0 on Alternative Means of Carrying out the Project.		
MNBC-23.5	Asked how long the VFPA expects the increase to 2.4 million TEUs of container traffic will be needed. Asked if the environmental assessment accommodates the full-scale expansion, or will further studies be required. Stated that without a better understanding of the scale of impact in a temporal context, there can be no clear indication of the appropriateness of the environmental assessment.	15-Jun-2015, Letter to the CEA Agency from Métis Nation British Columbia (CEAR Document #252)	**13-Oct-2015, Letter from the CEA Agency (CEAR Document #309):** *"The Agency did not request additional information for this item. The expansion that is planned is for an increased capacity of 2.4 M TEUs annually, not an annual increase of this amount. Put another way, the expansion will result in an annual capacity of 2.4 M TEUs, not an ongoing expansion."*	**Additional information provided by the VFPA:** EIS Section 2.2.5 further discusses independent container traffic forecasting. **Addressed in EIS Sections 4.0 and 6.1:** EIS Section 4.0 describes the scope of the proposed Project, including construction and operation activities. The information presented in the EIS and the MSA are intended to provide comprehensive information on potential Project-related changes to the environment, sufficient to permit a thorough evaluation of the environmental effects of the Project by the independent review panel (underway currently), pursuant to the *Canadian Environmental Assessment Act*, *2012* (*CEAA 2012*). EIS Section 6.1 presents federal powers, duties, or functions potentially to be exercised with respect to the Project, including the federal regulatory approvals potentially required for the project, in addition to the requirements under *CEAA 2012*. These may include: • DFO - Section 35 (*Fisheries Act*) Authorization for works, undertakings, and activities in or around water; • DFO - Agreement or Permit under section 73 of *Species at Risk Act* (*SARA)*, or under another enactment pursuant to section 74 or 77 of *SARA*, authorising an activity affecting southern resident killer whales or their critical habitat; and • VFPA - Project Permit pursuant to section 27 of the Port Authorities Operations Regulations (enabling act: *Canada Marine Act*). Additional study may be required as part of these potential additional requirements.	**EIS** 2.0 Project Overview 2.2.5 Current Canadian West Coast Container Traffic Forecasts 4.0 Project Description 6.0 Environmental Assessment and Permitting Process 6.1 Federal Involvement and Process
MNBC-23.6	Asked if there are any limits placed on the increase of particular goods, or does the project not discriminate based on the kinds of goods shipped. Asked if bitumen will be permitted to be shipped from the new terminal.	11-Sep-2015, Letter from Métis Nation of Greater Victoria	**13-Oct-2015, Letter from the VFPA:** *"The EIS and the MSA will provide details on regulations regarding the shipment of hazardous materials. There will not be limits placed on legally shipped goods. RBT2 is a container shipping terminal, and there are no plans to modify the Project to transport bitumen."* **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#6):** The proposed Project is a container terminal and does not include any coal-related elements. There are no plans to modify the Project to handle bulk oil or coal. **Additional information provided by the VFPA:** In 2017, the top ten container cargos accounting for approximately 73% of total inbound and outbound container cargo were household goods; lumber; woodpulp; specialty crops, construction, and materials; industrial, auto, and vehicle parts; basic metals; meat, fish, and poultry; and waste paper. **Addressed in MSA Appendix 5-B (#107):** Details on the types of hazardous materials shipped in containers are provided in EIS Appendix 30-A. Regulations for securing containers, and for the transport of dangerous goods, are set by the IMO: http://www.imo.org/en/About/Conventions/ListOfConventions/Pages/International-Convention-for-the-Safety-of-Life-at-Sea-(SOLAS),-1974.aspx The International Maritime Dangerous Goods Code is the international code that establishes where dangerous goods should be loaded on a ship. Some should be loaded below deck, others should be loaded on deck, some dangerous goods need to be separated by certain distances from other types of goods, and some dangerous goods need to be segregated in different holds from other goods. The implementation of the Code is mandatory under SOLAS and the International Convention for the Prevention of Pollution from Ships (MARPOL 73/78).	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table Appendix 30-A, Table B-4: Composition and Number of HNS Containers at Deltaport in 2012 (TSI 2013) **MSA** Appendix 5-B Aboriginal Issues and Interests

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
MNBC-23.7	Stated that it is understood that increased road access to the existing port has already been created. Asked if there was a separate assessment process for road development projects.	11-Sep-2015, Letter from Métis Nation of Greater Victoria	**13-Oct-2015, Letter from the VFPA:** *"Responded that this work was undertaken as part of the South Fraser Perimeter Road Project and was assessed under the British Columbia Environmental Assessment Act. More information on the South Fraser Perimeter Road Project can be found at the following link:* *https://a100.gov.bc.ca/appsdata/epic/html/deploy/epic_project_home_196.html."*	**Additional information provided by the VFPA:** Any new proposed road or rail improvements would be subject to applicable regulatory requirements and would be reviewed by applicable regulators at the time of application.
