				Project are not predicted, an assessment of future cumulative effects was not carried out.	
DFN-4.3	Stated that the following pathways of effects should be assessed: • Underwater ship noise; • Collisions with marine mammals; • Interference with Ditidaht marine activities – including specific shipping routes, typical transit times, typical size of ships, etc.; • Accidental discharge of hydrocarbons; and • Ship wake.	29-Jun-2015, Email	**24-Aug-2015, Letter:** *"With respect to the methodology for the assessment, we agree that we are required to assess the potential effects on specific valued components, consider the potential effects of those changes to the environment on aboriginal rights, and assess potential cumulative effects of marine shipping associated with the Project.* *The assessment of the potential effects of marine shipping associate with the Project will meet the direction provided by the Canadian Environmental Assessment Agency in the Updated Guidelines issued April 17, 2015, and as such it will include potential impacts on the components of the environment which Ditidaht First Nation have identified in the Preliminary Issues and Concerns, namely fish and fish habitat, marine mammals, marine vegetation and air quality. The Preliminary Issues and Concerns document identifies potential impacts to Ditidaht First Nation, including the ability to access traditional harvesting grounds, the quality of experience and ability to carry out traditional and spiritual practices and the health and wellbeing of community members. We very much welcome the opportunity to discuss such potential impacts of increased marine shipping with Ditidaht First Nation."* **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA.	**Additional information provided by the VFPA:** The MSA considers pathways of effects for all VCs. Included in the assessment is: underwater ship noise (MSA Section 7.6), the potential for collisions with marine mammals (MSA Section 8.2); interference with Ditidaht marine activities, including specific shipping routes, typical transit times, typical size of ships, etc. (included in MSA Section 9.2); accidental discharge of hydrocarbons (as a worst-case scenario in MSA Section 10.0); and ship wake (discussed in MSA Section 7.2).	**MSA** 7.2 Wave Environment 7.6 Underwater Noise 8.2 Marine Mammals 9.2 Marine Commercial Use 10.0 Accidents and Malfunctions
DFN-4.4	Requested that the VFPA provide results of environmental studies to Ditidaht in advance of filing the MSA, so that Ditidaht may comment on the VFPA's analysis before submittal. Stated that Ditidaht would like to see the MSA prior to its submission to the CEA Agency. Reiterated its concern about not seeing the draft report before it is submitted to the CEA Agency. Stated that 30 days is not sufficient to comment on MSA.	31-Jul-2015, Letter 08-Sep-2015, Meeting 18-Sep-2015, Letter	**31-Jul-2015:** Recorded comment for consideration by Project team. **08-Sep-2015, Meeting:** Stated that the VFPA will submit the report, followed by the 30-day comment period. Stated that the VFPA can meet with Ditidaht after the report is submitted to review results and mitigations. **27-Oct-2015, Email from the VFPA:** *"Comment that Ditidaht requires more than a 30-day comment period to review the Marine Shipping Addendum:* *I have passed your concerns and contact information to the CEA Agency so they may get in touch with you to discuss this comment. The contact at the Agency on this file [provided contact information]."*	**Addressed in MSA Appendix 5-B (#12):** The VFPA has engaged with Indigenous groups with the objective of obtaining the views of Indigenous groups on potential effects of changes to the environment on Indigenous peoples, and potential adverse impacts of the Project on potential or established Aboriginal or treaty rights. The VFPA has also provided the opportunity to review the summary of Current Use existing conditions information specific to Ditidaht First Nation prior to completing the assessment. The CEA Agency will provide Indigenous groups an opportunity to review the environmental studies following the submission of the MSA.	**MSA** 5.0 Aboriginal Groups Engagement and Consultation 5.1.2 Consultation Objectives Appendix 5-B Aboriginal Issues and Interests

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			09-Nov-2015, Letter from the VFPA: Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.		
DFN-4.5	Stated that the MSA only considers the impact of increased shipping from the RBT2 project and does not include cumulative effects and thus finds 'negligible' impacts. Stated that the VFPA does not provide clear rationales for its conclusions of 'negligible' impacts.	15-Dec-2015, Letter to the CEA Agency (CEAR Document #355)	**12-May-2016, Letter from the CEA Agency (CEAR Document #406):** *"The Agency requested additional information on [the VFPA's] assessment methodology in AIR #2 Rationale for Effects Characterization. In addition, we requested additional information on cumulative effects in AIR #6 Additional Projects to be Considered and AIR #7 Reasonably Foreseeable Projects and Activities.* *In addition, the Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in Responses to MSA IR-02.24.16-2, MSA IR-02.24.16-6, and MSA IR-02.24.16-7:** The VFPA's response to completeness-phase MSA IR-02.24.16-2 provides an explanation of which receptors, criteria, and thresholds were used to determine that the effects were not detectable or measurable, and therefore, negligible, and were used to determine that the effects were minor as compared to negligible, moderate, or high. The VFPA's response to completeness-phase MSA IR-02.24.16-6 discusses the exclusion of a specific project from the MSA cumulative effects assessment. The Woodfibre LNG Project was excluded from the prediction of future vessel traffic for the purposes of the MSA cumulative effects assessment as it was not considered to be a 'certain' or 'reasonably foreseeable' project at the time vessel predictions for the Project were undertaken. Projects and activities were included (for the purposes of the EIS cumulative effects assessment) if they were certain or reasonably foreseeable as of October 1, 2013 (as stated in EIS Section 8.1.9.1 and EIS Appendix 30-A, Appendix B). This 'cut-off' date was necessary, as the future vessel traffic predictions were required to be completed early in the development of the EIS, so that the predictions could inform relevant IC and VC effects assessments. As further noted in the response, at the time of the cut-off date of October 1, 2013, the Woodfibre LNG Project was a known project at a conceptual level, but had not yet entered a formal regulatory review process and remained uncertain; therefore, it was not included in the EIS vessel predictions or cumulative effects assessment. Since the cumulative effects assessment in the MSA relied on the vessel traffic predictions prepared for the EIS for the area of spatial overlap between the two assessments, it was necessary to maintain a consistent approach with respect to vessel traffic predictions and approach to assessing cumulative effects in this area. Thus, since the Woodfibre LNG Project was excluded from the assessment of incremental vessel traffic in the EIS (as described above), it was also excluded for the purposes of the MSA cumulative effects assessment. The VFPA's response to MSA IR-02.24.16-7 verifies that MSA Appendix 6-A reflects all the certain and reasonably foreseeable projects and activities that should be considered in the cumulative effects assessments for marine shipping associated with the Project and updates the list of projects and activities considered and the rationale for exclusion, where appropriate.	**EIS** 8.1.9.1 Identification of Other Certain and Reasonably Foreseeable Projects and Activities Appendix 30-A Quantitative Risk Assessment **MSA** Appendix 6-A Certain and Reasonably Foreseeable Projects and Associated Activities Considered in the Marine Shipping Cumulative Effects Assessments **Information Requests** Response to Additional Information Request #2 (MSA IR-02.24.16-2 of CEAR Document #386) Response to Additional Information Request #6 MSA IR-02.24.16-6 of CEAR Document #386) Response to Additional Information Request #7 (MSA IR-02.24.16-7 of CEAR Document #386)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
DFN-4.6	Stated that 2012 is set as the temporal boundary for existing conditions (MSA Section 6.2.2). Stated that the VFPA does not clearly explain how this baseline accounts for existing historical impacts on VCs, Ditidaht traditional use, and Ditidaht's Aboriginal rights, title, and culture. Stated that the VFPA should be required to analyse the Project's potential impacts from an earlier date that accounts for the effects Ditidaht included in its additional information shared with the VFPA.	15-Dec-2015, Letter to the CEA Agency (CEAR Document #355)	**12-May-2016, Letter from the CEA Agency (CEAR Document #406):** *"The Agency requested additional information on [the VFPA's] assessment methodology in AIR #2 Rationale for Effects Characterization.* *The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review.* *The Crown will be using the Review Panel process to the extent possible to collect information about potential impacts to the exercise of Ditidaht Nation's rights from marine shipping associated with the Project and we encourage you to provide your perspective on this topic to the Review Panel."*	**Addressed in Response to MSA IR-02.24.16-2:** The VFPA's response to completeness-phase MSA IR-02.24.16-2 provides an explanation of which receptors, criteria and thresholds were used to determine that the effects were not detectable or measurable, and therefore, negligible; and were used to determine that the effects were minor as compared to negligible, moderate or high. **Addressed in Response to IR10-13:** The VFPA's response to IR10-13, as requested by the Review Panel, provides additional information concerning the rationale for the effects assessment conclusions.	**Information Requests** Response to Additional Information Request #2 (MSA IR-02.24.16-2 of CEAR Document #386) Response to Sufficiency Information Request #13 (IR10-13)
DFN-4.7	Concerned with the completeness of the marine shipping cumulative effects assessment. Requested an effects assessment of maximum potential vessel traffic and taking into account marine traffic information that became available after the filing of the application.	28-Oct-2016, Letter to Panel (CEAR Document #636)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in Response to IR4-09:** In the VFPA's response to IR4-09, updated project status and vessel movement information is provided as available for the projects listed in the EIS and MSA (north of Segment B), plus other new projects considered to be certain or reasonably foreseeable (as of July 1, 2017).	**Information Requests** Response to Sufficiency Information Request #09 (IR4-09 of CEAR Document #1051)
DFN-4.8	Requested a cumulative effects assessment on Aboriginal rights and title prior to mitigation measures being applied and taking into account those project effects that have been excluded by the VFPA from the cumulative effects assessment.	28-Oct-2016, Letter to Panel (CEAR Document #636)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in Responses to IR10-13 to IR10-20:** The VFPA's responses to IR10-13 through IR10-20, as requested by the Review Panel, provide additional information concerning the rationale for the effects assessment conclusions in the MSA with regard to Current Use, in alignment with the mandate of the Review Panel (refer to CEAR Document #1137). As relayed to the VFPA by the CEA Agency (refer to CEAR Document #1137), the assessment of the seriousness of potential impacts on the exercise of Aboriginal rights and title from marine shipping associated with the Project is the responsibility of the Crown.	**Information Requests** Responses to Sufficiency Information Requests #13 to 20 (IR10-13 to IR10-20)
DFN-4.9	Requested inclusion and consideration of accidents and malfunctions in the cumulative effects assessment.	28-Oct-2016, Letter to Panel (CEAR Document #636)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 6.7:** *CEAA*, *2012*, s19(1)(a) requires an environmental assessment of a designated project to take into account "the environmental effects of the designated project, including the environmental effects of malfunctions or accidents that may occur in connection with the designated project and any cumulative environmental effects that are likely to result from the designated project in combination with other physical activities that have been or will be carried out". As accidents or malfunctions are not likely to occur, the effects arising from them, including cumulative effects, are also unlikely to occur. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans	**MSA** 6.7 Cumulative Effects Assessment **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				Protection Plan which includes information on the cumulative effects of marine shipping.	
DFN-4.10	Explain how Indigenous perspectives and traditional knowledge were incorporated into: • Significance determinations; • MSA Section 9.5.5.2 Potential Effects of Vessel Transit on Current Use; • MSA Section 10.5.6.1 Potential Interactions and Effects, Residual Effect #1 – Loss of Productivity from a Heavy Fuel Oil Spill [Marine Fish and Fish Habitat]; • MSA Section 9.2.5.1 Negligible Effects; and • The thresholds, measures and assessments in IR #10 – Cultural Heritage Assessment. Requested that this assessment be updated with a properly conducted cumulative effects assessment.	28-Oct-2016, Letter to Panel (CEAR Document #636)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 9.5:** MSA Section 9.5 considers Current Use, including intangible cultural heritage considerations, in the marine shipping area. The VFPA has provided detailed follow-up discussions of how the assessment of effects to cultural heritage, was undertaken in: • Response to IR-7.31.15-29; • Response to AIR-12.04.15-29; and • MSA IR-02.24.16-10. **Addressed in Response to IR10-02:** The VFPA's response to IR10-02, as requested by the Review Panel, provides further information concerning how available Indigenous knowledge was incorporated into the EIS and MSA.	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights **Information Requests** Response to Information Request #29 (IR-7.31.15-29 of CEAR Document #314) Response to Additional Information Request #29 (AIR-12.04.15-29 of CEAR Document #345) Response to Additional Information Request #10 (MSA IR-02.24.16-10 of CEAR Document #386) Response to Sufficiency Information Request #2 (IR10-02)
DFN-4.11	Stated that reliance on country foods does not figure sufficiently into assessment (IR #31 – Country Foods). Stated that once again, Indigenous issues are parsed into stand-alone sections, rather than integral to evaluation of project impacts.	28-Oct-2016, Letter to Panel (CEAR Document #636)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in Response to IR-7.31.15-31:** The response to IR-7.31.15-31 provided an explanation of how the assessments in the EIS were based on the best available sources of information related to food reliance, as relevant to the identified pathways of effects from the Project. The relevant pathways identified for the human health effects assessment (EIS Section 27.0) were the potential for consumption of contaminated shellfish, and potential effects on food security. AIR-12.04.15-31 (Appendix 31-A) further discusses all potentially-relevant information by Indigenous group, and considers reliance in terms of consumption of country foods as well as other related considerations, such as socio-economic considerations.	**EIS** 27.0 Human Health **Information Requests** Response to Information Request #31 (IR-7.31.15-31 of CEAR Document #314) Response to Additional Information Request #31 (AIR-12.04.15-31 of CEAR Document #345)
DFN-4.12	Requested that the VFPA account for marine resource use in and around Swiftsure Bank in effects assessments (MSA Section 7.5.2.1 Light Effects Assessment, Temporal and Spatial Boundaries).	28-Oct-2016, Letter to Panel (CEAR Document #636)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Appendix 5-B (#71):** Potential effects of marine shipping associated with the Project on marine fish and fish habitat are assessed in MSA Section 8.1. Potential effects on marine commercial use, including Indigenous fishing, are considered in MSA Section 9.2. The assessment of Current Use (MSA Section 9.5) describes how Current Use activities have been affected by other projects and activities that have been carried out and considers the effects of marine shipping associated with the Project in combination with the effects of other projects and activities (including marine shipping) that have been or will be carried out. **Addressed in MSA Section 7.5.2.1:** As noted in MSA Section 7.5.2.1, typical points of reception (PORs) include permanent or seasonal residences, hotels or motels, nursing or retirement homes, rental residences, hospitals, camp grounds, and buildings such as schools and places of worship, as well as light-sensitive locations such as urban star parks. The discrete PORs considered in this light	**MSA** Appendix 5-B Aboriginal Issues and Interests 7.5 Light 7.5.2.1 Temporal and Spatial Boundaries 9.2 Marine Commercial Use 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				assessment were selected in accordance with standard practice to be representative of the study area as a whole. **Additional information provided by the VFPA:** POR 25 (Juan de Fuca Provincial Park) is located in the western portion of Juan de Fuca Strait, though not in Ditidaht First Nation Traditional Territory.	
DFN-4.13	Stated that none of the Points of Reception (POR) selected are in western Juan de Fuca Strait or Ditidaht territory.	28-Oct-2016, Letter to Panel (CEAR Document #636)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 7.5.2.1:** As noted in MSA Section 7.5.2.1, typical PORs include permanent or seasonal residences, hotels or motels, nursing or retirement homes, rental residences, hospitals, camp grounds, and buildings such as schools and places of worship, as well as light-sensitive locations such as urban star parks. The discrete PORs considered in this light assessment were selected in accordance with standard practice to be representative of the study area as a whole. **Additional information provided by the VFPA:** POR 25 (Juan de Fuca Provincial Park) is located in the western portion of Juan de Fuca Strait, though not in Ditidaht First Nation Traditional Territory.	**MSA** 7.5 Light
DFN-4.14	Requested an update to the rationale for excluding water and sediment quality as an indicator in the assessment of effects of marine shipping on marine mammals (MSA IR #1 Indicators in the Assessment of Marine Mammals).	28-Oct-2016, Letter to Panel (CEAR Document #636)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in Response to MSA IR-02.24.16-1:** The VFPA has provided a rationale for excluding water and sediment quality as an indicator in the assessment of marine shipping on marine mammals. The assessment of marine mammals provided in the MSA did not include changes to water and sediment quality as an indicator because routine marine shipping associated with the Project is not anticipated to adversely affect water and sediment quality. Potential changes in water and sediment quality with the potential to affect marine mammals are anticipated during Project construction only and, therefore, this indicator was considered in EIS Section 14.6. As physical disturbances of the seabed, such as those proposed during Project construction, are not associated with marine shipping activities, routine marine shipping associated with the Project is not expected to adversely affect marine sediment or water quality, and therefore no potential interactions were identified. For more information, see MSA Section 7.3.1.	**EIS** 7.3.1 Water Quality 14.6 Marine Mammals **Information Requests** Response to Additional Information Request #1 (MSA IR-02.24.16-1 of CEAR Document #386)
DFN-4.15	With respect to the assessment of effects of the environment on marine shipping associated with the Project, requested clarification on which other environmental events besides extreme winds and waves were considered and how the International Maritime Organization (IMO) measures referred to account for these specific environmental conditions in and around Swiftsure Bank and Juan de Fuca Strait.	28-Oct-2016, Letter to Panel (CEAR Document #636)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** The MSA does not contain a stand-alone section considering effects of the environment as it relates to marine shipping associated with the Project. Ocean-going vessels are designed for and navigate regularly through challenging environmental conditions at sea (including extreme winds and waves). Although the *Updated Guidelines for the Preparation of an Environmental Impact Statement* (*Updated EIS Guidelines*) do not explicitly require separate consideration of the effects of the environment on transiting Project-associated vessels, environmental conditions were taken into consideration in the descriptions provided of the changes to the environment that may result from marine shipping associated with the Project. For example, tidal currents, especially near Race Rocks in Juan de	**MSA** 10.0 Potential Accidents and Malfunctions 10.4 Mitigation Measures Appendix 10-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				Fuca Strait, are considered (by the Pacific Pilotage Authority) to be large enough to influence deep sea vessel operations. The effects of extreme weather were also considered in the assessment of potential accidents and malfunctions. MSA Appendix 10-A notes severe weather is a contributor to potential foundering, but notes return periods of over 50,000 years, indicating an extremely unlikely event. Mitigation measures currently in place to address accidents and malfunctions in the marine shipping area are discussed in MSA Section 10.4.	
DFN-4.16	Stated that in regard to MSA IR #2 (Rationale for Effects Characterisation), the rationale supplied by the VFPA is insufficient because it does not explain how the categorisations used by the VFPA were determined without consideration of Ditidaht's understandings of risk and impact. Stated that the impacts of increased vessel traffic from other proposed and future projects must also be considered. Requested Indigenous thresholds and corresponding understandings of risk and impact that have been developed and validated with Indigenous communities.	28-Oct-2016, Letter to Panel (CEAR Document #636)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in Response to MSA IR-02.24.16-2:** MSA IR-02.24.16-2 provides an explanation of how potential effects and impacts were determined to be negligible or measurable in the MSA. The VFPA's engagement and consultation with Indigenous groups is described in MSA Section 5.0. **Additional information provided by the VFPA:** As noted in MSA Section 6.7, each assessment section in MSA Sections 7.0, 8.0, and 9.0 includes an assessment of potential additional future cumulative interactions between the residual effects anticipated for the VC (or residual changes for an IC), if any, and effects associated with additional marine shipping activity in the marine shipping area in 2030 related to reasonably foreseeable projects and activities. Projected future marine shipping traffic volumes are provided in MSA Table 4-7. These traffic volumes are associated with certain and reasonably foreseeable projects and activities listed in MSA Appendix 6-A. The significance determination for any residual cumulative effects is made using the same significance threshold as defined for the assessment of residual effects. Potential interactions with future certain or reasonably foreseeable marine-based projects are limited to increases in vessel traffic associated with those projects. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans Protection Plan which includes information on the cumulative effects of marine shipping.	**MSA** 4.0 Activity Description Table 4-7: 2030 Anticipated Movements by Vessel Type Through Segments A to D 5.0 Aboriginal Groups Engagement and Consultation 6.7 Cumulative Effects Assessment Appendix 6-A Certain and Reasonably Foreseeable Projects and Associated Activities Considered in the Marine Shipping Cumulative Effects Assessments 7.0 Physical Environment 8.0 Marine Biophysical Environment 9.0 Human Environment **Information Requests** Response to Additional Information Request #2 (MSA IR-02.24.16-2 of CEAR Document #386) **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**

Table 5: Engagement and Consultation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
DFN-5.1	Stated that the current capacity funding amounts the CEA Agency and the proponent have offered will not cover the costs of obtaining this information. Requested that additional funding be made available to Ditidaht for this purpose. Criticised the terms of the funding agreement provided by the VFPA and of the amount proposed. Stated that the VFPA's consultation with Ditidaht has occurred on a compressed timeline with limited funding.	29-May-2015, Letter to the CEA Agency (CEAR Document #197) 16-Jun-2015, Letter from Chief / 22-Jun-2015, Letter from JFK Law, Legal Counsel for Ditidaht First Nation (same letter) 15-Dec-2015, Letter to the CEA Agency (CEAR Document #355)	**26-May-2015, Letter from the VFPA:** Offered to provide funding to Ditidaht to support input into the assessment and review of Current Use information. **22-Jun-2015, Letter from the CEA Agency (CEAR Document #265):** *"Funding is available from the Agency's Participant Funding Program to provide limited financial assistance to Aboriginal groups and the public to help them prepare for and participate in key stages of the environmental assessment process. I understand that Ditidaht has submitted a funding application to the Agency for the Roberts Bank Terminal 2 environmental assessment."* **16-Jul-2015, Email from the VFPA:** Increased funding as requested by Ditidaht. **31-Jul-2015:** Ditidaht accepted the funding. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses. **12-May-2016, Letter from the CEA Agency (CEAR Document #406):** *"Thank you for your comment. The Agency encourages Vancouver Fraser Port Authority (formerly PMV) to continue to work with Ditidaht throughout the environmental assessment process and for any outcomes from your work together to be brought forward to the Panel."*	**Addressed in MSA Appendix 5-B (#8):** Concern is noted. The VFPA considers the amount of funding offered to be adequate and proportionate to the level of effort required by each Indigenous group to participate, given the scope of work. The VFPA increased the funding provided in some circumstances in response to specific requests.	**MSA** Appendix 5-B Aboriginal Issues and Interests
DFN-5.2	Concerned that 30-day comment period is not sufficient. [In reference to the CEA Agency's 30-day comment period on the MSA]	08-Sep-2015, Meeting	**08-Sep-2015, Meeting:** Committed to flagging this concern to the CEA Agency and suggested that Ditidaht speak directly to the CEA Agency about this matter. **27-Oct-2015, Email from the VFPA:** *"I have passed your concerns and contact information to the CEA Agency, so they may get in touch with you to discuss this comment. The contact at the CEA Agency on this file is Senior Policy Advisor, who can be reached at [contact information provided]."* **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in MSA Appendix 5-B (#16):** The VFPA advised the CEA Agency of this concern through MSA Appendix 5-B (#16).	**MSA** Appendix 5-B Aboriginal Issues and Interests
DFN-5.3	Interested in providing feedback with regards to mitigation measures on marine shipping.	08-Sep-2015, Meeting	**08-Sep-2015, Meeting:** Stated that the VFPA would request a meeting with the appropriate regulators. Stated that the VFPA would organise a follow-up meeting to discuss marine shipping results and mitigation with more specific information after the report is published. **18-Sept-2017, Letter from the VFPA:** *"The VFPA would like to further our understanding of the concerns raised by Ditidaht First Nation on Marine Shipping and work together to identify mitigations to potential impacts, where possible. The goal for this meeting is twofold:* *1. To develop a more fulsome understanding of the specific concerns raised by Ditidaht First Nation related to Marine Shipping.* *2. To develop, where possible, solutions to the concerns you raised. The VFPA is specifically interested in discussing what measures could be taken to address Ditidaht First Nation's concerns.* *The VFPA looks forward to learning more about Ditidaht First Nation's concerns and to working collaboratively to address these concerns regarding Marine Shipping.*	**Additional information provided by the VFPA:** Beyond the mitigation measures suggested in the EIS and MSA, the VFPA encourages Indigenous groups participating in the RBT2 environmental assessment to suggest specific mitigation measures for consideration.	

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			[Indigenous Affairs Advisor] will be in contact in the coming week to follow-up and arrange a meeting with Ditidaht First Nation." **23-Oct-2017, Meeting:** The VFPA met with Ditidaht First Nation and Pacheedaht First Nation along with representatives from the Canadian Environmental Assessment Agency, the BC Environmental Assessment Office, and the Canadian Coast Guard. In this meeting, Ditidaht First Nation and Pacheedaht First Nation expressed concerns around the location of the shipping lanes, vessel traffic around Swiftsure Bank, cumulative effects, and communications with Coast Guard. Discussions are ongoing.		

Table 6: Environmental Assessment and Permitting Process

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
DFN-6.1	Requested that the Draft Review Panel Terms of Reference explicitly include consideration of adverse impacts from the increase in marine traffic, and cumulative impacts to Aboriginal and treaty rights related.	22-Sep-2014, Letter to the CEA Agency (CEAR Document #125)	**17-Apr-2015, Letter from the CEA Agency (CEAR Document #279):** *"The Minister announced today that the Terms of Reference for the Review Panel assessing the proposed Roberts Bank Terminal 2 have been finalized. Based on feedback received during the comment period on the draft Terms of Reference, the Minister has identified two additional matters to be taken into account in the environmental assessment, [including] the potential effects on the environment of container ships coming and going from the proposed terminal through Juan de Fuca Strait and the Strait of Georgia. This is referred to as "the environmental effects of marine shipping associated with the project which is beyond the care and control of the proponent and within the 12 nautical mile limit of Canada's territorial sea. Consideration includes the environmental effects of malfunctions or accidents and any cumulative environmental effects, the significance of those effects, suggested mitigation measures and the possible requirements of any follow-up program that may be required."*		
DFN-6.2	Requested that the CEA Agency confirm: 1. The permits or approvals required for the marine shipping associated with the Project; 2. The federal department(s) responsible for assessing the environmental effects of the marine shipping associated with the Project and determining whether they are "significant"; 3. The decision maker's authority to address the marine shipping environmental effects; i.e., will the decision maker be able to impose conditions on the proponent? 4. How the information Ditidaht provides during the [environmental assessment] process will be considered, by whom, and when; and 5. The party ultimately responsible for consulting with Ditidaht about the Project's potential to adversely effect [*sic*] Ditidaht's rights and culture. Stated that if Canada intends to rely on the environmental assessment process to obtain information about the Project's potential adverse effects on Ditidaht's rights, it is essential such information is gathered from a rights-based perspective and that Ditidaht has an opportunity to identify key VCs and provide input into how the Nation's indigenous knowledge is incorporated into the final EIS.	29-May-2015, Letter to the CEA Agency (CEAR Document #197)	**22-Jun-2015, Letter from the CEA Agency (CEAR Document #265):** *"In response to the list of questions that you ask on behalf of Ditidaht First Nation, please consider:* *1. The permits or approvals required for the marine shipping associated with the Project will be identified as part of the environmental assessment.* *2. The Review Panel will be responsible for assessing the potential effects of marine shipping associated with the Project. The Minister of the Environment will determine whether the Project components under the care and control of the proponent are likely to cause significant adverse environmental effects. Marine shipping beyond the Port's care and control is a regulated activity within the jurisdiction of the federal government and inclusion of this matter in the environmental assessment will provide federal regulators such as Transport Canada with information on the potential effects of increased shipping associated with the Project to help inform programs and activities within federal jurisdiction.* *3. Under section 53 of* CEAA 2012*, the Minister has the authority to establish legally enforceable conditions in relation to the environmental effects of the designated project with which [the VFPA] must comply. Although marine shipping beyond the Port's care and control is not a component of the designated project, federal regulators such as Transport Canada will use the information collected in the environmental assessment as noted, above.* *4. Ditidaht First Nation will have an opportunity to provide comments to the Canadian Environmental Assessment Agency (the Agency) on the completeness of the marine addendum to the Environmental Impact Statement that will be submitted by the proponent, including the requirement of the Environmental Impact Statement Guidelines to consider Aboriginal traditional knowledge.* *Further, when the Review Panel is appointed, it will conduct a comment period during which review participants including the Ditidaht can provide their views on the sufficiency and technical merit of the environmental impact statement. When the Panel determines that it has sufficient information to do so, it will hold a public hearing in a manner that offers all interested parties an opportunity to participate.* *For the last phase of the environmental assessment, following submission of the Panel report and prior to the Minister's decision on the Project, the*		

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			Agency will consult on the potential conditions related to the Project should it be allowed to proceed. *Note that all of the information submitted or generated throughout the environmental assessment will be considered by the Review Panel in the preparation of its report and in the Panel's conclusions and recommendations to the government as part of that report.* *5. The federal government is responsible for ensuring that the duty to consult is met regarding the potential impacts of the Project on Ditidaht First Nation's potential or established Aboriginal or Treaty rights. As indicated in our letter of April 17, 2015 to Ditidaht First Nation, the federal government will rely on the environmental assessment process to the extent possible to collect information on potential impacts of any increased marine shipping associated with the Project on the exercise of the potential or established Aboriginal or Treaty rights.* *The Agency is leading the coordination of consultation for this environmental assessment of the Project on behalf of the whole of government. Further information regarding the consultation approach the federal government has proposed is included in attachment #3 of our April 17, 2015 letter to Ditidaht. The Crown Consultation Coordinators for the Project are also available to meet with Ditidaht First Nation at any time to discuss the [environmental assessment] and consultation process."*		
DFN-6.3	Concerned that the marine shipping report is only in the VFPA's jurisdiction.	08-Sep-2015, Meeting	**08-Sep-2015, Meeting:** Explained the scope of the MSA. Stated that at a next meeting, the VFPA could arrange to have all parties at a meeting together to discuss (Transport Canada, Western Canada Marine Response Corporation (WCMRC), etc.). **27-Oct-2015, Email from the VFPA:** *"Request to have all relevant parties (WCMRC, Transport Canada, etc.) present at future meetings: I have passed your concerns and contact information to Transport Canada, so they may get in touch with you to discuss this request. The contact at [Transport Canada] on this file is [provided contact information]. I will also continue to raise this request with [Transport Canada]."* **23-Oct-2017, Meeting:** The VFPA met with Ditidaht First Nation and Pacheedaht First Nation along with representatives from the Canadian Environmental Assessment Agency, the BC Environmental Assessment Office, and the Canadian Coast Guard. Questions and concerns outside of the VPFA's jurisdiction (international shipping lanes, the Oceans Protection Plan, and communications with Coast Guard) were presented to the responsible agency.	**Addressed in MSA Section 1.0:** As directed by the CEA Agency in the *Updated EIS Guidelines*, this report is an assessment of the potential effects of marine shipping associated with the Project. This assessment is provided as a supplemental to the EIS (March 2015). The *EIS Guidelines* specified the scope of RBT2, which included marine traffic within the VFPA's jurisdiction. The *Updated EIS Guidelines* require consideration of marine shipping outside the VFPA's jurisdiction (beyond the VFPA's care and control) to the 12 nautical mile limit of the Canadian territorial sea, which is outside of VFPA jurisdiction. This report refers to this area as the marine shipping area (MSA Figure 1-1).	**MSA** 1.0 Purpose of the MSA ***Updated Guidelines for the Preparation of an Environmental Impact Statement* (CEAR Document #177)**

Table 7: Environmental Management Program

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
DFN-7.1	Stated that there is insufficient information regarding monitoring and mitigation measures regarding marine shipping effects on the environment and on Indigenous interests (and a corresponding gap in information pertaining to jurisdictional issues regarding the development and enforcement of these issues).	28-Oct-2016, Letter to Panel (CEAR Document #636)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 11.0:** Consideration has been given to the need for and scope of follow-up to verify predicted effects related to marine shipping associated with the Project in the marine shipping area, as described in MSA Section 11.0. With respect to follow-up programs to verify predicted effects, these are generally proposed to address uncertainty, such as any gaps in knowledge or understanding related to key conclusions (as noted in EIS Section 8.1.10). This assessment has assigned moderate or high levels of confidence ratings to the residual effect predictions based on the following: • Robust comprehension of marine shipping in the marine shipping area, including vessel activities associated with RBT2; • Considerable scientific information concerning existing VCs; • A strong understanding of how Project-associated activities interact with VCs; • Appreciable knowledge of how the VC would respond to Project-associated marine shipping activities; and • Proven and established assessment methods. Because confidence in the residual effect predictions is moderate to high, no follow-up programs are suggested specifically related to the predicted effects of marine shipping associated with the Project in the MSA. With respect to follow-up programs to monitor the effectiveness of mitigation, mitigation measures are suggested only for Current Use (MSA Section 9.5). The mitigation measures suggested in MSA Section 9.5.6 address a potentially minor, possibly even unmeasurable, incremental effect on Current Use access and associated Current Use experience resulting from Project-associated shipping activities. Given the effect would be minor, may not be measurable, and confidence in the effectiveness of the mitigation (if applied) is high, a follow-up program is not suggested.	**MSA** 9.5.6 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights, Suggested Mitigation Measures 11.0 Follow-Up Program
DFN-7.2	Provide more clarity on the marine shipping mitigation measures proposed in the MSA and responses to information requests, including, at a minimum: a. What specific measures the VFPA has proposed in relation to Ditidaht territory, including Swiftsure Bank; b. More detail on the how the measures will mitigate potential adverse impacts to Aboriginal rights and title with respect to marine shipping and shipping lane location; c. How the measures will be monitored and enforced, including by whom; d. What mechanisms are in place or will be developed to monitor and compel compliance with relevant regulations; and e. What enhancement measures the VFPA proposes to address the deficiencies in the capabilities of WCMRC for responding to an emergency in and around Ditidaht territory and the VFPA's plan to implement those changes.	28-Oct-2016, Letter to Panel (CEAR Document #636)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in Responses to IR10-17 to IR10-19:** The VFPA's responses to IR10-17, IR10-18, and IR10-19, as requested by the Review Panel, provide further information concerning mitigation measures related to the marine shipping area.	**Information Requests** Response to Sufficiency Information Requests #17 to #19 (IR10-17 to IR10-19)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
DFN-7.3	Given that many of the VFPA's mitigation measures rely on third parties or are otherwise outside of the VFPA's control, requested an effects assessment that does not take into consideration any of those marine shipping mitigation measures that the VFPA cannot guarantee or control.	28-Oct-2016, Letter to Panel (CEAR Document #636)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in Response to IR10-17:** The VFPA's response to IR10-17, as requested by the Review Panel, provides further information concerning mitigation measures related to the Marine Shipping Area.	**Information Requests** Response to Sufficiency Information Request #17 (IR10-17)

Table 8: Human Health – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
DFN-8.1	Requested an assessment that considers holistic understanding of health and wellbeing, including relationship to lands and waters. Requested that this section (9.1.4.1) be updated to include Nuu-chah-nulth peoples. Stated that the MSA's assessment of human health privileges biophysical factors.	28-Oct-2016, Letter to Panel (CEAR Document #636)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 9.1 and MSA Executive Summary:** An assessment of potential effects of Project-associated marine vessel traffic on human health was conducted, focusing on exposure to air emissions from vessel transit activities, and on exposure to atmospheric noise from vessel transit activities. The health of communities in the LAA is generally good and comparable to provincial and national averages. The health of some Indigenous communities may diverge from that of the general population, in that the incidence of some illnesses is higher. This may make the health of Indigenous communities less resilient than that of non-Indigenous communities to future changes that affect environmental quality or social determinants of health. All potential incremental health effects related to routine Project-associated vessel transit activities that increase air and noise emissions were determined to be negligible because predicted changes are below thresholds for human health effects. Cumulative changes in air quality and noise due to Project-associated marine shipping, in combination with other existing and future marine shipping, are also not expected to result in any measurable human health effects. This finding applies to both Indigenous and non-Indigenous groups.	**MSA** Executive Summary 9.1 Human Health

Table 9: Marine Mammals – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
DFN-9.1	Concerned that marine shipping could potentially affect marine mammals, particularly in the vicinity of Swiftsure Bank, including their habitat, feeding grounds, breeding grounds, and migration patterns.	16-Jun-2015, Letter from Chief / 22-Jun-2015, Letter from JFK Law, Legal Counsel for Ditidaht First Nation (same letter) 31-Jul-2015, Letter 24-Aug-2015, Preliminary Issues and Concerns Regarding Port Metro Vancouver's Roberts Bank Terminal 2 Project	**24-Aug-2015, Letter from the VFPA:** *"The assessment of the potential effects of marine shipping associated with the Project will meet the direction provided by the Canadian Environmental Assessment Agency in the* Updated Guidelines *issued April 17, 2015, and as such it will include potential impacts on the components of the environment which Ditidaht First Nation have identified in the Preliminary Issues and Concerns, namely fish and fish habitat, marine mammals, marine vegetation and air quality. The Preliminary Issues and Concerns document identifies potential impacts to Ditidaht First Nation, including the ability to access traditional harvesting grounds, the quality of experience and ability to carry out traditional and spiritual practices and the health and wellbeing of community members. We very much welcome the opportunity to discuss such potential impacts of increased marine shipping with Ditidaht First Nation."* **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in MSA Section 8.2:** Potential effects on marine mammals related to incremental Project-associated vessel transit activities include behavioural disturbance and acoustic masking due to changes to the acoustic environment and physical disturbance from vessel strikes. These effects are expected to not be significant for marine mammals. Incremental marine shipping associated with the Project is not anticipated to have an adverse effect on either southern resident killer whales or North Pacific humpback whale critical habitat features when needed for life functions, or on the survival or recovery of southern resident killer whales, North Pacific humpback whales, or Steller sea lions. Cumulative effects are expected to be not significant for seals, sea lions, baleen whales, and toothed whales, other than southern resident killer whales. The VFPA has assumed that past activities and projects, including those described in the recovery strategy issued by Fisheries and Oceans Canada (DFO), have had a significant adverse effect on southern resident killer whales. As such, Project-associated vessel activity, in combination with existing and future vessel activity, is expected to continue to result in a significant cumulative effect to southern resident killer whales. **Addressed in Responses to IR5-41 and IR5-47:** The VFPA's responses to IR5-41 and IR5-47 further discuss marine mammal strike risk and potential underwater noise effects to southern resident killer whales at Swiftsure Bank, specifically. The overall effects assessment conclusions presented in the MSA remain the same. **Additional information from the VFPA:** In 2014, the VFPA-led Enhancing Cetacean Habitat and Observation (ECHO) Program was developed as a collaborative initiative aimed at better understanding and managing the impact of shipping activities on at-risk whales throughout the southern coast of B.C. The VFPA-led ECHO Program engages and involves key regional interested parties to maximise program success and help ensure that mitigation and management measures developed through the program are informed by social, cultural, economic, and environmental sustainability interests. The ECHO Program is guided by the advice and input of an advisory working group, and supported by a federal government advisory committee and associated technical committees. Through engagement and consultation with stakeholders, the ECHO Program has initiated or supported short-term projects, scientific studies, and educational initiatives to fill knowledge gaps necessary to inform the development of credible, science-based threat reduction solutions and management options to reduce cumulative effects of shipping to at-risk whales in the region.	**MSA** 8.2 Marine Mammals **Information Requests** Response to Sufficiency Information Request #41 (IR5-41 of CEAR Document #1159) Response to Sufficiency Information Request #47 (IR5-47 of CEAR Document #1145)

Table 10: Marine Shipping Addendum

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
DFN-10.1	Concerned that marine shipping could potentially affect fish habitat, migration patterns, or schooling behaviours, particularly in the vicinity of Swiftsure Bank, which is a critically important harvesting area for Ditidaht. Concerned that traffic, increased ship size, and wakes and waves will affect where the fish school and fish habitat and will affect where Ditidaht fishers are able to set their gear.	16-Jun-2015, Letter from Chief / 22-Jun-2015, Letter from JFK Law, Legal Counsel for Ditidaht First Nation 29-Jun-2015, Email 31-Jul-2015, Letter 24-Aug-2015, Preliminary Issues and Concerns Regarding Port Metro Vancouver's Roberts Bank Terminal 2 Project	**24-Aug-2015, Letter from the VFPA:** *"The assessment of the potential effects of marine shipping associate with the Project will meet the direction provided by the Canadian Environmental Assessment Agency in the* Updated Guidelines *issued April 17, 2015, and as such it will include potential impacts on the components of the environment which Ditidaht First Nation have identified in the Preliminary Issues and Concerns, namely fish and fish habitat, marine mammals, marine vegetation and air quality. The Preliminary Issues and Concerns document identifies potential impacts to Ditidaht First Nation, including the ability to access traditional harvesting grounds, the quality of experience and ability to carry out traditional and spiritual practices and the health and wellbeing of community members. We very much welcome the opportunity to discuss such potential impacts of increased marine shipping with Ditidaht First Nation."* **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in MSA Appendix 5-B (#42):** Potential effects of marine shipping associated with the Project, including increased traffic and associated wake waves on marine fish and fish habitat, are assessed in MSA Section 8.1. **Addressed in MSA Section 8.1.6.1:** Available data suggest that predicted wake wave heights arriving at shorelines within the LAA are well within the range of natural wave conditions, and are not distinguishable from the spectrum of wind-generated waves, except in non-calm conditions. Therefore, regardless of increased frequency of wake-related waves, any disturbance to marine fish and fish habitat will not be distinguishable from existing conditions and, consequently, is considered to be negligible. Effects of underwater noise are considered negligible for marine fish and fish habitat because i) RBT2-associated shipping represents a minimal increase over existing conditions (i.e., 520 additional container ship movements per year); ii) modelled cumulative incremental changes in sound, which includes all new projects plus RBT2-associated vessel traffic, is slight (i.e., 0.08 and 0.06 dB re 1 µPa increase over existing conditions in January and July, respectively); iii) vessel noise is not impulsive and will not cause injury or mortality to marine fish; and iv) vessel noise will not reach the behavioural avoidance threshold (i.e., 90 dBht) for Pacific salmon and will only exceed 90 dBht for Pacific herring within the immediate vicinity of the vessel (i.e., within 20 m of the vessel) and for short durations (i.e., as the ship passes). As routine marine shipping associated with the Project is not expected to result in any measurable change in marine fish or fish habitat, no mitigation measures are suggested.	**MSA** Appendix 5-B Aboriginal Issues and Interests 8.1 Marine Fish and Fish Habitat 8.1.5.3 Intertidal Habitat 8.1.6 Potential Interactions and Effects 8.1.6.1 Negligible Effects ***Updated EIS Guidelines***
DFN-10.2	Concerned that air contaminants associated with marine shipping could affect Ditidaht fishers in carrying out their fishing activities or travelling throughout their traditional territory.	16-Jun-2015, Letter from Chief / 22-Jun-2015, Letter from JFK Law, Legal Counsel for Ditidaht First Nation (same letter)	**24-Aug-2015, Letter from the VFPA:** *"The assessment of the potential effects of marine shipping associate with the Project will meet the direction provided by the Canadian Environmental Assessment Agency in the* Updated Guidelines *issued April 17, 2015, and as such it will include potential impacts on the components of the environment which Ditidaht First Nation have identified in the Preliminary Issues and Concerns, namely fish and fish habitat, marine mammals, marine vegetation and air quality. The Preliminary Issues and Concerns document identifies potential impacts to Ditidaht First Nation, including the ability to access traditional harvesting grounds, the quality of experience and ability to carry out traditional and spiritual practices and the health and wellbeing of community members. We very much welcome the opportunity to discuss such potential impacts of increased marine shipping with Ditidaht First Nation."* **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in MSA Section 9.1:** All potential incremental health effects related to routine Project-associated vessel transit activities that increase air and noise emissions were determined to be negligible because predicted changes are below thresholds for human health effects. Cumulative changes in air quality and noise due to Project-associated marine shipping, in combination with other existing and future marine shipping, are also not expected to result in any measurable human health effects. This finding applies to both Indigenous and non-Indigenous groups.	**MSA** 9.1 Human Health

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
DFN-10.3	Concerned that marine shipping could potentially affect Ditidaht's ability to access traditional harvesting grounds, such as Swiftsure Bank and traditional fishing sites near Carmanah and Bonilla Point. Concerned that marine shipping could potentially affect the ability of Ditidaht fishers to carry out their fishing rights. Requested that the VFPA take into account in its marine shipping assessment the effect of increased marine traffic on the ability of Ditidaht to practice marine harvesting (including fishing) rights.	16-Jun-2015, Letter from Chief / 22-Jun-2015, Letter from JFK Law, Legal Counsel for Ditidaht First Nation (same letter) 29-Jun-2015, Email 31-Jul-2015, Letter	**24-Aug-2015, Letter from the VFPA:** *"The assessment of the potential effects of marine shipping associated with the Project will meet the direction provided by the Canadian Environmental Assessment Agency in the* Updated Guidelines *issued April 17, 2015, and as such it will include potential impacts on the components of the environment which Ditidaht First Nation have identified in the Preliminary Issues and Concerns, namely fish and fish habitat, marine mammals, marine vegetation and air quality. The Preliminary Issues and Concerns document identifies potential impacts to Ditidaht First Nation, including the ability to access traditional harvesting grounds, the quality of experience and ability to carry out traditional and spiritual practices and the health and wellbeing of community members. We very much welcome the opportunity to discuss such potential impacts of increased marine shipping with Ditidaht First Nation."*	**Addressed in MSA Section 9.5:** Potential effects on Current Use as a result of Project-associated vessel transit activities are considered negligible before mitigation for access to preferred Current Use locations, due to Project-associated ship wake, the availability and quality of preferred Current Use resources, and the quality of the Current Use experience (i.e., cultural practices) tied to those aspects of Current Use. Residual effects on access to preferred Current Use locations due to Project-associated container ship pass-bys, and on cultural practices tied to that aspect of Current Use, are considered negligible after the implementation of mitigation, including development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location. Considering the conclusions of the Current Use assessment, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the marine shipping area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. As noted above, suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location. These mitigation measures for addressing potential incremental effects on Current Use are expected to also be effective at addressing the potential incremental impact to the exercise of Aboriginal and treaty rights. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans Protection Plan which includes information on the *Enhanced Maritime Situational Awareness and Proactive Vessel Management* initiative as well as information on the sharing of information of marine traffic with coastal communities.	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes, and Aboriginal and Treaty Rights **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**
DFN-10.4	Concerned that marine shipping could potentially affect Ditidaht community members' ability to pass on Indigenous Knowledge to the next generation, including (but not limited to) the limiting of access to significant or preferred locations or limiting the use of particular techniques or traditional modes of transportation due to nearby traffic. Concerned that marine shipping could potentially affect Ditidaht's ability to use preferred maritime travel routes and traditional	16-Jun-2015, Letter from Chief / 22-Jun-2015, Letter from JFK Law, Legal Counsel for Ditidaht First Nation (same letter) 31-Jul-2015, Letter 24-Aug-2015, Preliminary Issues and Concerns Regarding Port Metro Vancouver's Roberts Bank Terminal 2 Project	**24-Aug-2015, Letter from the VFPA:** *"The assessment of the potential effects of marine shipping associated with the Project will meet the direction provided by the Canadian Environmental Assessment Agency in the* Updated Guidelines *issued April 17, 2015, and as such it will include potential impacts on the components of the environment which Ditidaht First Nation have identified in the Preliminary Issues and Concerns, namely fish and fish habitat, marine mammals, marine vegetation and air quality. The Preliminary Issues and Concerns document identifies potential impacts to Ditidaht First Nation, including the ability to access traditional harvesting grounds, the quality of experience and ability to carry out traditional and spiritual practices and the health and wellbeing of community members. We very much welcome the opportunity to discuss such potential impacts*	**Addressed in MSA Appendix 5-B (#68):** The assessment of Current Use (MSA Section 9.5) considers cultural practices, such as use of travel routes and the use of waterways. MSA Section 9.5 includes an assessment of several aspects related to cultural practices, including potential changes to the following: access to preferred Current Use locations and quality of Current Use experience. **Addressed in MSA Section 9.5:** Potential effects on Current Use as a result of Project-associated vessel transit activities are considered negligible before mitigation for access to preferred Current Use locations, due to Project-associated ship wake, the availability and quality of preferred Current Use resources, and the quality of the Current Use experience (i.e., cultural practices) tied to those aspects of Current Use. Residual effects on access to preferred Current Use locations due to Project-associated container ship pass-bys, and on cultural practices tied to that aspect of Current Use, are considered negligible after the implementation of mitigation, including development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location.	**MSA** Appendix 5-B Aboriginal Issues and Interests 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4 Existing Conditions 9.5.5 Potential Interactions and Effects 9.5.5.2 Potential Effects of Vessel Transit on Current Use **Information Requests** Response to Sufficiency Information Request #15 (IR10-15)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	forms of transportation such as dugout canoes.		*of increased marine shipping with Ditidaht First Nation."* **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in Response to IR10-15:** The VFPA's response to IR10-15, as requested by the Review Panel, further discusses potential effects to the quality of the Current Use experience resulting from marine shipping associated with the project.	
DFN-10.5	Concerned that marine shipping could potentially affect Ditidaht's ability to carry out traditional and spiritual practices in its traditional territory, including visual or auditory disturbances during spiritual practices or in the transfer of knowledge to younger generations.	16-Jun-2015, Letter from Chief / 22-Jun-2015, Letter from JFK Law, Legal Counsel for Ditidaht First Nation (same letter) 31-Jul-2015, Letter 24-Aug-2015, Preliminary Issues and Concerns Regarding Port Metro Vancouver's Roberts Bank Terminal 2 Project	**09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in MSA Appendix 5-B (#83):** The assessment of Current Use (MSA Section 9.5) includes cultural considerations, such as cultural practices and sites of importance, as well as intangible cultural heritage considerations, such as the expression of cultural values or ways of knowing, and the formation and maintenance of cultural identity, in the assessment of quality of Current Use experience. The assessment describes how Current Use activities have been affected cumulatively by other projects and activities that have been carried out. As residual effects to Current Use as a result of marine shipping associated with the Project are not predicted, an assessment of future cumulative effects was not carried out. The assessment of potential adverse impacts on asserted or established Aboriginal and treaty rights is included in MSA Section 9.5. **Addressed in MSA Section 9.5:** Potential effects on Current Use as a result of Project-associated vessel transit activities are considered negligible before mitigation for access to preferred Current Use locations, due to Project-associated ship wake, the availability and quality of preferred Current Use resources, and the quality of the Current Use experience (i.e., cultural practices) tied to those aspects of Current Use. Residual effects on access to preferred Current Use locations due to Project-associated container ship pass-bys, and on cultural practices tied to that aspect of Current Use, are considered negligible after the implementation of mitigation, including development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location. **Addressed in Response to IR10-15:** The VFPA's response to IR10-15, as requested by the Review Panel, further discusses potential effects to the quality of the Current Use experience resulting from marine shipping associated with the project.	**MSA** Appendix 5-B Aboriginal Issues and Interests 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4 Existing Conditions 9.5.5.1 Negligible Effects of Vessel Transit on Current Use 9.5.5.2 Potential Effects of Vessel Transit on Current Use 9.5.11 Potential Adverse Impact on Asserted or Established Aboriginal and Treaty Rights **Information Requests** Response to Sufficiency Information Request #15 (IR10-15)
DFN-10.6	Concerned that marine shipping could potentially affect Ditidaht's ability to exercise its Aboriginal rights and culture on shore, including how increased wave frequency and size may adversely affect harvesting and processing seafood, marine plants/vegetation, and fish. Concerned that marine shipping could potentially affect Ditidaht's ability to exercise its Aboriginal rights and culture on shore, including how increased wave frequency and size	16-Jun-2015, Letter from Chief / 22-Jun-2015, Letter from JFK Law, Legal Counsel for Ditidaht First Nation (same letter) 31-Jul-2015, Letter 24-Aug-2015, Preliminary Issues and Concerns Regarding Port Metro Vancouver's Roberts Bank Terminal 2 Project	**24-Aug-2015, Letter from the VFPA:** *"The assessment of the potential effects of marine shipping associated with the Project will meet the direction provided by the Canadian Environmental Assessment Agency in the* Updated Guidelines *issued April 17, 2015, and as such it will include potential impacts on the components of the environment which Ditidaht First Nation have identified in the Preliminary Issues and Concerns, namely fish and fish habitat, marine mammals, marine vegetation and air quality. The Preliminary Issues and Concerns document identifies potential impacts to Ditidaht First Nation, including the ability to access traditional harvesting grounds, the quality of experience and ability to carry out traditional and spiritual practices and the health and wellbeing of community members. We very much welcome*	**Addressed in MSA Appendix 5-B (#79):** The potential changes to the wave environment from ship wake (from Project-associated vessels) are assessed in MSA Section 7.2. This assessment informs the assessment of potential effects on fish and fish habitat, including marine vegetation and marine invertebrates (MSA Section 8.1), as well as the assessment of potential effects on marine mammals (MSA Section 8.2) and on marine birds (MSA Section 8.3). The wave assessment also informs the assessment of potential effects on archaeological and heritage resources (MSA Section 9.4). **Addressed in Response to IR7-21:** The VFPA's response to IR7-21, as requested by the Review Panel, notes that although their probability slightly increases from Project-associated vessels (0.034% during calm conditions), wake-generated waves from Project-associated vessels will not result in a change to the shorelines in the marine shipping area due to the similarity of interaction at the shoreline from wake-generated and wind-generated waves. **Addressed in Response to IR7-22:**	**MSA** Appendix 5-B Aboriginal Issues and Interests 7.2 Wave Environment 7.2.5 Incremental Changes to the Wave Environment 8.1 Marine Fish and Fish Habitat 8.1.6.1 Negligible Effects – *Vessel Wake* 8.2 Marine Mammals 8.2.6.1 Negligible Effects – Habitat Degradation - Vessel Wake 8.3 Coastal Birds

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	may adversely affect sensitive spiritual and cultural sites, such as burial caves located on shore. Concerned that marine shipping could potentially affect Ditidaht's ability to exercise its Aboriginal rights and culture on shore, including how increased wave frequency and size may adversely affect areas of refuge.		*the opportunity to discuss such potential impacts of increased marine shipping with Ditidaht First Nation."* **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	The VFPA's response to IR7-22, as requested by the Review Panel, discusses the potential effects of waves generated by Project-associated vessels during calm conditions on small craft engaged in activities in open water at various points and various distances from shore throughout the marine shipping area, including fishing activities in the vicinity of Swiftsure Bank. For all segments discussed in the marine shipping area, vessel wakes from Project-associated vessels are not expected to introduce new navigational hazards for small-craft operators. The vessel wakes from Project-associated vessels are not expected to introduce new navigational hazards for small-craft operators at Swiftsure Bank, including operators undertaking fishing activities, because of the existing energetic wave climate. **Addressed in Response to IR10-23:** The VFPA's response to IR10-23, as requested by the Review Panel, discusses potential loss or deterioration of archaeological sites resulting from natural and ship-wake waves greater than 10 cm.	8.3.6.1 Negligible Effects - Vessel Wake 9.4 Archaeological and Heritage Resources 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4 Existing Conditions 9.5.5.1 Negligible Effects of Vessel Transit on Current Use **Information Requests** Response to Sufficiency Information Request #21 (IR7-21 of CEAR Document #1049) Response to Sufficiency Information Request #22 (IR7-22 of CEAR Document #1049) Response to Sufficiency Information Request #23 (IR10-23)
DFN-10.7	Concerned that marine shipping could potentially interfere with access to fish and fish habitat, and in turn the health and wellbeing of Ditidaht community members who rely on fish for a substantial part of their diet.	16-Jun-2015, Letter from Chief / 22-Jun-2015, Letter from JFK Law, Legal Counsel for Ditidaht First Nation (same letter) 31-Jul-2015, Letter 24-Aug-2015, Preliminary Issues and Concerns Regarding Port Metro Vancouver's Roberts Bank Terminal 2 Project	**24-Aug-2015, Letter from the VFPA:** *"The assessment of the potential effects of marine shipping associated with the Project will meet the direction provided by the Canadian Environmental Assessment Agency in the* Updated Guidelines *issued April 17, 2015, and as such it will include potential impacts on the components of the environment which Ditidaht First Nation have identified in the Preliminary Issues and Concerns, namely fish and fish habitat, marine mammals, marine vegetation and air quality. The Preliminary Issues and Concerns document identifies potential impacts to Ditidaht First Nation, Including the ability to access traditional harvesting grounds, the quality of experience and ability to carry out traditional and spiritual practices and the health and wellbeing of community members. We very much welcome the opportunity to discuss such potential impacts of increased marine shipping with Ditidaht First Nation."* **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in MSA Appendix 5-B (#52):** The assessment of potential effects of marine shipping associated with the Project on marine fish and fish habitat (MSA Section 8.1) addresses potential effects on the availability of marine resources. **Addressed in MSA Section 8.1:** Potential effects of vessel wake-generated waves on marine fish and fish habitat were characterised as negligible, because only 2% of coastline in the LAA is within the wake-related zone of influence, and because wake-generated wave heights at shorelines are predicted to be well within the range of natural wave conditions. Fish and fish habitat are already adapted to the natural conditions; therefore, any wake-related influences would not be distinguishable from existing conditions. Similarly, potential effects of underwater noise were also considered to be negligible because noise associated with Project-associated marine vessel activity and future cumulative shipping activities would not exceed injury thresholds for fish species or the Pacific salmon species behavioural threshold. Further, while noise-induced behavioural changes are possible for Pacific herring, potential effects would be localised to within 20 metres of a container ship and of short duration (as the ship passes by) and are therefore not anticipated to affect the integrity of populations within the LAA.	**MSA** Appendix 5-B Aboriginal Issues and Interests 8.1 Marine Fish and Fish Habitat
DFN-10.8	Concerned that marine shipping could potentially affect Ditidaht's ability to benefit economically from its interests related to	16-Jun-2015, Letter from Chief / 22-Jun-2015, Letter from JFK Law, Legal	**24-Aug-2015: Letter from the VFPA:** *"The assessment of the potential effects of marine shipping associate with the Project will meet the direction provided by the Canadian Environmental Assessment Agency in the*	**Addressed in MSA Appendix 5-B (#5):** The assessment of potential effects on marine commercial use (MSA Section 9.2) considers potential effects on relevant economic interests of Indigenous groups that	**MSA** Appendix 5-B Aboriginal Issues and Interests 8.2 Marine Commercial Use

	Aboriginal title, including visual and auditory disturbances during eco-tourism activities or other effects on the wilderness character of Ditidaht's territory.	Counsel for Ditidaht First Nation (same letter) 31-Jul-2015, Letter 24-Aug-2015, Preliminary Issues and Concerns Regarding Port Metro Vancouver's Roberts Bank Terminal 2 Project	Updated Guidelines *issued April 17, 2015, and as such it will include potential impacts on the components of the environment which Ditidaht First Nation have identified in the Preliminary Issues and Concerns, namely fish and fish habitat, marine mammals, marine vegetation and air quality. The Preliminary Issues and Concerns document identifies potential impacts to Ditidaht First Nation, Including the ability to access traditional harvesting grounds, the quality of experience and ability to carry out traditional and spiritual practices and the health and wellbeing of community members. We very much welcome the opportunity to discuss such potential impacts of increased marine shipping with Ditidaht First Nation."* **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	have been identified through a review of existing information as well as information provided directly to the VFPA by Indigenous groups engaged in consultation. **Addressed in MSA Section 9.2:** As potential adverse effects due to vessel transit from Project-associated shipping on marine area displacement, access, presence of SRKWs and marine birds, and environmental conditions are considered to be negligible, potential effects on activities and revenue from marine-based tourism are also considered to be negligible. When all lines of evidence are considered, a negligible effect is expected for the marine-based tourism sub-component. **Addressed in Response to IR10-27:** The VFPA's response to IR10-27, as requested by the Review Panel, discusses potential effects of the proposed Project on existing business ventures that have been identified by Indigenous groups.	**Information Requests** Response to Sufficiency Information Request #27 (IR10-27)
DFN-10.9	Concerned about the shipping activities' potential adverse effects, both on their own and together with the other existing and proposed shipping projects, can be organised into two main categories: 1. Increased shipping may potentially affect the marine environment and resources in Ditidaht's territory and Ditidaht's ability to access them to exercise their rights; and 2. The corresponding increased risk of an oil, fuel, or other cargo contaminant spill in Ditidaht's territory, which would profoundly alter the environment and have long-lasting impacts on Ditidaht's rights.	31-Jul-2015, Letter	**24-Aug-2015, Letter from the VFPA:** *"The assessment of the potential effects of marine shipping associated with the Project will meet the direction provided by the Canadian Environmental Assessment Agency in the* Updated Guidelines *issued April 17, 2015, and as such it will include potential impacts on the components of the environment which Ditidaht First Nation have identified in the Preliminary Issues and Concerns, namely fish and fish habitat, marine mammals, marine vegetation and air quality. The Preliminary Issues and Concerns document identifies potential impacts to Ditidaht First Nation, including the ability to access traditional harvesting grounds, the quality of experience and ability to carry out traditional and spiritual practices and the health and wellbeing of community members. We very much welcome the opportunity to discuss such potential impacts of increased marine shipping with Ditidaht First Nation."*	**Additional information provided by the VFPA:** The VFPA's responses to IR10-13 through IR10-20, as requested by the Review Panel, provide additional information concerning the rationale for the effects assessment conclusions in the MSA with regard to Current Use, in alignment with the mandate of the Review Panel (refer to CEAR Document #1137). As relayed to the VFPA by the CEA Agency (refer to CEAR Document #1137), the assessment of the seriousness of potential impacts on the exercise of Aboriginal rights and title from marine shipping associated with the Project is the responsibility of the Crown. With regard to the second bullet, the assessment in MSA Section 10.5.13 predicts a significant residual adverse effect on Current Use as a result of a hypothetical heavy fuel oil spill, and a serious impact on the ability of Indigenous groups to exercise marine-based Aboriginal or treaty rights within the marine shipping area. In both cases, the identified residual adverse effects are unlikely to occur because of the very low probability of the accident scenarios. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans Protection Plan which includes information on spill response and environmental protection.	**MSA** 10.5.13 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights **Information Requests** Responses to Sufficiency Information Requests #13 to #20 (IR10-13 to IR10-20) **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**
DFN-10.10	Stated that there is incomplete information respecting conditions in Juan de Fuca Strait and Ditidaht territory causing deficiencies in the marine	28-Oct-2016, Letter to Panel (CEAR Document #636)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** The environmental assessment for marine shipping associated with the Project was developed to meet the requirements specified in the *Updated EIS Guidelines* and is consistent with existing guidance documents. Descriptions of existing pre-Project conditions relevant to each VC and IC were developed based on existing information, data analysis, and modelling as	**MSA** 8.0 Marine Biophysical Environment

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	shipping effects assessment.			appropriate. The description of existing conditions considered how ICs and VCs have been already affected by other projects and activities that have been carried out. Expected conditions were also determined where substantial changes are expected to occur to a VC or IC in the future prior to Project construction or operation, such as from changes in regulation or as a result of other projects or activities currently underway.	
DFN-10.11	Stated that there is deficient incorporation of Indigenous perspectives and traditional knowledge into the marine shipping effects assessment and, in other places, lack of clarity around how Indigenous perspectives and traditional knowledge have been incorporated.	28-Oct-2016, Letter to Panel (CEAR Document #636)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in Response to MSA IR-02.24.16-4:** Response to MSA IR-02.24.16-4 discusses the application of Indigenous Traditional Knowledge in the MSA. **Addressed in Response to IR10-02:** The VFPA's response to IR10-02, as requested by the Review Panel, provides further information concerning how available Indigenous knowledge was incorporated into the EIS and MSA.	**Information Requests** Response to Additional Information Request #4 (MSA IR-02.24.16-4 of CEAR Document #386) Response to Sufficiency Information Request #10 (IR10-02)
DFN-10.12	Requested detailed discussion and assessment of disruption of routine vessel activities in situations of inclement weather in the specific context of western Juan de Fuca Strait or Ditidaht territory, including whether inclement weather could result in more traffic per day than currently calculated.	28-Oct-2016, Letter to Panel (CEAR Document #636)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 4.2.2.2:** Inclement weather may, in exceptional circumstances, require RBT2-associated container ships to anchor in protected areas and thus increase the number of ships operating in the marine shipping area temporarily; however, there are no established anchorages in the western portion of Juan de Fuca Strait.	**MSA** 4.0 Activity Description 4.2.2.2 Anchorage

Table 11: Marine Vegetation – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
DFN-11.1	Concerned that marine shipping could potentially affect marine vegetation, including through the introduction of pollutants or invasive species (such as through the exchange of ballast water or other releases).	16-Jun-2015, Letter from Chief / 22-Jun-2015, Letter from JFK Law, Legal Counsel for Ditidaht First Nation (same letter) 31-Jul-2015, Letter 24-Aug-2015, Preliminary Issues and Concerns Regarding Port Metro Vancouver's Roberts Bank Terminal 2 Project	**24-Aug-2015, Letter from the VFPA:** *"The assessment of the potential effects of marine shipping associated with the Project will meet the direction provided by the Canadian Environmental Assessment Agency in the* Updated Guidelines *issued April 17, 2015, and as such it will include potential impacts on the components of the environment which Ditidaht First Nation have identified in the Preliminary Issues and Concerns, namely fish and fish habitat, marine mammals, marine vegetation and air quality. The Preliminary Issues and Concerns document identifies potential impacts to Ditidaht First Nation, including the ability to access traditional harvesting grounds, the quality of experience and ability to carry out traditional and spiritual practices and the health and wellbeing of community members. We very much welcome the opportunity to discuss such potential impacts of increased marine shipping with Ditidaht First Nation."* **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#100):** The VFPA was the first port in North America to prohibit in-port ballast water exchange without prior mid-ocean exchange, a practice which became the basis of government requirements now enforced by Transport Canada. To prevent the invasion of foreign species into local waters, international regulations, through the IMO, are managed by Transport Canada. All commercial deep sea vessels are required to carry out a ballast water exchange prior to entering Canadian waters. This is done outside the exclusive economic zone of 200 nautical miles (nm) and in water deeper than 2,000 metres. By requiring vessels to complete this ballast 'flush' well outside Canadian waters, the aim is to prevent any foreign organisms from entering into the local ecosystem. The U.S.A. has similar requirements, and vessels arriving from the Puget Sound area need to forward the completed U.S. forms to Canadian authorities prior to entry into Canadian waters. **Addressed in MSA Appendix 5-B (#33):** Information on ballasting is provided in MSA Sections 3.0 and 4.0. Transport Canada enforces Canadian regulations and international conventions implemented by Canada governing matters such as ballast water management. Since ballasting is not permitted within the marine shipping area, it is not assessed as an activity of marine shipping associated with the Project. Further rationale is provided in MSA Section 7.3. Other types of releases are also described in MSA Section 4.0, and the assessment of potential effects on marine vegetation and other marine resources as a result of a spill is included in MSA Section 10.0. **Addressed in Transport Canada Information Requests (TC IR-02 to TC IR-06):** In its response to the Review Panel's Information Requests of May 10, 2017, Transport Canada has indicated that with respect to chronic oiling, the use of anti-fouling agents, and discharges of ballast water, bilge water, and sewage, that marine water quality in the marine shipping area is not expected to change because these potential contributors are regulated by the *Canada Shipping Act,* 2001, and in particular the Vessel Pollution and Dangerous Chemicals Regulations (VPDCR) under this act. Furthermore, Transport Canada states that "In relation to the Project, the technical requirements of the VPDCR apply to all vessels over 400 gross tonnage. As such, all container ships and most tugs serving container ships that would call at the proposed RBT2 would be subject to these requirements."	**EIS** 4.0 Project Description 4.4.2 Operation-phase Activities Appendix 7.2-B Aboriginal Issues and Interests 9.7 Marine Water Quality 9.7.8 Future Conditions with the Project **MSA** 3.0 Regulatory Framework and Role of Government 4.0 Activity Description Appendix 5-B Aboriginal Issues and Interests 7.3 Marine Water Quality 10.0 Potential Accidents or Malfunctions **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Document #954)**

Table 12: Port Operations

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
DFN-12.1	Asked what cargo is typically carried in ships travelling to and from the Project. Asked what the requirements are for securing cargo and how compliance is monitored and enforced.	16-Jun-2015, Letter from Chief / 22-Jun-2015, Letter from JFK Law, Legal Counsel for Ditidaht First Nation (same letter) 24-Aug-2015, Preliminary Issues and Concerns Regarding Port Metro Vancouver's Roberts Bank Terminal 2 Project	**09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in MSA Appendix 5-B (#109):** The potential for an accident involving a spilled container, and hazardous contents of containers, is addressed in MSA Section 10.0. Details on the types of hazardous materials shipped in containers are provided in EIS Appendix 30-A (Table G-3 in Appendix G). Regulations for securing containers and for the transport of dangerous goods are set by the IMO at http://www.imo.org/en/About/Conventions/ListOfConventions/Pages/International-Convention-for-the-Safety-of-Life-at-Sea-(SOLAS),-1974.aspx The International Maritime Dangerous Goods Code is the international code that establishes where dangerous goods should be loaded on a ship. Some should be loaded below deck, others should be loaded on deck, some dangerous goods need to be separated by certain distances from other types of goods, and some dangerous goods need to be segregated in different holds from other goods. The implementation of the Code is mandatory under the International Convention for the Safety of Life at Sea (SOLAS) and the International Convention for the Prevention of Pollution from Ships (MARPOL 73/78). **Additional information provided by the VFPA:** In 2017, the top ten container cargos accounting for approximately 73% of total inbound and outbound container cargo were household goods; lumber; woodpulp; specialty crops, construction and materials; industrial, auto and vehicle parts; basic metals; meat, fish, and poultry; and waste paper.	**MSA** Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents or Malfunctions 10.3.2.1 Loss Overboard of Containers from Ships In-transit in Semi-protected Waters **VFPA Statistics Overview 2017** https://www.portvancouver.com/wp-content/uploads/2018/03/2017-Stats-Overview-1.pdf
DFN-12.2	Requested a discussion of the specific context of western Juan de Fuca Strait or Ditidaht territory in terms of anchorage (MSA Section 4.2.2.2 Anchorage).	28-Oct-2016, Letter to Panel (CEAR Document #636)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** Marine shipping activities considered within the marine shipping area are those that take place within the international shipping lanes utilised by marine traffic associated with the Project, from VFPA jurisdiction to the 12 nautical mile limit of Canada's territorial sea at the west end of Juan de Fuca Strait. This area is referred to as the marine shipping area, which has been sub-divided into segments as shown in MSA Section 4.0 (MSA Figure 4-1). Segment D includes the western Juan de Fuca Strait, and potential effects to the area are discussed throughout the IC and VC sections.	**MSA** 4.0 Activity Description

Table 13: Potential Accidents or Malfunctions

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
DFN-13.1	Asked how contaminants contained in cargo would affect fish, seafood, birds, and other animals on shore and in or near to adjacent water bodies. Concerned with the potential for an oil, fuel, or other cargo contaminant spill or leakage to adversely affect marine and other resources Ditidaht relies upon, including any marine resources, animals, and vegetation on the shore, and any other animals up the food chain that may consume contaminated animals or vegetation.	16-Jun-2015, Letter from Chief / 22-Jun-2015, Letter from JFK Law, Legal Counsel for Ditidaht First Nation (same letter) 31-Jul-2015, Letter 24-Aug-2015, Preliminary Issues and Concerns Regarding Port Metro Vancouver's Roberts Bank Terminal 2 Project	**24-Aug-2015, Letter from the VFPA:** *"The assessment of the potential effects of marine shipping associate with the Project will meet the direction provided by the Canadian Environmental Assessment Agency in the* Updated Guidelines *issued April 17, 2015, and as such it will include potential impacts on the components of the environment which Ditidaht First Nation have identified in the Preliminary Issues and Concerns, namely fish and fish habitat, marine mammals, marine vegetation and air quality. The Preliminary Issues and Concerns document identifies potential impacts to Ditidaht First Nation, Including the ability to access traditional harvesting grounds, the quality of experience and ability to carry out traditional and spiritual practices and the health and wellbeing of community members. We very much welcome the opportunity to discuss such potential impacts of increased marine shipping with Ditidaht First Nation."* **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in MSA Appendix 5-B (#103):** The potential effects of an oil spill on marine resources, including marine birds, marine mammals, and marine fish and fish habitat are considered within the assessment of potential accidents or malfunctions (MSA Section 10.0). This section also considers the potential effects on Current Use, and related impacts on rights, resulting from effects on marine resources. MSA Section 10.0 also considers the probability of an incident involving loss of containers overboard. **Addressed in MSA Section 10.0:** The assessment of potential accidents or malfunctions considers a variety of potential effects related to two plausible worst-case scenarios selected based on the analysed probabilities of occurrence, higher risk areas, and possible consequences: • A collision between a container ship and a small vessel within an existing shipping lane, resulting in damage to the vessel and/or gear as well a serious injury or fatality; and • A powered grounding of a container ship on a hard substrate, resulting in a spill of 7,500 m^3 of heavy fuel oil. The assessment for the plausible worst-case spill scenario concluded that, with the exception of human health, measurable residual adverse effects are predicted for all VCs. In all cases, the identified residual adverse effects of a spill are unlikely to occur, because of the very low probability of an accident or malfunction that could result in a spill. With the exceptions of residual effects on marine mammals (southern resident killer whale), marine commercial use (guided sport fishing and marine-based tourism sub-components), outdoor recreation, archaeological and heritage resources, and Current Use, adverse residual effects were considered not significant. A serious residual adverse impact on the ability of Indigenous groups to exercise Aboriginal and treaty rights in areas overlapping or near the hypothetical spill area would be expected in the event of such a spill. In both cases, the identified residual adverse effects are unlikely to occur, because of the very low probability of the accident scenarios. A description of spill response protocols is also included in MSA Section 10.0 **Addressed in EIS Appendix 30-A:** As reported in the EIS, 0.7% of containers moving through Deltaport currently contain hazardous and noxious substances (2012 data; see EIS Appendix 30-A). As containers are either stuffed or destuffed away from the terminal in the Lower Mainland, or simply loaded onto inland-bound trains, the probability of containers carrying hazardous and noxious substances affecting vegetation on shore is exceedingly low. **Additional information provided by the VFPA:** As a marine based project, interactions with cargo and the Project are not predicted to have an effect on the vegetation on shore.	**EIS** Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment **MSA** Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents or Malfunctions 10.3.3 Identification of Plausible Worst-case Accident or Malfunction Scenarios 10.5.6 Marine Fish and Fish Habitat 10.5.7 Marine Mammals 10.5.13 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights **VFPA Statistics Overview 2017** https://www.portvancouver.com/wp-content/uploads/2018/03/2017-Stats-Overview-1.pdf

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
DFN-13.2	Concerned with marine shipping vessels in inclement weather and rough seas, which are common and spontaneous occurrences in Ditidaht's territory, and whether this will have an adverse impact on the safety of Ditidaht boaters. Concerned that marine shipping could potentially increase the risk of a Ditidaht boat colliding with a ship.	16-Jun-2015, Letter from Chief / 22-Jun-2015, Letter from JFK Law, Legal Counsel for Ditidaht First Nation (same letter) 31-Jul-2015, Letter 24-Aug-2015, Preliminary Issues and Concerns Regarding Port Metro Vancouver's Roberts Bank Terminal 2 Project	**24-Aug-2015, Letter from the VFPA:** *"The assessment of the potential effects of marine shipping associated with the Project will meet the direction provided by the Canadian Environmental Assessment Agency in the* Updated Guidelines *issued April 17, 2015, and as such it will include potential impacts on the components of the environment which Ditidaht First Nation have identified in the Preliminary Issues and Concerns, namely fish and fish habitat, marine mammals, marine vegetation and air quality. The Preliminary Issues and Concerns document identifies potential impacts to Ditidaht First Nation, Including the ability to access traditional harvesting grounds, the quality of experience and ability to carry out traditional and spiritual practices and the health and wellbeing of community members. We very much welcome the opportunity to discuss such potential impacts of increased marine shipping with Ditidaht First Nation."* **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in MSA Appendix 5-B (#73):** The assessment of Current Use (MSA Section 9.5) considers the risk of collision and perceptions of safety in the assessments of access to preferred Current Use locations, and quality of Current Use experience. **Addressed in MSA Section 10.0:** The assessment of potential accidents or malfunctions (MSA Section 10.0) includes consideration of a plausible worst-case collision scenario between a container ship and a smaller vessel such as a fishing vessel. Potential effects of such an event are assessed for the following VCs: marine commercial use, outdoor recreation, and human health, as well as Current Use. The plausible worst-case collision scenario has the potential to result in measurable residual adverse effects on human health, marine commercial use, outdoor recreation, Current Use, and asserted or established Aboriginal and treaty rights. In all cases, the identified residual adverse effects of a collision are unlikely to occur, because of the very low probability of collision. The assessment concluded that residual adverse effects are expected to be not significant for marine commercial use and outdoor recreation, but significant for human health. For Current Use, the residual effect could range from not significant to significant, depending on the capacity of the affected Indigenous group to continue to undertake Current Use. In the event of a collision between a vessel engaged in traditional use activities and a container ship, a minor to serious adverse residual impact on the ability of the affected Indigenous group to exercise Aboriginal and treaty rights associated with those activities would be expected. The assessment of Current Use (MSA Section 9.5) considers cultural practices, such as the acquisition of traditional foods and the transmission of traditional knowledge. Perceptions of safety, as well as access to preferred harvesting locations and visual or auditory disturbances, are covered in the assessment of potential changes to the following: access to preferred Current Use locations and quality of Current Use experience. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans Protection Plan which includes information on the *Enhanced Maritime Situational Awareness and Proactive Vessel Management* initiative as well as information on the sharing of information of marine traffic with coastal communities.	**MSA** Appendix 5-B Aboriginal Issues and Interests 9.5 Current Use of Lands and Resources for Traditional Purposes, and Aboriginal and Treaty Rights 10.0 Potential Accidents and Malfunctions **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**
DFN-13.3	Concerned with the potential for an oil, fuel, or other cargo contaminant spill or leakage to adversely affect Ditidaht's ability to participate in ceremonial practices. Concerned with the potential for an oil,	16-Jun-2015, Letter from Chief / 22-Jun-2015, Letter from JFK Law, Legal Counsel for Ditidaht First Nation (same letter)	**24-Aug-2015, Letter from the VFPA:** *"The assessment of the potential effects of marine shipping associate with the Project will meet the direction provided by the Canadian Environmental Assessment Agency in the* Updated Guidelines *issued April 17, 2015, and as such it will include potential impacts on the components of the environment which Ditidaht First Nation have identified in the Preliminary Issues and Concerns, namely fish and fish habitat, marine mammals, marine vegetation and air quality. The Preliminary Issues and Concerns document identifies potential impacts to Ditidaht First Nation, Including the ability to access traditional harvesting grounds, the quality of experience and ability to carry out*	**Addressed in MSA Section 10.0:** The assessment of potential accidents or malfunctions considers a variety of potential effects related to two plausible worst-case scenarios selected based on the analysed probabilities of occurrence, higher risk areas, and possible consequences: • A collision between a container ship and a small vessel within an existing shipping lane, resulting in damage to the vessel and/or gear as well a serious injury or fatality; and • A powered grounding of a container ship on a hard substrate, resulting in a spill of 7,500 m^3 of heavy fuel oil.	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights. 10.0 Potential Accidents and Malfunctions 10.5.9.4 Potential Interactions and Effects **From Transport Canada to the Review Panel re: Overview of the**

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	fuel, or other cargo contaminant spill or leakage to adversely affect Ditidaht members' health, as they would either be at risk of consuming contaminated marine resources, or would be forced to consume other food sources instead, which is neither their preferred traditional diet, nor as healthy.	31-Jul-2015, Letter 24-Aug-2015, Preliminary Issues and Concerns Regarding Port Metro Vancouver's Roberts Bank Terminal 2 Project	*traditional and spiritual practices and the health and wellbeing of community members. We very much welcome the opportunity to discuss such potential impacts of increased marine shipping with Ditidaht First Nation."* **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	In both cases, the identified residual adverse effects are unlikely to occur, because of the very low probability of the accident scenarios. A description of spill response protocols is also included in MSA Section 10.0. The assessment of potential accidents or malfunctions (MSA Section 10.0) includes consideration of potential effects of accidents or malfunctions arising from marine shipping associated with the Project on human health. As discussed in MSA Section 10.5.9, Coastal Indigenous peoples generally have a greater reliance on the harvesting and consumption of seafoods than the general population in the marine shipping area. This could result in a greater potential for contaminant exposures among communities and greater magnitude of exposures for some individuals, to the extent that harvesting and consumption continues following a spill event, and in absence of specific testing and risk management measures to directly assess the safety of the marine resource(s) affected. Thus, a greater proportion of Indigenous community members might be affected, with greater contaminant exposure potential initially. However, the effects are still expected to be short-term, reversible, and geographically localised. **Addressed in EIS Appendix 30-A:** As reported in the EIS, 0.7% of containers moving through Deltaport currently contain hazardous and noxious substances (2012 data; see EIS Appendix 30-A). As containers are either stuffed or destuffed away from the terminal in the Lower Mainland, or simply loaded onto inland-bound trains, the probability of containers carrying hazardous and noxious substances affecting vegetation on shore is exceedingly low. **Additional response provided by the VFPA:** In 2017, the top ten container cargos accounting for approximately 73% of total inbound and outbound container cargo were household goods; lumber; woodpulp; specialty crops, construction and materials; industrial, auto and vehicle parts; basic metals; meat, fish, and poultry; and waste paper. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans Protection Plan which includes information on spill response and environmental protection.	**Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**
DFN-13.4	Concerned that if an accident or spill occurred during a storm, the clean-up efforts may be hampered by weather. Asked what emergency response plans are in place for travel in bad weather. Asked how Ditidaht will be notified in	16-Jun-2015, Letter from Chief / 22-Jun-2015, Letter from JFK Law, Legal Counsel for Ditidaht First Nation (same letter) 24-Aug-2015, Preliminary Issues and Concerns	**09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in MSA Appendix 5-B (#99):** The effects of tides and currents in the dispersion of spilled material are considered within the assessment of potential accidents and malfunctions (MSA Section 10.0), and in particular within the technical analysis of the marine fate of shipping spill-type accidents (MSA Appendix 10-B). A description of spill response protocols is included in MSA Section 10.0. **Addressed in MSA Appendix 5-B (#102):** Details on spill response, including responsibilities of various parties, response timelines, and equipment requirements, are provided in the mitigation section of the assessment of potential accidents or malfunctions (MSA Section 10.0).	**MSA** Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents or Malfunctions 10.3.3 Identification of Plausible Worst-case Accident or Malfunction Scenarios 10.4 Mitigation Measures Appendix 10-B Marine Fate of Shipping Spill-type Accidents **From Transport Canada to the Review Panel re: Overview of the**

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	event of an emergency. Asked what the emergency communication procedures are in the event of an accident, malfunction, or spill. Asked if the emergency response plans account for the types of conditions typical of Ditidaht's marine territory. Asked if they account for the unique geography and topography of Ditidaht's territory or for the fact that road access to Ditidaht's territory is extremely limited. Asked who is responsible for carrying out, monitoring and enforcing emergency response plans. Asked what steps have been taken to ensure that Ditidaht has sufficient equipment at Nitinat or near the coast to deal with any spills.	Regarding Port Metro Vancouver's Roberts Bank Terminal 2 Project		Detailed Oil Spill Response Plans are prepared and executed by the WCMRC, and submitted to Transport Canada. Additional information is available here: http://wcmrc.com/ **Additional information provided by the VFPA:** The *Canada Shipping Act, 2001* is Transport Canada's regulatory framework surrounding marine pollution and its enforcement. In the case of a report of pollution in the water, including oil or fuel spills, Canada operates under the National Spill Response Protocol, which specifies that the Canadian Coast Guard is responsible for ensuring the clean-up of ship sourced spills of oil and other pollutants. While the VFPA is not the lead agency when it comes to spill response, it provides assistance often in the form of working with first responders and other agencies, providing information on a situation through the 24/7 operations centre, security cameras, patrol boats, and drone. As per a 2009 letter of understanding, the VFPA can be called upon by the Coast Guard to conduct an initial inspection in response to a pollution report in our federal jurisdiction. On the west coast, the Canadian Coast Guard contracts spill clean-up to the WCMRC. This is also the agency that ships or terminal operators are required to call if they discover they have been the source of a spill. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans Protection Plan which includes information on spill response and environmental protection.	**Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**
DFN-13.5	Asked what information is available about the various contaminant pathways for cargo typically carried to and from the Project. Asked how long it would typically take to reach the shore and nearby bodies of freshwater in Ditidaht's territory (particularly given the strong tides and currents in this area).	31-Jul-2015, Letter 24-Aug-2015, Preliminary Issues and Concerns Regarding Port Metro Vancouver's Roberts Bank Terminal 2 Project	**24-Aug-2015, Letter from the VFPA:** Responded that in terms of Ditidaht First Nation's request for detailed information, a presentation to Ditidaht First Nation may be the most effective way to provide information while offering the opportunity to raise questions and identify any issues which require further exploration. **08-Sep-2015, Meeting:** The VFPA met with Ditidaht First Nation to discuss the Project and its associated Marine Shipping. The VFPA provided the group with an introduction to the environmental assessment process and an introduction to the RBT2 Project, including a description of the Project and causeway design, distance from the shoreline, and total area of footprint. **09-Nov-2015, Letter from the VFPA:**	**Addressed in MSA Section 10.3.2.1:** Containers may be lost overboard in the event of a collision or grounding and could conceivably release hazardous and noxious substances (HNS) to the environment. While removal of containers lost overboard would involve a salvage operation, the combination of low collision or grounding accident frequencies with the low percentage of HNS containers at risk of being lost overboard (approximately 0.7% for Deltaport in 2012; see EIS Appendix 30-A), and the requirement for the container being compromised to release its contents, led to the assessment that the frequency of spills of HNS substances from containers lost overboard is low enough to not require further consideration as a plausible accident or malfunction arising from marine shipping associated with the Project. **Addressed in Response to IR11-03:** The VFPA's forthcoming response to IR11-03, as requested by the Review Panel, will provide additional information related to the volume,	**MSA** 10.3.2.1 Loss Overboard of Containers from Ships In-transit in Semi-protected Waters **Information Requests** Sufficiency Information Request #03 (IR11-03)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	rate, and pathways of effects for fuel spills (or releases of hazardous and noxious substances from containers) to the marine environment in the Project area and in the marine shipping area.	
DFN-13.6	Requested that the VFPA take into account in its marine shipping assessment the effect of accidents and malfunctions on the marine environment and species (including marine birds) and on Ditidaht's ability to practice marine harvesting rights. Concerned with the potential for an oil, fuel, or other cargo contaminant spill or leakage to adversely affect Ditidaht's ability to exercise its harvesting rights (if the marine resources are not safe to consume).	16-Jun-2015, Letter from Chief / 22-Jun-2015, Letter from JFK Law, Legal Counsel for Ditidaht First Nation (same letter) 29-Jun-2015, Email 31-Jul-2015, Letter 24-Aug-2015, Preliminary Issues and Concerns Regarding Port Metro Vancouver's Roberts Bank Terminal 2 Project	**24-Aug-2015, Letter from the VFPA:** *"The assessment of the potential effects of marine shipping associate with the Project will meet the direction provided by the Canadian Environmental Assessment Agency in the* Updated Guidelines *issued April 17, 2015, and as such it will include potential impacts on the components of the environment which Ditidaht First Nation have identified in the Preliminary Issues and Concerns, namely fish and fish habitat, marine mammals, marine vegetation and air quality. The Preliminary Issues and Concerns document identifies potential impacts to Ditidaht First Nation, Including the ability to access traditional harvesting grounds, the quality of experience and ability to carry out traditional and spiritual practices and the health and wellbeing of community members. We very much welcome the opportunity to discuss such potential impacts of increased marine shipping with Ditidaht First Nation."* **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in MSA Appendix 5-B (#103):** The potential effects of an oil spill on marine resources, including marine birds, marine mammals, and marine fish and fish habitat are considered within the assessment of potential accidents or malfunctions (MSA Section 10.0). This section also considers the potential effects on Current Use, and related impacts on rights, resulting from effects on marine resources. MSA Section 10.0 also considers the probability of an incident involving loss of containers overboard. **Addressed in MSA Section 10.0:** The assessment of potential accidents or malfunctions considers a variety of potential effects related to two plausible worst-case scenarios selected based on the analysed probabilities of occurrence, higher risk areas, and possible consequences: • A collision between a container ship and a small vessel within an existing shipping lane, resulting in damage to the vessel and/or gear as well a serious injury or fatality; and • A powered grounding of a container ship on a hard substrate, resulting in a spill of 7,500 m^3 of heavy fuel oil. The assessment for the plausible worst-case spill scenario concluded that, with the exception of human health, measurable residual adverse effects are predicted for all VCs. In all cases, the identified residual adverse effects of a spill are unlikely to occur, because of the very low probability of an accident or malfunction that could result in a spill. With the exceptions of residual effects on marine mammals (southern resident killer whale), marine commercial use (guided sport fishing and marine-based tourism sub-components), outdoor recreation, archaeological and heritage resources, and Current Use, adverse residual effects were considered not significant. A serious residual adverse impact on the ability of Indigenous groups to exercise Aboriginal and treaty rights in areas overlapping or near the hypothetical spill area would be expected in the event of such a spill. Identified residual adverse effects are unlikely to occur, because of the very low probability of the accident scenario. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans Protection Plan which includes information on spill response and environmental protection.	**MSA** 10.0 Potential Accidents or Malfunctions **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**
DFN-13.7	Concerned with ships travelling during storms as South Easterly winds would direct a ship wreck to Ditidaht's lands.	08-Sep-2015, Meeting	**08-Sep-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in MSA Appendix 5-B (#93):** The assessment of potential accidents and malfunctions (MSA Section 10.0) considers a plausible worst-case spill scenario, located in Boundary Passage. Boundary Passage is considered a higher risk area due to the relatively narrow passage, potential navigational hazards, and prevailing wind directions. The plausible worst-case spill scenario was selected based on probability of occurrence, likely locations, and potential effects. The assessment also describes the locations that fuel	**MSA** 10.0 Potential Accidents or Malfunctions 10.3.3 Identification of Plausible Worst-case 10.4 Mitigation Measures

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				from such a spill could travel to, including Ditidaht First Nation territory, based on wind directions and currents. The effects from a spill on Current Use would not be identical if the spill occurred in a different location; however, the risk reduction and spill response measures would be similar to those applicable to the plausible worst-case scenario assessed, and the likelihood of residual effects from a spill is lower in other areas than the location of the plausible worst-case scenario. **Addressed in MSA Section 10.0:** The assessment of potential accidents or malfunctions considers a variety of potential effects related to two plausible worst-case scenarios selected based on the analysed probabilities of occurrence, higher risk areas, and possible consequences: • A collision between a container ship and a small vessel within an existing shipping lane, resulting in damage to the vessel and/or gear as well a serious injury or fatality; and • A powered grounding of a container ship on a hard substrate, resulting in a spill of 7,500 m^3 of heavy fuel oil. In both cases, the identified residual adverse effects are unlikely to occur, because of the very low probability of the accident scenarios. 		24-Aug-2015, Preliminary Issues and Concerns Regarding Port Metro Vancouver's Roberts Bank Terminal 2 Project	*discuss such potential impacts of increased marine shipping with Ditidaht First Nation."* **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Section 10.0 the assessment of potential accidents or malfunctions.	The assessment of potential accidents or malfunctions considers a variety of potential effects related to two plausible worst-case scenarios selected based on the analysed probabilities of occurrence, higher risk areas, and possible consequences: • A collision between a container ship and a small vessel within an existing shipping lane, resulting in damage to the vessel and/or gear as well a serious injury or fatality; and • A powered grounding of a container ship on a hard substrate, resulting in a spill of 7,500 m^3 of heavy fuel oil. In both cases, the identified residual adverse effects are unlikely to occur because of the very low probability of the accident scenarios. **Addressed in MSA Section 10.3.2.1:** Containers may be lost overboard in the event of a collision or grounding and could conceivably release HNS to the environment. While removal of containers lost overboard would involve a salvage operation, the combination of low collision or grounding accident frequencies with the low percentage of HNS containers at risk of being lost overboard (approximately 0.7% for Deltaport in 2012; see EIS Appendix 30-A), and the requirement for the container being compromised to release its contents, led to the assessment that the frequency of spills of HNS substances from containers lost overboard is low enough to not require further consideration as a plausible accident or malfunction arising from marine shipping associated with the Project.	10.5.12 Archaeological and Heritage Resources 10.5.13 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights
DFN-13.15	Asked how contaminants contained in cargo would affect in-stream habitat for fish and other wildlife.	16-Jun-2015, Letter from Chief / 22-Jun-2015, Letter from JFK Law, Legal Counsel for Ditidaht First Nation (same letter) 31-Jul-2015, Letter	**24-Aug-2015, Letter from the VFPA:** *"The assessment of the potential effects of marine shipping associate with the Project will meet the direction provided by the Canadian Environmental Assessment Agency in the* Updated Guidelines *issued April 17, 2015, and as such it will include potential impacts on the components of the environment which Ditidaht First Nation have identified in the Preliminary Issues and Concerns, namely fish and fish habitat, marine mammals, marine vegetation and air quality. The Preliminary Issues and Concerns document identifies potential impacts to Ditidaht First Nation, Including the ability to access traditional harvesting grounds, the quality of experience and ability to carry out traditional and spiritual practices and the health and wellbeing of community members. We very much welcome the opportunity to discuss such potential impacts of increased marine shipping with Ditidaht First Nation."* **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Additional information provided by the VFPA:** The Project is located in the marine environment and therefore any resulting cargo would not impact in-stream habitat for fish and other wildlife.	
DFN-13.16	Asked what steps are taken to ensure that ships travelling to and from the Project are able to safely navigate through Juan de Fuca Strait generally and	31-Jul-2015, Letter 24-Aug-2015, Preliminary Issues and Concerns Regarding Port Metro Vancouver's	**24-Aug-2015, Letter from the VFPA:** *"The assessment of the potential effects of marine shipping associate with the Project will meet the direction provided by the Canadian Environmental Assessment Agency in the* Updated Guidelines *issued April 17, 2015, and as such it will include potential impacts on the components of the environment which Ditidaht First Nation have identified in the Preliminary Issues and Concerns, namely fish and fish habitat, marine mammals, marine vegetation and air quality. The Preliminary Issues and Concerns document identifies potential impacts*	**Additional information provided by the VFPA:** As outlined in Transport Canada's letter to the Review Panel of June 24, 2016 (CEAR Document #464), marine shipping associated with the Project is governed by Canada's marine safety and security (MSS) regime, which is a compliance-based regime. On December 20, 2017, Transport Canada provided the Review Panel information on Oceans Protection Plan (OPP) initiatives relevant to the Project, including the Enhanced Maritime Situational Awareness and Proactive Vessel Management initiatives (CEAR Document #1133). The	**EIS** 4.4.2.1 Container Ship Manoeuvres **MSA** 4.2.2.7 Tugboat Escort **Participation of Transport Canada in the Roberts Bank Terminal 2 Project Review Panel Process (Orientation Session**

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	Ditidaht's marine territory in particular. Asked who is responsible for monitoring this and ensuring that navigation requirements are followed. Asked if escort and rescue tugs are required. When and where? If not, why not? Asked if there are circumstances under which a ship will not travel.	Roberts Bank Terminal 2 Project	*to Ditidaht First Nation, Including the ability to access traditional harvesting grounds, the quality of experience and ability to carry out traditional and spiritual practices and the health and wellbeing of community members. We very much welcome the opportunity to discuss such potential impacts of increased marine shipping with Ditidaht First Nation."* **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	Enhanced Maritime Situational Awareness initiative will increase maritime awareness and meet Indigenous partners', coastal community, and stakeholder needs through the development of a user-friendly system that increases access to local maritime data, including vessel traffic. The Proactive Vessel Management initiative will develop a national framework to help guide how to manage local marine traffic issues in the future. As noted in MSA Section 4.2.2.7, container ships do not require tugboat escort while transiting through Segments A to D. It is anticipated that the same will apply to the additional container ships associated with RBT2. All tugboat activity for the Project-associated container ships will be near the terminal as described in EIS Section 4.4.2.1. Circumstances when ships will not travel are related to safety reasons, or to accommodate unexpected ship-specific maintenance, personnel, or operation issues that may arise.	**Presentation) (CEAR Document #464)** **Transport Canada Response to the Review Panel's December 19, 2017 Information Requests (CEAR Document # 1147)**
DFN-13.17	Stated that VFPA's worst-case scenario case study is inappropriate as the conditions in Juan de Fuca Strait generally, and Ditidaht territory specifically, are not represented by those in Boundary Passage and Haro Strait. Stated that the VFPA has not provided a clear rationale for whether or how its analysis of this particular case study can be reliably applied to Juan de Fuca Strait. Stated that the VFPA has cited evidence regarding higher numbers of vessel incidents in Juan de Fuca Strait than Boundary Passage and Haro Strait (see MSA Section 10.3.1, Vessel Incident Overview, page 10-4). These statistics, along with Ditidaht's knowledge and concerns regarding	15-Dec-2015, Letter to the CEA Agency (CEAR Document #355)	**12-May-2016, Letter from the CEA Agency:** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Additional information provided by the VFPA:** The assessment is based on a plausible worst-case spill scenario that occurs in Boundary Passage at the south end of South Pender Island. The plausible worst-case spill scenario was selected based on probability of occurrence, likely locations, and potential effects. The effects from a spill on Current Use would not be identical if the spill occurred in a different location; however, the risk reduction and spill response measures would be similar to those applicable to the plausible worst-case scenario assessed, and the likelihood of residual effects from a spill is lower in other areas than the location of the plausible worst-case scenario.	**MSA** 10.0 Accidents and Malfunctions 10.3.2.2 Collisions In-transit 10.3.3.1 Plausible Accident or Malfunction #1: Hard Grounding Resulting in a Spill

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	the existing safety risks, cumulative effects, and their impacts on Ditidaht's Aboriginal rights, title, and culture (particularly at Swiftsure Bank) support Ditidaht's view that a specific analysis of the potential impacts of accidents or malfunctions in this area is required.				
DFN-13.18	Stated that increased shipping traffic from RBT2 and other proposed and future projects may increase likelihood of an accident or malfunction in Juan de Fuca Strait and around Swiftsure Bank and must be considered.	28-Oct-2016, Letter to Panel (CEAR Document #636)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** The potential magnitude of environmental risk associated with a particular accident or malfunction is a function of the event's probability and its anticipated consequences (including environmental effects). In this assessment, the probabilities and consequences of marine accidents or malfunctions arising from marine shipping associated with the Project are based on the findings presented in MSA Appendices 10-A and 10-B, and are applicable to environmental conditions in and around Swiftsure Bank and Juan de Fuca Strait. The likelihood of marine shipping accidents is considered in *Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment*, which extends the geographical scope of the initial assessment contained in EIS Appendix 30-A and is provided as MSA Appendix 10-A.	**MSA** 10.0 Potential Accidents and Malfunctions Appendix 10-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment Appendix 10-B Marine Fate of Shipping Spill-type Accidents
DFN-13.19	Concerned that the assessment of accidents and malfunctions relating to marine shipping is inadequate.	28-Oct-2016, Letter to Panel (CEAR Document #636)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** The assessment of accidents and malfunctions presented in MSA Section 10.0 reflects requirements as set out in the *Updated EIS Guidelines*. **Addressed in MSA Section 10.0:** The assessment of potential accidents or malfunctions considers a variety of potential effects related to two plausible worst-case scenarios selected based on the analysed probabilities of occurrence, higher risk areas, and possible consequences: • A collision between a container ship and a small vessel within an existing shipping lane, resulting in damage to the vessel and/or gear as well a serious injury or fatality, and • A powered grounding of a container ship on a hard substrate, resulting in a spill of 7,500 m^3 of heavy fuel oil. In both cases, the identified residual adverse effects are unlikely to occur, because of the very low probability of the accident scenarios.	**MSA** 10.0 Potential Accidents or Malfunctions ***Updated EIS Guidelines***

Table 14: Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Lands and Resources for Traditional Purposes

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
DFN-14.1	Expressed concern about the use of materials from the National Energy Board Review of the Trans Mountain Expansion Project to compile Current Use information for Ditidaht First Nation. Requested that the VFPA incorporate Ditidaht's Indigenous perspective and input into the assessment. Stated that the Current Use Summary was deficient. Requested to review the Revised Current Use Summary prior to submission to the CEA Agency. Asked if or how impacts will be addressed in Current Use Summary. Provided some additional comments on the Current Use Summary. Stated that Ditidaht was content with the Report. Stated that there is inaccurate & unsupported statements regarding Indigenous marine activities, historical resources, current use activities and concerns.	16-Jun-2015, Letter from Chief / 22-Jun-2015, Letter from JFK Law, Legal Counsel for Ditidaht First Nation (same letter) 31-Jul-2015, Letter 24-Aug-2015, Letter 08-Sep-2015, Meeting 18-Sep-2015, Letter 05-Oct-2015, Email 10-Oct-2015, Email 28-Oct-2016, Letter to Panel (CEAR Document #636)	**16-Jul-2015, Email from the VFPA:** Agreed to provide Ditidaht with funding requested to support Ditidaht's input into the assessment and review of Current Use information. **20-Jul-2015, Letter from the VFPA:** Provided Ditidaht with a draft of the existing conditions section for "Ditidaht First Nation Current Use of Lands and Resources for Traditional Purposes" for the MSA and requested that Ditidaht confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final MSA. **30-Sep-2015, Letter from the VFPA:** Attached the draft updated summary of existing conditions for Ditidaht, which was updated to incorporate the report provided to the VFPA by Ditidaht in the summer, as well was feedback and information provided in our meeting earlier this month. **06-Oct-2015, Email from the VFPA:** Explained that the Summary is not meant to include a discussion about impacts, but just Current Use. Stated that the VFPA has compiled issues and concerns expressed by Ditidaht First Nation in letters, in our meeting, or in phone calls, and all will be addressed in the final version of the marine shipping report to be submitted to the CEA Agency.	**Addressed in *EIS Updated Guidelines*:** On April 17, 2015, the CEA Agency issued *Updated EIS Guidelines* that included the addition of environmental effects of marine shipping associated with the Project, beyond the scope of the Project (VFPA jurisdiction) to the 12 nautical mile limit of Canada's territorial sea. In October 2015, the VFPA submitted to the CEA Agency the MSA. The VFPA understands that marine shipping associated with the Project outside of Port of Vancouver's jurisdiction is not formally considered to be part of the Project for the purposes of the Minister's decision whether the Project is likely to cause significant adverse environmental effects. However, the MSA provides information to the federal government regarding the potential effects of marine shipping associated with the Project, which can be used to inform programs or activities within federal jurisdiction. Section 17 of the *Updated EIS Guidelines* notes: "To the degree possible, the proponent should maximise the use of existing material that is relevant to marine shipping activities associated with the Project which is beyond proponent's care and control and within the 12 nautical mile limit of the territorial sea. Existing material may be utilised from academic studies, work of government and non-government working groups, past or ongoing environmental assessments, Aboriginal traditional knowledge reports or any other source the proponent deems appropriate for its presentation of this material." The use of information from the National Energy Board Review of the Trans Mountain Expansion Project therefore is consistent with CEA Agency direction. **Additional information provided by the VFPA:** As part of the Current Use assessment for the MSA, a review of existing information was conducted, including the EIS. Previous studies and information used to support the characterisation of existing and future conditions of Current Use are itemised and described in MSA Section 9.5.3. In preparation of the MSA, the VFPA requested information regarding Current Use, including fishing, cultural practices, and sites of importance, and information regarding asserted or established Aboriginal or treaty rights in the marine shipping area. A letter was sent in July 2015 to provide Ditidaht First Nation with the opportunity to review and comment on draft existing conditions information regarding these topics as they pertained to Ditidaht First Nation. Subsequent feedback resulted in the VFPA commissioning a Ditidaht First Nation Indigenous Knowledge Summary Report which was then considered and incorporated into the MSA (see MSA Section). The VFPA arranged a subsequent meeting to discuss marine shipping and the Current Use profile in September 2015. MSA Appendix 5-A includes a	**MSA** 9.5.3 Information Sources ***Updated EIS Guidelines***

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				table listing engagement and consultation activities for Ditidaht First Nation as part of the MSA. Information provided by Ditidaht First Nation through consultation and engagement activities, including meeting summaries and written communication, informed the integration of Indigenous traditional knowledge into the MSA. Integration of Indigenous traditional knowledge also relied on existing literature relevant to the marine shipping area for Ditidaht First Nation.	
DFN-14.2	Expressed interest in establishing sites of importance in the Current Use summary. Provided some additional comments on the Current Use Summary. Stated that Ditidaht was content with the Report.	08-Sep-2015, Meeting 10-Oct-2015, Email	**08-Sep-2015, Meeting:** Responded that the VFPA is open to suggestions about the inclusion of sites of importance.	**Addressed in MSA Appendix 5-B (#83):** The assessment of Current Use (MSA Section 9.5) includes cultural considerations, such as cultural practices and sites of importance, as well as intangible cultural heritage considerations, such as the expression of cultural values or ways of knowing, and the formation and maintenance of cultural identity, in the assessment of quality of Current Use experience. The assessment describes how Current Use activities have been affected cumulatively by other projects and activities that have been carried out. As residual effects to Current Use as a result of marine shipping associated with the Project are not predicted, an assessment of future cumulative effects was not carried out. The assessment of potential adverse impacts on asserted or established Aboriginal and treaty rights is included in MSA Section 9.5.	**MSA** Appendix 5-B Aboriginal Issues and Interests 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4 Existing Conditions 9.5.5.1 Negligible Effects of Vessel Transit on Current Use 9.5.5.2 Potential Effects of Vessel Transit on Current Use 9.5.11 Potential Adverse Impacts on Asserted or Established Aboriginal and Treaty Rights
DFN-14.3	Requested a rights-based impact assessment (including rights, title, and culture). Commented that the VFPA's narrow focus on Current Use and biophysical factors goes against the Court's determination that Indigenous perspective must be taken into account.	16-Jun-2015, Letter from Chief / 22-Jun-2015, Letter from JFK Law, Legal Counsel for Ditidaht First Nation (same letter) 31-Jul-2015, Letter 24-Aug-2015, Preliminary Issues and Concerns Regarding Port Metro Vancouver's Roberts Bank Terminal 2 Project	**24-Aug-2015, Letter from the VFPA:** *"With respect to the methodology for the assessment, we agree that we are required to assess the potential effects on specific VCs, consider the potential effects of those changes to the environment on Indigenous rights, and assess potential cumulative effects of marine shipping associated with the Project.* *The assessment of the potential effects of marine shipping associated with the Project will meet the direction provided by the Canadian Environmental Assessment Agency in the* Updated Guidelines *issued April 17, 2015, and as such it will include potential impacts on the components of the environment which Ditidaht First Nation have identified in the Preliminary Issues and Concerns, namely fish and fish habitat, marine mammals, marine vegetation and air quality. The Preliminary Issues and Concerns document identifies potential impacts to Ditidaht First Nation, including the ability to access traditional harvesting grounds, the quality of experience and ability to carry out traditional and spiritual practices and the health and wellbeing of community members. We very much welcome the opportunity to discuss such*	**Addressed in MSA Section 9.5:** MSA Section 9.5 considers potential impacts on the ability to exercise asserted or established Aboriginal or treaty rights in the marine shipping area (assessed in MSA Section 9.5.11).	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			potential impacts of increased marine shipping with Ditidaht First Nation." **09-Nov-2015, Letter from the VFPA:** Provided a copy of the Marine Shipping Addendum (MSA), which included MSA Section 9.5 on Current Use.		
DFN-14.4	Stated that Ditidaht knowledge and concerns are discussed in the [MSA], but the VFPA does not demonstrate how it considered this information in its impact assessment. Stated that the VFPA concludes that RBT2-associated shipping will have little-to-no impact on Ditidaht traditional use and rights, but does not demonstrate how it arrived at its conclusion. Stated that a credible and reliable assessment must account for Ditidaht knowledge and concerns, including risk tolerance and thresholds from Ditidaht's perspective and must identify how the VFPA proposes to address Ditidaht's concerns.	15-Dec-2015, Letter to the CEA Agency (CEAR Document #355)	**12-May-2016, Letter from the CEA Agency (CEAR Document #406)**: *"The Agency requested additional information on [the VFPA]'s assessment methodology in AIR #2 Rationale for Effects Characterisation. In addition, the Agency requested additional information on how Aboriginal Traditional Knowledge was used in the MSA in AIR #4 Aboriginal Traditional Knowledge."*	**Addressed in Response to MSA IR-02.24.16-2:** MSA IR-02.24.16-2 further discusses assessment of potential effects of marine shipping associated with the Project on the Current Use by Indigenous groups and potential adverse impacts on their exercise of Aboriginal and treaty rights. It does so by identifying the receptors of these potential effects and impacts, and provides an explanation of how these potential effects and impacts were determined to be negligible or measurable in the MSA. **Addressed in Response to MSA IR-02.24.16-4:** MSA IR-02.24.16-4 discusses the application of Indigenous Traditional Knowledge in the MSA. **Addressed in Response to IR10-02:** The VFPA's response to IR10-02, as requested by the Review Panel, provides further information concerning how available Indigenous knowledge was incorporated into the EIS and MSA.	**Information Requests** Response to Additional Information Request #2 (MSA IR-02.24.16-2 of CEAR Document #386) Response to Additional Information Request #4 (MSA IR-02.24.16-4 of CEAR Document #386) Response to Sufficiency Information Request #02 (IR10-02)
DFN-14.5	Requested an assessment of impacts to Current Use activities regardless of whether the activities take place in Canadian waters (MSA IR #12 Current Use Activities Outside of Traditional Territories). Stated that the assessment of potential effects of marine shipping associated with the Project on Current Use is incomplete as it has only addressed those effects which occur in Canada even though some activities connected to Indigenous rights and culture take place outside that boundary.	28-Oct-2016, Letter to Panel (CEAR Document #636)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in Response to MSA IR-02.24.16-12:** As noted in the response to MSA IR-02.24.16-12, some of the Current Use locations described in MSA Section 9.5.4 as lying within the marine shipping area, but outside traditional territorial boundaries, were identified in the U.S.A. As stated in MSA Section 9.5.5.3, the "assessment of potential effects of marine shipping associated with the Project on Current Use has only addressed those effects which occur in Canada, in accordance with the requirements of *CEAA 2012*" (p. 9.5-145), and specifically subsection 5(1)(c) of that legislation, which states, "with respect to aboriginal peoples, an effect occurring in Canada of any change that may be caused to the environment on …" and subsection 5(1)(c)(iii), which continues, "the current use of lands and resources for traditional purposes."	**Information Requests** Response to Additional Information Request #12 (MSA IR-02.24.16-12 of CEAR Document #386)
DFN-14.6	Stated that the VFPA has not specifically assessed the Project's potential adverse effects on Ditidaht's asserted or established Aboriginal rights (see MSA Section 9.5.11). Rather, its assessment "relies on the summary of existing Current Use conditions of each Aboriginal group presented in Section 9.5.4." Stated that while the VFPA does acknowledge the Project may have an adverse effect on fishing rights in a general sense (p. 9.5-151), it does not identify specific factors or thresholds it considered or otherwise	15-Dec-2015, Letter to the CEA Agency (CEAR Document #355)	**12-May-2016, Letter from the CEA Agency (CEAR Document #406):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review.* *The Crown will be using the Review Panel process to the extent possible to collect information about potential impacts to the exercise of Ditidaht Nation's rights from marine shipping associated with the Project and we encourage you to provide your*	**Additional information provided by the VFPA:** MSA Section 9.5.4.11 contains information on Ditidaht Current Use and Ditidaht's perspectives on their Aboriginal rights and title. The factors considered in the VFPA's approach to the assessment of potential impacts on the exercise of rights as a result of marine shipping associated with the Project is presented in MSA Section 9.5.11.1. MSA IR-02.24.16-12 further discusses assessment of potential effects of marine shipping associated with the Project on the Current Use by Indigenous groups and	**MSA** 9.5.11.1 Approach to the Rights Assessment **Information Requests** Response to Additional Information Request #12 (MSA IR-02.24.16-12 of CEAR Document #386) Responses to Sufficiency Information Requests #13 to #20 (IR10-13 to IR10-20)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	demonstrate how it considered this information as it specifically relates to Ditidaht's Aboriginal rights. Stated that the VFPA does not describe how its assessment accounts for VCs that the VFPA analysed separately from "Current Use" (for example, human health; marine commercial use; archaeological and heritage resources). These still relate to Ditidaht's rights and culture but are not discussed clearly by the VFPA.		*perspective on this topic to the Review Panel, including any suggested methodologies for the assessment of impacts to rights."*	potential adverse impacts on their exercise of Aboriginal and treaty rights. It does so by identifying the receptors of these potential effects and impacts, and provides an explanation of how these potential effects and impacts were determined to be negligible or measurable in the MSA. **Addressed in Responses to IR10-13 to IR10-20:** The VFPA's responses to IR10-13 through IR10-20, as requested by the Review Panel, provide additional information concerning the rationale for the effects assessment conclusions in the MSA with regard to Current Use, in alignment with the mandate of the Review Panel (refer to CEAR Document #1137). As relayed to the VFPA by the CEA Agency (refer to CEAR Document #1137), the assessment of the seriousness of potential impacts on the exercise of Aboriginal rights and title from marine shipping associated with the Project is the responsibility of the Crown.	
DFN-14.7	Stated that consultation on the full range of potential impacts and concerns (not just "Current Use," the main focus of consultation between the VFPA and Ditidaht to date) is required.	15-Dec-2015, Letter to the CEA Agency (CEAR Document #355)	**12-May-2016, Letter from the CEA Agency (CEAR Document #406):** *"Thank you for your comment. The Agency encourages Vancouver Fraser Port Authority (formerly PMV) to continue to work with Ditidaht throughout the environmental assessment process and for any outcomes from your work together to be brought forward to the Panel."*		
DFN-14.8	Stated that Ditidaht is of the view that the VFPA has erred in concluding that the marine shipping activities associated with the Project will have negligible impacts on the rights, title, culture, and Current Use of Ditidaht members. Stated that the information provided by the VFPA to the Review Panel is incomplete and insufficient at this time.	28-Oct-2016, Letter to Panel (CEAR Document #636)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in Responses to IR10-06 and IR10-13:** The VFPA's responses to IR10-06 and IR10-13, as requested by the Review Panel, provide additional information concerning the rationale for the current use effects assessment conclusions.	**Information Requests** Response to Sufficiency Information Request #06 (IR10-06) Response to Sufficiency Information Request #13 (IR10-13)

Table 15: Social and Economic Setting

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
DFN-15.1	Concerned that a socio-economic report is being completed without anyone communicating with Ditidaht.	08-Sep-2015, Meeting	**08-Sep-2015, Meeting:** Recorded comment for follow-up. **11-Sep-2015, Email from the VFPA:** The VFPA shared Ditidaht's contact with the socio-economic specialist so they could follow-up directly with Ditidaht. **18-Sep-2015, Phone call and email:** Discussed Ditidaht's economic interests, regarding tourism, land development, and aquaculture. Committed to review this information and incorporate where relevant into the MSA.	**Addressed in MSA Section 9.2.4.1:** The MSA notes the following economic interests of Ditidaht First Nation and considers them in the marine commercial use assessment. The Ditidaht Development Corporation indicated they are developing a proposal for a commercial aquiculture operation. The Ditidaht Development Corporation also indicated that Ditidaht First Nation members are directly employed with DFO fish hatcheries and that Ditidaht Fisheries department partners work with DFO hatcheries on restoration work and data collection (Ditidaht Development Corporation Representative 2015). Ditidaht First Nation has indicated that they have sport fishing commercial operations (Ditidaht Development Corporation Representative 2015). Ditidaht First Nation has indicated that they have a number of marine-based tourism businesses, including windsurfer park tourism, water sports, and camping operations. They also operate a crab shack located on a floating dock on Nitinat Lake. The crab shack sells fresh crab, targeted to users of the West Coast Trail (Ditidaht Development Corporation Representative 2015).	**MSA** 9.2.4.1 Overview of Marine Commercial Use in the Regional Assessment Area
DFN-15.2	Stated that the VFPA's approach of obscuring Aboriginal rights, title, history, and culture by assessing impacts only at the level of the "general population" in the socio-economic assessment is bad practice. Stated that the VFPA has provided a deficient rationale for not considering socio-economic impacts beyond marine commercial use and outdoor recreation.	28-Oct-2016, Letter to Panel (CEAR Document #636)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in Response to MSA IR-02.24.16-9:** The VFPA's response to MSA IR-02.24.16-9 notes that Indigenous and non-Indigenous commercial users operating in the identified marine shipping area are expected to experience similar negligible effects due to Project-associated vessel transit. This conclusion is based on existing information pertaining to the number of users, type of use, and general location of marine commercial use by the general population and Indigenous peoples and groups in the LAAs for the four identified VC sub-components, and available information on specific locations and amount or frequency of commercial use by Indigenous groups versus the general population in the LAAs.	**Information Requests** Response to Additional Information Request #9 (MSA IR-02.24.16-9 of CEAR Document #386)

APPENDIX IR10-01-C24

MAA-NULTH FIRST NATIONS: ISSUES, VIEWS, AND CONCERNS RELATED TO THE PROPOSED PROJECT AND MARINE SHIPPING ASSOCIATED WITH THE PROJECT

Maa-nulth First Nations

Table 1: Alternative Means of Carrying out the Project

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MNFN-1.1	Concerned that the proponent's market projections may be unrealistic, and thus that there may be no need for the Project. Requested that Canada conduct a rigorous assessment of the proponent's market projections. Stated that if Canada concludes that the proponent's market projections are reasonable and that there is indeed a need for the Project, Maa-nulth First Nations seeks written rationale for that conclusion. Requested that Canada conduct a rigorous assessment of all potentially viable alternatives to this Project, including the PATH Project, and should consult with Maa-nulth First Nations both during and regarding the outcome of that assessment. Stated that the submissions in the Canadian Environmental Assessment Agency (CEA Agency) process to date suggest there is no need for the Project.	28-Oct-2016, Letter to Panel from the First Nations of the Maa-nulth Treaty Society (CEAR Document #640)	The Vancouver Fraser Port Authority (VFPA) has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** All levels of government have plans to capitalize on a growing global economy, which requires Canada to be prepared for the trade that will come to Canadian ports. At the Port of Vancouver, we handled a record 3.25 million 20-foot-equivalent unit containers (also called TEUs) in 2017. Historical trade figures and third-party forecasts have long signaled that the ability of West Coast ports to serve this growth is becoming constrained, and by the mid-2020s we won't have the capacity to handle anticipated future growth of trade in containers at the Port of Vancouver The role of the Vancouver Fraser Port Authority is to ensure the port is ready for Canada's trading future. As we plan, we must consider how to provide needed port facilities within a growing metropolitan area. To date, we have partnered with industry, governments and communities to improve road and rail networks, investing to help goods flow smoothly throughout our region. We have also consulted with local governments, Aboriginal groups and residents on the ways we can grow responsibly. Investments in increased size and improved efficiency are being, or have been, made to West Coast container terminals, including recent improvements at the Port of Vancouver's Deltaport, Canada's largest container terminal, and Fairview in Prince Rupert. However, even with these investments, we won't have enough space to accommodate the shortfall in needed capacity. The Roberts Bank Terminal 2 Project represents the best option to accommodate growth and is needed to deliver the capacity we need as demand for goods shipped in containers continue to grow. **Additional information provided by the VFPA in regards to independent container capacity forecasts:** Since 2011, the port authority has commissioned independent forecasts which consider many factors that influence container traffic demand, including: • Gross Domestic Product growth; • World demand for Canadian resources; • Increased consumer demand for trade with Asia; • Opening of the expanded Panama Canal; • Planned container terminal expansion at the Port of Prince Rupert; • Macroeconomic trends in North America; • North American container port demand and competitive developments; • Trends in container shipping; and • Vancouver's competitive position compared to other North American ports. The 2016 Ocean Shipping Consultants forecast shows continued growth in container trade through the west coast of Canada at a compound annual growth rate of about 4%, and reinforces the need for planned increases of capacity to ship goods in containers through the existing container terminals in Vancouver and the Fairview Terminal in Prince Rupert. The 2016 Ocean Shipping Consultants forecast also confirms that the proposed Project will be needed by the mid-2020s. **Addressed in Response to IR1-06:** For each marine terminal alternative location considered in EIS Section 5.3, Table IR1-06-1 in Appendix IR1-06-A summarises the criteria used to assess technical feasibility and provides the conclusion of the feasibility assessment along with supporting rationale. To be considered technically feasible, potential alternatives to the location of the marine terminal within B.C. needed to first meet all technical criteria (as stated in EIS Section 5.2), which included the following:	**EIS** 4.0 Project Description 5.0 Alternative Means of Carrying out the Project Description 5.7 Identification of the Preferred Means Table 5-10 Summary of Preferred Alternative Means **Information Requests** Response to Sufficiency Information Request #06 (IR1-06 of CEAR Document #897) **Ocean Shipping Consultants 2016 Container Traffic Forecast Report** http://www.robertsbankterminal2.com/wp-content/uploads/2016-Ocean-Shipping-Consultants-Container-Forecast.pdf

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				• Meeting the long-term container capacity growth by the mid-2020s, through operating efficiencies and a sufficient land base to accommodate growth; • Meeting the requirement for the necessary road and rail connections to efficiently transport containers to and from the market; and • Providing the ability for larger container ships to safely navigate the waterways. Safe navigation includes a minimum berth depth requirement of approximately 18.4 m and the ability to safely turn the vessel around, even in situations of sufficient draught. In addition, consideration was given to terminals with other uses (e.g., serving bulk or break-bulk markets) and if they could retain these capabilities if conversion to container handling was undertaken. The marine terminal location alternatives evaluated (including a combination of these alternatives) were determined not to be technically feasible, and therefore, an evaluation of economic feasibility was not conducted, and an assessment of environmental effects was not required. Based on the analyses of the location alternatives (see Table IR1-06-1), RBT2 was deemed to be the only viable option to meet the anticipated long-term growth and demand of containerised trade on the west coast of Canada, and a full assessment of environmental effects on this preferred alternative was conducted and is described in the EIS. **Further information provided by the VFPA in response to alternative supply chain concepts:** Several options for how containers move through the supply chain beyond the main container terminals, such as inland ports, have been proposed as a way to increase container capacity and/or improve efficiency. Shippers will ultimately decide how best to contract supply chain options for moving cargo, and the VFPA supports any opportunity for greater efficiency. However, these options could only ever be complementary to a new container terminal, rather than replacing it, because capacity is needed to manage ship-to-shore container movements.	

Table 2: Coastal Birds – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MNFN-2.1	Concerned that an accident or malfunction involving a Project container ship may impact both the Wildlife Harvest Area and the Migratory Birds Harvest Area, as well as other areas that may be utilised or relied upon by Wildlife or Migratory Birds that the Maa-nulth First Nations have a right to harvest.	28-Oct-2016, Letter to Panel from the First Nations of the Maa-nulth Treaty Society (CEAR Document #640)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Appendix 5-B (#78):** The assessment of potential accidents or malfunctions (MSA Section 10.0) considers potential effects of a spill on current use of lands and resources for traditional purposes (Current Use), including cultural practices, such as the transmission of traditional knowledge, in the assessments of access to preferred Current Use locations, and quality of Current Use experience. The assessment is based on a plausible worst-case spill scenario that occurs in in Boundary Passage at the south end of South Pender Island. The plausible worst-case spill scenario was selected based on probability of occurrence, likely locations, and potential effects. The effects from a spill on Current Use would not be identical if the spill occurred in a different location; however, the risk reduction and spill response measures would be similar to those applicable to the plausible worst-case scenario assessed, and the likelihood of residual effects from a spill is lower in other areas than the location of the plausible worst-case scenario. **Addressed in MSA Section 10.5.13.6:** MSA Section 10.5.13.6 specifically discusses the potential impacts on asserted or established Aboriginal and treaty rights resulting from accidents or malfunctions arising from marine shipping associated with the Project. The assessment concludes that considering the conclusions of the Current Use assessment relating to potential accidents or malfunctions, marine shipping associated with the Project is expected to result, after mitigation referred to in MSA Section 10.5.13.3, in a serious impact on the ability of Indigenous groups to exercise marine-based Aboriginal or treaty rights within the marine shipping area as a result of a hypothetical fuel spill, and a minor to serious impact on these rights as a result of a collision between a vessel engaged in traditional use activities and a Project-associated container ship. In either case, the residual effect is unlikely to occur, due to the very low probability of a fuel oil spill or collision occurring. Confidence in this prediction is high, based on knowledge of Indigenous group perspectives on the potential effects of an oil spill or a collision on the ability to exercise Aboriginal and treaty rights.	**Marine Shipping Addendum (MSA, CEAR Document #316)** Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents or Malfunctions 10.5.13.6 Aboriginal and Treaty Rights Assessment

Table 3: Economic Development – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MNFN-3.1	Stated that Maa-nulth First Nations businesses and economic development potential are either directly or indirectly reliant upon the marine environment for their success. Concerned their businesses and economic development opportunities may be impacted in the event of an accident or malfunction involving a Project container ship.	28-Oct-2016, Letter to Panel from the First Nations of the Maa-nulth Treaty Society (CEAR Document #640)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 10.5.10:** MSA Section 10.5.10 includes an assessment of the potential effects on marine commercial use resulting from accidents or malfunctions arising from marine shipping associated with the Project, including potential effects to marine fish and seafood harvesting, guided sport fishing, marine-based tourism, and marine transportation. Two plausible worst-case scenarios were selected for the assessment, based on the analysed probabilities of occurrence, higher risk areas, and possible consequences: • A collision between a container ship and a small vessel within an existing shipping lane, resulting in damage to the vessel and/or gear as well a serious injury or fatality; and • A powered grounding of a container ship on a hard substrate, resulting in a spill of 7,500 m^3 of heavy fuel oil. In both cases, the identified residual adverse effects to marine commercial use are unlikely to occur, because of the very low probability of the accident scenarios.	**MSA** 10.5.10 Potential Accidents or Malfunctions, Marine Commercial Use

Table 4: Effects Assessment Methods (including Cumulative Effects)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MNFN-4.1	Stated that they share concerns raised by other parties that the proponent's cumulative impacts assessment fails to include several projects that should have been assessed. Stated that the Panel should require the proponent to expand the projects included in its cumulative effects assessment to include projects that are reasonably foreseeable, and are either not mentioned in or are mentioned in the proponent's EIS but excluded from the cumulative effects assessment, including the following projects: • the Wespac Tilbury Marine Jetty Project (a proposed LNG marine jetty), • the Woodfibre LNG Project, and • the BURNCO Aggregate Project.	28-Oct-2016, Letter to Panel from the First Nations of the Maa-nulth Treaty Society (CEAR Document #640)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in Response to IR4-09:** In responding to IR4-09, updated project status and vessel movement information was provided as available for the projects listed in the EIS and MSA (north of Segment B), plus other new projects considered to be certain or reasonably foreseeable (as of July 1, 2017). As part of this update, Woodfibre LNG Project and Wespac Tilbury Marine Jetty Project vessel projections were updated. However, because the Burnco Aggregate project's activities fall outside the marine shipping area, it was not updated as part of the response.	**Information Requests** Response to Sufficiency Information Request #09 (IR4-09 of CEAR Document #1051)
MNFN-4.2	Concerned with cumulative impacts of development on the Salish Sea, including the proposed Project, and the long-term health of the Salish Sea as a result of that development. Recommended establishing a Salish Sea Environmental Foundation. To better understand the cumulative impacts of development on the Salish Sea and take steps to monitor its health and recommend policy changes aimed at ensuring its long-term health.	28-Oct-2016, Letter to Panel from the First Nations of the Maa-nulth Treaty Society (CEAR Document #640)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** The VFPA acknowledges concerns about cumulative effects of development on the Salish Sea. Although the regulated care and control of vessels calling at the Port of Vancouver is limited to its marine jurisdiction, the VFPA is leading and encouraging several regional environmental initiatives that enhance the cumulative environmental performance of the shipping industry and port operations in and around the Salish Sea. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans Protection Plan, which includes information on the cumulative effects of marine shipping.	**From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**

Table 5: Engagement and Consultation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MNFN-5.1	Stated that funding offered is insufficient to conduct a meaningful review of the Current Use Summary or engage in discussions with the VFPA outside the CEA Agency process.	16-Sep-2015, Letter	**29-Oct-2015, Letter from the VFPA:** The VFPA offered funding to the Maa-nulth Treaty Society in May 2015 and this funding was accepted by the Maa-nulth Treaty Society. Where specific requests were made to the VFPA for additional funding, these requests have been considered and responses were provided. Based on the guidance provided in the *Updated EIS Guidelines*, the MSA is to rely on information from publicly available sources where possible. <u>Huu-ay-aaht First Nations:</u> 26-May-2015: Offered funding for engagement regarding marine shipping associated with the Project. 31-August-2015: Accepted funding. <u>Ka:'yu:k't'h'/Che:k'tles7et'h' First Nations:</u> 26-May-2015: Offered funding for engagement regarding marine shipping associated with the Project. 06-August-2015: Accepted funding. <u>Toquaht Nation:</u> 26-May-2015: Offered funding for engagement regarding marine shipping associated with the Project. 25-June-2015: Accepted funding. <u>Uchucklesaht Tribe:</u> 26-May-2015: Offered funding for engagement regarding marine shipping associated with the Project. 25-June-2015: Accepted funding. <u>Ucluelet (YUUŁU?IŁ?ATH) First Nation:</u> 26-May-2015: Offered funding for engagement regarding marine shipping associated with the Project. 23-July-2015: Accepted funding. <u>Maa-nulth Treaty Society:</u> 18-Sep-2017, Letter from the VFPA: Offered funding to the Maa-nulth Treaty Society for further engagement regarding marine shipping associated with the Project. 22-Dec-2017: Accepted funding.	**Addressed in MSA Appendix 5-B (#67):** The VFPA has engaged with each of the Indigenous groups listed in the issued *Updated Guidelines for the Preparation of an Environmental Impact Statement* (*Updated EIS Guidelines*) and provide drafts of Current Use existing conditions sections, and to request any additional Current Use information that the Indigenous group may wish to provide. The revised Current Use summary, following incorporation of any additional input from Indigenous groups is provided in the assessment of Current Use (MSA Section 9.5). The VFPA has acknowledged the challenges of participating in consultation during summer months, and has extended timelines to accommodate the provision of additional information from Indigenous groups. The VFPA has provided funding to Indigenous groups participating in consultation, and considers the amount of funding offered to be adequate and proportionate to the level of effort required by each Indigenous group to participate, given the scope of work. The VFPA increased the funding provided in some circumstances in response to specific requests.	**MSA** Appendix 5-B Aboriginal Issues and Interests 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights ***Updated Guidelines for the Preparation of an Environmental Impact Statement* (CEAR Document #177)**
MNFN-5.2	Stated that the efforts to engage in meaningful, good faith consultation has been minimal.	04-Aug-2017, Letter	**18-Sep-2017, Letter from the VFPA:** Stated that the VFPA is committed to meaningful consultation and summarised the VFPA's consultation efforts to date.	**Additional information provided by the VFPA:** A summary of consultation undertaken with the Maa-nulth First Nations can be found in MSA Table 5A-18. The VFPA will continue to consult with the Maa-Nulth Treaty Society regarding marine shipping associated with the Project outside of the jurisdiction of the VFPA in accordance with direction from the CEA Agency.	**MSA** Table 5A-18 Consultation Activities with Maa-nulth Treaty Society (Ka:'yu:'k't'h'/Che:k'tles7et'h, Toquaht, Uchucklesaht Tribe, Ucluelet)
MNFN-5.3	Interested in better understanding the various mandates of the federal agencies.	28-Nov-2017, Meeting	**28-Nov-2017:** The VFPA committed to provide Maa-nulth Treaty Society with a link to the Transport Canada's submission, which discusses roles and responsibilities. **15-Jan-2018, Email from the VFPA:** Provided a link to Transport Canada's submission to the Panel that summarises roles and responsibilities: http://www.ceaa-acee.gc.ca/050/documents/p80054/114803E.pdf (CEAR Document #464)		**CEAR Document #464 From Transport Canada to the Review Panel re: Review Panel Orientation Session Submission**

Table 6: Environmental Assessment and Permitting Process

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MNFN-6.1	Expressed concern with the exclusion of marine shipping from the Project and stated it is not consistent with *Canadian Environmental Assessment Act* (*CEAA*)*, 2012*. Requested that the Minister amend the 'designated project' to include marine shipping.	28-Oct-2016, Letter to Panel from the First Nations of the Maa-nulth Treaty Society (CEAR Document #640)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Appendix 5-B (#17):** The VFPA advised the CEA Agency of this concern through MSA Appendix 5-B (#17). **Addressed in *Updated EIS Guidelines*:** On April 17, 2015, the CEA Agency issued the *Updated EIS Guidelines* that included the addition of environmental effects of marine shipping associated with the Project, beyond the scope of the Project (VFPA jurisdiction) to the 12 nautical mile limit of Canada's territorial sea. In October 2015, the VFPA submitted to the CEA Agency the MSA. **Additional information provided by the VFPA:** The VFPA understands that marine shipping associated with the Project outside of the VFPA's jurisdiction is not formally considered to be part of the Project for the purposes of the Minister's decision whether the Project is likely to cause significant adverse environmental effects. However, the MSA provides information to the federal government regarding the potential effects of marine shipping associated with the Project, which can be used to inform programs or activities within federal jurisdiction.	**MSA** 1.0 Introduction Appendix 5-B Aboriginal Issues and Interests ***Updated EIS Guidelines***
MNFN-6.2	Concerned with allegations made by the Corporation of Delta and Roger Emsley, the Executive Director of the Against Port Expansion Community Group that federal and provincial agencies are engaging in private meetings with the proponent while the environmental assessment is underway. Stated that they seek an explanation from British Columbia and Canada regarding these allegations, and a commitment to make public any discussions with the proponent outside the CEA Agency process.	28-Oct-2016, Letter to Panel from the First Nations of the Maa-nulth Treaty Society (CEAR Document #640)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in CEAR Document #489:** The VFPA requested guidance from the Review Panel Manager with respect to continuing vital inter-departmental engagement and coordination with other federal and provincial agencies and departments concerning RBT2. The VFPA asked for confirmation from the Panel regarding the appropriateness of the proposed approach to ongoing engagement and requested the Panel to (a) advise the VFPA regarding its potential needs or preferences for documentation of such engagement and (b) advise other federal and provincial agencies and departments that they may continue to engage with the VFPA on these matters while the panel process is underway. **Addressed in CEAR Document #498:** The Review Panel indicated that interaction between participants—especially between the VFPA and bodies that may have legislative authority regarding the Project—can take place during the sufficiency review period of the environmental assessment. The Review Panel Manager stated that transparency must be maintained and emphasised that the Panel and the participants in the environmental assessment must be informed of the substance of any interactions that are relevant to the environmental assessment as the process proceeds.	**CEAR Document #489 From the Vancouver Fraser Port Authority to the Review Panel re: Inter-departmental engagement and coordination** **CEAR Document #498 From the Review Panel to the Vancouver Fraser Port Authority re: Inter-departmental engagement and coordination**

Table 7: Marine Commercial Use – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MNFN-7.1	Stated that the geographic location in which the Maa-nulth First Nations' Commercial Harvesting Rights may be exercised corresponds to the type of commercial fishing licence held, some of which overlap the marine shipping lanes for the Project and which the Maa-nulth First Nations are concerned may be impacted in the event of an oil spill involving a Project container ship.	28-Oct-2016, Letter to Panel from the First Nations of the Maa-nulth Treaty Society (CEAR Document #640)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 10.5.10:** Assesses the potential effects on marine commercial use resulting from accidents or malfunctions arising from marine shipping associated with the Project, including potential effects to marine fish and seafood harvesting. Two plausible worst-case scenarios were selected for the assessment, based on the analysed probabilities of occurrence, higher risk areas, and possible consequences: • A collision between a container ship and a small vessel within an existing shipping lane, resulting in damage to the vessel and/or gear as well a serious injury or fatality; and • A powered grounding of a container ship on a hard substrate, resulting in a spill of 7,500 m^3 of heavy fuel oil. In both cases, the identified residual adverse effects to marine commercial use are unlikely to occur, because of the very low probability of the accident scenarios. MSA Section 10.5.13.6 specifically discusses the potential impacts on asserted or established Aboriginal and treaty rights resulting from accidents or malfunctions arising from marine shipping associated with the Project. The assessment concludes that considering the conclusions of the Current Use assessment relating to potential accidents or malfunctions, marine shipping associated with the Project is expected to result, after mitigation referred to in MSA Section 10.5.13.3, in a serious impact on the ability of Indigenous groups to exercise marine-based Aboriginal or treaty rights within the marine shipping area as a result of hypothetical fuel spill, and a minor to serious impact on these rights as a result of a collision between a vessel engaged in traditional use activities and a Project-associated container ship. In either case, the residual effect is unlikely to occur, due to the very low probability of a fuel oil spill or collision occurring. Confidence in this prediction is high, based on knowledge of Indigenous group perspectives on the potential effects of an oil spill or a collision on the ability to exercise Aboriginal and treaty rights. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans Protection Plan which includes information on spill response and environmental protection.	**MSA** 10.5.10 Marine Commercial Use 10.5.13.6 Aboriginal and Treaty Rights Assessment **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**

Table 8: Marine Fish – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MNFN-8.1	Stated that the Maa-nulth First Nations treaty allocation includes Fraser River Salmon that migrate to the Maa-nulth First Nations domestic fishing area. Concerned with effects from the Project to the health of Fraser River Salmon, and their safe return. Stated that freighters will pass through Maa-nulth First Nations' Domestic Fishing Area. Stated that Maa-nulth First Nations has a treaty right to harvest salmon whose migration route passes near the proposed terminal.	18-Jun-2015, Meeting 04-Aug-2017, Letter	**18-Jun-2015:** Recorded comment for consideration by Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Section 8.1 the assessment of potential effects of marine shipping associated with Project on salmon. **04-Aug-2017:** Recorded comment for consideration by the Project team. **18-Sep-2017, Letter from the VFPA:** Requested to meet with the Maa-nulth First Nations to discuss concerns raised regarding Marine Shipping associated with the Project. **28-Nov-2017, Meeting:** The VFPA met with the Maa-nulth Treaty Society to discuss concerns and issues raised in regards to Marine Shipping associated with the project. Maa-nulth requested to see how their concerns were addressed in the MSA. The VFPA committed to send information on mitigation measures. **15-Jan-2018, Email from the VFPA:** Provided a link to the suggested mitigation measures regarding the marine shipping area outlined in the MSA. Stated that each assessment section, where applicable, describes suggested measures intended to mitigate potential adverse effects.	**Addressed in MSA Section 8.1:** The assessment of potential effects of marine shipping associated with the Project on salmon, including potential effects to spawning and migration, is included in MSA Section 8.1. Potential effects of vessel wake-generated waves on marine fish and fish habitat were characterised as negligible, because only 2%of coastline in the local assessment area is within the wake-related zone of influence, and because wake-generated wave heights at shorelines are predicted to be well within the range of natural wave conditions. Fish and fish habitat are already adapted to the natural conditions; therefore, any wake-related influences would not be distinguishable from existing conditions. Similarly, potential effects of underwater noise were also considered to be negligible because noise associated with Project-associated marine vessel activity and future cumulative shipping activities would not exceed injury thresholds for fish species or the Pacific salmon species behavioral threshold. Further, while noise-induced behavioural changes are possible for Pacific herring, potential effects would be localised to within 20 metres of a container ship and of short duration (as the ship passes by) and are therefore not anticipated to affect the integrity of populations within the local assessment area. **Addressed in EIS Section 13.0:** EIS Section 13.0 includes an assessment of effects from the Project on Fraser River salmon. Overall, marine fish are expected to experience a minor decrease in productivity in the future with the Project. Minor decreases in productivity are anticipated during the construction and operation phases for all marine fish sub-components, with the exceptions of negligible changes in productivity for certain species, including adult Chinook and chum salmon (representative species for sockeye and other Pacific salmon species) and lingcod, and an increase in productivity for shiner perch during the operation phase. Productivity decreases can be partially mitigated through the implementation of environmental management plans and the creation of habitat. Residual effects are anticipated for flat fish and forage fish as a result of permanent loss of subtidal sand habitat associated with the terminal footprint and disturbance from underwater noise. The assessment concludes there are no significant adverse effects from the Project, as marine fish productivity or long-term integrity would not be compromised. The Project is not expected to result in measurable incremental adverse cumulative effects to marine fish.	**EIS** 13.0 Marine Fish **MSA** Appendix 5-B Aboriginal Issues and Interests 8.1 Marine Fish and Fish Habitat 8.1.6 Potential Interactions and Effects 8.1.6.1 Negligible Effects
MNFN-8.2	Concerned about impacts to Maa-nulth Treaty allocations for Fraser River sockeye salmon, ocean Chinook salmon and ocean coho salmon.	28-Oct-2016, Letter to Panel from the First Nations of the Maa-nulth Treaty Society (CEAR	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Section 13.0:** Potential Project-related effects on marine fish, including all five species of Pacific salmon, are considered in EIS Section 13.0. The assessment concludes there are no significant adverse effects from the Project, as marine fish productivity or long-term integrity would not be compromised. The Project is not expected to result in measurable incremental adverse cumulative effects to marine fish. In addition, the potential effects of the	**EIS** 13.0 Marine Fish **MSA** Appendix 5-B Aboriginal Issues and Interests 9.1 Human Health

Maa-nulth First Nations

		Document #640)		Project with respect to the ongoing productivity of commercial, recreational, and Aboriginal fisheries are evaluated in the EIS.	9.2 Marine Commercial Use 9.3 Outdoor Recreation 9.4 Archaeological and Heritage Resources 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights

Table 9: Mitigation for Marine Biophysical Valued Components (including Onsite Habitat Concepts)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MNFN-9.1	Requested more information on those potential impacts and mitigation measures the VFPA is proposing. Stated that certain additional measures should be implemented to better mitigate potential impacts on the environment and the Maa-nulth First Nations. Requested more information on the mitigation measures to address potential accidents and malfunctions.	16-Sep-2015, Letter 28-Oct-2016, Letter to Panel from the First Nations of the Maa-nulth Treaty Society (CEAR Document #640) 28-Nov-2017, Meeting	**09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Section 12.0 that summarises potential environmental effects of marine shipping associated with the Project, suggested mitigation to be considered, residual effects, and cumulative effects in relation to the categories of environmental effects. **18-Sep-2017, Letter from the VFPA:** *"VFPA would like to further our understanding of the concerns raised by Maa-nulth Treaty Society and work together to identify mitigations to potential impacts, where possible. We are interested in meeting with the Maa-nulth Treaty Society this fall…* *The goal for this meeting is twofold:* *1. To develop a more fulsome understanding of the specific concerns raised by the Maa-nulth Treaty Society related to Marine Shipping.* *2. To identify, where possible, solutions to the concerns raised. VFPA is specifically interested in discussing what measures could be taken to address Maa-nulth Treaty Society's concerns."* **28-Nov-2017, Meeting:** Committed to provide information on mitigation measures. **15-Jan-2018, Email from the VFPA:** Provided a link to the suggested mitigation measures regarding the marine shipping area outlined in the MSA. Stated that each assessment section, where applicable, describes suggested measures intended to mitigate potential adverse effects.	**Addressed in EIS Section 35.0 and MSA Section 12.0:** EIS Section 35.0 (EIS Table 35-2) presents mitigation measures and commitments proposed as part of RBT2. MSA Section 12.0 summarises potential environmental effects of marine shipping associated with the Project, suggested mitigation to be considered, residual effects, and cumulative effects in relation to the categories of environmental effects. **Addressed in Response to IR-15.07.31-12:** Response to IR-15.07.31-12 further discusses proposed mitigation related to the EIS; specifically, Appendix IR12-A presents a summary of proposed mitigation and anticipated effectiveness, and Appendix IR12-B presents summary of other mitigation considered and rationale for rejection. **Additional information provided by the VFPA:** Beyond the mitigation measures suggested in the EIS and MSA, the VFPA encourages Indigenous groups participating in the RBT2 environmental assessment to suggest specific mitigation measures for consideration. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans Protection Plan which includes information on environmental protection.	**EIS** 35.0 Effects Assessment Summaries **MSA** 12.0 Summary of Changes to the Environment and Effects of Change to the Environment: Marine Shipping Associated with RBT2 **Information Requests** Response to Information Request #12 (IR-15.07.31-12 of CEAR Document #314) **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**
MNFN-9.2	Stated that, if approved, the mitigations proposed by the proponent must be implemented, as well the recommendation by the Washington State Department of Ecology and van Dorp and Merrick that the speed for container ships be reduced to enhance situational awareness. Stated that in the event the Project proceeds and these measures prove to be inadequate, Maa-nulth First Nations reserves the right to demand that additional measures be implemented, for example	28-Oct-2016, Letter to Panel from the First Nations of the Maa-nulth Treaty Society (CEAR Document #640)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Appendix 5-B (#10):** Where relevant, the VFPA has proposed mitigation, which serves to address measurable potential effects of marine shipping associated with the Project, to be considered by those regulators with jurisdiction in the area. **Addressed in EIS Section 35.0 and MSA Section 12.0:** EIS Section 35.0 (EIS Table 35-2) presents mitigation measures and commitments proposed as part of RBT2. MSA Section 12.0 summarises potential environmental effects of marine shipping associated with the Project, suggested mitigation to be considered, residual effects, and cumulative effects in relation to the categories of environmental effects. **Additional information provided by the VFPA:** Should the Project be approved, the VFPA will be legally bound to the conditions (including any mitigation measures) set out in the federal Environment Minister's Decision Statement.	**EIS** 35.0 Effects Assessment Summaries **MSA** Appendix 5-B Aboriginal Issues and Interests 12.0 Summary of Changes to the Environment and Effects of Change to the Environment: Marine Shipping Associated with RBT2

Maa-nulth First Nations

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	altering the location of the marine shipping lanes for the Project.			Although the regulated care and control of vessels calling at the Port of Vancouver is limited to its marine jurisdiction, the VFPA is supportive of initiatives by other agencies and authorities in reducing marine shipping-related risks outside of its jurisdiction.	

Table 10: Potential Accidents or Malfunctions

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MNFN-10.1	Concerned with the effects of an accident or spill to the shoreline where the Maa-nulth First Nations have bivalve and wildlife harvesting rights. Stated that the marine shipping route passes through the Maa-nulth First Nations domestic fishing area. Concerned with the potential impacts from an accident, fuel, or container spill to fish stocks. Concerned that an accident or malfunction involving a Project container ship may reach the Barkley Sound Domestic Fishing Area, the Kyuquot Sound Domestic Fishing Area, and/or the Inter-tidal Bivalve Harvest Areas.	18-Jun-2015, Meeting 28-Oct-2016, Letter to Panel from the First Nations of the Maa-nulth Treaty Society (CEAR Document #640)	**18-Jun-2015, Meeting:** Recorded for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Section 10.0 that assesses the potential effects of accidents or malfunctions related to marine shipping associated with the Project.	**Addressed in MSA Appendix 5-B (#103):** The potential effects of an oil spill on marine resources, including marine birds, marine mammals, and marine fish and fish habitat are considered within the assessment of potential accidents or malfunctions (MSA Section 10.0). This section also considers the potential effects on Current Use, and related impacts on rights, resulting from effects on marine resources. **Addressed in MSA Section 10.3.2.1:** Containers may be lost overboard in the event of a collision or grounding and could conceivably release hazardous and noxious substances (HNS) to the environment. While removal of containers lost overboard would involve a salvage operation, the combination of low collision or grounding accident frequencies with the low percentage of HNS containers at risk of being lost overboard (approximately 0.7% for Deltaport in 2012; see EIS Appendix 30-A), and the requirement for the container being compromised to release its contents, led to the assessment that the frequency of spills of HNS substances from containers lost overboard is low enough to not require further consideration as a plausible accident or malfunction arising from marine shipping associated with the Project. **Additional information provided by the VFPA:** There is limited overlap in the Barkley Sound Domestic Fishing Area and the marine shipping area assessed by the MSA, and no overlap with the Kyuquot Sound Domestic Fishing Area and/or the Inter-tidal Bivalve Harvest Areas. MSA Section 10.4, however, describes mitigation measures relevant to the prevention of or response to potential accidents or malfunctions arising from marine shipping in the marine shipping area that are also applicable to potential accidents and malfunctions beyond the assessed area. As noted in MSA Section 10.4, the southern B.C. coast is a mature marine vessel traffic area that is regularly used by deep-sea vessels. Risk mitigation measures currently being implemented in the marine shipping area include a vessel traffic management system (using radar surveillance and traffic separation zones), mandatory pilotage for large vessels, navigational aids, and precautionary areas. Around Roberts Bank, large ships underway have radio communication with BC Ferries and have the option to use anchorages if inclement weather makes berthing unsafe. Federal legislation provides a regulatory framework for the prevention and management of, and response to, shipping-related accidents and malfunctions in the marine shipping area, including fires, spills, and collisions. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government	**MSA** Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents or Malfunctions 10.3.3 Identification of Plausible Worst-case Accident or Malfunction Scenarios 10.4 Mitigation Measures (Potential Accidents and Malfunctions) 10.5.6 Marine Fish and Fish Habitat 10.5.7 Marine Mammals 10.5.13 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				of Canada's Oceans Protection Plan which includes information on spill response and environmental protection.	
MNFN-10.2	Stated that the MSA is incomplete as it does not sufficiently evaluate the potential effects accidents and malfunctions arising from Project-related traffic may have on the environment and Maa-nulth First Nations' rights and interests.	16-Dec-2015, Letter to the CEA Agency from the Ka:'yu :'k't'h'/Che:k'tles7et'h' First Nations, the Toquaht Nation, the Uchucklesaht Tribe and the Yuutu7it7ath First Nation (CEAR Document #354)	**12-May-2016, Letter from the CEA Agency:** *"This is a question that is appropriate for the Panel's sufficiency review, rather than a completeness review, thus the Agency did not require the information at this point in the process.* *The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in MSA Section 10.0:** The assessment of potential accidents or malfunctions considers a variety of potential effects related to two plausible worst-case scenarios selected based on the analysed probabilities of occurrence, higher risk areas, and possible consequences: • A collision between a container ship and a small vessel within an existing shipping lane, resulting in damage to the vessel and/or gear as well a serious injury or fatality; and • A powered grounding of a container ship on a hard substrate, resulting in a spill of 7,500 m^3 of heavy fuel oil. MSA Section 10.5.13 assesses the potential effects on Current Use and potential impacts on the ability to exercise asserted or established Aboriginal and treaty rights resulting from accidents or malfunctions arising from marine shipping associated with the Project. The assessment for the plausible worst-case spill scenario concluded that, with the exception of human health, measurable residual adverse effects are predicted for all valued components. In all cases, the identified residual adverse effects of a spill are unlikely to occur, because of the very low probability of an accident or malfunction that could result in a spill. With the exceptions of residual effects on marine mammals (southern resident killer whale), marine commercial use (guided sport fishing and marine-based tourism sub-components), outdoor recreation, archaeological and heritage resources, and Current Use, adverse residual effects were considered not significant. A serious residual adverse impact on the ability of Indigenous groups to exercise Aboriginal and treaty rights in areas overlapping or near the hypothetical spill area would be expected in the event of such a spill. The plausible worst-case collision scenario has the potential to result in measurable residual adverse effects on human health, marine commercial use, outdoor recreation, Current Use, and asserted or established Aboriginal and treaty rights. In all cases, the identified residual adverse effects of a collision are unlikely to occur, because of the very low probability of collision. The assessment concluded that residual adverse effects are expected to be not significant for marine commercial use and outdoor recreation, but significant for human health. For Current Use, the residual effect could range from not significant to significant, depending on the capacity of the affected Indigenous group to continue to undertake Current Use. In the event of a collision between a vessel engaged in traditional use activities and a container ship, a minor to serious adverse residual impact on the ability of the affected Indigenous group to exercise Aboriginal and treaty rights associated with those activities would be expected. The	**MSA** 10.0 Potential Accidents and Malfunctions **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				identified residual adverse effects of a collision are unlikely to occur, because of the very low probability of collision. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans Protection Plan which includes information on spill response and environmental protection.	
MNFN-10.3	Concerned with the potential for an accident or malfunction at the terminal or involving a Project container ship as it has the potential to impact the environment, the Maa-nulth First Nations' harvesting rights within the Barkley Sound Domestic Fishing Area and other treaty protected harvesting areas, the Maa-nulth First Nations' economic development interests in and around their respective treaty lands, and the Maa-nulth First Nations' culture.	28-Oct-2016, Letter to Panel from the First Nations of the Maa-nulth Treaty Society (CEAR Document #640)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Appendix 5-B (#103):** The potential effects of an oil spill on marine resources, including marine birds, marine mammals, and marine fish and fish habitat are considered within the assessment of potential accidents or malfunctions (MSA Section 10.0). This section also considers the potential effects on Current Use, and related impacts on rights, resulting from effects on marine resources. MSA Section 10.0 also considers the probability of an incident involving loss of containers overboard. **Addressed in MSA Appendix 5-B (#60):** The assessment of potential accidents or malfunctions (MSA Section 10.0) includes consideration of potential effects of a spill on marine commercial use, as well as outdoor recreation, including ecotourism. **Addressed in MSA Section 10.0:** The assessment of potential accidents or malfunctions considers a variety of potential effects related to two plausible worst-case scenarios selected based on the analysed probabilities of occurrence, higher risk areas, and possible consequences: • A collision between a container ship and a small vessel within an existing shipping lane, resulting in damage to the vessel and/or gear as well a serious injury or fatality, and • A powered grounding of a container ship on a hard substrate, resulting in a spill of 7,500 m^3 of heavy fuel oil. In both cases, the identified residual adverse effects are unlikely to occur, because of the very low probability of the accident scenarios.	**MSA** Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents and Malfunctions
MNFN-10.4	Stated that by focusing its evaluation of the potential effects of accidents and malfunctions on two hypothetical scenarios, namely a grounding and spill in Boundary Passage and a collision between a container ship and a small vessel, the MSA fails to sufficiently evaluate the potentially significant effects an accident or malfunction closer to the head of Juan de Fuca Strait may have on the environment within Barkley Sound and the Maa-nulth First Nations' Domestic Fishing Area, and	16-Dec-2015, Letter to the CEA Agency from the Ka:'yu :'k't'h'/Che:k'tles7et'h' First Nations, the Toquaht Nation, the Uchucklesaht Tribe and the Yuutu7it7ath First Nation (CEAR Document #354) 28-Oct-2016, Letter to Panel from the First Nations of the Maa-nulth Treaty Society (CEAR Document #640)	**12-May-2016, Letter from the CEA Agency:** *"This is a question that is appropriate for the Panel's sufficiency review, rather than a completeness review, thus the Agency did not require the information at this point in the process.*	**Addressed in MSA Appendix 5-B (#78):** The assessment is based on a plausible worst-case spill scenario that occurs in Boundary Passage at the south end of South Pender Island. The plausible worst-case spill scenario was selected based on probability of occurrence, likely locations, and potential effects. The effects from a spill on Current Use would not be identical if the spill occurred in a different location; however, the risk reduction and spill response measures would be similar to those applicable to the plausible worst-case scenario assessed, and the	**MSA** Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents and Malfunctions 10.3.3 Identification of Plausible Worst-case Accident or Malfunction Scenarios ***Updated EIS Guidelines*** **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	the Maa-nulth First Nations' rights and interests within and adjacent to those areas. Requested that the MSA be expanded to include a hypothetical spill at least one additional location along the marine shipping lane, at or near the head of Juan de Fuca Strait. Requested that, when evaluating the potential effects of any spill, including one at or near the head of Juan de Fuca Strait, the possibility of oil or other contaminants reaching Barkley Sound be considered and discussed. Raised a concern about the MSA's assessment of a potential spill involving a Project container ship being limited to: 1. One location (Boundary Passage), 2. One season (spring), and 3. One type of accident or malfunction (a hard grounding). Stated that these limitations fail to to adequately assess the potential impacts of accidents and malfunctions on the environment and the Maa-nulth First Nations. Stated that the Panel should require the VFPA to revise the MSA to include the following: • A hypothetical spill at least one additional location along the marine shipping lane, at or near the head of Juan de Fuca Strait; • For each hypothetical spill, an assessment of the potential impacts of that spill in at least two seasons (for example spring and summer); • For each hypothetical spill and season, an assessment of the possibility of heavy fuel reaching Barkley Sound and Kyuquot Sound; • A discussion on how the spill response for and potential impacts from an allision, a collision, a soft grounding or an explosion may differ from a spill resulting from a hard grounding, and how the spill response for and potential impacts may differ if the vessel sinks as a result of the allision, collision, grounding, or explosion, as applicable; • An assessment of potential impacts in the event one or more containers carrying hazardous materials fall off a		*The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	likelihood of residual effects from a spill is lower in other areas than the location of the plausible worst-case scenario. **Addressed in MSA Appendix 5-B (#92):** The assessment of potential accidents and malfunctions (MSA Section 10.0) considers a plausible worst-case spill scenario, located in Segment B of the marine shipping area, in Boundary Passage at the south end of South Pender Island. This location is near Turn Point. Boundary Passage is considered a higher risk area due to the relatively narrow passage, potential navigational hazards, and prevailing wind directions. The assessment also includes a description of applicable mitigation. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans Protection Plan which includes information on spill response and environmental protection.	

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	Project container ship near the head of Juan de Fuca Strait; and • That the Maa-nulth First Nations should be consulted by the proponent and Canada regarding those revisions.				
MNFN-10.5	Concerned that the routine operation of Project container ships may impact their Domestic Harvesting Rights and Commercial Harvesting Rights, for example by: • Restricting the times and locations in which those rights can be exercised; • Disrupting travelways utilised by Maa-nulth First Nations citizens to exercise those rights; and • Increasing the likelihood of a collision between a container ship and a vessel owned or operated by Maa-nulth First Nations or a Maa-nulth First Nations citizen.	28-Oct-2016, Letter to Panel from the First Nations of the Maa-nulth Treaty Society (CEAR Document #640)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Appendix 5-B (#4):** The MSA addresses potential effects from routine (day-to-day) marine shipping associated with the Project outside of VFPA jurisdiction, as well as potential accidents or malfunctions on components of the physical, biophysical, and social environment. Potential effects to Indigenous groups are described in the assessments of human health (MSA Section 9.1), marine commercial use (MSA Section 9.2), outdoor recreation (MSA Section 9.3), archaeological and heritage resources (MSA Section 9.4), and Current Use and Aboriginal and treaty rights (MSA Section 9.5). Where relevant, the VFPA has proposed mitigation to be considered by those regulators with jurisdiction in the area. **Addressed in MSA Section 9.5:** As noted in MSA Section 9.5, taking a precautionary approach, the assessment of potential impacts to Indigenous groups' ability to exercise asserted or established Aboriginal and treaty rights as a result of Project-associated shipping was based on the assumption that traditional use presently occurring in the marine shipping area (i.e., Current Use) is an expression of the exercise of Aboriginal or treaty rights. Where traditional use was not identified as occurring at present within the marine shipping area, but similar use was identified as practised in the past in the marine shipping area, asserted as an Aboriginal right, or protected under treaty, this use was assumed to be potentially exercisable as an Aboriginal or treaty right, and subject to potential impacts as a result of Project-associated shipping in much the same way as potential effects on Current Use. Considering the conclusions of the Current Use assessment presented in MSA Section 9.5, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the marine shipping area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups to identify measures that would reduce the impact of the international shipping lanes to fishing by Indigenous groups. These mitigation measures for addressing potential incremental effects on Current Use are expected to also be effective at addressing the potential	**MSA** Appendix 5-B Aboriginal Issues and Interests 9.1 Human Health 9.2 Marine Commercial Use 9.3 Outdoor Recreation 9.4 Archaeological and Heritage Resources 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				incremental impact to the exercise of Aboriginal and treaty rights. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans Protection Plan which includes information on the *Enhanced Maritime Situational Awareness and Proactive Vessel Management* initiative as well as information on the sharing of information of marine traffic with coastal communities.	
MNFN-10.6	Stated that potential impacts an accident or malfunction may have on Maa-nulth First Nations include the following: • May restrict the times and locations in which Maa-nulth First Nations can exercise their Domestic Harvesting and Commercial Harvesting Rights due to regulated or voluntary spill-related closures; • May reduce the quantity and quality of Fish, Aquatic Plants, Wildlife and Migratory Birds the Maa-nulth First Nations have a right to harvest under their Domestic Harvesting Rights and Commercial Harvesting Rights, and economic benefits to the Maa-nulth First Nations from those resources; • May damage the habitat and food sources that Fish, Aquatic Plants, Wildlife and Migratory Birds require to survive and reproduce; • May damage vessels or gear utilised to exercise the Maa-nulth First Nations' Domestic Harvesting Rights and Commercial Harvesting Rights; • May restrict the times and locations in which Maa-nulth First Nations citizens can engage in traditional ceremonies due to contamination of waters, shorelines, or marine resources used in those ceremonies; • May damage burial sites, archaeological remains, and other areas of cultural or spiritual significance to the Maa-nulth First Nations; • May result in negative human health impacts to Maa-nulth First Nations citizens; • May result in a loss in property value, loss in revenues from, or loss of an opportunity to develop treaty lands or	28-Oct-2016, Letter to Panel from the First Nations of the Maa-nulth Treaty Society (CEAR Document #640)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 10.0:** MSA Section 10.5.13 assesses the potential effects on Current Use and potential impacts on the ability to exercise asserted or established Aboriginal and treaty rights resulting from accidents or malfunctions arising from marine shipping associated with the Project. The assessment for the plausible worst-case spill scenario concluded that, with the exception of human health, measurable residual adverse effects are predicted for all valued components. In all cases, the identified residual adverse effects of a spill are unlikely to occur, because of the very low probability of an accident or malfunction that could result in a spill. With the exceptions of residual effects on marine mammals (southern resident killer whale), marine commercial use (guided sport fishing and marine-based tourism sub-components), outdoor recreation, archaeological and heritage resources, and Current Use, adverse residual effects were considered not significant. A serious residual adverse impact on the ability of Indigenous groups to exercise Aboriginal and treaty rights in areas overlapping or near the hypothetical spill area would be expected in the event of such a spill. The plausible worst-case collision scenario has the potential to result in measurable residual adverse effects on human health, marine commercial use, outdoor recreation, Current Use, and asserted or established Aboriginal and treaty rights. In all cases, the identified residual adverse effects of a collision are unlikely to occur, because of the very low probability of collision. The assessment concluded that residual adverse effects are expected to be not significant for marine commercial use and outdoor recreation, but significant for human health. For Current Use, the residual effect could range from not significant to significant, depending on the capacity of the affected Indigenous group to continue to undertake Current Use. In the event of a collision between a vessel engaged in traditional use activities and a container ship, a minor to serious adverse residual impact on the ability of the affected Indigenous group to exercise Aboriginal and treaty rights associated with those activities would be expected. The	**MSA** 10.0 Potential Accidents or Malfunctions

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	other lands a Maa-nulth First Nations currently has or acquires an interest in; and • May result in a loss of revenues from businesses a Maa-nulth First Nations currently has or acquires an interest in.			identified residual adverse effects of a collision are unlikely to occur, because of the very low probability of collision.	
MNFN-10.7	Stated that regardless of whether or not the Project is approved, Canada should implement the following measures: • A requirement that one or more emergency response towing vessels be stationed at strategic locations along the marine shipping route; • A requirement that a resident salvor and personnel as well as salvage equipment be stationed at strategic locations along the marine shipping route; and • A requirement that, at least by 2030 and sooner if possible, only container ships with double hulled fuel tanks be allowed in Canadian waters.	28-Oct-2016, Letter to Panel from the First Nations of the Maa-nulth Treaty Society (CEAR Document #640)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** Although the regulated care and control of vessels calling at the Port of Vancouver is limited to its marine jurisdiction, the VFPA is supportive of initiatives by other agencies and authorities in reducing marine shipping-related risks outside of its jurisdiction. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans Protection Plan which includes information on emergency response.	https://www.portvancouver.com/about-us/topics-of-interest/emergencies-and-spill-response/ http://wcmrc.com/ **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**
MNFN-10.8	In reference to MARPOL, asked whether it is possible to implement it in Canada sooner than 2030, for example if container ship owners divert container ships that do not have double hulled fuel tanks to other countries that do not yet require all container ships to be double hulled.	28-Oct-2016, Letter to Panel from the First Nations of the Maa-nulth Treaty Society (CEAR Document #640)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** The VFPA does not have the ability to direct container ship owners to divert ships in the suggested fashion. As is described in EIS Appendix 30-A, Section 2.2.2, it is noted that virtually all container ships calling at a fully-operational RBT2 (in 2030) would be in compliance with the IMO 2010 MARPOL convention concerning double hulled container ships.	**EIS** Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment
MNFN-10.9	Stated that Canada should conduct a review of existing research regarding the fate and behavior of heavy fuel and, if necessary, either conduct or require the proponent to conduct additional research to fill any gaps in existing research.	28-Oct-2016, Letter to Panel from the First Nations of the Maa-nulth Treaty Society (CEAR Document #640)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** The VFPA supports Canada's leadership in advancing spill preparedness and response in the Salish Sea, including its recently announced ongoing research initiatives as a part of the federal Oceans Protection Plan (OPP). Other organisations such as Clear Seas are also contributing to research considering risks, mitigation measures, and best practices for marine shipping on Canada's west coast. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans Protection Plan which includes information on spill response and environmental protection.	**From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**

Maa-nulth First Nations

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MNFN-10.10	Requested that a spill response base should be established in Ucluelet and the Maa-nulth First Nations should continue to be consulted regarding the establishment of that base. Stated that there may be benefit in training one or more Maa-nulth First Nations citizens in spill response measures, including shoreline clean-up and wildlife response, so that those members may assist in responding to a spill within the Maa-nulth First Nations' respective traditional territory. Stated that Canada should assess any deficiencies in the responses to the Esquimalt Harbour and English Bay spills and either implement or recommend improvements to address those deficiencies, and that Canada and/or Western Canada Marine Response Corporation (WCMRC) should consult with Maa-nulth First Nations regarding the possibility of training one or more Maa-nulth First Nations citizens in spill response measures. Concerned that they may have difficulty securing compensation for damages to its culture and Aboriginal and Treaty Harvesting Rights in the event of a spill involving a Project container ship. As such, Maa-nulth First Nations seek further information from Canada on how damages to their culture and Domestic Harvesting Rights would be compensated under the spill compensation regime and, if the compensation process for these matters is inadequate, a commitment from Canada to address that inadequacy.	28-Oct-2016, Letter to Panel from the First Nations of the Maa-nulth Treaty Society (CEAR Document #640)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** The *Canada Shipping Act, 2001* is Transport Canada's regulatory framework surrounding marine pollution and its enforcement. In the case of a report of pollution in the water, including oil or fuel spills, Canada operates under the National Spill Response Protocol, which specifies that the Canadian Coast Guard is responsible for ensuring the clean-up of ship sourced spills of oil and other pollutants. While the VFPA is not the lead agency when it comes to spill response, it provides assistance often in the form of working with first responders and other agencies, providing information on a situation through the 24/7 operations centre, security cameras, patrol boats and drone. As per a 2009 letter of understanding, the VFPA can be called upon by the Coast Guard to conduct an initial inspection in response to a pollution report in our federal jurisdiction. On the west coast, the Canadian Coast Guard contracts spill clean-up to WCMRC. This is also the agency that ships or terminal operators are required to call if they discover they have been the source of a spill. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans Protection Plan which includes information on spill response and environmental protection.	**From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**
MNFN-10.11	Stated that they seek further information from the proponent and/or Canada regarding the compensation regime in the event a contaminant other than oil is released from a Project container ship, for example if a container carrying hazardous materials falls overboard.	28-Oct-2016, Letter to Panel from the First Nations of the Maa-nulth Treaty Society (CEAR Document #640)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 10.3.2.1:** MSA Section 10.3.2.1 discusses the likelihood of containers carrying hazardous materials falling overboard. The 2010 HNS Convention sets out a shared liability regime to compensate claimants for damages arising from the international or domestic carriage of HNS by seagoing vessels. The HNS Convention follows the two-tier model of compensation of the international oil pollution liability and compensation regime (Civil Liability Convention (CLC) and the International Oil Pollution Compensation (IOPC) Fund), which Canada adopted in 1989. The Convention differs from the oil pollution regime mainly in that it covers many more substances and combines the shipowner liability regime and the HNS Fund into one instrument. Further information is available on Transport Canada's website.	**MSA** 10.3.2.1 Loss Overboard of Containers from Ships In-transit in Semi-protected Waters **Transport Canada: Overview of the 2010 Hazardous and Noxious Substances Convention** https://www.tc.gc.ca/eng/policy/acf-acfi-hns-overview-2609.htm

Table 11: Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Lands and Resources for Traditional Purposes

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MNFN-11.1	Confirmed that the Summary of Existing Conditions document shared with Huu-ay-aht First Nations was accurate. Asked for three specific changes to the document.	27-Aug-2015, Letter – Huu-ay-aht First Nations	**18-Sep-2015, Letter from the VFPA:** *"VFPA will incorporate your suggestions into the final version of the Marine Shipping Addendum, to be submitted to the Canadian Environmental Assessment Agency this fall."*	**Addressed in MSA Appendix 5-B (#12):** The VFPA has engaged with Indigenous groups with the objective of obtaining the views of Indigenous groups on potential effects of changes to the environment on Indigenous peoples, and potential adverse impacts of the Project on potential or established Aboriginal or treaty rights. The VFPA has also provided the opportunity to review the summary of Current Use existing conditions information specific to each Indigenous group prior to completing the assessment. Feedback received on these summaries has been considered and incorporated, as has additional information provided by Indigenous groups. The CEA Agency will provide Indigenous groups an opportunity to review the environmental studies following the submission of the MSA.	**MSA** Appendix 5-B Aboriginal Issues and Interests 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights
MNFN-11.2	Stated that the Current Use Summary does not reflect concerns regarding potential impacts from the day-to-day operations or potential impacts from an accident or malfunction involving Project-related marine traffic. Identified some inaccuracies in the Summary and requested a number of changes.	16-Sep-2015, Letter	**29-Oct-2015, Letter from the VFPA:** *"Comments on the contents of the draft summary of Maa-nulth Nations' Current Use of Lands and Resources for Traditional Purposes will be considered and incorporated into Marine Shipping Addendum."*	**Addressed in MSA Appendix 5-B (#20):** The MSA addresses potential effects from routine (day-to-day) marine shipping associated with the Project on components of the physical, biophysical, and social environment. **Addressed in MSA Appendix 5-B (#4):** The MSA addresses potential effects from routine (day-to-day) marine shipping associated with the Project outside of VFPA jurisdiction, as well as potential accidents or malfunctions on components of the physical, biophysical, and social environment. Potential effects on Indigenous groups are described in the assessments of human health (MSA Section 9.1), marine commercial use (MSA Section 9.2), outdoor recreation (MSA Section 9.3), archaeological and heritage resources (MSA Section 9.4), and current use of lands and resources for traditional purposes (MSA Section 9.5). Where relevant, the VFPA has proposed mitigation to be considered by those regulators with jurisdiction in the area.	**MSA** Appendix 5-B Aboriginal Issues and Interests 7.1 through 9.4 (All intermediate and valued component assessments) 9.1 Human Health 9.1.5 Potential Interactions and Effects 9.2 Marine Commercial Use 9.2.4 Existing Conditions 9.2.5 Potential Interactions and Effects 9.3 Outdoor Recreation 9.3.5 Potential Interactions and Effects 9.4 Archaeological and Heritage Resources 9.4.6.1 Negligible Effect #1 – Disturbance from Vessel Wake 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.5.1 Negligible Effects of Vessel Transit on Current Use 9.5.5.2 Potential Effects of Vessel Transit on Current Use 9.5.6 Suggested Mitigation Measures 9.5.7 Residual Effects Assessment and Significance Determination

Table 12: Project Benefits

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MNFN-12.1	Stated that Current Use Summary also did not reflect concerns that the Maa-nulth First Nations have regarding their economic interests, and stated their opposition to the Project unless they share in the economic benefits of the Project. Stated that the port representatives lacked authority to engage in mutual benefit agreement discussions. Stated that there has been no willingness of the VFPA to widen its mandate to negotiate a mutual benefit agreement. Reiterated request to enter into a mutual benefit agreement with the VFPA on the Project. Stated that they should be granted an equitable share of the economic benefits from the Project. Stated that they have not secured a commitment from the proponent or the federal or provincial governments to share in any economic benefits of the Project in the event it proceeds. Stated that Canada must not approve the Project unless and until an economic benefits package satisfactory to the Maa-nulth First Nations has been secured. Concerned about the lack of commitment from the VFPA, the federal, or provincial governments to share economic benefits with Maa-nulth First Nations. Expressed the fundamental connection between the sharing of wealth within their traditional territory and their constitutionally protected rights. Indicated that there is a fundamental legal right to share in the wealth that is generated in, on, and by the use of the waters within their territorial sea with regards to the Project. Expressed that without the sharing of wealth generated by the Project, there can be no true reconciliation, and, without that, there can be no free, prior, and informed consent to the Project by the Maa-nulth First Nations.	16-Sep-2015, Letter 28-Oct-2016, Letter to Panel from the First Nations of the Maa-nulth Treaty Society (CEAR Document #640) 04-Aug-2017, Letter 15-Nov-2017, Letter to Panel (CEAR Document #1097) 28-Nov-2017, Meeting	**29-Oct-2015, Letter from the VFPA:** *"Comments on the contents of the draft summary of Maa-nulth Nations' Current Use of Lands and Resources for Traditional Purposes will be considered and incorporated into the [MSA]. [The VFPA] will additionally respond to each of these concerns directly in a letter at a later date."* **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Appendix 5-B Aboriginal Issues and Interests. **25-Apr-2016, Letter from the VFPA:** *"The VFPA responded to those issues and concerns related to marine shipping and the draft summary in a letter dated October 29, 2015. Those concerns were also included and addressed within the MSA: a tracking table of concerns raised by Aboriginal groups with respect to the potential impacts of future marine shipping associated with RBT2 can be found in Section 5.0 Aboriginal Groups Engagement and Consultation of the MSA.* *Comments provided by the Maa-nulth Nations related to the draft summary were considered and changes were made to the MSA as appropriate. The comment tracking table enclosed includes the comments provided by the Maa-nulth Nations, the VFPA's response to those comments, and a description of any subsequent changes made to the MSA in response."* **28-Nov-2017, Meeting:** Committed to following up on the request for a mutual benefit agreement. **18-Jan-2018, Letter from the VFPA:** Provided an explanation of the VFPA's mandate and mitigation measures related to marine shipping associated with the Project as well as provided clarification regarding economic benefits. Explained that regarding potential impacts of marine shipping, which is beyond the VFPA's jurisdiction, the VFPA's approach has been to work with government departments and agencies that do have jurisdiction over marine shipping to determine feasible measures to reduce or avoid the impacts that marine shipping associated with the Project may have on Aboriginal and treaty rights. Stated that taking into account proposed mitigation, the Project is not likely to impact Maa-nulth First Nations' rights. For this reason, as well as the fact that marine shipping associated with the Project is outside of the VFPA's care and control, the VFPA is not prepared at this time to negotiate a mutual benefit agreement. That being said, the VFPA recognises that there are many potential economic benefits arising from the Project—both direct and indirect—and the VFPA is always open to further discussions with Maa-nulth First Nations in this regard.	**Addressed in MSA Appendix 5-B (#6):** This topic is not within the scope of assessment for the MSA, as defined by the *Updated EIS Guidelines*. An assessment of potential economic effects of the Project is included in EIS Section 20.0.	**MSA** Appendix 5-B Aboriginal Issues and Interests 9.2 Marine Commercial Use 9.2.4 Existing Conditions 9.2.4.1 Overview of Marine Commercial Use in the Regional Assessment Area 9.2.4.2 Strait of Georgia (Segment A of the [Marine Shipping Area]) 9.2.4.3 Haro Strait and Southern Gulf Islands (Segment B of the [Marine Shipping Area]) 9.2.4.4 Juan de Fuca Strait (Segments C and D of the [Marine Shipping Area])

IR10-02 Current Use of Lands and Resources for Traditional Purposes – Indigenous Traditional Knowledge

Information Source(s)

EIS Guidelines: Section 4.4.2; Section 10.2; Section 11.2.

Proponent Response to Additional Information Requirements of July 31, 2015 (CEAR Doc#314): IR8

Proponent Response to Additional Information Requirements of February 24, 2016 (CEAR Doc#391): IR4

Proponent Response to Additional Information Requirements of January 13, 2016 (CEAR Doc#572): Table 9-1

Proponent Response to Additional Information Requirements of January 13, 2016 (CEAR Doc#930): Table 9-1

Context

The EIS Guidelines required the Proponent to describe and summarize where Indigenous Knowledge was incorporated into the selection of valued components, baseline descriptions, the assessment of the potential effects of the proposed Project and marine shipping associated with the Project, as well as any measures proposed to mitigate or avoid those environmental effects.

In Tables 9.1 of CEAR Doc#572 and CEAR Doc# 930, the Proponent presented additional Indigenous Knowledge pertaining to Musqueam Indian Band, Tsleil-Waututh Nation and the WSÁNEĆ Nations, derived from information within the two documents. The tables included a description of what was informed by the Indigenous Knowledge, and which part of the environmental assessment was supplemented by this Knowledge.

However, no information concerning mitigation measures was included. Group-specific tables using the format presented in Tables 9.1 of CEAR Doc#572 and CEAR Doc#930 which include mitigation measures are required.

Information Request

Provide tables similar to those presented in CEAR Doc#572 and CEAR Doc#930 to summarize how all available Indigenous Knowledge was incorporated into the Proponent's environmental assessment of the proposed Project and marine shipping associated with the Project for the Indigenous groups listed in Tables 1-A and 1-C. The tables must be group-specific.

When addressing input from Indigenous groups regarding proposed mitigation measures, include all the groups listed in Tables 1-A, 1-B, 1-C, and 1-D of Attachment 2.

VFPA Response

As stated in the VFPA's response to MSA IR-02.24.16-4 of CEAR Document #391[1] and IR-7.31.15-08 of CEAR Document #314[2], the Canadian Environmental Assessment Agency's (CEA Agency's) reference guide on *Considering Aboriginal Traditional Knowledge in Environmental Assessments Conducted under the Canadian Environmental Assessment Act, 2012* (CEA Agency 2015) was considered in the development of the EIS and Marine Shipping Addendum (MSA), Additional Information to the EIS for *W*SÁNEĆ Nation (AIEIS; CEAR Document #930[3]), and Additional Information to the Marine Shipping Addendum for Musqueam First Nation and Tsleil-Waututh Nation (AIMSA; CEAR Document #572[4]), as well as in the development of this response. As stated in the reference guide, there is no one universally accepted definition of Indigenous (Aboriginal) traditional knowledge (ITK). The reference guide refers to ITK generally as 'knowledge that is held by, and unique to, Aboriginal peoples'. ITK is also described as 'a body of knowledge, built up by a group of people through generations of living in close contact with nature. ITK is cumulative and dynamic. It builds upon the historic experiences of a people and adapts to social, economic, environmental, spiritual, and political change'. The term traditional ecological knowledge (TEK) refers to a subset of ITK that is primarily concerned with the environment (CEA Agency 2015).

In the absence of an official definition of ITK, the EIS and MSA were developed based on the CEA Agency's reference guide (previously published as interim principles). For the purposes of the EIS and MSA, ITK (termed ATK in CEAR Documents #314, #391, #572, and #930) refers to knowledge about the natural environment, is synonymous with TEK, and refers to information provided by Indigenous groups specifically about an intermediate component (IC) or a valued component (VC). This is distinguished from other types of information provided by Indigenous groups, such as information about the traditional use of a resource or component by Indigenous groups (considered in the current use of lands and resources for traditional purposes ('Current Use') assessment and potential or established Aboriginal or treaty rights assessment), and concerns about effects to a resource or component, expressed by Indigenous groups in consultation or other documentation regarding the Project or marine shipping associated with the Project (considered to be 'interests and issues').[5]

[2] CEAR Document #314 From Port Metro Vancouver to the Canadian Environmental Assessment Agency re: Completeness Review - Responses to Additional Information Requirements (See reference document # 271) for the Environmental Impact Statement.
[3] CEAR Document #930 From the Vancouver Fraser Port Authority to the Review Panel re: Response to Additional Information on the WSÁNEC Nation requested by the Canadian Environmental Assessment Agency on January 13, 2016 (See Reference Document #383).
[4] CEAR Document #572 From the Vancouver Fraser Port Authority to the Review Panel re: Response to the Additional Information to the Marine Shipping Addendum on the Musqueam First Nation and Tsleil-Waututh Nation requested by the Canadian Environmental Assessment Agency on January 13, 2016 (See Reference Document #383) (NOTE: Title of post updated February 16, 2017).
[5] For clarity, concerns expressed by Indigenous groups regarding cumulative effects to date on a resource or component were included in the 'existing conditions' descriptions of applicable assessments.

The overall approach taken for integration of ITK is described in EIS Section 7.2.1.7 and in MSA Section 5.1.4. All relevant ITK that was available was incorporated into the EIS and the MSA. When ITK is used in the assessment of an IC or VC (most often informing existing conditions), the source of ITK is cited directly. When information about the use of lands and resources for traditional purposes by Indigenous groups is included in an assessment of an IC or VC for context purposes, a cross reference to the Current Use and rights assessments (EIS Section 32.0 and MSA Section 9.5) is generally provided. When information is included in an assessment of an IC or VC about the importance of a resource to Indigenous groups, or about concerns raised by Indigenous groups about potential effects to the IC or VC (often as rationale for selection of the IC, VC, or sub-components), a cross reference to the consultation and engagement section (EIS Section 7.2 and MSA Section 5.0) is provided.

Table IR10-02-A1 and Table IR10-02-A2 of **Appendix IR10-02-A** relate to the EIS and the MSA respectively and summarise how all available ITK was incorporated into the Proponent's environmental assessment of the proposed Project and marine shipping associated with the Project. The tables are specific to each Indigenous group listed in Tables 1-A and 1-C (Attachment 2 of Information Request Package 10 from the Review Panel (CEAR Document #1130[6]), and list each IC and VC assessment section (left column); indicate where and how ITK was used in the assessment (centre column); and identify the source of ITK for each IC and VC assessment section by Indigenous group (right column).

As Table IR10-02-A1 and Table IR10-02-A2 of **Appendix IR10-02-A** indicate, ITK provided by a number of Indigenous groups has been incorporated into the EIS and the MSA and considered in the description of existing conditions, definition of study areas, selection of ICs and VCs, effects assessment determination, as well as measures proposed to mitigate or avoid environmental effects. Suggested mitigation measures by Indigenous groups has been provided in previous filings (see sections below for specific references). Further input from Indigenous groups, including ITK, to support the development of mitigation measures, is currently being sought by the VFPA.

One of the purposes of the VFPA's Indigenous engagement and consultation process in advance of submission of the EIS was to "facilitate the identification and collection of ITK", including the consideration and incorporation of ITK into the EIS (EIS Section 7.2.1.1). EIS Section 7.2.1.7 describes the process for collecting ITK that included literature reviews, meetings and workshops, specific ITK questions and interviews, and sponsorship of additional studies. MSA Section 5.1.4 describes a similar process for the marine shipping area, which includes consultation and engagement activities, including meeting summaries and written communication, and review of existing relevant literature.

[6] CEAR Document #1130 From the Review Panel to the Vancouver Fraser Port Authority re: Information Request Package 10.

Indigenous Traditional Knowledge within the EIS by Indigenous group

Table IR10-02-A1 of **Appendix IR10-02-A** outlines where and how ITK is included in the EIS by IC/VC section and Indigenous group (as listed in Attachment 2, Table 1-A of Information Request Package 10 from the Review Panel (CEAR Document #1130)).

In summary, ITK that the VFPA had access to or acquired through engagement activities was incorporated into the EIS in the following ways:

1. Establishment of spatial boundaries for the following:
    - Marine fish (EIS Section 13.3): local assessment area boundaries in terms of marine fish species locations; and
    - Archaeological and heritage resources (EIS Section 28.3): local assessment boundaries in terms of potential locations of archaeological resources.
2. Description of existing conditions for the following:
    - Surficial geology (EIS Section 9.6): surficial sediments;
    - Marine vegetation (EIS Section 11.5): eelgrass location and characteristics, harvestable plants abundance and availability, intertidal marsh abiotic factors, and spatial and temporal variation;
    - Marine invertebrates (EIS Section 12.5): bivalve shellfish locations, Dungeness crab historical abundance and decline, and location, abundance and seasonality;
    - Marine fish (EIS Section 13.5): location of Pacific salmon species, herring, and starry flounder;
    - Marine mammals (EIS Section 14.0): historical abundance of Steller sea lions;
    - Coastal birds (EIS Section 15.5): locations of waterfowl, piscivorous species, and sea duck species; abundance and location of dabbling ducks and geese; abundance of peregrine falcon; presence and location of bald eagle, passerines, and barn swallow;
    - Commercial, recreational, and Aboriginal (CRA) fisheries (EIS Section 16.5): current and historical Indigenous fishing access to Dungeness crab as well as quality of resource;
    - Human health (EIS Section 27.5): food security in terms of health of Indigenous people and importance of traditional food sources;
    - Archaeological and heritage resources (EIS Section 28.5): ethnography, past uses of area, and archaeological potential; and
    - Potential or established Aboriginal and treaty rights and related interests, including Current Use (EIS Section 32.2.4): group-specific context about past use for traditional purposes and changes in this use over time, including group-specific information on cumulative effects to date.
3. Assessment of potential effects:
    - Archaeological and heritage resources (EIS Sections 28.6 and 28.8.4): location of potential fish trap stakes; and
    - Various ICs and VCs and potential or established Aboriginal and treaty rights and related interests, including Current Use (EIS Sections 32.2.6 and 32.3.2):

To the extent that ITK informed existing conditions (2. above) it also informed the assessment of effects.

4. Determination of significance:
    - Archaeological and heritage resources (EIS Section 28.9): definition of significance.

Mitigation measures for marine vegetation (EIS Section 11.0), marine invertebrates (EIS Section 12.0), marine fish (EIS Section 13.0), marine mammals (EIS Section 14.0), coastal birds (EIS Section 15.0), human health (EIS Section 27.0), and archaeological and heritage resources (EIS Section 28.0) were informed by other types of Indigenous information, but relevant ITK was not available.

A summary of mitigation measures suggested by the Indigenous groups listed in Table 1-A (Attachment 2 of CEAR Document #1130) is provided by Indigenous group in EIS Section 32.3.3.2. A summary of mitigation measures suggested by the Indigenous groups listed in Table 1-B (Attachment 2 of CEAR Document #1130) is provided by Indigenous group in AIEIS Section 7.3.3.2 (CEAR Document #930).

Indigenous Knowledge within the MSA by Aboriginal group

Table IR10-02-A2 of **Appendix IR10-02-A** outlines where and how ITK is included in the MSA by IC/VC section and by Indigenous group (as listed in Attachment 2, Table 1-C of CEAR Document #1130).

In summary, ITK that the VFPA had access to or acquired through engagement activities was incorporated into the MSA in the following ways:

1. IC-VC selection for the following:
    - Light (MSA Section 7.5): selection of light as an IC, specifically knowledge that oral traditions and sacred practices are reliant on stars and unimpaired visibility of night sky;
    - Marine mammals (MSA Section 8.2): selection of marine mammals as a VC;
    - Human health (MSA Section 9.1): selection of human health as a VC; and
    - Archaeological and heritage resources (MSA Section 9.4): selection of archaeological and heritage resources as a VC and archaeology as a sub-component;
2. Description of existing conditions for the following:
    - Wave environment (MSA Section 7.2): wind-generated and wake-related wave climates;
    - Marine fish and fish habitat (MSA Section 8.1): intertidal habitat, specifically types of marine vegetation (kelp) and characterisation of intertidal marshes; marine invertebrates; Pacific herring (proximity indicators); and Pacific salmon (timing of migrations);
    - Marine mammals (MSA Section 8.2): characterisation of existing conditions for marine mammals;

- Marine birds (MSA Section 8.3): ecology, habitat preferences, abundance, and distribution;
- Human health (MSA Section 9.1): characterisation of existing conditions for human health;
- Archaeological and heritage resources (MSA Section 28.5): characterisation of existing conditions, including ethnography, regional archaeology and heritage, and archaeological sites and potential; and
- Current Use (MSA Section 9.5.4): group-specific context about past use for traditional purposes and changes in this use over time, including group-specific information on cumulative effects to date.

3. Assessment of potential effects:
    - Various ICs and VCs and Current Use (MSA Section 9.5.5): To the extent that ITK informed existing conditions (2. above), it also informed the assessment of effects.
4. Residual effects assessment and significance determination:
    - Marine mammals (MSA Section 8.2): To the extent that ITK informed existing conditions (2. above), and the determination that existing conditions reflect significant cumulative effects that have already occurred, ITK informed the significance determination.
5. Cumulative effects assessment:
    - Marine mammals (MSA Section 8.2): To the extent that ITK informed existing conditions (2. above), ITK also informed the assessment of potential cumulative effects on the VC.

A summary of mitigation measures suggested by Indigenous groups listed in Table 1-C (Attachment 2 of CEAR Document #1130) is provided by Indigenous group in Table MSA IR13-1 of CEAR Document #391). A summary of mitigation measures suggested by Indigenous groups listed in Table 1-D (Attachment 2 of CEAR Document #1130) is provided in AIMSA Sections 7.4 and 7.8.3 (CEAR Document #572).

IC/VC Section	Assessment Steps Where ITK Was Used, and How it Informed the Assessment	Source of ITK for IC/VC Section by Indigenous Group
Wave Environment Section 7.2	• **Description of Existing Conditions:** ○ ITK informed the description of existing conditions for the wind-generated wave climate (Section 7.2.4.1, p. 7.2-4).	**Pacheedaht First Nation** National Energy Board. 2015c. Written Evidence of Pacheedaht First Nation. Exhibit 7 in the Affidavit of Kevin Neary, sworn May 25, 2015. Filed by Pacheedaht First Nation May 26, 2015, in relation to Kinder Morgan Canada, Trans Mountain Expansion Project.
	○ ITK informed the description of existing conditions for the wake-related wave climate (Section 7.2.4.2, p. 7.2-11).	**Tsawout First Nation** National Energy Board. 2014. Tsawout First Nation Oral Traditional Evidence Presentation to the National Energy Board in relation to Kinder Morgan Canada, Trans Mountain Expansion Project. Hearing Order OH-001-2014. Volume 23, November 28, 2014.
	• **Assessment of Potential Effects:** ○ To the extent that ITK informed existing conditions, as indicated above, ITK also informed the assessment of potential effects of marine shipping associated with the Project* on these conditions of the IC.	
Light Section 7.5	• **IC Selection**: ○ ITK informed IC selection, specifically the knowledge that oral traditions and sacred practices are reliant on stars and unimpaired visibility of the night sky (Section 7.5.1, p. 7.5-1). ○ IC selection was also informed by other types of Indigenous information.	**Lyackson First Nation** National Energy Board. 2015. Written Evidence of Lyackson First Nation. Appendix B, Lyackson Use and Occupancy Mapping Study for Trans Mountain Pipeline ULC's Proposed Trans Mountain Pipeline Expansion Project, prepared with Lyackson First Nation by Firelight Group Research Collective, dated November 14, 2014. Filed by Lyackson First Nation, May 27, 2015.
Marine Fish and Fish Habitat Section 8.1	• **Description of Existing Conditions:** ○ ITK informed the description of existing conditions for the intertidal habitat, specifically types of marine vegetation (kelp) and characterisation of intertidal marshes (Section 8.1.5.3).	**Tsawout First Nation** National Energy Board. 2014c. Tsawout First Nation Oral Traditional Evidence Presentation to the National Energy Board. Hearing Order OH-001-2014 in relation to Kinder Morgan Canada, Trans Mountain Expansion Project, Volume 23, November 28, 2014.
	○ ITK informed the description of existing conditions for marine invertebrates (Section 8.1.5.4).	**Beecher Bay (Scia'new) First Nation** National Energy Board. 2015b. Written Evidence of the Beecher Bay (Scia'new) First Nation: Traditional Marine and Land Use Baseline Documentation. In relation to Kinder Morgan Canada, Trans Mountain Expansion Project. Dated May 25, 2015. Filed by Scia'new First Nation, May 25, 2015. **Ditidaht First Nation**

IC/VC Section	Assessment Steps Where ITK Was Used, and How it Informed the Assessment	Source of ITK for IC/VC Section by Indigenous Group
		National Energy Board. 2015a. Written Evidence of Ditidaht First Nation. Ditidaht First Nation Traditional Marine Use and Occupancy Study. Exhibit B to Affidavit of Chief Jack Thompson, sworn May 21, 2015. In relation to Kinder Morgan Canada, Trans Mountain Expansion Project. December 13, 2012 TEK re: Shellfish and Crab - Dialogue Bullet-Form Summary.
	○ ITK informed the description of existing conditions for Pacific herring (proximity indicators) and Pacific salmon (timing of migrations) (Section 8.1.5.5). ○ The description of existing conditions for marine fish and fish habitat was also informed by other types of Indigenous information.	**Lummi Nation** National Energy Board. 2014a. Oral Presentation by the Tulalip Tribes and Lummi Nation. Hearing Order OH-001-2014 in relation to Kinder Morgan Canada, Trans Mountain Expansion Project, Volume 11, October 23, 2014. **Lyackson First Nation** Port Metro Vancouver. 2015. Meeting between PMV and Lyackson FN and LCFN, Draft notes, 2015-08-07. **Pacheedaht First Nation** National Energy Board. 2015c. Written Evidence of the Pacheedaht First Nation. Pacheedaht First Nation Traditional Marine Use and Occupancy Study, dated June 7, 2014. Exhibit 2 to Affidavit of Keven Neary, sworn May 25, 2015. In relation to Kinder Morgan Canada, Trans Mountain Expansion Project. Filed by Pacheedaht First Nation May 26, 2015. **Tsawout First Nation** National Energy Board. 2014c. Tsawout First Nation Oral Traditional Evidence Presentation to the National Energy Board. Hearing Order OH-001-2014 in relation to Kinder Morgan Canada, Trans Mountain Expansion Project, Volume 23, November 28, 2014. **Tulalip Tribes** National Energy Board. 2014a. Oral Presentation by the Tulalip Tribes and Lummi Nation. Hearing Order OH-001-2014 in relation to Kinder Morgan Canada, Trans Mountain Expansion Project, Volume 11, October 23, 2014.
	• **Assessment of Potential Effects:** ○ To the extent that ITK informed existing conditions, as indicated above, ITK also informed the assessment of potential effects of marine shipping associated with the Project* on these conditions of the VC.	

IC/VC Section	Assessment Steps Where ITK Was Used, and How it Informed the Assessment	Source of ITK for IC/VC Section by Indigenous Group
Marine Mammals Section 8.2	• **VC Selection:** ○ ITK informed the selection of marine mammals as a VC (Section 8.2.1).	**Ditidaht First Nation** National Energy Board. 2014a. Written Evidence of Ditidaht First Nation. Ditidaht First Nation Traditional Marine Use and Occupancy Study. Exhibit B to Affidavit of Chief Jack Thompson, sworn May 21, 2015. In relation to Kinder Morgan Canada, Trans Mountain Expansion Project. Filed by Ditidaht First Nation May 25, 2015. **Tsartlip First Nation** National Energy Board. 2014b. Tsartlip First Nation Exhibits to Oral Aboriginal Traditional Evidence. Hearing Order OH-001-2014 for the Trans Mountain Pipeline ULC Trans Mountain Expansion Project, Exhibit 1 – Saltwater People, as told by Dave Elliott, Sr.: A Resource Book for the Saanich Native Studies Program, edited by Janet Poth (Saanich, B.C.: Dave Elliott Jr. and the School District 63 (Saanich), 1983). In relation to Kinder Morgan Canada, Trans Mountain Expansion Project. Filed by Tsartlip First Nation, November 21, 2014. **Tsawwassen First Nation** Port Metro Vancouver. 2015a. Meeting between PMV and TFN, Draft notes, 2015-07-21.
	• **Description of Existing Conditions:** ○ ITK informed the characterisation of existing conditions for marine mammals (Sections 8.2.5.1 to 8.2.5.4).	**Maa-nulth First Nations (Huu-ay-aht First Nation)** National Energy Board. 2015a. Written Evidence of the Maa-nulth Treaty Society. Appendix B-1 - Culture and Heritage Study, Marine Resource Sites and Activities, Maa-nulth First Nations: Huu-ay-aht First Nation Project Final Report. In relation to Kinder Morgan Canada, Trans Mountain Expansion Project. Dated March 12, 2004. Filed by the Maa-nulth Treaty Society, May 26, 2015. **Pacheedaht First Nation** Pacheedaht. 2015. Pacheedaht First Nation Traditional Use and Occupancy Study Report for Port Metro Vancouver Roberts Bank Terminal 2 Project. Prepared by Pacheedaht Heritage Project, Pacheedaht First Nation Treaty Department and Traditions Consulting Services, Inc. September 23, 2015.
	• **Assessment of Potential Effects:** ○ To the extent that ITK informed existing conditions, as indicated above, ITK also informed the assessment of potential effects of marine shipping associated with the Project* on these conditions of the VC.	
	• **Residual Effects Assessment and Significance Determination** ○ To the extent that ITK informed existing conditions, and the determination that existing conditions reflect significant cumulative effects that have already occurred, ITK informed the significance determination.	
	• **Cumulative Effects Assessment** ○ To the extent that that ITK informed existing conditions, as indicated above, ITK also informed the assessment of potential cumulative effects on the VC.	
Marine Birds Section 8.3	• **Description of Existing Conditions:** ○ ITK informed the characterisation of existing conditions, specifically, the ecology, habitat preferences, abundance and distribution, and prediction of effects to marine birds in the local assessment area (Section 8.3.5.1). ○ The description of existing conditions for marine birds was also informed by other types of Indigenous information.	**Métis Nation British Columbia** Métis Nation BC, and Métis Youth British Columbia. 2014. 	• **Assessment of Potential Effects:** ○ To the extent that ITK informed existing conditions, as indicated above, ITK also informed the assessment of potential effects of marine shipping associated with the Project* on these conditions of the VC.	

IC/VC Section	Assessment Steps Where ITK Was Used, and How it Informed the Assessment	Source of ITK for IC/VC Section by Indigenous Group
Human Health Section 9.1	• **VC Selection:** ○ ITK and other types of Indigenous information informed the selection of human health as a VC (Section 9.1.1).	**Beecher Bay (Scia'new) First Nation** National Energy Board. 2015a. Written Evidence of the Beecher Bay First Nation. Beecher Bay First Nation: Traditional Marine and Land Use Baseline Documentation. In relation to Kinder Morgan Canada, Trans Mountain Expansion Project. Dated May 25, 2015. Filed by Scia'new First Nation, May 25, 2015. **Lyackson First Nation** National Energy Board. 2015b. Written Evidence of Lyackson First Nation. Appendix B, Lyackson Use and Occupancy Mapping Study in relation to Kinder Morgan Canada, Trans Mountain Expansion Project, prepared with Lyackson First Nation by Firelight Group Research Collective, dated November 14, 2014. Filed by Lyackson First Nation, May 27, 2015. **Pauquachin First Nation** National Energy Board. 2015c. Pauquachin Traditional Marine Resource Use Study. Hearing Order OH-001-2014, Appendix A to Written Evidence of Pauquachin First Nation, Prepared by Trailmark Consulting on behalf of Pauquachin First Nation in relation to Kinder Morgan Canada, Trans Mountain Expansion Project, Victoria, B.C. Filed by Pauquachin First Nation, May 26, 2015
	• **Description of Existing Conditions:** ○ ITK informed the characterisation of existing conditions for human health (Section 9.1.4.1). ○ The description of existing conditions for human health was also informed by other types of Indigenous information.	**Pauquachin First Nation** National Energy Board. 2015c. Pauquachin Traditional Marine Resource Use Study. Hearing Order OH-001-2014, Appendix A to Written Evidence of Pauquachin First Nation, Prepared by Trailmark Consulting on behalf of Pauquachin First Nation in relation to Kinder Morgan Canada, Trans Mountain Expansion Project, Victoria, B.C. Filed by Pauquachin First Nation, May 26, 2015. **Tsleil-Waututh Nation** Coast Salish Gathering. 2015. Salish Sea Ecosystem Conference.
	• **Assessment of Potential Effects:** ○ To the extent that ITK informed existing conditions, as indicated above, ITK also informed the assessment of potential effects of marine shipping associated with the Project* on these conditions of the VC.	
Archaeological and Heritage Resources Section 9.4	• **VC and Sub-component Selection:** ○ ITK informed the selection of archaeological and heritage resources as a VC and archaeology as a sub-component (Section 9.4.1). • **Description of Existing Conditions:** ○ ITK informed the characterisation of existing conditions, including ethnography (Section 9.4.5.2), regional archaeology and heritage (Section 9.4.5.3), and archaeological sites and potential (Section 9.4.5.4). ○ The description of existing conditions for archaeological and heritage resources was also informed by other types of Indigenous information.	**Beecher Bay (Scia'new) First Nation** National Energy Board. 2015b. IR10-03 Current Use of Lands and Resources for Traditional Purposes – Effects vs Rights

Information Source(s)

EIS Volume 5: Section 32.2.8; Section 32.3.2.1; Section 32.3.2.2

Context

In Section 32.2.8 of the EIS, the Proponent stated that residual Project-related effects on current use are expected to be negligible (not measurable or detectable) for all Indigenous groups.

However, in Sections 32.3.2.1 and 32.3.2.2 of the EIS, the Proponent concluded that the Project was expected to impact the ability of Tsawwassen First Nation and Musqueam Indian Band to exercise their Treaty or asserted Aboriginal rights to fish for crab, based on potential changes in access to a primary or preferred crab harvesting location.

The conclusion of the assessment of the potential environmental effects on current use is inconsistent with the assessment of potential impacts to asserted or established Aboriginal and Treaty rights.

Information Request

Clarify and provide a rationale for the difference in conclusions on the potential environmental effects of current use and the assessment of potential impacts to asserted or established Aboriginal and Treaty rights.

VFPA Response

The conclusion of the assessment of the potential environmental effects on Current Use and the assessment of potential impacts to asserted or established Aboriginal and treaty rights is consistent when the same end points of the assessment (i.e., pre-mitigation, post-mitigation) are compared.

Pre-mitigation

The Current Use and Aboriginal and treaty rights assessments *both* identify a measurable effect on Tsawwassen and Musqueam crab harvesting access *prior* to the application of mitigation. The pre-mitigation discussion of the Current Use assessment is contained within EIS Section 32.2.6. As EIS Section 32.2.6.1 describes for Tsawwassen First Nation and Musqueam First Nation: "Based on information available to date, it is anticipated that access to preferred domestic or FSC [food, social, or ceremonial] crab harvesting locations in the marine invertebrates LAA [local assessment area] by Tsawwassen First Nation and Musqueam First Nation would be subject to a potential adverse effect during Project construction and

operation, given the level of use of the area reported by these two groups or other information sources (e.g., DFO records)" (p. 32-104).

As referenced in the context to this information request, the VFPA concluded in EIS Sections 32.3.2.1 and 32.3.2.2 that the Project was expected to impact the ability of Tsawwassen First Nation and Musqueam First Nation to exercise their treaty or asserted Aboriginal rights to fish for crab, based on potential changes in access to a primary or preferred crab harvesting location.

The proposed measures to address the predicted *pre-mitigation* measurable effect on Tsawwassen First Nation and Musqueam First Nation crab harvesting for Current Use purposes, as presented in EIS Section 32.2.7, are the same as the measures proposed in EIS Section 32.3.3 to address the potential impact on the ability of Tsawwassen First Nation and Musqueam First Nation to exercise rights related to crab harvesting, as presented in EIS Section 32.3.3.

Post-mitigation

Neither the Current Use nor rights assessment concludes these effects will remain measurable *post-mitigation*. As referenced in the context to this information request, EIS Section 32.2.8 states that "with the implementation of mitigation measures, residual Project-related effects on Current Use are expected to be negligible (i.e., not measurable or detectable), and are not assessed further," meaning that a characterisation of these residual effects, significance determination, and total cumulative effects assessment was not undertaken per the methodology for *Canadian Environmental Assessment Act, 2012*, section 5. Similarly, with regard to Aboriginal and treaty rights, EIS Section 32.3.3.4 states that after the mitigation measures are applied, the VFPA anticipates "adverse impacts to asserted or established Aboriginal and treaty rights would be mitigated," meaning no measurable or detectable residual effects. The VFPA will continue to engage Indigenous groups on issues that, from the perspective of Indigenous groups, may remain outstanding, but that from the VFPA's perspective, "there are no other potential adverse impacts on asserted or established Aboriginal and Treaty rights that have not been fully mitigated" (p. 32-149).

As the conclusions of the Current Use and rights assessments are the same—i.e., no measurable or detectable residual effects—a rationale that would explain a difference in conclusions is not required.

IR10-04 Current Use of Lands and Resources for Traditional Purposes – Effects Assessment: Wildfowl Harvesting Opportunity

Information Source(s)

EIS Volume 5: Section 32.2.4.1; Section 32.3.2.1; Figure 32-1

Tsawwassen First Nation Submission to the Review Panel (CEAR Doc#651)

Context

In Section 32.3.2.1 of the EIS, the Proponent concluded that the proposed Project would not affect the ability of Tsawwassen First Nation to harvest migratory birds in the Tsawwassen First Nation Migratory Bird Harvest Area (Figure 32.1). This area was designated under the Tsawwassen First Nation Final Agreement and allows them to harvest migratory birds for domestic purposes throughout the year.

In its submission to the Panel, Tsawwassen First Nation disagreed with the Proponent's conclusion since the EIS did not provide any indication as to the nature or extent of the changes to the area presently available to them. Tsawwassen First Nation stated that the current port and causeway are within a zone in which the discharge of firearms is prohibited. Tsawwassen First Nation expressed the view that the Project, including the expansion of the port and causeway, could potentially necessitate an expansion of this zone; the result being a decrease of hunting opportunity of migratory birds for their citizens.

In Section 32.2.4.1 of the EIS, Tsawwassen First Nation is also reported as considering locations within and adjacent to the coastal birds Local Assessment Area as preferred harvesting areas for wildfowl.

More information regarding the existing zone in which the discharge of firearms is prohibited and its potential extension is required in order to predict if this may affect opportunities for Tsawwassen First Nation members to harvest migratory birds or resident waterfowl.

Information Request

Provide a map of appropriate scale showing the area(s) where the discharge of firearms is currently prohibited and its potential extension resulting from the proposed Project.

Indicate any overlaps with the Tsawwassen Migratory Bird Harvest Area shown in Figure 32-1 of the EIS.

If overlap(s) exist, provide an effects assessment on Tsawwassen First Nation's opportunity to harvest migratory birds or resident waterfowl.

VFPA Response

The VFPA makes the following clarification in relation to this information request before providing the requested information in Part 1 and Part 2 of this response:

- The title of the information request refers to the Current Use effects assessment in relation to wildfowl harvesting opportunity.
- The context to this information request refers to the Tsawwassen First Nation Migratory Bird Harvest Area, as designated under the *Tsawwassen First Nation Final Agreement* (*TFNFA*; Tsawwassen First Nation et al. 2009, 2010), which describes the treaty rights of Tsawwassen First Nation.
    - The VFPA notes that, in the case of treaty rights, migratory birds and resident waterfowl are covered by different provisions of the *TFNFA*, and hence relate not only to the Tsawwassen Right to Harvest Migratory Birds (per Chapter 11 of the *TFNFA*), but also to the Tsawwassen Right to Harvest Wildlife (per Chapter 10 of the *TFNFA*). These rights pertain respectively to the Tsawwassen Migratory Bird Harvest Area and the Tsawwassen Wildlife Harvest Area. These areas are spatially the same. This information is provided in EIS Section 32.2.4.1, which provides existing conditions information for both the Current Use and the rights assessments. The assessment of effects on Current Use and the assessment of impacts on the exercise of rights were provided in separate sections of EIS Section 32.0 pursuant to different requirements for each of those assessments, as laid out in the EIS Guidelines. This differential approach is described in EIS Section 32.1.
    - While the *TFNFA* protects treaty rights to harvest resources in specific areas, Current Use may include activities that may or may not be associated with these rights or the areas in which those rights may be exercised.
- The information request itself requests an effects assessment on Tsawwassen First Nation's opportunity to harvest migratory birds or resident waterfowl, and is not specific to Current Use or rights. The response in Part 2 references information contained in both the Current Use and rights subsections of EIS Section 32.0 (Section 32.2 and Section 32.3, respectively) with regard to Tsawwassen First Nation's opportunity to harvest migratory birds or resident waterfowl.

Part 1: Provide a map of appropriate scale showing the area(s) where the discharge of firearms is currently prohibited and its potential extension resulting from the proposed Project. Indicate any overlaps with the Tsawwassen Migratory Bird Harvest Area shown in Figure 32-1 of the EIS.

Refer to Figure IR10-04-A1 in **Appendix IR10-04-A** for a map showing the area in and around the existing terminal where the discharge of firearms is currently prohibited ('no-shoot zone'), and the potential extension of this no-shoot zone resulting from the proposed Project. The map also shows the spatial relationship of these existing and potential no-shoot zones with the Tsawwassen Migratory Bird Harvest Area, and other relevant treaty areas to the harvesting of wildfowl, identified in EIS Figure 32-1.

As Figure IR10-04-A1 shows, the existing Roberts Bank terminals and causeway lie within the Tsawwassen Migratory Bird Harvest Area and in the Tsawwassen Wildlife Harvest Area, in which the Tsawwassen have the right to harvest migratory birds and resident waterfowl, limited by measures necessary for conservation, public health, and public safety. For public safety reasons, the discharge of firearms is currently prohibited on the existing Roberts Bank terminals and causeway, and in an adjacent buffer area around the existing footprint and causeway of approximately 150 m.

As Figure IR10-04-A1 also shows, the proposed Project footprint overlaps the Tsawwassen Migratory Bird Harvest Area and Tsawwassen Wildlife Harvest Area, and lies within an area that currently allows the discharge of firearms (MFLNRO 2017).

Part 2: If overlap(s) exist, provide an effects assessment on Tsawwassen First Nation's opportunity to harvest migratory birds or resident waterfowl.

The Current Use existing conditions and effects assessment for Tsawwassen First Nation considered that the proposed Project footprint overlaps the Tsawwassen Migratory Bird Harvest Area and Tsawwassen Wildlife Harvest Area, and that it lies within an area that allows the discharge of firearms (MFLNRO 2013).[1] The assessment was based on reported Tsawwassen hunting locations for wildfowl, information available to the VFPA regarding no-shoot zones in the area (MFLNRO 2013), and an assumption that the existing no-shoot zone would be expanded around the new terminal, with a similar sized buffer of about 150 m. In other words, the EIS already considered the overlaps in question in the Current Use and rights assessments.

As reported in the Current Use existing conditions for Tsawwassen (EIS Section 32.2.4.1), harvesting areas for wildfowl traditionally included "all of what are now Tsawwassen First Nation Lands and nearby back fields, as well as the shoreline from west of the Roberts Bank causeway up to and including Brunswick Point, and areas in and around Westham Island" (p. 32-37). This information was based on Aboriginal traditional knowledge shared by Tsawwassen First Nation members during interviews requested by the VFPA to understand current Tsawwassen hunting locations and targeted resources, including birds (cited in EIS Section 32.0 as Tsawwassen First Nation Hunters 2014 a,b).

Considering information contained in EIS Section 32.2.4 regarding existing conditions of use with regard to coastal birds, the Current Use assessment expressly addressed potential hunting access effects on Aboriginal groups in EIS Section 32.2.6.1, including Tsawwassen First Nation. The Current Use assessment took into account Tsawwassen hunting locations known to the VFPA (as reviewed above), both in terms of land-based hunting (e.g., on Tsawwassen First Nation Lands) and marine-based hunting, which, as previously noted, considered an expanded no-shoot zone around the proposed marine terminal.

For land-based hunting, the Current Use assessment explains that effects on upland access and terrestrial and freshwater resources were not assessed, as Project interactions with those

[1] With regard to the existing Roberts Bank terminals and causeway area, there appear to be no substantial differences between the maps that appear in MFLNRO (2013) and MFLNRO (2017).

locations and resources were not anticipated (EIS Section 32.2.6, p. 32-100). For marine-based hunting, the EIS states: "Based on available information, effects on access to preferred locations for the Current Use of… coastal birds by Aboriginal groups within the… coastal birds LAA [local assessment area, which lies fully within the Tsawwassen Migratory Bird Harvest Area and Tsawwassen Wildlife Harvest Area], … are not anticipated as a result of the Project (for hunting by boat, only limited open-water hunting of birds was reported, *none of which is in the immediate area of the Project footprint*)" (EIS Section 32.2.6.1, p. 32-101; emphasis added).

With regard to potential impacts on Tsawwassen First Nation's right to harvest migratory birds or resident waterfowl in the Tsawwassen Migratory Bird Harvest Area and Tsawwassen Wildlife Harvest Area, the rights assessment (EIS Section 32.3.2.1) took into consideration the existing conditions of use for traditional purposes presented in EIS Section 32.2.4.1 and the results of the Current Use assessment presented in EIS Section 32.2.6 when it concluded that the Project is not expected to impact the ability of Tsawwassen First Nation to exercise the treaty right to harvest migratory birds (EIS Section 32.3.2.1, p. 32-127) or the treaty right to harvest wildlife (EIS Section 32.3.2.1, p. 32-128) in the designated areas for such activities, based on information known to the VFPA about locations currently used by Tsawwassen First Nation members for hunting birds for traditional purposes.

For the reasons explained above, the requested effects assessment regarding Tsawwassen First Nation's opportunity to harvest migratory birds or resident waterfowl was appropriately carried out in the EIS, and it is the VFPA's view that additional assessment is not required.

IR10-05 Current Use of Lands and Resources for Traditional Purposes – Clarification: Vegetation

Information Source(s)

EIS Volume 5: Section 32.2.4.2; Section 32.2.6

Context

In Section 32.2.6 of the EIS, the Proponent stated that since the proposed Project was not anticipated to interact with terrestrial vegetation, it was not carried forward for further assessment. As a result, the potential effects of the Project on current use by Indigenous peoples were also not carried forward.

In Section 32.2.4.2 of the EIS, Musqueam Indian Band was reported as stating that qʼəχmin is only available in the Musqueam Study Area, which includes the Project area. However, the Proponent does not provide any information about qʼəχmin.

More information on qʼəχmin is required in order to determine if there are any potential interactions with the Project.

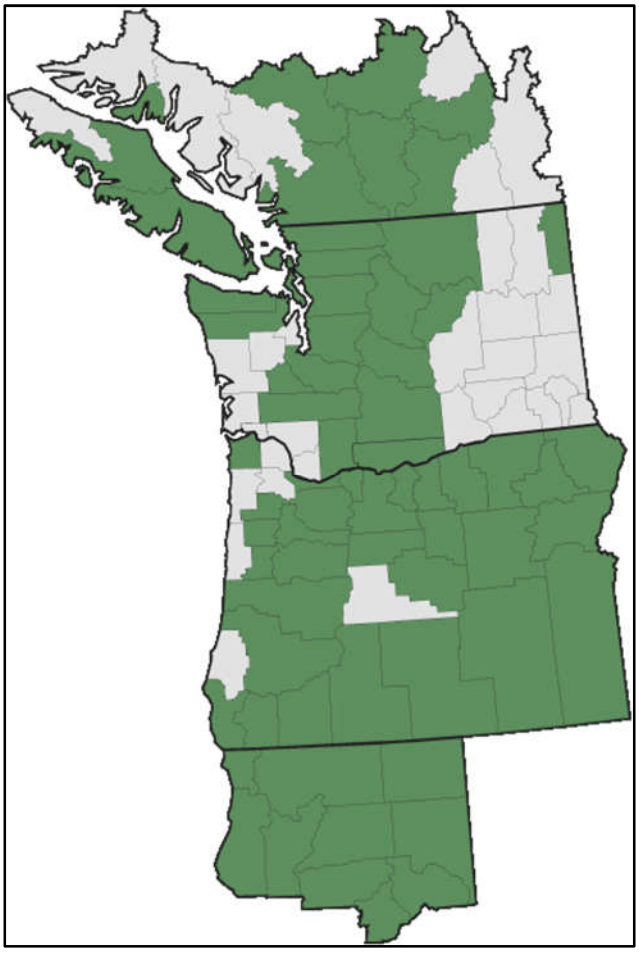
Information Request

Confirm that qʼəχmin is *Lomatium nudicaule*, also known as Indian Celery.

Provide a map showing the distribution of qʼəχmin in relation to the proposed Project.

Confirm whether there is a potential for interaction between qʼəχmin and the Project, including any potential effects of the Project with respect to current use by Indigenous peoples, including any changes in access to qʼəχmin.

VFPA Response



Part 1: Confirm that qʼəχmin is* Lomatium nudicaule*, also known as Indian Celery.

We confirm that qʼəχmin is *Lomatium nudicaule*, which is also known as Indian Celery or Barestem Desert-Parsley (Kuhnlein and Turner 1991).

Part 2: Provide a map showing the distribution of qʼəχmin in relation to the proposed Project.

Figure IR10-05-1 below shows the generalised distribution of qʼəχmin in western North America.

Figure IR10-05-1 Generalised Distribution of q̓əχmin (shaded in green) in Western North America

Source: Gustafson and Turner 2006.

In western Northern America, q̓əχmin occurs in dry rocky or grassy slopes and open woods in the lowland and steppe zones from southern B.C. to northern California. It is locally common on southeast Vancouver Island and the Gulf Islands, but is more rare eastward in southern B.C. (Klinkenberg 2013).

The plant is a relatively common terrestrial species, for which species-specific vegetation distribution maps do not exist. A more localised distribution map for q̓əχmin in relation to the proposed Project is therefore not available; however, as it is not an aquatic plant (Klinkenberg 2013), it would not occur in the marine vegetation local assessment area (LAA) or the regional assessment area (RAA) (EIS Section 11.3.1; EIS Figure 11-1), which include aquatic environments up to the high water mark and do not include upland areas (i.e., there is no spatial overlap between q̓əχmin and the marine vegetation LAA or RAA).

Part 3: Confirm whether there is a potential for interaction between q̓əχmin and the Project, including any potential effects of the Project with respect to current use by Indigenous peoples, including any changes in access to q̓əχmin.

As reviewed in Part 2 of this response, q̓əχmin is a terrestrial plant. As described in EIS Appendix 8-A, terrestrial vegetation does not spatially overlap with the Project, and therefore has no potential to interact with the Project. This includes q̓əχmin.

With regard to potential effects of the Project on current use of lands and resources for traditional purposes (Current Use) of q̓əχmin by Indigenous peoples, including any changes in access to q̓əχmin, EIS Section 32.2.4.2 considered information provided by Musqueam First Nation regarding q̓əχmin, which was identified by Musqueam as "Indian Consumption Plant ~ Bare-stem Desert Parsley" (Woolman 2014). Under the heading 'Terrestrial and Freshwater Resources,' the EIS reported that q̓əχmin or 'Indian Consumption Plant (Bare-stem Parsley)' is now primarily harvested from or traded for by Musqueam around Tsawwassen First Nation Lands (EIS Section 32.2.4.2, p. 32-54).

No other Indigenous group reported use of q̓əχmin to the VFPA.

In deriving conclusions with regard to Current Use of terrestrial resources in EIS Section 32.2.6, the Current Use assessment considered effects on terrestrial resources themselves as well as effects on access to those resources, and predicted there would be no interaction between the Project and Current Use of such resources (p. 32-100, para. 2):

> "Since Project construction and operation are not anticipated to interact with terrestrial or freshwater resources, these components were not considered in the EIS. By extension, effects of a change in the availability or quality of these resources on the Current Use of these resources by [Indigenous] groups were not carried forward for further assessment. Based on information reviewed to date and summarised in [EIS] Section 32.2.4, access to preferred locations for the Current Use of terrestrial or freshwater resources is also not anticipated as a result of Project construction and operation."

This conclusion regarding terrestrial resources includes q̓əχmin, as supported by Indigenous traditional knowledge supplied by Musqueam First Nation (as considered in EIS Section 32.0) and the additional information provided in this response regarding the spatial distribution and habitat preferences of the q̓əχmin plant.

Tsawwassen First Nation Submission to the Review Panel (CEAR Doc#651)

Proponent Response to Additional Information Requirements of January 13, 2016 (CEAR Doc#930)

Responses to Review Panel Request for Information: Musqueam Indian Band (CEAR Doc#1098); Métis Nation British Columbia (CEAR Doc#1099); Lake Cowichan First Nation (CEAR Doc#1101); Cowichan Nation Alliance (CEAR Doc#1108)

Context

In sections 32.2.4. of the EIS, the Proponent summarized the information it had received from Indigenous groups regarding the existing conditions of marine and terrestrial resource use and other cultural considerations. The summaries included the identification of the different resources harvested by the Indigenous groups, as well as the locations and methods used to harvest them.

The analysis of future conditions with the Project regrouped the information from all Indigenous groups together and was analyzed in relation to the following indicators:

1. Changes in access to preferred current use locations;
2. Changes in availability of preferred current use resources;
3. Changes in quality of preferred current use resources; and
4. Changes in quality of the current use experience (see IR10-08 below).

Based on this analysis, the Proponent concluded that with the implementation of the proposed mitigation measures, the residual effects of the Project would be negligible and no characterization of the residual effects or evaluation of significance was carried out.

In submissions received by the Panel, some Indigenous groups raised concerns with the Proponent's assessment, and expressed the following views:

1. Baseline information on current conditions in terms of sufficiency of resources and conditions of acceptable displacement is missing. For example, the following information is not provided:
    - the number of vessels per hour per year in the local and regional assessment areas for harvesting purposes;

- the seasonal utilization and spatial distribution of resources used by Indigenous peoples; and
- the community-based aspirational harvest quotas and the sufficiency of resources to meet food, social and ceremonial (FSC) requirements of the community.

2. The assessment and significance of effects since levels of significance may vary between affected Indigenous groups and significance for one group may not be representative of others. For example, the following information is not provided within the EIS or CEAR Doc#930:
   - the effects of the existing causeway and terminals on fisheries for commercial, domestic and FSC purposes and resultant alienation from fishing grounds and harvesting other marine resources.
   - the effects on traditional use locations and travel-ways due to increased disturbance on lands and waters by shipping traffic and existing Roberts Bank terminals and future Project construction and operation.
   - the existence of other activities that already interfere with the ability of Indigenous groups to engage in traditional activities, such as non-tenured commercial activity, existing coastal and marine uses, recreational boating activity, marinas and docks, and sanitary shellfish closures.
3. Baseline data provided for each group in the EIS does not adequately inform the analysis of the Proponent's four indicators of potential changes. For instance, there are no maps indicating the locations of harvesting of resources. Further, some Indigenous groups consider that the information reported on their community is incomplete.

Group-specific baseline information and an analysis of the potential effects of the Project is required. This should include the characterization of residual effects and a determination of significance on current use for each Indigenous group covered in the Section 32 of the EIS and in CEAR Doc#930.

Information Request

Based on existing information, provide a group-specific assessment of the potential effects of the proposed Project and the characterization and significance of any residual effect on current use in terms of changes in access, availability and quality of all preferred current use resources. Provide the assessment for each of the Indigenous groups listed in Tables 1-A and 1-B of Attachment 2. When responding to this request, the Proponent should include any relevant elements that will be covered in its responses to IR10-09 and IR10-10 below.

The assessment should:

- Present baseline data for:
  - preferred species and locations;
  - timing of current use activities, such as frequency, duration and seasonality;
  - FSC harvest achieved and desired to meet the FSC requirements of the community; and
  - existing and future conditions of travel and access, including an estimate of the number of vessels per hour per year in the local and regional assessment areas for harvesting purposes.
- Provide maps indicating marine harvest sites for each Indigenous group.
- Consider any effects to social conditions of Indigenous groups resulting from changes to the availability and quality of marine resources such as:
  - conditions of access to other family member(s) territory or other Indigenous group's territory for traditional harvesting purposes;
  - access by non-Indigenous user(s); and

    - alienation from current and traditional harvesting places resulting from government policies and regulations;
- Present the views expressed by each Indigenous group on how the existing terminals at Roberts Bank and the proposed Project have and could affect their past, current and future access and harvesting opportunities and discuss what each Indigenous group considers as acceptable conditions for any displacement of activities; and
- Present the criteria used for characterization of the residual effects of the Project and the determination of significance, including the definition of thresholds of acceptance by each Indigenous group.

VFPA Response

Preface

The information request asks the VFPA to provide, based on existing information, a group-specific assessment of the potential effect of the proposed Project and the characterisation and significance of any residual effect on current use of lands and resources for traditional purposes (Current Use) in terms of changes in access, availability, and quality of all preferred Current Use resources, including consideration of any relevant elements that will be covered in responses to IR10-09 and IR10-10 regarding mitigation measure effectiveness and offsets.

Group-specific assessments of the potential effect of the proposed Project for Indigenous groups listed in Table 1-A and Table 1-B of Attachment 2 to Information Request Package 10 are presented in Appendix IR10-A. These assessments consider the VFPA's responses to each of the five main sub-requests to the overarching request, as reviewed in sequence below.

Part 1 – Present baseline data for: preferred species and locations; timing of current use activities, such as frequency, duration and seasonality; FSC harvest achieved and desired to meet the FSC requirements of the community; and existing and future conditions of travel and access, including an estimate of the number of vessels per hour per year in the local and regional assessment areas for harvesting purposes.

Baseline Information Previously Provided

As indicated in the context to the information request, Section 32.2.4 of the EIS summarised the information the VFPA had received from Indigenous groups listed in Table 1-A of Attachment 2 to Information Request Package 10 ("Table 1-A Indigenous groups") regarding the existing conditions of marine and terrestrial resource use and other cultural considerations. This information, which included Indigenous perspectives shared with the VFPA on existing effects, was largely summarised from existing or Project-specific studies pertaining to use of lands and resources for traditional purposes provided to the VFPA by Indigenous groups in the course of consultation on the Project, as well as information shared with the VFPA during consultation meetings (refer to EIS Section 32.2.3). Scoping documents to assist Indigenous groups with helping to fulfill the information requirements for the EIS Section 32.0 assessments were also provided by the VFPA. The resulting baseline summaries, as well as the methods of assessment (e.g., scope of the assessment, indicators, assessment boundaries), were shared with Table 1-A Indigenous groups for review and comment regarding the accuracy, appropriateness, and completeness of the information prior to submission to the CEA Agency. The same approach was taken with Table 1-B Indigenous

groups in relation to the Additional Information to the EIS – *WSÁNEĆ* Nation (AIEIS; CEAR Document #930[1]). *Refer to Appendix IR10-A for group-specific details of the process that the VFPA undertook with each Table 1-A and Table 1-B Indigenous group to obtain and confirm baseline information.*[2]

Prior to the summary of each Indigenous group's existing conditions in EIS Sections 32.2.4.1 through 32.2.4.10, EIS Section 32.2.4 lists the information requirements of section 9.1.8 and section 9.2 of the *EIS Guidelines* that the VFPA addressed in each group-specific subsection based on information available to the VFPA, namely the following (pp. 32-22 to 32-23):

- In relation to section 9.1.8 (i.e., related to the *Canadian Environmental Assessment Act* (*CEAA*), *2012* 5(1)(c)(iii) regarding the Current Use and aspects of 5(1)(c)(ii) related to cultural heritage):
    - *Current use of all waterways and water bodies that will be directly affected by the Project;*
    - *Traditional uses currently practiced (e.g., fishing for crab, bivalves and fin-fish, harvesting plants, hunting birds, trapping wildlife, and gathering berries) that could be affected by the Project;*
    - *Places where fish, wildlife, and plants are harvested;*
    - *Fish, wildlife, and plants of importance for traditional use;*
    - *Access and travel routes for conducting traditional practices;*
    - *Locations of hunting camps, cabins, and villages; and*
    - *Culturally important sites, places, or viewscapes (e.g., burial sites, spiritual places, sacred sites, cultural landscapes) and attributes (e.g., language, beliefs).*
- In relation to section 9.2 (i.e., related to asserted or established rights):
    - *Maps and descriptions of lands, and harvesting and cultural activities as outlined in the Tsawwassen First Nation Final Agreement that are relevant to the Project; and*
    - *Information on each group's asserted or established rights (including geographical extent, nature, frequency, timing), including maps and data sets (e.g., fish catch numbers) when this information is provided by a group to [the VFPA].*

The VFPA notes that section 9.1.8 refers to a number of other factors related to Indigenous health and socio-economic conditions, physical heritage, and any structure, site, or thing of historical, archaeological, paleontological, or architectural significance (i.e., related to *CEAA, 2012* 5(1)(c)(i), 5(1)(c)(ii), and 5(1)(c)(iv), for which existing conditions and future conditions with the Project are described in other sections of the EIS. These sections are listed

[1] CEAR Document #930 From the Vancouver Fraser Port Authority to the Review Panel re: Response to Additional Information on the WSÁNEC Nation requested by the Canadian Environmental Assessment Agency on January 13, 2016 (See Reference Document #383).

[2] With regard to Table 1-A Indigenous groups, the VFPA was not directed by the *EIS Guidelines* (section 9.2) to meet with the Stó:lō Tribal Council and Stó:lō Nation groups, which the *EIS Guidelines* identified as "less likely to be affected by the project and its related effects" (p. 23). The VFPA was also not directed to consult with Hwlitsum, who are not identified in the *EIS Guidelines*.

in EIS Section 32.1 (p. 32-3). The VFPA also notes that EIS Section 29.4 (p. 29-2), and specifically EIS Appendix 29-F, summarises the effects of changes to the environment on Indigenous peoples with respect to all four 5(1)(c) factors, including mitigation measures, follow-up and related commitments, and any residual environmental effects (including any cumulative environmental effects).

In addition to providing a description of the requirements of the *EIS Guidelines* addressed in the existing conditions summary for each Indigenous group regarding Current Use and aspects of cultural heritage (as listed above), the introduction to EIS Section 32.2.4 also explains that the content of these summaries was not limited to present use (pp. 32-24 to 32-25). Rather, the summaries also included the following:

- Information provided by Indigenous groups to the VFPA regarding their past use, in part to provide context for understanding the circumstances that have contributed to the existing conditions of use (i.e., changes over time), as well as to inform the rights assessment, particularly in circumstances where use is not currently occurring, but may have occurred in the past, and has the potential to resume in the future; and
- Views expressed by Indigenous groups to the VFPA on how the existing terminals at Roberts Bank, and the effects of other existing projects and activities (e.g., government policies and regulations), have already affected their past and current access and harvesting opportunities, including prior displacement.

The introduction to EIS Section 32.2.4 also explains that Indigenous groups had advised the VFPA that existing levels of use (or lack of use) may not be indicative of desired future use, particularly where there are ongoing concerns with existing conditions of access, availability or quality of resources, or quality of experience (p. 32-25). Where information about desired or aspirational use was provided, the VFPA included it in the existing conditions summaries (see below for further information on the general, qualitative nature of this information), and considered this desired or aspirational use in the effects assessment (refer to the response to Part 3 of the information request, below).

The approach described above in Section 32.2.4 of the EIS in relation to Table 1-A Indigenous groups was also applied to Section 7.2.4 of the AIEIS in relation to Table 1-B Indigenous groups.

Additional Baseline Information Requested

The context to the information request states that some Indigenous groups have raised concerns with the VFPA's assessment, suggesting that the information presented in the existing conditions for each Indigenous group was inadequate to inform the assessment (e.g., there are no maps indicating the locations of harvesting of resources, the information reported on their community is incomplete).

As noted in the discussion of technical boundaries to the Current Use assessment in EIS Section 32.2.2.4 (p. 32-20), Indigenous groups had indicated to the VFPA during consultation that an absence of reported use in the Project area for traditional purposes did not necessarily reflect the absence of actual use by individual community members, which is often not known

in any detail by Indigenous group representatives or comprehensively documented in studies. This consideration, along with time and resource constraints and a reluctance to share sensitive community information, were cited by Indigenous groups as limiting their ability to provide the range or depth of information to the VFPA that may be relevant to the assessment.

Most groups also emphasised that the Project-specific studies they had prepared for the VFPA to inform the assessment did not constitute comprehensive and complete documentation of all uses or interests.[3] Where these types of limitations on the information were noted by Indigenous groups either in the Project-specific studies or in discussion with the VFPA, the VFPA noted these limitations on the information in the baseline summaries. The VFPA notes that many of the studies provided by Indigenous groups to the VFPA were typically marked confidential, preliminary, or draft, and accompanied by a request that the information contained within them not be used without the permission of the Indigenous group (as discussed further in Part 2 of response below).

When preparing the baseline summaries included in the EIS Section 32.2.4 and AIEIS Section 7.2.4, the VFPA paid careful attention to these limitations and the list of requirements regarding the Current Use and aspects of cultural heritage presented in section 9.1.8 of the *EIS Guidelines* (as listed above). The VFPA notes that there is overlap between those requirements and the requests for baseline information contained in Part 1 of the information request, particularly in relation to the following:

- Preferred species and locations;
- Timing of Current Use activities, such as frequency, duration, and seasonality;
- Food, social, and ceremonial (FSC) harvest achieved; and
- Existing (i.e., past, current) and future (i.e., desired) conditions of travel and access.

The VFPA has presented all information it has received and that it is able to disclose in relation to the above for any Table 1-A or Table 1-B Indigenous group in EIS Section 32.2.4, AIEIS Section 7.2.4, Marine Shipping Addendum (MSA) Section 9.5.4, Additional Information to the MSA – Musqueam First Nation and Tsleil-Waututh Nation (AIMSA; CEAR Document #572[4]) Section 7.2, or in response to previous information requests (e.g., AIR-12.04.15-29,

[3] For example, in response to Musqueam feedback on their baseline summary contained within Section 32.2.4.2 of the EIS, the VFPA added a caveat following the identification of the key sources relied upon for that summary, acknowledging that these reports (identified on p. 32-43) do not constitute comprehensive and complete documentation of all interests and uses. This caveat was repeated in Musqueam's baseline summary included in the AIMSA, following Musqueam's own caveat quoted from an additional study submitted to the VFPA subsequent to the filing of the EIS. Musqueam's caveat indicates the study should be used only as a representational account of Musqueam use in the spatial areas defined in the study, and that an "absence of data does not signify an absence of use or value" (Section 7.2.1, p. 34). Refer also to footnote 10 on p. 9 of this response.

[4] CEAR Document #572 From the Vancouver Fraser Port Authority to the Review Panel re: Response to the Additional Information to the Marine Shipping Addendum on the Musqueam First Nation and Tsleil-Waututh Nation requested by the Canadian Environmental Assessment Agency on January 13, 2016 (See Reference Document #383) (NOTE: Title of post updated February 16, 2017).

AIR-12.04.15-30 of CEAR Document #388[5]).[6] The VFPA recognises that Indigenous groups may have more information regarding the above information requested by the Review Panel and leaves it to the discretion of Indigenous groups to submit this information (which could be sensitive or confidential) directly to the Review Panel for its consideration.

The VFPA notes that Part 1 of the information request also asks for information regarding FSC harvest desired and for an estimate of the number of vessels per hour per year in the local and regional assessment areas for FSC harvesting purposes. These two requests are considered in turn below in (a) and (b).

(a) FSC Harvest Desired

All Indigenous groups expressed to the VFPA that their current harvests for traditional purposes are insufficient to meet their needs due to existing effects, and that they desired (or required) more than their achieved FSC harvests; however, "community-based aspirational quotas" in relation to FSC harvesting at Roberts Bank were not provided by any Indigenous group to the VFPA in quantitative terms.[7]

As the Review Panel will be aware, FSC harvesting is a highly regulated activity that takes priority only when conservation goals have been met. The VFPA recognised that the regulation of FSC harvesting (as an example) effectively functioned as administrative boundary to the assessment (p. 32-19):

> *"Aboriginal use of lands and resources is constrained by laws, government regulations, policies, and procedures, as well as by agreements between government and specific Aboriginal groups, including but not limited to Comprehensive Fisheries Agreements and the Tsawwassen First Nation Final Agreement, which do not necessarily reflect the full spatial extent of areas that Aboriginal groups have reportedly used or may wish to use for traditional purposes."*

The VFPA notes that Comprehensive Fisheries Agreements referenced above are negotiated on a periodic basis (often annually) between Indigenous groups and DFO pursuant to DFO's Aboriginal Fisheries Strategy. In addition to spatial FSC harvesting limitations (based on strength of rights claims), these agreements identify other limitations on current FSC harvests, such as allowable species, catch limits, and harvesting methods (DFO 2012). These

[5] CEAR Document #388 From Port Metro Vancouver to the Canadian Environmental Assessment Agency re: Completeness Review - Responses to Additional Information Requirements Follow-Up (See Reference Document # 345) including 22 Technical Data Reports.
[6] There are Table 1-A and Table 1-B Indigenous groups that also appear on Table 1-C and Table 1-D of Attachment 2 to Information Request Package 10. Additional baseline information received from Table 1-A Indigenous groups after the submission of the EIS was included in subsequent filings (e.g., MSA, AIMSA), while additional baseline information received from Table 1-B Indigenous groups after the submission of the MSA was considered in subsequent filings (e.g., AIEIS).
[7] The VFPA notes that the Cowichan Nation Alliance's submission identified as CEAR Document #1108 in the information sources to this information request contains quantitative data regarding desired amounts of traditional foods. As this information is already on file with the Review Panel, the VFPA has not repeated the information here.

agreements, which were once available publicly, are now confidential (they were not at the time the EIS was prepared). As indicated in the previous section of this response, there are several other existing limitations identified by Indigenous groups that already prevent desired FSC harvests (e.g., non-Indigenous settlement, geographical factors related to reserve creation, urban development, pollution, overfishing by commercial harvesters, existing terminals and causeways). These and other existing effects that Indigenous groups identified to the VFPA as contributing to their existing conditions are described in each Indigenous group's existing conditions summaries (i.e., Sections 32.2.4.1 through 32.2.4.10 of the EIS for Table 1-A Indigenous groups, Sections 7.2.4.1 through 7.2.4.5 of the AIEIS for Table 1-B Indigenous groups, as well as additional information on Table 1-A and Table 1-B Indigenous groups contained in Section 9.5.4 of the MSA and Section 7.2 of the AIMSA). The EIS and AIEIS summaries collectively amount to approximately 100 pages of information across 15 summaries (related to 19 Indigenous groups) and are not repeated here (*refer to Appendix IR10-A for group-specific index tables that identify where existing baseline data for each Indigenous group may be found within the EIS, AIEIS, or responses to previous information requests).*

The VFPA recognises that Indigenous groups may have more information regarding the baseline information requested by the Review Panel and leaves it to the discretion of Indigenous groups to submit this information (which could be sensitive or confidential) directly to the Review Panel for its consideration.

(b) Estimate of the Number of Vessels per Hour per Year in the Local and Regional Assessment Areas for FSC Harvesting Purposes

The VFPA is not in possession of information that would permit such a quantitative estimate.

The VFPA recognises that Indigenous groups may have more information regarding the information requested by the Review Panel and leaves it to the discretion of Indigenous groups to submit this information (which could be sensitive or confidential) directly to the Review Panel for its consideration.

The information contained in Section 32.2.4 of the EIS and Section 7.2.4 of the AIEIS, as well as additional information contained in subsequent filings, including but not limited to the response to AIR-12.04.15-29 of CEAR Document #388 (Section 2.3.1.1, pp. 10 to 12) and Table AIR30-1 (CEAR Document #388), provides the information as available on each Indigenous group's current FSC harvesting at Roberts Bank—including factors such as current FSC access and travel routes, the timing of that access (including frequency, duration, and seasonality), and FSC harvest achieved—to support the VFPA's predictions of potential Project-related effects on each Indigenous group's FSC harvesting in terms of access, availability and quality of resources, and quality of experience (see response to IR10-08), as presented in Section 32.2.6 of the EIS (and reiterated in the responses to AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388) and Section 7.2.6 of the AIEIS (refer to Part 3 of the response to this information request below regarding the VFPA's predictions on levels of effect for each Indigenous group). The VFPA respects that Indigenous groups may not agree with these predictions and leaves it to the discretion of each Indigenous group to

provide their own analysis and assessment of Project-related effects on their FSC harvesting directly to the Review Panel for its consideration.

Part 2 – Provide maps indicating marine harvest sites for each Indigenous group.

The VFPA notes that spatial information regarding harvesting locations, including mapping, was requested as part of section 9.1.8 and section 9.2 of the *EIS Guidelines*, as indicated above in Part 1 of the response to this information request.

In general, Indigenous groups advised the VFPA that they preferred to maintain confidentiality with respect to harvesting sites and other sites used for traditional purposes (including sites that may not be used but are culturally important). Accordingly, most Indigenous groups did not provide site-specific maps or descriptions to the VFPA. Where site-specific mapping or information was provided, the VFPA described it in the baseline summaries in a manner appropriate for public disclosure. The VFPA was particularly diligent in circumstances where Indigenous groups had specifically requested that VFPA not disclose site-specific mapping or had otherwise indicated sensitivities with the information and made efforts to report in the EIS and AIEIS when Indigenous groups had requested special treatment of information. As described above, the baseline summaries were shared with Table 1-A and Table 1-B Indigenous groups for review and comment on the accuracy, appropriateness, and completeness of the information prior to submission to the CEA Agency. The VFPA's response to review comments were tracked and provided back to each Indigenous group. While some Indigenous groups requested changes to traditional territory maps as a result of those reviews (refer to response to IR-7.31.15-02 of CEAR Document #314[8]), no group requested that the VFPA include site-specific mapping that had been provided to the VFPA in the public submission to the CEA Agency.

To the extent that some Indigenous groups have raised concerns about the lack of site-specific mapping (and other information regarding existing and future conditions), the VFPA leaves it to the discretion of those Indigenous groups to submit the information requested by the Review Panel, or any other specific information Indigenous groups consider relevant to their current or desired harvesting, directly to the Review Panel for its consideration. The VFPA notes that some Indigenous groups have already opted to submit this site-specific mapping directly to the Review Panel (e.g., Musqueam First Nation (CEAR Document#1098[9]),[10] Métis

[8] CEAR Document #314 From Port Metro Vancouver to the Canadian Environmental Assessment Agency re: Completeness Review - Responses to Additional Information Requirements (See reference document # 271) for the Environmental Impact Statement.

[9] CEAR Document #1098 From the Musqueam Indian Band to the Review Panel re: Response to Review Panel request for information regarding the sufficiency review for the Roberts Bank Terminal 2 Environmental Assessment (See Reference Documents #776 & #1030).

[10] This submission by Musqueam (CEAR Document #1098) included a study funded by the VFPA after the submission of the EIS to provide baseline information for Musqueam in relation to marine shipping associated with the Project (i.e., for the AIMSA). Most of the information presented in the study pertained to the Project and less to marine shipping associated with the Project, and was, in the VFPA's view, largely consistent with the content presented for Musqueam in EIS Section 32.2.4.2, which was based on an earlier Project-specific study completed by Musqueam. These points of consistency are identified in the existing conditions summary for Musqueam in AIMSA Section 7.2.1.

Nation British Columbia (CEAR Document #1099[11]), which are referenced in the information sources to this information request).

Part 3 – Consider any effects to social conditions of Indigenous groups resulting from changes to the availability and quality of marine resources such as: Conditions of access to other family member(s) territory or other Indigenous group's territory for traditional harvesting purposes; Access by non-Indigenous user(s); and Alienation from current and traditional harvesting places resulting from government policies and regulations.

As indicated in the context of this information request, the assessment of future conditions with the Project was analysed in relation to the following four indicators:

- Changes in access to preferred Current Use locations;
- Changes in availability of preferred Current Use resources;
- Changes in quality of preferred Current Use resources; and
- Changes in quality of the Current Use experience (see response to IR10-08).

The context to this information request states that the analysis of future conditions in relation to these indicators regrouped the information for all Indigenous groups together, and concluded that, with the implementation of the proposed mitigation measures, the residual effects of the Project would be negligible, and no characterisation of residual effects or evaluation of significance was carried out (refer to Part 5 of the response to this information request, below, regarding characterisation of residual effects and evaluation of significance).

The VFPA notes that AIR-12.04.15-30 (CEAR Document #388), issued by the CEA Agency in December 2015, asked the VFPA to provide a rationale for the conclusions of the effects assessment for Current Use by Indigenous peoples. The VFPA wishes to reiterate the clarification provided in the response to AIR-12.04.15-30 that, prior to 'regrouping' of the group-specific information in the EIS Sections 32.2.6.1 through 32.2.6.4 analysis, the introduction to EIS Section 32.2.6 identified the overall level of effect on Current Use predicted for each Table 1-A Indigenous group taking into account all indicators (p. 32-100) and provided further analysis and rationale for these predictions in EIS Sections 32.2.6.1 through 32.2.6.4 (or indicator by indicator).

As discussed in the response to AIR-12.04.15-30 of CEAR Document #388 (which also draws on information and analysis contained in the response to AIR-12.04.15-29 of CEAR Document #388), different levels of potential Project-related effects were predicted for Table 1-A Indigenous groups in Section 32.2.6 of the EIS, based on the group-specific information provided in EIS Section 32.2.4, as well as additional baseline information received from Indigenous groups since EIS submission (the VFPA notes that the additional information did not change the original predictions of the EIS). Table AIR30-1 (CEAR Document #388) summarises the predicted level of effect and rationale for that prediction for each Table 1-A

[11] CEAR Document #1099 From Métis Nation British Columbia to the Review Panel re: Response to Review Panel request for information regarding the sufficiency review for the Roberts Bank Terminal 2 Environmental Assessment (See Reference Document #1029).

Indigenous group. The AIEIS lays out the rationale for the predicted level of effect for each Table 1-B Indigenous group in AIEIS Section 7.2.6, based on group-specific information presented in AIEIS Section 7.2.4.

The VFPA notes that Part 3 of this information request asks the VFPA to consider any effects on social conditions of Indigenous groups that may result from changes in availability or quality of resources. The VFPA further notes that the examples of such effects on social conditions that the VFPA could consider are related to conditions of access. The VFPA has interpreted this to mean that the VFPA is being asked to consider existing social constraints on access for harvesting purposes that have resulted in decreases in resources that remain available (and of sufficient quality) for harvesting, which may be magnified by any further access or displacement effects.

In the response to AIR-12.04.15-30 (CEAR Document #388), the VFPA explained that in evaluating whether there would be a potential effect, the VFPA considered whether Project components or activities could lead to noticeable (i.e., measurable) changes in the levels of Current Use activity or outcomes for a given Indigenous group over existing conditions, and that could therefore potentially compromise the traditional or cultural purposes underlying that use. The response to AIR-12.04.15-30 (CEAR Document #388) continues:

> *"Considerations in this regard included whether the effect could lead to displacement of activities that are not portable or are limited in portability to other areas (e.g., requiring considerably more travel time or financial resources to support), decreases in biophysical resource availability or quality, or avoidance of activities for reasons other than those flowing through access or biophysical resources effects (i.e., effects on the users themselves, such as sensory disturbance)."*

The VFPA considers the potential social effects identified in Part 3 of this information request to be a factor that would limit the portability of harvesting to other areas.

As explained in the response to AIR-12.04.15-30 (CEAR Document #388), the VFPA expects that Project-related displacement effects at Roberts Bank could measurably affect the relatively higher levels of use (i.e., crab harvesting activity) of Tsawwassen First Nation and Musqueam First Nation at a primary and year-round crab harvesting location for these two groups. Factors that have made it a primary location for each of these groups (e.g., historical and ongoing use, relative ease of access for Tsawwassen, prior displacement for Musqueam from other parts of Musqueam territory, such as Burrard Inlet) were considered in assessing the level of potential effect on these groups as measurable and were contemplated in the proposed mitigation measures in EIS Section 32.2.7.1 related to access, some of which are specific to these two groups.

For other Table 1-A and Table 1-B Indigenous groups, the VFPA expects that Project-related displacement effects at Roberts Bank will not result in a noticeable change in their existing levels of use at Roberts Bank with the Project, given that these levels (if use is occurring at all) are relatively low and infrequent (as described in Section 32.2.4 of the EIS and Section 7.2.4 of the AIEIS and summarised in the response to AIR-12.04.15-29 (CEAR

Document #388), pp. 10-12). Even so, the VFPA has not excluded other groups from proposed mitigation measures identified in EIS Section 32.2.7.1 related to access, including ongoing consultation (refer to Part 4 of this information request below and the responses to IR-15.07.31-11 and IR-15.07.31-12 of CEAR Document #314), in part in recognition of their expressed desire to increase or restore their use of Roberts Bank for traditional purposes.

The VFPA is of the view that, with the implementation of mitigation measures, Current Use access and harvesting opportunities will remain consistent with existing conditions at Roberts Bank for Table 1-A and Table 1-B Indigenous groups and that there will be no incremental changes in the availability or quality of resources for Current Use at Roberts Bank for any group (refer to responses to IR10-09, IR10-11, IR10-12, and the forthcoming response to IR10-10). The VFPA does not therefore expect that existing social constraints on Current Use will be magnified as a result of the Project.

The VFPA recognises and respects that Indigenous groups may not agree with the VFPA's views and leaves it to the discretion of each Indigenous group to provide, directly to the Review Panel for its consideration, their own analysis of how their existing social constraints may be magnified as a result of the Project.

Part 4 – Present the views expressed by each Indigenous group on how the existing terminals at Roberts Bank and the proposed Project have and could affect their past, current and future access and harvesting opportunities and discuss what each Indigenous group considers as acceptable conditions for any displacement of activities.

The views expressed by each Table 1-A and Table 1-B Indigenous group to the VFPA prior to EIS or AIEIS submission on how the existing terminals at Roberts Bank have affected their access and harvesting opportunities to date were included in the group-specific existing conditions summaries in Section 32.2.4 of the EIS and Section 7.2.4 of the AIEIS.

The views expressed by each Table 1-A and Table 1-B Indigenous group to the VFPA prior to EIS or AIEIS submission on how the proposed Project at Roberts Bank could affect their current and desired future access and harvesting opportunities were considered in the effects assessment and mitigation measures presented in Sections 32.2.6 and 32.2.7 of the EIS and Sections 7.2.6 and 7.2.7 of the AIEIS.

The full suite of views expressed by each Table 1-A and Table 1-B Indigenous group to the VFPA before and after EIS and AIEIS submission are presented in group-specific tables included in the forthcoming response to IR10-01.

In general, Table 1-A and Table 1-B Indigenous groups that have participated in consultation with the VFPA (all but the Stó:lō groups) have expressed the view that no further displacement is acceptable.[12] Refer to the response to Part 3 of this information request that describes the VFPA's view that the effects of Project displacement can be effectively mitigated through the

[12] Additional views and interests are captured in the forthcoming response to IR10-01.

measures identified in EIS Section 32.2.7, measures that include ongoing consultation with Table 1-A and Table 1-B Indigenous groups.[13]

This consultation involves continued discussion of mitigation measures, the follow-up program, and implementation of Project-related benefits between the VFPA and Table 1-A and Table 1-B Indigenous groups, or, in other terms, on what effectively constitutes acceptable conditions for any Project-related effects (see responses to IR10-11 and IR10-12).

The VFPA recognises and respects that Indigenous groups may have additional views on effects to their past, current, and future access and harvesting opportunities and what they each consider acceptable conditions for displacement of activities, and that Indigenous groups may wish to provide this information (which may be sensitive or confidential) directly to the Review Panel for its consideration.

Part 5 – Present the criteria used for characterization of the residual effects of the Project and the determination of significance, including the definition of thresholds of acceptance by each Indigenous group.

As noted in the response to Part 3 of this information request, the context to this information request states that the analysis of future conditions with the Project concluded that, with the implementation of the proposed mitigation measures, the residual effects of the Project on Current Use would be negligible for all Indigenous groups, and no characterisation of residual effects or evaluation of significance was carried out. The context to the information request also notes that Indigenous groups raised concerns that levels of significance of residual effects may vary between affected Indigenous groups.

The VFPA's methodology for the assessment of environmental effects, described in Section 8.0 of the EIS, was designed to meet the requirements of sections 5 and 19(1) of *CEAA, 2012* relating to residual effects of the Project and of accidents and malfunctions and cumulative effects, including the significance of such effects.

Consistent with the overall methodology adopted for the EIS for valued components (VCs), a cumulative effects assessment was only carried out when a residual adverse effect of the Project was predicted and the residual adverse effect was considered likely to interact cumulatively with the effects of other projects and activities that have been or will be carried out. Accordingly, taking mitigation measures into account, if the assessment concluded that the Project would have no residual adverse effect on Current Use, no cumulative effects analysis on Current Use was undertaken.

As indicated in Part 4 of the response to this information request, the VFPA remains of the view that the mitigation measures proposed for VCs linked to Current Use (refer to response to IR10-09 and forthcoming response to IR10-10) and ongoing consultation (refer to responses to IR10-11 and IR10-12)—as laid out in Section 32.2.7 of the EIS—will be effective,

[13] That is, all Table 1-A and Table 1-B Indigenous groups except Stó:lō Tribal Council and Stó:lō Nation groups. Refer to footnote 2 on p. 4 of this response.

and no residual adverse effect on Current Use is predicted for any Table 1-A and 1-B Indigenous group. In the absence of a residual effect on Current Use in relation to Project construction and operation, there was no residual effect to characterise or evaluate for significance.

The VFPA notes that the case was different in the assessment of potential effects of accidents and malfunctions on Current Use for both the Project (EIS Section 32.6.2.3, pp. 32-65 to 32-66) and marine shipping associated with the Project (MSA Section 10.5.13), wherein the criteria used to characterise residual effects and determine significance were presented (and are not repeated here). In the case of both the Project and marine shipping associated with the Project, residual effects on Current Use were predicted and therefore those residual effects were characterised in the context of existing effects on Current Use. In each case, the residual effect on Current Use was determined to be significant. This conclusion was largely informed by Indigenous perspectives on the severity of cumulative effects to date on their use—that is, their use is already significantly affected—such that any further incremental change could be nothing but significant. The VFPA notes that Indigenous perspectives regarding the level of significance of residual effects—or the threshold of acceptable change—were consistent with respect to this aspect of the assessment.[14]

Summary

Part 1 of the response to this information request indicates what baseline information the VFPA has already provided in relation to the baseline information requested, and what baseline information the VFPA is not able to provide.

Part 2 of the response to this information request indicates that the VFPA is either not in possession of or is not at liberty to provide maps of marine harvesting sites that were not already included in the EIS or AIEIS (or MSA or AIMSA). The VFPA notes that some Indigenous groups have already opted to provide such mapping (which the VFPA has already considered in previous filings) in their own submissions, some of which are posted to the registry.

Part 3 of the response to this information request explains how the VFPA has considered the effects on social conditions of Indigenous groups as a result of changes in availability or quality of resources.

Part 4 of the response to this information request indicates where the views of each Indigenous group have been presented regarding the effects of the existing terminals and the effects of the proposed Project on access and harvesting opportunities, as well as acceptable conditions for further displacement.

[14] An example of this universal threshold may be found in Musqueam's response to the VFPA following their review of the draft AIMSA (the entire document) prior to submission; Musqueam stated, with regard to the VFPA's conclusions regarding the effects of potential accidents and malfunctions: *"Musqueam agrees with both conclusions for significance of effects to CULTRP (current use) and seriousness of adverse impacts on rights"* (AIMSA, Appendix 2-B Aboriginal Issues and Interests, Email from Musqueam to the VFPA, September 15, 2016, p. 3, CEAR Document #572).

Part 5 of the response to this information request indicates where the residual effects criteria and significance threshold for Current Use have been presented, when they were used, and how these criteria were informed by Indigenous perspectives.

The VFPA has considered the responses in Part 1 through Part 5 of this information request in the group-specific assessments regarding potential changes in Current Use related to access and the availability and quality of Current Use resources. These group-specific assessments are presented in Appendix IR10-A.

EIS Volume 1: Appendix 7.2-B

Responses to Review Panel Request for Information: Tsawwassen First Nation (CEAR Doc#1115)

Proponent Response to Additional Information Requirements of July 31, 2015 (CEAR Doc#314): IR26

Context

In Appendix 7.2-B of the EIS, the Proponent considered that the terminal footprint would interact with tidal currents and wind-generated waves resulting in alterations to sediment transport, sediment erosion and deposition, and water flow exchange during both construction and operations. For some Indigenous groups, these coastal geomorphology changes could further affect access to preferred sites and result in potential displacements from commercial, domestic, food, social and ceremonial fishing areas. However, the Proponent concluded, in Section 32.2.6 of the EIS, the effects of the Project on access to Indigenous current use locations for fishing and harvesting were expected to be negligible.

Some Indigenous groups disagreed with this conclusion. For example, Tsawwassen First Nation identified that access to the Fraser River, following industrial development of Roberts Bank, now involves a longer navigational route. Indigenous groups, such as Tsleil-Waututh Nation and Penelakut Tribe, also expressed concerns about the potential inability to harvest crabs in the future due to changes in access during construction and operation of the Project.

In Section 32.2.4 and in submissions to the Panel, other Indigenous groups reported that the terminal and expanded causeway footprint and the proposed navigational closure areas are actively fished. Further, in appendix 7.2-B of the EIS, several groups reported that any reduction in fishing in the Project area would cause displacement and create subsequent burden on other fishing areas.

In addition, in its recent submission to the Panel, Tsawwassen First Nation explained that they would need to retool all their boats at their own expenses in order to be able to harvest crabs currently inaccessible because of the water depth. Some groups, such as Semiahmoo First Nation, have also identified the potential for an increase in competition and displacement of activities due to increased access by competing user groups and other Indigenous groups.

Further, some Indigenous groups expressed concerns that the effect assessment was limited to Tsawwassen First Nation and Musqueam Indian Band. In response to additional information

requirement #26 from the Canadian Environmental Assessment Agency (CEAR Doc#314), the Proponent presented its rationale as to why socio-economic conditions were provided for Tsawwassen First Nation and Musqueam Indian Band separately and in an aggregated manner for other groups; the main reason being that these two Indigenous groups have treaty, or reserve, or communities located at or in close proximity to the Project.

The Proponent mentioned that there would be displacement due to navigational closure but did not provide details as to what it meant economically for Indigenous peoples.

An economic assessment of the potential effects of the proposed Project footprint and navigational closure extension, on Indigenous groups' commercial, domestic and food, social and ceremonial fishing and harvesting activities is required to understand the Proponent's conclusion of negligible effects.

Information Request

For each of the Indigenous groups listed in Tables 1-A and 1-B of Attachment 2, assess the economic implications of any permanent or temporary displacement in terms of:

- access to resources;
- any constraints of displacement (e.g. alternate areas previously alienated);
- the sufficiency of resources at alternate locations to meet the requirements of the community; and
- any extra expenses involved in terms of time traveled, incremental costs or necessary changes in technology for the practice or access to resources

The assessment should include a discussion about the potential consequences of displacement that may occur as a result of Project activities on current use of Indigenous groups regardless of the amount of present-day harvesting carried out by each group. The discussion should cover any potential implications associated with an increase in competition by other user groups and other Indigenous groups and displacement of activities to another area or territory.

Provide clarification on how the Proponent plans to mitigate the potential increase in competition amongst and between commercial and recreational user groups and Indigenous groups harvesting crab.

VFPA Response

Preface

The context to this information request refers to the VFPA's response to an information request previously issued by the Canadian Environmental Assessment Agency (CEA Agency) in July 2015 (during EIS Completeness review) that asked the VFPA to provide a rationale for presenting social and economic conditions for Tsawwassen First Nation and Musqueam First Nation and not for other Indigenous groups, in light of the requirements of sections 9.1.8 and 9.2 of the *EIS Guidelines* (IR-7.31.15-26 of CEAR Document #314[1]). The context to this

[1] CEAR Document #314 From Port Metro Vancouver to the Canadian Environmental Assessment Agency re: Completeness Review - Responses to Additional Information Requirements (See reference document # 271) for the Environmental Impact Statement.

information request also appears to link the presentation of socio-economic conditions with concerns raised by some Indigenous groups that the effects assessment was limited to Tsawwassen and Musqueam.

As clarified in Part 1 in the response to IR10-06, section 9.1.8 requirements of the *EIS Guidelines*, which relate to the *Canadian Environmental Assessment Act* (*CEAA*), *2012* 5(1)(c) factors, were carved up into multiple sections of the EIS, assessed separately, and then summarised together in EIS Appendix 29-F.

The VFPA wishes to clarify that the response to IR-7.31.15-26 (CEAR Document #314), including the rationale provided regarding the presentation of socio-economic conditions for Tsawwassen and Musqueam, was related to the effects assessments identified in that response—that is, the "economic sections of the EIS (including Section 19.0 Labour Market, Section 20.0 Economic Development, Section 21.0 Marine Commercial Use, and Section 22.0 Local Government Finances) and the socio-community sections of the EIS (including Section 23.0 Services and Infrastructure and Section 24.0 Outdoor Recreation)."

The socio-economic assessments identified in the response to IR-7.31.15-26 (CEAR Document #314) included EIS Section 21.0 (Marine Commercial Use), which assessed the economic implications of potential displacement as a result of the Project footprint and navigational closure expansion on marine fishing and harvesting under commercial licences, including those held by Tsawwassen, Musqueam, and other Indigenous groups (per Table IR26-1 (CEAR Document #314)). The EIS Section 21.0 assessment predicted a negligible effect in relation to commercial fishing; however, the EIS Section 21.0 assessment also predicted a moderate residual Project effect and residual cumulative effect on commercial crab harvesting within Crab Management Area (CMA) I as a result of displacement (including the potential associated change in harvest and revenue). This residual Project effect and residual cumulative effect were considered by the EIS Section 21.0 assessment to be not significant. Section 3.0 of the AIEIS (Additional Information to the EIS – *W*SÁNEĆ Nation) reached the same conclusions.

The assessment of potential Project displacement effects on marine fishing and harvesting under domestic or food, social, and ceremonial (FSC) licences was presented in the current use of lands and resources for traditional purposes (Current Use) and rights sections of the EIS and AIEIS (Sections 32.2.6.1 and 32.3.2 of the EIS and Sections 7.2.6.1 and 7.3 of the AIEIS, respectively). To clarify, the assessments in Section 32.0 of the EIS and Section 7.0 of the AIEIS were based on the baseline information for each Table 1-A and Table 1-B Indigenous group presented in Section 32.2.4 of the EIS and Section 7.2.4 of the AIEIS and were not dependent on socio-economic baseline conditions described in other chapters (e.g., Section 21.0 of the EIS or Section 3.0 of the AIEIS). As reviewed in Part 3 of the response to IR10-06, the VFPA predicted negligible effects on Current Use after the implementation of mitigation measures.

The rest of the response to this information request addresses the request to assess the economic implications of any permanent or temporary Project-related displacement in relation to marine fishing and harvesting under domestic and FSC licences, but not under commercial licences, for the following reasons:

- As reviewed above, EIS Section 21.0 and Section 3.0 of the AIEIS have already considered the economic implications of the potential effects of the proposed Project footprint and navigational closure extension on the commercial fishing and harvesting activities of Table 1-A and Table 1-B Indigenous groups that participate in these commercial activities (also see the response to IR10-27);
- As reviewed above, EIS Section 21.0 and AIEIS Section 3.0 predicted residual Project and cumulative effects in relation to the displacement of commercial crab harvesters and associated change in harvest or revenue for commercial crab harvesters, including Table 1-A and Table 1-B Indigenous groups harvesting crab under commercial licences in CMA I (and therefore did not conclude negligible effects in this regard, unlike the Current Use assessment);
- As reviewed above, potential Project displacement effects on marine fishing and harvesting under domestic and FSC licences was assessed separately in the Current Use and rights sections of the EIS (EIS Sections 32.2.6.1 and 32.3.2) and AIEIS (AIEIS Sections 7.2.6.1 and 7.3);
- The Current Use assessment was not intended as a roll up section on *CEAA, 2012* 5(1)(c) related factors; and
- The information request specifies the need for a discussion about the potential consequences of displacement that may occur as a result of Project activities on *current use* (emphasis added) of Indigenous groups and any potential implications associated with an increase in competition by other user groups and other Indigenous groups and displacement of activities to another area or territory.

Group-specific assessments of the economic implications of any permanent or temporary displacement from the proposed Project for Indigenous groups listed in Table 1-A and Table 1-B of Attachment 2 to Information Request Package 10 are presented in Appendix IR10-A. These assessments consider the VFPA's responses to Part 1 and Part 2 below.

Part 1 – For each of the Indigenous groups listed in Tables 1-A and 1-B of Attachment 2, assess the economic implications of any permanent or temporary displacement in terms of: access to resources; any constraints of displacement (e.g. alternate areas previously alienated); the sufficiency of resources at alternate locations to meet the requirements of the community; and any extra expenses involved in terms of time traveled, incremental costs or necessary changes in technology for the practice or access to resources.

Part 1 of the response to IR10-06 details the scope and limitations of the baseline information provided by the VFPA for each Table 1-A Indigenous group in Section 32.2.4 of the EIS (as well as in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388[2]) and for each Table 1-B Indigenous groups in Section 7.2.4 of the AIEIS. As explained in Part 1 of the response to IR10-06, views expressed by Indigenous groups on existing effects (e.g., existing

[2] CEAR Document #388 From Port Metro Vancouver to the Canadian Environmental Assessment Agency re: Completeness Review - Responses to Additional Information Requirements Follow-Up (See Reference Document # 345) including 22 Technical Data Reports.

constraints on access, or the availability or quality of resources, at alternate locations) were included in the group-specific baseline summaries.

For example, EIS Section 32.2.4.1 describes how Tsawwassen First Nation are already having to seek crab in deeper waters at Roberts Bank, in some cases at depths of up to 600 to 700 feet (183 m to 213 m), whereas prior to 10 years ago, 70 to 100 feet (21 m to 30 m) deep would have been the maximum (p. 32-31).[3] EIS Section 32.2.4.1 also notes that Tsawwassen refer to Roberts Bank as their traditional crabbing ground and consider the existing navigational closure area as an important area for their domestic harvest of crab, particularly during the annual commercial opening (p. 32-32). The VFPA also shared Tsawwassen's view that access to these crabbing grounds at Roberts Bank would be easier if they had a local dock as Tsawwassen crabbers must currently access Roberts Bank from the Fraser River, where their boats are currently moored, contributing to increasingly higher costs to obtain traditional resources at traditional locations, such as Roberts Bank (p. 32-41). Similarly, in EIS Section 32.2.4.3, the VFPA described how the existing crab conditions in Boundary Bay mean that Semiahmoo no longer participate in commercial crab harvesting, which they say is poorly regulated and results in overharvesting, meaning in turn fewer crab for their FSC harvest in Boundary Bay, fewer Semiahmoo engaged in the practice, and fewer opportunities to transfer knowledge about crabbing to Semiahmoo youth (p. 32-59).

Part 3 of the response to IR10-06 explains how these views on existing effects or conditions, as well as the views expressed by other Indigenous groups regarding their existing conditions, were factored into the VFPA's evaluation of the potential level of effect of the Project on the Current Use of each Indigenous group before the implementation of mitigation. As noted in Part 3 of the response to IR10-06 (quoting from the VFPA's response to AIR-12.04.15-30 of CEAR Document #388):

> *"Considerations in this regard included whether the effect could lead to displacement of activities that are not portable or are limited in portability to other areas (e.g., requiring considerably more travel time or financial resources to support) ... [.]"*

The predicted level of potential effect on Current Use access for each Table 1-A and Table 1-B Indigenous group before the implementation of mitigation (taking into account all reported uses), as reiterated in Part 3 of the response to IR10-06 and contained in Appendix IR10-A, remains the same as presented in Section 32.2.6.1 of EIS and Section 7.2.6.1 of the AIEIS—that is, measurable for Tsawwassen and Musqueam and non-measurable for all other Indigenous groups. As indicated in Section 32.2.6.1 of the EIS, this analysis considered the

[3] The VFPA notes that LGL's *Dungeness Crab Abundance and Movement Study in the Roberts Bank Terminal 2 Project Area* (CEAR Document #997), prepared on behalf of Tsawwassen First Nation, indicates that additional gear and technology may be required by Tsawwassen crab harvesters to maintain crab harvesting levels with the Project, and specifically in terms of being able to access crab at depths greater than 50 m within an expanded navigational closure area. The VFPA has requested further information from Tsawwassen First Nation regarding these potential gear and technology requirements, and they have indicated in their response that they would have to further discuss the matter internally (CEAR Document #1132, Part B, Comment #1).

potential for increased competition as a result of incremental Project-related displacement away from Roberts Bank, as follows (p. 32-103):

> *"Relocation of commercial crab traps and vessels elsewhere within Crab Management Area I or to other crab management areas (e.g., Crab Management Area J, in Boundary Bay) as a result of displacement could lead to increased competition in other areas where Aboriginal [domestic or FSC] harvesting occurs, but which are not otherwise anticipated to experience Project-related effects (e.g., Boundary Bay, Sturgeon Bank). Boundary Bay is an important crabbing area for Semiahmoo, who do not crab at Roberts Bank. Tsawwassen also harvest crab for domestic purposes in Boundary Bay (except in the area immediately fronting the Semiahmoo community). Musqueam additionally harvest crab at Sturgeon Bank for FSC purposes [i.e., in addition to Roberts Bank], but Tsawwassen reportedly do not use this area for domestic harvesting, as this is considered a Musqueam area."*

As explained in Part 4 of the response to IR10-06, precisely because of these sorts of potential implications, including indirect social and economic implications, Indigenous groups reported to the VFPA that no further displacement was acceptable. Part 3 and Part 4 of the response to IR10-06 explains why the VFPA is of the view that the potential effects of Project displacement, including indirect economic effects (e.g., incremental costs related to access), can be effectively mitigated through the measures identified in EIS Section 32.2.7.[4] This mitigation includes ongoing consultation with Table 1-A and Table 1-B Indigenous groups,[5] regardless of the amount of present-day harvesting carried out by each group. As such, the VFPA is of the view that there will be no measurable economic consequences for any Table 1-A or Table 1-B Indigenous group associated with Project-related displacement.

The VFPA recognises and respects that Indigenous groups may not agree with the VFPA's predictions and leaves it to the discretion of each Indigenous group to provide their own analysis and assessment of economic implications of Project-related displacement directly to the Review Panel for its consideration.

Part 2 – Provide clarification on how the Proponent plans to mitigate the potential increase in competition amongst and between commercial and recreational user groups and Indigenous groups harvesting crab.

As indicated in Part 1 of this response, the VFPA considered the potential for increased competition as a result of measurable Project-related displacement effects on Current Use in Section 32.2.6.1 of the EIS and Section 7.2.6.1 of the AIEIS and has outlined several mitigation measures to address potential displacement effects on the Current Use of Table 1-A

[4] For example, the 2004 Memorandum of Agreement between Tsawwassen and the VFPA, identified in EIS Section 32.2.7.1 as a mitigation measure, includes provision for a local dock that would reduce travel time and costs from the Fraser River, where Tsawwassen boats are moored.

[5] With regard to Table 1-A Indigenous groups, the VFPA was not directed by the *EIS Guidelines* (section 9.2) to meet with the Stó:lō Tribal Council and Stó:lō Nation groups, which the *EIS Guidelines* identified as "less likely to be affected by the project and its related effects" (p. 23). The VFPA was also not directed to consult with Hwlitsum, who are not identified in the *EIS Guidelines*.

and Table 1-B Indigenous groups in Section 32.2.7.1 of the EIS (which are carried over to Section 7.2.7.1 of the AIEIS). Of relevance to the potential increase in competition between Indigenous groups harvesting for domestic or FSC purposes and other user groups, these measures include but are not limited to:

- The VFPA working with Fisheries and Oceans Canada (DFO), the agency responsible for regulating commercial, recreational, and Aboriginal (CRA) fisheries, to support an exclusive Indigenous crab fishery (i.e., domestic and FSC harvesting) within an expanded navigational closure area, as has been the practice within the existing navigational closure area, which Indigenous groups have identified as a protection against competition during the commercial opening; and
- The VFPA working with DFO and Indigenous groups regarding the timing (of implementation) and spatial area (including configuration) of the expanded navigational closure area, as well as the identification of additional mitigation measures to address potential Project-related effects on Current Use that may be associated with the expanded navigational closure area.

In addition to these measures (and others listed in Section 32.2.7.1 of the EIS), the VFPA notes that, pursuant to DFO's Aboriginal Fisheries Strategy, implemented in the wake of the Supreme Court of Canada's ruling in *R. v. Sparrow* [1990] 1 SCR 1075), FSC harvesting takes priority, after conservation, over other uses of the resource. For example, domestic and FSC harvesting takes place at Roberts Bank year-round, while the commercial season is open for approximately five and a half months (June through November). Tsawwassen First Nation has reported to the VFPA that they experience less interference and better access to crab during the commercial closure (p. 32-31).

As indicated in Part 3 of the response to IR10-06, the VFPA continues to discuss mitigation measures, environmental management plans, the follow-up program, and the implementation of Project-related benefits with Table 1-A and Table 1-B Indigenous groups (also refer to responses to IR10-11 and IR10-12).

IR10-08 Current Use of Lands and Resources for Traditional Purposes – Effects Assessment, Quality of the Current Use Experience

Information Source(s)

EIS Volume 5: Section 32.2.6.4; Section 32.2.7.4

Proponent Response to Additional Information Requirements of December 4, 2015 (CEAR Doc#388): IR29

Musqueam Indian Band Submission to the Review Panel (CEAR Doc# 776)

Context

In order to assess the potential effects of the proposed Project resulting from changes in the quality of the current use experience, the Proponent examined the following factors:

1. Changed sense of place;
2. Risks to safety and security from increased vessel traffic and perceived contamination of food sources from the proposed Project and previous projects;
3. Reduced opportunities to transmit Indigenous knowledge that may be associated, for instance to sensory disturbance while pursuing current use or avoidance of current use activities; and
4. Sensory disturbance related to light, noise and vibration.

The Proponent considered that sensory disturbance was not predicted to affect the experience of current use in a way that might lead to avoidance of sites or practice, or reduce the quality of experience beyond which Indigenous groups may already be experiencing.

The Proponent concluded the potential effects of the Project for all factors were negligible.

Some Indigenous groups have challenged this assessment and the Proponent's conclusions in the following ways:

- Changes in access to Traditional Use sites resulting from effects of the Project will affect the quality of the current use experience and associated changes to cultural practices, in addition to groups' connections to other additional sites and areas of use. This, in turn, will result in a fragmentation of the cultural landscape and associated social networks.
- Any overlap associated with Project-related activities resulting in an effect to the quality of traditional use experience would require assessment regardless of its temporal context (i.e. past, current, or future use) or its nature.

For some Indigenous groups, all these aspects should be considered measurable effects, not negligible ones, and in need of mitigation measures.

Cultural heritage effects were further evaluated by the Proponent in response to an Agency request (CEAR Doc# 388, IR 29). The Proponent considered that they were already largely assessed under the quality of the current use experience indicator. The Proponent proposed two effects pathways: one using the four factors listed above (changed sense of place, change in risks to safety and security, sensory disturbance, or change in cultural heritage) and another, considering the four indicators (change to access, availability and quality of resources and change to quality of the current use experience) used for the assessment of current use.

The conclusion with respect to the first pathway was one of effects being negligible for all Indigenous groups.

The only potential effect for the second pathway analysis was in terms of access for crab harvesting for Tsawwassen First Nation and Musqueam Indian Band; with the mitigation measures proposed, it was considered as being negligible.

Although the indicator of quality of the current use experience is related to aspects of cultural heritage (see IR10-22 below), there is a need to assess them separately. More information on how the Project could affect the quality of experience of Indigenous groups using the area of the Project is required.

Information Request

Provide a group-specific assessment of the changes in quality of the current use experience resulting from the proposed Project. The assessment should include the Indigenous groups listed in Tables 1-A and 1-B of Attachment 2.

The assessment should consider the following points:

1. Loss of preferred harvesting sites;
2. How the quality of the current use experience could change due to the real and perceived contamination of traditional food resources;
3. Sensory disturbances from light, noise and vibration affecting oral traditions and sacred practices;
4. Safety risks and concerns due to increased vessel traffic;
5. Industrialization of the Project area, with subsequent loss and disruption of social and cultural values associated with the proposed Project area and the Fraser River estuary;
6. Increased alienation from traditional harvesting caused by industrial development on Roberts Bank, including the proposed expansion of navigational closure areas;
7. Decreased willingness and ability by Indigenous peoples to access the Project area due to the perception of risk, reduced harvesting opportunities and aesthetic impacts;
8. Level of importance placed upon patterns and areas of use (past, present and future); and
9. Lost opportunities for the transmission of Indigenous knowledge and practices due to avoidance of an expanded industrialized area.

VFPA Response

Group-specific assessments of the potential change in quality of the current use of lands and resources for traditional purposes (Current Use) experience resulting from the proposed Project for Indigenous groups listed in Table 1-A and Table 1-B of Attachment 2 to Information Request Package 10 are presented in Appendix IR10-A. These assessments consider the VFPA's response below.

The analysis of potential changes in the quality of Current Use experience as a result of the Project in Section 32.2.6.4 of the EIS (pp. 32-109 to 32-115) was the longest analysis of all four indicators assessed for Current Use in EIS Section 32.2.6. The response to AIR-12.04.15-29 (CEAR Document #388[1]) provided clarification on the assessment presented in EIS Section 32.2.6.4, particularly in relation to the two key pathways of effect on experiential quality, as identified in the context to this information request.

The VFPA is of the view that it has already considered, in EIS Section 32.2.6.4 and the response to AIR-12.04.15-29 (CEAR Document #388), the nine points that the Review Panel has asked the VFPA to consider in a group-specific assessment of the potential incremental changes in quality of the Current Use experience. The VFPA has identified the primary pathway under which each of the nine points has already been assessed, as indicated in **Table IR10-08-1**.

Table IR10-08-1 Pathways for Potential Incremental Changes in Quality of the Current Use Experience

Number	Changes in Quality of Current Use Experience	Pathway
1	Loss of preferred harvesting sites	Second pathway, based on access and availability and quality of resources indicators
2	How the quality of the Current Use experience could change due to the real and perceived contamination of traditional food resources	Second pathway, based on quality of resources indicator
3	Sensory disturbances from light, noise and vibration affecting oral traditions and sacred practices	First pathway under quality of experience indicator
4	Safety risks and concerns due to increased vessel traffic	First pathway under quality of experience indicator
5	Industrialization of the Project area, with subsequent loss and disruption of social and cultural values associated with the proposed Project area and the Fraser River estuary	Second pathway, based on the first pathway under quality of experience indicator
6	Increased alienation from traditional harvesting caused by industrial development on Roberts Bank, including the proposed expansion of navigational closure areas	Second pathway, based on access indicator
7	Decreased willingness and ability by Indigenous peoples to access the Project area due to the perception of risk; Reduced harvesting opportunities; and	First pathway under quality of experience indicator; Second pathway, based on access and availability and quality of resources indicators; and

[1] CEAR Document #388 From Port Metro Vancouver to the Canadian Environmental Assessment Agency re: Completeness Review - Responses to Additional Information Requirements Follow-Up (See Reference Document # 345) including 22 Technical Data Reports.

Number	Changes in Quality of Current Use Experience	Pathway
	Aesthetic impacts	First pathway under quality of experience indicator
8	Level of importance placed upon patterns and areas of use (past, present and future)	Both pathways, based on access and availability and quality of resources indicators and first pathway under quality of experience indicator
9	Lost opportunities for the transmission of Indigenous knowledge and practices due to avoidance of an expanded industrialized area	First pathway under quality of experience indicator

The VFPA notes that the additional analysis contained in AIR-12.04.15-29 (CEAR Document #388) to clarify the analysis in EIS Section 32.2.6.4 was also referenced in the response to AIR-12.04.15-30 (CEAR Document #388), which presented the VFPA's rationale for its level of effect predictions (i.e., no effect, negligible effect, measurable effect), and summarised these predictions on a group-specific basis in Table AIR30-1 (CEAR Document #388), including as these relate to quality of Current Use experience.

The VFPA notes that EIS Section 32.2.6.4 and AIR-12.04.15-29 and AIR-12.04.15-30 (CEAR Document #388) contain important caveats to the VFPA's predictions regarding potential changes in the quality of Current Use experience that are not referenced in the context to this information request.

EIS Section 32.2.6.4 states (p. 32-115), with regard to the first pathway:

> *"While the changes to the environment and residual effects of the Project that may affect experiential quality, including visual changes, safety on the water, and human health as described above, are considered to be negligible…, the Project may affect the quality of experience of Current Use for one or more Aboriginal groups as a result of construction and operation, as the Current Use experience is community specific."*

EIS Section 32.2.6.4 states (p. 32-114), with regard to the second pathway:

> *"[E]ffect pathways on intangible cultural factors are complex and layered, and are informed by potential effects on other indicators within the Current Use component …. During consultation on the Project, [the VFPA] sought specific guidance from Aboriginal groups on the assessment of this quality of experience indicator for Current Use. Aside from the acknowledgement by at least one Aboriginal group regarding the challenges associated with evaluating intangible cultural heritage (e.g., potential effects to a Stl'áleqem site near the Project*

area; see Section 32.2.4.4), no other feedback has been provided to [the VFPA] to date.[2]"

The VFPA notes that the context to this information request states that "some Indigenous groups" have challenged the VFPA's conclusion of negligible effects for the quality of Current Use experience and that, for "some Indigenous groups," all the aspects referenced in the context to this information request should be considered measurable effects, not negligible ones, and in need of mitigation measures.

The VFPA recognises and respects that Indigenous groups may not agree with the VFPA's predictions and leaves it to the discretion of each Indigenous group to provide their own analysis and assessment of Project-related effects on their quality of Current Use experience directly to the Review Panel for its consideration. The VFPA notes, however, that the VFPA proposed mitigation measures in EIS Section 32.2.6.4 to address potential changes in the quality of Current Use experience, regardless of its predicted level of potential effect for each Indigenous group.

As clarified in the response to AIR-12.04.15-29 (p. 19; CEAR Document #388):

"It is important to note that measures were proposed for Current Use in Section 32.0 of the EIS to address potential effects that may be either *measurable or negligible* before mitigation is applied*. In this way, measures were proposed to assist with confirming the conclusions of the assessment (i.e., as a means of monitoring circumstances following the onset of Project construction, through ongoing engagement)."*

And (p. 20):

"Section 32.2.7.4 of the EIS concludes in relation to the four measures identified for potential changes in the quality of Current Use experience, including cultural heritage, as follows (p. 32-119):

> "In combination with the measures to reduce Project-related effects on Current Use access and Current Use resources*, the measures identified in Section 25.0 Visual Resources, Section 27.0 Human Health, and Section 28.0 Archaeological and Heritage Resources are also expected to be effective at addressing adverse effects on the quality of current use experience that may relate to Project-related changes in sense of place, light, noise, vibration, and air emissions, and cultural heritage and transmission. [The VFPA] recognises that the quality of Current Use*

[2] The VFPA acknowledges that Tsleil-Waututh Nation has prepared a study regarding the evaluation of potential effects on intangible cultural heritage, such as this *Stl'áleqem* site ("Intangible Cultural Heritage – Potential Impacts to Sacred Tunnels from the Proposed Roberts Bank Terminal 2 Project Report"), and that Tsleil-Waututh Nation requested that this study be kept confidential under the Review Panel's confidentiality procedures (CEAR Document #1197). The VFPA notes that the Review Panel has agreed to keep this study confidential (CEAR Document #1222).

experience is community specific, and expects the communications mechanism identified in Section 32.2.7.1 to support dialogue between [the VFPA] and appropriate Aboriginal groups on topics of concern, including [but not limited to] safety issues, will augment the effectiveness of other measures identified to address community-specific concerns related to the quality of use experience" (emphasis added)."

For clarity, these measures are expected to address both the potential measurable change in cultural heritage that Tsawwassen and Musqueam may experience as a result of a predicted measurable change in access, as well as potential effects to cultural heritage that Tsawwassen, Musqueam, and other Aboriginal groups may experience in relation to Project components and activities that are current considered "negligible" [by the VFPA] in the Current Use assessment, based on existing conditions information presented in Section 32.2.4 of the EIS regarding that cultural heritage."

As further clarified in the response to AIR-12.04.15-30 (p. 5; CEAR Document #388):

"[The VFPA] recognises that there is a high level of subjectivity associated with establishing the degree to which Project-related changes may be experienced as measurable or non-measurable by a given Aboriginal group. For these reasons, [the VFPA] proposed mitigation measures to address potential Project-related effects on Current Use not only for potential effects identified as measurable, but also for potential effects identified as non-measurable, and specifically by proposing mechanisms for ongoing consultation (see Section 32.2.7 of the EIS."

The VFPA's assessment and mitigation approach in Section 32.2.7.4 of the EIS for potential changes in the quality of Current Use experience for Table 1-A Indigenous groups was also applied in Section 7.2.7.4 of the AIEIS (Additional Information to the Environmental Impact Statement – *W*SÁNEĆ Nation; CEAR Document #930[3]) for Table 1-B Indigenous groups.

As indicated in Part 4 of the response to IR10-06, the VFPA continues to discuss mitigation measures and Project-related benefits with Table 1-A and Table 1-B Indigenous groups regarding acceptable conditions for potential Project-related effects (also refer to responses to IR10-11 and IR10-12).

[3] CEAR Document #930 From the Vancouver Fraser Port Authority to the Review Panel re: Response to Additional Information on the WSÁNEC Nation requested by the Canadian Environmental Assessment Agency on January 13, 2016 (See Reference Document #383).

IR10-09 Current Use of Lands and Resources for Traditional Purposes – Mitigation Measures, Effectiveness

Information Source(s)

EIS Volume 5: Section 32.2.7; Section 32.2.8

Review Panel Information Request Package 7 (CEAR Doc#1000): IR7-31

Malahat First Nation Submission to the Review Panel (CEAR Doc#621)

Context

In Section 32.2.8 of the EIS, the Proponent concluded that the residual effects of the proposed Project on current use are expected to be negligible after the implementation of the proposed mitigation measures.

Some Indigenous groups have questioned whether the mitigation measures proposed by the Proponent are adequate to address the potential effects of the Project. For example, Malahat First Nation considered that while many Indigenous groups may share similar interests and practices that could be affected by Project activities, each group may rate the value of site-specific practices and activities differently. Malahat First Nation underlined that the complexity of these values could make it difficult to summarize and determine the effectiveness of the proposed mitigation measures. While some of the mitigation measures could reduce residual effects of the Project in a specific area for a specific Indigenous group, that same set of mitigation measures may not be effective for another Indigenous group in a different area.

In order to evaluate the potential residual effects of the Project, the relevance and adequacy of the proposed mitigation measures must be determined for each Indigenous group individually.

Information Request

For each Indigenous group listed in Tables 1-A and 1-B of Attachment 2, evaluate the relevance and adequacy of the proposed mitigation measures to reduce the potential effects of the proposed Project on the access, availability and quality of preferred current use resources and the quality of the current use experience.

Clearly indicate the link between the potential effects of the Project and the mitigation measures and explain how the mitigation measures would reduce any potential effects such that the residual effects would become negligible.

Provide the list of Indigenous groups that were consulted on these mitigation measures and the results of the discussions and indicate if reasonably foreseeable future uses by Indigenous groups were considered. When responding to this request, the Proponent should include any relevant elements that will be covered in its response to IR7-31.

VFPA Response

Part 1 – For each Indigenous group listed in Tables 1-A and 1-B of Attachment 2, evaluate the relevance and adequacy of the proposed mitigation measures to reduce the potential effects of the proposed Project on the access, availability and quality of preferred current use resources and the quality of the current use experience.

Clearly indicate the link between the potential effects of the Project and the mitigation measures and explain how the mitigation measures would reduce any potential effects such that the residual effects would become negligible.

The VFPA's view of the relevance and adequacy of the proposed mitigation measures to reduce the potential effects of the proposed Project on each Table 1-A and Table 1-B Indigenous group's access for current use of land and resources for traditional purposes (Current Use), the availability and quality of their preferred Current Use resources, and the quality of their Current Use experience, such that the residual effects on each group's Current Use would become negligible, is presented in **Appendix IR10-09-A**.

Appendix IR10-09-A consists of a table that identifies the following:

- The proposed mitigation measures for each potential effect on Current Use, as represented by the four Current Use indicators (i.e., changes in access to Current Use locations, changes in availability of Current Use resources, changes in quality of Current Use resources, and changes in quality of Current Use experience);
- The anticipated effectiveness (and therefore adequacy) of the proposed mitigation measures, from the VFPA's perspective, based on the analysis undertaken previously and presented in the VFPA's response to IR-7.31.15-12 (CEAR Document #314[1]); and
- The potential applicability (and therefore relevance) of the proposed mitigation measures to Table 1-A and Table 1-B Indigenous groups, based on the VFPA's understanding of each group's past, present, and desired future use, as summarised in EIS Section 32.2.4 (and in the responses to AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388[2]) for Table 1-A Indigenous groups and Section 7.2.4 of Additional Information to the EIS – *W*SÁNEĆ Nation (AIEIS; CEAR Document #930[3]) for Table 1-B Indigenous groups.

As the VFPA has explained in its responses to IR10-06, IR10-07, and IR10-08, the measures listed in Section 32.2.7 of the EIS (and presented in **Appendix IR10-09-A**) for all four Current Use indicators were conservatively proposed to address potential Project-related

[1] CEAR Document #314 From Port Metro Vancouver to the Canadian Environmental Assessment Agency re: Completeness Review - Responses to Additional Information Requirements (See reference document # 271) for the Environmental Impact Statement.
[2] CEAR Document #388 From Port Metro Vancouver to the Canadian Environmental Assessment Agency re: Completeness Review - Responses to Additional Information Requirements Follow-Up (See Reference Document # 345) including 22 Technical Data Reports.
[3] CEAR Document #930 From the Vancouver Fraser Port Authority to the Review Panel re: Response to Additional Information on the WSÁNEC Nation requested by the Canadian Environmental Assessment Agency on January 13, 2016 (See Reference Document #383).

effects on Current Use, not only for potential effects predicted as measurable by the VFPA, but also for potential effects predicted by the VFPA as non-measurable, in part in recognition of the desire expressed by Indigenous groups to increase or restore their use of land and resources at Roberts Bank for traditional purposes. These measures include ongoing consultation between the VFPA and Table 1-A and Table 1-B Indigenous groups[4], regardless of the amount of present-day Current Use activities, to continue discussion of the mitigation measures, the follow-up program, and implementation of Project-related benefits (refer to the responses to IR10-11 and IR10-12).

Part 2 – Provide the list of Indigenous groups that were consulted on these mitigation measures and the results of the discussions and indicate if reasonably foreseeable future uses by Indigenous groups were considered. When responding to this request, the Proponent should include any relevant elements that will be covered in its response to IR7-31.

The VFPA has consulted with the following Indigenous groups in relation to proposed mitigation measures related to the Project and/or mitigation suggested in relation to marine shipping associated with the Project, including those related to Current Use (as identified in **Appendix IR10-09-A**):

- Tsawwassen First Nation;
- Musqueam First Nation;
- Semiahmoo First Nation;
- Tsleil-Waututh Nation;
- Stz'uminus First Nation;
- Cowichan Tribes;
- Halalt First Nation;
- Lake Cowichan First Nation;
- Lyackson First Nation;
- Penelakut Tribe;
- Métis Nation British Columbia;
- Hwlitsum;
- Tsawout First Nation;
- Pauquachin First Nation;
- Tsartlip First Nation;
- Tseycum First Nation; and
- Malahat First Nation.

The measures proposed by the VFPA in the EIS were informed by discussions between the VFPA and Indigenous groups, and, as reviewed in Part 1 of the response to this information

[4] With regard to Table 1-A Indigenous groups, the VFPA was not directed by the *EIS Guidelines* (section 9.2) to meet with the Stó:lō Tribal Council and Stó:lō Nation groups, which the *EIS Guidelines* identified as "less likely to be affected by the project and its related effects" (p. 23). The VFPA was also not directed to consult with Hwlitsum, who are not identified in the *EIS Guidelines*.

request, remain the subject of ongoing discussions regarding acceptable conditions for Project-related effects (refer to the responses to IR10-11 and IR10-12 for further details).

The VFPA's consideration of potential Project-related effects on reasonably foreseeable future uses for traditional purposes by Indigenous groups, including in the proposed mitigation measures identified in EIS Section 32.2.7 and **Appendix IR10-09-A**, has been discussed in the responses to IR10-06, IR10-07, and IR10-08, and Part 1 of the response to this information request (refer also to the response to IR10-26 regarding reasonably foreseeable future use activities). The VFPA's consideration included the views expressed by Indigenous groups in relation to proposed mitigation measures, including offsetting, for biophysical components of the environment, such as marine vegetation, marine invertebrates, marine fish, and coastal birds, during the preparation of the EIS and ongoing consultation.

Appendices

Appendix IR10-09-A Current Use Mitigation Adequacy and Applicability

APPENDIX IR10-09-A
CURRENT USE MITIGATION ADEQUACY AND APPLICABILITY

Table IR10-09-A1 Current Use Mitigation Adequacy and Applicability

#	Potential Effect	Applicable Phase(s)	Mitigation Measures	Applicable Environmental Management Plans / Mitigation	Applicable Mitigation Measures Within Environmental Management Plan / Specific Mitigation	Intent of Mitigation to Reduce Significance of Residual Effect	Anticipated Effectiveness of Mitigation and Risks (where applicable)	Applicable Table 1-A and Table 1-B Indigenous Group(s)
1	Changes in Access to Preferred Current Use Locations	Construction, Operation	Continue to abide by the Memorandum of Agreement in place with Tsawwassen First Nation to accommodate Tsawwassen First Nation for effects from the Project	Mitigation not in environmental management plan (EMP)	Continue to abide by the Memorandum of Agreement in place with Tsawwassen First Nation to accommodate Tsawwassen First Nation for effects from the Project	Provide accommodation for potential effects on Current Use.	Effective as intended – combined with other mitigation measures proposed for this effect, effective mitigation is anticipated.	Tsawwassen First Nation
			Work with Musqueam First Nation to draft Terms of Reference to guide future discussions related to accommodation for effects from the Project	Mitigation not in EMP	Work with Musqueam First Nation to draft Terms of Reference to guide future discussions related to accommodation for effects from the Project	Provide accommodation for potential effects on Current Use.	Effective as intended – combined with other mitigation measures proposed for this effect, effective mitigation is anticipated.	Musqueam First Nation
			Implement mitigation for marine commercial use and outdoor recreation valued components (VCs; EIS Sections 21.0 and 24.0) to address potential displacement-related effects on commercial and recreational crab harvesting. (Including Indigenous commercial and recreational crab harvesting)	(Construction) Marine Commercial Use – Construction Compliance Monitoring Plan	Alignment of construction activities to avoid fisheries-sensitive windows for Dungeness crabs Compliance checking for water quality Provisions for intervention in the case of non-compliance	Avoid effect on harvest levels by: 1) reducing direct mortality of crabs (specifically gravid female crabs) below -5.0 m chart datum (CD) water depth through work window restrictions from October 15 to March 30; and 2) maintaining existing Dungeness crab productivity through protection of water quality.	Effective as intended – proven approach in aquatic environments (e.g., guideline levels for total suspended solids (TSS)/turbidity, DFO-regulated timing windows).	Indigenous groups participating in commercial crab harvesting: Tsawwassen, Salish Seas LP (equal partnership between Tsleil-Waututh, Musqueam, and Tla'amin), Tsleil-Waututh, and Malahat.
				(Construction) Marine Commercial Use – Marine Species Salvage Plan	Crab Salvage Program	Minimise effects of displacement by reducing effects to harvestable crab population to be relocated from portion of closure area. Involves the capture and relocation of crabs within terminal and causeway containment dykes to local area outside of Project-related disturbance area.	Effective as intended for crabs – proven approach at Roberts Bank for Deltaport Third Berth Project; effectiveness of mitigation incorporated into environmental assessment as salvages are known to only reduce and not fully mitigate construction-related crab productivity decreases. Therefore, a change in the significance of the residual effect is not anticipated if this mitigation measure is not fully effective in salvaging all crabs from within work zones.	

#	Potential Effect	Applicable Phase(s)	Mitigation Measures	Applicable Environmental Management Plans / Mitigation	Applicable Mitigation Measures Within Environmental Management Plan / Specific Mitigation	Intent of Mitigation to Reduce Significance of Residual Effect	Anticipated Effectiveness of Mitigation and Risks (where applicable)	Applicable Table 1-A and Table 1-B Indigenous Group(s)
				(Construction) Marine Commercial Use – Communications Plan	Inform marine commercial operators about the nature, location, status, and progress of construction work	Minimise effect on harvesting by providing timely information about potential closures and other activities during construction. This will allow commercial crab harvesters to adjust their planned activities in advance.	Effective as intended – it is anticipated that advanced notification of potential regulatory changes in connection with Project construction and operation would allow commercial crab harvesters to adjust their planned activities if they thought necessary to do so.	
				(Construction) Marine Commercial Use – work with Fisheries and Oceans Canada (DFO) to ensure that consultation with commercial crab harvesters and Indigenous groups is undertaken to: • Communicate timing and spatial area of proposed navigational closure expansion for commercial crab harvesting; • Communicate access restrictions and procedures for maintenance of safety for commercial crab harvesting activity; and • Provide a process for commercial crab harvesters and Indigenous groups to ask questions and submit concerns about the proposed navigational closure expansion and associated displacement of commercial crab harvesting	Work with DFO to ensure necessary consultation with commercial crab harvesters concerning the proposed navigational closure expansion. Where identified and agreed upon, implement feasible mitigation	Minimise effects through supporting the identification and implementation of feasible measures to mitigate displacement effects.	Effective as intended – the VFPA can effectively work with DFO to ensure consultation with commercial crab harvesters occurs on the matter of the proposed navigational closure area expansion. Where identified and agreed upon, the VFPA will work with other parties, including DFO to implement feasible mitigation to address displacement effects.	
				(Construction) Outdoor Recreation – Work with DFO to ensure that the necessary consultations with recreational crab harvesters is undertaken, including the following: • Communicate timing and spatial area of proposed navigational closure expansion for recreational crab harvesting; • Communicate access restrictions and procedures for maintenance of safety for recreational crab harvesting activity; and • Provide a process for recreational crab harvesters to ask questions, and submit concerns about the proposed navigational closure expansion and associated displacement of recreational crab harvesting	Work with DFO to ensure necessary consultation with recreational crab harvesters concerning the proposed navigational closure expansion. Where identified and agreed upon, implement feasible mitigation	Minimise effects through supporting the identification and implementation of feasible measures to mitigate displacement effects.	Effective as intended – the VFPA can effectively work with DFO to ensure consultation with recreational crab harvesters occurs on the matter of the proposed navigational closure area expansion. Where identified and agreed upon, the VFPA will work with other parties, including DFO to implement feasible mitigation to address displacement effects.	Indigenous groups participating in recreational crab harvesting, as applicable.

#	Potential Effect	Applicable Phase(s)	Mitigation Measures	Applicable Environmental Management Plans / Mitigation	Applicable Mitigation Measures Within Environmental Management Plan / Specific Mitigation	Intent of Mitigation to Reduce Significance of Residual Effect	Anticipated Effectiveness of Mitigation and Risks (where applicable)	Applicable Table 1-A and Table 1-B Indigenous Group(s)
				(Construction) Outdoor Recreation – Construction Compliance Monitoring Plan	Alignment of construction activities to avoid fisheries-sensitive windows for Dungeness crabs Compliance checking for water quality Provisions for intervention in the case of non-compliance	Avoid effect on of harvest levels by: 1) reducing direct mortality of crabs (specifically gravid female crabs) below -5.0 m CD water depth through work window restrictions from October 15 to March 30; and 2) maintaining existing Dungeness crab productivity through protection of water quality.	Effective as intended – proven approach in aquatic environments (e.g., guideline levels for TSS/turbidity, DFO-regulated timing windows).	
				(Construction) Outdoor Recreation – Marine Species Salvage Plan	Crab Salvage Program	Minimise effects of displacement by reducing effects to harvestable crab population to be relocated from portion of closure area. Involves the capture and relocation of crabs within terminal and causeway containment dykes to local area outside of Project-related disturbance area.	Effective as intended for crabs – proven approach at Roberts Bank for Deltaport Third Berth Project; effectiveness of mitigation incorporated into environmental assessment as salvages are known to only reduce and not fully mitigate construction related crab productivity decreases. Therefore, a change in the significance of the residual effect is not anticipated if this mitigation measure is not fully effective in salvaging all crabs from within work zones.	
				(Construction) Outdoor Recreation – Communications Plan	Inform marine recreational operators about the nature, location, status, and progress of construction work	Minimise effect on harvesting by providing timely information about potential closures and other activities during construction. This will allow recreational crab harvesters to adjust their planned activities in advance.	Effective as intended – it is anticipated that advanced notification of potential regulatory changes in connection with Project construction and operation would allow recreational crab harvesters to adjust their planned activities if they thought necessary to do so.	
			Work with DFO to ensure necessary consultations with Indigenous domestic or food, social, and ceremonial (FSC) crabbers concerning the proposed expansion of the area closed to	Mitigation not in EMP	Work with DFO to ensure necessary consultations with Indigenous domestic or FSC crabbers concerning the proposed expansion of the area closed to commercial and recreational crabbing	Minimise effects through identification of feasible measures to mitigate displacement effects.	Effective as intended – combined with other mitigation measures proposed for this effect, effective mitigation is anticipated.	Tsawwassen First Nation, Musqueam First Nation, Tsleil-Waututh Nation, and any other Table 1-A or Table 1-B Indigenous group that, to the VFPA's knowledge has recently acquired (e.g., Cowichan Tribes, Penelakut Tribe), or could acquire (or re-acquire)

#	Potential Effect	Applicable Phase(s)	Mitigation Measures	Applicable Environmental Management Plans / Mitigation	Applicable Mitigation Measures Within Environmental Management Plan / Specific Mitigation	Intent of Mitigation to Reduce Significance of Residual Effect	Anticipated Effectiveness of Mitigation and Risks (where applicable)	Applicable Table 1-A and Table 1-B Indigenous Group(s)
			commercial and recreational crabbing					FSC crab harvesting access, through DFO, to the Pacific Fisheries Management Areas that cover Roberts Bank (refer to Part 2 of the response to IR10-07 regarding DFO's regulation of FSC access
			Support Indigenous crabbing for domestic or FSC within the area closed to commercial and recreational crabbing	Mitigation not in EMP	Support Indigenous crabbing for domestic or FSC purposes within the area closed to commercial and recreational crabbing	Reduce displacement effect of terminal by ensuring domestic and FSC crabbing can continue in navigational closure area.	Effective as intended– combined with other mitigation measures proposed for this effect, effective mitigation is anticipated.	Tsawwassen First Nation, Musqueam First Nation, Tsleil-Waututh Nation, and any other Table 1-A or Table 1-B Indigenous group that, to the VFPA's knowledge has recently acquired (e.g., Cowichan Tribes, Penelakut Tribe), or could acquire (or re-acquire) FSC crab harvesting access, through DFO, to the Pacific Fisheries Management Areas that cover Roberts Bank (refer to Part 2 of the response to IR10-07 regarding DFO's regulation of FSC access).
			Implement measures for land and water use VC (EIS Section 26.0) to reduce potential disturbance to marine access to Tsawwassen First Nation community lease lands (Tsawwassen Water Lots)	(Construction) Land and Water Use – Mitigation not in EMP	Engagement with land and water users, including dialogue and communications through a mechanism for two-way dialogue and communications about port-related issues in Delta, and use of Community Feedback Line	Reduce potential disturbance through engagement to identify and resolve issues.	Effective as intended – engagement with water users, in this case Tsawwassen First Nation, is the standard approach to identifying and addressing potential issues. This measure is complemented and supported by other ongoing consultation with Tsawwassen First Nation.	Tsawwassen First Nation
				(Construction) Land and Water Use – Communications Plan	Inform Indigenous groups about the nature, location, status, and progress of construction work	Reduce potential for navigational disturbance, including delays or route changes, by notifying Indigenous groups (as applicable) of construction activities.	Effective as intended – community lease users may be able to plan to avoid marine areas with construction activity.	Tsawwassen First Nation
				(Construction) Land and Water Use – Land and Marine Traffic Management Plan	Identify areas to be avoided by marine vessel traffic through establishment of restricted access areas	Reduce potential disturbance by providing guidance to avoid construction activity and vessel travel that will affect access to the community lease lands.	Effective as intended – establishment of an area to be avoided, such that there will continue to be direct access to the community lease without interference from Project vessels, is considered effective.	Tsawwassen First Nation

#	Potential Effect	Applicable Phase(s)	Mitigation Measures	Applicable Environmental Management Plans / Mitigation	Applicable Mitigation Measures Within Environmental Management Plan / Specific Mitigation	Intent of Mitigation to Reduce Significance of Residual Effect	Anticipated Effectiveness of Mitigation and Risks (where applicable)	Applicable Table 1-A and Table 1-B Indigenous Group(s)
			Develop a communications protocol to inform appropriate Indigenous groups of planned or unplanned events related to Project construction or operation that may affect Current Use access.	Mitigation not in EMP	Develop a communications protocol to inform appropriate Indigenous groups of planned or unplanned events related to Project construction or operation that may affect Current Use access	Minimise potential disturbance through provision of timely information to allow for alternate access plans and confirmation of potential effects and mitigation effectiveness generally.	Effective as intended – combined with other mitigation measures proposed for this effect, effective mitigation is anticipated.	All Indigenous groups in Table 1-A and Table 1-B.
			Work with appropriate Indigenous groups to develop and implement a communications mechanism that will support dialogue between the VFPA and appropriate Indigenous groups on topics of concern that arise during the construction and initial operation phases.	Mitigation not in EMP	Work with appropriate Indigenous groups to develop and implement a communications mechanism that will support dialogue between the VFPA and appropriate Indigenous groups on topics of concern that arise during the construction and initial operation phases	Minimise potential disturbance through provision of timely information to allow for alternate access plans.	Effective as intended – combined with other mitigation measures proposed for this effect, effective mitigation is anticipated.	All Indigenous groups in Table 1-A and Table 1-B.
2	Changes in Availability of Preferred Current Use Resources	Construction, Operation	Implement mitigation identified in EIS Section 32.2.7.1.	Mitigation not in EMP	Mitigation measures noted above regarding changes in access to Current Use locations	See above – mitigating potential changes in availability of Current Use resources is predicated by the mitigation of potential changes in access to Current Use locations where those resources are harvested.	Effective as intended – see above.	Indigenous groups for whom mitigation is applicable to potential effects to access to Current Use locations, as described above.
			Implement mitigation to reduce Project-related effects to marine resources, including marine vegetation, marine invertebrates, marine fish, marine mammals, and coastal birds VCs (EIS Sections 11.0 through 15.0).	(Construction) Marine Vegetation – Construction Compliance Monitoring Plan	Compliance checking for water quality Provisions for intervention in the case of non-compliance	Maintain existing macroalgae productivity through protection of water quality.	Effective as intended – proven approach in aquatic environments (i.e., guideline levels for TSS/turbidity).	All Indigenous groups in Table 1-A and Table 1-B.
				(Construction) Marine Vegetation – Environmental Training Plan	Environmental awareness training	Prevent unnecessary disturbance to macroalgae to maintain existing productivity.	Effective as intended – minor risk through temporary environmental disturbance should an unauthorised activity occur. Should mitigation measure be ineffective, change in significance of residual effect is not anticipated due to likelihood of isolated incident (limited spatial and temporal scale).	
				(Construction) Marine Vegetation – Dredging and Sediment Discharge Plan	Compliance checking for water quality according to relevant permit conditions	Maintain existing macroalgae productivity through protection of water quality.	Effective as intended – regulatory conditions and	

#	Potential Effect	Applicable Phase(s)	Mitigation Measures	Applicable Environmental Management Plans / Mitigation	Applicable Mitigation Measures Within Environmental Management Plan / Specific Mitigation	Intent of Mitigation to Reduce Significance of Residual Effect	Anticipated Effectiveness of Mitigation and Risks (where applicable)	Applicable Table 1-A and Table 1-B Indigenous Group(s)
					Provisions for intervention in the case of non-compliance		guidelines for dredging and discharge will apply.	
				(Construction) Marine Vegetation – Sediment and Erosion Control Plan	Installation and regular inspection of land-based erosion-control measures (e.g., silt fence) Control of storm water to avoid sensitive environments Compliance checking for water quality	Maintain existing macroalgae productivity through protection of water quality.	Effective as intended – regulatory conditions and guidelines for land development and the maintenance of water quality to prevent sedimentation will apply.	
				(Construction) Marine Vegetation – Hazardous Materials and Waste Management Plan	Maintain inventory of hazardous products on site Safe storage and handling of hazardous products Standard practices for onsite fuelling of construction equipment	Prevent introduction of deleterious substances to the aquatic environment to maintain habitat quality.	Effective as intended – proven approach on construction sites. Relevant legislation, guidelines, and standard management practices will apply.	
				(Construction) Marine Vegetation – Spill Preparedness and Response Plan	Spill preparedness measures, including equipment staging and personnel training Development of procedures for spill response and containment, clean-up, and disposal	Minimise direct effects to species and maintain habitat quality through intervention for any released deleterious substances.	Effective as intended – proven approach on construction sites. Relevant regulations, guidelines, and reporting requirements will apply.	
				(Operation) Marine Vegetation – Operation Compliance Monitoring Plan	Site inspections and sample collection to evaluate implemented measures Provisions for intervention in the case of non-compliance	Maintain existing macroalgae productivity through protection of water quality.	Effective as intended – proven approach in aquatic environments (e.g., guideline levels for TSS/turbidity).	
				(Operation) Marine Vegetation – Environmental Training Plan	Environmental awareness training	Prevent unnecessary disturbance to macroalgae to maintain existing productivity.	Effective as intended – minor risk through temporary environmental disturbance should an unauthorised activity occur. Should mitigation measure be ineffective, change in significance of residual effect is not anticipated due to likelihood of isolated incident (limited spatial and temporal scale).	
				(Operation) Marine Vegetation – Hazardous Materials and Waste Management Plan	Maintain inventory of hazardous products on site Safe storage and handling of hazardous products	Prevent introduction of deleterious substances to the aquatic environment.	Effective as intended – proven approach. Relevant legislation, guidelines, and standard	

#	Potential Effect	Applicable Phase(s)	Mitigation Measures	Applicable Environmental Management Plans / Mitigation	Applicable Mitigation Measures Within Environmental Management Plan / Specific Mitigation	Intent of Mitigation to Reduce Significance of Residual Effect	Anticipated Effectiveness of Mitigation and Risks (where applicable)	Applicable Table 1-A and Table 1-B Indigenous Group(s)
					Standard practices for onsite fuelling of operation equipment		management practices will apply.	
				(Operation) Marine Vegetation – Spill Preparedness and Response Plan	Spill preparedness measures, including equipment staging and personnel training Development of procedures for spill response and containment, clean-up, and disposal	Minimise effects through intervention for any released deleterious substances.	Effective as intended – proven approach. Relevant legislation, guidelines, and standard management practices will apply.	
				Offsetting Plan (as relates to marine vegetation)	Creation of subtidal rock reef habitat	Provide habitat for attachment and recolonisation to promote increase in macroalgae productivity.	Effective as intended – proven approach at Roberts Bank.	
				(Construction) Marine Invertebrates – Construction Compliance Monitoring Plan	Alignment of construction activities to avoid fisheries-sensitive windows for Dungeness crabs Compliance checking for water quality Provisions for intervention in the case of non-compliance	Reduce direct mortality of crabs (specifically gravid female crabs) below -5.0 m CD water depth through work window restrictions from October 15 to March 30. Maintain existing bivalve shellfish, Dungeness crab, and orange sea pen productivity through protection of water quality.	Effective as intended – proven approach in aquatic environments (e.g., guideline levels for TSS/turbidity, DFO-regulated timing windows).	All Indigenous groups in Table 1-A and Table 1-B.
				(Construction) Marine Invertebrates – Environmental Training Plan	Environmental awareness training	Prevent unnecessary disturbance to marine invertebrates to maintain existing productivity.	Effective as intended – minor risk through temporary environmental disturbance should an unauthorised activity occur. Should mitigation measure be ineffective, change in significance of residual effect is not anticipated due to likelihood of isolated incident (limited spatial and temporal scale).	
				(Construction) Marine Invertebrates – Dredging and Sediment Discharge Plan	Compliance checking for water quality according to relevant permit conditions Provisions for intervention in the case of non-compliance	Maintain existing bivalve shellfish, Dungeness crab, and orange sea pen productivity through protection of water quality.	Effective as intended – regulatory conditions and guidelines for dredging and discharge will apply.	

#	Potential Effect	Applicable Phase(s)	Mitigation Measures	Applicable Environmental Management Plans / Mitigation	Applicable Mitigation Measures Within Environmental Management Plan / Specific Mitigation	Intent of Mitigation to Reduce Significance of Residual Effect	Anticipated Effectiveness of Mitigation and Risks (where applicable)	Applicable Table 1-A and Table 1-B Indigenous Group(s)
				(Construction) Marine Invertebrates – Sediment and Erosion Control Plan	Installation and regular inspection of land-based erosion-control measures (e.g., silt fence) where necessary Control of storm water to avoid sensitive environments Compliance checking for water quality	Maintain existing bivalve shellfish, Dungeness crab, and orange sea pen productivity through protection of water quality.	Effective as intended – regulatory conditions and guidelines for land development and the maintenance of water quality will apply.	
				(Construction) Marine Invertebrates – Marine Species Salvage Plan	Crab Salvage Program Orange Sea Pen Transplant	Capture and relocate crabs within terminal and causeway containment dykes to local area outside of Project-related disturbance area to partially mitigate construction-related mortality and physical injury. Collect and relocate orange sea pens to local area outside of Project-related disturbance area to partially mitigate direct mortality from terminal construction.	Effective as intended for crabs – proven approach at Roberts Bank for Deltaport Third Berth Project; effectiveness of mitigation incorporated into environmental assessment as salvages are known to only reduce and not fully mitigate construction related crab productivity decreases. Therefore, a change in the significance of the residual effect is not anticipated if this mitigation measure is not fully effective in salvaging all crabs from within work zones. Effective as intended for sea pens – a pilot study has confirmed that sea pens can be successfully transplanted in the wild and monitoring of survival success continues. A small portion of the sea pen aggregation is targeted for transplant, and the effectiveness of this measure for a portion of the population was taken into consideration in the effects assessment. Therefore, a change in the significance of the residual effect is not anticipated.	

#	Potential Effect	Applicable Phase(s)	Mitigation Measures	Applicable Environmental Management Plans / Mitigation	Applicable Mitigation Measures Within Environmental Management Plan / Specific Mitigation	Intent of Mitigation to Reduce Significance of Residual Effect	Anticipated Effectiveness of Mitigation and Risks (where applicable)	Applicable Table 1-A and Table 1-B Indigenous Group(s)
				(Construction) Marine Invertebrates – Hazardous Materials and Waste Management Plan	Maintain inventory of hazardous products on site Safe storage and handling of hazardous products Standard practices for onsite fuelling of construction equipment	Prevent introduction of deleterious substances to the aquatic environment to maintain habitat quality.	Effective as intended – proven approach on construction sites. Relevant legislation, guidelines, and standard management practices will apply.	
				(Construction) Marine Invertebrates – Spill Preparedness and Response Plan	Spill preparedness measures, including equipment staging and personnel training Development of procedures for spill response and containment, clean-up, and disposal	Minimise direct effects to species and maintain habitat quality through intervention for any released deleterious substances.	Effective as intended – proven approach on construction sites. Relevant regulations, guidelines, and reporting requirements will apply.	
				(Operation) Marine Invertebrates – Operation Compliance Monitoring Plan	Site inspections and sample collection to evaluate implemented measures Provisions for intervention in the case of non-compliance	Maintain existing bivalve shellfish, Dungeness crab, and orange sea pen productivity through protection of water quality.	Effective as intended – proven approach in aquatic environments (e.g., guideline levels for TSS/turbidity).	
				(Operation) Marine Invertebrates – Environmental Training Plan	Environmental awareness training	Prevent unnecessary disturbance to bivalve shellfish, Dungeness crab, and orange sea pen to maintain existing productivity.	Effective as intended – minor risk through temporary environmental disturbance should an unauthorised activity occur. Should mitigation measure be ineffective, change in significance of residual effect is not anticipated due to likelihood of isolated incident (limited spatial and temporal scale).	
				(Operation) Marine Invertebrates – Hazardous Materials and Waste Management Plan	Maintain inventory of hazardous products on site Safe storage and handling of hazardous products Standard practices for onsite fuelling of operation equipment	Prevent introduction of deleterious substances to the aquatic environment to maintain habitat quality.	Effective as intended – proven approach. Relevant legislation, guidelines, and standard management practices will apply.

Effective as intended – proven approach. Relevant legislation, guidelines, and standard management practices will apply.	

#	Potential Effect	Applicable Phase(s)	Mitigation Measures	Applicable Environmental Management Plans / Mitigation	Applicable Mitigation Measures Within Environmental Management Plan / Specific Mitigation	Intent of Mitigation to Reduce Significance of Residual Effect	Anticipated Effectiveness of Mitigation and Risks (where applicable)	Applicable Table 1-A and Table 1-B Indigenous Group(s)
				Offsetting Plan (as relates to marine invertebrates)	Creation of eelgrass habitat Creation of tidal marsh habitat, mudflat, and sandy gravel beach habitat Creation of subtidal rock reef habitat	Eelgrass – to promote increase in bivalve shellfish (heart cockles) and crab productivity. Tidal marsh, mudflat, sandy gravel beach – to promote increase in bivalve shellfish productivity. Subtidal rock reef – to promote increase in bivalve shellfish (bay mussel and Pacific oysters) productivity.	Effective as intended – these habitats have been proposed as mitigation based on the proven success of previous habitat creation projects within the Fraser River estuary and similar environments.	
				(Construction) Marine Fish – Construction Compliance Monitoring Plan	Alignment of construction activities to avoid fisheries-sensitive windows for juvenile salmon Compliance checking for water quality Provisions for intervention in the case of non-compliance	Reduce productivity losses for fish during sensitive periods through work window restrictions from March 1 to August 15 above -5.0 m CD water depth. Maintain existing marine fish productivity through protection of water quality.	Effective as intended – proven approach in aquatic environments (e.g., guideline levels for TSS/turbidity, DFO-regulated timing windows).	All Indigenous groups in Table 1-A and Table 1-B.
				(Construction) Marine Fish – Environmental Training Plan	Environmental awareness training	Prevent unnecessary disturbance to marine fish to maintain existing productivity.	Effective as intended – minor risk through temporary environmental disturbance should an unauthorised activity occur. Should mitigation measure be ineffective, change in significance of residual effect is not anticipated due to likelihood of isolated incident (limited spatial and temporal scale).	
				(Construction) Marine Fish – Dredging and Sediment Discharge Plan	Compliance checking for water quality according to relevant permit conditions Provisions for intervention in the case of non-compliance	Maintain existing marine fish productivity through protection of water quality.	Effective as intended – regulatory conditions and guidelines for dredging and discharge will apply.	
				(Construction) Marine Fish – Light Management Plan	Direct light away from marine environment Control light levels Limit use of lights to active work areas where possible	Maintain existing marine fish habitat quality and fish productivity by minimising light trespass into marine environment.	Effective as intended – as stated in environmental assessment, the effectiveness of lighting mitigation measures on marine fish are not well established, and therefore, this uncertainty has been taken into consideration. Therefore, a change in the significance of the	

#	Potential Effect	Applicable Phase(s)	Mitigation Measures	Applicable Environmental Management Plans / Mitigation	Applicable Mitigation Measures Within Environmental Management Plan / Specific Mitigation	Intent of Mitigation to Reduce Significance of Residual Effect	Anticipated Effectiveness of Mitigation and Risks (where applicable)	Applicable Table 1-A and Table 1-B Indigenous Group(s)
							residual effect is not anticipated if these mitigation measure are not fully effective in reducing light in the marine environment.	
				(Construction) Marine Fish – Underwater Noise Management Plan	During piling, use of vibratory hammer instead of impact pile driving when practical Hydrophone monitoring to confirm sound levels remain below thresholds Implementation of sound reduction or dampening methods or technologies (e.g., bubble curtains) to manage pile-driving sound levels, if required, to lower sound levels below thresholds	To conduct activities under the threshold sound level that may cause harm (injury or mortality) to fish.	Effective as intended– proven approach in aquatic environments (existing standard management practices for pile driving activities will apply).	
				(Construction) Marine Fish – Sediment and Erosion Control Plan	Installation and regular inspection of land-based erosion-control measures (e.g., silt fence) where necessary Control of storm water to avoid sensitive environments Compliance checking for water quality	Maintain existing macroalgae productivity through protection of water quality.	Effective as intended – regulatory conditions and guidelines for land development and the maintenance of water quality will apply.	
				(Construction) Marine Fish – Marine Species Salvage Plan	Fish Salvage Strategy Crab Salvage Program	Capture and relocate fish within terminal and causeway containment dykes to local area outside of Project-related disturbance area to partially mitigate construction-related mortality and physical injury.	Effective as intended – proven approach at Roberts Bank for Deltaport Third Berth Project; effectiveness of mitigation incorporated into environmental assessment as salvages are known to only reduce and not fully mitigate construction-related fish productivity decreases. 				(Construction) Marine Fish – Hazardous Materials and Waste Management Plan	Maintain inventory of hazardous products on site Safe storage and handling of hazardous products Standard practices for onsite fuelling of construction equipment	Prevent introduction of deleterious substances to the aquatic environment to maintain habitat quality.	Effective as intended – proven approach on construction sites. Relevant legislation, guidelines, and standard management practices will apply.	
				(Construction) Marine Fish – Spill Preparedness and Response Plan	Spill preparedness measures, including equipment staging and personnel training Development of procedures for spill response and containment, clean-up, and disposal	Minimise direct effects to species and maintain habitat quality through intervention for any released deleterious substances.	Effective as intended – proven approach on construction sites. Relevant regulations, guidelines, and reporting requirements will apply.	
				(Operation) Marine Fish – Operation Compliance Monitoring Plan	Site inspections and sample collection to evaluate implemented measures Provisions for intervention in the case of non-compliance	Maintain existing marine fish productivity through protection of water quality.	Effective as intended – proven approach in aquatic environments (e.g., guideline levels for TSS/turbidity).	
				(Operation) Marine Fish – Light Management Plan	Direct light away from marine environment Control light levels Limit use of lights to active work areas where possible	Maintain existing marine fish habitat quality and fish productivity by minimising light trespass into marine environment.	Effective as intended – as stated in environmental assessment, the effectiveness of lighting mitigation measures on marine fish are not well established, and therefore, this uncertainty has been taken into consideration in the effects assessment. Therefore, a change in the significance of the residual effect is not anticipated if these mitigation measures are not fully effective in reducing light in the marine environment.	
				(Operation) Marine Fish – Environmental Training Plan	Environmental awareness training	Prevent unnecessary disturbance to marine fish to maintain existing productivity.	Effective as intended – minor risk through temporary environmental disturbance should an unauthorised activity occur. Should mitigation measure be ineffective, change in significance of residual effect is not anticipated due to likelihood of isolated incident (limited spatial and temporal scale).	

#	Potential Effect	Applicable Phase(s)	Mitigation Measures	Applicable Environmental Management Plans / Mitigation	Applicable Mitigation Measures Within Environmental Management Plan / Specific Mitigation	Intent of Mitigation to Reduce Significance of Residual Effect	Anticipated Effectiveness of Mitigation and Risks (where applicable)	Applicable Table 1-A and Table 1-B Indigenous Group(s)
				(Operation) Marine Fish – Hazardous Materials and Waste Management Plan	Maintain inventory of hazardous products on site Safe storage and handling of hazardous products Standard practices for onsite fuelling of operation equipment	Prevent introduction of deleterious substances to the aquatic environment.	Effective as intended – proven approach. Relevant legislation, guidelines, and standard management practices will apply.	
				(Operation) Marine Fish – Spill Preparedness and Response Plan	Spill preparedness measures, including equipment staging and personnel training Development of procedures for spill response and containment, clean-up, and disposal	Minimise effects through intervention for any released deleterious substances.	Effective as intended – proven approach. Relevant legislation, guidelines, and standard management practices will apply.	
				Offsetting Plan (as relates to marine fish)	Creation of eelgrass habitat Creation of tidal marsh habitat Creation of mudflat Creation of sandy gravel beach habitat Creation of subtidal rock reef habitat	Eelgrass – to promote productivity increases for juvenile salmon, juvenile rockfish, forage fish, and small demersal fish. Tidal marsh – to promote productivity increases for juvenile salmon. Mudflat – to promote productivity increase in benthic invertebrates, which are food sources for fish. Sandy gravel beach – to promote increase in juvenile salmon productivity, and promote forage fish spawning. Subtidal rock reef – to promote increase in reef fish productivity.	Effective as intended – proven approach at Roberts Bank.	
				(Construction) Marine Mammals – Construction Compliance Monitoring Plan	Compliance checking for underwater noise levels Provisions for intervention in the case of non-compliance	Maintain existing marine fish productivity (food source) and marine mammal habitat quality.	Effective as intended – proven approach in aquatic environments.	All Indigenous groups in Table 1-A and Table 1-B.
				(Construction) Marine Mammals – Underwater Noise Management Plan	During piling, use of vibratory hammer instead of impact pile driving when practical Establish protective buffer zones around Project construction activities Hydrophone monitoring to confirm sound levels remain below thresholds Hydrophone monitoring in darkness or weather-induced poor visibility will supplement	Reduce potential marine mammal behavioural disturbance and physical injury to hearing caused by an increase in underwater noise. Maintain habitat quality.	Effective as intended – proven approach in aquatic environments (existing best management practices for pile driving activities will apply).	

#	Potential Effect	Applicable Phase(s)	Mitigation Measures	Applicable Environmental Management Plans / Mitigation	Applicable Mitigation Measures Within Environmental Management Plan / Specific Mitigation	Intent of Mitigation to Reduce Significance of Residual Effect	Anticipated Effectiveness of Mitigation and Risks (where applicable)	Applicable Table 1-A and Table 1-B Indigenous Group(s)
					Marine Mammal Observation Plan Implementation of sound reduction or dampening methods or technologies (e.g., bubble curtains) to manage pile-driving sound levels, if required, to lower sound levels below thresholds			
				(Construction) Marine Mammals – Marine Mammal Observation Plan	Onshore and on-construction-vessel Marine Mammal Observers to visually and acoustically monitor the safety and buffer zones and record location and behaviour of observed animals Observers have the authority to suspend construction activities if marine mammals are within the buffer distance	Reduce potential marine mammal behavioural disturbance and physical injury to hearing caused by an increase in underwater noise or increased construction-vessel traffic.	Effective as intended – visual observations are limited by weather-induced limitations and daylight, but in conjunction with acoustic monitoring, marine mammal presence within a buffer zone will be improved. The effectiveness of the mitigation will not change the significance of the effect, as current underwater noise levels are deemed to be significant.	
				(Construction) Marine Mammals – Environmental Training Plan	Environmental awareness training	Reduce potential disturbances by increasing individual awareness and knowledge of potential consequences of actions or lack of action in response to an incident.	Effective as intended – minor risk through temporary environmental disturbance should an unauthorised activity occur. Should mitigation measure be ineffective, change in significance of residual effect is not anticipated due to likelihood of isolated incident (limited spatial and temporal scale).	
				(Construction) Marine Mammals – Construction Compliance Monitoring Plan	Compliance checking for adherence to buffer zones and effectiveness of hydrophone and observer in detecting marine mammal presence Provisions for intervention in the case of non-compliance	Reduce potential marine mammal behavioural disturbance and physical injury from interactions with vessels. Maintain habitat quality.	Effective as intended – proven approach in aquatic environments, but effectiveness of this EMP will not change the significance of the effect.	

#	Potential Effect	Applicable Phase(s)	Mitigation Measures	Applicable Environmental Management Plans / Mitigation	Applicable Mitigation Measures Within Environmental Management Plan / Specific Mitigation	Intent of Mitigation to Reduce Significance of Residual Effect	Anticipated Effectiveness of Mitigation and Risks (where applicable)	Applicable Table 1-A and Table 1-B Indigenous Group(s)
				(Construction) Marine Mammals – Environmental Training Plan	Environmental awareness training	Reduce potential disturbances by increasing individual awareness and knowledge of potential consequences of actions or lack of action in response to an incident.	Effective as intended – minor risk through temporary environmental disturbance should an unauthorised activity occur. Should mitigation measure be ineffective, change in significance of residual effect is not anticipated due to likelihood of isolated incident (limited spatial and temporal scale).	
				(Operation) Marine Mammals – Environmental Training Plan	Environmental awareness training	Reduce potential disturbances by increasing individual awareness and knowledge of potential consequences of actions or lack of action in response to an incident.	Effective as intended – minor risk through temporary environmental disturbance should an unauthorised activity occur. Should mitigation measure be ineffective, change in significance of residual effect is not anticipated due to likelihood of isolated incident (limited spatial and temporal scale).	
				(Operation) Marine Mammals – Mitigation not in EMP	Distribution of a marine mammal awareness pamphlet, "Marine Mammals of the Roberts Bank Area", to marine pilots working within VFPA jurisdiction	Raise awareness of sensitivity of Roberts Bank and surrounding areas to potentially avoid interactions between whales and vessels.	Unknown – as effectiveness of this measure is difficult to measure, the application of this measure was not taken into consideration in the determination of significance, and therefore, if it is ineffective, there would be no change to the significance of this residual effect.	
				(Construction) Coastal Birds – Construction Compliance Monitoring Plan	Alignment of construction activities to avoid periods when diving birds are abundant in the area Compliance checking for water quality, above-ground noise, underwater noise Provisions for intervention in the case of non-compliance	Maintain existing bird productivity by minimising disturbance and through protection of habitat.	Effective as intended – proven approach in aquatic environments (e.g., guideline levels for TSS/turbidity).	All Indigenous groups in Table 1-A and Table 1-B.

#	Potential Effect	Applicable Phase(s)	Mitigation Measures	Applicable Environmental Management Plans / Mitigation	Applicable Mitigation Measures Within Environmental Management Plan / Specific Mitigation	Intent of Mitigation to Reduce Significance of Residual Effect	Anticipated Effectiveness of Mitigation and Risks (where applicable)	Applicable Table 1-A and Table 1-B Indigenous Group(s)
				(Construction) Coastal Birds – Environmental Training Plan	Environmental awareness training	Reduce potential disturbances by increasing individual awareness and knowledge of potential consequences of actions or lack of action in response to an incident.	Effective as intended – minor risk through temporary environmental disturbance should an unauthorised activity occur. Should mitigation measure be ineffective, change in significance of residual effect is not anticipated due to likelihood of isolated incident (limited spatial and temporal scale).	
				(Construction) Coastal Birds – Light Management Plan	Orienting lights downward and away from known bird-occupied areas where possible Using shielding to minimise light trespass Controlling light levels and limiting light use to areas where activities are occurring, where possible Where possible, using fixtures that emit light at specific wavelengths Ensuring dredge lighting system shields light from spilling outside the basic working footprint of the dredge.	To minimise disorienting effects to birds, thereby maintaining habitat quality.	Effective as intended – research continues on general effects to birds from artificial light, including which wavelengths minimise disorientating effects to birds, which can vary by species. Should mitigation measure be ineffective, change in significance of residual effect is not anticipated, as the determination of significance took into account the fact that birds have habituated to current light levels from the existing terminals, and are likely to habituate to any Project-related light increases.	
				(Construction) Coastal Birds – Sediment and Erosion Control Plan	Installation and regular inspection of land-based erosion-control measures (e.g., silt fence) where necessary Control of storm water to avoid sensitive environments Compliance checking for water quality	Maintain existing bird productivity by minimising disturbance and through protection of habitat.	Effective as intended – proven approach in aquatic environments (e.g., guideline levels for TSS/turbidity).	
				(Construction) Coastal Birds – Hazardous Materials and Waste Management Plan	Maintain inventory of hazardous products on site Safe storage and handling of hazardous products Standard practices for onsite fuelling of construction equipment	Prevent introduction of deleterious substances to the environment to maintain habitat quality.	Effective as intended – proven approach on construction sites. Relevant legislation, guidelines, and standard management practices will apply.	

#	Potential Effect	Applicable Phase(s)	Mitigation Measures	Applicable Environmental Management Plans / Mitigation	Applicable Mitigation Measures Within Environmental Management Plan / Specific Mitigation	Intent of Mitigation to Reduce Significance of Residual Effect	Anticipated Effectiveness of Mitigation and Risks (where applicable)	Applicable Table 1-A and Table 1-B Indigenous Group(s)
				(Construction) Coastal Birds – Spill Preparedness and Response Plan	Spill preparedness measures, including equipment staging and personnel training Development of procedures for spill response and containment, clean-up, and disposal	Prevent introduction of deleterious substances to the environment to maintain habitat quality.	Effective as intended – proven approach on construction sites. Relevant regulations, guidelines, and reporting requirements will apply.	
				(Construction) Coastal Birds – Noise Management Plan	Shutdown of equipment and vehicles when not in use Utilisation of equipment that produces less noise where feasible Awareness and training for construction crew Using barriers (e.g., acoustic blankets) to shield wildlife from abrupt loud noise where feasible Increasing or ramping-up sound levels slowly to allow birds to habituate or temporarily leave the area where feasible Where possible, implementing measures to minimise impulsive noise	Maintain habitat quality.	Effective as intended – minor disturbance as birds can relocate or habituate; should mitigation measure be ineffective, change in significance of residual effect is not anticipated, as the determination of significance took into account the fact that birds have habituated to current noise levels from the existing terminals, and are likely to habituate to any Project-related noise increases.	
				(Construction) Coastal Birds – Underwater Noise Management Plan	During piling, use of vibratory hammer instead of impact pile driving when practical Implementation of sound reduction or dampening methods or technologies (e.g., bubble curtains) to manage pile-driving sound levels, if required, to lower sound levels below thresholds Hazing birds prior to construction to move them away from the affected zone if loud operations are necessary during periods of peak bird abundance	Reduce potential behavioural disturbance and physical injury to hearing caused by an increase in underwater noise. Maintain habitat quality.	Effective as intended – existing best management practices for pile driving activities will apply.	
				(Construction) Coastal Birds – Land and Marine Traffic Management Plan	Sensitive areas to be avoided by marine vessel traffic operating in the Project area during construction will be established	Reduce potential disturbance and maintain habitat quality.	Effective as intended for vessel traffic – published thresholds for noise and visual disturbance do not exist for birds; however, literature indicates minimal effects as long as vessel traffic is restricted to designated areas. The establishment of	

#	Potential Effect	Applicable Phase(s)	Mitigation Measures	Applicable Environmental Management Plans / Mitigation	Applicable Mitigation Measures Within Environmental Management Plan / Specific Mitigation	Intent of Mitigation to Reduce Significance of Residual Effect	Anticipated Effectiveness of Mitigation and Risks (where applicable)	Applicable Table 1-A and Table 1-B Indigenous Group(s)
							designated areas will effectively mitigate potential disturbances.	
				(Operation) Coastal Birds – Operation Compliance Monitoring Plan	Site inspections and sample collection to evaluate implemented measures Provisions for intervention in the case of non-compliance	Maintain existing bird productivity through protection of water quality.	Effective as intended – proven approach in aquatic environments (i.e., guideline levels for TSS/turbidity).	
				(Operation) Coastal Birds – Environmental Training Plan	Environmental awareness training	Prevent unnecessary disturbance to birds to maintain existing productivity.	Effective as intended – minor risk through temporary environmental disturbance should an unauthorised activity occur. Should mitigation measure be ineffective, change in significance of residual effect is not anticipated due to likelihood of isolated incident (limited spatial and temporal scale).	
				(Operation) Coastal Birds – Hazardous Materials and Waste Management Plan	Maintain inventory of hazardous products on site Safe storage and handling of hazardous products Standard practices for onsite fuelling of operation equipment	Prevent introduction of deleterious substances to the aquatic environment.	Effective as intended – proven approach. Relevant legislation, guidelines, and standard management practices will apply.	
				(Operation) Coastal Birds – Spill Preparedness and Response Plan	Spill preparedness measures, including equipment staging and personnel training Development of procedures for spill response and containment, clean-up, and disposal	Minimise effects through intervention for any released deleterious substances.	Effective as intended - proven approach. Relevant legislation, guidelines, and standard management practices will apply.	
				(Operation) Coastal Birds – Noise Management Plan	Shutdown of equipment and vehicles when not in use Utilisation of equipment that produces less noise where feasible Awareness and training for construction crews Using barriers (e.g., acoustic blankets) to shield wildlife from abrupt loud noise where feasible Increasing or ramping-up sound levels slowly to allow birds to habituate or temporarily leave the area	Maintain existing bird productivity by minimising disturbance and maintaining habitat quality.	Effective as intended – minor disturbance as birds can relocate or habituate; should mitigation measure be ineffective, change in significance of residual effect is not anticipated, as the determination of significance took into account the fact that birds have habituated to current noise levels from the existing terminals, and are likely to	

#	Potential Effect	Applicable Phase(s)	Mitigation Measures	Applicable Environmental Management Plans / Mitigation	Applicable Mitigation Measures Within Environmental Management Plan / Specific Mitigation	Intent of Mitigation to Reduce Significance of Residual Effect	Anticipated Effectiveness of Mitigation and Risks (where applicable)	Applicable Table 1-A and Table 1-B Indigenous Group(s)
					Implementing measures to minimise impulsive noise where feasible Where possible, avoiding operations generating loud noise (greater than 85 dBA at 60 m from source) during the period of peak northward shorebird migration (April 20 to May 7) within 3 km of the high tide line (i.e., the shoreline)		habituate to any Project-related noise increases.	
				(Operation) Coastal Birds – Light Management Plan	Orienting lights downward and away from known bird-occupied areas where possible Using shielding to minimise light trespass Controlling light levels and limiting light use to areas where activities are occurring, where possible Where possible, using fixtures that emit light at specific wavelengths	To minimise disorienting effects to birds, thereby maintaining habitat quality.	Effective as intended – research continues on general effects to birds from artificial light, including which wavelengths minimise disorientating effects to birds, which can vary by species. Should mitigation measure be ineffective, change in significance of residual effect is not anticipated, as the determination of significance took into account the fact that birds have habituated to current light levels from the existing terminals, and are likely to habituate to any Project-related light increases.	
				Offsetting Plan (as relates to coastal birds)	Creation of eelgrass habitat Creation of tidal marsh habitat Creation of mudflat Creation of sandy gravel beach habitat Creation of subtidal rock reef habitat	Eelgrass – an important food source for waterfowl and brant, and habitat for various prey. Tidal marsh – provides food and shelter for many coastal birds. Mudflat – promotes productivity increase in marine invertebrates and biofilm, which are food sources for birds. Sandy gravel beach – promotes increases in the productivity of food sources (e.g., forage fish, bivalves).	Effective as intended – these habitats have been proposed as mitigation based on the proven success of previous habitat creation projects within the Fraser River estuary and similar environments.	

#	Potential Effect	Applicable Phase(s)	Mitigation Measures	Applicable Environmental Management Plans / Mitigation	Applicable Mitigation Measures Within Environmental Management Plan / Specific Mitigation	Intent of Mitigation to Reduce Significance of Residual Effect	Anticipated Effectiveness of Mitigation and Risks (where applicable)	Applicable Table 1-A and Table 1-B Indigenous Group(s)
						Subtidal rock reef – promotes increase in diving bird prey (e.g., bivalve shellfish).		
				(Operation) Coastal Birds – Mitigation not in EMP	The VFPA to work collaboratively with appropriate transportation authorities and Canadian Wildlife Service to develop and implement measures to mitigate effects to barn owl from vehicle collisions.	Minimise potential of barn owl-vehicle interactions to reduce injury or mortality.	Effective as intended – proven approaches have been applied along other linear corridors.	
			Share with appropriate Indigenous groups information gained through environmental monitoring and follow-up programs to support monitoring, by Indigenous groups, of environmental conditions related to Current Use.	Mitigation not in EMP	Share with appropriate Indigenous groups information gained through environmental monitoring and follow-up programs to support monitoring, by Indigenous groups, of environmental conditions related to Current Use	Minimise potential effect on marine resource availability by facilitating early identification of any unanticipated outcomes.	Effective as intended – participation in monitoring will allow for identification of unanticipated outcomes.	All Indigenous groups in Table 1-A and Table 1-B.
			Work with appropriate Indigenous groups to identify opportunities to participate in environmental monitoring and follow-up programs, including those focused on the ongoing availability and quality of marine resources upon which Current Use depends.	Mitigation not in EMP	Work with appropriate Indigenous groups to identify opportunities to participate in environmental monitoring and follow-up programs	Minimise potential effect on marine resource availability by facilitating early identification of any unanticipated outcomes.	Effective as intended – participation in monitoring will allow for identification of unanticipated outcomes.	All Indigenous groups in Table 1-A and Table 1-B.
3	Changes in Quality of Preferred Current Use Resources	Construction, Operation	Implement mitigation identified in EIS Section 32.2.7.2.	Mitigation not in EMP	Mitigation measures noted above regarding changes in availability of Current Use resources (which in turn carries forward measures regarding changes in access to Current Use locations)	See above – mitigating potential changes in quality of Current Use resources is predicated by the mitigation of potential changes in access to Current Use locations where those resources are harvested and potential changes in availability of Current Use resources at those locations.	Effective as intended – see above.	Indigenous groups for whom mitigation is applicable to potential effects to access to Current Use locations and availability of Current Use resources, as described above.
			Implement mitigation for human health VC (EIS Section 27.0) to address perceived contamination of traditional food sources.	Mitigation not in EMP	Mitigation measures noted above regarding human health to address perceived contamination of traditional food sources	Reduced risk of avoidance of preferred Current Use resources through awareness building measures regarding perceived contamination of marine resources.	Effective as intended – results of investigations into perceived shellfish contamination can be effectively shared with each interested Indigenous group through ongoing consultation activities.	All Indigenous groups in Table 1-A and Table 1-B.

#	Potential Effect	Applicable Phase(s)	Mitigation Measures	Applicable Environmental Management Plans / Mitigation	Applicable Mitigation Measures Within Environmental Management Plan / Specific Mitigation	Intent of Mitigation to Reduce Significance of Residual Effect	Anticipated Effectiveness of Mitigation and Risks (where applicable)	Applicable Table 1-A and Table 1-B Indigenous Group(s)
4	Changes in Quality of Current Use Experience	Construction, Operation	Implement the mitigation identified in EIS Section 32.2.7.3.	Mitigation not in EMP	Mitigation measures noted above regarding changes in quality of Current Use resources (which in turn carries forward measures regarding changes in availability of Current Use resources, which in turn carries forward measures regarding changes in access to Current Use locations, which includes a communications mechanism to support ongoing dialogue between the VFPA and Indigenous groups)	See above – mitigating potential changes in quality of Current Use experience is predicated by the mitigation of potential changes in access to locations where Current Use activities are carried out and the availability and quality of resources that are harvested at those locations.	Effective as intended – see above.	Indigenous groups for whom mitigation is applicable to potential effects to access to Current Use locations, and the availability and quality of Current Use resources, as described above.
			Implement mitigation for visual resources VC (EIS Section 25.0) to reduce Project-related changes in daytime and nighttime visibility.	Mitigation not in EMP	Crane colour optimisation to reduce contrast and enhance blending with the landscape	Reduce effect of quality of experience by reducing visibility of features (cranes) and light that could potentially affect quality of experience in terms of sense of place.	Effective as intended – to the extent that other mitigation measures are effective at mitigating effects on visual resources, as described above, they are expected to be effective at mitigating effects on Current Use, where augmented with the communication measure (identified under "access") related to other matters of concern.	All Indigenous groups in Table 1-A and Table 1-B.
				(Construction) Visual Resources – Light Management Plan	Orienting lights downward and away from residential and marine areas Using shielding to minimise light trespass Controlling light levels and limiting light use to areas where activities are occurring Ensuring dredge lighting system shields light from spilling outside the basic working footprint of the dredge	Reduce the light emitted from construction equipment and activities to reduce changes in sky glow and light trespass.	Effective as intended – proven approach. Best practices as recommended by the International Commission on Illumination (CIE), Illuminating Engineering Society of North America (IESNA), BC Oil and Gas Commission (OGC), International Dark-Sky Association (IDA), and the Royal Astronomical Society of Canada (RASC) to reduce changes in sky glow and light trespass.	

#	Potential Effect	Applicable Phase(s)	Mitigation Measures	Applicable Environmental Management Plans / Mitigation	Applicable Mitigation Measures Within Environmental Management Plan / Specific Mitigation	Intent of Mitigation to Reduce Significance of Residual Effect	Anticipated Effectiveness of Mitigation and Risks (where applicable)	Applicable Table 1-A and Table 1-B Indigenous Group(s)
				(Operation) Visual Resources – Light Management Plan	Orienting lights downward and away from residential and marine areas Using shielding to minimise light trespass Controlling light levels and limiting light use to areas where activities are occurring Establishing a centralised lighting control system to select lighting where required	Reduce the light emitted from operation phase activities to reduce changes in sky glow and light trespass.	Effective as intended – proven approach. Best practices as recommended by CIE, IESNA, OGC, IDA, and RASC to reduce changes in sky glow and light trespass.	
			Implement mitigation for human health VC (EIS Section 27.0) to decrease potential effects from Project-related noise, light, subsistence food avoidance, and air emissions	(Construction) Human Health – Air Quality and Dust Control Plan	Regular inspection and maintenance of construction vehicles and equipment Avoidance of creating traffic congestion Restrictions on vehicle idling Preferential use of low-sulphur fuels Installation of wheel washer or regular sweeping of paved surfaces Covering of haul vehicles during transport of bulk fine materials Stabilisation of exposed earthworks Timing activities to avoid high wind events	Reduce risk of health effects by reducing air emissions of contaminants and fugitive dust.	Effective as intended – proven approach on construction sites.	All Indigenous groups in Table 1-A and Table 1-B.
				(Construction) Human Health – Construction Compliance Monitoring Plan	Compliance checking for air quality	Reduce risk of health effects by contributing to reduction in air emissions through monitoring and adaptive management.	Effective as intended – feedback provided through monitoring will facilitate adaptive management.	
				(Construction) Human Health – Noise Management Plan	Scheduling of higher noise-generating activities during weekdays, and during the daytime Shutdown of equipment and vehicles when not in use Utilisation of equipment that produces less noise Awareness and training for construction crews	Reduce risk of health effects by reducing noise generated during construction.	Effective as intended – proven approach on construction sites.	

#	Potential Effect	Applicable Phase(s)	Mitigation Measures	Applicable Environmental Management Plans / Mitigation	Applicable Mitigation Measures Within Environmental Management Plan / Specific Mitigation	Intent of Mitigation to Reduce Significance of Residual Effect	Anticipated Effectiveness of Mitigation and Risks (where applicable)	Applicable Table 1-A and Table 1-B Indigenous Group(s)
				(Construction) Human Health – Construction Compliance Monitoring Plan	Compliance checking for above-ground noise	Reduce risk of health effects by contributing to reduction in noise through monitoring and adaptive management.	Effective as intended – proven approach for noise monitoring.	
				(Construction) Human Health – Communications Plan	Inform local residents, Tsawwassen First Nation, and other Indigenous groups about the nature, location, status, and progress of construction work	Reduce potential for exposure to noise from peak construction activity by notifying local residents and Indigenous groups of construction activities.	Effective as intended – the communications plan provides communication to residents and Indigenous groups that will enable them to plan their activities to avoid exposure to noise from peak construction activity.	
				(Construction) Human Health – Light Management Plan	Orienting lights downward and away from residential and marine areas Using shielding to minimise light trespass Controlling light levels and limiting light use to areas where activities are occurring Ensuring dredge lighting system shields light from spilling outside the basic working footprint of the dredge	Reduced risk of health effects from stress and annoyance by reducing light as a source of stress and annoyance during construction.	Effective as intended – proven approach. Best practices as recommended by CIE, IESNA, OGC, IDA, and RASC to reduce changes in sky glow and light trespass.	
				(Operation) Human Health – Noise Management Plan	Optimised tonality for equipment alarms Operator awareness and training Regular maintenance of equipment Advertisement and maintenance of VFPA Community Feedback Line	Reduce risk of health effects by reducing noise generated during operation.	Effective as intended – assuming adequate management and control of implementation.	
				(Operation) Human Health – Operation Compliance Monitoring Plan	Routine instrument-based monitoring	Reduce risk of health effects by contributing to reduction in noise through monitoring and adaptive management.	Effective as intended – proven approach for noise monitoring.	
				(Operation) Human Health – Light Management Plan	Orienting lights downward and away from residential and marine areas Using shielding to minimise light trespass Controlling light levels and limiting light use to areas where activities are occurring	Reduce risk of health effects from stress and annoyance by reducing light as a source of stress and annoyance during operation.	Effective as intended – proven approach. Best practices as recommended by CIE, IESNA, OGC, IDA, and RASC to reduce changes in sky glow and light trespass.	

#	Potential Effect	Applicable Phase(s)	Mitigation Measures	Applicable Environmental Management Plans / Mitigation	Applicable Mitigation Measures Within Environmental Management Plan / Specific Mitigation	Intent of Mitigation to Reduce Significance of Residual Effect	Anticipated Effectiveness of Mitigation and Risks (where applicable)	Applicable Table 1-A and Table 1-B Indigenous Group(s)
					Establishing a centralised lighting control system to select lighting where required			
				Mitigation not in EMP	Awareness and education measures regarding results of contaminant sampling of edible shellfish	Reduce risk of health effects from stress and annoyance by reducing perception of subsistence food contamination as a source of stress and annoyance.	Effective as intended – to the extent that other mitigation measures are effective at mitigating effects on human health, as described above, they are expected to be effective at mitigating effects on Current Use, where augmented with the communication measure (identified under "access") related to other matters of concern.	
			Implement mitigation to identify and reduce potential damage to fish trap stakes.	Mitigation not in EMP	Excavate a test trench, or series of trenches, across the area of archaeological potential to locate potential fish trap stakes, if present	Reduce effect of quality of experience by reducing factors that could potentially degrade the quality of experience in terms of cultural heritage and transmission.	Effective as intended – to the extent that this mitigation is effective at mitigating effects on archaeological and heritage resources, as described above, it is expected to be effective at mitigating effects on Current Use, where augmented with the communication measure (identified under "access") related to other matters of concern.	All Indigenous groups in Table 1-A and Table 1-B.
				Mitigation not in EMP	Excavate a test trench across the area of archaeological potential to locate potential fish trap stakes, if present, and sample/investigate/preserve fish trap stakes if found	Reduce effect of quality of experience by reducing factors that could potentially degrade the quality of experience in terms of cultural heritage and transmission.		
				Mitigation not in EMP	Annually monitor, for a period of 4 years, predicted tidal erosion and sample/investigate fish trap stakes if found	Reduce effect of quality of experience by reducing factors that could potentially degrade the quality of experience in terms of cultural heritage and transmission.		

IR10-10 Current Use of Lands and Resources for Traditional Purposes – Mitigation Measures, Offsets

Information Source(s)

EIS Volume 3: Section 17.3

EIS Volume 5: Section 32.2.7; Table 32-6

Review Panel Information Request Package 7 (CEAR Doc#1000): IR7-27; IR7-31

Context

In Section 32.2.7 and Table 32-6 of the EIS, the Proponent proposed to mitigate the potential effects of the proposed Project on the changes in availability of preferred traditional resources using the mitigation measures proposed for the biophysical components of the environment.

These measures included the offsetting framework highlighted in Section 17.3 of the EIS. The Proponent stated that the timing for any onsite offsetting measures would be dependent upon completion of Project construction. In addition, the Proponent stated that the offsetting measures would require a period of years to establish new functional habitat and to recover productivity of affected marine species. During this period of time the availability of, and access to, preferred resources would potentially be reduced and limited.

The Proponent predicted that there would be no residual effects on the changes in availability of preferred traditional resources. However, the Proponent did not discuss the potential effects of the time lag required for the establishment of functioning habitat offsets.

Information Request

Discuss the potential effects of the proposed Project on availability of preferred traditional resources taking into account the time lag required for the establishment of functioning habitat offsets.

When responding to this request, the Proponent should include any relevant elements that will be covered in its responses to IR7-27 and IR7-31.

VFPA Response

Clarification

The context to this information request states that, in Section 32.2.7 and Table 32-6 of the EIS, the Proponent proposed to mitigate the potential effects of the proposed Project on the changes in availability of preferred traditional resources using the mitigation measures proposed for the biophysical components of the environment.

The VFPA wishes to clarify that the mitigation measures proposed for the biophysical components of the environment were considered applicable to addressing potential effects on the availability of traditional resources; however, the VFPA also identified additional measures in Section 32.2.7.2 (and summarised in Table 32-6) of the EIS related to the availability of traditional resources, as follows:

- The VFPA will share with appropriate Indigenous groups information gained through compliance monitoring and the RBT2 Follow-up Program conducted during the construction and operation phases of the Project to support monitoring, by Indigenous groups, of environmental conditions related to the current use of lands and resources for traditional purposes (Current Use); and
- The VFPA will work with appropriate Indigenous groups to identify opportunities to participate in compliance monitoring and the RBT2 Follow-up Program, to take place during construction and operation phases, including those focused on the ongoing availability and quality of marine resources upon which Current Use depends.

In addition, in EIS Section 32.2.7.1, the VFPA identified a communications mechanism that was carried forward to the discussion of mitigation measures related to the availability of resources in EIS Section 32.2.7.2. That mechanism was proposed to support dialogue between the VFPA and Indigenous groups on topics of concern that arise during the Project construction phase and initial operation phase, including but not limited to Project status, safety issues, effectiveness of mitigation measures (including offsetting), and sharing of information from compliance monitoring and the Project's Follow-up Program. The proposed communications mechanism identified in the EIS has been further described as the Indigenous Advisory Committee in the responses to IR10-11 and IR10-12 (CEAR Document #1275[1]). Further discussion of the relationship of compliance monitoring and the Follow-up Program to Current Use are discussed in the responses to IR13-29 and IR13-30 (CEAR Document #1331[2]).

Response

The assessment of potential effects of the proposed Project on the availability of Current Use resources presented in EIS Section 32.2.6.2 considered the mitigation measures proposed for the biophysical components of the environment—including those in relation to the Project's proposed Offsetting Framework, which considers minimising temporal losses in the establishment of fully functioning onsite habitat offsets identified in Section 17.3 of the EIS—when it proposed additional measures in EIS Section 32.2.7, as reviewed above in the Clarification to this response. The responses to IR10-09, IR10-11, and IR10-12 (CEAR Document #1275) provide more detail regarding the measures that the VFPA proposed in the

[1] CEAR Document #1275 From the Vancouver Fraser Port Authority to the Review Panel re: Response to Information Requests IR5-01a, IR7-28, IR7-29, IR10-02, IR10-06 to IR10-09, IR10-11 to IR10-26, IR11-07, IR11-22, IR11-23, IR12-03, IR12-06, IR13-01, and IR13-19 (See Reference Documents #1000, 1130, 1179, 1206 and 1228).
[2] CEAR Document #1331 From the Vancouver Fraser Port Authority to the Review Panel re: Response to Information Requests IR13-29 and IR13-30 (See Reference Document #1228).

EIS to address potential effects on Current Use, including in relation to the availability of Current Use resources.

The current RBT2 Offsetting Framework*,* as presented in EIS Section 17.0, was developed with the principle of maximising ecological productivity through optimal Offsetting Measures to ensure there is no net loss of productivity for key marine biophysical valued components at Roberts Bank, including marine vegetation, invertebrates, fish, mammals, and coastal birds, or for wetlands. The proposed Offsetting Framework, developed to meet the environmental assessment phase of the Project, will be advanced following engagement with Indigenous groups, regulatory agencies, and key stakeholders, to understand priorities, needs, and expectations when it comes to offsetting, with the goal of agreeing on a final Offsetting Plan that meets the Project's permitting phase requirements while responding to the dynamic nature of the Roberts Bank ecosystem (see Preamble to Offsetting-related Information Requests for further details). As a fundamental principle to the development of the final Offsetting Plan, the plan will also address and account for uncertainty in offsetting success and the associated time lag for the offset to become effective. The response to IR7-27 provides further details on how time lag will be considered in the Offsetting Plan. The responses to offsetting-related information requests and the Preamble to Offsetting-related Information Requests further describe how the VFPA is committed to taking into account Indigenous group concerns and perspectives in refining the onsite habitat Offsetting Concepts, as the final Offsetting Plan is developed (refer to the response to IR7-31 of CEAR Document #1333[3] for a review of Indigenous group comments to date and the responses to IR10-11 and IR10-12 of CEAR Document #1275 regarding the VFPA's vision for ongoing consultation). The success and effectiveness of the proposed Offsetting Measures will be monitored, as part of the Project's Follow-up Program (IR13-30 of CEAR Document #1331) and future permitting requirements. The VFPA will respond to any deficiencies (if they occur) via an adaptive management approach with communication with Indigenous groups, regulatory agencies, and key stakeholders.

For the reasons discussed above, the conclusions presented in the EIS and reiterated in the response to IR10-06 (CEAR Document #1275) regarding Project-related effects on the availability of preferred Current Use resources remain negligible after both biophysical mitigation measures (including offsetting) and additional Current Use-specific mitigation measures are taken into account (refer to the assessment tables for each applicable Indigenous group in Appendix IR10-A of CEAR Document #1275).

[3] CEAR Document #1333 From the Vancouver Fraser Port Authority to the Review Panel re: Response to Information Requests IR7-31, IR11-02, IR11-11, IR11-20, IR12-05, IR13-02, IR13-03, IR13-15, and IR13-18 (See Reference Documents #1000, #1179, #1206 and #1228).

IR10-11 Current Use of Lands and Resources for Traditional Purposes – Follow-up Program

Information Source(s)

EIS Guidelines: Section 11.4

EIS Volume 5: Section 33.5

Adaptive Management Strategy 2014 Annual Report - Deltaport Third Berth, Delta, BC (CEAR Doc#1124)

Context

The *Canadian Environmental Assessment Act*, 2012 requires that a follow-up program be designed to verify the accuracy of the effects assessment and to determine the effectiveness of the measures implemented to mitigate the potential adverse effects of the proposed Project.

Section 11.4 of the EIS Guidelines requires that a follow-up program be designed to monitor the implementation of mitigation measures resulting from Indigenous engagement, including:

- verification of predictions of environmental effects with respect to Indigenous peoples;
- determination of the effectiveness of mitigation measures as they relate to environmental effects with respect to Indigenous peoples in order to modify or implement new measures, where required;
- support for the implementation of adaptive management measures to address previously unanticipated adverse environmental effects with respect to Indigenous peoples;
- verification of measures identified to prevent and mitigate potential adverse effects of the proposed Project on current use; and
- provision of information that can be used to improve and support future environmental assessments and Indigenous engagement processes.

Section 33.5 of the EIS outlined the Proponent's commitments to report on the implementation of mitigation measures resulting from Indigenous engagement, which would include the objectives described above. However, the Proponent did not specify in the EIS how this would be accomplished.

The Deltaport Third Berth Project Adaptive Management Strategy (AMS) focused exclusively on biophysical indicators including:

- Geomorphology/Oceanography;
- Surface water quality;
- Sediment quality;
- Eel grass; and
- Other biota including benthic communities and bird populations.

Further details as to how the follow-up program objectives set out in Section 11.4 of the EIS Guidelines and Section 33.5 of the EIS would be met. There is also a need to understand how lessons learned from the Deltaport Third Berth Project Adaptive Management Strategy could be applied to the follow-up program for the Project, in relation to the potential effects on current use by Indigenous peoples.

Information Request

Provide a summary of actions describing how the followup program objectives set out in Section 11.4 of the EIS Guidelines and Section 33.5 of the EIS would be met.

Describe how Indigenous groups would be involved in the development, implementation and management of the follow-up program for the proposed Project.

Provide information about the effectiveness of the adaptive management strategy for the Deltaport Third Berth Project on its biophysical components and how lessons learned from that process could be applied to the follow-up program for the Project, in relation to the potential effects on current use by Indigenous peoples.

VFPA Response

Provide a summary of actions describing how the follow-up program objectives set out in Section 11.4 of the EIS Guidelines and Section 33.5 of the EIS would be met.

Describe how Indigenous groups would be involved in the development, implementation and management of the follow-up program for the proposed Project.

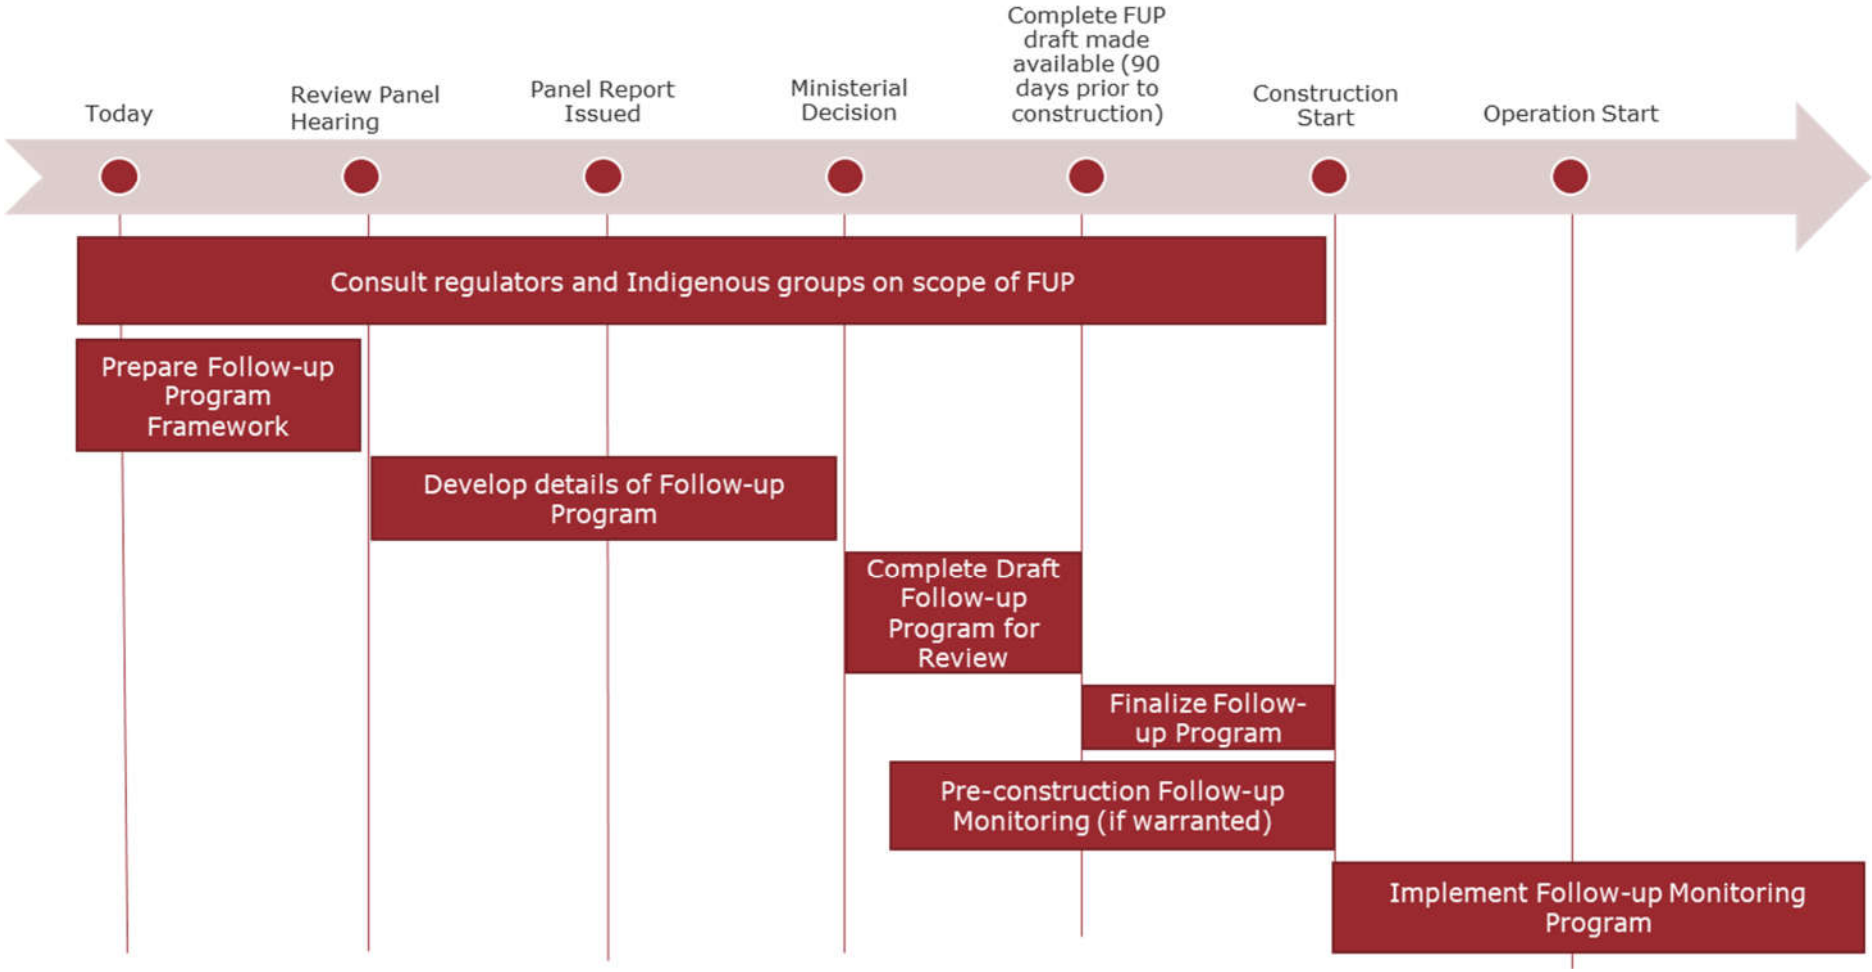
As noted in EIS Section 33.5, the purpose of the RBT2 Follow-up Program (FUP) is to verify the accuracy of effect predictions made in the EIS, and to determine the effectiveness of any measures taken to mitigate the adverse environmental effects of the Project for those predictions or mitigation measures where there is some uncertainty, or Indigenous group or stakeholder concern. The objectives set out in section 11.4 of the *EIS Guidelines* and Section 33.5 of the EIS—including verification of EIS predictions and determination of the effectiveness of mitigation as they relate to Indigenous groups—will be met through purposeful integration of these objectives through the development and implementation of the RBT2 FUP.

As noted in the EIS Section 33.5, pg. 33-20:

> *"To ensure the Program's elements adequately reflect conditions of Project approvals (including permits), final designs, construction, or operation approaches, as well as public, Aboriginal group, and regulator feedback received during the review of the EIS, [the VFPA] will develop the Follow-up Program after the submission of this EIS."*

The VFPA is currently consulting with Indigenous groups and regulators to support the development of the RBT2 FUP, and will continue to do so until the program is formally initiated at the start of the construction phase, should the Project receive approval to proceed. Information presented in this response therefore presents current planning and draft concepts under consideration by the VFPA and is based on consultation input received to date.

This section of the response presents the VFPA's post-EIS submission planning efforts related to the FUP, and discusses how Indigenous groups are currently participating, and will continue to participate, in the FUP development, governance, and oversight.



Follow-up Program Development

Since the submission of the EIS in March of 2015 and through the course of the Project's environmental review to date, the VFPA has and continues to:

- Review and consider regulator, Indigenous group, and stakeholder comments and suggestions related to the RBT2 FUP as noted on the Canadian Environmental Assessment Agency (CEA Agency) Registry;
- Engage with Indigenous groups and regulators to solicit input on the RBT2 FUP, as well as other aspects of the Project.
    - The VFPA completed its first FUP-specific planning workshops with Indigenous groups in the summer and fall of 2017. The purpose of these workshops was to share information and seek input on the RBT2 FUP. Discussions focused on the purpose of the FUP, the Deltaport Third Berth (DP3) Adaptive Management Strategy (AMS) experience, and VFPA's proposed approach to developing the RBT2 FUP. Participants were asked about their perspectives concerning what should be monitored and their preferred way of being involved in the FUP's ongoing development. **Appendix IR10-11-01** provides an example presentation that served to guide discussions with participants during a FUP planning workshop. The results of the planning workshops are being considered by the Project team in development of the FUP and are informing further evaluation and consultation on the FUP;
- Develop the RBT2 FUP as described in EIS Section 33.5, including potential roles and responsibilities, governance concepts, regulator and Indigenous group engagement mechanisms, and reporting plans;
- Internally evaluate the consultation inputs, additional studies/analysis, and scientific rationale for potential program elements for inclusion in the RBT2 FUP, feasibility of monitoring programs to support program objectives, and identification of applicable action thresholds as part of the adaptive management approaches. In short, should monitoring results reveal that Project activities led to the action threshold(s) being met or exceeded, then adaptive management measures would be applied; and
- Plan for a process to have a final draft RBT2 FUP document available to regulators a minimum of 90 days prior to the start of field measurement, as noted in EIS Section 33.5.

Figure IR10-11-1 presents a step-wise summary of future actions proposed to progressively develop the RBT2 FUP prior to the start of construction, when the FUP-related monitoring will be formally initiated.

Figure IR10-11-1 Follow-up Program Development Map

As noted in **Figure IR10-11-1** above, the VFPA is committed to continued efforts to consult with Indigenous groups concerning the scope of the RBT2 FUP. Indigenous groups were invited to participate in an Indigenous Advisory Forum (IAF) held on September 18 and 19, 2018 and were provided funding to support their participation. The IAF was a two-day series of presentations and 'world café'-style workshops, with topic-specific discussion tables hosted by VFPA staff and technical experts. Building on previous engagement activities, the workshops were an opportunity for Indigenous participation on a variety of aspects of the Project, including proposed mitigation, FUP, environmental management plans, offsetting, and accessing Project-related benefits. Comments and suggestions heard at the workshops are being considered and evaluated as the VFPA continues to develop the RBT2 FUP in collaboration with Indigenous groups, and will be shared with participants, regulators, and the Review Panel.

Pending an evaluation of its effectiveness in communicating and receiving input, the VFPA may continue to use the IAF format as an ongoing way to meaningfully engage Indigenous groups on the development of the RBT2 FUP and other topics (such as mitigation, offsetting, etc.) following the Panel Hearing and through to the start of construction. In addition, the VFPA will continue to meet individually with Indigenous groups as part of its ongoing RBT2 consultation program.

In addition, the VFPA notes that the Panel-led environmental review process currently underway is a vehicle for stakeholders, regulators, Indigenous groups and the public (specifically via public comment periods) to provide input regarding the RBT2 FUP. The VFPA continues to review and evaluate comments and suggestions that have been have been made about aspects of the FUP through information request responses and submissions to the CEA Agency Registry.

Using input received through the engagement initiatives outlined above, the VFPA will develop a FUP framework before the Panel Hearing and present updated FUP elements[1] as part of its response to IR13-30. The VFPA will develop the FUP's details following the Panel Hearing considering input from future consultation with Indigenous groups and public, and regulators, including the CEA Agency, Fisheries and Oceans Canada (DFO), and Environment and Climate Change Canada, and the Panel Report. After the Ministerial Decision is released (and if the Project is approved), the VFPA will review and consider conditions and update the draft RBT2 FUP document accordingly as is described in EIS Section 33.5, inclusive of the VFPA's proposed approach to governance, monitoring elements, adaptive management strategies, and reporting approach.

Using the draft RBT2 FUP document as a centerpiece of the discussion, the VFPA will lead a series of workshops with both regulators and Indigenous groups intended to collaboratively refine and finalise the RBT2 FUP. Through these workshops, the VFPA will seek to confirm that the RBT2 FUP as drafted addresses section 11.4 of the *EIS Guidelines*. A refined draft of the RBT2 FUP document will be made available prior to the start of construction-phased field measurements to enable parties and regulators consulted on specific elements of the program

[1] See EIS Appendix 33-A the for the VFPA's preliminary proposed FUP elements.

have a reasonable opportunity to evaluate it in its entirety. During the course of developing and refining the FUP, the VFPA will identify and initiate necessary pre-construction field sampling to support the FUP monitoring, as appropriate.

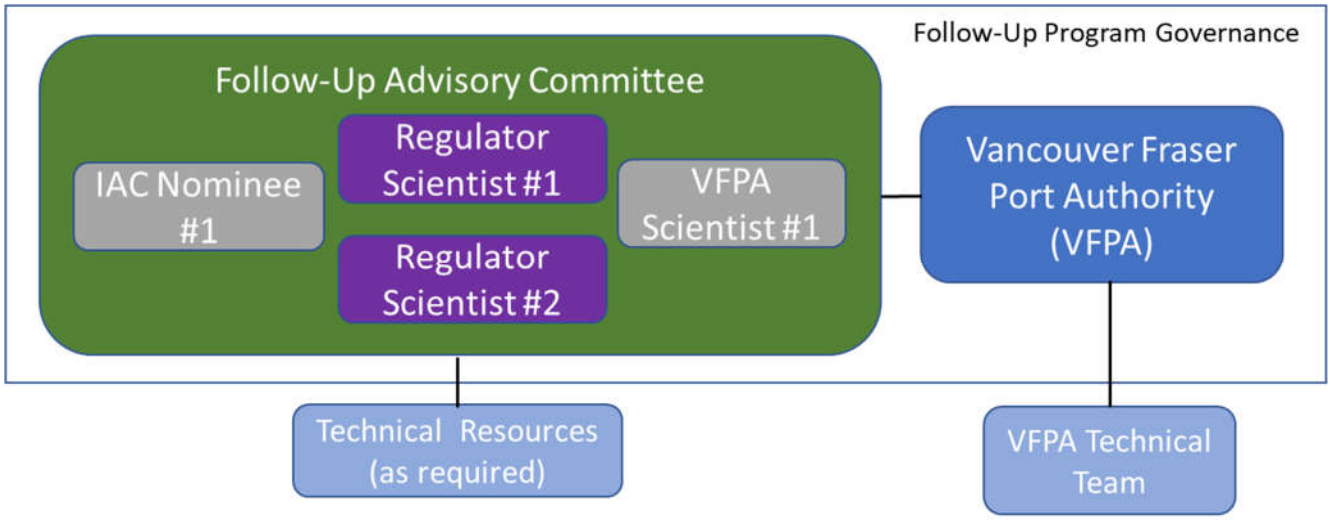
Indigenous Group Involvement in RBT2 Follow-up Program Implementation

Establishment of an RBT2 Indigenous Advisory Committee

Building on current and ongoing consultation, the VFPA is considering a variety of additional engagement and consultation mechanisms that would facilitate ongoing Indigenous group involvement in the construction and operation phases of Project. For example, the VFPA is considering the establishment of an RBT2 Indigenous Advisory Committee (IAC), made up of representatives from Indigenous groups potentially affected by the Project. IAC representatives would meet with the VFPA regularly, at a frequency to be jointly determined, and would hear updates on the Project's progress, review Project monitoring reports, discuss any Project-related issues as identified by their represented communities, and otherwise provide advice and feedback to the VFPA. In turn, IAC representatives would report back to their communities and solicit feedback to be brought back to the IAC and the VFPA. The VFPA believes that the IAC format may act as the vehicle for effective two-way communication concerning a wide variety of Project matters, including opportunities and benefits, ongoing community concerns, as well as the provision and use of traditional knowledge in the ongoing RBT2 FUP. The VFPA also proposes the IAC would nominate a member(s) to sit on the RBT2 Follow-up Advisory Committee (discussed below), ensuring Indigenous participation in the implementation and management of the FUP.

Indigenous Representation on a RBT2 Follow-up Advisory Committee

Similar to the DP3 Project's Scientific Advisory Committee (described later in this response), the VFPA is proposing oversight of the FUP by an independent governance body. Pending future input from Indigenous groups and regulators, this oversight committee is preliminarily referred to as the RBT2 Follow-up Advisory Committee.



The overarching purpose of establishing an independent governance body is to provide all stakeholders assurance that the RBT2 FUP is meeting its objectives as defined: verifying the accuracy of EIS predictions and determining the effectiveness of measures taken to mitigate potential adverse environmental effects of the Project. Additionally, the proposed governance structure would ensure the following:

- A vehicle for the IAC and appropriate regulators to adapt the scope and focus of FUP monitoring through the construction and operation phases, based on results of initial phases of implementation;
- Independent oversight and evaluation of the monitoring results generated by the technical teams retained by the VFPA, the Infrastructure Developer, and Terminal Operator; and
- Recommendations provided for any warranted amendments to the RBT2 FUP or adaptive management initiatives are evidence-based.

Guided by a Terms of Reference to be developed by the VFPA, with input from Indigenous groups and regulators, the Follow-up Advisory Committee's mandate would be to evaluate, independently report on, and make recommendations on the VFPA's implementation of the RBT2 FUP.

The proposed governance structure of the RBT2 FUP is in **Figure IR10-11-2** below.

Figure IR10-11-2 Proposed RBT2 Follow-up Program Governance Structure

It is proposed that the VFPA would be responsible for the RBT2 FUP's overall implementation, and responsible for providing administrative support for the governance body, including the necessary financial, communication, and administrative resources required for its success. The VFPA would retain a technical team[2] to execute necessary FUP monitoring data collection and analysis (the scope of which is in development) and report on the results and interpretation of monitoring. Project FUP reports would be made publicly available on a VFPA-hosted FUP-specific website.

The RBT2 Follow-up Advisory Committee would be comprised of one (1) nominee from the IAC, one (1) from the Government of Canada, one (1) from Government of British Columbia, and one (1) from the VFPA[3]. The nominees would have a broad understanding of the Project and an appropriate level of technical experience collectively to fulfill the Follow-up Advisory Committee's mandate.

The Follow-up Advisory Committee would be responsible for providing independent oversight of the VFPA's execution of the RBT2 FUP as described in the final RBT2 FUP document. Within its mandate and at the discretion of the nominees, the Follow-up Advisory Committee would make recommendations concerning adequacy and focus of FUP monitoring, as well as recommendations regarding adaptive management initiatives. In the context of the FUP

[2] Where possible, the VFPA will make available opportunities for Indigenous groups to participate in FUP monitoring.
[3] The VFPA nominee will not be professionally affiliated with the VFPA Technical Team.

governance, the Follow-up Advisory Committee's roles and responsibilities would include the following:

- Meet regularly to review and consider follow-up monitoring reports generated by the VFPA, as well as materials brought forward by Follow-up Advisory Committee nominees (including community knowledge and traditional knowledge) that might support its interpretation of FUP monitoring;
- Consult with independent scientists, engineers, technical experts, and Indigenous group leaders, as needed to provide independent technical and traditional knowledge advice, to fulfill the Follow-up Advisory Committee's mandate;
- Author annual reports that present summary opinions and recommendations; and
- Ensure effective FUP information flows to and from their respective constituencies.

Both the Follow-up Advisory Committee and the IAC will be formed prior to the start of construction and would dissolve when the VFPA, the RBT2 Follow-up Advisory Committee, and appropriate regulators agree that the RBT2 FUP has met its objectives and monitoring and reporting are no longer warranted.

Provide information about the effectiveness of the adaptive management strategy for the Deltaport Third Berth Project on its biophysical components and how lessons learned from that process could be applied to the follow-up program for the Project, in relation to the potential effects on current use by Indigenous peoples.

As described above, the VFPA completed its first FUP-specific planning workshops with Indigenous groups in the summer and fall of 2017. An overview of the DP3 AMS was provided as part of the workshops (see **Appendix IR10-11-A**).

Information concerning the effectiveness of the AMS as it relates to the potential effects on biophysical components and through these pathways to potential effects on current use of lands and resources for traditional purposes (Current Use) by Indigenous groups is summarised below, following a brief overview of the program.

Deltaport Third Berth Adaptive Management Strategy Overview

The AMS was one component of the environmental program undertaken by the VFPA as part of the DP3 Project. The DP3 environmental assessment concluded that no significant adverse environmental effects would occur as a result of the project, provided recommended mitigation measures identified in the application were implemented. Initial review by Environment Canada led to a recommendation that an AMS be developed to provide practical advance warning of any potential emerging negative ecosystem trends during project construction and operation, and to establish actions that the port authority would undertake to stabilise or mitigate negative trends.

The objective of the AMS was to undertake a science-based systematic approach to monitor and manage the Roberts Bank inter-causeway ecosystem. The specific goal of the program was to reduce scientific uncertainty and to assess the potential for the occurrence of marine eutrophic events (nutrient imbalances in the water column leading to ecosystem changes)

and dendritic channelisation leading to erosion that could result in significant negative trends in the ecosystem.

A Scientific Advisory Committee (SAC), comprised of three scientists, was established in 2007 to provide independent scientific and technical advice and recommendations. The committee members were appointed by the VFPA and Environment Canada, and the three original members remained on the committee throughout the duration of the monitoring program. The SAC reviewed monthly and quarterly monitoring reports, met regularly, and provided independent commentary on findings through an annual report. The SAC's Chair also made annual presentations to the VFPA, Environment Canada, City of Delta, Tsawwassen First Nation, and the Deltaport Community Liaison Committee.

The monitoring program associated with the AMS was initiated in 2007, as berth construction was beginning, and continued through 2014, for a total of eight years of monitoring.

While the AMS program did not detect ecosystem-wide change from eutrophication and dendritic channel formation across the inter-causeway area as a result of DP3, it did detect small scale, localised change related to DP3 construction behind the tug basin. The restricted drainage in this area led to poor water quality, which in turn affected eelgrass. As an outcome of monitoring, this issue was detected and the adaptive measure of installing a swale in the tug basin berm mitigated the drainage and water quality issues in this area, and monitoring results indicate that the eelgrass has recovered. The AMS final report, *Adaptive Management Strategy 2014 Annual Report Deltaport Third Berth, Delta, BC*, provides a review of the program's findings over the course of its eight year study (see CEAR Document #1124[4]).

Deltaport Third Berth Adaptive Management Program Outcomes

In its formal response to the 2014 monitoring report (the final AMS report), the independent SAC acknowledged the AMS had met its goal of effectively and adaptively monitoring ecosystem-wide changes as a result of DP3 construction and operation. The CEA Agency has included the DP3 AMS as a case example in its *Operational Policy Statement, Adaptive Management Measures under the Canadian Environmental Assessment Act* (CEA Agency 2009). Through its consultation efforts for RBT2, the VFPA has heard from many Indigenous groups that they are supportive of a similar adaptive monitoring approach to the AMS (see the VFPA's forthcoming response to IR10-01).

The VFPA considers the DP3 AMS successful in meeting its objective of monitoring and responding to potential negative changes in the Roberts Bank inter-causeway ecosystem. The monitoring of biophysical components and associated analysis completed within the DP3 AMS were documented in monthly reports, which in turn were reviewed for environmental trends and discussed in quarterly VFPA-SAC meetings. Through this rigorous review process,

[4] CEAR Document #1124 From Review Panel Secretariat to the Review Panel re: Adaptive Management Strategy for the Deltaport Third Berth Project - 2014 Annual Report prepared for the Vancouver Fraser Port Authority.

effective and adaptive mitigation measures were identified and actioned early, as evidenced by the VFPA's responsiveness to drainage and water quality issues noted above.

The independent nature of the SAC contributed to the program's overall success. Establishing the SAC provided regulators and other stakeholders with confidence that interpretation of environmental monitoring data was rigorous and that any required corrective action would be sufficient and timely. By way of meetings and reporting, regulators also had a vehicle for ongoing communications regarding the project's progress and environmental management. The VFPA's website hosting of AMS documents, including monitoring reports and the SAC's annual and independent assessment, provided overall transparency to the program.

The AMS generated considerable environmental data that has supported the VFPA's ongoing environmental stewardship of Roberts Bank, and contributed to regional data and ecological understanding. The scientific results of AMS monitoring were foundational information used in the development of the RBT2 EIS and its assessment of valued components. The AMS and the RBT2 EIS data together make Roberts Bank one of the most studied and comprehensively understood marine ecosystems in Canada.

Lessons Learned that Support the Development of the RBT2 Follow-up Program

The rationale for and purpose of the DP3 AMS differ from the RTB2 FUP. The DP3 AMS was a condition of the disposal at sea permit, was noted in the Project's provincial environmental assessment certificate and *Fisheries Act* Authorization, and its purpose was to monitor specific issues of concern in the inter-causeway area. For RBT2, a FUP is a requirement under the *Canadian Environmental Assessment Act, 2012*, to verify the accuracy of effect predictions made in the EIS and to determine the effectiveness of any measures taken to mitigate the adverse environmental effects of the Project. Though different, the DP3 AMS experience clearly informs the RBT2 FUP and the VFPA's experience of DP3 AMS provides credibility for its capacity and commitment to implement a FUP for RBT2.

The overarching lesson learned for the VFPA from administering the AMS is that such a monitoring program can effectively identify adverse environmental trends and adaptively manage unexpected changes. The creation of an independent, evidence-based advisory committee both enhanced the credibility of the program and effectively supported the VFPA's adaptive management of the Roberts Bank ecosystem through DP3 construction and operation.

Based on input solicited from Indigenous groups and DP3 AMS participants, the VFPA believes the following are key considerations in its ongoing development of the RBT2 FUP:

- **Diversity in RBT2 FUP governance:** As noted above, the VFPA is considering a governance structures involving third party oversight or other concepts. Following from input gathered from ongoing consultation and engagement, the VFPA proposes the establishment of the proposed independent oversight body with a clear Terms of Reference and appointment of diverse, highly qualified, and representative members. The VFPA will seek broader participation by regulatory bodies, unlike the AMS (in which regulators appointed only one representative and jointly appointed the Chair with the

VFPA). Indigenous groups, while consulted regarding the findings of the AMS, were not included in the DP3 program's governance. As discussed above, the VFPA intends to ensure a participatory role for Indigenous groups in the governance of the RBT2 FUP, both to ensure Indigenous perspectives, knowledge, and priorities are represented, and enhance evaluation of monitoring data and input into adaptive management recommendations.

- **Follow-up monitoring for current use by Indigenous people:** The DP3 AMS' focus was on a suite of physical and biophysical parameters defined by regulators in discussion with the VFPA. As such, the DP3 AMS did not directly monitor DP3's potential effects on Current Use by Indigenous people. Indigenous perspectives, knowledge, and priorities will contribute to both the development and oversight of the RBT2 FUP through the consultation mechanisms described above. The VFPA anticipates that, based on ongoing discussions with Indigenous groups, the RBT2 FUP will incorporate parameters applicable to potential effects to Current Use by Indigenous peoples.
- **Managing scope based on evidence:** An important component of the DP3 AMS was that its scope was adapted according to what monitoring results revealed; that is, data collection methods, schedules, and testing methods could be altered when the independent SAC and the VFPA agreed it was appropriate. When aspects of the DP3 AMS monitoring program were deemed redundant or where there was sufficient evidence that no negative trend was emerging, program elements were either reduced or eliminated with approval by the independent advisory body. For the RBT2 FUP, the VFPA will commit to communicating with Indigenous groups, regulators, and other stakeholders and document the circumstances under which the RBT2 FUP elements may be appropriately scaled back.

Workshop purpose

- The purpose of the RBT2 Follow-up Program planning workshop is to provide an opportunity to:
  - **Share information**
    - What is a follow-up program?
    - Deltaport Third Berth Follow-up Program experience
    - Proposed approach to developing the RBT2 Follow-up Program
  - **Seek input on the RBT2 Follow-up Program:**
    - What is important to you and your community?
    - What elements would you like to see monitored?
    - How would you like to be involved moving forward?

Presentation overview

- **Follow-up program introduction**
- Deltaport Third Berth (DP3) Environmental Management Program
- Proposed Roberts Bank Terminal 2 follow-up program
- Next steps

3

What is a follow-up program?

4

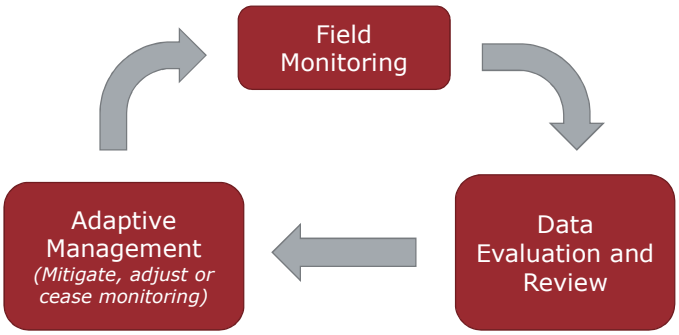
Follow-up program - overview

- Follow-up programs are **mandatory** for all projects undergoing a federal assessment (requirement of *Canadian Environmental Assessment Act (2012)*)

- A follow-up program is intended to:
  - verify the accuracy of the predictions regarding potential environmental effects;
  - determine if mitigation measures are working as intended;
  - provide early detection of adverse environmental trends;
  - take corrective actions, when necessary, by adapting planned activities or implementing additional mitigation to address unanticipated adverse environmental effects.

PORT of vancouver

5



Follow-up program - overview

- CEAA's Operational Statement, *Follow-up Programs Under the Canadian Environmental Assessment Act,* provides direction on the design and contents of a follow-up program.
- This direction includes considering the following questions when determining what should be monitored:
  - Is the Project in an environmentally sensitive area?
  - Is there a need to address issues of Aboriginal or public concern?
  - Is there a need to verify that mitigation measures are effective?

PORT of vancouver

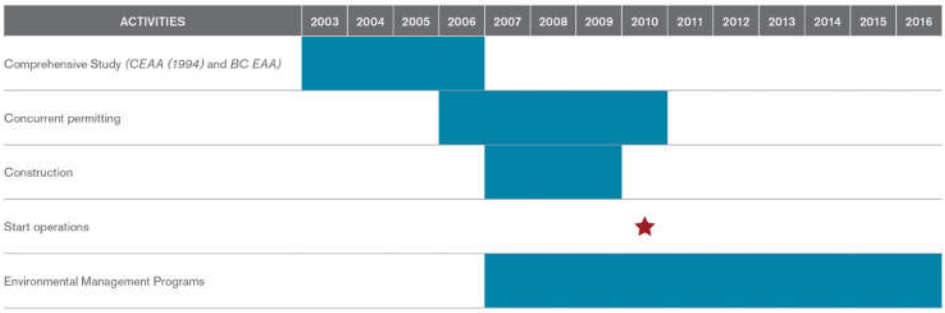
- **Deltaport Third Berth (DP3) Environmental Management Program**
- Proposed Roberts Bank Terminal 2 follow-up program
- Next steps

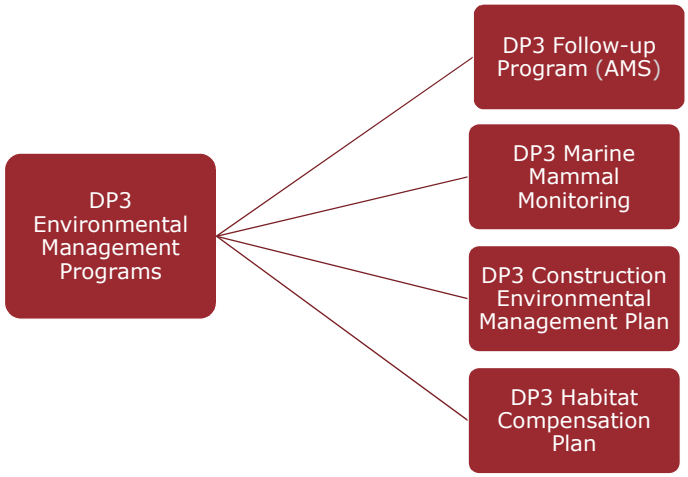
Deltaport Third Berth (DP3) - overview



- Expansion of the existing Deltaport container terminal located at Roberts Bank
- Project components:
  - Wharf to accommodate third berth
  - Land for container storage
  - Tug moorage
  - Ship access channel
  - Terminal services and infrastructure

PORT of vancouver

DP3 – timeline



PORT of vancouver

DP3 – environmental assessment

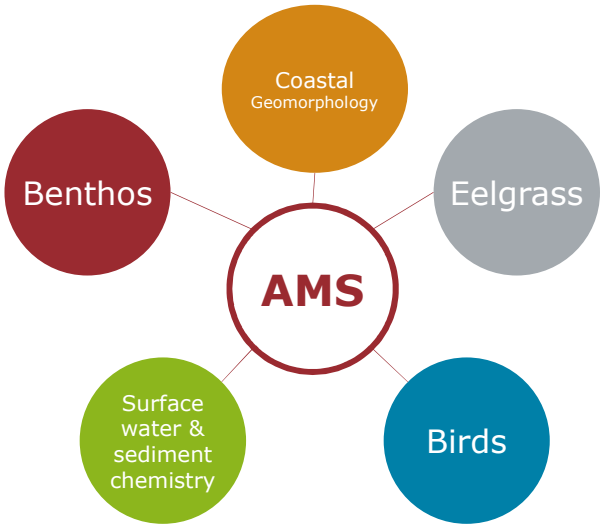
- The environmental assessment for DP3 included a review of:
  - Air quality/noise/vibration;
  - Fish and fish habitat;
  - Marine mammals (SRKW);
  - Coastal seabirds and waterfowl;
  - Marine vegetation;
  - Water quality – eutrophication; and
  - Coastal geomorphology (dendritic channel formation).

PORT of vancouver

DP3 – environmental management programs

PORT of vancouver

13



DP3 – follow-up program (AMS)

- Developed in consultation with multiple parties including regulatory agencies, academics, consultants
- Science Advisory Committee led a science-based approach to monitoring and managing the ecosystem
- Goal was to provide early detection of potential changes in the inter-causeway ecosystem so that negative environmental trends attributed to DP3 could be mitigated or prevented

PORT of vancouver

14

DP3 – follow-up program (AMS)

PORT of vancouver

15

DP3 – pre-construction monitoring

- Pre-construction monitoring data was collected to establish a baseline for each of the five study areas:
  - Surface Water and Sediment Quality
  - Coastal Geomorphology
  - Eelgrass Distribution
  - Benthic Community Structure
  - Coastal Seabird / Shorebird Composition
- In some cases, the VFPA used historical data from its previous studies to provide a longer-term baseline

PORT of vancouver

16

DP3 – follow-up program (AMS) - coastal birds

- **What was monitored**
  - Coastal seabirds/shorebird composition
  - Relative abundance and use of the inter-causeway area
    - Monitoring program was amended in 2010 to focus on great blue heron and brant geese
- **Results**
  - Effects limited to direct habitat loss associated with DP3 footprint as predicted by the environmental assessment
  - Birds use alternative habitat available
  - No change in habitat use or abundance of heron

PORT of vancouver

17

DP3 – follow-up program (AMS) - sediment and surface water, benthic community

- **What was monitored**
  - Sediment and surface water, through nine monitoring stations to identify if there were indications of marine eutrophication in the inter-causeway area

PORT of vancouver

18

DP3 – follow-up program (AMS) - sediment and surface water, benthic community

- **Results**
  - The data collected over eight years did not indicate any ecosystem-wide changes that required mitigation
  - One exception included small-scale, localized changes in water and sediment quality in an area behind the tug basin
    - Additional studies concluded that the cause was likely restricted drainage leading to poor water quality in this area
    - As a result, the port authority installed a swale in the tug basin berm in 2014 to increase drainage and tidal flushing of the area. Monitoring results indicated that the mitigation measure was successful
  - Species diversity remained constant and communities were relatively more diverse than reference locations

PORT of vancouver

DP3 – follow-up program (AMS) - coastal geomorphology

- **What was monitored**
  - Changes/trends in the coastal zone processes that were predicted in the coastal geomorphology study
- **Results**
  - New drainage channels formed in 2007 adjacent to DP3 due to sediment release during construction of a perimeter dike
    - Stabilized in 2008 through placement of filter rock and fabric along construction berm
    - Very little sediment transported through the channels and flattened not long after their formation
  - No other long-term physical changes were attributed to DP3 construction as was predicted by the environmental assessment
  - Annual mapping indicated most areas remain stable

PORT of vancouver

DP3 – follow-up program (AMS) - eelgrass

- **What was monitored:**
  - The health of eelgrass in the inter-causeway area relative to reference sites on the west side of the causeway as well as in Boundary Bay (both native *Zostera marina* and *z. japonica*)
- **Results:**
  - Variations in distribution and health due to natural factors
  - No indication the construction or operation of DP3 has affected eelgrass distribution with the exception of small-scale localized changes behind the tug basin
    - A swale was installed in the tug-basin berm to distribute drainage and tidal flushing of the area
  - Localized, temporary loss of eelgrass

PORT of vancouver

DP3 – follow-up program (AMS) - overall conclusions

- No significant changes to the Roberts Bank ecosystem attributed to DP3
- Seasonal and inter-annual variability documented
- Small-scale localized changes behind the tug-basin related to eelgrass change were observed and corrected through adaptive management
- Use of Roberts Bank area by birds not affected by DP3 construction
- No eutrophication effects from DP3 construction
- Pre-existing dendritic channels not affected by DP3 construction or operation

PORT of vancouver

DP3 – follow-up program (AMS) - overall conclusions

- **Monitoring and management**
  - Acted as early warning system
  - Confirmed environmental assessment predictions
  - Adaptive
    - Bird monitoring studies discontinued when no change detected
    - Some studies continued until sufficient confidence was achieved (Depth of Disturbance (DoD) rods, metals analysis)
    - Reduced frequency of benthic studies when no changes occurred
    - Analyses/statistics adapted to meet needs
    - Localized eelgrass loss was detected
      - VFPA responded by determining cause and mitigating via in-water works

PORT of vancouver

DP3 Marine Mammal Monitoring

PORT of vancouver

DP3 marine mammal monitoring

- **Objectives:**
  - Monitor marine mammal presence, and
  - Avoid, reduce or mitigate effects, especially to SRKW
- Established marine mammal safety zone
  - Implemented a daily monitoring program
  - Requirement to cease in-water construction activities if SRKW were observed in the exclusion zone
- No SRKW were sighted in the safety zone

PORT of vancouver

DP3 Construction Environmental Management Plan

PORT of vancouver

DP3 – construction environmental management plan

- Contractors and sub-contractors were required to
  - Provide detailed environment management plans
  - Confirm compliance with the environmental requirements and conditions
- Activities for marine construction took into consideration timing windows for fish and wildlife
- Independent consultants were retained to provide construction environmental monitoring services

PORT of vancouver

DP3 – construction environmental management plan

- Construction incidents:
  - Hydraulic oil leak
    - Impact minimized through use of biodegradable oil
  - Barge and caisson grounding during high winds
    - 1 in 25 year storm event, barge secured after incident
  - Dredge disposal pipe fracture
    - Divers dispatched to repair pipe
  - Dredging contractor siting error
    - Independent Marine Surveyor support
- Continue to incorporate preventative planning within construction management plans, monitoring, and follow up program.

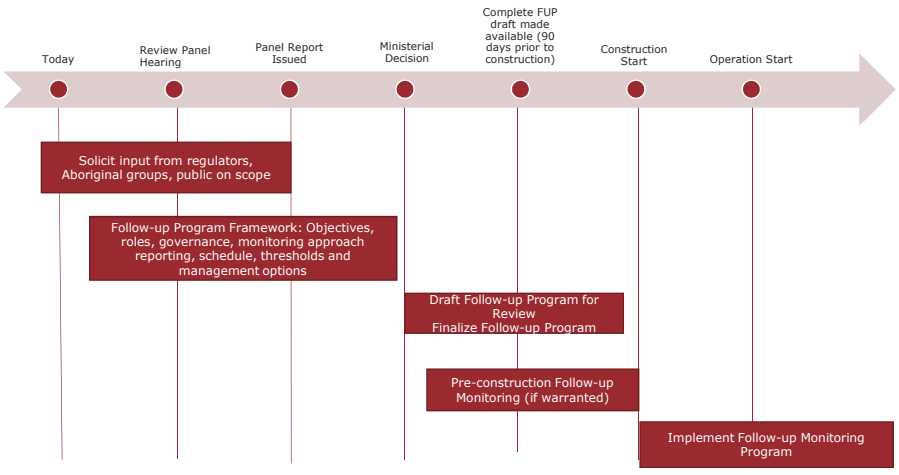
- Deltaport Third Berth (DP3) Environmental Management Program
- **Proposed Roberts Bank Terminal 2 follow-up program**
- Next steps

Developing the RBT2 follow-up program



- The RBT2 Follow-up Program will describe:
  - Thresholds of acceptable environmental change in monitored parameters;
  - Options for corrective action to be undertaken if monitoring reveals such thresholds are exceeded;
  - Adaptive management measures that may be applied, as required;
  - Reporting plan, including frequency, report recipients and opportunities for input;
  - How the RBT2 Follow-up Program addresses project approval conditions.

Developing the RBT2 follow-up program

- The RBT2 Follow-up Program will be structured by project phase
  - Pre-construction
  - Construction
  - Operation
- The VFPA will collaborate with regulators and Aboriginal groups to establish the RBT2 Follow-Up Program governance structure, schedule and implementation
- The VFPA will build on lessons learned from the DP3 Follow-up Program

PORT of vancouver

RBT2 follow-up program – process map

PORT of vancouver

RBT2 follow-up program – proposed elements

- Appendix 33-A of the EIS provides a preliminary list of proposed follow-up program elements
- Monitoring to verify predictions related to:
  - Marine Vegetation – biofilm assemblage;
  - Marine Invertebrates –bivalves, Dungeness crab and sea pens;
  - Marine Fish – forage fish and flatfish;
  - Marine Mammals – behavioral effects of SRKW;
  - Coastal Birds – diving birds;
  - Light – sky glow and light trespass; and
  - Human Health – noise and air quality related to health effects;

PORT of vancouver

What we've heard

From Hwlitsum, Lake Cowichan, Semiahmoo and Tsleil-Waututh Nations on RBT2 Follow-up Program and Monitoring:

- Interest in lessons learned from DP3, and outcome of monitoring specific to:
  - Killer whales
  - Armoured shelves
  - Reef construction and reef fish
- Concern that commitments from past projects are not monitored / desire for certainty that monitoring will take place
- Interest in implementation of adaptive management strategy similar to DP3
- Interest in the duration of the monitoring period
- Request for funding to support First Nation review of reports and participation in meetings

PORT of vancouver

What we've heard (continued)

Interest in:

- Interest in how success will be measured
- What will happen if predictions are incorrect or mitigation measures do not work as planned.
- How certain species would be monitored (e.g. biofilm)
- Monitoring for the encroachment of species on others
- Monitoring the success of eelgrass and sea pen transplants
- Monitoring of geomorphological processes including shoreline erosion and sediment deposition
- Underwater noise monitoring and management
  - Request for consideration of PLOS One monitoring technology for marine mammals

PORT of vancouver

What we've heard: key topics of interest

- Impacts to fishing activities (crab, salmon) in the vicinity of the Project:
  - Access
  - Stocks and level of catch
  - Impacts to harvest livelihood / crab licensees
  - Small vessel safety
- Black crabs caught in the vicinity of the Project
- Marine fish including:
  - Eulachon and Herring/herring spawning habitat
  - Resident herring stocks
  - Migrating salmon
  - Effects from underwater noise

PORT of vancouver

What we've heard: key topics of interest (cont.)

- Shellfish contamination
- Southern Resident Killer Whales
  - Vessel strikes to marine mammals
  - Effects from underwater noise
- Marine vegetation including: biofilm, eelgrass and eelgrass habitat, cattail, bulrush and other marsh plants
- Human health effects related to noise (e.g. rail shunting)
- Light effects from terminal and vessel traffic

PORT of vancouver

Discussion

- The VFPA is seeking input on the RBT2 follow-up program:
  - What is important to you and your community?
  - How would you like to be involved moving forward?

PORT of vancouver

Presentation overview

- Follow-up program introduction
- Deltaport Third Berth (DP3) Environmental Management Program
- Proposed Roberts Bank Terminal 2 follow-up program
- **Next steps**

Next steps

- Consider input from today's consultation, plus future engagements
- Draft the RBT2 follow-up program framework, determining:
  - Best way to monitor key parameters;
  - Appropriate thresholds and options for corrective action (if required); and
  - Program governance structure and reporting approach.
- Share draft RBT2 follow-up program framework
- Share final RBT2 follow-up program with regulators and Aboriginal groups

IR10-12 Current Use of Lands and Resources for Traditional Purposes – Environmental Management Plans for Indigenous Peoples

Information Source(s)

EIS Guidelines: Section 11.4; Section 16

EIS Volume 1: Appendix 7.2-B

EIS Volume 5: Section 32; Section 33; Table 33-1; Table 33-2; Table 35-2

Context

According to the EIS Guidelines, environmental management plans are meant to clearly define the Proponent's ongoing commitment to consultation and collaboration with Indigenous groups. In Section 33 of the EIS, the Proponent has proposed four sub-plans that include consultation or collaboration with Indigenous groups. They are:

1. the Archaeological Monitoring and Management Plan
2. the Land and Marine Traffic Management Plan
3. the Communication Plan
4. the Operation and Compliance Monitoring Plan.

In their submissions to the Review Panel, and throughout Section 32 and Appendix 7.2-B of the EIS, Indigenous groups expressed a desire to be involved in the preparation and implementation of the Environmental Management Plans (EMPs) to ensure the protection of their traditional activities and cultural heritage. Some Indigenous groups also expressed concerns that there were no specific EMPs specifically addressing the potential effects of the Project on current use and cultural heritage. Tables 33-1 and 33-2 in Section 33 of the EIS list no such specific plans.

Sustainability reporting referred to by the Proponent in terms of its approach to environmental management includes the consideration of effects on communities in planning and managing operations and how to respond to raised issues and concerns. In this respect, more information is required on the Proponent's commitment to address potential Project-related effects on current use and cultural heritage, health and safety of Indigenous peoples.

Information Request

Provide an outline of a plan that would be developed and implemented to address potential environmental effects during construction and operation of the proposed Project on current use, cultural heritage, health and safety of Indigenous peoples. Clearly define the Proponent's ongoing and proposed environmental commitment and identify concrete actions that would consider contemporary interests and aspirations of Indigenous groups, such as representation on a management committee, funding for necessary studies or any other reasonable endeavors.

VFPA Response

Based on the assessment presented in the EIS, the VFPA has proposed mitigation measures to address potential environmental effects during construction and operation of the proposed Project on current use of lands and resources for traditional purposes (Current Use), cultural heritage, and the health and safety of Indigenous peoples. As noted in EIS Section 32.2.7, the effectiveness of mitigation measures for predicted effects to linked or inter-related valued components (VCs) were evaluated for effectiveness in the applicable VC assessment sections of the EIS. Such measures include standard operating practices, as well as management practices or measures developed to specifically avoid or reduce the potential adverse effects of the Project on those VCs. Mitigation measures for VCs that were considered effective at also reducing potential Project-related effects on Current Use, inclusive of cultural heritage, and the health and safety of Indigenous peoples, are described and summarised in EIS Table 32-6 (included below). The effectiveness of the proposed mitigation measures and their relevance to specific Indigenous groups is further discussed in IR10-09, and the commitments made by the VFPA to meaningfully engage and consult with Indigenous groups during drafting of environmental management plans and sub-plans, including mitigation frameworks, is further discussed in the VFPA's forthcoming response to IR13-29.

EIS Table 32-6 Summary of Mitigation Measures to Address Adverse Project-related Effects on Current Use

#	Potential Effect	Applicable Phase(s)	Mitigation Measures
1	Changes in Access to Preferred Current Use Locations	Construction, Operation	Continue to abide by the [Memorandum of Agreement (MOA)] in place with Tsawwassen First Nation to accommodate Tsawwassen First Nation for effects from the Project. Work with Musqueam First Nation to draft Terms of Reference to guide future discussions related to accommodation for effects from the Project Implement mitigation for Marine Commercial Use and Outdoor Recreation VCs (**Sections 21.0** and **24.0**) to address potential displacement-related effects on commercial and recreational crab harvesting. Work with DFO to ensure necessary consultations with [Indigenous] domestic or [food, social, or ceremonial (FSC)] crabbers concerning the proposed expansion of the area closed to commercial and recreational crabbing. Support [Indigenous] crabbing for domestic or FSC within the area closed to commercial and recreational crabbing. Implement measures for Land and Water Use VC (**Section 26.0**) to reduce potential disturbance to marine access to Tsawwassen First Nation community lease lands (Tsawwassen Water Lots). Develop a communications protocol to inform appropriate [Indigenous] groups of planned or unplanned events related to Project construction or operation that may affect Current Use access. Work with [Indigenous] groups to develop and implement a communications mechanism that will support dialogue between [the VFPA] and appropriate [Indigenous] groups on topics of concern that arise during the construction and initial operation phases.
2	Changes in Availability of Preferred Current Use Resources	Construction, Operation	Implement mitigation identified in **Section 32.2.7.1**. Implement mitigation to reduce Project-related effects to marine resources, including Marine Vegetation, Marine Invertebrates, Marine Fish, Marine Mammals, and Coastal Birds VCs (**Sections 11.0** through **15.0**). Share with appropriate [Indigenous] groups information gained through environmental monitoring and follow-up programs to support monitoring, by [Indigenous] groups, of environmental conditions related to Current Use. Work with appropriate [Indigenous] groups to identify opportunities to participate in environmental monitoring and follow-up programs.
3	Changes in Quality of Preferred Current Use Resources	Construction, Operation	Implement mitigation identified in **Section 32.2.7.2**. Implement mitigation for Human Health VC (**Section 27.0**) to address perceived contamination of traditional food sources.

#	Potential Effect	Applicable Phase(s)	Mitigation Measures
4	Changes in Quality of Current Use Experience	Construction, Operation	Implement the mitigation identified in **Section 32.2.7.3**. Implement mitigation for Visual Resources VC (**Section 25.0**) to reduce Project-related changes in daytime and nighttime visibility. Implement mitigation for Human Health VC (**Section 27.0**) to decrease potential effects from Project-related noise, light, subsistence food avoidance, and air emissions Implement mitigation to identify and reduce potential damage to fish trap stakes.

Note: This table is reproduced from the EIS. Square brackets ([ ]) indicate changes made to the original text.

As discussed in the response to IR10-11, the VFPA intends to continue consultation with Indigenous groups regarding proposed mitigation measures, including the proposed environmental management plans listed in EIS Tables 33-1 and 33-2 and those noted in EIS Table 32-6. The VFPA anticipates such consultation will further inform mitigation measures to address potential environmental effects during construction and operation of the proposed Project on Current Use, cultural heritage, health, and safety of Indigenous peoples.

Indigenous groups were invited to participate in an Indigenous Advisory Forum (IAF) held on September 18 and 19, 2018 and were provided funding to support their participation. In total, 23 individuals attended the IAF representing 15 of the 16 Indigenous groups that the VFPA has consulted at a high or moderate depth in relation to the Project. During the IAF, there were many discussions and opportunities to provide feedback on proposed mitigation, environmental management plans, offsetting, and follow-up programs. Pending an evaluation of its effectiveness in communicating and receiving input, the VFPA may continue to use the IAF format (or a modified version thereof based on feedback) as an ongoing way to engage Indigenous groups on topics, such a the environmental management plans, following the Panel Hearing and through to the start of construction. In addition, the VFPA will continue to meet individually with specific Indigenous groups as part of its ongoing RBT2 consultation program. The VFPA will consider the information provided at the recent IAF sessions as it continues to work with Indigenous groups to develop the environmental management plans and mitigation.

The VFPA, in consultation with Indigenous groups, is also considering a variety of engagement and consultation mechanisms that could facilitate meaningful ongoing Indigenous group involvement in the construction and operation phases of Project. As further discussed in the response to IR10-11, the VFPA is proposing the establishment of a RBT2 Indigenous Advisory Committee and also Indigenous representation on the RBT2 Follow-up Advisory Committee. The VFPA has and will also continue to provide funding for necessary studies and reasonable costs to enable Indigenous participation and incorporation of Indigenous traditional knowledge into the RBT2 Project and RBT2 environmental program planning. Where possible, the VFPA will make available opportunities for Indigenous groups to participate in environmental monitoring associated with the Project (see further discussion in the response to IR10-11).

IR10-13 Current Use of Lands and Resources for Traditional Purposes – Effects Assessment; Access, Availability and Quality of Preferred Current Use Resources

Information Source(s)

EIS Guidelines: Section 17.4.2

Marine Shipping Addendum: Section 9.5.2.1; Section 9.5.4; Section 9.5.5; Section 9.5.6; Section 9.5.7

Proponent Response to Additional Information Requirements of February 24, 2016 (CEAR Doc#391): IR2

Proponent Response to Additional Information Requirements of January 13, 2016 (CEAR Doc#572)

Responses to Review Panel Request for Information: Musqueam Indian Band (CEAR Doc#1098); Métis Nation British Columbia (CEAR Doc#1099); Pacheedaht First Nation (CEAR Doc#1118)

Context

In Section 9.5.7 of the Marine Shipping Addendum, the Proponent stated that, with the application of the proposed mitigation measures, all residual environmental effects in relation to marine shipping associated with the proposed Project on current use would be negligible.

These conclusions were challenged by some Indigenous groups based on the following points:

1. The assessment of potential environmental effects for current use was carried out for all of the groups combined rather than individually;
2. The absence of using all available group-specific information;
3. The methodology used by the Proponent for the characterization of potential effects did not take into consideration concerns and perspectives of each group, including risk tolerance and thresholds and the effectiveness of the mitigation measures;
4. The absence of considering seasonality or certain sites, such as Swiftsure Bank, as critical components of the assessment;
5. The absence of information regarding which Indigenous groups harvested in the shipping lanes versus groups traveling through to access fishing, harvesting and cultural sites elsewhere and, groups using the marine shipping area for activities other than fishing;
6. The consideration that fishing is the only activity which would be subject to adverse effects from the increase in ship traffic compared to other activities;
7. The use of the term 'temporary displacement' and its implications; and
8. The lack of adequately addressing issues and concerns raised by Indigenous groups, such as safety, wake-wave effects, and restrictions in access to traditional harvesting areas and cultural sites.

Considering all of the above, the assessment of potential effects and characterisation of residual effects of the marine shipping associated with the Project needs to be provided for each Indigenous group addressed in the Marine Shipping Addendum and CEAR Doc#572.

Information Request

Provide a group-specific assessment of potential effects and the characterization and significance of residual effects of the marine shipping associated with the proposed Project on current use in terms of changes to access and availability and quality of preferred marine resources for each Indigenous group listed in Tables 1-C and 1-D of Attachment 2.

At minimum, the assessment should:

- Present baseline data of:
    - preferred species and locations;
    - timing of the current activities, such as frequency, duration and seasonality;
    - FSC harvest achieved and desired to meet the FSC requirements of the community;
    - existing and future conditions of travel and access for groups using the shipping lanes for fishing, groups traveling through the shipping lanes to access fishing, harvesting and cultural sites and, groups using the marine shipping area adjacent to the marine shipping lanes.
- Provide maps indicating marine harvest sites for each Indigenous group;

In addition, with respect to ship pass-bys, the following should be provided:

1. a list of issues/concerns raised by each Indigenous group in relation to effects on current use from vessel transit associated with the Project;
2. whether each Indigenous group considered that these issues/concerns were adequately addressed by the Proponent;
3. the views of the Proponent regarding:
    a) thresholds of acceptance for measuring effects on access to preferred locations and resources, incorporation of Indigenous Knowledge and whether the studies relied upon for considering the existing conditions were considered acceptable;
    b) risk tolerance in relation to the use or avoidance of a site; and,
    c) acceptable 'temporary' or 'permanent' displacement conditions.

VFPA Response

Preface

The overarching information request asks the VFPA to provide a group-specific assessment of potential effects and the characterisation and significance of residual effects of the marine shipping associated with the proposed Project on current use of lands and resources for traditional purposes (Current Use) in terms of changes to access and availability and quality of preferred marine resources for each Indigenous group listed in Tables 1-C and Table 1-D of Attachment 2.

Group-specific assessments of the potential effect of the marine shipping associated with the proposed Project for Indigenous groups listed in Tables 1-C and 1-D of Attachment 2 to Information Request Package 10 are presented in Appendix IR10-A (the VFPA notes that the assessments for Musqueam First Nation and Tsleil-Waututh Nation were group-specific in the

AIMSA (Additional Information to the Marine Shipping Addendum (MSA) – Musqueam First Nation and Tsleil-Waututh Nation; CEAR Document #572[1]). These assessments consider the VFPA's responses to each of the three main sub-requests to the overarching request (Part 1 through Part 3), as reviewed in sequence below.

Part 1 – Present baseline data of: preferred species and locations; timing of the current activities, such as frequency, duration and seasonality; FSC harvest achieved and desired to meet the FSC requirements of the community; and existing and future conditions of travel and access for groups using the shipping lanes for fishing, groups traveling through the shipping lanes to access fishing, harvesting and cultural sites and, groups using the marine shipping area adjacent to the marine shipping lanes.

Baseline Information Previously Provided

Part 1 of the response to IR10-06 ("Baseline Information Previously Provided") details the relationship of the scope of the baseline information included for each Table 1-A Indigenous group in Section 32.2.4 of the EIS and for each Table 1-B Indigenous group in Section 7.2.4 of the AIEIS (Additional Information to the EIS – *W*SÁNEĆ Nation; CEAR Document #930[2]) to section 9.1.8 and section 9.2 of the *EIS Guidelines* regarding information requirements related to Current Use, aspects of cultural heritage, and rights.

The scope described in Part 1 of the response to IR10-06 largely applies to the baseline information included for each Table 1-C Indigenous group in Section 9.5.4 of the MSA and for each Table 1-D Indigenous group in Section 7.2 of the AIMSA.

In addition to the requirements in section 9.1.8 and section 9.2 of the *EIS Guidelines*, the scope of the baseline information presented in Section 9.5.4 of the MSA for Table 1-C Indigenous groups and Section 7.2 of the AIMSA for Table 1-D Indigenous groups also took into account the information requirements of section 17.3.2 of the *Updated EIS Guidelines* in terms of their applicability to Current Use and aspects of cultural heritage, as well as the requirements of section 17.5 regarding rights. The VFPA notes that fishing activities were a focus of the requirements listed under section 17.3.2.

As with the EIS and AIEIS, the baseline information in Section 9.5.4 of the MSA and Section 7.2 of the AIMSA also included information about past use and the effects of other projects and activities on use, with a particular emphasis on existing effects that Table 1-C and Table 1-D Indigenous groups attributed to marine shipping. Information regarding desired or aspirational use, where known to the VFPA, was also included.

[1] CEAR Document #572 From the Vancouver Fraser Port Authority to the Review Panel re: Response to the Additional Information to the Marine Shipping Addendum on the Musqueam First Nation and Tsleil-Waututh Nation requested by the Canadian Environmental Assessment Agency on January 13, 2016 (See Reference Document #383) (NOTE: Title of post updated February 16, 2017).
[2] CEAR Document #930 From the Vancouver Fraser Port Authority to the Review Panel re: Response to Additional Information on the WSÁNEC Nation requested by the Canadian Environmental Assessment Agency on January 13, 2016 (See Reference Document #383).

Table 1-C and Table 1-D Indigenous groups were asked by the VFPA to review and comment on the accuracy, appropriateness, and completeness of the baseline information prior to submission of the MSA and AIMSA. *Refer to Appendix IR10-A for group-specific details of the process that the VFPA undertook with each Table 1-C and Table 1-D Indigenous group to obtain and confirm baseline information.*

Additional Baseline Information Requested

As detailed in Part 1 of the response to IR10-06 ("Additional Baseline Information Requested"), the VFPA identified limitations with the baseline information presented in the EIS and AIEIS. Similar to the limitations described in relation to the EIS and AIEIS, the introduction to Section 9.5.4 of the MSA stated the following(p. 9.5-6):

> *"Some Aboriginal groups have advised that Current Use or the absence of Current Use may not be reflective of desired future use or where Aboriginal and treaty rights exist or may be exercised in the future. Aboriginal groups have also indicated that an absence of reported Current Use in a given area does not necessarily reflect the absence of actual use by individual community members, which is often not known in any detail by Aboriginal group representatives."*

The introduction to Section 7.2 of the AIMSA further emphasised that the summaries of baseline information were indicative but not exhaustive of past, present, or future use of the marine shipping area by Indigenous groups (p. 32).

The direction provided to the VFPA in section 17 of the *Updated EIS Guidelines* to "maximise the use of existing information" (see "Anticipated Level of Effort") was also identified by Indigenous groups as a limitation on the baseline information. In the discussion of administrative and technical boundaries for the Current Use assessment in the MSA (which were applied to the AIMSA), the VFPA notes the following (p. 9.5-4):

> *"Some Aboriginal groups have expressed concern over the use of existing information to characterise their Current Use. They have said it is not appropriate to assume that the information developed in the context of other circumstances (i.e., Trans Mountain Expansion Project) is applicable to another set of circumstances, in this case marine shipping associated with the Project. Certain Aboriginal groups requested that they be provided with more time and resources to provide information specific to marine shipping associated with the Project. They report that time and resource constraints, as well as a reluctance to share sensitive community information, have limited their ability to provide the range or depth of information that may be relevant to the assessment to augment existing material."*

The VFPA notes that the additional baseline information requested as part of this information request in relation to the MSA and AIMSA is the same as the additional baseline information requested in Part 1 of IR10-06 in relation to the EIS and AIEIS for the following items:

- Preferred species and locations;

- Timing of the current activities, such as frequency, duration, and seasonality; and
- FSC harvest achieved and desired to meet the FSC requirements of the community.

As explained in Part 1 of the response to IR10-06 (including the subsection on "FSC harvest desired"), the VFPA has no further information to provide in relation to the above for any Table 1-C or Table 1-D Indigenous group that is not already contained in EIS Section 32.2.4, AIEIS Section 7.2.4, MSA Section 9.5.4, AIMSA Section 7.2, or in response to previous information requests (e.g., AIR-12.04.15-29, AIR-12.04.15-30 of CEAR Document #388[3]).[4]

With regard to the additional baseline information requested within this information request—that is, the existing and future conditions of travel and access for groups using the shipping lanes for fishing, groups traveling through the shipping lanes to access fishing, harvesting, and cultural sites and, groups using the marine shipping area adjacent to the marine shipping lanes—the VFPA notes that the information available to the VFPA regarding past, present, or desired use in, through, or adjacent to the shipping lanes within the marine shipping area is summarised for Table 1-C and Table 1-D Indigenous groups in Section 9.5.4 of the MSA and Section 7.2 of the AIMSA. These summaries related to 27 Indigenous groups collectively amount to approximately 135 pages of information and therefore are not repeated here (*refer to Appendix IR10-A for group-specific index tables that identify where existing baseline data for each Indigenous group can be found within the MSA or AIMSA*).

The VFPA recognises that Indigenous groups may have more information regarding the baseline information requested by the Review Panel and leaves it to the discretion of Indigenous groups to submit this information (which could be sensitive or confidential) directly to the Review Panel for its consideration.

Part 2 – Provide maps indicating marine harvest sites for each Indigenous group.

The VFPA has provided a response regarding the Review Panel's request to provide maps indicating marine harvest sites for Table 1-A and Table 1-B Indigenous groups in Part 2 of the response to IR10-06. That response is also applicable to Table 1-C and Table 1-D Indigenous groups (16 of which also appear on Table 1-A or Table 1-B).

For the same reasons expressed in that response, the VFPA leaves it to the discretion of Table 1-C and Table 1-D Indigenous groups to submit the information requested by the Review Panel, or any other specific information Indigenous groups consider relevant to their Current Use, directly to the Review Panel for its consideration. The VFPA notes that some Indigenous groups have already opted to submit this site-specific mapping directly to the Review Panel (refer to response to IR10-06), including under the Review Panel's confidentiality procedures (e.g., Pacheedaht First Nation).

[3] CEAR Document #388 From Port Metro Vancouver to the Canadian Environmental Assessment Agency re: Completeness Review - Responses to Additional Information Requirements Follow-Up (See Reference Document # 345) including 22 Technical Data Reports.
[4] There are Table 1-C and Table 1-D Indigenous groups that also appear on Table 1-A and Table 1-B of Attachment 2 to Information Request Package 10.

Part 3 – In addition, with respect to ship pass-bys, the following should be provided: 1. a list of issues/concerns raised by each Indigenous group in relation to effects on current use from vessel transit associated with the Project; 2. whether each Indigenous group considered that these issues/concerns were adequately addressed by the Proponent; 3. the views of the Proponent regarding: a) thresholds of acceptance for measuring effects on access to preferred locations and resources, incorporation of Indigenous Knowledge and whether the studies relied upon for considering the existing conditions were considered acceptable; b) risk tolerance in relation to the use or avoidance of a site; and, c) acceptable 'temporary' or 'permanent' displacement conditions.

1. Lists of Issues/Concerns

Issues or concerns raised by each Table 1-C and Table 1-D Indigenous group in relation to the effects on Current Use from vessel transit associated with the Project, including those specific to ship pass-bys, are provided in group-specific issues and interests tracking tables in the VFPA's forthcoming response to IR10-01.

The VFPA notes that the issues and concerns of each Table 1-D Indigenous group regarding effects on Current Use from vessel transit associated with the Project that had been received prior to submission of the AIMSA were identified in the effects assessment associated with each Current Use indicator in Section 7.3 of the AIMSA (these issues and concerns are specifically discussed in relation to ship pass-bys in AIMSA Sections 7.3.1, 7.3.4, and 7.3.5). The issues and concerns of Table 1-D Indigenous groups were also provided on a group-specific basis in the table that appears in Appendix 2-B of the AIMSA (CEAR Document #572[5]).

2. Adequacy of Proponent's Response

The VFPA notes that Table 1-C and Table 1-D Indigenous groups have been requested by both the Canadian Environmental Assessment Agency (CEA Agency) and Review Panel to comment on the VFPA's assessment of potential effects of marine shipping associated with the Project, including potential effects on Current Use, from both a completeness and sufficiency perspective.

It is understood that many Indigenous groups characterise existing effects on their Current Use as already significantly affected by marine shipping, and that any further incremental effect on that Current Use, no matter how small, could be nothing but significant. The VFPA has also been informed by Indigenous groups that they disagree with the VFPA's predictions regarding the effects of Project-associated shipping on Current Use (i.e., negligible-to-minor; refer to "Proponent's Views on Thresholds of Acceptability and Risk" below).

The VFPA would like to emphasise that, as marine shipping associated with the Project is beyond the care and control of the VFPA and that most issues and concerns raised by

[5] CEAR Document #572 From the Vancouver Fraser Port Authority to the Review Panel re: Response to the Additional Information to the Marine Shipping Addendum on the Musqueam First Nation and Tsleil-Waututh Nation requested by the Canadian Environmental Assessment Agency on January 13, 2016 (See Reference Document #383) (NOTE: Title of post updated February 16, 2017).

Indigenous groups regarding marine shipping associated with the Project were often presented in the context of existing (and increasing) effects of marine shipping in the shipping lanes generally, the VFPA is not in a position to (adequately) address issues and concerns of Indigenous groups regarding marine shipping on its own, but is prepared to be an active participant in a collaborative effort to address these issues and concerns. Refer to the responses to IR10-17 through IR10-20, which provide clarification on mitigation measures suggested by the VFPA for consideration by the appropriate regulatory authorities regarding the potential effects on Current Use from vessel traffic associated with the Project, the VFPA's proposed role in the implementation of those measures, and consultation activities in relation thereto (including confirming accuracy of predictions) with Table 1-C and Table 1-D Indigenous groups.

3. Proponent's Views on Thresholds of Acceptability and Risk

In relation to the VFPA's views on thresholds of acceptability and risk presented below in subsections (a) through (c), the VFPA recognises and respects that Indigenous groups may not agree with the VFPA's views and leaves it to the discretion of Indigenous groups to provide their own analysis and assessment of effects on their Current Use as a result of Project-associated ship pass-bys directly to the Review Panel for its consideration.

(a) (i) Thresholds of Acceptance for Measuring Effects on Access

The VFPA has previously provided information on its views of thresholds of acceptance for measuring potential effects on Current Use from vessel traffic associated with the Project, and specifically on the measurability of potential effects on access to locations and resources as a result of Project-associated ship pass-bys, in Section 9.5.5 of the MSA and in the response to IR-2, which is referenced in the information sources to this Information Request.

In assessing the potential effect on Current Use access as a result of Project-associated ship pass-bys as negligible-to-minor (per Section 9.5.5 of the MSA, Section 7.3 of the AIMSA, and the response to MSA IR-02.24.16-2 of CEAR Document #391[6]), the VFPA was attempting to reflect its understanding of how detectable those ship pass-bys may reasonably be, considering the following:

- These pass-bys would be occurring in established shipping lanes (3 movements every 2 days on average per year), which transit the traditional territory or otherwise defined area of use for each Table 1-C and Table 1-D Indigenous group (all of whom reported use in, through, and adjacent to those shipping lanes, in qualitative terms);
- Only one of the established shipping lanes—the outbound lane—is in Canadian waters (*Canadian Environmental Assessment Act*, *2012* 5(1)(c) only contemplates effects occurring in Canada) (1.5 movements every 2 days—or 0.75 movements per day—on average per year); and

[6] CEAR Document #391 From Port Metro Vancouver to the Canadian Environmental Assessment Agency re: Marine Shipping Addendum Completeness Review - Responses to Additional Information Requirements (See Reference Document #386).

- Not every pass-by in the outbound shipping lane would likely overlap with a Current Use activity.

As explained in the response to MSA IR-02.24.16-2 (CEAR Document #391):

> *"It is reasonable to expect that these temporary overlaps [between a Current Use activity and a transiting ship] would be less than the incremental increase in ship pass bys [0.75 movements per day], but by an unknown amount, and that this amount could effectively be zero. Taking a precautionary approach, the analysis assumed that there may be some detectable or measurable increase in temporary overlaps as a result of the additional pass bys for all Aboriginal groups with reported use in Section 9.5.4, and moved the effect forward to Section 9.5.5.2 for further assessment [i.e., as a measurable effect]."*

As a transiting Project-associated ship would cross the territory or otherwise defined area of use for each Table 1-C and Table 1-D Indigenous group, the predicted level of effect was assessed as the same for each group (i.e., negligible-to-minor).

The VFPA is aware that temporary displacement as a result of overlaps between Current Use and Project-associated ship pass-bys could effectively become permanent if the potential increase in overlaps as a result of Project-associated ship pass-bys is not mitigated (use may be avoided given existing conditions of use, which Indigenous groups consider already significantly affected). Refer to the response to (c) below.

(a) (ii) Incorporation of Indigenous Knowledge

In the course of consultation on marine shipping associated with the Project (and per the requirements of sections 17.3.2 and 17.5 of the *Updated EIS Guidelines*), the VFPA obtained the views of Indigenous groups regarding the effects of existing marine shipping in the marine shipping area, including the view that no further risks or displacement (whether temporary or permanent) were acceptable, as the existing conditions of risk and displacement were already unacceptable. This view was universal.

Indigenous Knowledge regarding existing effects on Current Use as a result of marine shipping—including the view that existing conditions of risk and displacement are already unacceptable—was incorporated into the group-specific baseline summaries within Section 9.5.4 of the MSA and Section 7.2 of the AIMSA. It was also taken into account in the suggested mitigation measures in Section 9.5.6 (and repeated in Section 7.4 of the AIMSA) to address what the VFPA predicted to be at most a minor incremental effect on Current Use in relation to Project-associated ship pass-bys given the understanding reflected in (a)(i) above, but in the context of existing conditions described by Indigenous groups. Refer to the responses to IR10-17 through IR10-20 for further discussion of these suggested measures.

As the measures suggested by the VFPA are expected to be effective at addressing the potentially measurable effect on Current Use access as a result of Project-associated ship pass-bys, residual effects on that access were assessed as negligible for all Table 1-C or

Table 1-D Indigenous groups and were not assessed further for significance. Accordingly, a cumulative effects assessment was not carried out (per the methodology applied to valued components assessed in the EIS and MSA).[7]

(a) (iii)Whether the Studies Relied upon for Considering the Existing Conditions were Considered Acceptable

The VFPA has described limitations on the sources relied upon for considering existing conditions of use in Part 1 of the response to this information request, including but not limited to concerns expressed by Indigenous groups regarding the use of existing materials to describe those conditions. The VFPA has also explained in Part 1 to this information request that the use of existing materials was augmented by additional information provided to the VFPA by Indigenous groups in the course of consultation on marine shipping associated with the Project, including additional written information and studies (refer to Section 9.5.3 of the MSA, Section 7.1.2 of the AIMSA, and each group-specific summary in Section 9.5.4 of the MSA and Section 7.2 of the AIMSA). As stated in Part 1 of the response to this information request, the baseline summaries that were generated from this information were provided to Indigenous groups for review and comment regarding the accuracy, appropriateness, and completeness of the information prior to submission.

The VFPA is of the view that, while there are known and stated limitations associated with sources of information on use, the information relied upon for considering the existing conditions provides an acceptable (sufficient) snapshot of use to support the VFPA's predictions of potential effects on Current Use as a result of Project-associated ship pass-bys, as well as the development of the mitigation measures suggested by the VFPA in Section 9.5.6 of the MSA (and repeated in Section 7.4 of the AIMSA), measures that were informed by Indigenous perspectives on existing effects from marine shipping. Refer to response (a)(ii) above.

(b) Risk Tolerance in Relation to the Use or Avoidance of a Site

The VFPA is of the view that the effect of Project-associated ship pass-bys on Current Use, to the extent that any such effect may be detectable, can be mitigated through the measures suggested by the VFPA in Section 9.5.6 of the MSA (and repeated in Section 7.4 of the AIMSA), and will not magnify the risk conditions that Indigenous groups currently describe as unacceptable. Refer to the response in (a)(ii) above.

(c) Acceptable 'Temporary' or 'Permanent' Displacement Conditions

The VFPA is of the view that the effect of Project-associated ship pass-bys on Current Use, to the extent that any such effect may be detectable, can be mitigated through the measures suggested by the VFPA in Section 9.5.6 of the MSA (and repeated in Section 7.4 of the AIMSA),

[7] A cumulative effects assessment was only carried out when a residual adverse effect of the Project was predicted and the residual adverse effect was considered likely to interact cumulatively with the effects of other projects and activities that have been or will be carried out.

and will not magnify the displacement conditions that Indigenous groups currently describe as unacceptable. Refer to the response in (a)(ii) above.

IR10-14 Current Use of Lands and Resources for Traditional Purposes – Socio-economic Conditions

Information Source(s)

Marine Shipping Addendum: Section 9

Marine Shipping Addendum: Appendix 5-B

Proponent Response to Follow-up Additional Information Requirements of February 24, 2016 (CEAR Doc#391): IR9

Context

Section 17.4.2 of the EIS Guidelines requires assessment of effects of changes to the environment on Indigenous peoples, including socio-economic conditions that may arise as a result of the Project.

In response to additional information requirement #9 from the Canadian Environmental Assessment Agency (CEAR Doc#391), the Proponent considered that effects of any changes to the environment caused by marine shipping associated with the Project on socio-economic conditions applied only in relation to Marine Commercial Use and Outdoor Recreation.

The Proponent provided an assessment for all Indigenous groups combined for marine commercial use and outdoor recreation, but did not describe socio-economic implications of potential displacement as a result of marine shipping associated with the Project. For instance, in Appendix 5-B of the marine shipping addendum, Pacheedaht First Nation reported that, due to the high volume of vessel traffic, members must hire charters at great expense to safely fish in the area as most do not own boats with radar.

Additional information is required in order to assess effects of changes to the environment on socioeconomic conditions of each Indigenous group.

Information Request

For each of the Indigenous groups listed in Tables 1-C and 1-D of Attachment 2, consider the socio-economic implications of potential or necessary displacement (permanent and/or temporary) in terms of:

- sufficiency of resources at alternate locations to meet the requirements of the community;
- constraints of displacement (areas further from their community or already alienated to other interests);
- extra expenses required in monetary terms or additional travel time or necessary changes in technology for the practice or access to resources; and

- constraints on current harvesting activities caused by development, regulatory restrictions, reduced resources, contamination and conservation concerns and impediment to the revival of traditions surrounding coastal harvesting activities.

VFPA Response

Group-specific assessments of potential effects of Project-associated shipping on current use of lands and resources for traditional purposes (Current Use) for Indigenous groups listed in Table 1-C and Table 1-D of Attachment 2 to Information Request Package 10 are presented in Appendix IR10-A (the VFPA notes that the assessments for Musqueam First Nation and Tsleil-Waututh Nation were group-specific in the AIMSA (Additional Information to the Marine Shipping Addendum (MSA) – Musqueam First Nation and Tsleil-Waututh Nation; CEAR Document #572[1]*)). The assessments in Appendix IR10-A consider the VFPA's response below.*

The Current Use assessment presented in Section 9.5.5 of the MSA and Section 7.3 of the AIMSA has already considered the socio-economic implications of displacement in terms of the four factors listed in this information request. In the response to the information request that follows, the VFPA addresses the last factor first, followed by a discussion of the first three factors.

As explained in Part 1 of the response to IR10-13, the baseline information presented in Section 9.5.4 of the MSA for each Table 1-C Indigenous group and Section 7.2 of the AIMSA for each Table 1-D Indigenous group, included each Indigenous group's perspectives about existing effects of other projects and activities, including existing marine shipping, on their Current Use, aspects of cultural heritage, and rights to date. These existing effects included existing constraints on current harvesting activities caused by development, regulatory restrictions, reduced resources, contamination and conservation concerns, and impediments to the revival of traditions surrounding coastal harvesting activities.

For example, Section 9.5.4.10 of the MSA, which presents the baseline information for Pacheedaht First Nation (referenced in the context to this information request), cites a long list of factors that have combined cumulatively over time, "eroding their once thriving economy based on the harvest, trade, and sale of marine products, and resulting in other effects on the Pacheedaht community" (p. 9.5-63). Among the factors cited were the following:

- Depletion of fisheries and other marine resources, and the imposition of fishing and marine harvesting regulations, including loss of economic rights related to the harvesting of marine resources; and

[1] CEAR Document #572 From the Vancouver Fraser Port Authority to the Review Panel re: Response to the Additional Information to the Marine Shipping Addendum on the Musqueam First Nation and Tsleil-Waututh Nation requested by the Canadian Environmental Assessment Agency on January 13, 2016 (See Reference Document #383) (NOTE: Title of post updated February 16, 2017).

- Re-routing of the international shipping lanes in 2005,[2] causing them to interfere with Pacheedaht's "safe" access to Swiftsure Bank, one of Pacheedaht's preferred fishing areas.

Later in MSA Section 9.5.4.10 (p. 9.5-68), the VFPA expands on Pacheedaht's views on the existing effects of the movement of the outbound shipping lane on their fishing at Swiftsure Bank, including the use of charter boats as a means to improve their sense of safety when accessing and using Swiftsure Bank, since these boats are equipped with the technology (e.g., radar) to help avoid interactions between Pacheedaht and transiting ships. These concerns of Pacheedaht are repeated in the effects assessment regarding access to Current Use locations and cultural heritage linked to that access (MSA Section 9.5.5.1, pp. 9.5-127, 9.5-140; MSA Section 9.5.5.2, p. 9.5-144).

The VFPA notes that the first three factors in this information request pertaining to socio-economic implications were also identified in IR10-07 in relation to the EIS and AIEIS (Additional Information to the Environmental Impact Statement – *W*SÁNEĆ Nation; CEAR Document #930[3]).

Part 1 of the response to IR10-07 explains how Indigenous perspectives on existing socio-economic constraints were considered in the VFPA's evaluation of the potential level of effect of the Project on the Current Use of each Indigenous group before the implementation of mitigation. Quoting from Part 3 of the response to IR10-06, Part 1 of the response to IR10-07 states the following:

> *"Considerations in this regard included whether the effect could lead to displacement of activities that are not portable or are limited in their portability to other areas (e.g., requiring considerably more travel time or financial resources to support) … [.]"*

This consideration was also taken into account in the analysis of potential effects of marine shipping associated with the Project on Current Use.

As explained in Part 3 of the response to IR10-13 (3(a)(ii)), the VFPA has reported that Table 1-C and Table 1-D Indigenous groups universally expressed the view that no further risks or displacement (whether temporary or permanent) as a result of marine shipping were acceptable, as the existing conditions of risk and displacement were already considered unacceptable. As also explained in this section of Part 3 of the response to IR10-13 (3(a)(i)), the VFPA is of the view that the contribution of Project-associated ship pass-bys in designated

[2] Transport Canada, in its submission to the Review Panel dated October 14, 2016 (CEAR Document #580, Clarification #8), noted as follows, in response to the information provided by Pacheedaht (at p. 9.5-68 of Section 9.5.4.10 of the MSA): "[T]he widening of the outbound lane came into force December 2006. The previous lane was narrower and also passed over Swiftsure Bank. The lane was widened to dilute the density of traffic transiting the area to reduce the encounters between transiting vessels and vessels fishing in the area."

[3] CEAR Document #930 From the Vancouver Fraser Port Authority to the Review Panel re: Response to Additional Information on the WSÁNEC Nation requested by the Canadian Environmental Assessment Agency on January 13, 2016 (See Reference Document #383).

shipping lanes to these existing effects (before mitigation) is so small (as discussed in detail in IR10-13) as to be likely undetectable against these existing conditions; however, the VFPA treated it as potentially measurable (before mitigation), and is of the view that the effect, for all Indigenous groups, can be effectively mitigated through the measures suggested by the VFPA (refer to the responses to IR10-17 through IR10-20).

As the VFPA expects the potentially measurable access effect on Current Use as a result of Project-associated ship pass-bys can be mitigated, incremental socio-economic implications as a result of marine shipping associated with the Project are not anticipated for any Table 1-C or Table 1-D Indigenous group.

IR10-15 Current Use of Lands and Resources for Traditional Purposes – Effects Assessment, Quality of the Current Use Experience

Information Source(s)

Marine Shipping Addendum: Section 9.5.5.1; Section 9.5.5.2; Section 9.5.5.3; Section 9.5.6; Section 9.5.7; Table 9.5-35; Figure 10.1

Ditidaht First Nation (CEAR Doc#636)

Pacheedaht First Nation Submission to the Review Panel (CEAR Doc#672)

Context

In Section 9.5.5 of the Marine Shipping Addendum, the Proponent assessed the potential effects of marine shipping associated with the proposed Project on the quality of the current use experience, including:

- Sensory disturbance associated with noise, light and air quality;
- Safety; and
- Cultural Landscape (defined as important cultural sites).

The Proponent concluded that:

- Ship-generated noise, light and air quality were expected to have a negligible effect on the quality of the current use experience;
- A measurable change in safety risk during current use activities as a result of marine shipping associated with the Project was not expected; and
- Marine shipping associated with the Project was not expected to measurably affect the existing quality of the current use experience through further erosion to sites of importance.

For the cultural landscape, the relative contribution of ship-related wave effects to erosion affecting these sites compared to other sources were considered by the Proponent as 'difficult if not impossible' to measure. The Proponent concluded that while cumulative effects to traditional use are acknowledged, Project-associated shipping is not expected to measurably affect the existing quality of the current use experience within the marine shipping addendum through further erosion to sites of importance. In the Proponent's view, pre-existing effects had led to changes in use patterns and the amount of time spent on the land and water for traditional purposes, such as the creation of international borders, placement of shipping lanes, natural erosion to important sites. Alterations to the physical landscape over time had already resulted in influencing how these landscapes were experienced culturally.

Indigenous groups, such as Ditidaht First Nation and Pacheedaht First Nation, challenged the Proponent's conclusions and considered that their Current Use experience had already been eroded in terms of perceived threats to safety at sea resulting in potential avoidance of important sites, such as Swiftsure Bank. An associated consequence was the loss of inter-

generation transmission of Traditional Knowledge regarding resource gathering, practices and sites.

Pacheedaht First Nation members considered that the acceptable threshold for the amount of traffic in the shipping lanes had already been exceeded and the term "temporary displacement" did not accurately describe the required actions to avoid commercial shipping vessels on Swiftsure Bank.

Additional information on how the Project could affect the quality of the current use experience of Indigenous groups using the marine shipping area is required.

Information Request

Provide a group-specific assessment of potential effects of the changes in quality of the current use experience resulting from marine shipping associated with the proposed Project and the characterization and significance of residual effects. The assessment should include the Indigenous groups listed in Tables 1-C and 1- D of Attachment 2.

The assessment should evaluate:

- Sites of importance to Indigenous groups;
- Decreased willingness, ability or avoidance by Indigenous peoples to access Current Use sites in or through the marine shipping lanes due to safety concerns and the perception of risk, reduced harvesting opportunities, and/or sensory disturbances;
- Alienation from existing patterns of traditional harvesting due to the temporary or permanent displacement from areas of importance; and
- Loss of opportunities for the cultural transmission of Traditional Knowledge and practices due to the temporary or permanent displacement from those areas of importance.

VFPA Response

Group-specific assessments of the potential effect of the marine shipping associated with the Project on the quality of current use of lands and resources for traditional purposes (Current Use) experience for Indigenous groups listed in Table 1-C and Table 1-D of Attachment 2 to Information Request Package 10 are presented in Appendix IR10-A (the VFPA notes that the assessments for Musqueam First Nation and Tsleil-Waututh Nation were group-specific in the AIMSA (Additional Information to the Marine Shipping Addendum (MSA) – Musqueam First Nation and Tsleil-Waututh Nation; CEAR Document #572[1])). The assessments in Appendix IR10-A consider the VFPA's response below.

The VFPA notes that the context to this information request states that, in Section 9.5.5 of the MSA, "the Proponent assessed the potential effects of marine shipping associated with the proposed Project on the quality of the current use experience, including:

[1] CEAR Document #572 From the Vancouver Fraser Port Authority to the Review Panel re: Response to the Additional Information to the Marine Shipping Addendum on the Musqueam First Nation and Tsleil-Waututh Nation requested by the Canadian Environmental Assessment Agency on January 13, 2016 (See Reference Document #383) (NOTE: Title of post updated February 16, 2017).

- Sensory disturbance associated with noise, light and air quality;
- Safety; and
- Cultural Landscape (defined as important cultural sites)."

The VFPA would like to clarify that, with regard to safety, the assessment in MSA Section 9.5.5.1 explains that a potential detectable or measurable change in safety risk during Current Use activities as a result of Project-associated shipping, *based on statistical data*, is not expected; however, the reader is referred to MSA Section 9.5.5.2 for a discussion of potential effects of a *perceived change in safety risk* tied to a potential incremental change in access to Current Use locations due to Project-associated increases in ship pass-bys (pp. 9.5-141 to 9.5-142).

The VFPA also wishes to clarify that it did not define cultural landscape as "important cultural sites." Rather, the "Cultural Landscape Considerations" subsection within MSA Section 9.5.5.1 indicates that (physical) sites of importance *help* define the cultural landscape of each Indigenous group, and are a *key* component of how lands and resources are used and experienced. The section also notes how alterations to the physical landscape over time have influenced how these landscapes are experienced culturally. How these landscapes are experienced culturally—the intangible or cultural heritage aspects of landscape—were taken into account in MSA Section 9.5.5.2 (p. 9.5-144).

The VFPA further wishes to clarify that, while only Ditidaht First Nation and Pacheedaht First Nation are referenced in the context to this information request, the baseline information presented in Section 9.5.4 of the MSA for Table 1-C Indigenous groups and Section 7.2 of the AIMSA for Table 1-D Indigenous groups, as well as in the issues and interests tracking tables submitted with the MSA (MSA Appendix 5-B) and AIMSA (AIMSA Appendix 7-2) (refer also to the VFPA's forthcoming response to IR10-01), indicate that all Indigenous groups with traditional territories or otherwise defined areas of use overlapping the marine shipping area (i.e., each Indigenous group on Table 1-C and Table 1-D) similarly described, within that area, the following:

- Sites of importance;
- Decreased willingness or ability to access, and even avoidance of, Current Use sites in or through the marine shipping lanes due to safety concerns and the perception of risk, reduced harvesting opportunities, and/or sensory disturbances;
- Alienation from existing patterns of traditional harvesting due to the temporary or permanent displacement from areas of importance; and
- Loss of opportunities for the cultural transmission of Indigenous Knowledge and practices due to the temporary or permanent displacement from those areas of importance.

As previously clarified in the response to AIR-12.04.15-29 (CEAR Document #388[2]) (revisited in the response to IR10-08) and MSA IR-02.24.16-10 (CEAR Document #391[3]), the VFPA's assessment of potential effects on the quality of Current Use experience took into account two pathways. The factors listed above are predominantly relevant to the second pathway (i.e., effects on the quality of experience tied to access), whereby a predicted effect (before mitigation) on any one of the Current Use indicators (in this case access) was assumed to have a potentially corresponding effect on quality of experience (before mitigation) related to cultural heritage. As explained in the assessment in Section 9.5.5.2 (p. 9.5-144) of the MSA (and further applied in Section 7.3.4 of the AIMSA):

> *"This [up to] minor change in access to preferred Current Use locations could also potentially result in an associated change in cultural practices [and cultural heritage] that that are tied to the affected use of locations and resources, such as incrementally affecting the transmission of knowledge (e.g., adding to circumstances that may be keeping children from experiencing fishing at a traditionally important location because of safety concerns with existing traffic. … [T]his incremental effect of an increase on Project-associated [ship] pass bys on the quality of Current Use experience, if measurable, is also expected to be minor relative to existing conditions."*

Clarifications regarding the VFPA's assessment of potential effects on access to Current Use locations (including displacement considerations) as a result of Project-associated vessel traffic in designated shipping lanes—that is, as potentially measurable (i.e., negligible-to-minor) for all Table 1-C and Table 1-D Indigenous groups—has been provided in the responses to IR10-13 and IR10-14. As summarised in the response to IR10-14:

> *"As explained in Part 3 of the response to IR10-13 (3(a)(ii)), the VFPA has reported that Table 1-C and Table 1-D Indigenous groups universally expressed the view that no further risks or displacement (whether temporary or permanent) as a result of marine shipping were acceptable, as the existing conditions of risk and displacement were already considered unacceptable. As also explained in this section of Part 3 of the response to IR10-13 (3(a)(i)), the VFPA is of the view that the contribution of Project-associated ship pass-bys in designated shipping lanes to these existing effects (before mitigation) is so small as to be likely undetectable against these existing conditions; however, the VFPA treated it as measurable (before mitigation), and is of the view that the effect, for all Indigenous groups, can be effectively mitigated through the measures suggested by the VFPA (refer to the responses to IR10-17 through IR10-20)."*

---

[2] CEAR Document #388 From Port Metro Vancouver to the Canadian Environmental Assessment Agency re: Completeness Review - Responses to Additional Information Requirements Follow-Up (See Reference Document # 345) including 22 Technical Data Reports.

[3] CEAR Document #391 From Port Metro Vancouver to the Canadian Environmental Assessment Agency re: Marine Shipping Addendum Completeness Review - Responses to Additional Information Requirements (See Reference Document #386).

As the VFPA expects that the potentially measurable access effect on Current Use as a result of Project-associated ship pass-bys can be mitigated, residual effects on the quality of experience (e.g., cultural heritage) tied to that access were assessed as negligible for all Table 1-C or Table 1-D Indigenous groups and were not assessed further for significance. Accordingly, a cumulative effects assessment was not carried out (per the methodology applied to valued components assessed in the EIS and MSA).[4] The VFPA is of the view that this remains a reasonable conclusion.

[4] A cumulative effects assessment was only carried out when a residual adverse effect of the Project was predicted and the residual adverse effect was considered likely to interact cumulatively with the effects of other projects and activities that have been or will be carried out.

IR10-16 Current Use of Lands and Resources for Traditional Purposes – Effects Assessment, Access to Current Use Locations and Vessel Pass-bys

Information Source(s)

Marine Shipping Addendum: Section 9.5.5.1; Section 9.5.5.2; Section 9.5.6; Figure 7.2-2

Context

In Section 9.5.5.1 of the Marine Shipping Addendum, the Proponent determined that the residual effects from vessel transit on Current Use within the marine shipping area were negligible.

First, the Proponent presented some of the Indigenous perspectives on existing interactions with vessel transit on Current Use and provided the following arguments to conclude that the effects were negligible:

- According to regulations, any vessel less than 20 metres must not impede the transit of a larger vessel; this would render the effect similar as existing conditions;
- The Current Use activities would need to occur simultaneously with ship pass-bys, in which case, the frequency of the temporary displacement could be increased by nine per cent for Segment D and 12 per cent for Segment B and it is difficult to assess quantitatively the potential for overlaps;
- 44 per cent of Project-associated vessel movements are expected to occur at night when Current Use activities are reduced compared to day-time activities.

Second, the Proponent considered that with an increase of approximately 1.5 ship movements per 24 hours, there is a potential minor incremental effect on the ability of Indigenous groups to access Current Use locations as a result of a potential increase in spatial and temporal overlaps between Current Use activities and ship pass-bys.

Some Indigenous groups questioned these conclusions since they did not accurately address the use of important sites and the displacement of fishing vessels and gear. They also considered that their perception of potential collisions between fishing craft and marine commercial traffic in the shipping lanes was not sufficiently addressed.

Additional information is required to address and clarify the potential increases in overlap between Current Use activities and ship pass-bys.

Information Request

Present for each specific Indigenous group listed in Tables 1-C and 1-D of Attachment 2:

- The current activities taking place during the day or the night with a quantification of day and night duration;
- The access required within, outside or through the shipping lanes;
- The seasons that activities are practised;

- The frequency that each Indigenous group crosses the shipping lanes in the marine shipping area; and
- The minimum and maximum number of vessels per hour in the shipping lanes, by Segment, encountered by Indigenous fishing vessels for Current Use activities in relation to the proposed Project-related ship movements.

VFPA Response

The VFPA wishes to clarify the information provided in context to this information request regarding the VFPA's predictions on the effects of Project-associated vessel transit on current use of lands and resources for traditional purposes (Current Use) presented in Section 9.5.5 of the Marine Shipping Addendum (MSA).

First, residual effects on Current Use are not discussed in Section 9.5.5.1 of the MSA. Rather, MSA Section 9.5.5 discusses potential effects on Current Use that are predicted to be negligible (MSA Section 9.5.5.1) or measurable (MSA Section 9.5.5.2) before mitigation. Residual effects, which are expected to be negligible, are discussed in MSA Section 9.5.7.

Second, the VFPA's analysis of the potential effects of Project-associated ship pass-bys presented in Section 9.5.5 of the MSA, including the rationale for level of effect predictions on Table 1-C Indigenous groups (i.e., negligible-to-minor before mitigation), has been previously clarified in the response to MSA IR-02.24.16-2 (CEAR Document #391[1]), and has been further clarified in Part 3 of the response to IR10-13 (for both Table 1-C and Table 1-D Indigenous groups). The clarification in Part 3 of the response to IR10-13 has also been summarised in the response to IR10-14, as follows:

> *"As explained in Part 3 of the response to IR10-13 (3(a)(ii)), the VFPA has reported that Table 1-C and Table 1-D Indigenous groups universally expressed the view that no further risks or displacement (whether temporary or permanent) as a result of marine shipping were acceptable, as the existing conditions of risk and displacement were already considered unacceptable. As also explained in this section of Part 3 of the response to IR10-13 (3(a)(i)), the VFPA is of the view that the contribution of Project-associated ship pass-bys in designated shipping lanes to these existing effects (before mitigation) is so small as to be likely undetectable against these existing conditions; however, the VFPA treated it as measurable (before mitigation), and is of the view that the effect, for all Indigenous groups, can be effectively mitigated through the measures suggested by the VFPA (refer to the responses to IR10-17 through IR10-20).*

With regard to the additional baseline information requested in this information request, Part 1 of the response to IR10-13 explains why the information contained in Section 9.5.4 of the MSA and Section 7.2 of the AIMSA (Additional Information to the MSA – Musqueam First

[1] CEAR Document #391 From Port Metro Vancouver to the Canadian Environmental Assessment Agency re: Marine Shipping Addendum Completeness Review - Responses to Additional Information Requirements (See Reference Document #386).

Nation and Tsleil-Waututh Nation; CEAR Document #572[2]) is the extent of the information known to the VFPA, or that the VFPA is in a position to provide, regarding past, present, and desired future use in, through, and adjacent to the designated shipping lanes by Table 1-C and Table 1-D Indigenous groups.

The VFPA has no further baseline information to provide with respect to this information request for Table 1-C or Table 1-D Indigenous groups; however, as explained in Part 3(a)(iii) of the response to IR10-13, the VFPA is of the view that the information provided is sufficient to support the VFPA's predictions of potential incremental effects on Current Use as a result of Project-associated routine vessel transit, as well as the development of suggested mitigation measures that were informed by Indigenous perspectives on existing effects from marine shipping.

[2] CEAR Document #572 From the Vancouver Fraser Port Authority to the Review Panel re: Response to the Additional Information to the Marine Shipping Addendum on the Musqueam First Nation and Tsleil-Waututh Nation requested by the Canadian Environmental Assessment Agency on January 13, 2016 (See Reference Document #383) (NOTE: Title of post updated February 16, 2017).

IR10-17 Current Use of Lands and Resources for Traditional Purposes – Mitigation Measures, Current Use Access

Information Source(s)

Marine Shipping Addendum: Section 9.5.6

Transport Canada Submission to the Review Panel (CEAR Doc#580)

Context

In Section 9.5.6 of the Marine Shipping Addendum, the Proponent suggested mitigation measures to address potential effects on Current Use access resulting from the potential increase in overlap between Current Use activities with Project-associated marine shipping traffic. These mitigation measures were suggested for consideration by the appropriate regulatory authorities and included the following:

1. Consultation on the development of a potential marine shipping communication plan that would provide affected Indigenous groups with real-time information regarding the movement of Project associated shipping traffic through the Marine Shipping Area, including:
   - the estimated time of arrival of Project associated container ships and their expected duration of use of the shipping lanes for inbound and outbound movements; and
   - circumstances outside normal operations that might affect the expected frequency or concentration of Project-associated vessel traffic along the shipping routes, such as the clearing of backlogs in shipping traffic due to storms requiring ships to temporarily anchor before proceeding.
2. Consultation with the affected Indigenous groups to identify measures that would reduce the effects of the international shipping lanes to fishing by Indigenous groups.

Some Indigenous groups expressed concerns that the mitigation measures proposed by the Proponent were vague and incomplete since they addressed only fishing within the shipping lanes but not adjacent areas. A description of the process that would be used to implement the mitigation measures was also needed.

Clarification of the proposed mitigation measures is required.

Information Request

With respect to the marine shipping communication plan, provide clarification on:

1. Which appropriate regulatory authorities has the Proponent engaged with to discuss the potential mitigation measures; and
2. What role does the Proponent intend to play in the development and implementation of the marine-shipping-communication plan.

Discuss the expected effectiveness of a marine shipping communication plan to address the concerns raised by Indigenous groups concerning Current Use access and navigation in and through the marine shipping lanes.

Discuss how the mitigation measures will mitigate the potential adverse effects of marine shipping associated with the proposed Project considering that the mitigation measures are reliant on entities outside the care and control of the Proponent.

VFPA Response

Part 1 – With respect to the marine shipping communication plan, provide clarification on which appropriate regulatory authorities has the Proponent engaged with to discuss the potential mitigation measures.

Marine shipping associated with the Project occurs in an area that is beyond the care and control of the VFPA, but within the jurisdiction of the federal government. The VFPA was therefore directed by the *Updated EIS Guidelines* to *suggest* mitigation measures for consideration by the federal government, for use by programs and activities within federal jurisdiction.

To date, the VFPA has engaged Transport Canada on the mitigation measures suggested by the VFPA regarding marine shipping associated with the Project. Meetings have occurred subsequent to the submission of Transport Canada's responses to TC IR-08 and TC IR-09 (CEAR Document #1147[1]) pertaining to these measures. Further discussions are expected (refer to Part 2 of this response).

Part 2 – With respect to the marine shipping communication plan, provide clarification on what role does the Proponent intend to play in the development and implementation of the marine shipping-communication plan.

Although marine shipping associated with the Project is beyond the care and control of the VFPA, the VFPA considers itself a key stakeholder with a critical interest in marine shipping associated with the Project. As a key stakeholder, the VFPA expects that it would be actively involved in "*consultation on the development of a potential* marine shipping activities communication plan" (emphasis added), which, for clarification, is the language of the first of two suggested measures in Marine Shipping Addendum (MSA) Section 9.5.6.

As noted in Part 1 of this response, the VFPA has engaged Transport Canada on the measures suggested by the VFPA, and subsequent to the submission of Transport Canada's responses to TC IR-08 and TC IR-09 (CEAR Document #1147). The VFPA is aware that there are other federal government agencies in addition to Transport Canada (e.g., Fisheries and Oceans Canada, Environment and Climate Change Canada, and Canadian Coast Guard) and stakeholders in addition to the VFPA (e.g., Pacific Pilotage Authority), with a mandate or interest in marine shipping associated with the Project.

[1] CEAR Document #1147 From Transport Canada to the Review Panel re: Response to Information Requests issued by the Review Panel on December 19, 2017 (See Reference Document #1128).

At the time the MSA was prepared, the marine shipping activities communication plan was contemplated by the VFPA as a potential tool for the consideration of the federal government for use in federal programs and activities. The VFPA also assumed that such a tool, were the federal government to consider it, would be discussed and developed in consultation and collaboration with Indigenous groups, other appropriate regulatory authorities, and stakeholders (e.g., the VFPA), such as in the 'forum' format suggested by Tsawout First Nation (i.e., per Table MSA IR13-1, "Establish a forum including Aboriginal groups, government, project proponents, and researchers to consider impacts of increased marine shipping from multiple projects, including RBT2, on Aboriginal and treaty rights"; see MSA IR-02.24.16-13 of CEAR Document #391[2]).

The MSA was submitted to the Canadian Environmental Assessment Agency (CEA Agency) in October 2015. On November 7, 2016, the federal government launched the national Oceans Protection Plan (OPP) to improve marine safety and responsible shipping, protect Canada's marine environment, and offer new opportunities for Indigenous and coastal communities (Transport Canada 2018). The VFPA notes that the OPP has been identified by the CEA Agency in communications with Indigenous groups in relation to marine shipping associated with the Project (see for example CEAR Document #1073[3], October 17, 2017), and specifically in relation to the VFPA's suggested mitigation measures related to marine shipping, both of which were based on suggestions by Indigenous groups (refer to Part 3 of this response). The VFPA is aware through this correspondence that the federal government has initiated meetings with Indigenous groups "to discuss concerns regarding the location of the shipping lanes"—reflected in the VFPA's second suggested measure after the marine shipping communications plan—and that these "marine safety-related discussions" are continuing as part of a "newly formed [OPP] Working Group" that includes Indigenous groups and "federal representatives from Transport Canada, Canadian Coast Guard and Fisheries and Oceans" (CEAR Document #1073).

The VFPA notes that the OPP Working Group presents an opportunity for consultation on the development of a potential marine shipping activities communications plan for marine shipping associated with the Project. The VFPA is prepared to actively participate as a key stakeholder in the OPP Working Group or other OPP/federal initiatives, as appropriate and as relevant to the Project. Some of these other federal initiatives were identified by Transport Canada in its response to TC IR-08 and TC IR-09 (CEAR Document #1147), including those of the Canadian Coast Guard (i.e., Enhanced Maritime Situational Awareness (EMSA) initiative, Proactive Vessel Management (PVM) initiative, and Common Situational Awareness Portal (CSAP)). The VFPA notes that some of these initiatives, such as those pertaining to marine communications, capture the key aspects of the VFPA's suggested measure for a potential marine communications plan (refer to Part 3 of this response).

[2] CEAR Document #391 From Port Metro Vancouver to the Canadian Environmental Assessment Agency re: Marine Shipping Addendum Completeness Review - Responses to Additional Information Requirements (See Reference Document #386).
[3] CEAR Document #1073 From the Canadian Environmental Assessment Agency to the Pacheedaht First Nation re: Preliminary Depth Reassessment for Pacheedaht First Nation.

Part 3 – Discuss the expected effectiveness of a marine shipping communication plan to address the concerns raised by Indigenous groups concerning Current Use access and navigation in and through the marine shipping lanes.

The VFPA expects that a marine shipping communication plan would be effective for the following reasons:

- As discussed in Part 2 of this response, it is assumed that such a plan would be developed and implemented in consultation and collaboration with Indigenous groups that have raised concerns regarding current use of lands and resources for traditional purposes (Current Use) access and navigation, in, through, and adjacent to the marine shipping lanes.
- The VFPA considered the specific concerns raised by Indigenous groups regarding the potential effects of marine shipping generally and marine shipping associated with the Project on Current Use access and navigation in, through, and adjacent to the marine shipping lanes. It also considered specific measures suggested by Indigenous groups (refer to Table MSA IR13-1 of CEAR Document #391) to address potential effects of marine shipping,[4] when it suggested the marine shipping communications plan as a potential measure to reduce what the VFPA predicts will be up to a minor potential effect on Current Use (and associated cultural heritage, including intangible cultural heritage) as a result of Project-associated ship pass-bys in established shipping lanes.
- Similar plans have been identified by federal and provincial regulators as approval conditions for a number of projects with marine shipping components having the potential to interact with Current Use. These projects include, for example, LNG Canada Project (Marine Activities Plan; LNG Canada 2015), Woodfibre LNG Project (Marine Transportation and Monitoring Plan; Woodfibre 2015, and the Trans Mountain Expansion (TMX) Project (i.e., Marine Public Outreach Program / Aboriginal Marine Outreach Program; NEB 2016, TMX 2017).[5]
- As discussed in Part 2 of this response, federal government agencies have already started to implement initiatives similar to the suggested marine shipping communication plan. For example, in the response to TC IR-08, the Canadian Coast Guard identified CSAP (as identified in Part 1 of this response), an initiative "to provide local communities with real-time information and data on marine traffic," which is "complimentary to the [EMSA] initiative being developed by [Transport Canada]" (CEAR Document #1147). The Canadian Coast Guard goes on to describe CSAP as a

[4] Per Table MSA IR13-1 (CEAR Document #391), measures were suggested by Ditidaht First Nation, Lake Cowichan First Nation, Lyackson First Nation, Malahat Nation, Pacheedaht First Nation, Tsawout First Nation, Tsawwassen First Nation, and Tseycum First Nation.

[5] Similar to the VFPA's suggested measure, these plans contemplate the communication of applicable information on project-related vessel timing and scheduling and the following, for example:

- Specific actions to inform affected Indigenous groups of potential interference with marine navigation and use;
- Specific Indigenous navigation routes, fishing areas, or other potentially affected marine areas and applicable timing windows;
- Specific measures to reduce disruption to these routes and areas; and
- Specific activities to monitor the effects of project-associated shipping activities during project operation.

"long-term initiative intended to provide more comprehensive, accurate, and timely marine traffic information," which would presumably include marine traffic associated with the Project.

In addition to a potential marine shipping communication plan, the VFPA also suggested consultation with Indigenous groups to identify measures to reduce the impact of the established shipping lanes on Current Use (and associated cultural heritage, including intangible cultural heritage).

The VFPA expects that consultation regarding the established shipping lanes would be effective for the following reasons:

- The VFPA considered the specific measures suggested by Indigenous groups in relation to fishing at Swiftsure Bank (refer to Table MSA IR13-1 of CEAR Document #391),[6] as well as concerns raised more broadly by Indigenous groups regarding the potential effects of marine shipping generally and marine shipping associated with the Project, when it suggested consultation regarding the established shipping lanes as a potential measure to reduce what the VFPA predicts will be up to a minor potential effect on Current Use (and associated cultural heritage, including intangible cultural heritage) as a result of Project-associated ship pass-bys in established shipping lanes..
- The VFPA is aware that Transport Canada, in the context of the TMX Project, offered to meet with Indigenous groups to discuss issues surrounding the location of the shipping lanes near Swiftsure Bank (NRC 2016).
- In its response to TC IR-08 and TC IR-09, Transport Canada cited their involvement in TMX-related measures that may "assist in responding to [RBT2] Project-related marine shipping concerns identified by Indigenous groups," including but not limited to the "Trans Mountain Indigenous Advisory Monitoring Committee" (CEAR Document #1147).
- Also in its response to TC IR-08 and TC IR-09, Transport Canada committed to facilitating a smooth transition of the Crown Consultation Coordinator role from the environmental assessment phase to the regulatory phase of the Project and anticipates continued participation in post-environmental assessment decision consultations related to marine shipping, as appropriate (where Transport Canada is not the "responsible authority") (CEAR Document #1147).

Given that the VFPA considered the concerns and suggested measures of Indigenous groups in the development of the VFPA's suggested measures, and that similar approaches to the management of effects on Current Use have been identified for other projects with marine shipping components (and have even been made conditions of project approvals, which indicates regulator confidence), the VFPA expects that the suggested measures will be effective at reducing, to a negligible level, the potentially measurable (i.e., up to minor) incremental effect of marine shipping associated with the Project on Current Use access and

[6] Per Table MSA IR13-1 (CEAR Document #391), measures regarding fishing at Swiftsure Bank were suggested by Ditidaht First Nation and Pacheedaht First Nation, with Pacheedaht First Nation specifically referencing the location of the outbound shipping lane.

navigation, in, through, and adjacent to the marine shipping lanes (and associated cultural heritage effects, including intangible cultural heritage).

Part 4 – Discuss how the mitigation measures will mitigate the potential adverse effects of marine shipping associated with the proposed Project considering that the mitigation measures are reliant on entities outside the care and control of the Proponent.

As reviewed in Part 1 of this response, the VFPA conducted its assessment of potential effects of marine shipping associated with the Project according to the *Updated EIS Guidelines*, which clearly state that jurisdiction for marine shipping associated with the Project lay with the federal government.

As reviewed in Part 2 of this response, these measures, which were suggested by the VFPA for consideration by the federal government for use in federal programs and activities, appear to fit well with federal initiatives that are already underway. The VFPA expects to actively participate in federal initiatives that are relevant to marine shipping associated with the Project, as a key stakeholder.

Part 3 of this response explains how the suggested measures are expected to mitigate the potential adverse effects of marine shipping associated with the Project on Current Use by explaining why the VFPA is of the view that the suggested measures will be effective.

IR10-18 Current Use of Lands and Resources for Traditional Purposes – Mitigation Measures, Clarification

Information Source(s)

Marine Shipping Addendum: Executive Summary, p. 15 Section 9.5.5.3

Transport Canada Submission to the Review Panel (CEAR Doc#580)

Context

In the Executive Summary of the Marine Shipping Supplemental Report, the Proponent suggested the "development of a marine shipping activities communication plan and consultation with affected Aboriginal groups concerning the outbound international shipping lane location" as a possible mitigation measure.

However, in Section 9.5.5.3 of the Marine Shipping Addendum, the Proponent indicated it did not carry out an assessment of the potential environmental effects of marine shipping associated with the proposed Project occurring outside of Canada, in accordance with the requirements of CEAA 2012.

Clarification is required as to the extent of the consultation.

Information Request

Clarify the extent of the consultation activities for the development of a marine shipping communication plan concerning the outbound international shipping lane location and if Indigenous groups outside of Canada would be included.

Clarify what regulatory authorities, Indigenous groups and stakeholders would be consulted.

VFPA Response

The VFPA notes that the information request appears to combine two separate mitigation measures suggested by the VFPA in Section 9.5.6 of the Marine Shipping Addendum (MSA). To clarify, the mitigation measures identified in the Executive Summary of the MSA, and quoted in the context to the information request, in fact reflect two separate mitigation measures suggested by the VFPA in Section 9.5.6 of the MSA. The first suggested measure relates to consultation on the development of a potential marine shipping activities communication plan. The second suggested measure relates to consultation with affected Indigenous groups to identify measures that would reduce the impact of the international

shipping lanes, and specifically the outbound shipping lane, which is the lane located in Canadian waters.[1]

In the response to IR10-17, the VFPA identified the regulatory authorities that the VFPA has engaged in discussion of both the suggested measures (i.e., Transport Canada, subsequent to Transport Canada's submission referenced in the information sources to the information request, CEAR Document #580[2]). The VFPA expects to play a key stakeholder role in further discussions between federal government agencies and other regulatory authorities, Indigenous groups, and stakeholders regarding the suggested measures and their relationship to other federal initiatives pertaining to marine shipping that the federal government has announced subsequent to the submission of the MSA, and is in the process of implementing.

With specific regard to the extent of consultation activities concerning the outbound shipping lane location, based on the VFPA's discussions with Transport Canada to date, it is the VFPA's understanding that Transport Canada would continue to lead consultation activities (as discussed in IR10-17) on behalf of the federal government, and that, accordingly, the extent of consultation activities with other regulatory authorities, Indigenous groups, and stakeholders will be guided by Transport Canada on behalf of the federal government. The VFPA is therefore not in a position to identify what other regulatory authorities, Indigenous groups, or stakeholders would be consulted.

[1] The reference to the outbound shipping lane being in Canadian waters is germane to information contained within the context to the information request, which notes that the VFPA indicated in Section 9.5.5.3 of the MSA that it did not carry out an assessment of the potential environmental effects of marine shipping associated with the proposed Project occurring outside of Canada, in accordance with the requirements of the *Canadian Environmental Assessment Act*, 2012 (*CEAA* 2012). The VFPA wishes to clarify that the specific requirement of *CEAA* 2012 to which this relates is subsection 5(1)(c), which states: "with respect to aboriginal peoples, *an effect occurring in Canada* of any change that may be caused to the environment on: [among other factors] (iii) the current use of lands and resources for traditional purposes" (emphasis added).

[2] CEAR Document #580 From Transport Canada to the Review Panel re: Comments on the information relating to the environmental assessment of the Roberts Bank Terminal 2 Project.

IR10-19 Current Use of Lands and Resources for Traditional Purposes – Mitigation Measures

Information Source(s)

Marine Shipping Addendum: Section 9.5.5.1

Proponent Response to Follow-Up Additional Information Requirements of February 24, 2016 (CEAR Doc#391): IR13

Context

In response to additional information requirement #13 from the Canadian Environmental Assessment Agency (CEAR Doc#391), the Proponent submitted a list of mitigation measures proposed by Indigenous groups related to potential adverse effects of the proposed Project – including marine shipping associated with the Project – on potential or established Aboriginal and Treaty rights and related interests.

Clarification is required on the applicability and effectiveness of these measures intended to mitigate the potential effects of the marine shipping associated with the Project. The clarification pertains to Current Use related to access to preferred sites, availability and quality of resources and quality of the current use experience.

Information Request

Provide a discussion of the measures proposed by Indigenous groups to mitigate potential impacts on asserted or established Aboriginal and Treaty rights and related interests that could be used to mitigate potential effects on current use resulting from the marine shipping associated with the proposed Project.

VFPA Response

The VFPA wishes to clarify that MSA IR-13, referenced in the information sources to this information request, asked that VFPA provide "a table of mitigation measures proposed by Aboriginal groups related to potential adverse impacts of the Project—including marine shipping associated with the Project—on potential or established Aboriginal and Treaty rights and related interests." The provided table (Table MSA IR13-1 of CEAR Document #391[1]) presents measures suggested by Table 1-C Indigenous groups. For Table 1-D Indigenous groups, refer to Additional Information to the Marine Shipping Addendum – Musqueam First

[1] CEAR Document #391 From Port Metro Vancouver to the Canadian Environmental Assessment Agency re: Marine Shipping Addendum Completeness Review - Responses to Additional Information Requirements (See Reference Document #386).

Nation and Tsleil-Waututh Nation (AIMSA) Section 7.4 and 7.8.3 (no specific measures were suggested; CEAR Document ##572[2]).

In the context of Marine Shipping Addendum (MSA) Section 9.5, the VFPA *first* considered the measures suggested by Indigenous groups in relation to potential effects of marine shipping associated with the Project on the current use of land and resources for traditional purposes (Current Use). The suggested measures for Current Use are presented in MSA Section 9.5.6, and are the same as the measures identified in MSA Section 9.5.11.3 with regard to potential adverse impacts of marine shipping associated with the Project on the exercise of rights.

Part 3 of the response to IR10-17 discusses how the concerns (and potential mitigation measures) identified by Indigenous groups to the VFPA in relation to marine shipping associated with the Project were factored into the two measures suggested by the VFPA to reduce, to a negligible level, the potentially small (up to minor) incremental effect on access to Current Use locations (and potential 'knock-on' cultural heritage effects) as a result of ship pass-bys. In addition, the response to IR10-13 provides a discussion of the VFPA's thresholds of acceptance for measuring effects on access as a result of ship pass-bys (and the linked response to IR10-16), and the responses to IR10-15 and IR10-22 regarding the VFPA's approach to the assessment of potential effects on cultural heritage.

As potential interactions between marine shipping associated with the Project (i.e., routine vessel transit) and Current Use related to the availability or quality of Current Use resources or quality of Current Use experience (other than knock-on cultural heritage effects linked to potential access effects) were not predicted to be measurable before the application of mitigation, they were therefore not considered further in the assessment as per the methodology adopted for Section 5 environmental effects (i.e., because they were predicted to be negligible before the application of mitigation, mitigation was not required).

The VFPA notes that, while no measurable interactions were identified with regard to availability or quality of Current Use resources or quality of Current Use experience (other than knock-on cultural heritage effects related to potential access effects), the VFPA expects that the suggested measures, which are consultative and collaborative in nature, have the potential to assist with monitoring these negligible predictions, as well as the measurable predictions related to access as a result of ship pass-bys and associated cultural heritage considerations.

[2] CEAR Document #572 From the Vancouver Fraser Port Authority to the Review Panel re: Response to the Additional Information to the Marine Shipping Addendum on the Musqueam First Nation and Tsleil-Waututh Nation requested by the Canadian Environmental Assessment Agency on January 13, 2016 (See Reference Document #383) (NOTE: Title of post updated February 16, 2017).

IR10-20 Current Use of Lands and Resources for Traditional Purposes – Follow-up Program

Information Source(s)

EIS Guidelines: Section 11.4

Marine Shipping Addendum: Section 9.5.10

Context

In Section 9.5.10 of the Marine Shipping Addendum, the Proponent stated that since marine shipping associated with the proposed Project was not expected to result in any measurable or detectible residual effects to current use by Indigenous peoples, no specific follow-up measures were suggested.

Section 11.4 of the EIS Guidelines outlined the specific requirements needed in a follow-up program to verify the accuracy of the effects assessment and to determine the effectiveness of the measures implemented to mitigate any potential adverse effects of the Project.

Where the predictions of the effects assessment for the four indicators analyzed by the Proponent: access, availability and quality of resources and quality of the current use experience; and where the effectiveness of the proposed mitigation measures for the increase in ship pass-bys appears uncertain, a follow-up program would be required and be developed and implemented by Federal authorities.

Information Request

Describe the elements of the follow-up program the Proponent considers necessary to verify the accuracy of the conclusion that there will be no measurable or detectible residual effects of marine shipping associated with the proposed Project on current use by Indigenous peoples.

VFPA Response

A discussion of the anticipated effectiveness of the suggested mitigation measures for potential effects of marine shipping associated with the Project on the current use of land and resources for traditional purposes (Current Use) by Indigenous peoples is presented in the response to IR10-17.

As indicated in the responses to IR10-17 and IR10-18, the VFPA expects to play a key stakeholder role in further discussions between federal government agencies and other regulatory authorities, Indigenous groups, and stakeholders regarding the suggested mitigation measures and their relationship to other federal initiatives pertaining to marine shipping that the federal government has announced subsequent to the submission of the Marine Shipping Addendum and is in the process of implementing.

While confident that suggested measures would address any potential measurable effects, the VFPA will continue to work with all parties, as appropriate and as relevant to marine shipping associated with the Project, to determine the scope, responsibilities, and potential methods of mitigation measure implementation and follow-up program, should the need for a follow-up program be identified in the course of discussions with regulators, Indigenous groups, and stakeholders.

IR10-21 Physical and Cultural Heritage – Baseline Information, Effects Assessment: Physical and Cultural Heritage Sites

Information Source(s)

EIS Volume 4: Section 28; Appendix 28-A

EIS Volume 5: Section 32.2.4

Marine Shipping Addendum: Section 9.4.5.2; Section 9.4.5.3; Section 9.5.4; Figure 9.4-1; Figure 9.4-2

Parks Canada Submission to the Review Panel (CEAR Doc#549)

Review Panel Information Request Package 7 (CEAR Doc#1000): IR7-13 to IR7-23

Context

In the Marine Shipping Addendum, the Proponent provided physical and cultural heritage-related maps:

- Figure 9.4-1, indicating spatial boundaries for the archaeological and heritage resources assessment in the marine shipping area; and
- Figure 9.4-2, indicating the primary and secondary focus areas for the archaeological and heritage resources assessment in the marine shipping area in relation to wave effects.

However, there are no maps that indicate sites of physical or cultural importance to Indigenous peoples that may be affected by the proposed Project or marine shipping associated with the Project.

In their submissions to the Review Panel, some Indigenous groups raised concerns that sites of physical or cultural importance, such as house sites, seasonal sites, and place-names were not included in the EIS or the Marine Shipping Addendum. They considered that a clear understanding of physical and cultural resources, as well as their importance within the cultural landscape, was critical to properly assess the effects of the Project and marine shipping associated with the Project and in determining the potential significance of those effects. This included the inability to access these sites, which could potentially sever the transmission of place-based knowledge from generation to generation.

Further, Parks Canada raised the necessity for a clear understanding of potential effects on physical and cultural resources, their significance and required mitigations. In order to achieve the proper analysis, there was a need for the provision of a complete description and map of all Indigenous physical and cultural heritage sites.

In addition, some Indigenous groups stated that they were of the view that the Proponent did not outline adequate measures to mitigate the loss of these sites.

Information Request

Provide a complete description and maps showing sites of physical and cultural importance to Indigenous peoples located on the shores of the marine shipping area and in the shipping lanes for each group listed in Attachment 2. Include the names of the sites, where possible.

Any new data should be cross-referenced with existing data, such as the locations provided in the EIS (Sections 32.2.4 and Appendix 28-A; Section 3.2.1.1) and the Marine Shipping Addendum (Sections 9.5.4, 9.4.5.2 and 9.4.5.3) to ensure complete coverage of the physical and cultural heritage potential in the marine shipping area or the heritage resources regional assessment area for the proposed Project.

Present an assessment of the effects of the potential loss of sites of physical or cultural importance to Indigenous peoples resulting from natural and ship-wake waves greater than 10 cm. When responding to this request, the Proponent should include any relevant elements that will be covered in its responses to the wave environment requests of Package 7.

Provide information regarding any plans to mitigate the loss or deterioration of physical or cultural heritage sites occurring in the heritage resources regional assessment area of the marine shipping associated with the Project.

VFPA Response

Part 1 – Provide a complete description and maps showing sites of physical and cultural importance to Indigenous peoples located on the shores of the marine shipping area and in the shipping lanes for each group listed in Attachment 2. Include the names of the sites, where possible.

Any new data should be cross-referenced with existing data, such as the locations provided in the EIS (Sections 32.2.4 and Appendix 28-A; Section 3.2.1.1) and the Marine Shipping Addendum (Sections 9.5.4, 9.4.5.2 and 9.4.5.3) to ensure complete coverage of the physical and cultural heritage potential in the marine shipping area or the heritage resources regional assessment area for the proposed Project.

Group-specific descriptions of sites of importance, as identified by Indigenous groups to the VFPA (including sites such as house sites, seasonal sites, and place names), were provided in the baseline summaries of the current use of lands and resources for traditional purposes (Current Use) for each Indigenous group within EIS Section 32.2.4, Additional Information to the EIS – *WSÁNEĆ* Nation (AIEIS) Section 7.2.4 (CEAR Document #930[1]), Marine Shipping Addendum (MSA) Section 9.5.4, and Additional Information to the MSA – Musqueam First Nation and Tsleil-Waututh Nation (AIMSA) Section 7.2 (CEAR Document #572[2]). As explained

[1] CEAR Document #930 From the Vancouver Fraser Port Authority to the Review Panel re: Response to Additional Information on the WSÁNEC Nation requested by the Canadian Environmental Assessment Agency on January 13, 2016 (See Reference Document #383).
[2] CEAR Document #572 From the Vancouver Fraser Port Authority to the Review Panel re: Response to the Additional Information to the Marine Shipping Addendum on the Musqueam First Nation and Tsleil-Waututh Nation requested by the Canadian Environmental Assessment Agency on January 13, 2016 (See Reference Document #383) (NOTE: Title of post updated February 16, 2017).

in the VFPA's response to AIR-12.04.15-29 (CEAR Document #388[3]) relating to physical and cultural heritage, these descriptions were not confined to certain subsections within the summaries (i.e., "Other Cultural Considerations" or "Other Cultural Practices and Considerations"), based on Indigenous perspectives shared with the VFPA that all sites of use—past, present, future—are valued as integral to cultural continuity and sense of place and identity, and include sites where traditional or ancestral use (practices, traditions, and customs) continues to take place, such as marine harvesting sites.

For reasons described in the responses to IR10-06 and IR10-13, the VFPA is not in a position to provide maps or 'complete' descriptions of marine harvesting sites in the vicinity of the Project or in the marine shipping area for each Indigenous group listed in Attachment 2 to Information Request Package 10 (CEAR Document #1130[4]).[5] This applies to other sites of importance as well, such as those for non-consumptive uses or associated with spirituality and beliefs, like sacred tunnels.[6]

The VFPA notes that given the continuity of ancestral use over time by Indigenous groups and the importance of location to that use, specific sites for marine harvesting and other practices, traditions, and customs (such as house sites, seasonal sites, and named places) on the shores of the marine shipping area are likely to coincide with archaeological sites (as described in Section 28.0 of the EIS, Section 6.0 of the AIEIS, Section 9.4 of the MSA, and Section 6.0 of the AIMSA). Archaeological sites are an aspect of physical heritage that, as described in the response to IR10-15, help to define the cultural landscape of each Indigenous group, and that, as such, are a key component of how lands and resources are used and experienced culturally by Indigenous groups. The importance of all archaeological sites to Indigenous groups in terms of cultural continuity and sense of place and identity has been described in the response to IR10-23. As also described in that response, the VFPA is not in a position to disclose the precise location of archaeological sites, but has provided overview level mapping in Figure IR10-23-1 of that response. The VFPA is of the view that the spatial distribution of sites shown in this mapping is strongly indicative of the degree to which the entire shoreline and waters of the Salish Sea, as well as specific sites within this geographical context, have been and remain important to Indigenous groups as physical and cultural heritage.

As explained in Part 2 of the response to IR10-06 (and referenced in the response to IR10-13), the baseline summaries of information on each Indigenous group's use, including sites of importance, were shared with Indigenous groups for review and comment on the accuracy,

---

[3] CEAR Document #388 From Port Metro Vancouver to the Canadian Environmental Assessment Agency re: Completeness Review - Responses to Additional Information Requirements Follow-Up (See Reference Document # 345) including 22 Technical Data Reports.
[4] CEAR Document #1130 From the Review Panel to the Vancouver Fraser Port Authority re: Information Request Package 10.
[5] Refer to MSA Section 9.5.4.1 (MSA Figure 9.5-1A, p. 9.5-9) for a place name and reef net site map provided by Tsawout First Nation to the VFPA for inclusion in the MSA.
[6] The VFPA notes that sacred tunnels are the subject of the study prepared by Tsleil-Waututh Nation, "Intangible Cultural Heritage – Potential Impacts to Sacred Tunnels from the Proposed Roberts Bank Terminal 2 Project Report." Tsleil-Waututh Nation requested that this study be kept confidential under the Review Panel's confidentiality procedures (CEAR Document #1197). The VFPA notes that the Review Panel has agreed to keep this study confidential (CEAR Document #1222).

appropriateness, and completeness of the information prior to submission to the CEA Agency. No group requested that the VFPA include site-specific mapping as part of their baseline summary; however, the site-specific information (descriptions and mapping) was considered by the VFPA in its assessment of potential changes to Current Use, including access to locations and the ability to transmit place-based knowledge (see responses to IR10-06 (Part 3 and Part 4), IR10-07, IR10-08, IR10-13 (Part 3), IR10-14, IR10-15, and IR10-16).

To the extent that some Indigenous groups have raised concerns that sites of physical or cultural importance, such as house sites, seasonal sites, and place-names, were not included in the EIS or the MSA, the VFPA leaves it to the discretion of those Indigenous groups to provide this information (which could be sensitive or confidential) directly to the Review Panel for its consideration. As the VFPA has noted in Part 2 of the responses to IR10-06 and IR10-13, some Indigenous groups have already opted to submit descriptions and mapping directly to the Review Panel, including under the Review Panel's confidentiality procedures (e.g., Pacheedaht First Nation, Tsleil-Waututh Nation).

Part 2 – Present an assessment of the effects of the potential loss of sites of physical or cultural importance to Indigenous peoples resulting from natural and ship-wake waves greater than 10 cm. When responding to this request, the Proponent should include any relevant elements that will be covered in its responses to the wave environment requests of Package 7.

The VFPA notes that IR10-23 asks the VFPA to present an assessment of the effects of the potential loss or deterioration of archaeological sites, an aspect of physical heritage, resulting from natural and ship-wake waves greater than 10 cm, and further asks the VFPA to include any relevant elements covered in the VFPA's responses to the wave environment requests in Information Request Package 7.

The response to IR10-23 summarises the approach to assessing wake for the wave assessment presented in the *Preamble for IR7-13 to IR7-23 Wave Environment Information Requests* (CEAR Document #1141[7]), and concludes that, regardless of additional baseline information (i.e., maps of archaeological sites located on the shores of the marine shipping area), no measurable loss or deterioration of archaeological sites—all of which are considered by the VFPA to be sites of importance to Indigenous peoples—is predicted as a result of Project-associated ship-wake waves (the response to IR10-23 notes that Project-associated ship-wake waves were assessed in combination with natural waves, which were described in existing conditions, but the effects of natural waves were not assessed separately).

The conclusion of no measurable effects on this aspect of physical heritage remains unchanged from that presented in MSA Section 9.4. The conclusion presented in MSA Section 9.4 was considered in the Current Use assessment in MSA Section 9.5.5, and specifically in the discussion relating to potential effects on the quality of Current Use experience.

[7] CEAR Document #1141 From the Vancouver Fraser Port Authority to the Review Panel re: Responses to Information Requests IR2-01a, IR7-04, IR7-13 to IR7-23 (See Reference Documents #991 & #1000).

As described in Section 9.5.5.1 of the MSA ("Cultural Landscape Considerations," pp. 9.5-142 to 9.5-143), since incremental physical alteration of the landscape through potential loss or deterioration of archaeological sites was not anticipated as a result of Project-associated vessel wake, a change in how the landscape would be experienced culturally by Indigenous peoples through this pathway was considered to be negligible (before mitigation); however, as explained in responses to earlier information requests (i.e., AIR-12.04.15-29, AIR-12.04.15-30 of CEAR Document #388; IR10-08 and IR10-15), this was not the only pathway through which the VFPA considered potential effects of Project-associated vessel wake on the physical and cultural heritage of Indigenous peoples. The VFPA has also considered potential Project-associated vessel wake effects on Indigenous peoples' access to sites of physical and cultural importance (or physical and cultural heritage).

As described in MSA Section 9.5.5.1 (pp. 9.5-129 to 9.5-130), Project-associated vessel wake was not anticipated to have a potentially measurable effect on access to Current Use locations (i.e., all of which were considered by the VFPA to be sites of importance to Indigenous peoples), either along the shoreline or in open water in the marine shipping area. The VFPA has considered the responses to Information Request Package 7 in relation to this analysis and is of the view that those responses do not change this prediction.[8] As such, the potential effect on the transmission of Indigenous peoples' cultural heritage (place-based knowledge) associated with that access is also considered negligible. For a discussion of potentially measurable effects on access to Current Use locations (including sites of importance) as a result of displacement from ship pass-bys in the established shipping lanes, and potentially measurable effects on the transmission of Indigenous peoples' cultural heritage (place-based knowledge) linked to that access, refer to the responses to IR10-13 through IR10-16.

For the reasons presented in Part 1 of this response, the VFPA is of the view that it has sufficiently understood the importance of physical and cultural resources to Indigenous peoples, as well as their importance within the cultural landscape, and reflected this understanding in the group-specific baseline summaries in EIS Section 32.2.4, AIEIS Section 7.2.4, MSA Section 9.5.4, and AIMSA Section 7.2. For the reasons explained above in this part of the response, the VFPA is of the view that the effects of the potential loss of sites of physical and cultural importance to Indigenous peoples as a result of Project-associated vessel wake was sufficiently considered by the VFPA in the analysis of potential changes to Current Use presented in MSA Section 9.5.5 and AIMSA Section 7.3, and that the analysis in the responses to requests in Information Request Package 7 do not change the VFPA's predictions regarding potential physical and cultural heritage effects.

The VFPA recognises and respects that Indigenous groups may not agree with the VFPA's views, and leaves it to the discretion of Indigenous groups to provide their own analysis and

[8] The VFPA notes that the response to IR7-22 (CEAR Document #1141) explains that vessel wake from Project-associated vessels is not expected to introduce new navigational hazards for small-craft operators in any segment of the marine shipping area. This conclusion applies to Indigenous groups using small craft for traditional purposes to access and use sites of importance, which is consistent with the analysis in Section 9.5.5.1 of the MSA.

assessment of effects on their sites of physical and cultural importance directly to the Review Panel for its consideration.

Part 3 – Provide information regarding any plans to mitigate the loss or deterioration of physical or cultural heritage sites occurring in the heritage resources regional assessment area of the marine shipping associated with the Project.

The VFPA notes that IR10-23 asks the VFPA to describe any suggested measures to mitigate for the loss or deterioration of any archaeological sites resulting from natural and ship-wake waves greater than 10 cm. As no potentially measurable effects on archaeological sites are expected as a result of Project-associated ship-wake waves (refer to Part 2 of this response above), no mitigation measures have been suggested by the VFPA specifically in relation to the potential loss or deterioration of these sites of physical and cultural importance.

While potential effects on access to sites of physical and cultural importance are not anticipated as a result of Project-associated vessel wake, mitigation measures have been suggested by the VFPA in Section 9.5.6 of the MSA for potentially measurable effects on access to sites of physical and cultural importance as a result of Project-associated vessel pass-bys in established shipping lanes, and the potentially measurable associated effects on cultural heritage (place-based knowledge) associated with that access (as reviewed in Part 2 above). Refer to the responses to IR10-17 through IR10-20 for further details regarding these measures.

IR10-22 Cultural Heritage – Effects Assessment

Information Source(s)

EIS Volume 5: Section 32.2.6.4

Marine Shipping Addendum: Section 9.5.5.1; Section 9.4.5.2; Section 9.4.5.3

Proponent Response to Follow-Up Additional Information Requirements of December 4, 2015 (CEAR Doc#388): IR29

Proponent Response to Follow-Up Additional Information Requirements of February 24, 2016 (CEAR Doc#391): IR10

Context

The EIS suggests that alterations to the physical landscape over time influence how these landscapes are experienced culturally. The Proponent concluded that while there are existing effects to traditional activities, marine shipping associated with the proposed Project is not expected to measurably affect the existing quality of the current use experience within the marine shipping area through changes to light, noise, or air emissions, increased risk to safety on the water, or further erosion to sites of importance that help to define cultural landscapes.

The Agency noted that the Proponent addressed cultural effects, including intangible aspects, not with an analysis of effects on physical and cultural heritage but with an analysis of current use of lands and resources for traditional purposes. The Agency recognized that some baseline information was provided by the Proponent on cultural places, sites and features but requested an assessment of the environmental effects of marine shipping associated with the Project since no analysis was provided on cultural heritage.

In response, the Proponent reiterated the value of its 'proxy approach' by using the four indicators of access, availability and quality of resources, quality of experience and cultural aspects being evaluated under the quality of the current use experience. Changes in these indicators could reflect associated changes in use patterns such as avoidance of certain locations or the amount of time spent on the water or the land. Changes in experience, access to current use locations or availability or quality of current use resources could also lead to associated changes in cultural practices tied to the use of locations and resources. These include intangible cultural heritage considerations, such as the expression and transmission of cultural values or ways of knowing including environmental knowledge, language, laws, stories and spiritual beliefs. In addition, the Proponent's effects rating was applied equally to all Indigenous groups with reported use in the marine shipping area (Doc#391: IR10, p. 3).

Some participants, including Indigenous groups, have contested the Proponent's approach considering that an assessment of individual valued components such as the current use of lands and resources for traditional purposes is not equivalent to an assessment of cultural heritage. They consider that there was no baseline discussion of cultural heritage, no attempt to link it to the effects assessment, and no assessment of the Project's effects.

Some Indigenous groups have also contested the Proponent's conclusions with respect to the Project's effects on cultural heritage:

- The terms "negligible" and "minor" employed to measure Project-related effects to traditional use and access minimized the severity of cultural loss associated with Project-related effects to Traditional Use; and
- Effects on Traditional Use and access attributed to Project-related activities would result in interruptions to the transfer of knowledge to younger generations, connections to other traditional use sites and places of cultural importance, kinship ties, and social and trade networks, in turn leading to the fragmentation of the cultural landscape.

The information found in the description of existing conditions in the EIS and Marine Shipping Addendum needs to be carried forward for the analysis of effects of the Project and associated marine shipping on cultural heritage of Indigenous peoples, including intangible heritage.

Information Request

Provide an assessment of effects from the proposed Project and associated marine shipping on cultural heritage for each group listed in Attachment 2, including intangible cultural heritage.

In addition, include for each group potentially affected, mitigation measures and a determination of significance of residual effects on the following:

- Disruptions or loss of ceremonial and cultural practices;
- Disruption to sense of belonging, identity and spirituality resulting from the fragmentation of the cultural landscape.

VFPA Response

Group-specific assessments of potential effects from the proposed Project and marine shipping associated with the Project on the cultural heritage of each Indigenous group listed in Attachment 2 are presented in Appendix IR10-A (refer to lines IR10-08 and IR10-15 in each group's assessment table). These assessments consider the VFPA's response below.

In the response to AIR-12.04.15-29 (CEAR Document #388[1]), which is cited in the information sources and context to this information request, the VFPA employed the Canadian Environmental Assessment Agency's (CEA Agency's) *Technical Guidance for Assessing Physical and Cultural Heritage or any Structure, Site or Thing that is of Historical, Archaeological, Paleontological or Architectural Significance under the Canadian Environmental Assessment Act, 2012* (CEAA 2012 Technical Guidance; CEA Agency 2015) to support the approach applied to the assessment of cultural heritage within the assessment of the current use of lands and resources for traditional purposes (Current Use).

[1] CEAR Document #388 From Port Metro Vancouver to the Canadian Environmental Assessment Agency re: Completeness Review - Responses to Additional Information Requirements Follow-Up (See Reference Document # 345) including 22 Technical Data Reports.

According to the CEAA 2012 Technical Guidance, "a land or resource (e.g., an artifact, object or place) that is considered as heritage or any structure, site or thing is distinguished from other lands and resources by the value placed on it." The CEAA 2012 Technical Guidance also states that this value "originates from its:

- Association with one or more important aspects of human history or culture;
- Historical, archaeological, paleontological or architectural significance; and
- Association with a particular group's practices, traditions or customs" (CEA Agency 2015, p. 2).

The CEAA 2012 Technical Guidance goes on to explain that perceptions of heritage tend to be broad, encompassing a wide range of dimensions (e.g., social, economic, political, natural, and cultural), and include the concept of cultural landscapes, or "any geographical area that has been modified, influenced, or given special cultural meaning by people." With regard to Indigenous groups specifically, the CEAA 2012 Technical Guidance states that "lands and resources identified as heritage or any structure, site or thing may also fit under *current use of lands and resources for traditional purposes*" (emphasis added), while also noting that the "[s]piritual and cultural practices of Aboriginal Groups' are often integrally linked to specific locations and surrounding landscape features" (CEA Agency 2015, p. 3). Consequently, "[e]nvironmental effects resulting from a designated project may impact these places, which may in turn limit the ability of Aboriginal peoples to engage in their spiritual and cultural practices" (CEA Agency 2015, p. 5). The CEAA 2012 Technical Guidance also states that "Aboriginal traditional knowledge may provide important information on an Aboriginal group's connection to heritage or any structure, site or thing on a given landscape" (CEA Agency 2015, p. 8).

The VFPA notes that all lands and resources within traditional territories (or otherwise defined areas of use) were broadly identified by Indigenous groups as heritage, valued as integral to their practices, traditions, and customs, their cultural continuity, and sense of place and identity. The group-specific descriptions of lands (locations) and resources identified as important by Indigenous groups to the VFPA—provided throughout the baseline summaries of the Current Use within EIS Section 32.2.4, AIEIS Section 7.2.4, MSA Section 9.5.4, and AIMSA Section 7.2—reflect this broad understanding of heritage.

Potential direct effects of the Project and marine shipping associated with the Project on locations identified as important by Indigenous groups (including for ceremonial and cultural practices), in terms of access to and quality of use (experience) at those locations (as well as the availability and quality of resources at those locations), were in turn considered in relation to potential indirect effects on intangible cultural heritage, such as sense of belonging, identity, and spirituality associated with the cultural landscape (the meaning or value placed on the physical landscape). The visual resources assessment and archaeological and heritage resources assessment also considered elements of Indigenous heritage related to sense of place and identity, beliefs, landscapes, and cultural continuity, which were in turn carried forward in the Current Use assessment.

Several responses to requests in Information Request Package 10 have reviewed the VFPA's approach to the assessment of Current Use and associated effects on cultural heritage,

including intangible cultural heritage. In particular, refer to the responses to IR10-08, IR10-15, and IR10-21. As reviewed in those and other linked responses to requests within Information Request Package 10 (e.g., IR10-06, IR10-07, IR10-13, IR10-14, IR10-16), the VFPA acknowledges that the Project and marine shipping associated with the Project would take place within a context (including a cultural heritage context) that is already significantly affected; however, for reasons described in the responses to IR10-11, IR10-12, and IR10-17 through IR10-20, the VFPA is of the view that the potential effects of the Project and marine shipping associated with the Project can be effectively mitigated. Without a measurable residual effect from the Project or marine shipping associated with the Project, an evaluation of significance was not required.

The VFPA is of the view that the methods used to assess potential effects of the Project and marine shipping associated with the Project on cultural heritage, including intangible cultural heritage, were reasonable and consistent with the federal guidance referenced above.

IR10-23 Archaeological and Heritage Resources – Baseline Information, Effects Assessment: Archaeological Sites

Information Source(s)

Marine Shipping Addendum: Section 9.4; Section 9.4.5.3; Section 9.4.5.4; Figure 9.4-1; Figure 9.4-2; Figure 9.4-12; Figure 9.4-13; Figure 9.4-14

Review Panel Information Request Package 7 (CEAR Doc#1000): IR7-13 to IR7-23

Context

In the Marine Shipping Addendum, the Proponent provided several archaeological-related maps:

- Figures 9.4-1 and 9.4-2, indicating the spatial boundaries for archaeological resources assessment in the marine shipping area and
- Figures 9.4-12 to 9.4-14, indicating areas of archaeological potential within two kilometres of the marine shipping route for Saturna Island, the Victoria shoreline from Gordon Head to Ogden Point and, Stuart Island.

However, there is no identification of the locations of the archaeological sites discussed and listed in Sections 9.4.5.3 and 9.4.5.4 of the Marine Shipping Addendum on these maps, nor are these sites carried forward into the assessment of potential effects of marine shipping associated with the Project.

The information used by the Proponent and gathered from the Provincial Archaeology Branch did not describe the importance of each site to inform the assessment. There is a need to consult with the British Columbia Ministry of Forests, Lands and Natural Resource Operations and Rural Development to incorporate this information.

Information Request

Provide maps of the archaeological sites located on the shores of the marine shipping area that cross-reference the locations provided in the Marine Shipping Addendum (Sections 9.4.5.3 and 9.4.5.4).

Present an assessment of the effects of the potential loss or deterioration of archaeological sites resulting from natural and ship-wake waves greater than 10 cm, and considered important by Indigenous peoples and the British Columbia Ministry of Forests, Lands and Natural Resource Operations and Rural Development. When responding to this request, the Proponent should include any relevant elements that will be covered in its responses to the wave environment requests of Package 7.

Describe any suggested measures to mitigate for the loss or deterioration of any of those archaeological sites.

VFPA Response

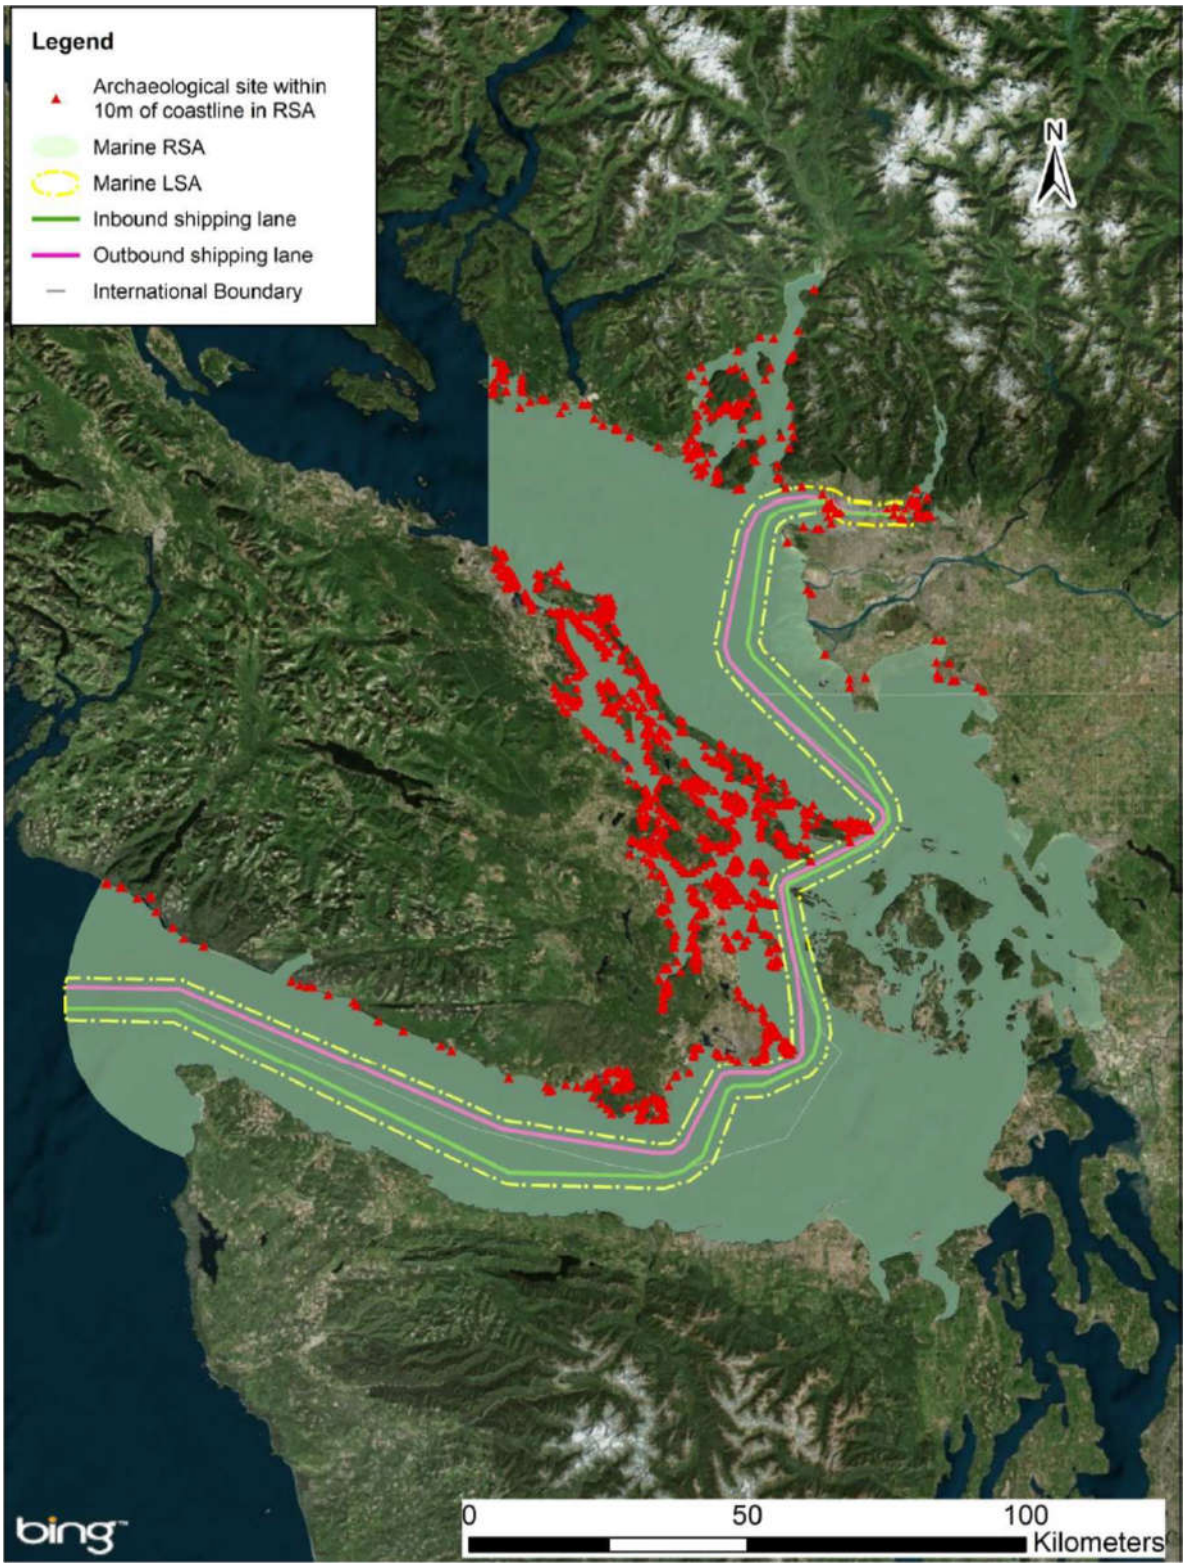
Provide maps of the archaeological sites located on the shores of the marine shipping area that cross-reference the locations provided in the Marine Shipping Addendum (Sections 9.4.5.3 and 9.4.5.4).

The specific locations of archaeological sites in British Columbia are kept confidential in order to prevent sites from being looted or damaged intentionally. Further, archaeological site information accessed from the B.C. Archaeology Branch Remote Access to Archaeological Data (RAAD) system are only to be shared on a limited basis with third parties.

The Ministry of Forests, Lands, Natural Resource Operations and Rural Development's "Terms and Conditions Concerning Access to Archaeological and Heritage Site Information" state "Digital data is copyright of the Province of British Columbia and files cannot be copied or re-distributed without the permission of the Archaeology Branch. Information may be copied for internal use. A user may present information to a third party or parties who have a need to know."[1]

Further, archaeological site information for Sections 9.4.5.3 and 9.4.5.4 of the Marine Shipping Addendum (MSA, CEAR Document #316[2]) was accessed under a signed information sharing agreement detailing the terms and conditions of website usage, information access and distribution. Specifically, the information was accessed under the following condition:

> "Archaeological information will not be shared or redistributed to a third party without the written permission of the Branch. Under this agreement, sharing of archaeological information is permitted when the third party is:
>
> - A representative of a First Nation government organization.
> - A third party with a registered interest in the land (e.g., land owner, tenure holder, licensee).
> - An agent of a third party with a registered interest in the land (e.g., realtor, notary public). In all cases, archaeological information that is shared with a third party will be accompanied by this disclaimer: *Archaeological information must not be shared or redistributed without the permission of the Archaeology Branch.*"



[1] Limits on the distribution of archaeological information are specified in the Archaeology Branch Policy "Access to Provincial Archaeological Information" (May 2012). The Branch acknowledges that user groups requiring access to archaeological information include Federal Government Branches, specifically "Staff supporting land and resource management planning and authorisations"; however, "Archaeological information is not placed in the public domain and site specific information is not distributed to the general public as this information may be misused to damage archaeological sites." Further details are provided at http://www.for.gov.bc.ca/ftp/archaeology/external/!publish/web/Access_to_Information_Policy_May_2012.pdf.

[2] CEAR Document #316 Marine Shipping Addendum to the Environmental Impact Statement (see reference document # 181).

The VFPA wishes to maintain the confidentiality of the maps of archaeological sites requested by the Panel. If the Panel believes further information (beyond the overview information provided below) is necessary, the VFPA would only proceed following a confidentiality request to the Panel.

From an overview perspective, the mapped information is similar to that shown in a figure contained in an archaeological overview assessment report prepared by Millennia (2015) for a different project in the same region in British Columbia as the RBT2 Project and in a similar timeframe as the RBT2 EIS. This figure from that report is reproduced (unamended) in **Figure IR10-23-1**.

Figure IR10-23-1 Submerged Sites and Terrestrial Sites within 10 m of the Shoreline in the Regional Study Area as Presented in Millennia (2015)

Source: Millennia 2015, p. 26.

Present an assessment of the effects of the potential loss or deterioration of archaeological sites resulting from natural and ship-wake waves greater than 10 cm, and considered important by Indigenous peoples and the British Columbia Ministry of Forests, Lands and Natural Resource Operations and Rural Development. When responding to this request, the Proponent should include any relevant elements that will be covered in its responses to the wave environment requests of Package 7.

Additional information regarding the wave environment effects assessment, provided in the responses for IR7-13 to IR7-23 of CEAR Document #1141[3], does not change the conclusions regarding potential effects on archaeological and heritage resources. The response to IR7-18 (CEAR Document #1141), concluded that except during calm conditions, vessel wake would be indistinguishable from the spectrum of wind-generated waves at most shoreline locations. In addition, from the point of view of physical processes at a shoreline, wake-generated waves arriving at a shoreline during calm periods have the same interaction as waves arriving during non-calm periods. Although the probability slightly increases from Project-associated vessels (0.034% during calm conditions, as shown in Table IR7-21-1 of CEAR Document #1141), wake-generated waves from Project-associated vessels will not result in a change to the shorelines in Zones 1, 2, and 3 due to the similarity of interaction at the shoreline from wake-generated and wind-generated waves. As such, all potential incremental effects on archaeological and heritage resources related to Project-associated vessel transit activities, including shoreline erosion from vessel wake greater than 10 cm, remain negligible, as wake waves predicted from Project-associated marine vessel traffic are predicted to be within the range of natural conditions.

Natural waves were described in existing conditions, and considered in combination with wake waves from marine shipping associated with the Project; the effects of natural waves alone were not assessed.

All archaeological sites are considered important to Indigenous groups in terms of cultural continuity and sense of place and identity; thus, this response does not distinguish any archaeological sites that are not important to Indigenous groups.

All archaeological sites within Provincial jurisdiction (on private and provincial Crown land) are protected under the *Heritage Conservation Act* and are assumed to be valued by the British Columbia Ministry of Forests, Lands, Natural Resource Operations and Rural Development which administers this legislation. This provincial ministry does not manage archaeological and heritage resources present on federal lands (e.g., First Nation reserves, National Defence lands, and federal parks) but may include information on these archaeological resources in the Provincial registry of archaeological sites (RAAD) in order to assist in the management of provincial archaeological sites, e.g., in order to model and identify areas of archaeological potential. This response does not distinguish which archaeological sites may be important to the ministry because on December 19, 2017, the

[3] CEAR Document #1141 From the Vancouver Fraser Port Authority to the Review Panel re: Responses to Information Requests IR2-01a, IR7-04, IR7-13 to IR7-23 (See Reference Documents #991 & #1000).

Panel requested the ministry to "Provide a ranking of importance of 'high' and 'moderate' for the archeological sites referred to by the Proponent in the EIS and Marine Shipping Addendum." In its response to the Panel's request, the ministry notes (see CEAR Document #1227[4]) site significance is not an attribute it records within its inventory of archaeological sites.

Describe any suggested measures to mitigate for the loss or deterioration of any of those archaeological sites.

As potential incremental effects on archaeological and heritage resources related to Project-associated vessel transit activities, including shoreline erosion from vessel wake greater than 10 cm, remain negligible (as per the EIS), the VFPA does not expect there will be loss or deterioration of archaeological and heritage resources from marine shipping associated with the Project that requires mitigation.

IR10-24 Archaeological and Heritage Resources – Chance Find Procedure

Information Source(s)

EIS Volume 4: Section 28.7; Section 28.12; Section 33.2; Section 33.3.4

Parks Canada Submission to the Review Panel (CEAR Doc#549)

Context

In Section 28.7 of the EIS, the Proponent proposed to include a "chance find procedure" as part of its Archaeological Monitoring and Management Plan, in order to manage any inadvertent discovery of cultural materials or artifacts, such as fish trap stakes, during construction. In Section 33.2, the Proponent stated that the Archaeological Monitoring and Management Plan would be developed and finalized closer to the start of the construction phase for the proposed Project.

In their submission to the Review Panel, Parks Canada considered that details concerning the chance find procedure were lacking. More information regarding the chance find procedure is required.

Information Request

Provide details on the chance find procedure proposed by the Proponent; management guidelines for workers; relations with relevant authorities, such as the British Columbia Ministry of Forests, Lands and Natural Resource Operations and Rural Development, Parks Canada and others; and participation of Indigenous groups.

VFPA Response

Overview

The chance find procedure, identified in EIS Section 28.12, will be part of the Project's Archaeological Monitoring and Management Plan, as outlined in the Construction Environmental Management Plans (EMPs; EIS Section 33.3). The Construction EMP will consist of a series of stand-alone sub-plans to be developed prior to commencement of construction. The plans and their sub-plans will be updated during the course of the construction work by the Environmental Monitor to reflect evolving site conditions and any applicable learnings. The Archaeological Monitoring and Management Plan will be developed in consultation with appropriate agencies (e.g., B.C. Archaeology Branch, Parks Canada) and Indigenous groups. The chance find procedure, as described below, will be incorporated into the body of, or an appendix to, the Archaeological Monitoring and Management Plan.

The purpose of the chance find procedure is to provide direction to Project personnel and contractors to appropriately manage any inadvertent discovery of cultural materials or

artifacts, such as fish trap stakes, during construction. The chance find procedure will address procedures for the inadvertent discovery of other types of cultural remains, including the unlikely discovery of human remains. This stop-work procedure involves seeking professional archaeological advice when suspected cultural materials or artifacts are found during construction, and includes steps such as notifying and consulting regulators and Indigenous groups, assessing the find for significance, determining mitigation strategies on a case-by-case basis, and providing appropriate protection and documentation.

Elements of the Chance Find Procedure

Regulatory Context and Jurisdiction

The chance find procedure will provide an overview of the regulatory context, which depends greatly on which level of government controls the use of the land in which Project effects may occur. Potential Project effect #1 as identified in EIS Section 28.6 (crushing or biological degradation of potential fish trap stakes) and #2 (reduced access for future archaeological study or preservation of potential fish trap stakes) were identified on federal lands in proximity to the north end of the widened causeway.

Archaeological materials or sites on federal lands and lands under water fall under the jurisdiction of the minister responsible for Parks Canada Agency (S.4(1) B) and the *Parks Canada Agency Act*, SC 1998, c. 31. Guidelines provided by the federal government pertaining to archaeological materials or sites include *Parks Canada Guidelines for the Management of Archaeological Resources* (Parks Canada 2005) and *Canada Research and Collection Permit Process* (Government of Canada 2017) as well as the Treasury Board's *Guide to the Management of Moveable Heritage Assets* (2008). Parks Canada refers to certain aspects of provincial laws "for guidance as a matter of practicality" (Parks Canada 2005), and generally accepts as best practice the archaeological standards established by the B.C. Archaeology Branch. These include the *Archaeological Impact Assessment Guidelines* (MFLNRO 1998) and the *Found Human Remains Policy* (MFLNRO n.d.).

Potential Project effect #3 (exposure of potential fish trap stakes) may occur on provincial land (a historic tidal channel that formerly drained a portion of Canoe Passage). Archaeological sites on provincial (and private) land are managed by the Ministry of Forests, Lands and Natural Resource Operations and Rural Development under the B.C. *Heritage Conservation Act*.

Archaeological and Cultural Resources in Project Area

The chance find procedure will provide an overview of the expected archaeological and cultural resources in the Project area. This description will focus on sites that may be immediately visible to a non-archaeologist, including the following:

- Surface features such as fish weirs and traps. Fish weirs and traps typically comprise linear arrangements of wooden stakes interwoven with brush or mats to trap fish on the falling tide. Look for short stubs of small-diameter branches in linear arrangements in the intertidal zone or along the river bank. Other typical surface features include

depressions created by former habitations, earthen fortifications, rock cairns, clam gardens, and burned rock.

- Waterlogged deposits or wet sites, which are locations containing organic artifacts (i.e., wood, bark, or plant fibre), that are preserved due to their presence in an anaerobic (oxygen free) environment. Look for fragmentary baskets, rope, carved wood implements (e.g., wedges), and similar objects eroding from intertidal silts or clay deposits.
- Shell middens, which are cultural accumulations of shells, stratified in white and grey layers, mixed with streaks of charcoal, ash, and other debris. Shell middens were also commonly used as human burial sites. Look for accumulations of layered, crushed, and whole shell possibly mixed with charcoal, black soil, and other food remains (i.e., fish bone).
- Artifacts that have become visible on the land surface owing to erosion or recent land-altering activity. These may be produced in a variety of materials such as stone, bone, antler, wood, or shell. Look for obviously formed stone objects or pieces of stone that have been chipped or ground in a non-natural way. Bone and antler artifacts will exhibit obvious modification (i.e., cutting, shaping, incision, etc.).
- Buried cultural remains that may be sighted in a cut-bank, excavation, eroded shoreline, or other exposed deposit.

Photographic examples of the above-noted archaeological and cultural heritage resources will be provided in an appendix to the chance find procedure. **Figure IR10-24-1** provides an example of a fish weir.

Figure IR10-24-1 Intertidal Fish Weir

Source: Lepofsky and Caldwell 2013.

Specific Actions

The chance find procedure will outline the following specific actions to be taken by personnel or contractors that inadvertently discover archaeological or heritage resources:

1. Stop work immediately – All construction activity in the vicinity of the chance find is to cease immediately.
    - Notify the Terminal Operator, Infrastructure Developer site/project manager, and VFPA contact as soon as possible.
    - Avoid disturbing the site. Erect barriers (e.g., pylons) or flag off the affected location to prevent further disturbance.
    - If in a busy location, assign an employee to stand guard.
    - Ensure that cultural materials are treated with full dignity and respect by all those at the scene.
2. Contact the project archaeologist and applicable regulator.
3. In the case of human remains, contact the RCMP immediately.
4. Record the find location, and leave all cultural materials, including human remains, in place.

5. Potential significance of the cultural materials will be assessed and mitigative options will be identified by the project archaeologist.
6. If the significance of the cultural materials is judged to be sufficient to warrant further action and they cannot be avoided, then the project archaeologist in consultation with the regulator and representatives of local Indigenous groups will determine the appropriate course of action.
7. In the case of human remains, if the remains are assessed to be archaeological, then the regulator and local Indigenous groups will be consulted to determine how to handle them. Options could include avoidance or respectful removal and reburial.

Notifications

The chance find procedure will also include a contact list of all appropriate contacts (e.g., project manager, project archaeologist, federal and provincial regulators, local Indigenous groups, RCMP, and coroner), a Record of Contact Form, and a Report Form. The individual reporting the chance find will be directed to complete an Archaeological Chance Find Procedure Record of Contact form which will be attached as an appendix to the chance find procedure. The project archaeologist will be directed to complete the Archaeological Chance Find Report Form, which will be attached as an appendix to the chance find procedure and inform the Project when work may resume in the cordoned-off area of the site.

The Archaeological Monitoring and Management Plan, including the chance find procedure, will describe the protocols to be followed in communicating with the VFPA, Parks Canada, the B.C. Archaeology Branch, Tsawwassen First Nation, and other Indigenous groups as necessary. For example, the B.C. Archaeology Branch would be advised of any cultural materials observed on provincial lands during implementation of proposed mitigation measure #2 (annually monitor tidal erosion) (EIS Section 28.7.2) and any archaeological sampling and investigation would be undertaken under a provincial heritage inspection permit and related heritage inspection permits issued by Indigenous groups. The B.C. Archaeology Branch would not necessarily be advised of chance finds on federal lands.

Tsawwassen First Nation (Natural Resources Department Manager) and Musqueam First Nation (Archaeologist) would be notified in the event of a chance find. Additional Indigenous groups would be notified of a chance find, and/or invited to participate in follow-up, as arranged in advance by protocol developed in consultation between the Indigenous groups and the VFPA, or as judged necessary by the Project's professional archaeologist.

Awareness and Implementation of the Chance Find Procedure

The construction phase Environmental Training Plan (EIS Section 33.3.2) will set out training objectives and identify the mechanisms to be used to keep Project personnel (including sub-contractors) informed about key environmental considerations relevant to Project construction, including heritage or cultural characteristics or requirements. All Project personnel will be required to complete environmental and safety orientation and awareness training prior to commencing work on the Project site. The training will include training requirements of the Construction EMP sub-plans, including the Archaeological Monitoring and

Management Plan containing the chance find procedure. Project personnel (including sub-contractors) will be reminded of the chance find procedure at opportunities such as daily safety tailgate meetings and other safety/environmental training opportunities.

IR10-25 Archaeological and Heritage Resources – Mitigation Measures: Indigenous Input

Information Source(s)

EIS Volume 4: Section 28.7; Appendix 28-A

Marine Shipping Addendum: Section 9.4.7

Parks Canada Submission to the Review Panel (CEAR Doc#549)

Review Panel Information Request Package 7 (CEAR Doc#1000): IR7-13 to IR7-23

Context

In Section 28.7 of the EIS, the Proponent stated that the selection of mitigation measures was informed by:

- a review of mitigation measures and follow-up programs undertaken for past developments at Roberts Bank;
- recommendations from the Archeological Overview Assessment (Appendix 28-A of the EIS);
- internal evaluation of technical and economic feasibility; and
- consultation with Indigenous groups.

In Section 9.4.7 of the Marine Shipping Addendum, the Proponent did not suggest mitigation measures for marine shipping associated with the Project.

Information Request

Provide a summary of the information regarding mitigation measures provided by Indigenous groups living or using the marine shipping area or the archaeological and heritage resources regional assessment area for the proposed Project.

Discuss how that information would be used for the development of mitigation measures, including for any standard operating practices and standard management practices developed to specifically avoid or reduce the potential adverse effects of the proposed Project or marine shipping associated with the Project on the archeological and heritage resources of Indigenous peoples.

When responding to this request, the Proponent should include any relevant elements that will be covered in its responses to the wave environment requests of Package 7.

VFPA Response

Provide a summary of the information regarding mitigation measures provided by Indigenous groups living or using the marine shipping area or the archaeological and heritage resources regional assessment area for the proposed Project.

A review of all comments provided by Indigenous groups since initial consultation, and since submission of the Marine Shipping Addendum, has been conducted to identify any suggested mitigation measures related to potential effects of marine shipping associated with the Project (vessel transits) on archaeological and heritage resources.

Comments focused on the RBT2 terminal construction site were provided by the following Indigenous groups:

1. Tsawwassen First Nation requested the opportunity to review and comment on any 'Chance Find Procedure' that is developed for the Project area (see response to IR10-24).
2. Musqueam First Nation provided comments related to the construction area, including interest in proposed archaeological monitoring. Musqueam First Nation also requested more detail on the methodology for monitoring and expressed concern that the proposed test trench mitigation may not detect archaeological materials or features.
3. Tseycum First Nation expressed interest in monitoring, and suggested having an Indigenous observer on site during construction to avoid disturbance to gravesites and artifacts. Tseycum First Nation noted the proximity of the Project to burial cairns at Point Roberts and the likelihood of archaeological potential in proximity to the Project. Tseycum suggested scanning the beach for artifacts. They also requested involvement in cultural/archaeological work undertaken in the Project area.

Comments focused on the marine shipping were provided by the following Indigenous groups:

4. Beecher Bay First Nation suggested an additional mitigation measure: that the speed for container ships be reduced to enhance situational awareness, which could reduce wave actions and thereby reduce potential adverse impacts to archaeological and heritage resources if predicted to occur.
5. Esquimalt First Nation requested the opportunity to suggest additional mitigation measures if proposed measures prove inadequate; for example, altering the location of the marine shipping lanes for the Project.
6. Lyackson First Nation suggested a slow bell be introduced to help mitigate effects.
7. Tsawout First Nation requested funding to protect shoreline sites and assist with reburial and ceremonies that follow. Tsawout members noted the occurrence of super high tides in winter, which combine with effects from ferries and anchors to erode the land and expose gravesites on the island. Suggested protection measures included rip-rap reinforcement of shorelines.

Discuss how that information would be used for the development of mitigation measures, including for any standard operating practices and standard management practices developed to specifically avoid or reduce the potential adverse effects of the proposed Project or marine shipping associated with the Project on the archeological and heritage resources of Indigenous peoples.

Regarding Tsawwassen First Nation's request (#1 above) for the opportunity to review and comment on the 'Chance Find Procedure', the VFPA indicated in EIS Table 33-1 (EIS Section 33.3) the commitment to consult and/or provide review functions to the Canadian Environmental Assessment Agency, B.C. Archaeology Branch, and appropriate Indigenous groups, including Tsawwassen First Nation, during the development of the Archaeological Monitoring and Management Plan.

Musqueam First Nation's comment (#2 above) was received early in the consultation process. Subsequent to receiving this comment, the VFPA incorporated archaeological monitoring, and involvement of Indigenous groups in implementation of this mitigation, into the EIS within the mitigation proposed (EIS Section 28.7). This comment is specific to the monitoring for Project-related effects. There are no predicted measurable effects from marine shipping associated with the Project, and therefore no archaeological monitoring proposed.

Regarding Tseycum First Nation's comments (#3 above), there are no predicted effects of the Project that would affect archaeological resources on beaches at Roberts Bank or Point Roberts. The suggested measure would also not apply to the Marine Shipping Addendum, as there are no measurable effects predicted from marine shipping associated with the Project, and therefore mitigation is not required.

Mitigation measures suggested by Beecher Bay, Esquimalt, Lyackson, and Tsawout First Nations were considered, but are not viewed as necessary as there are no measurable effects predicted from marine shipping associated with the Project, and therefore mitigation is not required.

When responding to this request, the Proponent should include any relevant elements that will be covered in its responses to the wave environment requests of Package 7.

The response to IR10-23 reiterates that there are no changes to the wave assessment, nor the archaeological and heritage resources assessment, as a result of information requests on the wave environment in Package 7 (see responses to IR7-13 to -23 of CEAR Document #1141[1]). Therefore, no mitigation is required for potential marine shipping wake wave effects on archaeological and heritage resources.

Technical Guidance for Assessing the Current Use of Lands and Resources for Traditional Purposes under the *Canadian Environmental Assessment Act, 2012*

Context

The Agency's technical guidance for *"Assessing the Current Use of Lands and Resources for Traditional Purposes under the Canadian Environmental Assessment Act, 2012"* defines "current use" as uses by Aboriginal peoples that are actively being carried out at the time of the assessment and uses that are likely to occur in the reasonably foreseeable future provided that they have continuity with traditional practices, traditions or customs.

Several Indigenous groups expressed concerns that the potential future use of lands and resources was not considered in the assessment of effects for the proposed Project.

For example, in Section 32 of the EIS, the Proponent stated that since the current harvesting of marine mammals by Indigenous groups did not appear to be occurring within the marine mammal local assessment area, the Project was not expected to have an effect on the current use of marine mammals. However, in their submissions to the Review Panel, T'Sou-ke First Nation and Pacheedaht First Nation considered whales as an integral part of their customs, practices, traditions and spirituality. Any resulting effects from increased marine shipping should be considered as a significant adverse effect to T'sou-ke First Nation's and Pacheedaht First Nation's ongoing relationship with whales. Further, Tsleil-Waututh First Nation expressed the view that the environmental assessment process is not designed to capture or appreciate the deep cultural or spiritual connection that past, current, and future members may have with marine mammals.

Other examples of potential effects on future use of traditional lands and resources have been identified, such as the ecosystem restoration activities by T'Sou-ke First Nation, or the

imposed moratorium on Eulachon considered by Musqueam Indian Band as an adverse effect. Malahat First Nation stated that the appearance - or lack thereof - of current harvesting activities by Indigenous groups was not representative of the overall temporal scale or frequency of traditional use practices, or the level of importance placed upon patterns and areas of use. Malahat First Nation stated that it was of the view that future use remains an integral part of the holistic nature of traditional use and must be considered in assessing Project-related effects to traditional use and access.

These examples illustrate that any effect of the Project on habitats, marine resources, traditional sites or existing conditions could potentially impinge on future activities of Indigenous groups or desires to protect or enhance the environment for future uses.

Consideration of reasonably foreseeable future activities of Indigenous groups is required in the Project effects assessment.

Information Request

Provide an assessment of the potential effects of the proposed Project on the reasonably foreseeable future current use activities that have been identified by Indigenous groups listed in Attachment 2, and that have continuity with traditional practices, traditions or customs.

At minimum, the assessment should address:

- Potential loss of any future opportunities in terms of socio-economic conditions;
- Effects on environmental stewardship activities for activities presently being refrained for conservation purposes, such as traditional harvesting of marine mammals, fish harvesting and traditional fishing practices; and
- Potential loss of practices due to restricted access to seafood, marine mammals and plants traditionally harvested and reasonably expected to resume in the future.

VFPA Response

Given that the information request pertains to the potential effects of the proposed Project on reasonably foreseeable future use activities for traditional purposes, the VFPA's response to this information request is limited to Indigenous groups listed in Table 1-A and Table 1-B of Attachment 2.

The VFPA notes that the context to the information request cites to the Canadian Environmental Assessment Agency's (CEA Agency's) technical guidance for *"Assessing the Current Use of Lands and Resources for Traditional Purposes under the* Canadian Environmental Assessment Act, 2012,*"* (CEA Agency 2015) and specifically the guidance document's definition of the current use of lands and resources for traditional purposes (Current Use) (i.e., uses by Indigenous peoples that are actively being carried out at the time of the assessment and uses that are likely to occur in the reasonably foreseeable future provided that they have continuity with traditional practices, traditions, or customs). This guidance document was issued in draft form for public comment in December 2015, several months after the submission of the EIS, and is understood to remain in draft form at the time of this submission.

While the guidance document was not available to the VFPA at the time the EIS was prepared, as reviewed in Part 1 of the response to IR10-06, the baseline information summarised for

each Table 1-A Indigenous group in the EIS (EIS Section 32.2.4) and each Table 1-B Indigenous group in the Additional Information to the EIS – *WSÁNEĆ* Nation (AIEIS) (Section 7.2.4; CEAR Document #930[1]) is not limited to uses by Indigenous groups that were actively being carried out at the time of the assessment. Rather, the baseline summaries also contain information, as provided by Indigenous groups, regarding each Indigenous groups' past use, their perspectives on existing effects that have constrained their use over time and that therefore limit their present use, and their expressed desire to increase or restore use in the future. Accordingly, the VFPA was working with a definition of Current Use that understood the continuity between past, present, and future use for traditional purposes. As Part 1 of the response to IR10-06 states, based on information provided in the introduction to Section 32.2.4 of the EIS:

> *"Indigenous groups had advised the VFPA that existing levels of use (or lack of use) may not be indicative of desired future use, particularly where there are ongoing concerns with existing conditions of access, availability and quality of resources, or quality of experience (p. 32-25). Where information about desired or aspirational use was provided, the VFPA included it in the existing conditions summaries…, and considered this desired or aspirational use in the effects assessment."*

The VFPA considered desired use in the Current Use effects assessment precisely because it recognised, as expressed in the context to the information request, that "any effect of the Project on habitats, marine resources, traditional sites or existing conditions could potentially impinge on future activities of Indigenous groups or desires to protect or enhance the environment for future uses." Moreover, the VFPA took a more cautious approach with regard to desired use than indicated by the CEA Agency's technical guidance document on Current Use (quoted above), insofar as the VFPA assumed that use reported as carried out in the past, even if it was not evident or clear that the use was being actively carried out at present, could potentially be carried out again in the future, and hence subject to potential incremental effects as a result of the Project.

For example, in Section 7.2.6 the AIEIS, the VFPA predicted negligible potential Project-related effects on Current Use by *WSÁNEĆ*, as reports of their active use of the Project area (per their baseline summaries in AIEIS Section 7.2.4) was limited or absent; however, the VFPA considered the potential for future use based on reports of past (ancestral) patterns of use (p. 89):

> *"In the context of consultation with the VFPA,* WSÁNEĆ *have indicated a desire to restore or increase traditional use in the area of the Project. Should use in the vicinity of the Project area be restored or increased, there is a high degree of confidence that the mitigation measures identified in Section 32.2.7 of the EIS would also be effective at addressing any potential effects to future use of*

[1] CEAR Document #930 From the Vancouver Fraser Port Authority to the Review Panel re: Response to Additional Information on the WSÁNEC Nation requested by the Canadian Environmental Assessment Agency on January 13, 2016 (See Reference Document #383).

the area of the Project by Tsawout First Nation, Pauquachin First Nation, Tsartlip First Nation, Tseycum First Nation, and Malahat Nation."

As the VFPA has explained in the responses to IR10-06, IR10-07, and IR10-08 (and summarised in the response to IR10-09), the measures listed in Section 32.2.7 of the EIS for all four Current Use indicators were conservatively proposed to address potential Project-related effects on Current Use not only for potential effects predicted as measurable by the VFPA (before mitigation), but also for potential effects predicted by the VFPA as non-measurable (i.e., negligible, before mitigation), in part in recognition of the desire expressed by Table 1-A and Table 1-B Indigenous groups to increase or restore their use of lands and resources at Roberts Bank for traditional purposes. These measures include ongoing consultation between the VFPA and Table 1-A and Table 1-B Indigenous groups, regardless of the amount of present-day Current Use activities, to continue discussion of the mitigation measures, the follow-up program, and implementation of Project-related benefits (refer to the responses to IR10-11 and IR10-12).

For the foregoing reasons, the VFPA is of the view that:

- The assessment of the potential effects of the proposed Project on Current Use, as presented in Section 32.0 of the EIS and Section 7.0 of the AIEIS and reiterated in the responses to IR10-06, IR10-07, and IR10-08, has sufficiently considered reasonably foreseeable future use activities by Table 1-A and Table 1-B Indigenous groups; and
- The VFPA's predictions of Project-related effects on the Current Use of Table 1-A and Table 1-B Indigenous groups, as identified in the group-specific assessments in Appendix IR10-A for the responses to IR10-06, IR10-07, and IR10-08, apply to reasonably foreseeable future use access, resource availability and quality, and quality of experience for each Indigenous group and remain unchanged (i.e., negligible for all Indigenous groups after mitigation, including ongoing consultation; refer to IR10-11 and IR10-12 responses).

IR10-27 Effects Assessment Socio-economic Conditions – Commercial Ventures for Indigenous Peoples

Information Source(s)

EIS Volume 1: Appendix 7.2-B

EIS Volume 5: Section 32.2.4

Marine Shipping Addendum: Appendix 5-B

Context

Indigenous groups expressed concerns that effects from the proposed Project on existing commercial activities and potential future commercial ventures were not considered in the Proponent's assessment.

For instance, Lyackson First Nation expressed concerns about the potential adverse economic effects of increased lighting on their commercial campground located on the eastern side of Le'eyqsun. Dididaht First Nation was concerned that marine shipping could affect the wilderness character of their ecotourism business with respect to visual and auditory disturbances. Their members were further concerned that an accident, resulting in an oil, fuel, or other cargo contaminant spill, might affect Ditidaht First Nation's ability to develop and maintain its ecotourism industry, which is a major source of economic development.

Esquimalt Nation, Pauquachin First Nation, the First Nations of the Maa-Nulth Treaty Society, and Scia'new (Beecher Bay) First Nation have expressed concerns regarding potential effects to Indigenous economic interests and requested that these interests on the development of lands or revenues from business be included in the assessment.

There is a need to assess how commercial ventures could be affected by the Project.

Information Request

Provide an assessment of the potential effects of the proposed Project on existing business ventures that have been identified by Indigenous groups listed in Tables 1-A and 1-B.

Include consideration of the loss of any existing business and any identified future opportunity in terms of socioeconomic conditions.

VFPA Response

The EIS assessed Project effects on businesses, including Indigenous businesses, where a potential Project interaction with, and effect on businesses was identified based on pathways analysis methodology as described in EIS Section 8.1.5. Indigenous businesses assessed in the EIS include businesses identified by Table 1-A and Table 1-B Indigenous groups through baseline data collection and consultation for the Project. Project effects on businesses,

including those identified by Indigenous groups, were assessed in the labour market, economic development, and marine commercial use (MCU) assessments in EIS Sections 19.0, 20.0, 21.0, and in the MCU AIEIS Section 3.1[1]. The visual quality assessment (EIS Section 25.0) also considered and assessed locations of known Indigenous commercial activity. The results of these assessments with respect to effects on Indigenous businesses are summarised below to address this information request.

EIS Section 19.0 Labour Market and EIS Section 20.0 Economic Development

As described in EIS Section 19.7.2, changes in indirect and induced employment opportunities during Project construction and operation would have a positive effect to contracting businesses, including Indigenous businesses. These changes would occur as a result of companies supplying goods and services during Project construction and operation, and through induced employment generated within consumer businesses accessed by Project-associated direct and indirect workers during Project construction and operation.

As identified in EIS Section 20.6.2, the Project will generate contracting opportunities during Project construction and operation, resulting in positive effects to businesses, including Indigenous businesses, such as increased revenue and employment as described above. Based on available information, known existing and planned Indigenous business profiles for Table 1-A and 1-B Indigenous groups are described, related to Project spending and procurement requirements, in EIS Section 20.5.2.2, EIS Appendix 18-A, and EIS Appendix 18-B. Measures to support potential contracting and revenue opportunities for Table 1-A and Table 1-B Indigenous groups are outlined in EIS Section 32.3.3.3 and AIEIS Section 7.3.3.3 and include the following:

- Continue to abide by the Memorandum of Agreement in place with Tsawwassen First Nation to accommodate Tsawwassen First Nation for effects from the Project (EIS Section 32.3.3.3);
- Work with Musqueam First Nation to draft Terms of Reference to guide further discussions related to accommodation for effects from the Project (EIS Section 32.3.3.3);
- Work with Lake Cowichan First Nation and Tseycum First Nation to implement commitments within their respective negotiated Mutual Benefit Agreements;
- Continue discussions with groups, including Semiahmoo First Nation, Tsleil-Waututh Nation, Stz'uminus First Nation, Cowichan Tribes, Halalt First Nation, Lyackson First Nation, Penelakut Tribe, Métis Nation British Columbia, Hwlitsum, Tsawout First Nation, Pauquachin First Nation, Tsartlip First Nation, and Malahat Nation on Mutual Benefit Agreements; and
- Assist all Indigenous groups identified above in accessing potential economic opportunities resulting from the Project, including contracting opportunities and construction employment opportunities. To support these Indigenous groups in

[1] The AIEIS (Additional Information to the Environmental Impact Statement – *W*SÁNEĆ Nation; CEAR Document #930) did not include an assessment of Project effects on economic development as effects to economic development as outlined in the EIS were deemed to be not applicable to the Indigenous groups comprising *W*SÁNEĆ Nation.

preparing for employment opportunities, the VFPA will provide training funding. To support the development and implementation of plans to facilitate access to such Project-related benefits, the VFPA will continue engagement, initiated in December 2014, with these groups (EIS Section 32.3.3.3; AIEIS Section 7.3.3.3).

As described in EIS Section 20.6.1, changes in construction aggregate availability and price due to increased demand for Project construction aggregate would have a negligible effect on aggregate availability and price in the local assessment area. As a result, effects to businesses within the local assessment area (including Indigenous businesses) demanding or supplying aggregate and sand is not anticipated.

EIS Section 21.0 Marine Commercial Use

As described in EIS Section 21.7, potential Project effects on MCU sub-components, including change in seafood harvesting access and resource availability; change in marine fish harvesting area, access, resource availability, and harvesting revenue; change in guided sport fishing area, access, resource availability, and revenue; and marine-based tourism, were identified as negligible. Therefore, effects on associated marine commercial Indigenous businesses due to these changes are not anticipated.

As indicated in EIS Section 21.7.5 and further discussed in IR7-33 of CEAR Document #1172[2], the proposed navigational closure expansion during construction and operation has the potential to affect the MCU sub-component "change in area, harvest, and revenue" for commercial crab harvesting. Commercial crab harvesting is also influenced by a variety of other factors.[3] The potential displacement could affect businesses holding commercial crab licences in Crab Management Area (CMA) I (where the proposed navigational closure expansion for construction and operation is located) and in other CMAs by relocating harvesting activity out of the proposed navigational closure expansion. This could increase harvesting competition among commercial harvesters[4]. Additionally, as indicated in EIS Section 21.1.7.5, commercial harvesters who choose to harvest in other parts of CMA I or re-select their harvest area may experience higher fuel costs if the new locations are farther from their place of moorage than the proposed navigational closure expansion. EIS Section 21.5.2 and AIEIS Section 3.1.1.2 identify CMA I communal commercial crab licences held by Table 1-A and Table 1-B Indigenous groups, including Tsawwassen First Nation, Tsleil-

[2] CEAR Document #1172 From the Vancouver Fraser Port Authority to the Review Panel re: Responses to Information Requests IR5-50, IR7-07, IR7-33, IR7-34, IR7-35, and IR7-43 (See Reference Documents #975 and #1000).

[3] Factors, including fluctuations in crab productivity, movement of crabs to baited traps, ability to harvest in other areas, fluctuation in market price for Dungeness crab, and individual decisions by commercial crab harvesters on preferred harvesting locations, will further influence the potential adjustments to commercial crab harvesting and landing values from the proposed navigational closure expansion. Based on variety of factors, it is difficult to quantifiably estimate, or predict, reductions in landing values due to the decrease in the size of the fishing areas in sub-area 29-6 and sub-area 29-7 directly attributable to the navigational closure expansion. See the response to IR7-33 (CEAR Document #1172) for further discussion.

[4] For additional discussion on mitigation for the potential increase in competition amongst commercial and recreational user groups and Indigenous groups from the perspective of mitigating effects on Current Use, see response to IR10-07 (CEAR Document #1275).

Waututh Nation, and Salish Seas LP (an equal partnership between Tsleil-Waututh Nation, Musqueam First Nation, and Tla'amin, who are neither Table 1-A or Table 1-B) and Malahat Nation. Commercial crab licences could also be held individually by Indigenous persons who are members of Table 1-A or 1-B Indigenous groups.

With the implementation of mitigation measures as outlined in EIS Section 21.8, the Project would have a residual adverse effect on commercial crab harvest businesses that would be not significant (as described in EIS Sections 21.9 and 21.10). Residual cumulative adverse effects on commercial crab harvesting businesses would also be not significant (as described in EIS Section 21.12.2). Residual Project and cumulative effects could be experienced by Indigenous commercial crab harvesting businesses with commercial crab harvesting licences for CMA I and those with commercial crab harvesting licences in other CMAs that may experience competition and displacement effects from commercial crab harvester relocation.

EIS Section 25.0 Visual Resources

Through consultation prior to the development of the EIS, Lyackson First Nation raised concerns about potential adverse economic effects of Project-related lighting on their commercial campground on the eastern side of Le'eyqsun (Valdes Island) (see Table 24 in EIS Appendix 7.2-B). To address this concern, N-POR12 at Le'eyqsun was included in the analysis undertaken as part of the light study (EIS Section 9.4) and visual resources assessment (EIS Section 25.0). No change in zone classification (i.e., general light condition) for sky glow or light trespass was identified at N-POR12 (EIS Section 9.4.8.2). Based on the results presented in EIS Section 25.6.2, the Project is not expected to result in adverse effects to the Lyackson commercial campground.

Conclusion

In summary, the Project has the potential to positively affect Indigenous businesses—including businesses pertaining to Table 1-A and 1-B Indigenous groups—who secure materials, goods, and services contracting opportunities during construction and operation. Positive effects include changes in revenues and employment. The Project could potentially result in a not significant residual effect on Indigenous commercial crab harvesting businesses who hold CMA I licences, as well as those who hold commercial licences in other CMAs that may experience increased competition from relocation of commercial harvesting activity out of CMA I as a result of the Project (as described in EIS Sections 21.9 and 21.10).

IR10-28 Effects Assessment Socio-economic Conditions – Labour Market for Indigenous Peoples

Information Source(s)

EIS Volume 4: Section 21.5.1.1

EIS Volume 5: Appendix 29-F; Appendix 29-G

Marine Shipping Addendum: Appendix 5-B

Proponent Response to Additional Information Requirements of July 31, 2015 (CEAR Doc#314): IR1

Context

In Appendices 29-F and 29-G of the EIS as well as in the Proponent's response to follow-up information requirement #1 from the Canadian Environmental Assessment Agency (CEAR Doc#314), the Proponent indicated that there will be no change to the environment that will result in adverse residual effects to the labour market for Indigenous peoples. No justification was provided.

One participant considered that changes to the environment could impact the labour market for Indigenous peoples if the tourism or commercial-marine sectors were affected. In addition, Section 21.5.1.1 of the EIS provided details on the crab industry. However, it does not give adequate information on how the negative effects on Dungeness crab harvesting will impact the Indigenous labour market. Another example is with Lyackson First Nation. They have started to hold cultural revival sessions, workshops and retreats on Vancouver Island, the Southern Gulf Islands and the Lower Mainland, investing financially and with the intention to pursue these activities.

A detailed breakdown and analysis of what effects are anticipated from the proposed Project and marine shipping associated with the Project on the existing labour market of Indigenous groups is needed.

Information Request

Provide a detailed breakdown of the anticipated effects on the participation of Indigenous Peoples in the labour market resulting from changes in the environment from the proposed Project and marine shipping associated with the Project.

VFPA Response

The RBT2 assessment considered Project effects on the participation of Indigenous people in the labour market where a potential Project interaction with key aspects of the labour market was identified based on pathways analysis methodology as described in EIS Section 8.1.5 and MSA Section 6.1. These effects were addressed in the labour market valued component (VC)

(considered within the EIS), the marine commercial use VC (considered within the EIS, Additional Information to the Environmental Impact Statement – *W*SÁNEĆ Nation (AIEIS; CEAR Document #930[1]), the Marine Shipping Addendum (MSA), and Additional Information to the Marine Shipping Addendum – Musqueam First Nation and Tsleil-Waututh Nation (AIMSA; CEAR Document #572[2])). These effects are summarised below. As the assessment considered Project effects on Indigenous peoples in the labour market, including the effects on marine commercial use, further assessment of Project effects on the participation of Indigenous peoples in the labour market is not required.

EIS Section 19.0 Labour Market

Based on available information, baseline information related to Indigenous participation in the labour force is described in EIS Section 19.6. The following potential effects to the labour market, as identified in EIS Section 19.7, could in turn positively affect labour market participation, including participation of Indigenous peoples:

- Change in direct, indirect, and induced employment; and
- Training opportunities.

Direct employment opportunities generated in the construction sector of the labour market during Project construction (including those pertaining to labourers, trades and operators, and managers and technical professionals during construction) and within the marine terminal and transportation sector of the labour market during Project operations (including those pertaining to vessel and yard longshore workers, maintenance and security, administration and management) would be available to Indigenous people in the local assessment area labour force (as described in the labour market VC baseline in EIS Section 19.6). In addition, the Project would generate employment opportunities that would be available to Indigenous people in the local assessment area labour force, including through the following:

- Industries supplying goods and services to terminal construction; and
- Economic activity generated by spending of Project associated employment income.

Project hiring, and training processes and practices that recognise and directly address systemic challenges facing Indigenous workers in the local assessment area could be expected to support employment and longer work attachments for Indigenous workers in connection with the Project. Measures to support employment opportunities for Indigenous people are outlined in EIS Section 32.3.3.3 and AIEIS Section 7.3.3.3 and include the following:

[1] CEAR Document #930 From the Vancouver Fraser Port Authority to the Review Panel re: Response to Additional Information on the WSÁNEC Nation requested by the Canadian Environmental Assessment Agency on January 13, 2016 (See Reference Document #383).
[2] CEAR Document #572 From the Vancouver Fraser Port Authority to the Review Panel re: Response to the Additional Information to the Marine Shipping Addendum on the Musqueam First Nation and Tsleil-Waututh Nation requested by the Canadian Environmental Assessment Agency on January 13, 2016 (See Reference Document #383) (NOTE: Title of post updated February 16, 2017).

- Continue to abide by the Memorandum of Agreement in place with Tsawwassen First Nation to accommodate Tsawwassen First Nation for effects from the project (EIS Section 32.3.3.3);
- Work with Musqueam First Nation to draft Terms of Reference to guide further discussions related to accommodation for effects from the Project (EIS Section 32.3.3.3);
- Work with Lake Cowichan First Nation and Tseycum First Nation to implement commitments within their respective negotiated Mutual Benefit Agreements;
- Continue discussions with groups including Semiahmoo First Nation, Tsleil-Waututh Nation, Stz'uminus First Nation, Cowichan Tribes, Halalt First Nation, Lyackson First Nation, Penelakut Tribe, Métis Nation British Columbia, Hwlitsum, Tsawout First Nation, Pauquachin First Nation, Tsartlip First Nation, and Malahat Nation on Mutual Benefit Agreements; and
- Assist all Indigenous groups identified above in accessing potential economic opportunities resulting from the Project, including contracting opportunities as well as construction employment opportunities. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding. To support the development and implementation of plans to facilitate access to such Project-related benefits, the VFPA will continue engagement, initiated in December 2014, with these groups (EIS Section 32.3.3.3; AIEIS Section 7.3.3.3).

In summary, potential Project effects to the Indigenous labour market are expected to be beneficial.

EIS Section 21.0 Marine Commercial Use; AIEIS Section 3.0 Marine Commercial Use; MSA Section 9.2 Marine Commercial Use; AIMSA Section 4.0 Marine Commercial Use

As reflected in EIS Section 21.0 and AIEIS Section 3.0, Indigenous people are employed through vessels licensed under communal commercial or commercial Crab Management Area (CMA) I licences as the licence holder or as employees working on vessels harvesting under these licences, such as deckhands. As indicated in the responses to IR10-27 and IR7-33 of CEAR Document #1172[3], and described in EIS Section 21.7.5 and AIEIS Section 3.2, the proposed navigational closure expansion during Project construction and operations could have a non-significant residual effect on commercial seafood (crab) harvest and revenues for commercial crab harvesting business entities holding CMA I crab licences,[4] as well as commercial crab harvesting businesses who hold licences for other CMAs, and who may experience increased harvesting competition if there is relocation of commercial harvesting activity out of CMA I. Depending on the extent of revenue effects, employment within certain businesses may be affected. However, effects on local labour force participation, including Indigenous groups' participation in the regional commercial crab and fishing harvesting sector of the labour market, are not anticipated given the small number of potentially affected

[3] CEAR Document #1172 From the Vancouver Fraser Port Authority to the Review Panel re: Responses to Information Requests IR5-50, IR7-07, IR7-33, IR7-34, IR7-35, and IR7-43 (See Reference Documents #975 and #1000).
[4] The Project navigational closure expansion is located within CMA I.

harvesters compared to the size of the regional commercial crab and fishing industry. This effect is assumed to apply to all CMA I and other CMA commercial crab harvesters and licence holders, including Indigenous communal commercial licence holders, and Indigenous persons holding CMA I and other commercial licences.

As described in EIS Section 21.7 and AIEIS Section 3.2, all other potential Project effects on marine commercial use were identified as negligible. All potential effects to marine commercial use from Project-associated marine shipping as identified in the MSA Section 9.2.5.1 and AIMSA Section 4.2 were also identified as negligible. In summary, these negligible effects would not adversely affect Indigenous groups' participation in the marine commercial use sectors of the labour market.

Tsawwassen First Nation[1] Group-specific Baseline Information Process Summary (EIS and MSA)

Environmental Impact Statement (EIS)

In discussions with Tsawwassen First Nation, the VFPA was advised to use information contained in the *"Tsawwassen First Nation Final Agreement"* (Tsawwassen First Nation et al. 2009, 2010), and in documents prepared pursuant to that agreement, including the *"Tsawwassen First Nation Harvest Agreement"* (Government of Canada et al. 2010), and available annual post-season fishing reports prepared since the Tsawwassen First Nation Final Agreement came into effect (LGL Limited and Tsawwassen Fisheries Department 2010, 2011, 2012, 2013). Information was additionally collected through 11 Project-specific workshops or interviews with Tsawwassen Elders and resource users (e.g., Tsawwassen First Nation Elders 2012a, 2012b, 2013, 2014, Tsawwassen First Nation Fishers 2012a, 2012b, 2013, Tsawwassen First Nation Member 2014b, Tsawwassen First Nation Hunters 2014a, 2014b, Tsawwassen First Nation Member 2014a) and ongoing consultation between the VFPA and Tsawwassen First Nation regarding the Project.

Economic and socio-economic information for the Tsawwassen First Nation community was collected through an economic and socio-community study and assessment conducted by the VFPA's consultant, with input from Tsawwassen First Nation regarding the scope and terms of reference for the study (EIS Appendix 18-A). The VFPA worked closely with Tsawwassen First Nation to develop and obtain approval on the terms of reference for the study. Meetings were held to obtain feedback and input from Tsawwassen First Nation on the existing socio-economic conditions of the Tsawwassen First Nation community through meetings in late 2013 and interviews in April 2014. A Community Researcher from Tsawwassen First Nation participated on the socio-economic assessment team for the First Nations Community Assessment for the RBT2 Project Environmental Assessment.

Information regarding Tsawwassen First Nation's reliance on traditional foods was provided directly by Tsawwassen First Nation following requests by the VFPA, and information provided verbally during interviews to collect Indigenous traditional knowledge. Two community meetings were held with the Tsawwassen First Nation community to identify Project-related issues and concerns related to health. Information gathered at these meetings informed the scope of the human health assessment). These meetings were held in November 2013 and April 2014. The Human Health Risk Assessment (HHRA) and Health Impact Assessment (HIA) relied on information provided directly from Tsawwassen First Nation during consultation and through a community well-being study provided by Tsawwassen First Nation to the VFPA, as well as other published information and data sources related to health in B.C. Indigenous communities.

On July 15, 2014, the VFPA provided Tsawwassen First Nation with a draft *"Tsawwassen First Nation Community Profile"* for review and comment. Comments were received from

[1] Indigenous group listed in Table 1-A (EIS) and Table 1-C (MSA) of Attachment 2 to IR Package 10.

Tsawwassen First Nation on July 30, 2014, and the draft was revised to reflect the input provided by Tsawwassen First Nation.

On November 26, 2014, the VFPA met with Tsawwassen First Nation to provide information regarding the assessment of potential Project effects and cumulative effects on Aboriginal and treaty rights and related interests and current use of lands and resources for traditional purposes (Current Use), and to identify any additional information to inform the assessment. The presentation and discussion included content regarding the proposed methodology for this assessment, the VFPA's understanding of existing conditions, based on the information provided by Tsawwassen, and preliminary conclusions of the assessment.

On December 9, 2014, the VFPA provided Tsawwassen First Nation with draft existing conditions sections of the EIS, including *"Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Lands and Resources for Traditional Purposes"* and *"Aboriginal Commercial Fishing and Seafood Harvesting,"* as well as a report titled *"Existing Socio-economic Conditions of Tsawwassen First Nation Community."* The VFPA requested that Tsawwassen confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final EIS. Comments on the draft sections and report were received from Tsawwassen on January 11, 2015, and changes made to the sections as appropriate. The VFPA provided Tsawwassen with a revised version of "Existing Socio-economic Conditions of Tsawwassen First Nation Community" on January 21, 2015, incorporating Tsawwassen First Nation's comments on the draft document, and Tsawwassen confirmed that they were satisfied with the revised report.

On April 2, 2015, the VFPA provided Tsawwassen First Nation with a copy of the EIS.

Marine Shipping Addendum (MSA)

On May 25, 2015, the VFPA wrote a letter to Tsawwassen First Nation explaining that the VFPA is considering effects from marine shipping associated with the Project on the Current Use by Tsawwassen First Nation. The VFPA requested information from Tsawwassen First Nation regarding Current Use, fisheries, or potential effects associated with marine shipping. In the letter, the VFPA explained the intent to rely on existing information to inform the assessment of potential effects of marine shipping associated with the Project, including the *"Tsawwassen First Nation Final Agreement"* and documents prepared pursuant to that agreement, and the Trans Mountain Expansion Project Application to the National Energy Board. The VFPA requested any additional information from Tsawwassen First Nation that may help to inform the assessment.

On July 20, 2015, the VFPA sent a draft document titled *Roberts Bank Terminal 2 Project Marine Shipping Study: Tsawwassen First Nation – Current Use of Lands and Resources for Traditional Purposes – Summary of Existing Conditions*. The VFPA requested that Tsawwassen First Nation confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final MSA. Tsawwassen First Nation provided comments on the draft summary in a meeting in July 2015, and phone call in September 2015, and changes were made to the draft summary as appropriate.

On November 9, 2015 the VFPA provided Tsawwassen First Nation with a copy of the MSA.

Tsawwassen First Nation Group-specific Index and Assessment Tables

Table IR10-A1-1 Tsawwassen First Nation Index Table

EIS / MSA Section	Original EIS / MSA Information Presentation (Aggregated / Disaggregated)	Tsawwassen First Nation
EIS Section 32.1.1 Aboriginal Groups (Community profiles)	Disaggregated	32.1.1.1 Tsawwassen First Nation, pp. 32-4 to 32-5
EIS Section 32.2.4 Existing Conditions (Past, present, desired future use and list of rights identified by Indigenous Groups as affected)	Disaggregated	32.2.4.1 Tsawwassen First Nation, pp. 32-25 to 32-42
EIS Section 32.2.6 Future Conditions With the Project – Potential Project-Related Effects (on Current Use)	Overall level of potential effect on each Indigenous group's Current Use identified in introduction to section. For each Current Use indicator, only groups for whom a measurable potential effect was predicted were disaggregated from the aggregated discussion.	32.2.6 Future Conditions With the Project – Potential Project-Related Effects, p. 32-100, para. 4 (measurable potential effect) 32.2.6.1 (Access), p. 32-102, para. 2, 3, 4; p. 32-103, para. 3; p. 32-104, para. 1, 2, 4, 5, differential effect (i.e., measurable)[2] 32.2.6.2 (Resource availability), no differential effect 32.2.6.3 (Resource quality), no differential effect 32.2.6.4 (Experiential quality), differential effect tied to access effect; no differential effect otherwise
EIS Section 32.2.7 Mitigation Measures	For each Current Use indicator, only groups for whom a measurable potential effect was predicted were identified specifically in the aggregated discussion.	32.2.7.1 (Access), p. 32-116, p. 32-117, differential measures 32.2.7.2 (Resource availability), no differential measures 32.2.7.3 (Resource quality), no differential measures 32.2.7.4 (Experiential quality), no differential measures beyond those for the differential access effect
EIS Section 32.2.8 Residual Effects / Section 32.2.9 Cumulative Effects	N/A (no residual effects predicted)	N/A (no residual effects predicted)
EIS Section 32.3.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups	Disaggregated	32.3.2.1 Potential Impacts on the Exercise of Treaty Rights – Tsawwassen First Nation, pp. 32-126 to 32-129
EIS Section 32.3.3 Mitigation Measures	Disaggregated (but limited to groups with measurable potential impacts) Note: Measures identified are exactly the same as for Current Use (across all indicators, given that they were to be considered in the aggregate).	32.3.3.1 Summary of Mitigation Measures for Potential Adverse Impacts on the Exercise of Asserted or Established Aboriginal and Treaty Rights (same as Current use measures in Section 32.2.7), p. 32-146 32.3.3.2 Summary of Mitigation Measures Suggested by Aboriginal Groups, p. 32-147 32.3.3.3 Other Accommodations, p. 32-148 32.3.3.4 Outstanding Aboriginal Issues, no outstanding issues
EIS IR/AIR	N/A	AIR-12.04.15-30 Rationale for (Current Use) Conclusions, Table AIR30-1 Rationale for Predicted Level of Effect, Tsawwassen First Nation, p. 6 (CEAR Document #388)
MSA Section 9.5.4 Existing Conditions	Disaggregated	9.5.4.13 Tsawwassen First Nation, pp. 9.5-96 to 9.5-101
MSA Section 9.5.5 Potential Interactions and Effects on Current Use	Aggregated (all Indigenous groups identified as experiencing a similar level of potential effect due to the linear activity of routine vessel transit)	9.5.5 Potential Interactions and Effects on Current Use, Table 9.5-35 (potential negligible-to-minor effect, all Indigenous groups) 9.5.5.1 Negligible Effects of Vessel Transit on Current Use, no differential effects[3] 9.5.5.2 Potential Effects of Vessel Transit on Current Use, no differential effects 9.5.5.3 Summary of Potential Transboundary Effects, not assessed

[2] In this case, a potential effect is described as a "differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be measurable for some groups but not others in relation to the Project. Mitigation measures that are described as "differential measures" are those that are intended to address the potential differential (i.e., measurable) effect on those specific groups in relation to the Project (in this case Tsawwassen).
[3] In this case, a potential effect is described as "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be the same for all groups (i.e., negligible-to-minor) as a result of marine shipping associated with the Project. Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-C and 1-D Indigenous groups.

EIS / MSA Section	Original EIS / MSA Information Presentation (Aggregated / Disaggregated)	Tsawwassen First Nation
MSA Section 9.5.6 Suggested Mitigation Measures	Aggregated (to address the potentially minor linear effect on all Indigenous groups)	9.5.6 Suggested Mitigation Measures, no differential measures
MSA Section 9.5.7 Residual Effects Assessment and Significance Determination / Section 9.5.8 Cumulative Effects Assessment / Section 9.5.9 Summary of Assessment / Section 9.5.10 Follow-Up Program	N/A (no residual effects predicted)	N/A (no residual effects predicted)
MSA Section 9.5.11 Potential Impacts on Asserted or Established Aboriginal and Treaty Rights	Aggregated (all Indigenous groups identified as experiencing a similar level of potential impact due to the linear activity of routine vessel transit)	9.5.11.1 Approach to the Rights Assessment, Tsawwassen First Nation, p. 9.5-149 9.5.11.2 Results of the Rights Assessment, potential negligible-to-minor impact (all Indigenous groups, no differential impacts) 9.5.11.3 Suggested Mitigation Measures, no differential measures 9.5.11.4 Residual Effects, N/A (no residual effects predicted)
MSA IR	N/A	MSA IR-02.24.16-13 Aboriginal and Treaty Rights and Related Interests, Table MSA IR13-1 Mitigation Measures Proposed by Aboriginal Groups for Potential Adverse Impacts to Potential or Established Aboriginal and Treaty Rights and Related Interests, Tsawwassen First Nation, p. 3 (CEAR Document #391)

Table IR10-A1-2 Tsawwassen First Nation Assessment Table (Information Request Package 10)

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[4]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR Package 10 (IR10)				
IR10-06 (EIS)				
Provide a group-specific assessment of the potential effects of the proposed Project and the characterisation and significance of any residual effect on current use in terms of changes in access, availability and quality of all preferred current use resources	*Note: A group-specific summary of the Current Use assessment for Tsawwassen was presented in Table AIR30-1 (CEAR Document #388; based on the analysis in AIR-12.04.15-29 and AIR-12.04.15-30)* Access – Potentially measurable change in access expected for Tsawwassen (before Current Use-specific mitigation) as a result of Project-related displacement effects within Tsawwassen's primary crab harvesting area, in relation to which Tsawwassen is licensed to harvest crab year-round for domestic purposes, with annual catches averaging approximately 20,000 per year. Project-related	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Tsawwassen access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	*Part 1 – Additional baseline information regarding FSC harvesting*[5] – No additional information (refer to Tsawwassen-specific information provided in EIS Section 32.2.4.1 and MSA Section 9.5.4.13, per Tsawwassen Index Table above, for available information) *Part 2 - Maps of marine harvest sites* – Spatial information for Tsawwassen (including maps) already considered by the VFPA in the EIS / MSA Current Use assessment *Part 3 – Consider effects on social conditions*[6] – None anticipated given the predicted access effect on Tsawwassen is	No change in EIS predictions for Tsawwassen in terms of Current Use access or availability and quality of Current Use resources

[4] The level of potential effect prediction identified in this column refers to the predicted level of effect *before* Current Use-specific measures are taken into account, but *after* measures related to linked valued components (if applicable) have been considered. The next column refers to the level of residual effect prediction after *both* linked valued component measures (if applicable) and Current Use-specific measures have been taken into account.
[5] Additional baseline information requested in IR10-06: (1) Preferred species and locations; (2) Timing of current use activities, such as frequency, duration, and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access, including an estimate of the number of vessels per hour per year in the local and regional assessment areas for harvesting purposes.
[6] Social effects identified in IR10-06 for consideration in the assessment: (1) Conditions of access to other family member(s) territory or other Indigenous group's territory for traditional harvesting purposes; (2) Access by non-Indigenous user(s); and (3) Alienation from current and traditional harvesting places resulting from government policies and regulations.

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[4]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
	displacement and activities also expected to result in a potentially measurable change in access (before Current Use-specific mitigation) to Tsawwassen canoe route and *She'səmkəm* (a navigable channel within Roberts Bank leading to Canoe Passage)		expected to be addressed through mitigation (the VFPA is of the view that its predictions in the EIS already sufficiently considered Tsawwassen views regarding existing social constraints on access, as described in EIS Section 32.2.4.1 and MSA Section 9.5.4.13) *Part 4 – Views expressed by Indigenous groups regarding existing and potential effects on access and harvesting opportunities* – The VFPA is of the view that Tsawwassen views regarding existing effects, as described in EIS Section 32.2.4.1 and MSA Section 9.5.4.13, as well as Tsawwassen views regarding potential Project-related effects (provided in EIS Appendix 7.2-B and the Tsawwassen-specific issue tracking table in the forthcoming IR10-01 response), were already sufficiently considered in the VFPA's predictions in EIS Section 32.2.6 (including the analysis in Section 32.2.6.1, Section 32.2.6.2, and Section 32.2.6.3, and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388). *Part 5 – Characterisation of residual effects and evaluation of significance* – No additional information (the VFPA is of the view that Tsawwassen views on thresholds are reflected in EIS Section 32.2.4.1 and MSA Section 9.5.4.13, and were factored into the Current Use assessment for Project-related effects; refer also to responses to IR10-11 and IR10-12)	
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Tsawwassen with implementation of measures for linked valued components	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on availability of resources for Tsawwassen use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Tsawwassen with implementation of measures for linked valued components	Negligible – Taking mitigation, including consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on quality of resources for Tsawwassen use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)		
IR10-07 (EIS)				
Provide a group-specific assessment of the economic implications of permanent or temporary displacement as a result of the Project on current use	Access – Potentially measurable change in access expected for Tsawwassen (before Current Use-specific mitigation) as a result of Project-related displacement effects within Tsawwassen's primary crab harvesting area, in relation to which Tsawwassen is licensed to harvest crab year-round for domestic purposes, with annual catches averaging approximately 20,000 per year. Project-related displacement and activities also expected to result in a potentially measurable change in access (before Current Use-specific mitigation) to Tsawwassen canoe route and *She'səmkəm* (a navigable channel within Roberts Bank leading to Canoe Passage)	Negligible – Taking mitigation, including ongoing consultation, into account (refer to the response to IR10-12 and the forthcoming response to IR10-11), no residual effect on Tsawwassen access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that Tsawwassen views regarding existing constraints on access, as described in EIS Section 32.2.4.1 and MSA Section 9.5.4.13, as well as Tsawwassen views regarding potential Project-related effects (provided in EIS Appendix 7.2-B and the Tsawwassen-specific issues tracking table in the forthcoming response to IR10-01), were already sufficiently considered in the VFPA's predictions in EIS Section 32.2.6 regarding the potentially measurable access effect on Tsawwassen (including the analysis in EIS Section 32.2.6.1 and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388).	As the predicted Current Use access effect (including the potential for increased competition) on Tsawwassen is expected to be addressed through mitigation, no residual economic effects for Tsawwassen are anticipated as a result of the Project

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[4]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR10-08 (EIS)				
Provide a group-specific assessment of the changes in quality of the current use experience resulting from the proposed Project	Quality of experience (Pathway #1) – Negligible potential change in Tsawwassen sense of place, risks to safety and security, and sensory disturbance expected with implementation of measures for linked valued components Quality of experience (Pathway #2) – Negligible potential change for all indicators except access. Potentially measurable effect (before Current Use-specific mitigation) is expected on Tsawwassen's ability to reproduce and transmit cultural heritage associated with a potentially measurable incremental access/displacement effect (refer to response to IR10-06)	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Tsawwassen's quality of experience at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that the nine factors[7] identified in IR10-08 for consideration in a group-specific assessment of potential changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in EIS Section 32.2.6.4 (and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388). The VFPA notes that factors contributing to existing effects are reflected in Tsawwassen baseline summaries in EIS Section 32.2.4.1 and AIMSA Section 9.5.4.13, and that these views and Tsawwassen views about potential Project-related effects (as provided in EIS Appendix 7.2-B and the Tsawwassen-specific issues tracking table in the forthcoming response to IR10-01) were taken into consideration in the assessment of potential effects on their quality of experience.	No change in EIS predictions for Tsawwassen in terms of quality of Current Use experience
IR10-13 (MSA)				
Provide a group-specific assessment of potential effects and the characterisation of residual effects of the marine shipping associated with the proposed Project on current use in terms of changes to access and availability and quality of preferred marine resources	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Tsawwassen as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Tsawwassen's access to preferred locations as a result of Project-associated ship pass-bys is expected	*Part 1 – Additional baseline information regarding harvesting and other Current Use activities*[8] – No additional information (refer to Tsawwassen-specific information provided in EIS Section 32.2.4.1 and MSA Section 9.5.4.13, per **Table IR10-A1-1** above, for available information) *Part 2 - Maps of marine harvest sites* – Spatial information for Tsawwassen (including maps) already considered by the VFPA in the EIS / MSA Current Use assessment *Part 3(1) – List of issues / concerns regarding Project-associated vessel transit* – Identified for Tsawwassen in list of issues in MSA Appendix 5-B (also refer to the Tsawwassen-specific issues tracking table in the forthcoming IR10-01 response) *Part 3(2) – Adequacy of Proponent's response* – Refer to IR10-13 response	No change in MSA predictions for Tsawwassen in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Tsawwassen as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Tsawwassen as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		

[7] Nine factors identified in IR10-08 for consideration in the assessment: (1) Loss of preferred harvesting sites; (2) How the quality of the Current Use experience could change due to the real and perceived contamination of traditional food sources; (3) Sensory disturbances from light, noise and vibration affecting oral traditions and sacred practices; (4) Safety risks and concerns due to increased vessel traffic; (5) Industrialization of the Project area, with subsequent loss and disruption of social and cultural values associated with the proposed Project area and the Fraser River estuary; (6) Increased alienation from traditional harvesting caused by industrial development on Roberts Bank, including the proposed expansion of navigational close areas; (7) Decreased willingness and ability by Indigenous peoples to access the Project area due to the perception of risk, reduced harvesting opportunities and aesthetic impacts; (8) Level of importance placed upon patters of use (past, present and future); and (9) Lost opportunities for the transmission of Indigenous Knowledge and practices due to avoidance of an expanded industrialized area.

[8] Additional baseline information requested in IR10-13 for consideration in the assessment: (1) Preferred species and locations; (2) Timing of the current use activities, such as frequency, duration and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access for groups using the shipping lanes for fishing, groups traveling through the shipping lanes to access fishing, harvesting and cultural sites and, groups using the marine shipping area adjacent to the marine shipping lanes.

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[4]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
			Part 3(3) – Proponent's views on thresholds of acceptability and risk - Refer to IR10-13 response	
IR10-14 (MSA)				
Consider (on a group-specific basis) the socio-economic implications of potential or necessary displacement (permanent or temporary)[9]	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Tsawwassen as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Tsawwassen's access to preferred locations as a result of Project-associated ship pass-bys is expected	The VFPA is of the view that Tsawwassen's views regarding existing constraints on access, as described in EIS Section 32.2.4.1 and MSA Section 9.5.4.13, as well as Tsawwassen's views regarding potential effects of Project-associated vessel transit, described in MSA Appendix 5-B, were already sufficiently considered in the VFPA's predictions in MSA Section 9.5.5 regarding a potential access effect on Tsawwassen as a result of Project-associated vessel transit.	As the predicted Current Use access effect on Tsawwassen is expected to be addressed through the suggested mitigation identified in MSA Section 9.5.6, no residual economic effects for Tsawwassen are anticipated
IR10-15 (MSA)				
Provide a group-specific assessment of potential effect of the changes in quality of the current use experience resulting from marine shipping associated with the proposed Project and the characterisation and significance of residual effects	Quality of experience (Pathway #1) – Negligible potential change in Tsawwassen's sense of place, risks to safety and security, and sensory disturbance expected Quality of experience (Pathway #2) – Negligible potential change for all indicators except access. Potentially measurable (up to minor) effect (before Current Use-specific mitigation) is expected on Tsawwassen's ability to reproduce and transmit cultural heritage associated with potentially measurable access / displacement effect (refer to response to IR10-13)	Pathway #1 – N/A (negligible before Current Use-specific mitigation) Pathway #2 - Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Tsawwassen's quality of experience tied to access is expected	The VFPA is of the view that the 4 factors[10] identified in IR10-15 for consideration in the group-specific assessment of changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in MSA Section 9.5.5. The VFPA notes that factors contributing to existing effects are reflected in Tsawwassen's baseline summaries in EIS Section 32.2.4.1 and MSA Section 9.5.6.13, and that these views and Tsawwassen's views about potential effects of Project-associated vessel transit on Tsawwassen (as referenced in MSA Appendix 5-B), were taken into consideration in the assessment of potential effects on their quality of experience.	No change in MSA predictions for Tsawwassen in terms of quality of Current Use experience
IR10-16 (MSA)				
Present (the requested group-specific baseline information)[11]	N/A	N/A	No additional information available (refer to Tsawwassen-specific information provided in EIS Section 32.2.4.1 and MSA Section 9.5.4.13, per **Table IR10-A1-1** above, for available information)	No additional information available

[9] Implications identified in IR10-14 for consideration in the assessment: (1) Sufficiency of resources at alternate locations to meet the requirements of the community; (2) Constraints of displacement (areas further from their community or already alienated to other interests); (3) Extra expenses required in monetary terms or additional travel time or necessary changes in technology for the practice or access to resources; and (4) Constraints on current harvesting activities caused by development, regulatory restrictions, reduced resources, contamination and conservation concerns and impediments to the revival of traditions surrounding coastal harvesting activities.

[10] Four factors identified in IR10-15 for consideration in the assessment: (1) Sites of importance to Indigenous groups; (2) Decreased willingness, ability or avoidance by Indigenous peoples to access Current Use sites in or through the marine shipping lanes due to safety concerns and the perception of risk, reduced harvesting opportunities, and/or sensory disturbances; (3) Alienation from existing patterns of traditional harvesting due to the temporary or permanent displacement from areas of importance; and (4) Loss of opportunities for the cultural transmission of Indigenous Knowledge and practices due to the temporary or permanent displacement from those areas of importance.

[11] Additional baseline information requested in IR10-16: (1) The current activities taking place during the day or the night with a quantification of day and night duration; (2) The access required within, outside or through the shipping lanes; (3) The seasons that activities are practiced; (4) The frequency that each Indigenous group crosses the shipping lanes in the marine shipping area; and (5) The minimum and maximum number of vessels per hour in the shipping lanes, by Segment, encountered by Indigenous fishing vessels for Current Use activities in relation to the proposed Project-related ship movements.

Musqueam First Nation[1] Group-specific Baseline Information Process Summary (EIS and AIMSA)

Environmental Impact Statement (EIS)

On January 18, 2013, the VFPA met with Musqueam First Nation ("Musqueam") to gather Traditional Ecological Knowledge (TEK) on food, social and ceremonial (FSC) fisheries (both finfish and shellfish) occurring within the proposed Project Area (Roberts Bank) and the wider reaches of the lower Fraser River and Fraser River Estuary by Musqueam First Nation. Musqueam provided information on its FSC in the Project Area.

On December 18, 2013, the VFPA and Musqueam signed a funding agreement to support Musqueam's completion of a Traditional Use study for the Project to assess the potential for interactions between the RBT2 Project and current traditional uses of resources within the Project study area and to work collaboratively with the VFPA to address any potential gaps in the Traditional Use study program for the Project. In the agreement, Musqueam was also requested to share information contained in existing reports or summary reports, as appropriate, to support the Traditional Use component of the environmental assessment.

On June 18, 2014, the VFPA met with Musqueam to seek additional Indigenous traditional knowledge (ITK) information beyond the sources already identified by and available to VFPA. Musqueam provided feedback on the sources of ITK available to the VFPA and shared information and knowledge in response to questions regarding birds, wildlife, plant use, the cultural importance of Roberts Bank, the mudflats and tidal flats, sediment and marine waters, and changes in resources over time in the Roberts Bank area.

On July 11, 2014, the VFPA provided Musqueam with a draft *"Musqueam First Nation Community Profile"* for review and comment. No comments were received.

On August 19, 2014, Musqueam provided the VFPA with a report titled *"Draft Contemporary Musqueam Use of the Southern Fraser Delta"* (Woolman 2014) and on October 7, 2014, Musqueam provided the VFPA with a report titled *"Traditional Musqueam Use of the Southern Fraser Delta"* (Ham 2014).

Economic and socio-community information for the Musqueam community was collected through a social and economic existing conditions study conducted by the VFPA's consultant, with input from Musqueam regarding the scope, terms of reference for the study, and primary and secondary data collection, including interviews with Musqueam representatives (EIS Appendix 18-B). The report was reviewed and approved by Musqueam for inclusion in the

[1] Indigenous group listed in Table 1-A (EIS) and Table 1-D (AIMSA) of Attachment 2 to Information Request Package 10 (identified in those tables as Musqueam Indian Band, but in *EIS Guidelines* as Musqueam First Nation).

EIS. A Musqueam representative worked directly with VFPA's consultant in the collection of information/data from Musqueam participants.

Information regarding Musqueam's reliance on traditional foods was provided directly by Musqueam in its Traditional Use Studies (Woolman 2014 and Ham 2014). The VFPA also met with Musqueam in November 2014 to provide Musqueam with information from the preliminary assessments on human health, and Aboriginal and treaty rights and related interests including current use of lands and resources for traditional purposes (Current Use); and to obtain feedback on preliminary assessment results and identify additional information to inform the assessments. The Human Health Risk Assessment (HHRA) and Health Impact Assessment (HIA) relied on information provided directly from Musqueam during consultation as well as other published information and data sources related to health in B.C. Indigenous communities.

On November 19, 2014, the VFPA met with Musqueam to provide information regarding the assessment of potential Project effects and cumulative effects on Aboriginal and treaty rights and related interests and Current Use, and to identify any additional information to inform the assessment. The presentation and discussion included content regarding the proposed methodology for this assessment, the VFPA's understanding of existing conditions, based on the information provided by Musqueam, and preliminary conclusions of the assessment.

On December 9, 2014, the VFPA provided Musqueam with advance drafts of the existing conditions sections of the EIS: *"Potential or Established Aboriginal and Treaty Rights and Related Interests, and including Current Use of Lands and Resources for Traditional Purposes"* and *"Aboriginal Commercial Fishing and Seafood Harvesting."* The VFPA requested that Musqueam confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final EIS. Comments on the draft sections were received from Musqueam on January 15, 2015 and January 23, 2015, respectively, and changes made to the sections as appropriate. The *"Aboriginal Commercial Fishing and Seafood Harvesting"* section was provided again to Musqueam to confirm the substantial changes made to the section based on Musqueam's comments, and further comments from Musqueam were integrated into the final EIS.

On March 26, 2015, the VFPA provided Musqueam with a table outlining all Musqueam's comments on the draft sections, responses to each comment from the VFPA, and a description of subsequent changes made to the sections in the EIS.

On April 2, 2015, the VFPA provided Musqueam with a copy of the EIS.

Additional Information to the Marine Shipping Addendum – Musqueam First Nation and Tsleil-Waututh Nation (AIMSA)

On December 4, 2015, the VFPA wrote to Musqueam requesting input regarding the potential effects of marine shipping to Musqueam. Specifically, the VFPA sought information from Musqueam on the effects of changes to the environment as a result of existing marine shipping on the Musqueam's health and socio-economic conditions, physical and cultural heritage, including any structure, site, or thing that is of historical, archaeological, paleontological, or

architectural significance, and Current Use. The VFPA also sought information on the effects of marine shipping on Musqueam's ability to exercise its asserted Aboriginal rights.

On June 22, 2016, the VFPA met with Musqueam to discuss marine shipping associated with the Project, including its request to learn more about Musqueam's use of the marine shipping area. Musqueam expressed concerns regarding time constraints and funding.

In response to a request from Musqueam, on March 15, 2016 the VFPA signed a funding agreement to support Musqueam's completion of a marine shipping-specific use study.

On May 24, 2016, Musqueam provided the VFPA with a study titled *"Musqueam Marine Shipping Effects Assessment"* (Tam et al. 2016).

On June 9, 2016, the VFPA provided Musqueam with the draft existing conditions sections for components considered in the AIMSA (i.e., Human Health, Marine Commercial Use, Outdoor Recreation, Archaeological and Heritage Resources, and Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights), and requested that Musqueam confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final AIMSA.

On June 20, 2016, the VFPA and Musqueam met to discuss the *"Musqueam Marine Shipping Effects Assessment"* report, and the process for integrating this report into the final AIMSA.

On July 15, 2016, Musqueam provided comments on the draft existing conditions sections for components considered in the AIMSA, which were integrated into the draft sections of the AIMSA as appropriate.

On August 3, 2016, the VFPA provided the full draft AIMSA for Musqueam's review and comment, including the existing conditions sections shared earlier and all effects assessment sections. Musqueam responded with comments on September 15, 2016. Musqueam's comments were integrated into the final AIMSA as appropriate.

On September 30, 2016, the VFPA provided Musqueam with a table including all Musqueam's comments on the draft sections, responses to each comment from the VFPA, and a description of subsequent changes made to the sections.

Musqueam First Nation Group-specific Index and Assessment Tables

Table IR10-A2-1 Musqueam First Nation Index Table

EIS / AIMSA Section	Original EIS / AIMSA Information Presentation (Aggregated / Disaggregated)	Musqueam First Nation
EIS Section 32.1.1 Aboriginal Groups (Community profiles)	Disaggregated	32.1.1.2 Musqueam First Nation, pp. 32-5 to 32-6
EIS Section 32.2.4 Existing Conditions (Past, present, desired future use and list of rights identified by Indigenous Groups as affected)	Disaggregated	32.2.4.2 Musqueam First Nation, pp. 32-43 to 32-56
EIS Section 32.2.6 Future Conditions With the Project – Potential Project-Related Effects (on Current Use)	Overall level of potential effect on each Indigenous group's Current Use identified in introduction to section. For each Current Use indicator, only groups for whom a measurable potential effect was predicted were disaggregated from the aggregated discussion.	32.2.6 Future Conditions With the Project – Potential Project-Related Effects, p. 32-100, para. 4 (measurable potential effect) 32.2.6.1 (Access), p. 32-102, para. 4; p. 32-103, para. 3; p. 32-104, para. 1, 2, 4, 5, differential effect (i.e., measurable)[1] 32.2.6.2 (Resource availability), no differential effect 32.2.6.3 (Resource quality), no differential effect 32.2.6.4 (Experiential quality), differential effect tied to access effect; no differential effect otherwise
EIS Section 32.2.7 Mitigation Measures	For each Current Use indicator, only groups for whom a measurable potential effect was predicted were identified specifically in the aggregated discussion.	32.2.7.1 (Access), p. 32-116, p. 32-117, differential measures 32.2.7.2 (Resource availability), no differential measures 32.2.7.3 (Resource quality), no differential measures 32.2.7.4 (Experiential quality), no differential measures beyond those for the differential access effect
EIS Section 32.2.8 Residual Effects / Section 32.2.9 Cumulative Effects	N/A (no residual effects predicted)	N/A (no residual effects predicted)
EIS Section 32.3.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups	Disaggregated	32.3.2.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups, Musqueam First Nation, p. 32-129 to p. 32-133
EIS Section 32.3.3 Mitigation Measures	Disaggregated (but limited to groups with measurable potential impacts) Note: Measures identified are exactly the same as for Current Use (across all indicators, given that they were to be considered in the aggregate).	32.3.3.1 Summary of Mitigation Measures for Potential Adverse Impacts on the Exercise of Asserted or Established Aboriginal and Treaty Rights (same as Current Use measures in Section 32.2.7), p. 32-146 32.3.3.2 Summary of Mitigation Measures Suggested by Aboriginal Groups, no measures suggested by Musqueam 32.3.3.3 Other Accommodations, p. 32-148 32.3.3.4 Outstanding Aboriginal Issues, p. 32-149
EIS information request / additional information request	N/A	AIR-12.04.15-30 Rationale for (Current Use) Conclusions, Table AIR30-1 Rationale for Predicted Level of Effect, Musqueam First Nation, p. 6 (CEAR Document #388)
AIMSA Section 7.2 Existing Conditions	Disaggregated	7.2.1 Musqueam First Nation, pp. 32 to 42
AIMSA Section 7.3 Potential Interactions and Effects on Current Use	Disaggregated within each Current Use indicator discussion	7.3 Potential Interactions and Effects on Current Use, pp. 48-55 (Musqueam identified within each subsection, with potential group-specific effects identified as negligible-to-minor)
AIMSA Section 7.4 Suggested Mitigation Measures	Disaggregated within each Current Use indicator discussion	7.4 provides Musqueam perspective on measures suggested by VFPA, p. 56; no specific suggestions were provided by Musqueam, citing the need for further research, p. 56
AIMSA Section 7.5 Residual Effects, 7.6 Cumulative Effects, 7.7 Follow Up Program	N/A (no residual effects predicted)	N/A (no residual effects predicted)

[1] In this table, a potential effect is described as a "differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be measurable for some groups but not others. Mitigation measures that are described as "differential measures" are those that are intended to address the potential differential (i.e., measurable) effect on those specific groups (in this case Musqueam).

EIS / AIMSA Section	Original EIS / AIMSA Information Presentation (Aggregated / Disaggregated)	Musqueam First Nation
AIMSA Section 7.8 Potential Impacts on Asserted or Established Aboriginal and Treaty Rights	Effectively disaggregated, with group-specific conclusions, given the limited number of nations included in AIMSA (i.e., two)	7.8, pp. 57-61 (Musqueam are identified within each subsection, with potential group-specific impacts identified as negligible to minor)
Issues tracking tables	EIS – Aggregated AIMSA – Disaggregated by issue/interest	EIS – See forthcoming response to IR10-01 for disaggregated issues tracking tables AIMSA Appendix 2-B Aboriginal Issues and Interests, Musqueam First Nation (disaggregated by issue/interest, but not a separate group-specific table)
Indigenous Traditional Knowledge (ITK)	EIS – MSA IR-02.24.16-4 (Aggregated) (CEAR document #391) AIMSA – Table 9.1 (Disaggregated)	EIS – See response to IR10-02 for disaggregated ITK AIMSA Table 9.1 Additional Aboriginal Traditional Knowledge Supporting the RBT2 Marine Shipping Addendum, Musqueam First Nation, pp. 70 to 79

Table IR10-A2-2 Musqueam First Nation Assessment Table (Information Request Package 10)

IR10 Information Request	EIS / AIMSA Level of Potential Effect Prediction[2]	EIS / AIMSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR10-06 (EIS)				
Provide a group-specific assessment of the potential effects of the proposed Project and the characterisation and significance of any residual effect on current use in terms of changes in access, availability and quality of all preferred current use resources	*Note: A group-specific summary of the Current Use assessment for Musqueam was presented in Table AIR30-1 (based on the analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388)* Access – Potentially measurable change in access expected for Musqueam (before Current Use-specific mitigation) as a result of Project-related displacement effects within Musqueam's primary crab harvesting area, in relation to which Musqueam is licensed to harvest crab year-round for FSC purposes, with annual catches understood to be on the same order of magnitude as Tsawwassen First Nation (i.e., over 20,000 per year)	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Musqueam access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	*Part 1 – Additional baseline information regarding FSC harvesting*[3] – No additional information (refer to Musqueam-specific information provided in EIS Section 32.2.4.2 and AIMSA Section 7.2.1, per **Table IR10-A2-1** above, for available information) *Part 2 - Maps of marine harvest sites* – Maps contained in Musqueam studies already considered by the VFPA in the EIS / AIMSA Current Use assessment *Part 3 – Consider effects on social conditions*[4] – None anticipated given the predicted access effect on Musqueam is expected to be addressed through mitigation (the VFPA is of the view that its predictions in the EIS already sufficiently considered Musqueam views regarding existing social constraints on access, as described in EIS Section 32.2.4.2 and AIMSA Section 7.2.1)	No change in EIS predictions for Musqueam in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Musqueam with implementation of measures for linked valued components	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on availability of resources for Musqueam use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)	*Part 4 – Views expressed by Indigenous groups regarding existing and potential effects on access and harvesting opportunities* – The VFPA is of the view that Musqueam views regarding existing effects, as described in EIS Section 32.2.4.2 and AIMSA Section 7.2.1, as well as the Musqueam views regarding potential Project-related effects (provided in EIS Appendix 7.2-B and the	

[2] The level of potential effect prediction identified in this column refers to the predicted level of effect *before* Current Use-specific measures are taken into account, but *after* measures related to linked valued components (if applicable) have been considered. The next column refers to the level of residual effect prediction after *both* linked valued component measures (if applicable) and Current Use-specific measures have been taken into account.
[3] Additional baseline information requested in IR10-06: (1) Preferred species and locations; (2) Timing of current use activities, such as frequency, duration, and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access, including an estimate of the number of vessels per hour per year in the local and regional assessment areas for harvesting purposes.
[4] Social effects identified in IR10-06 for consideration in the assessment: (1) Conditions of access to other family member(s) territory or other Indigenous group's territory for traditional harvesting purposes; (2) Access by non-Indigenous user(s); and (3) Alienation from current and traditional harvesting places resulting from government policies and regulations.

IR10 Information Request	EIS / AIMSA Level of Potential Effect Prediction[2]	EIS / AIMSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Musqueam with implementation of measures for linked valued components	Negligible – Taking mitigation, including consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on quality of resources for Musqueam use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)	Musqueam-specific issue tracking table in the forthcoming IR10-01 response), were already sufficiently considered in the VFPA's predictions in EIS Section 32.2.6 (including the analysis in Section 32.2.6.1, Section 32.2.6.2, and Section 32.2.6.3, and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388). *Part 5 – Characterisation of residual effects and evaluation of significance* – No additional information (the VFPA is of the view that Musqueam views on thresholds are reflected in EIS Section 32.2.4.2 and AIMSA Section 7.2.1, and were factored into the Current Use assessment for Project-related effects; refer also to responses to IR10-11 and IR10-12)	
IR10-07 (EIS)				
Provide a group-specific assessment of the economic implications of permanent or temporary displacement as a result of the Project on current use	Access – Potentially measurable change in access expected for Musqueam (before Current Use-specific mitigation) as a result of Project-related displacement effects within Musqueam's primary crab harvesting area, in relation to which Musqueam is licensed to harvest crab year-round for FSC purposes, with annual catches understood to be on the same order of magnitude as Tsawwassen First Nation (i.e., over 20,000 per year)	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Musqueam access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that Musqueam views regarding existing constraints on access, as described in EIS Section 32.2.4.2 and AIMSA Section 7.2.1, as well as Musqueam views regarding potential Project-related effects (provided in EIS Appendix 7.2-B and the Musqueam-specific issues tracking table in the forthcoming response to IR10-01), were already sufficiently considered in the VFPA's predictions in EIS Section 32.2.6 regarding the potentially measurable access effect on Musqueam (including the analysis in EIS Section 32.2.6.1 and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388).	As the predicted Current Use access effect (including the potential for increased competition) on Musqueam is expected to be addressed through mitigation, no residual economic effects for Musqueam are anticipated as a result of the Project
IR10-08 (EIS)				
Provide a group-specific assessment of the changes in quality of the current use experience resulting from the proposed Project	Quality of experience (Pathway #1) – Negligible potential change in Musqueam sense of place, risks to safety and security, and sensory disturbance expected with implementation of measures for linked valued components Quality of experience (Pathway #2) – Negligible potential change for all indicators except access. Potentially measurable effect (before Current Use-specific mitigation) is expected on Musqueam's ability to reproduce and transmit cultural heritage associated with a potentially measurable incremental access/displacement effect (refer to response to IR10-06)	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Musqueam's quality of experience at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that the nine factors[5] identified in IR10-08 for consideration in a group-specific assessment of potential changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in EIS Section 32.2.6.4 (and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388). The VFPA notes that factors contributing to existing effects are reflected in Musqueam baseline summaries in EIS Section 32.2.4.2 and AIMSA Section 7.2.1, and that these views and Musqueam views about potential Project-related effects (as provided in EIS Appendix 7.2-B and the Musqueam-specific issues tracking table in the forthcoming response to IR10-01) were taken into consideration in the assessment of potential effects on their quality of experience.	No change in EIS predictions for Musqueam in terms of quality of Current Use experience

[5] Nine factors identified in IR10-08 for consideration in the assessment: (1) Loss of preferred harvesting sites; (2) How the quality of the Current Use experience could change due to the real and perceived contamination of traditional food sources; (3) Sensory disturbances from light, noise and vibration affecting oral traditions and sacred practices; (4) Safety risks and concerns due to increased vessel traffic; (5) Industrialization of the Project area, with subsequent loss and disruption of social and cultural values associated with the proposed Project area and the Fraser River estuary; (6) Increased alienation from traditional harvesting caused by industrial development on Roberts Bank, including the proposed expansion of navigational close areas; (7) Decreased willingness and ability by Indigenous peoples to access the Project area due to the perception of risk, reduced harvesting opportunities and aesthetic impacts; (8) Level of importance placed upon patters of use (past, present and future); and (9) Lost opportunities for the transmission of Indigenous Knowledge and practices due to avoidance of an expanded industrialized area.

IR10 Information Request	EIS / AIMSA Level of Potential Effect Prediction[2]	EIS / AIMSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR10-13 (AIMSA)				
Provide a group-specific assessment of potential effects and the characterisation of residual effects of the marine shipping associated with the proposed Project on current use in terms of changes to access and availability and quality of preferred marine resources	*Note: A group-specific assessment for Musqueam was presented in the AIMSA for all indicators* Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Musqueam as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Musqueam access to preferred locations as a result of Project-associated ship pass-bys is expected	*Part 1 – Additional baseline information regarding harvesting and other Current Use activities*[6] – No additional information (refer to Musqueam-specific information provided in EIS Section 32.2.4.2 and AIMSA Section 7.2.1, per **Table IR10-A2-1** above, for available information) *Part 2 - Maps of marine harvest sites* – Maps contained in Musqueam studies considered by the VFPA in the EIS / AIMSA Current Use assessment *Part 3(1) – List of issues / concerns regarding Project-associated vessel transit* – Identified for Musqueam in the effects assessment for each Current Use indicator in AIMSA Section 7.3 and in the group-specific list of issues in AIMSA Appendix 2-B (also refer to the Musqueam-specific issues tracking table in the forthcoming IR10-01 response) *Part 3(2) – Adequacy of Proponent's response* – Refer to IR10-13 response *Part 3(3) – Proponent's views on thresholds of acceptability and risk* - Refer to IR10-13 response	No change in AIMSA predictions for Musqueam in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Musqueam as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Musqueam as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
IR10-14 (AIMSA)				
Consider (on a group-specific basis) the socio-economic implications of potential or necessary displacement (permanent or temporary)[7]	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Musqueam as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Musqueam access to preferred locations as a result of Project-associated ship pass-bys is expected	The VFPA is of the view that Musqueam views regarding existing constraints on access, as described in EIS Section 32.2.4.2 and AIMSA Section 7.2.1, as well as Musqueam views regarding potential effects of Project-associated vessel transit, described for each group in AIMSA Section 7.3 and AIMSA Appendix 2-B, were already sufficiently considered in the VFPA's predictions in AIMSA Section 7.3.1 regarding a potential access effect on Musqueam as a result of Project-associated vessel transit.	As the predicted Current Use access effect on Musqueam is expected to be addressed through the suggested mitigation identified in AIMSA Section 7.4, no residual economic effects for Musqueam are anticipated.
IR10-15 (AIMSA)				
Provide a group-specific assessment of potential effect of the changes in quality of the current use experience resulting from marine shipping associated with the proposed Project and the characterisation and significance of residual effects	Quality of experience (Pathway #1) – Negligible potential change in Musqueam sense of place, risks to safety and security, and sensory disturbance expected	Pathway #1 – N/A (negligible before Current Use-specific mitigation) Pathway #2 - Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Musqueam's quality of experience tied to access is expected	The VFPA is of the view that the 4 factors[8] identified in IR10-15 for consideration in the group-specific assessment of changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in AIMSA Section 7.3.4. The VFPA notes that factors contributing to existing effects are reflected in Musqueam baseline summaries in EIS Section 32.2.4.2 and AIMSA Section 7.2.1, and that these views and Musqueam views about potential effects of Project-associated vessel	No change in AIMSA predictions for Musqueam in terms of quality of Current Use experience
	Quality of experience (Pathway #2) – Negligible potential change for all indicators except access. Potentially measurable (up to minor) effect (before Current Use-specific mitigation) is expected on Musqueam's ability to reproduce and transmit cultural			

[6] Additional baseline information requested in IR10-13 for consideration in the assessment: (1) Preferred species and locations; (2) Timing of the current use activities, such as frequency, duration and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access for groups using the shipping lanes for fishing, groups traveling through the shipping lanes to access fishing, harvesting and cultural sites and, groups using the marine shipping area adjacent to the marine shipping lanes.

[7] Implications identified in IR10-14 for consideration in the assessment: (1) Sufficiency of resources at alternate locations to meet the requirements of the community; (2) Constraints of displacement (areas further from their community or already alienated to other interests); (3) Extra expenses required in monetary terms or additional travel time or necessary changes in technology for the practice or access to resources; and (4) Constraints on current harvesting activities caused by development, regulatory restrictions, reduced resources, contamination and conservation concerns and impediments to the revival of traditions surrounding coastal harvesting activities.

[8] Four factors identified in IR10-15 for consideration in the assessment: (1) Sites of importance to Indigenous groups; (2) Decreased willingness, ability or avoidance by Indigenous peoples to access Current Use sites in or through the marine shipping lanes due to safety concerns and the perception of risk, reduced harvesting opportunities, and/or sensory disturbances; (3) Alienation from existing patterns of traditional harvesting due to the temporary or permanent displacement from areas of importance; and (4) Loss of opportunities for the cultural transmission of Indigenous Knowledge and practices due to the temporary or permanent displacement from those areas of importance.

IR10 Information Request	EIS / AIMSA Level of Potential Effect Prediction[2]	EIS / AIMSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
	heritage associated with potentially measurable access / displacement effect (refer to response to IR10-13)		transit on Musqueam (as referenced in Musqueam's group-specific assessment in AIMSA Section 7.3.4), were taken into consideration in the assessment of potential effects on their quality of experience.	
IR10-16 (AIMSA)				
Present (the requested group-specific baseline information)[9]	N/A	N/A	No additional information available (refer to Musqueam-specific information provided in EIS Section 32.2.4.2 and AIMSA Section 7.2.1, per **Table IR10-A2-1** above, for available information)	No additional information available

[9] Additional baseline information requested in IR10-16: (1) The current activities taking place during the day or the night with a quantification of day and night duration; (2) The access required within, outside or through the shipping lanes; (3) The seasons that activities are practiced; (4) The frequency that each Indigenous group crosses the shipping lanes in the marine shipping area; and (5) The minimum and maximum number of vessels per hour in the shipping lanes, by Segment, encountered by Indigenous fishing vessels for Current Use activities in relation to the proposed Project-related ship movements.

Semiahmoo First Nation[1] Group-specific Index and Assessment Tables (EIS and MSA)

Environmental Impact Statement (EIS)

On February 25, 2014, the VFPA and Semiahmoo First Nation signed a funding agreement to support Semiahmoo First Nation's completion of a Traditional Use study to assess the potential for interactions between the Project and current traditional uses of resources with the Project study area and to work collaboratively with the VFPA to address any potential gaps in the VFPA's proposed Traditional Use Study program for the Project.

The VFPA worked with Semiahmoo First Nation on finalising the scope and associated funding amount to facilitate Semiahmoo First Nation's sharing of current use information for consideration and integration into the assessment. The VFPA requested information on Semiahmoo First Nation's current use of the waters and terrestrial areas adjacent to the Project as well as any foreseeable changes or impacts to these areas that may result from the Project. Information was sought in relation to the location and timing of harvests, how these locations were accessed, specific species that were targeted, how the harvested species were utilised and the cultural values associated with the harvest. In addition, the VFPA requested broader contextual information on traditional economy and knowledge, and culturally important places. The VFPA further requested information related to past use, existing use, and changes that Semiahmoo First Nation anticipated to the landscape and their use of the area over time.

On July 15, 2014, the VFPA provided Semiahmoo First Nation with a draft *"Semiahmoo First Nation Community Profile"* for review and comment. No comments from Semiahmoo First Nation were received.

On August 19, 2014, Semiahmoo First Nation provided the VFPA with a report titled "*An Interim Report on the Traditional Land and Marine Resource Use (TLMRU) and Practices of the Semiahmoo First Nation for the Proposed Roberts Bank Terminal 2 Project"* (Semiahmoo 2014).

On December 4, 2014, the VFPA met with Semiahmoo First Nation to provide information regarding the assessment of human health preliminary effects, potential Project effects, cumulative effects on Aboriginal and treaty rights and related interests and current use of lands and resources for traditional purposes (Current Use) to identify any additional information to inform the assessment. The presentation and discussion included content regarding the proposed methodology for this assessment, the VFPA's understanding of existing conditions, based on the information provided by Semiahmoo First Nation, and preliminary conclusions of the assessment. Following the meeting, on January 8, 2015, the VFPA sent a summary of questions and comments raised by Semiahmoo First Nation during the meeting for verification prior to incorporating the information into the EIS.

On December 9, 2014, the VFPA provided Semiahmoo First Nation with an advance draft of the existing conditions section of the EIS, "*Potential or Established Aboriginal and Treaty*

[1] Indigenous group listed in Table 1-A (EIS) and Table 1-C (MSA) of Attachment 2 to IR Package 10.

Rights and Related Interests, and including Current Use of Lands and Resources for Traditional Purposes." The VFPA requested that Semiahmoo First Nation confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final EIS. Semiahmoo First Nation sent a revised traditional territory map to the VFPA on January 6, 2015, but no further comments were received from Semiahmoo First Nation on the draft summary.

On April 2, 2015, the VFPA provided Semiahmoo First Nation with a copy of the EIS.

Marine Shipping Addendum (MSA)

On May 26, 2015, the VFPA wrote a letter to Semiahmoo First Nation explaining that the VFPA is considering effects from marine shipping associated with the Project on Current Use by Semiahmoo First Nation. The VFPA requested information regarding Current Use, fisheries, or potential effects associated with marine shipping. In the letter, the VFPA explained its intent to rely on existing information to inform the assessment of potential effects associated marine shipping associated with the Project, including the report previously provided by Semiahmoo First Nation titled "*An Interim Report on the Traditional Land and Marine Resource Use (TLMRU) and Practices of the Semiahmoo First Nation for the Proposed Roberts Bank Terminal 2 Project*." The VFPA requested any additional information from Semiahmoo First Nation that may help to inform the assessment. The VFPA also offered funding to facilitate Semiahmoo First Nation's participation in consultation. The funding was accepted by Semiahmoo First Nation on May 22, 2015.

On June 11, 2015, the VFPA met with Semiahmoo First Nation to discuss marine shipping associated with the Project and Semiahmoo First Nation's Current Use and rights in the marine shipping area. Semiahmoo expressed concern about the timeline and funding to review the draft report and to complete a study of the marine shipping area. Semiahmoo shared some information of its current use of the marine shipping area.

On June 24, 2015, the VFPA provided Semiahmoo First Nation with a draft document titled "*Marine Shipping Study: Semiahmoo First Nation – Current Use of Lands and Resources for Traditional Purposes – Summary of Existing Conditions."* The VFPA requested that Semiahmoo First Nation confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final MSA.

On July 29, 2015, the VFPA met with Semiahmoo First Nation to discuss marine shipping associated with the Project. Semiahmoo First Nation stated that they would provide comments on the draft Current Use document by August 31, 2015.

The VFPA did not receive comments from Semiahmoo First Nation on the draft Current Use document provided.

On November 9, 2015 the VFPA provided Semiahmoo First Nation with a copy of the MSA.

Semiahmoo First Nation Group-specific Index and Assessment Tables

Table IR10-A3-1 Semiahmoo First Nation Index Table

EIS / MSA Section	Original EIS / MSA Information Presentation (Aggregated / Disaggregated)	Semiahmoo First Nation
EIS Section 32.1.1 Aboriginal Groups (Community profiles)	Disaggregated	32.1.1.3 Semiahmoo First Nation, pp. 32-6 to 32-7
EIS Section 32.2.4 Existing Conditions (Past, present, desired future use and list of rights identified by Indigenous groups as affected)	Disaggregated	32.2.4.3 Semiahmoo First Nation, pp. 32-56 to 32-63
EIS Section 32.2.6 Future Conditions With the Project – Potential Project-Related Effects (on Current Use)	Overall level of potential effect on each Indigenous group's Current Use identified in introduction to section. For each Current Use indicator, only groups for whom a measurable potential effect was predicted were disaggregated from the aggregated discussion.	32.2.6 Future Conditions With the Project – Potential Project-Related Effects, p. 32-100, para. 4 (no potential effect) 32.2.6.1 (Access), no potential effect 32.2.6.2 (Resource availability), no potential effect 32.2.6.3 (Resource quality), no potential effect 32.2.6.4 (Experiential quality), no potential effect
EIS Section 32.2.7 Mitigation Measures	For each Current Use indicator, only groups for whom a measurable potential effect was predicted were identified specifically in the aggregated discussion.	32.2.7.1 (Access), no differential measures 32.2.7.2 (Resource availability), no differential measures 32.2.7.3 (Resource quality), no differential measures 32.2.7.4 (Experiential quality), no differential measures
EIS Section 32.2.8 Residual Effects / Section 32.2.9 Cumulative Effects	N/A (no residual effects predicted)	N/A (no residual effects predicted)
EIS Section 32.3.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups	Disaggregated	32.3.2.1 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups, Semiahmoo First Nation, p. 32-133
EIS Section 32.3.3 Mitigation Measures	Disaggregated (but limited to groups with measurable potential impacts) Note: Measures identified are exactly the same as for Current Use (across all indicators, given that they were to be considered in the aggregate).	32.3.3.1 Summary of Mitigation Measures for Potential Adverse Impacts on the Exercise of Asserted or Established Aboriginal and Treaty Rights (same as Current use measures in Section 32.2.7), no differential measures 32.3.3.2 Summary of Mitigation Measures Suggested by Aboriginal Groups, no measures suggested by Semiahmoo First Nation 32.3.3.3 Other Accommodations, Semiahmoo First Nation, p. 32-148 32.3.3.4 Outstanding Aboriginal Issues, no differential issues
EIS IR/AIR	N/A	AIR-12.04.15-30 Rationale for (Current Use) Conclusions, Table AIR30-1 Rationale for Predicted Level of Effect, Semiahmoo First Nation, p. 6 (CEAR Document #388)
MSA Section 9.5.4 Existing Conditions	Disaggregated	9.5.4.14 Semiahmoo First Nation, pp. 9.5-101 to 9.5-105
MSA Section 9.5.5 Potential Interactions and Effects on Current Use	Aggregated (all Indigenous groups identified as experiencing a similar level of potential effect due to the linear activity of routine vessel transit)	9.5.5 Potential Interactions and Effects on Current Use, Table 9.5-35 (potential negligible-to-minor effect, all Indigenous groups) 9.5.5.1 Negligible Effects of Vessel Transit on Current Use, no differential effects[2] 9.5.5.2 Potential Effects of Vessel Transit on Current Use, no differential effects 9.5.5.3 Summary of Potential Transboundary Effects, not assessed
MSA Section 9.5.6 Suggested Mitigation Measures	Aggregated (to address the potentially minor linear effect on all Indigenous groups)	9.5.6 Suggested Mitigation Measures, no differential measures
MSA Section 9.5.7 Residual Effects Assessment and Significance Determination / Section 9.5.8 Cumulative	N/A (no residual effects predicted)	N/A (no residual effects predicted)

[2] In this case, a potential effect is described as a "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be the same for all groups (i.e., negligible-to-minor) as a result of marine shipping associated with the Project. Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-C and 1-D Indigenous groups.

EIS / MSA Section	Original EIS / MSA Information Presentation (Aggregated / Disaggregated)	Semiahmoo First Nation
Effects Assessment / Section 9.5.9 Summary of Assessment / Section 9.5.10 Follow-Up Program

Table IR10-A3-2 Semiahmoo First Nation Assessment Table (Information Request Package 10)

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[3]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR Package 10 (IR10)				
IR10-06 (EIS)				
Provide a group-specific assessment of the potential effects of the proposed Project and the characterisation and significance of any residual effect on current use in terms of changes in access, availability and quality of all preferred current use resources	*Note: A group-specific summary of the Current Use assessment for Semiahmoo was presented in Table AIR30-1 (based on the analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388)* Access – No potential change in access to preferred locations (before Current Use-specific mitigation) expected for Semiahmoo as a result of Project-related displacement effects based on available information, which did not indicate use of locations that may be affected by the Project	N/A (no effect before Current Use-specific mitigation)	*Part 1 – Additional baseline information regarding FSC harvesting*[4] – No additional information (refer to Semiahmoo-specific information provided in EIS Section 32.2.4.3 and MSA Section 9.5.4.14, per **Table IR10-A3-1** above, for available information) *Part 2 - Maps of marine harvest sites* – Spatial information for Semiahmoo already considered by the VFPA in the EIS / MSA Current Use assessment *Part 3 – Consider effects on social conditions*[5] – None anticipated given no potential access effect on Semiahmoo is expected (the VFPA is of the view that its predictions in the EIS already sufficiently considered Semiahmoo views regarding	No change in EIS predictions for Semiahmoo in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – No potential change in availability of Current Use resources at preferred locations expected for Semiahmoo with implementation of measures for linked valued components	N/A (no effect before Current Use-specific mitigation)		

[3] The level of potential effect prediction identified in this column refers to the predicted level of effect *before* Current Use-specific measures are taken into account, but *after* measures related to linked valued components (if applicable) have been considered. The next column refers to the level of residual effect prediction after *both* linked valued component measures (if applicable) and Current Use-specific measures have been taken into account.
[4] Additional baseline information requested in IR10-06: (1) Preferred species and locations; (2) Timing of current use activities, such as frequency, duration, and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access, including an estimate of the number of vessels per hour per year in the local and regional assessment areas for harvesting purposes.
[5] Social effects identified in IR10-06 for consideration in the assessment: (1) Conditions of access to other family member(s) territory or other Indigenous group's territory for traditional harvesting purposes; (2) Access by non-Indigenous user(s); and (3) Alienation from current and traditional harvesting places resulting from government policies and regulations.

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[3]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
	Quality of resources – No potential change in quality of Current Use resources at preferred locations expected for Semiahmoo with implementation of measures for linked valued components	N/A (no effect before Current Use-specific mitigation)	existing social constraints on access, as described in EIS Section 32.2.4.3 and MSA Section 9.5.4.14 *Part 4 – Views expressed by Indigenous groups regarding existing and potential effects on access and harvesting opportunities* – The VFPA is of the view that Semiahmoo views regarding existing effects, as described in EIS Section 32.2.4.3 and MSA Section 9.5.4.14, as well as Semiahmoo views regarding potential Project-related effects (provided in EIS Appendix 7.2-B and the Semiahmoo-specific issue tracking table (refer to forthcoming IR10-01 response), were already sufficiently considered in the VFPA's predictions in EIS Section 32.2.6 (including the analysis in Section 32.2.6.1, Section 32.2.6.2, and Section 32.2.6.3, and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388). *Part 5 – Characterisation of residual effects and evaluation of significance* – No additional information	
IR10-07 (EIS)				
Provide a group-specific assessment of the economic implications of permanent or temporary displacement as a result of the Project on current use	No potential change in access to preferred locations (before Current Use-specific mitigation) expected for Semiahmoo as a result of Project-related displacement effects based on available information, which did not indicate use of locations that may be affected by the Project	N/A (no effect before Current Use-specific mitigation)	The VFPA is of the view that Semiahmoo views regarding existing constraints on access, as described in EIS Section 32.2.4.3 and MSA Section 9.5.4.14, as well as Semiahmoo views regarding potential Project-related effects (provided in EIS Appendix 7.2-B and the Semiahmoo-specific issues tracking table in the forthcoming response to IR10-01), were already sufficiently considered in the VFPA's predictions in EIS Section 32.2.6 (including the analysis in Section 32.2.6.1 on access and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388).	As no potential effect on Current Use access (including the potential for increased competition) is expected for Semiahmoo (before Current Use-specific mitigation), no residual economic effects for Semiahmoo are anticipated as a result of the Project
IR10-08 (EIS)				
Provide a group-specific assessment of the changes in quality of the current use experience resulting from the proposed Project	Quality of experience (Pathway #1) – No potential change in Semiahmoo sense of place, risks to safety and security, and sensory disturbance expected with implementation of measures for linked valued components	N/A (no effect before Current Use-specific mitigation)	The VFPA is of the view that the nine factors[6] identified in IR10-08 for consideration in a group-specific assessment of potential changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and	No change in EIS predictions for Semiahmoo in terms of quality of Current Use experience

[6] Nine factors identified in IR10-08 for consideration in the assessment: (1) Loss of preferred harvesting sites; (2) How the quality of the Current Use experience could change due to the real and perceived contamination of traditional food sources; (3) Sensory disturbances from light, noise and vibration affecting oral traditions and sacred practices; (4) Safety risks and concerns due to increased vessel traffic; (5) Industrialization of the Project area, with subsequent loss and disruption of social and cultural values associated with the proposed Project area and the Fraser River estuary; (6) Increased alienation from traditional harvesting caused by industrial development on Roberts Bank, including the proposed expansion of navigational close areas; (7) Decreased willingness and ability by Indigenous peoples to access the Project area due to the perception of risk, reduced harvesting opportunities and aesthetic impacts; (8) Level of importance placed upon patters of use (past, present and future); and (9) Lost opportunities for the transmission of Indigenous Knowledge and practices due to avoidance of an expanded industrialized area.

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[3]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
	Quality of experience (Pathway #2) – No potential change in any indicator (i.e., access, availability and quality of resources, quality of experience (Pathway#1)) expected for Semiahmoo; therefore, no potential effect (before Current Use-specific mitigation) is expected on Semiahmoo's ability to reproduce and transmit cultural heritage associated with preferred locations and resources		assessed under Pathway #1 and/or Pathway #2 in EIS Section 32.2.6.4 (and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388). The VFPA notes that factors contributing to existing effects are reflected in Semiahmoo's baseline summaries in EIS Section 32.2.4.3 and MSA Section 9.5.4.14, and that these views and Semiahmoo views about potential Project-related effects (as provided in EIS Appendix 7.2-B and the Semiahmoo-specific issues tracking table in the forthcoming response to IR10-01) were taken into consideration in the assessment of potential effects on their quality of experience.	
IR10-13 (MSA)				
Provide a group-specific assessment of potential effects and the characterisation of residual effects of the marine shipping associated with the proposed Project on current use in terms of changes to access and availability and quality of preferred marine resources	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Semiahmoo as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Semiahmoo's access to preferred locations as a result of Project-associated ship pass-bys is expected	*Part 1 – Additional baseline information regarding harvesting and other Current Use activities*[7] – No additional information (refer to Semiahmoo-specific information provided in EIS Section 32.2.4.3 and MSA Section 9.5.4.14, per **Table IR10-A3-1** above, for available information) *Part 2 - Maps of marine harvest sites* – Spatial information for Semiahmoo already considered by the VFPA in the EIS / MSA Current Use assessment *Part 3(1) – List of issues / concerns regarding Project-associated vessel transit* – Identified for Semiahmoo in list of issues in MSA Appendix 5-B (also refer to the Semiahmoo-specific issues tracking table in the forthcoming IR10-01 response) *Part 3(2) – Adequacy of Proponent's response* – Refer to IR10-13 response *Part 3(3) – Proponent's views on thresholds of acceptability and risk* - Refer to IR10-13 response	No change in MSA predictions for Semiahmoo in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Semiahmoo as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Semiahmoo as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
IR10-14 (MSA)				
Consider (on a group-specific basis) the socio-economic implications of potential or necessary displacement (permanent or temporary)[8]	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Semiahmoo as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Semiahmoo's access to preferred locations as a result of Project-associated ship pass-bys is expected	The VFPA is of the view that Semiahmoo's views regarding existing constraints on access, as described in EIS Section 32.2.4.3 and MSA Section 9.5.4.14, as well as Semiahmoo's views regarding potential effects of Project-associated vessel transit,	As the predicted Current Use access effect on Semiahmoo is expected to be addressed through the suggested mitigation identified in MSA Section 9.5.6, no residual economic effects for Semiahmoo are anticipated

[7] Additional baseline information requested in IR10-13 for consideration in the assessment: (1) Preferred species and locations; (2) Timing of the current use activities, such as frequency, duration and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access for groups using the shipping lanes for fishing, groups traveling through the shipping lanes to access fishing, harvesting and cultural sites and, groups using the marine shipping area adjacent to the marine shipping lanes.

[8] Implications identified in IR10-14 for consideration in the assessment: (1) Sufficiency of resources at alternate locations to meet the requirements of the community; (2) Constraints of displacement (areas further from their community or already alienated to other interests); (3) Extra expenses required in monetary terms or additional travel time or necessary changes in technology for the practice or access to resources; and (4) Constraints on current harvesting activities caused by development, regulatory restrictions, reduced resources, contamination and conservation concerns and impediments to the revival of traditions surrounding coastal harvesting activities.

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[3]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
			described in MSA Appendix 5-B, were already sufficiently considered in the VFPA's predictions in MSA Section 9.5.5 regarding a potential access effect on Semiahmoo as a result of Project-associated vessel transit.	
IR10-15 (MSA)				
Provide a group-specific assessment of potential effect of the changes in quality of the current use experience resulting from marine shipping associated with the proposed Project and the characterisation and significance of residual effects	Quality of experience (Pathway #1) – Negligible potential change in Semiahmoo's sense of place, risks to safety and security, and sensory disturbance expected Quality of experience (Pathway #2) – Negligible potential change for all indicators except access. Potentially measurable (up to minor) effect (before Current Use-specific mitigation) is expected on Semiahmoo's ability to reproduce and transmit cultural heritage associated with potentially measurable access / displacement effect (refer to response to IR10-13)	Pathway #1 – N/A (negligible before Current Use-specific mitigation) Pathway #2 - Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Semiahmoo's quality of experience tied to access is expected	The VFPA is of the view that the 4 factors[9] identified in IR10-15 for consideration in the group-specific assessment of changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in MSA Section 9.5.5. The VFPA notes that factors contributing to existing effects are reflected in Semiahmoo's baseline summaries in EIS Section 32.2.4.3 and MSA Section 9.5.6.14, and that these views and Semiahmoo's views about potential effects of Project-associated vessel transit on Semiahmoo (as referenced in MSA Appendix 5-B), were taken into consideration in the assessment of potential effects on their quality of experience.	No change in MSA predictions for Semiahmoo in terms of quality of Current Use experience
IR10-16 (MSA)				
Present (the requested group-specific baseline information)[10]	N/A	N/A	No additional information available (refer to Semiahmoo-specific information provided in EIS Section 32.2.4.3 and MSA Section 9.5.4.14, per **Table IR10-A3-1** above, for available information)	No additional information available

[9] Four factors identified in IR10-15 for consideration in the assessment: (1) Sites of importance to Indigenous groups; (2) Decreased willingness, ability or avoidance by Indigenous peoples to access Current Use sites in or through the marine shipping lanes due to safety concerns and the perception of risk, reduced harvesting opportunities, and/or sensory disturbances; (3) Alienation from existing patterns of traditional harvesting due to the temporary or permanent displacement from areas of importance; and (4) Loss of opportunities for the cultural transmission of Indigenous Knowledge and practices due to the temporary or permanent displacement from those areas of importance.

[10] Additional baseline information requested in IR10-16: (1) The current activities taking place during the day or the night with a quantification of day and night duration; (2) The access required within, outside or through the shipping lanes; (3) The seasons that activities are practiced; (4) The frequency that each Indigenous group crosses the shipping lanes in the marine shipping area; and (5) The minimum and maximum number of vessels per hour in the shipping lanes, by Segment, encountered by Indigenous fishing vessels for Current Use activities in relation to the proposed Project-related ship movements.

Tsleil-Waututh Nation[1] Group-specific Baseline Information Process Summary (EIS and AIMSA)

Environmental Impact Statement (EIS)

On November 15, 2013, the VFPA and Tsleil-Waututh Nation signed a funding agreement to support Tsleil-Waututh Nation's completion of a Traditional Use study for the Project to identify current use of lands and resources, including any marine lands and/or marine resources for traditional purposes, to identify, where possible, current navigational use for traditional purposes, given the marine footprint of the Project, to help understanding any potential impacts to current land and resource use opportunities and practices as a result of the Project, and to help understand what, if any, changes Tsleil-Waututh Nation foresee to current land and resource use opportunities and practices as a result of the proposed Project.

On April 1, 2014, Tsleil-Waututh Nation provided the VFPA with a report titled "*Tsleil-Waututh Nation Knowledge Study: Roberts Bank Terminal 2 Project."*

On July 14, 2014, the VFPA provided Tsleil-Waututh Nation with a draft *"Tsleil-Waututh Nation Community Profile"* for review and comment. Comments were received from Tsleil-Waututh Nation on August 14, 2014, and changes were made to reflect input from Tsleil-Waututh Nation.

On November 20, 2014, the VFPA met with Tsleil-Waututh Nation to provide information regarding the assessment of potential Project effects and cumulative effects on Aboriginal and treaty rights and related interests and current use of lands and resources for traditional purposes (Current Use), and to identify any additional information to inform the assessment. The presentation and discussion included content regarding the proposed methodology for this assessment, the VFPA's understanding of existing conditions, based on the information provided by Tsleil-Waututh Nation, and preliminary conclusions of the assessment.

On December 9, 2014, the VFPA provided Tsleil-Waututh Nation with advance drafts of the existing conditions sections of the EIS: "*Potential or Established Aboriginal and Treaty Rights and Related Interests, and including Current Use of Lands and Resources for Traditional Purposes*" and "*Aboriginal Commercial Fishing and Seafood Harvesting*." The VFPA requested that Tsleil-Waututh Nation confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final EIS. Comments on the draft sections were received from Tsleil-Waututh Nation on January 15, 2015 and changes were made to reflect input from Tsleil-Waututh Nation.

On March 25, 2015, the VFPA sent a tracking table outlining all Tsleil-Waututh Nation's comments on the draft sections, responses to each comment from the VFPA, and a description of subsequent changes made to the sections in the EIS.

On April 2, 2015, the VFPA provided Tsleil-Waututh Nation with a copy of the EIS.

[1] Indigenous group listed in Table 1-A (EIS) and Table 1-D (AIMSA) of Attachment 2 to IR Package 10.

Additional Information to the Marine Shipping Addendum – Musqueam First Nation and Tsleil-Waututh Nation (AIMSA)

On December 4, 2015, the VFPA wrote to Tsleil-Waututh Nation requesting input regarding the potential effects of marine shipping to Tsleil-Waututh Nation. Specifically, the VFPA sought information from Tsleil-Waututh Nation on the effects of changes to the environment as a result of existing marine shipping on Tsleil-Waututh Nation's health and socio-economic conditions, physical and cultural heritage, including any structure, site, or thing that is of historical, archaeological, paleontological, or architectural significance, and Current Use. The VFPA also sought information on the effects of marine shipping on Tsleil-Waututh Nation's ability to exercise its asserted Aboriginal rights.

On February 12, 2016, the VFPA provided Tsleil-Waututh Nation with a draft document titled "*Roberts Bank Terminal 2 Project—Marine Shipping Study: Tsleil-Waututh Nation—Current Use of Lands and Resources for Traditional Purposes – Summary of Existing Conditions."* The VFPA sought to confirm with Tsleil-Waututh Nation that the information is accurately presented and whether any revisions, additions, or deletions are required. Comments were provided by Tsleil-Waututh Nation on March 22, 2016. Changes to the draft were made to reflect input from Tsleil-Waututh Nation.

On June 7, 2016, the VFPA provided Tsleil-Waututh Nation with the draft existing conditions sections for components considered in the AIMSA (i.e., Human Health, Marine Commercial Use, Outdoor Recreation, Archaeological and Heritage Resources, and Current Use and Aboriginal and Treaty Rights), and requested that Tsleil-Waututh confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final AIMSA. On June 24, 2016, Tsleil-Waututh Nation provided comments on the draft existing conditions sections. Changes were made to the draft AIMSA to reflect input from Tsleil-Waututh.

On August 3, 2016, the VFPA provided the full draft AIMSA for Tsleil-Waututh Nation's review and comment, including the existing conditions sections shared earlier and all effects assessment sections. Tsleil-Waututh Nation responded with comments on August 25, 2016. Tsleil-Waututh Nation's comments were integrated into the final AIMSA as appropriate.

On September 30, 2016, the VFPA provided Tsleil-Waututh Nation with a table including all Tsleil-Waututh Nation's comments on the draft sections, responses to each comment from the VFPA, and a description of subsequent changes made to the sections.

Tsleil-Waututh Nation Group-specific Index and Assessment Tables

Table IR10-A4-1 Tsleil-Waututh Nation Index Table

EIS / AIMSA Section	Original EIS / AIMSA Information Presentation (Aggregated / Disaggregated)	Tsleil-Waututh Nation
EIS Section 32.1.1 Aboriginal Groups (Community profiles)	Disaggregated	32.1.1.4 Tsleil-Waututh Nation, pp. 32-7 to 32-8
EIS Section 32.2.4 Existing Conditions (Past, present, desired future use and list of rights identified by Indigenous groups as affected)	Disaggregated	32.2.4.4 Tsleil-Waututh Nation, pp. 32-63 to 32-70
EIS Section 32.2.6 Future Conditions With the Project – Potential Project-Related Effects (on Current Use)	Overall level of potential effect on each Indigenous group's Current Use identified in introduction to section. For each Current Use indicator, only groups for whom a measurable potential effect was predicted were disaggregated from the aggregated discussion.	32.2.6 Future Conditions With the Project – Potential Project-Related Effects, p. 32-100, para. 4 (negligible potential effect) 32.2.6.1 (Access), Tsleil-Waututh Nation, p. 32-103, para. 1; p. 32-104, para. 1, no differential effect (i.e., negligible)[2] 32.2.6.2 (Resource availability), no differential effect 32.2.6.3 (Resource quality), no differential effect 32.2.6.4 (Experiential quality), no differential effect
EIS Section 32.2.7 Mitigation Measures	For each Current Use indicator, only groups for whom a measurable potential effect was predicted were identified specifically in the aggregated discussion.	32.2.7.1 (Access), no differential measures 32.2.7.2 (Resource availability), no differential measures 32.2.7.3 (Resource quality), no differential measures 32.2.7.4 (Experiential quality), no differential measures
EIS Section 32.2.8 Residual Effects / Section 32.2.9 Cumulative Effects	N/A (no residual effects predicted)	N/A (no residual effects predicted)
EIS Section 32.3.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups	Disaggregated	32.3.2.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups, Tsleil-Waututh Nation, p. 32-133 to p. 32-135
EIS Section 32.3.3 Mitigation Measures	Disaggregated (but limited to groups with measurable potential impacts) Note: Measures identified are exactly the same as for Current Use (across all indicators, given that they were to be considered in the aggregate).	32.3.3.1 Summary of Mitigation Measures for Potential Adverse Impacts on the Exercise of Asserted or Established Aboriginal and Treaty Rights (same as Current Use measures in Section 32.2.7), no differential measures 32.3.3.2 Summary of Mitigation Measures Suggested by Aboriginal Groups, no measures suggested by Tsleil-Waututh 32.3.3.3 Other Accommodations, p. 32-148 32.3.3.4 Outstanding Aboriginal Issues, no differential issues
EIS IR/AIR	N/A	AIR-12.04.15-30 Rationale for (Current Use) Conclusions, Table AIR30-1 Rationale for Predicted Level of Effect, Tsleil-Waututh Nation, p. 6 (CEAR Document #388)
AIMSA Section 7.2 Existing Conditions	Disaggregated	7.2.2 Tsleil-Waututh Nation, pp. 42 to 47
AIMSA Section 7.3 Potential Interactions and Effects on Current Use	Disaggregated within each Current Use indicator discussion	7.3 Potential Interactions and Effects on Current Use, pp. 48-55 (Tsleil-Waututh identified within each subsection, with potential group-specific effects identified as negligible-to-minor)
AIMSA Section 7.4 Suggested Mitigation Measures	Disaggregated within each Current Use indicator discussion	7.4 provides Tsleil-Waututh perspective on measures suggested by VFPA, p. 56; no specific suggestions were provided by Tsleil-Waututh, citing the need for ongoing consultation, p. 56
AIMSA Section 7.5 Residual Effects, 7.6 Cumulative Effects, 7.7 Follow Up Program	N/A (no residual effects predicted)	N/A (no residual effects predicted)

[2] In this table, a potential effect is described as a "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be non-measurable. Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-A and Table 1-D Indigenous groups, regardless of whether the predicted level of potential effect (before Current Use-specific mitigation) was identified as measurable or non-measurable.

EIS / AIMSA Section	Original EIS / AIMSA Information Presentation (Aggregated / Disaggregated)	Tsleil-Waututh Nation
AIMSA Section 7.8 Potential Impacts on Asserted or Established Aboriginal and Treaty Rights	Effectively disaggregated given the limited number of nations included in AIMSA (i.e., two) Note: Proposed measures identified are exactly the same as for Current Use	7.8, pp. 57-61 (Tsleil-Waututh are identified within each subsection, with potential group-specific impacts identified as negligible-to-minor)
Issue Tracking Table	EIS – Aggregated AIMSA – Disaggregated by issue/interest	EIS – See forthcoming response to IR10-01 for disaggregated issues tracking table AIMSA Appendix 2-B Aboriginal Issues and Interests – Tsleil-Waututh Nation (disaggregated by issue/interest, but not a separate group-specific table)
Indigenous Traditional Knowledge (ITK)	EIS – IR-7.31.15-04 (Aggregated) (CEAR Document #314) AIMSA – Table 9.1 (Disaggregated)	EIS – See response to IR10-02 for disaggregated ITK AIMSA Table 9.1 Additional Aboriginal Traditional Knowledge Supporting the RBT2 Marine Shipping Addendum: Tsleil-Waututh Nation, pp. 70 to 79

Table IR10-A4-2 Tsleil-Waututh Nation Assessment Table (Information Request Package 10)

IR10 Information Request	EIS / AIMSA Level of Potential Effect Prediction[3]	EIS / AIMSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR Package 10 (IR10)				
IR10-06 (EIS)				
Provide a group-specific assessment of the potential effects of the proposed Project and the characterisation and significance of any residual effect on current use in terms of changes in access, availability and quality of all preferred current use resources	*Note: A group-specific summary of the Current Use assessment for Tsleil-Waututh was presented in Table AIR30-1 (based on the analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388)* Access – Negligible potential change in access expected for Tsleil-Waututh (before Current Use-specific mitigation) as a result of Project-related displacement effects based on available information, which indicated very limited crab harvesting access at this location by Tsleil-Waututh members (i.e., five days in total from 2010 to 2014, always in the month of June)	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Tsleil-Waututh access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	*Part 1 – Additional baseline information regarding FSC harvesting*[4] – No additional information (refer to Tsleil-Waututh-specific information provided in EIS Section 32.2.4.4 and AIMSA Section 7.2.2, per Tsleil-Waututh Index Table above, for available information) *Part 2 - Maps of marine harvest sites* – Maps contained in Tsleil-Waututh studies already considered by the VFPA in the EIS / AIMSA Current Use assessment *Part 3 – Consider effects on social conditions*[5] – None anticipated given the predicted access effect on Tsleil-Waututh is expected to be negligible (the VFPA is of the view that its predictions in the EIS already sufficiently considered Tsleil-Waututh views regarding existing social constraints on access, as described in EIS Section 32.2.4.4 and AIMSA Section 7.2.2) *Part 4 – Views expressed by Indigenous groups regarding existing and potential effects on access and harvesting opportunities* – The VFPA is of the view that Tsleil-Waututh views regarding existing	No change in EIS predictions for Musqueam in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Tsleil-Waututh with implementation of measures for linked valued components	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on availability of resources for Tsleil-Waututh use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)		

[3] The level of potential effect prediction identified in this column refers to the predicted level of effect *before* Current Use-specific measures are taken into account, but *after* measures related to linked valued components (if applicable) have been considered. The next column refers to the level of residual effect prediction after *both* linked valued component measures (if applicable) and Current Use-specific measures have been taken into account.
[4] Additional baseline information requested in IR10-06: (1) Preferred species and locations; (2) Timing of current use activities, such as frequency, duration, and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access, including an estimate of the number of vessels per hour per year in the local and regional assessment areas for harvesting purposes.
[5] Social effects identified in IR10-06 for consideration in the assessment: (1) Conditions of access to other family member(s) territory or other Indigenous group's territory for traditional harvesting purposes; (2) Access by non-Indigenous user(s); and (3) Alienation from current and traditional harvesting places resulting from government policies and regulations.

IR10 Information Request	EIS / AIMSA Level of Potential Effect Prediction[3]	EIS / AIMSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Tsleil-Waututh with implementation of measures for linked valued components	Negligible – Taking mitigation, including consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on quality of resources for Tsleil-Waututh use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)	effects, as described in EIS Section 32.2.4.4 and AIMSA Section 7.2.2, as well as the Tsleil-Waututh views regarding potential Project-related effects (provided in EIS Appendix 7.2-B and the Tsleil-Waututh-specific issue tracking table in the forthcoming IR10-01 response), were already sufficiently considered in the VFPA's predictions in EIS Section 32.2.6 (including the analysis in Section 32.2.6.1, Section 32.2.6.2, and Section 32.2.6.3, and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388). *Part 5 – Characterisation of residual effects and evaluation of significance* – No additional information (the VFPA is of the view that Tsleil-Waututh views on thresholds are reflected in EIS Section 32.2.4.4 and AIMSA Section 7.2.2, and were factored into the Current Use assessment for Project-related effects; refer also to responses to IR10-11 and IR10-12)	
IR10-07 (EIS)				
Provide a group-specific assessment of the economic implications of permanent or temporary displacement as a result of the Project on current use	Access – Negligible potential change in access expected for Tsleil-Waututh (before Current Use-specific mitigation) as a result of Project-related displacement effects based on available information, which indicated very limited crab harvesting access at this location by Tsleil-Waututh members (i.e., five days in total from 2010 to 2014, always in the month of June)	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Tsleil-Waututh access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that Tsleil-Waututh views regarding existing constraints on access, as described in EIS Section 32.2.4.4 and AIMSA Section 7.2.2, as well as Tsleil-Waututh views regarding potential Project-related effects (provided in EIS Appendix 7.2-B and the Tsleil-Waututh-specific issues tracking table in the forthcoming response to IR10-01), were already sufficiently considered in the VFPA's predictions in EIS Section 32.2.6 (including the analysis in EIS Section 32.2.6.1 and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388).	As the predicted Current Use access effect (including the potential for increased competition) on Tsleil-Waututh is expected to be negligible, no residual economic effects for Tsleil-Waututh are anticipated as a result of the Project
IR10-08 (EIS)				
Provide a group-specific assessment of the changes in quality of the current use experience resulting from the proposed Project	Quality of experience (Pathway #1) – Negligible potential change in Tsleil-Waututh sense of place, risks to safety and security, and sensory disturbance expected with implementation of measures for linked valued components	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Tsleil-Waututh's quality of experience at preferred locations is predicted	The VFPA is of the view that the nine factors[6] identified in IR10-08 for consideration in a group-specific assessment of potential changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and	No change in EIS predictions for Tsleil-Waututh in terms of quality of Current Use experience

[6] Nine factors identified in IR10-08 for consideration in the assessment: (1) Loss of preferred harvesting sites; (2) How the quality of the Current Use experience could change due to the real and perceived contamination of traditional food sources; (3) Sensory disturbances from light, noise and vibration affecting oral traditions and sacred practices; (4) Safety risks and concerns due to increased vessel traffic; (5) Industrialization of the Project area, with subsequent loss and disruption of social and cultural values associated with the proposed Project area and the Fraser River estuary; (6) Increased alienation from traditional harvesting caused by industrial development on Roberts Bank, including the proposed expansion of navigational close areas; (7) Decreased willingness and ability by Indigenous peoples to access the Project area due to the perception of risk, reduced harvesting opportunities and aesthetic impacts; (8) Level of importance placed upon patters of use (past, present and future); and (9) Lost opportunities for the transmission of Indigenous Knowledge and practices due to avoidance of an expanded industrialized area.

IR10 Information Request	EIS / AIMSA Level of Potential Effect Prediction[3]	EIS / AIMSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
	Quality of experience (Pathway #2) – Negligible potential change across all indicators (i.e., access, availability and quality of resources, quality of experience (Pathway#1)) for Tsleil-Waututh; therefore, a negligible potential effect (before Current Use-specific mitigation) is expected on Tsleil-Waututh's ability to reproduce and transmit cultural heritage	(i.e., use at preferred locations will be consistent with existing conditions)	assessed under Pathway #1 and/or Pathway #2 in EIS Section 32.2.6.4 (and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388). The VFPA notes that factors contributing to existing effects are reflected in Tsleil-Waututh baseline summaries in EIS Section 32.2.4.4 and AIMSA Section 7.2.2, and that these views and Tsleil-Waututh views about potential Project-related effects (as provided in EIS Appendix 7.2-B and the Tsleil-Waututh-specific issues tracking table in the forthcoming response to IR10-01) were taken into consideration in the assessment of potential effects on their quality of experience.	
IR10-13 (AIMSA)				
Provide a group-specific assessment of potential effects and the characterisation of residual effects of the marine shipping associated with the proposed Project on current use in terms of changes to access and availability and quality of preferred marine resources	*Note: A group-specific assessment for Tsleil-Waututh was presented in the AIMSA for all indicators* Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Tsleil-Waututh as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Tsleil-Waututh access to preferred locations as a result of Project-associated ship pass-bys is expected	*Part 1 – Additional baseline information regarding harvesting and other Current Use activities*[7] – No additional information (refer to Tsleil-Waututh-specific information provided in EIS Section 32.2.4.4 and AIMSA Section 7.2.2, per **Table IR10-A4-1** above, for available information) *Part 2 - Maps of marine harvest sites* – Maps contained in Tsleil-Waututh studies considered by the VFPA in the EIS / AIMSA Current Use assessment *Part 3(1) – List of issues / concerns regarding Project-associated vessel transit* – Identified for Tsleil-Waututh in the effects assessment for each Current Use indicator in AIMSA Section 7.3 and in the group-specific list of issues in AIMSA Appendix 2-B (also refer to the Tsleil-Waututh-specific issues tracking table in the forthcoming IR10-01 response) *Part 3(2) – Adequacy of Proponent's response* – Refer to IR10-13 response *Part 3(3) – Proponent's views on thresholds of acceptability and risk* - Refer to IR10-13 response	No change in AIMSA predictions for Tsleil-Waututh in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Tsleil-Waututh as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Tsleil-Waututh as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
IR10-14 (AIMSA)				
Consider (on a group-specific basis) the socio-economic implications of potential or	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Tsleil-Waututh as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Tsleil-Waututh access to preferred locations	The VFPA is of the view that Tsleil-Waututh views regarding existing constraints on access, as described in EIS Section 32.2.4.4 and AIMSA Section 7.2.2, as well as Tsleil-Waututh views regarding potential effects of	As the predicted Current Use access effect on Tsleil-Waututh is expected to be addressed through the suggested mitigation identified in AIMSA Section 7.4, no residual

[7] Additional baseline information requested in IR10-13 for consideration in the assessment: (1) Preferred species and locations; (2) Timing of the current use activities, such as frequency, duration and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access for groups using the shipping lanes for fishing, groups traveling through the shipping lanes to access fishing, harvesting and cultural sites and, groups using the marine shipping area adjacent to the marine shipping lanes.

IR10 Information Request	EIS / AIMSA Level of Potential Effect Prediction[3]	EIS / AIMSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
necessary displacement (permanent or temporary)[8]		as a result of Project-associated ship pass-bys is expected	Project-associated vessel transit, described for each group in AIMSA Section 7.3 and AIMSA Appendix 2-B, were already sufficiently considered in the VFPA's predictions in AIMSA Section 7.3.1 regarding a potential access effect on Tsleil-Waututh as a result of Project-associated vessel transit.	economic effects for Tsleil-Waututh are anticipated.
IR10-15 (AIMSA)				
Provide a group-specific assessment of potential effect of the changes in quality of the current use experience resulting from marine shipping associated with the proposed Project and the characterisation and significance of residual effects	Quality of experience (Pathway #1) – Negligible potential change in Tsleil-Waututh sense of place, risks to safety and security, and sensory disturbance expected Quality of experience (Pathway #2) – Negligible potential change for all indicators except access. Potentially measurable (up to minor) effect (before Current Use-specific mitigation) is expected on Tsleil-Waututh's ability to reproduce and transmit cultural heritage associated with potentially measurable access / displacement effect (refer to response to IR10-13)	Pathway #1 – N/A (negligible before Current Use-specific mitigation) Pathway #2 - Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Tsleil-Waututh's quality of experience tied to access is expected	The VFPA is of the view that the 4 factors[9] identified in IR10-15 for consideration in the group-specific assessment of changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in AIMSA Section 7.3.4. The VFPA notes that factors contributing to existing effects are reflected in Tsleil-Waututh baseline summaries in EIS Section 32.2.4.4 and AIMSA Section 7.2.2, and that these views and Tsleil-Waututh views about potential effects of Project-associated vessel transit on Tsleil-Waututh (as referenced in Tsleil-Waututh's group-specific assessment in AIMSA Section 7.3.4), were taken into consideration in the assessment of potential effects on their quality of experience.	No change in AIMSA predictions for Tsleil-Waututh in terms of quality of Current Use experience
IR10-16 (AIMSA)				
Present (the requested group-specific baseline information)[10]	N/A	N/A	No additional information available (refer to Tsleil-Waututh-specific information provided in EIS Section 32.2.4.4 and AIMSA Section 7.2.2, per **Table IR10-A4-1** above, for available information)	No additional information available

[8] Implications identified in IR10-14 for consideration in the assessment: (1) Sufficiency of resources at alternate locations to meet the requirements of the community; (2) Constraints of displacement (areas further from their community or already alienated to other interests); (3) Extra expenses required in monetary terms or additional travel time or necessary changes in technology for the practice or access to resources; and (4) Constraints on current harvesting activities caused by development, regulatory restrictions, reduced resources, contamination and conservation concerns and impediments to the revival of traditions surrounding coastal harvesting activities.
[9] Four factors identified in IR10-15 for consideration in the assessment: (1) Sites of importance to Indigenous groups; (2) Decreased willingness, ability or avoidance by Indigenous peoples to access Current Use sites in or through the marine shipping lanes due to safety concerns and the perception of risk, reduced harvesting opportunities, and/or sensory disturbances; (3) Alienation from existing patterns of traditional harvesting due to the temporary or permanent displacement from areas of importance; and (4) Loss of opportunities for the cultural transmission of Indigenous Knowledge and practices due to the temporary or permanent displacement from those areas of importance.
[10] Additional baseline information requested in IR10-16: (1) The current activities taking place during the day or the night with a quantification of day and night duration; (2) The access required within, outside or through the shipping lanes; (3) The seasons that activities are practiced; (4) The frequency that each Indigenous group crosses the shipping lanes in the marine shipping area; and (5) The minimum and maximum number of vessels per hour in the shipping lanes, by Segment, encountered by Indigenous fishing vessels for Current Use activities in relation to the proposed Project-related ship movements.

Stz'uminus First Nation[1] Group-specific Baseline Information Process Summary (EIS and MSA)

Environmental Impact Statement (EIS)

On April 24, 2014, the VFPA and the Cowichan Nation Alliance ("CNA"), which at that time consisted of Cowichan Tribes, Penelakut Tribes, Halalt First Nation, Stz'uminus First Nation, and Hwlitsum, signed a funding agreement to support the completion of a Traditional Use Study.

The VFPA requested information on CNA's current use of the waters and terrestrial areas adjacent to the Project as well as any foreseeable changes or impacts to these areas that may result from the Project. Information was sought in relation to the location and timing of harvests, how these locations were accessed, specific species that were targeted, how the harvested species were utilised, and the cultural values associated with the harvest. In addition, the VFPA requested broader contextual information on traditional economy and knowledge and culturally important places. The VFPA further requested information related to past use, existing use, and changes that CNA anticipated to the landscape and their use of the area over time.

On July 11, 2014, the VFPA provided Stz'uminus with a draft of the "*Stz'uminus Community Profile"* for review and comment. In August 2014, the VFPA wrote to Stz'uminus asking whether there is any specific cultural information that Stz'uminus would like to provide for inclusion in the EIS, specifically information related to special features, unique characteristics, or stories associated with Roberts Bank. No comments were provided by Stz'uminus First Nation.

On October 16, 2014, CNA provided the VFPA with a report titled "*Port Metro Vancouver: Roberts Bank Terminal 2: Cowichan Nation Alliance Current and Planned Use."*

On December 11, 2014, the VFPA met with Stz'uminus First Nation and other members of CNA to provide information regarding the assessment of potential Project effects and cumulative effects on Aboriginal and treaty rights and related interests and current use of lands and resources for traditional purposes (Current Use), and to obtain feedback and identify any additional information to inform the assessment. The presentation and discussion included content regarding the proposed methodology for this assessment, the VFPA's understanding of existing conditions, based on the information provided by Stz'uminus First Nation or CNA, and preliminary conclusions of the assessment. Following the meeting, on January 14, 2015, the VFPA sent a summary of questions and comments raised by CNA during the meeting for verification prior to incorporating the information into the EIS.

On January 15, 2015, comments on the draft section, *"Potential or Established Aboriginal and Treaty Rights and Related Interests, and including Current Use of Lands and Resources for Traditional Purposes,"* was received from CNA, and changes were made to reflect input from CNA.

[1] Indigenous group listed in Table 1-A (EIS) and Table 1-C (MSA) of Attachment 2 to IR Package 10.

On March 25, 2015, the VFPA provided CNA with a table outlining all CNA's comments on the draft sections, responses to each comment from the VFPA, and a description of subsequent changes made to the sections in the EIS.

On April 2, 2015, the VFPA provided Stz'uminus First Nation with a copy of the EIS.

Marine Shipping Addendum (MSA)

On May 26, 2015, the VFPA wrote a letter to Stz'uminus First Nation explaining that the VFPA is considering effects from marine shipping associated with the Project on the current use of lands and resources by Stz'uminus First Nation. The VFPA requested information from Stz'uminus First Nation regarding Current Use, fisheries, or potential effects associated with marine shipping. In the letter, the VFPA explained its intent to rely on existing information to inform the assessment of potential effects associated marine shipping associated with the Project, including the report previously provided titled "*Port Metro Vancouver: Roberts Bank Terminal 2: Cowichan Nation Alliance Current and Planned Use"* as well as the Application to the National Energy Board and the Stz'uminus First Nation oral hearing transcript for the Trans Mountain Expansion Project. The VFPA requested any additional information from Stz'uminus First Nation that may help to inform the assessment. The VFPA also offered funding to facilitate Stz'uminus First Nation's participation in consultation. The funding was accepted by Stz'uminus First Nation on May 15, 2015.

On June 17, 2015, the VFPA met with CNA (a representative of Stz'uminus First Nation was not in attendance at this meeting) to discuss marine shipping associated with the Project and reiterated its request for information regarding CNA's current use of the marine shipping area. CNA committed to reviewing the summaries once received.

On July 27, 2015, the VFPA provided CNA with a draft section of the MSA titled *"Cowichan Nation Alliance Current Use of Lands and Resources for Traditional Purposes."* The VFPA requested that CNA confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final MSA. Comments on the draft sections were received from CNA (writing on behalf of Cowichan Tribes, Stz'uminus First Nation, and Halalt First Nation) on September 9, 2015 and changes were made to reflect input from CNA.

On November 9, 2015, the VFPA provided Stz'uminus First Nation with a copy of the final MSA.

On April 25, 2016, the VFPA provided CNA with a tracking table including all CNA's comments on the draft sections, responses to each comment from the VFPA, and a description of subsequent changes made to the sections.

Stz'uminus First Nation Group-specific Index and Assessment Table

Table IR10-A5-1 Stz'uminus First Nation Index Table

EIS / MSA Section	Original EIS / MSA Information Presentation (Aggregated / Disaggregated)	Stz'uminus First Nation
EIS Section 32.1.1 Aboriginal Groups (Community profiles)	Disaggregated	32.1.1.5 Stz'uminus First Nation, pp. 32-8 to 32-9
EIS Section 32.2.4 Existing Conditions (Past, present, desired future use and list of rights identified by Indigenous groups as affected)	Disaggregated	32.2.4.5 Cowichan Nation Alliance (CNA, including Stz'uminus First Nation), pp. 32-71 to 32-77
EIS Section 32.2.6 Future Conditions With the Project – Potential Project-Related Effects (on Current Use)	Overall level of potential effect on each Indigenous group's Current Use identified in introduction to section. For each Current Use indicator, only groups for whom a measurable potential effect was predicted were disaggregated from the aggregated discussion.	32.2.6 Future Conditions With the Project – Potential Project-Related Effects, member groups of the CNA (including Stz'uminus First Nation), p. 32-100, para. 4 (negligible potential effect) 32.2.6.1 (Access), no differential effect (i.e., negligible)[1] 32.2.6.2 (Resource availability), no differential effect 32.2.6.3 (Resource quality), no differential effect 32.2.6.4 (Experiential quality), no differential effect
EIS Section 32.2.7 Mitigation Measures	For each Current Use indicator, only groups for whom a measurable potential effect was predicted were identified specifically in the aggregated discussion.	32.2.7.1 (Access), no differential measures 32.2.7.2 (Resource availability), no differential measures 32.2.7.3 (Resource quality), no differential measures 32.2.7.4 (Experiential quality), no differential measures
EIS Section 32.2.8 Residual Effects / Section 32.2.9 Cumulative Effects	N/A (no residual effects predicted)	N/A (no residual effects predicted)
EIS Section 32.3.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups	Disaggregated	32.3.2.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups, Cowichan Nation Alliance (including Stz'uminus First Nation), pp. 32-135 to p. 32-137
EIS Section 32.3.3 Mitigation Measures	Disaggregated (but limited to groups with measurable potential impacts) Note: Measures identified are exactly the same as for Current Use (across all indicators, given that they were to be considered in the aggregate).	32.3.3.1 Summary of Mitigation Measures for Potential Adverse Impacts on the Exercise of Asserted or Established Aboriginal and Treaty Rights (same as Current use measures in Section 32.2.7), no differential measures 32.3.3.2 Summary of Mitigation Measures Suggested by Aboriginal Groups, no differential measures suggested by Stz'uminus 32.3.3.3 Other Accommodations, Stz'uminus First Nation, p. 32-148 32.3.3.4 Outstanding Aboriginal Issues, no differential issues
EIS IR/AIR	N/A	AIR-12.04.15-30 Rationale for (Current Use) Conclusions, Table AIR30-1 Rationale for Predicted Level of Effect, Stz'uminus First Nation, p. 7 (CEAR Document #388)
MSA Section 9.5.4 Existing Conditions	Disaggregated	9.5.4.15 Cowichan Nation Alliance (including Stz'uminus First Nation), pp. 9.5-105 to 9.5-114
MSA Section 9.5.5 Potential Interactions and Effects on Current Use	Aggregated (all Indigenous groups identified as experiencing a similar level of potential effect due to the linear activity of routine vessel transit)	9.5.5 Potential Interactions and Effects on Current Use, Table 9.5-35 (potential negligible-to-minor effect, all Indigenous groups) 9.5.5.1 Negligible Effects of Vessel Transit on Current Use, no differential effects[2] 9.5.5.2 Potential Effects of Vessel Transit on Current Use, no differential effects 9.5.5.3 Summary of Potential Transboundary Effects, not assessed

[1] In this case, a potential effect is described as a "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be non-measurable in relation to the Project. Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-A and Table 1-B Indigenous groups, regardless of whether the predicted level of potential effect (before Current Use-specific mitigation) was identified as measurable or non-measurable in relation to the Project.

[2] In this case, a potential effect is described as a "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be the same for all groups (i.e., negligible-to-minor) as a result of marine shipping associated with the Project. Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-C and 1-D Indigenous groups.

EIS / MSA Section	Original EIS / MSA Information Presentation (Aggregated / Disaggregated)	Stz'uminus First Nation
MSA Section 9.5.6 Suggested Mitigation Measures	Aggregated (to address the potentially minor linear effect on all Indigenous groups)	9.5.6 Suggested Mitigation Measures, no differential measures
MSA Section 9.5.7 Residual Effects Assessment and Significance Determination / Section 9.5.8 Cumulative Effects Assessment / Section 9.5.9 Summary of Assessment / Section 9.5.10 Follow-Up Program	N/A (no residual effects predicted)	N/A (no residual effects predicted)
MSA Section 9.5.11 Potential Impacts on Asserted or Established Aboriginal and Treaty Rights	Aggregated (all Indigenous groups identified as experiencing a similar level of potential impact due to the linear activity of routine vessel transit) Note: Measures identified are exactly the same as for Current Use	9.5.11.1 Approach to the Rights Assessment, Stz'uminus First Nation, p. 9.5-148 9.5.11.2 Results of the Rights Assessment, potential negligible-to-minor impact (all Indigenous groups, no differential impacts) 9.5.11.3 Suggested Mitigation Measures, no differential measures 9.5.11.4 Residual Effects, N/A (no residual effects predicted)
MSA IR	N/A	MSA IR-02.24.16-13 Aboriginal and Treaty Rights and Related Interests, Table MSA IR13-1 Mitigation Measures Proposed by Aboriginal Groups for Potential Adverse Impacts to Potential or Established Aboriginal and Treaty Rights and Related Interests, Stz'uminus First Nation, p. 3 (CEAR Document #391)
Issues Tracking Table	EIS – Aggregated MSA – Aggregated	EIS / MSA – See forthcoming response to IR10-01 for disaggregated issues tracking table
Indigenous Traditional Knowledge (ITK)	EIS – IR-7.31.15-04 (Aggregated) (CEAR Document #314) MSA – MSA IR-02.24.16-08 (Aggregated) (CEAR Document #391)	EIS / MSA – See response to IR10-02 for disaggregated ITK

Table IR10-A5-2 Stz'uminus First Nation Assessment Table (Information Request Package 10)

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[3]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR Package 10 (IR10)				
IR10-06 (EIS)				
Provide a group-specific assessment of the potential effects of the proposed Project and the characterisation and significance of any residual effect on current use in terms of changes in access, availability and quality of all preferred current use resources	*Note: A group-specific summary of the Current Use assessment for Stz'uminus First Nation / CNA was presented in Table AIR30-1 (based on the analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388)* Access – Negligible potential change in access expected for Stz'uminus / CNA (before Current Use-specific mitigation) as a result of Project-related displacement effects based on available information, which indicated that CNA member groups reported crabbing in a regional area that included Roberts Bank, but that did not indicate	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Stz'uminus / CNA access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	*Part 1 – Additional baseline information regarding FSC harvesting*[4] – No additional information (refer to Stz'uminus / CNA-specific information provided in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, per **Table IR10-A5-1** above, for available information) *Part 2 - Maps of marine harvest sites* –Spatial information (including mapping) for Stz'uminus / CNA already considered by the VFPA in the EIS / MSA Current Use assessment *Part 3 – Consider effects on social conditions*[5] – None anticipated given the predicted access	No change in EIS predictions for Stz'uminus / CNA in terms of Current Use access or availability and quality of Current Use resources

[3] The level of potential effect prediction identified in this column refers to the predicted level of effect *before* Current Use-specific measures are taken into account, but *after* measures related to linked valued components (if applicable) have been considered. The next column refers to the level of residual effect prediction after *both* linked valued component measures (if applicable) and Current Use-specific measures have been taken into account.
[4] Additional baseline information requested in IR10-06: (1) Preferred species and locations; (2) Timing of current use activities, such as frequency, duration, and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access, including an estimate of the number of vessels per hour per year in the local and regional assessment areas for harvesting purposes.
[5] Social effects identified in IR10-06 for consideration in the assessment: (1) Conditions of access to other family member(s) territory or other Indigenous group's territory for traditional harvesting purposes; (2) Access by non-Indigenous user(s); and (3) Alienation from current and traditional harvesting places resulting from government policies and regulations.

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[3]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
	specific details regarding licence type, catch effort, timing, or frequency for Stz'uminus.		effect on Stz'uminus / CNA is expected to be negligible (the VFPA is of the view that its predictions in the EIS already sufficiently considered Stz'uminus / CNA views regarding existing social constraints on access, as described in EIS Section 32.2.4.5 and MSA Section 9.5.4.15) *Part 4 – Views expressed by Indigenous groups regarding existing and potential effects on access and harvesting opportunities* – The VFPA is of the view that Stz'uminus / CNA views regarding existing effects, as described in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, as well as Stz'uminus / CNA views regarding potential Project-related effects (provided in EIS Appendix 7.2-B and the Stz'uminus / CNA-specific issue tracking table (refer to forthcoming IR10-01 response), were already sufficiently considered in the VFPA's predictions in EIS Section 32.2.6 (including the analysis in Section 32.2.6.1, Section 32.2.6.2, and Section 32.2.6.3, and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388). *Part 5 – Characterisation of residual effects and evaluation of significance* – No additional information (the VFPA is of the view that Stz'uminus / CNA views on thresholds are reflected in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, and were factored into the Current Use assessment for Project-related effects; refer also to responses to IR10-11 and IR10-12)	
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Stz'uminus / CNA with implementation of measures for linked valued components	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on availability of resources for Stz'uminus / CNA use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Stz'uminus / CNA with implementation of measures for linked valued components	Negligible – Taking mitigation, including consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on quality of resources for Stz'uminus / CNA use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)		
IR10-07 (EIS)				
Provide a group-specific assessment of the economic implications of permanent or temporary displacement as a result of the Project on current use	Access – Negligible potential change in access expected for Stz'uminus / CNA (before Current Use-specific mitigation) as a result of Project-related displacement effects based on available information, which indicated that CNA member groups reported crabbing in a regional area that included Roberts Bank, but that did not indicate specific details regarding licence type, catch effort, timing, or frequency for Stz'uminus.	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Stz'uminus / CNA access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that Stz'uminus / CNA views regarding existing constraints on access, as described in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, as well as Stz'uminus / CNA views regarding potential Project-related effects (provided in EIS Appendix 7.2-B and the Stz'uminus / CNA-specific issues tracking table in the forthcoming response to IR10-01), were already sufficiently considered in the VFPA's predictions in EIS Section 32.2.6 (including the analysis in Section 32.2.6.1 on access and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388).	As the predicted Current Use access effect (including the potential for increased competition) on Stz'uminus / CNA is expected to be negligible (before Current Use-specific mitigation), no residual economic effects for Stz'uminus / CNA are anticipated as a result of the Project

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[3]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR10-08 (EIS)				
Provide a group-specific assessment of the changes in quality of the current use experience resulting from the proposed Project	Quality of experience (Pathway #1) – Negligible potential change in Stz'uminus / CNA sense of place, risks to safety and security, and sensory disturbance expected with implementation of measures for linked valued components Quality of experience (Pathway #2) – Negligible potential change across all indicators (i.e., access, availability and quality of resources, quality of experience (Pathway#1)) for Stz'uminus / CNA; therefore, a negligible potential effect (before Current Use-specific mitigation) is expected on Stz'uminus / CNA ability to reproduce and transmit cultural heritage	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Stz'uminus / CNA quality of experience at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that the nine factors[6] identified in IR10-08 for consideration in a group-specific assessment of potential changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in EIS Section 32.2.6.4 (and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388). The VFPA notes that factors contributing to existing effects are reflected in Stz'uminus / CNA baseline summaries in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, and that these views and Stz'uminus / CNA views about potential Project-related effects (as provided in EIS Appendix 7.2-B and the Stz'uminus / CNA-specific issues tracking table in the forthcoming response to IR10-01) were taken into consideration in the assessment of potential effects on their quality of experience.	No change in EIS predictions for Stz'uminus / CNA in terms of quality of Current Use experience
IR10-13 (MSA)				
Provide a group-specific assessment of potential effects and the characterisation of residual effects of the marine shipping associated with the proposed Project on current use in terms of changes to access and availability and quality of preferred marine resources	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Stz'uminus / CNA as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Stz'uminus / CNA access to preferred locations as a result of Project-associated ship pass-bys is expected	*Part 1 – Additional baseline information regarding harvesting and other Current Use activities*[7] – No additional information (refer to Stz'uminus / CNA-specific information provided in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, per **Table IR10-A5-1** above, for available information) *Part 2 - Maps of marine harvest sites* – Spatial information (including mapping) for Stz'uminus / CNA already considered by the VFPA in the EIS / MSA Current Use assessment *Part 3(1) – List of issues / concerns regarding Project-associated vessel transit* – Identified for Stz'uminus / CNA in list of issues in MSA Appendix 5-B (also refer to the Stz'uminus / CNA-specific issues tracking table in the forthcoming IR10-01 response) *Part 3(2) – Adequacy of Proponent's response* – Refer to IR10-13 response	No change in MSA predictions for Stz'uminus / CNA in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Stz'uminus / CNA as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Stz'uminus / CNA as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		

[6] Nine factors identified in IR10-08 for consideration in the assessment: (1) Loss of preferred harvesting sites; (2) How the quality of the Current Use experience could change due to the real and perceived contamination of traditional food sources; (3) Sensory disturbances from light, noise and vibration affecting oral traditions and sacred practices; (4) Safety risks and concerns due to increased vessel traffic; (5) Industrialization of the Project area, with subsequent loss and disruption of social and cultural values associated with the proposed Project area and the Fraser River estuary; (6) Increased alienation from traditional harvesting caused by industrial development on Roberts Bank, including the proposed expansion of navigational close areas; (7) Decreased willingness and ability by Indigenous peoples to access the Project area due to the perception of risk, reduced harvesting opportunities and aesthetic impacts; (8) Level of importance placed upon patters of use (past, present and future); and (9) Lost opportunities for the transmission of Indigenous Knowledge and practices due to avoidance of an expanded industrialized area.

[7] Additional baseline information requested in IR10-13 for consideration in the assessment: (1) Preferred species and locations; (2) Timing of the current use activities, such as frequency, duration and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access for groups using the shipping lanes for fishing, groups traveling through the shipping lanes to access fishing, harvesting and cultural sites and, groups using the marine shipping area adjacent to the marine shipping lanes.

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[3]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
			Part 3(3) – Proponent's views on thresholds of acceptability and risk - Refer to IR10-13 response	
IR10-14 (MSA)				
Consider (on a group-specific basis) the socio-economic implications of potential or necessary displacement (permanent or temporary)[8]	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Stz'uminus / CNA as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Stz'uminus / CNA access to preferred locations as a result of Project-associated ship pass-bys is expected	The VFPA is of the view that Stz'uminus / CNA views regarding existing constraints on access, as described in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, as well as Stz'uminus / CNA views regarding potential effects of Project-associated vessel transit, described in MSA Appendix 5-B, were already sufficiently considered in the VFPA's predictions in MSA Section 9.5.5 regarding a potential access effect on Stz'uminus / CNA as a result of Project-associated vessel transit.	As the predicted Current Use access effect on Stz'uminus / CNA is expected to be addressed through the suggested mitigation identified in MSA Section 9.5.6, no residual economic effects for Stz'uminus / CNA are anticipated
IR10-15 (MSA)				
Provide a group-specific assessment of potential effect of the changes in quality of the current use experience resulting from marine shipping associated with the proposed Project and the characterisation and significance of residual effects	Quality of experience (Pathway #1) – Negligible potential change in Stz'uminus / CNA sense of place, risks to safety and security, and sensory disturbance expected Quality of experience (Pathway #2) – Negligible potential change for all indicators except access. Potentially measurable (up to minor) effect (before Current Use-specific mitigation) is expected on Stz'uminus / CNA ability to reproduce and transmit cultural heritage associated with potentially measurable access / displacement effect (refer to response to IR10-13)	Pathway #1 – N/A (negligible before Current Use-specific mitigation) Pathway #2 - Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Stz'uminus / CNA quality of experience tied to access is expected	The VFPA is of the view that the 4 factors[9] identified in IR10-15 for consideration in the group-specific assessment of changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in MSA Section 9.5.5. The VFPA notes that factors contributing to existing effects are reflected in Stz'uminus / CNA baseline summaries in EIS Section 32.2.4.5 and MSA Section 9.5.6.15, and that these views and Stz'uminus / CNA views about potential effects of Project-associated vessel transit on Stz'uminus / CNA (as referenced in MSA Appendix 5-B), were taken into consideration in the assessment of potential effects on their quality of experience.	No change in MSA predictions for Stz'uminus / CNA in terms of quality of Current Use experience
IR10-16 (MSA)				
Present (the requested group-specific baseline information)[10]	N/A	N/A	No additional information available (refer to Stz'uminus / CNA-specific information provided in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, per **Table IR10-A5-1** above, for available information)	No additional information available

[8] Implications identified in IR10-14 for consideration in the assessment: (1) Sufficiency of resources at alternate locations to meet the requirements of the community; (2) Constraints of displacement (areas further from their community or already alienated to other interests); (3) Extra expenses required in monetary terms or additional travel time or necessary changes in technology for the practice or access to resources; and (4) Constraints on current harvesting activities caused by development, regulatory restrictions, reduced resources, contamination and conservation concerns and impediments to the revival of traditions surrounding coastal harvesting activities.

[9] Four factors identified in IR10-15 for consideration in the assessment: (1) Sites of importance to Indigenous groups; (2) Decreased willingness, ability or avoidance by Indigenous peoples to access Current Use sites in or through the marine shipping lanes due to safety concerns and the perception of risk, reduced harvesting opportunities, and/or sensory disturbances; (3) Alienation from existing patterns of traditional harvesting due to the temporary or permanent displacement from areas of importance; and (4) Loss of opportunities for the cultural transmission of Indigenous Knowledge and practices due to the temporary or permanent displacement from those areas of importance.

[10] Additional baseline information requested in IR10-16: (1) The current activities taking place during the day or the night with a quantification of day and night duration; (2) The access required within, outside or through the shipping lanes; (3) The seasons that activities are practiced; (4) The frequency that each Indigenous group crosses the shipping lanes in the marine shipping area; and (5) The minimum and maximum number of vessels per hour in the shipping lanes, by Segment, encountered by Indigenous fishing vessels for Current Use activities in relation to the proposed Project-related ship movements.

Cowichan Tribes[1] Group-specific Baseline Information Process Summary (EIS and MSA)

Environmental Impact Statement (EIS)

On April 24, 2014, the VFPA and Cowichan Nation Alliance ("CNA"), which at that time consisted of Cowichan Tribes, Penelakut Tribes, Halalt First Nation, Stz'uminus First Nation, and Hwlitsum, signed a funding agreement to support the completion of a Traditional Use study.

The VFPA requested information on CNA's current use of the waters and terrestrial areas adjacent to the Project as well as any foreseeable changes or impacts to these areas that may result from the Project. Information was sought in relation to the location and timing of harvests, how these locations were accessed, specific species that were targeted, how the harvested species were utilised, and the cultural values associated with the harvest. In addition, the VFPA requested broader contextual information on traditional economy and knowledge, and culturally important places. The VFPA further requested information related to past use, existing use, and changes that CNA anticipated to the landscape and their use of the area over time.

On July 11, 2014, the VFPA provided Cowichan Tribes with a draft of the *"Cowichan Tribes Community Profile"* for review and comment. Comments were received from Cowichan Tribes on August 1, 2014.

On October 16, 2014, Cowichan Tribes provided the VFPA with a report titled "*Port Metro Vancouver: Roberts Bank Terminal 2: Cowichan Nation Alliance Current and Planned Use."*

On December 9, 2014, the VFPA provided Cowichan Tribes with an advance draft of the existing conditions section for "*Potential or Established Aboriginal and Treaty Rights and Related Interests, and including Current Use of Lands and Resources for Traditional Purposes"* of the EIS. The VFPA requested that Cowichan Tribes confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final EIS.

On December 11, 2014, the VFPA met with Cowichan Tribes and other members of CNA to provide information regarding the assessment of potential Project effects and cumulative effects on Aboriginal and treaty rights and related interests and current use of lands and resources for traditional purposes (Current Use), and to obtain feedback and identify any additional information to inform the assessment. The presentation and discussion included content regarding the proposed methodology for this assessment, the VFPA's understanding of existing conditions, based on the information provided by Cowichan Tribes or CNA, and preliminary conclusions of the assessment. Following the meeting, on January 14, 2015, the VFPA sent a summary of questions and comments raised by CNA during the meeting for verification prior to incorporating the information into the EIS.

On January 15, 2015, comments on the draft section "*Potential or Established Aboriginal and Treaty Rights and Related Interests, and including Current Use of Lands and Resources for*

[1] Indigenous group listed in Table 1-A (EIS) and Table 1-C (MSA) of Attachment 2 to IR Package 10.

Traditional Purposes" were received from CNA and changes were made to the section to reflect input from CNA.

On March 25, 2015, the VFPA provided CNA with a table outlining all CNA's comments on the draft section, responses to each comment from the VFPA, and a description of subsequent changes made to the sections in the EIS.

On April 2, 2015, the VFPA provided Cowichan Tribes with a copy of the EIS.

Marine Shipping Addendum (MSA)

On May 26, 2015, the VFPA wrote a letter to Cowichan Tribes explaining that the VFPA is considering effects from marine shipping associated with the Project on current use of lands and resources by Cowichan Tribes. The VFPA requested information from Cowichan Tribes regarding Current Use, fisheries, or potential effects associated with marine shipping. In the letter, the VFPA explained its intent to rely on existing information to inform the assessment of potential effects of marine shipping associated with the Project, including the report previously provided titled "*Port Metro Vancouver: Roberts Bank Terminal 2: Cowichan Nation Alliance Current and Planned Use"* as well as the Trans Mountain Expansion Project Application to the National Energy Board. The VFPA requested any additional information from Cowichan Tribes that may help to inform the assessment. The VFPA also offered funding to facilitate Cowichan Tribe's participation in consultation. The funding was accepted by Cowichan Tribes on May 25, 2015.

On June 17, 2015, the VFPA met with CNA to discuss marine shipping associated with the Project and reiterated its request for information regarding CNA's current use of the marine shipping area. CNA committed to reviewing the summaries once received.

On July 27, 2015, the VFPA provided CNA with a draft section of the MSA titled "*Cowichan Nation Alliance Current Use of Lands and Resources for Traditional Purposes."* The VFPA requested that CNA confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final MSA. Comments on the draft section were received from CNA (writing on behalf of Cowichan Tribes, Stz'uminus First Nation, and Halalt First Nation) on September 10, 2015, and changes were made to the MSA to reflect input from CNA.

On November 9, 2015, the VFPA provided Cowichan Tribes with a copy of the final MSA.

On April 25, 2016, the VFPA provided CNA with a tracking table outlining all CNA's comments on the draft sections, responses to each comment from the VFPA, and a description of subsequent changes made to the sections in the MSA.

Cowichan Tribes Group-specific Index and Assessment Tables

Table IR10-A6-1 Cowichan Tribes Index Table

EIS / MSA Section	Original EIS / MSA Information Presentation (Aggregated / Disaggregated)	Cowichan Tribes
EIS Section 32.1.1 Aboriginal Groups (Community profiles)	Disaggregated	32.1.1.6 Cowichan Tribes, pp. 32-9 to 32-10
EIS Section 32.2.4 Existing Conditions (Past, present, desired future use and list of rights identified by Indigenous groups as affected)	Disaggregated	32.2.4.5 Cowichan Nation Alliance (CNA, including Cowichan Tribes), pp. 32-71 to 32-77
EIS Section 32.2.6 Future Conditions With the Project – Potential Project-Related Effects (on Current Use)	Overall level of potential effect on each Indigenous group's Current Use identified in introduction to section. For each Current Use indicator, only groups for whom a measurable potential effect was predicted were disaggregated from the aggregated discussion.	32.2.6 Future Conditions With the Project – Potential Project-Related Effects, member groups of the CNA (including Cowichan Tribes), p. 32-100, para. 4 (negligible potential effect) 32.2.6.1 (Access), no differential effect (i.e., negligible)[1] 32.2.6.2 (Resource availability), no differential effect 32.2.6.3 (Resource quality), no differential effect 32.2.6.4 (Experiential quality), no differential effect
EIS Section 32.2.7 Mitigation Measures	For each Current Use indicator, only groups for whom a measurable potential effect was predicted were identified specifically in the aggregated discussion.	32.2.7.1 (Access), no differential measures 32.2.7.2 (Resource availability), no differential measures 32.2.7.3 (Resource quality), no differential measures 32.2.7.4 (Experiential quality), no differential measures
EIS Section 32.2.8 Residual Effects / Section 32.2.9 Cumulative Effects	N/A (no residual effects predicted)	N/A (no residual effects predicted)
EIS Section 32.3.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups	Disaggregated	32.3.2.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups, Cowichan Nation Alliance (including Cowichan Tribes), pp. 32-135 to p. 32-137
EIS Section 32.3.3 Mitigation Measures	Disaggregated (but limited to groups with measurable potential impacts) Note: Measures identified are exactly the same as for Current Use (across all indicators, given that they were to be considered in the aggregate).	32.3.3.1 Summary of Mitigation Measures for Potential Adverse Impacts on the Exercise of Asserted or Established Aboriginal and Treaty Rights (same as Current use measures in Section 32.2.7), no differential measures 32.3.3.2 Summary of Mitigation Measures Suggested by Aboriginal Groups, no differential measures suggested by Cowichan Tribes 32.3.3.3 Other Accommodations, Cowichan Tribes, p. 32-148 32.3.3.4 Outstanding Aboriginal issues, no differential issues identified by Cowichan Tribes
EIS IR/AIR	N/A	AIR-12.04.15-30 Rationale for (Current Use) Conclusions, Table AIR30-1 Rationale for Predicted Level of Effect, Cowichan Tribes, p. 7 (CEAR Document #388)
MSA Section 9.5.4 Existing Conditions	Disaggregated	9.5.4.15 Cowichan Nation Alliance (including Cowichan Tribes), pp. 9.5-105 to 9.5-114
MSA Section 9.5.5 Potential Interactions and Effects on Current Use	Aggregated (all Indigenous groups identified as experiencing a similar level of potential effect due to the linear activity of routine vessel transit)	9.5.5 Potential Interactions and Effects on Current Use, Table 9.5-35 (potential negligible-to-minor effect, all Indigenous groups) 9.5.5.1 Negligible Effects of Vessel Transit on Current Use, no differential effects[2] 9.5.5.2 Potential Effects of Vessel Transit on Current Use, no differential effects 9.5.5.3 Summary of Potential Transboundary Effects, not assessed

[1] In this case, a potential effect is described as a "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be non-measurable in relation to the Project. Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-A and Table 1-B Indigenous groups, regardless of whether the predicted level of potential effect (before Current Use-specific mitigation) was identified as measurable or non-measurable in relation to the Project.

[2] In this case, a potential effect is described as a "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be the same for all groups (i.e., negligible-to-minor) as a result of marine shipping associated with the Project. Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-C and 1-D Indigenous groups.

EIS / MSA Section	Original EIS / MSA Information Presentation (Aggregated / Disaggregated)	Cowichan Tribes
MSA Section 9.5.6 Suggested Mitigation Measures	Aggregated (to address the potentially minor linear effect on all Indigenous groups)	9.5.6 Suggested Mitigation Measures, no differential measures
MSA Section 9.5.7 Residual Effects Assessment and Significance Determination / Section 9.5.8 Cumulative Effects Assessment / Section 9.5.9 Summary of Assessment / Section 9.5.10 Follow-Up Program	N/A (no residual effects predicted)	N/A (no residual effects predicted)
MSA Section 9.5.11 Potential Impacts on Asserted or Established Aboriginal and Treaty Rights	Aggregated (all Indigenous groups identified as experiencing a similar level of potential impact due to the linear activity of routine vessel transit) Note: Measures identified are exactly the same as for Current Use	9.5.11.1 Approach to the Rights Assessment, Cowichan Tribes, p. 9.5-148 9.5.11.2 Results of the Rights Assessment, potential negligible-to-minor impact (all Indigenous groups, no differential impacts) 9.5.11.3 Suggested Mitigation Measures, no differential measures 9.5.11.4 Residual Effects, N/A (no residual effects predicted)

Table IR10-A6-2 Cowichan Tribes Assessment Table (Information Request Package 10)

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[3]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR Package 10 (IR10)				
IR10-06 (EIS)				
Provide a group-specific assessment of the potential effects of the proposed Project and the characterisation and significance of any residual effect on current use in terms of changes in access, availability and quality of all preferred current use resources	*Note: A group-specific summary of the Current Use assessment for Cowichan Tribes / CNA was presented in Table AIR30-1 (based on the analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388)* Access – Negligible potential change in access expected for Cowichan Tribes / CNA (before Current Use-specific mitigation) as a result of Project-related displacement effects based on available information, which indicated that Cowichan Tribes has recently held an FSC licence (ca. 2015-2016) that applied to Roberts Bank, but catch effort, timing, and frequency of harvesting at	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Cowichan Tribes / CNA access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	*Part 1 – Additional baseline information regarding FSC harvesting*[4] – No additional information (refer to Cowichan Tribes / CNA - specific information provided in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, per **Table IR10-A6-1** above, for available information) *Part 2 - Maps of marine harvest sites* –Spatial information (including mapping) for Cowichan Tribes / CNA already considered by the VFPA in the EIS / MSA Current Use assessment *Part 3 – Consider effects on social conditions*[5] – None anticipated given the predicted access effect on Cowichan Tribes / CNA is expected to	No change in EIS predictions for Cowichan Tribes / CNA in terms of Current Use access or availability and quality of Current Use resources

[3] The level of potential effect prediction identified in this column refers to the predicted level of effect *before* Current Use-specific measures are taken into account, but *after* measures related to linked valued components (if applicable) have been considered. The next column refers to the level of residual effect prediction after *both* linked valued component measures (if applicable) and Current Use-specific measures have been taken into account.
[4] Additional baseline information requested in IR10-06: (1) Preferred species and locations; (2) Timing of current use activities, such as frequency, duration, and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access, including an estimate of the number of vessels per hour per year in the local and regional assessment areas for harvesting purposes.
[5] Social effects identified in IR10-06 for consideration in the assessment: (1) Conditions of access to other family member(s) territory or other Indigenous group's territory for traditional harvesting purposes; (2) Access by non-Indigenous user(s); and (3) Alienation from current and traditional harvesting places resulting from government policies and regulations.

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[3]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
	Roberts Bank is not currently known to the VFPA. Cowichan Tribes has identified other crab harvesting locations but has said it now relies on Roberts Bank for crab harvesting due to contamination of crabbing grounds closer to their home communities based on Vancouver Island.		be negligible (the VFPA is of the view that its predictions in the EIS already sufficiently considered Cowichan Tribes / CNA views regarding existing social constraints on access, as described in EIS Section 32.2.4.5 and MSA Section 9.5.4.15) *Part 4 – Views expressed by Indigenous groups regarding existing and potential effects on access and harvesting opportunities* – The VFPA is of the view that Cowichan Tribes / CNA views regarding existing effects, as described in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, as well as Cowichan Tribes / CNA views regarding potential Project-related effects (provided in EIS Appendix 7.2-B and the Cowichan Tribes / CNA-specific issue tracking table (refer to forthcoming IR10-01 response), were already sufficiently considered in the VFPA's predictions in EIS Section 32.2.6 (including the analysis in Section 32.2.6.1, Section 32.2.6.2, and Section 32.2.6.3, and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388). *Part 5 – Characterisation of residual effects and evaluation of significance* – No additional information (the VFPA is of the view that Cowichan Tribes / CNA views on thresholds are reflected in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, and were factored into the Current Use assessment for Project-related effects; refer also to responses to IR10-11 and IR10-12)	
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Cowichan Tribes / CNA with implementation of measures for linked valued components	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on availability of resources for Cowichan Tribes / CNA use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Cowichan Tribes / CNA with implementation of measures for linked valued components	Negligible – Taking mitigation, including consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on quality of resources for Cowichan Tribes / CNA use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)		
IR10-07 (EIS)				
Provide a group-specific assessment of the economic implications of permanent or temporary displacement as a result of the Project on current use	Access – Negligible potential change in access expected for Cowichan Tribes / CNA (before Current Use-specific mitigation) as a result of Project-related displacement effects based on available information, which indicated that Cowichan Tribes has recently held an FSC licence (ca. 2015-2016) that applied to Roberts Bank, but catch effort, timing, and frequency of harvesting at Roberts Bank is not currently known to the VFPA. Cowichan Tribes has identified other crab harvesting locations but has said it now relies on Roberts Bank for crab harvesting due to contamination of crabbing grounds closer to their home communities based on Vancouver Island.	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Cowichan Tribes / CNA access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that Cowichan Tribes / CNA views regarding existing constraints on access, as described in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, as well as Cowichan Tribes / CNA views regarding potential Project-related effects (provided in EIS Appendix 7.2-B and the Cowichan Tribes / CNA-specific issues tracking table in the forthcoming response to IR10-01), were already sufficiently considered in the VFPA's predictions in EIS Section 32.2.6 (including the analysis in Section 32.2.6.1 on access and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388).	As the predicted Current Use access effect (including the potential for increased competition) on Cowichan Tribes / CNA is expected to be negligible (before Current Use-specific mitigation), no residual economic effects for Cowichan Tribes / CNA are anticipated as a result of the Project

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[3]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR10-08 (EIS)				
Provide a group-specific assessment of the changes in quality of the current use experience resulting from the proposed Project	Quality of experience (Pathway #1) – Negligible potential change in Cowichan Tribes / CNA sense of place, risks to safety and security, and sensory disturbance expected with implementation of measures for linked valued components Quality of experience (Pathway #2) – Negligible potential change across all indicators (i.e., access, availability and quality of resources, quality of experience (Pathway#1)) for Cowichan Tribes / CNA; therefore, a negligible potential effect (before Current Use-specific mitigation) is expected on Cowichan Tribes / CNA ability to reproduce and transmit cultural heritage	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Cowichan Tribes / CNA quality of experience at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that the nine factors[6] identified in IR10-08 for consideration in a group-specific assessment of potential changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in EIS Section 32.2.6.4 (and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388). The VFPA notes that factors contributing to existing effects are reflected in Cowichan Tribes / CNA baseline summaries in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, and that these views and Cowichan Tribes / CNA views about potential Project-related effects (as provided in EIS Appendix 7.2-B and the Cowichan Tribes / CNA-specific issues tracking table in the forthcoming response to IR10-01) were taken into consideration in the assessment of potential effects on their quality of experience.	No change in EIS predictions for Cowichan Tribes / CNA in terms of quality of Current Use experience
IR10-13 (MSA)				
Provide a group-specific assessment of potential effects and the characterisation of residual effects of the marine shipping associated with the proposed Project on current use in terms of changes to access and availability and quality of preferred marine resources	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Cowichan Tribes / CNA as a result of displacement from Project-related ship pass-bys Availability of resources – Negligible potential change in availability of Current Use resources expected for Cowichan Tribes / CNA as a result of Project-associated vessel transit Quality of resources – Negligible potential change in quality of Current Use resources expected for Cowichan Tribes / CNA as a result of Project-associated vessel transit	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Cowichan Tribes / CNA access to preferred locations as a result of Project-associated ship pass-bys is expected N/A (negligible before Current Use-specific mitigation) N/A (negligible before Current Use-specific mitigation)	*Part 1 – Additional baseline information regarding harvesting and other Current Use activities*[7] – No additional information (refer to Cowichan Tribes / CNA-specific information provided in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, per **Table IR10-A6-1** above, for available information) *Part 2 - Maps of marine harvest sites* – Spatial information (including mapping) for Cowichan Tribes / CNA already considered by the VFPA in the EIS / MSA Current Use assessment *Part 3(1) – List of issues / concerns regarding Project-associated vessel transit* – Identified for Cowichan Tribes / CNA in list of issues in MSA Appendix 5-B (also refer to the Cowichan Tribes / CNA-specific issues tracking table in the forthcoming IR10-01 response) *Part 3(2) – Adequacy of Proponent's response* – Refer to IR10-13 response	No change in MSA predictions for Cowichan Tribes / CNA in terms of Current Use access or availability and quality of Current Use resources

[6] Nine factors identified in IR10-08 for consideration in the assessment: (1) Loss of preferred harvesting sites; (2) How the quality of the Current Use experience could change due to the real and perceived contamination of traditional food sources; (3) Sensory disturbances from light, noise and vibration affecting oral traditions and sacred practices; (4) Safety risks and concerns due to increased vessel traffic; (5) Industrialization of the Project area, with subsequent loss and disruption of social and cultural values associated with the proposed Project area and the Fraser River estuary; (6) Increased alienation from traditional harvesting caused by industrial development on Roberts Bank, including the proposed expansion of navigational close areas; (7) Decreased willingness and ability by Indigenous peoples to access the Project area due to the perception of risk, reduced harvesting opportunities and aesthetic impacts; (8) Level of importance placed upon patters of use (past, present and future); and (9) Lost opportunities for the transmission of Indigenous Knowledge and practices due to avoidance of an expanded industrialized area.

[7] Additional baseline information requested in IR10-13 for consideration in the assessment: (1) Preferred species and locations; (2) Timing of the current use activities, such as frequency, duration and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access for groups using the shipping lanes for fishing, groups traveling through the shipping lanes to access fishing, harvesting and cultural sites and, groups using the marine shipping area adjacent to the marine shipping lanes.

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[3]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
			Part 3(3) – Proponent's views on thresholds of acceptability and risk - Refer to IR10-13 response	
IR10-14 (MSA)				
Consider (on a group-specific basis) the socio-economic implications of potential or necessary displacement (permanent or temporary)[8]	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Cowichan Tribes / CNA as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Cowichan Tribes / CNA access to preferred locations as a result of Project-associated ship pass-bys is expected	The VFPA is of the view that Cowichan Tribes / CNA views regarding existing constraints on access, as described in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, as well as Cowichan Tribes / CNA views regarding potential effects of Project-associated vessel transit, described in MSA Appendix 5-B, were already sufficiently considered in the VFPA's predictions in MSA Section 9.5.5 regarding a potential access effect on Cowichan Tribes / CNA as a result of Project-associated vessel transit.	As the predicted Current Use access effect on Cowichan Tribes / CNA is expected to be addressed through the suggested mitigation identified in MSA Section 9.5.6, no residual economic effects for Cowichan Tribes / CNA are anticipated
IR10-15 (MSA)				
Provide a group-specific assessment of potential effect of the changes in quality of the current use experience resulting from marine shipping associated with the proposed Project and the characterisation and significance of residual effects	Quality of experience (Pathway #1) – Negligible potential change in Cowichan Tribes / CNA sense of place, risks to safety and security, and sensory disturbance expected Quality of experience (Pathway #2) – Negligible potential change for all indicators except access. Potentially measurable (up to minor) effect (before Current Use-specific mitigation) is expected on Cowichan Tribes / CNA ability to reproduce and transmit cultural heritage associated with potentially measurable access / displacement effect (refer to response to IR10-13)	Pathway #1 – N/A (negligible before Current Use-specific mitigation) Pathway #2 - Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Cowichan Tribes / CNA quality of experience tied to access is expected	The VFPA is of the view that the 4 factors[9] identified in IR10-15 for consideration in the group-specific assessment of changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in MSA Section 9.5.5. The VFPA notes that factors contributing to existing effects are reflected in Cowichan Tribes / CNA baseline summaries in EIS Section 32.2.4.5 and MSA Section 9.5.6.15, and that these views and Cowichan Tribes / CNA views about potential effects of Project-associated vessel transit on Cowichan Tribes / CNA (as referenced in MSA Appendix 5-B), were taken into consideration in the assessment of potential effects on their quality of experience.	No change in MSA predictions for Cowichan Tribes / CNA in terms of quality of Current Use experience
IR10-16 (MSA)				
Present (the requested group-specific baseline information)[10]	N/A	N/A	No additional information available (refer to Cowichan Tribes / CNA-specific information provided in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, per **Table IR10-A6-1** above, for available information)	No additional information available

[8] Implications identified in IR10-14 for consideration in the assessment: (1) Sufficiency of resources at alternate locations to meet the requirements of the community; (2) Constraints of displacement (areas further from their community or already alienated to other interests); (3) Extra expenses required in monetary terms or additional travel time or necessary changes in technology for the practice or access to resources; and (4) Constraints on current harvesting activities caused by development, regulatory restrictions, reduced resources, contamination and conservation concerns and impediments to the revival of traditions surrounding coastal harvesting activities.
[9] Four factors identified in IR10-15 for consideration in the assessment: (1) Sites of importance to Indigenous groups; (2) Decreased willingness, ability or avoidance by Indigenous peoples to access Current Use sites in or through the marine shipping lanes due to safety concerns and the perception of risk, reduced harvesting opportunities, and/or sensory disturbances; (3) Alienation from existing patterns of traditional harvesting due to the temporary or permanent displacement from areas of importance; and (4) Loss of opportunities for the cultural transmission of Indigenous Knowledge and practices due to the temporary or permanent displacement from those areas of importance.
[10] Additional baseline information requested in IR10-16: (1) The current activities taking place during the day or the night with a quantification of day and night duration; (2) The access required within, outside or through the shipping lanes; (3) The seasons that activities are practiced; (4) The frequency that each Indigenous group crosses the shipping lanes in the marine shipping area; and (5) The minimum and maximum number of vessels per hour in the shipping lanes, by Segment, encountered by Indigenous fishing vessels for Current Use activities in relation to the proposed Project-related ship movements.

Halalt First Nation[1] Group-specific Baseline Information Process Summary (EIS and MSA)

Environmental Impact Statement (EIS)

On April 24, 2014, the VFPA and Cowichan Nation Alliance ("CNA"), which at that time consisted of Cowichan Tribes, Penelakut Tribes, Halalt First Nation, Stz'uminus First Nation, and Hwlitsum, signed a funding agreement to support the completion of a Traditional Use study.

The VFPA requested information on CNA's current use of the waters and terrestrial areas adjacent to the Project as well as any foreseeable changes or impacts to these areas that may result from the Project. Information was sought in relation to the location and timing of harvests, how these locations were accessed, specific species that were targeted, how the harvested species were utilised, and the cultural values associated with the harvest. In addition, the VFPA requested broader contextual information on traditional economy and knowledge and culturally important places. The VFPA further requested information related to past use, existing use, and changes that CNA anticipated to the landscape and their use of the area over time.

On July 11, 2014, the VFPA provided Halalt First Nation with a draft of the "*Halalt First Nation Community Profile"* for review and comment. In August 2014, the VFPA also requested information on dietary survey, traditional and current use, the open sea hunt for scoters, and any other information (cultural information, special features, unique characteristics, or stories associated with Roberts Bank) that Halalt First Nation would like the VFPA to include within the Project assessment. No comments were provided by Halalt First Nation.

On October 16, 2014, CNA provided the VFPA with a report titled "*Port Metro Vancouver: Roberts Bank Terminal 2: Cowichan Nation Alliance Current and Planned Use."*

On December 9, 2014, the VFPA provided Halalt First Nation with an advance draft of the existing conditions section for "*Potential or Established Aboriginal and Treaty Rights and Related Interests, and including Current Use of Lands and Resources for Traditional Purposes"* of the EIS. The VFPA requested that Halalt First Nation confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final EIS.

On December 11, 2014, the VFPA met with Halalt First Nation and other members of CNA to provide information regarding the assessment of potential Project effects and cumulative effects on Aboriginal and treaty rights and related interests and current use of lands and resources for traditional purposes (Current Use), and to obtain feedback and identify any additional information to inform the assessment. The presentation and discussion included content regarding the proposed methodology for this assessment, the VFPA's understanding of existing conditions based on the information provided by Halalt First Nation or CNA, and preliminary conclusions of the assessment. Following the meeting, on January 14, 2015, the

[1] Indigenous group listed in Table 1-A (EIS) and Table 1-C (MSA) of Attachment 2 to IR Package 10.

VFPA sent a summary of questions and comments raised by CNA during the meeting for verification prior to incorporating the information into the EIS.

On January 15, 2015, comments on the draft section "*Potential or Established Aboriginal and Treaty Rights and Related Interests, and including Current Use of Lands and Resources for Traditional Purposes"* were received from CNA and changes were made to the section as appropriate.

On March 25, 2015, the VFPA provided CNA with a table outlining all CNA's comments on the draft sections, responses to each comment from the VFPA, and a description of subsequent changes made to the sections in the EIS.

On April 2, 2015, the VFPA provided Halalt First Nation with a copy of the EIS.

Marine Shipping Addendum (MSA)

On May 25, 2015, the VFPA wrote a letter to Halalt First Nation explaining that the VFPA is considering effects from marine shipping associated with the Project on the current use of lands and resources by Halalt First Nation. The VFPA requested information from Halalt First Nation regarding Current Use, fisheries, or potential effects associated with marine shipping. In the letter, the VFPA explained its intent to rely on existing information to inform the assessment of potential effects associated marine shipping associated with the Project, including the report previously provided titled "*Port Metro Vancouver: Roberts Bank Terminal 2: Cowichan Nation Alliance Current and Planned Use."* The VFPA requested any additional information from Halalt First Nation that may help to inform the assessment. The VFPA also offered funding to facilitate Halalt First Nation's in consultation. The funding was accepted by Halalt First Nation on May 22, 2015.

On June 17, 2015, the VFPA met with CNA to discuss marine shipping associated with the Project and reiterated its request for information regarding CNA's current use of the marine shipping area. CNA committed to reviewing the summaries once received.

On July 27, 2015, the VFPA provided CNA with a draft section of the MSA titled *"Cowichan Nation Alliance Current Use of Lands and Resources for Traditional Purposes."* The VFPA requested that CNA confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final MSA. Comments on the draft section were received from CNA (writing on behalf of Cowichan Tribes, Stz'uminus First Nation, and Halalt First Nation) on September 10, 2015, and changes were made to the MSA to reflect input from CNA.

On November 9, 2015, the VFPA provided Halalt First Nation with a copy of the final MSA.

On April 25, 2016, the VFPA provided CNA with a tracking table outlining all CNA's comments on the draft sections, responses to each comment from the VFPA, and a description of subsequent changes made to the sections in the MSA.

Halalt First Nation Group-specific Index and Assessment Tables

Table IR10-A7-1 Halalt First Nation Index Table

EIS / MSA Section	Original EIS / MSA Information Presentation (Aggregated / Disaggregated)	Halalt First Nation
EIS Section 32.1.1 Aboriginal Groups (Community profiles)	Disaggregated	32.1.1.7 Halalt First Nation, pp. 32-10 to 32-11
EIS Section 32.2.4 Existing Conditions (Past, present, desired future use and list of rights identified by Indigenous groups as affected)	Disaggregated	32.2.4.5 Cowichan Nation Alliance (CNA, including Halalt First Nation), pp. 32-71 to 32-77
EIS Section 32.2.6 Future Conditions With the Project – Potential Project-Related Effects (on Current Use)	Overall level of potential effect on each Indigenous group's Current Use identified in introduction to section. For each Current Use indicator, only groups for whom a measurable potential effect was predicted were disaggregated from the aggregated discussion.	32.2.6 Future Conditions With the Project – Potential Project-Related Effects, member groups of the CNA (including Halalt First Nation), p. 32-100, para. 4 (negligible potential effect) 32.2.6.1 (Access), no differential effect (i.e., negligible)[2] 32.2.6.2 (Resource availability), no differential effect 32.2.6.3 (Resource quality), no differential effect 32.2.6.4 (Experiential quality), no differential effect
EIS Section 32.2.7 Mitigation Measures	For each Current Use indicator, only groups for whom a measurable potential effect was predicted were identified specifically in the aggregated discussion.	32.2.7.1 (Access), no differential measures 32.2.7.2 (Resource availability), no differential measures 32.2.7.3 (Resource quality), no differential measures 32.2.7.4 (Experiential quality), no differential measures
EIS Section 32.2.8 Residual Effects / Section 32.2.9 Cumulative Effects	N/A (no residual effects predicted)	N/A (no residual effects predicted)
EIS Section 32.3.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups	Disaggregated	32.3.2.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups, Cowichan Nation Alliance (including Halalt First Nation), pp. 32-135 to p. 32-137
EIS Section 32.3.3 Mitigation Measures	Disaggregated (but limited to groups with measurable potential impacts) Note: Measures identified are exactly the same as for Current Use (across all indicators, given that they were to be considered in the aggregate).	32.3.3.1 Summary of Mitigation Measures for Potential Adverse Impacts on the Exercise of Asserted or Established Aboriginal and Treaty Rights (same as Current use measures in Section 32.2.7), no differential measures 32.3.3.2 Summary of Mitigation Measures Suggested by Aboriginal Groups, no differential measures suggested by Halalt 32.3.3.3 Other Accommodations, Halalt First Nation, p. 32-148 32.3.3.4 Outstanding Aboriginal Issues, no differential issues
EIS IR/AIR	N/A	AIR-12.04.15-30 Rationale for (Current Use) Conclusions, Table AIR30-1 Rationale for Predicted Level of Effect, Halalt First Nation, p. 7 (CEAR Document #388)
MSA Section 9.5.4 Existing Conditions	Disaggregated	9.5.4.15 Cowichan Nation Alliance (including Halalt First Nation), pp. 9.5-105 to 9.5-114
MSA Section 9.5.5 Potential Interactions and Effects on Current Use	Aggregated (all Indigenous groups identified as experiencing a similar level of potential effect due to the linear activity of routine vessel transit)	9.5.5 Potential Interactions and Effects on Current Use, Table 9.5-35 (potential negligible-to-minor effect, all Indigenous groups) 9.5.5.1 Negligible Effects of Vessel Transit on Current Use, no differential effects[3] 9.5.5.2 Potential Effects of Vessel Transit on Current Use, no differential effects 9.5.5.3 Summary of Potential Transboundary Effects, not assessed

[2] In this case, a potential effect is described as a "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be non-measurable in relation to the Project. Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-A and Table 1-B Indigenous groups, regardless of whether the predicted level of potential effect (before Current Use-specific mitigation) was identified as measurable or non-measurable in relation to the Project.

[3] In this case, a potential effect is described as a "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be the same for all groups (i.e., negligible-to-minor) as a result of marine shipping associated with the Project. Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-C and 1-D Indigenous groups.

EIS / MSA Section	Original EIS / MSA Information Presentation (Aggregated / Disaggregated)	Halalt First Nation
MSA Section 9.5.6 Suggested Mitigation Measures	Aggregated (to address the potentially minor linear effect on all Indigenous groups)	9.5.6 Suggested Mitigation Measures, no differential measures
MSA Section 9.5.7 Residual Effects Assessment and Significance Determination / Section 9.5.8 Cumulative Effects Assessment / Section 9.5.9 Summary of Assessment / Section 9.5.10 Follow-Up Program	N/A (no residual effects predicted)	N/A (no residual effects predicted)
MSA Section 9.5.11 Potential Impacts on Asserted or Established Aboriginal and Treaty Rights	Aggregated (all Indigenous groups identified as experiencing a similar level of potential impact due to the linear activity of routine vessel transit) Note: Measures identified are exactly the same as for Current Use	9.5.11.1 Approach to the Rights Assessment, Halalt First Nation, p. 9.5-148 9.5.11.2 Results of the Rights Assessment, potential negligible-to-minor impact (all Indigenous groups, no differential impacts) 9.5.11.3 Suggested Mitigation Measures, no differential measures 9.5.11.4 Residual Effects, N/A (no residual effects predicted)

Table IR10-A7-2 Halalt First Nation Assessment Table (Information Request Package 10)

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[4]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR Package 10 (IR10)				
IR10-06 (EIS)				
Provide a group-specific assessment of the potential effects of the proposed Project and the characterisation and significance of any residual effect on current use in terms of changes in access, availability and quality of all preferred current use resources	*Note: A group-specific summary of the Current Use assessment for Halalt First Nation / CNA was presented in Table AIR30-1 (based on the analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388)* Access – Negligible potential change in access expected for Halalt / CNA (before Current Use-specific mitigation) as a result of Project-related displacement effects based on available information, which indicated that CNA member groups reported crabbing in a regional area that included Roberts Bank, but that did not indicate specific	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Halalt / CNA access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	*Part 1 – Additional baseline information regarding FSC harvesting*[5] – No additional information (refer to Halalt / CNA-specific information provided in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, per **Table IR10-A7-1** above, for available information) *Part 2 - Maps of marine harvest sites* –Spatial information (including mapping) for Halalt / CNA already considered by the VFPA in the EIS / MSA Current Use assessment *Part 3 – Consider effects on social conditions*[6] – None anticipated given the predicted access effect on Halalt / CNA is expected to be	No change in EIS predictions for Halalt / CNA in terms of Current Use access or availability and quality of Current Use resources

[4] The level of potential effect prediction identified in this column refers to the predicted level of effect *before* Current Use-specific measures are taken into account, but *after* measures related to linked valued components (if applicable) have been considered. The next column refers to the level of residual effect prediction after *both* linked valued component measures (if applicable) and Current Use-specific measures have been taken into account.
[5] Additional baseline information requested in IR10-06: (1) Preferred species and locations; (2) Timing of current use activities, such as frequency, duration, and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access, including an estimate of the number of vessels per hour per year in the local and regional assessment areas for harvesting purposes.
[6] Social effects identified in IR10-06 for consideration in the assessment: (1) Conditions of access to other family member(s) territory or other Indigenous group's territory for traditional harvesting purposes; (2) Access by non-Indigenous user(s); and (3) Alienation from current and traditional harvesting places resulting from government policies and regulations.

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[4]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
	details regarding licence type, catch effort, timing, or frequency for Halalt.		negligible (the VFPA is of the view that its predictions in the EIS already sufficiently considered Halalt / CNA views regarding existing social constraints on access, as described in EIS Section 32.2.4.5 and MSA Section 9.5.4.15) *Part 4 – Views expressed by Indigenous groups regarding existing and potential effects on access and harvesting opportunities* – The VFPA is of the view that Halalt / CNA views regarding existing effects, as described in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, as well as Halalt / CNA views regarding potential Project-related effects (provided in EIS Appendix 7.2-B and the Halalt / CNA-specific issue tracking table (refer to forthcoming IR10-01 response), were already sufficiently considered in the VFPA's predictions in EIS Section 32.2.6 (including the analysis in Section 32.2.6.1, Section 32.2.6.2, and Section 32.2.6.3, and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388). *Part 5 – Characterisation of residual effects and evaluation of significance* – No additional information (the VFPA is of the view that Halalt / CNA views on thresholds are reflected in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, and were factored into the Current Use assessment for Project-related effects; refer also to responses to IR10-11 and IR10-12)	
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Halalt / CNA with implementation of measures for linked valued components	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on availability of resources for Halalt / CNA use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Halalt / CNA with implementation of measures for linked valued components	Negligible – Taking mitigation, including consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on quality of resources for Halalt / CNA use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)		
IR10-07 (EIS)				
Provide a group-specific assessment of the economic implications of permanent or temporary displacement as a result of the Project on current use	Access – Negligible potential change in access expected for Halalt / CNA (before Current Use-specific mitigation) as a result of Project-related displacement effects based on available information, which indicated that CNA member groups reported crabbing in a regional area that included Roberts Bank, but that did not indicate specific details regarding licence type, catch effort, timing, or frequency for Halalt.	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Halalt / CNA access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that Halalt / CNA views regarding existing constraints on access, as described in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, as well as Halalt / CNA views regarding potential Project-related effects (provided in EIS Appendix 7.2-B and the Halalt / CNA-specific issues tracking table in the forthcoming response to IR10-01), were already sufficiently considered in the VFPA's predictions in EIS Section 32.2.6 (including the analysis in Section 32.2.6.1 on access and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388).	As the predicted Current Use access effect (including the potential for increased competition) on Halalt / CNA is expected to be negligible (before Current Use-specific mitigation), no residual economic effects for Halalt / CNA are anticipated as a result of the Project
IR10-08 (EIS)				
Provide a group-specific assessment of the changes in quality of the current use experience resulting from the proposed Project	Quality of experience (Pathway #1) – Negligible potential change in Halalt / CNA sense of place, risks to safety and security, and sensory disturbance expected with implementation of measures for linked valued components	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Halalt / CNA quality of experience at preferred locations is predicted		No change in EIS predictions for Halalt / CNA in terms of quality of Current Use experience

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[4]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
	Quality of experience (Pathway #2) – Negligible potential change across all indicators (i.e., access, availability and quality of resources, quality of experience (Pathway#1)) for Halalt / CNA; therefore, a negligible potential effect (before Current Use-specific mitigation) is expected on Halalt / CNA ability to reproduce and transmit cultural heritage	(i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that the nine factors[7] identified in IR10-08 for consideration in a group-specific assessment of potential changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in EIS Section 32.2.6.4 (and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388). The VFPA notes that factors contributing to existing effects are reflected in Halalt / CNA baseline summaries in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, and that these views and Halalt / CNA views about potential Project-related effects (as provided in EIS Appendix 7.2-B and the Halalt / CNA-specific issues tracking table in the forthcoming response to IR10-01) were taken into consideration in the assessment of potential effects on their quality of experience.	
IR10-13 (MSA)				
Provide a group-specific assessment of potential effects and the characterisation of residual effects of the marine shipping associated with the proposed Project on current use in terms of changes to access and availability and quality of preferred marine resources	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Halalt / CNA as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Halalt / CNA access to preferred locations as a result of Project-associated ship pass-bys is expected	*Part 1 – Additional baseline information regarding harvesting and other Current Use activities*[8] – No additional information (refer to Halalt / CNA-specific information provided in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, per **Table IR10-A7-1** above, for available information) *Part 2 - Maps of marine harvest sites* – Spatial information (including mapping) for Halalt / CNA already considered by the VFPA in the EIS / MSA Current Use assessment *Part 3(1) – List of issues / concerns regarding Project-associated vessel transit* – Identified for Halalt / CNA in list of issues in MSA Appendix 5-B (also refer to the Halalt / CNA-specific issues tracking table in the forthcoming IR10-01 response) *Part 3(2) – Adequacy of Proponent's response* – Refer to IR10-13 response *Part 3(3) – Proponent's views on thresholds of acceptability and risk* - Refer to IR10-13 response	No change in MSA predictions for Halalt / CNA in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Halalt / CNA as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Halalt / CNA as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		

[7] Nine factors identified in IR10-08 for consideration in the assessment: (1) Loss of preferred harvesting sites; (2) How the quality of the Current Use experience could change due to the real and perceived contamination of traditional food sources; (3) Sensory disturbances from light, noise and vibration affecting oral traditions and sacred practices; (4) Safety risks and concerns due to increased vessel traffic; (5) Industrialization of the Project area, with subsequent loss and disruption of social and cultural values associated with the proposed Project area and the Fraser River estuary; (6) Increased alienation from traditional harvesting caused by industrial development on Roberts Bank, including the proposed expansion of navigational close areas; (7) Decreased willingness and ability by Indigenous peoples to access the Project area due to the perception of risk, reduced harvesting opportunities and aesthetic impacts; (8) Level of importance placed upon patters of use (past, present and future); and (9) Lost opportunities for the transmission of Indigenous Knowledge and practices due to avoidance of an expanded industrialized area.

[8] Additional baseline information requested in IR10-13 for consideration in the assessment: (1) Preferred species and locations; (2) Timing of the current use activities, such as frequency, duration and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access for groups using the shipping lanes for fishing, groups traveling through the shipping lanes to access fishing, harvesting and cultural sites and, groups using the marine shipping area adjacent to the marine shipping lanes.

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[4]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR10-14 (MSA)				
Consider (on a group-specific basis) the socio-economic implications of potential or necessary displacement (permanent or temporary)[9]	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Halalt / CNA as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Halalt / CNA access to preferred locations as a result of Project-associated ship pass-bys is expected	The VFPA is of the view that Halalt / CNA views regarding existing constraints on access, as described in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, as well as Halalt / CNA views regarding potential effects of Project-associated vessel transit, described in MSA Appendix 5-B, were already sufficiently considered in the VFPA's predictions in MSA Section 9.5.5 regarding a potential access effect on Halalt / CNA as a result of Project-associated vessel transit.	As the predicted Current Use access effect on Halalt / CNA is expected to be addressed through the suggested mitigation identified in MSA Section 9.5.6, no residual economic effects for Halalt / CNA are anticipated
IR10-15 (MSA)				
Provide a group-specific assessment of potential effect of the changes in quality of the current use experience resulting from marine shipping associated with the proposed Project and the characterisation and significance of residual effects	Quality of experience (Pathway #1) – Negligible potential change in Halalt / CNA sense of place, risks to safety and security, and sensory disturbance expected Quality of experience (Pathway #2) – Negligible potential change for all indicators except access. Potentially measurable (up to minor) effect (before Current Use-specific mitigation) is expected on Halalt / CNA ability to reproduce and transmit cultural heritage associated with potentially measurable access / displacement effect (refer to response to IR10-13)	Pathway #1 – N/A (negligible before Current Use-specific mitigation) Pathway #2 - Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Halalt / CNA quality of experience tied to access is expected	The VFPA is of the view that the 4 factors[10] identified in IR10-15 for consideration in the group-specific assessment of changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in MSA Section 9.5.5. The VFPA notes that factors contributing to existing effects are reflected in Halalt / CNA baseline summaries in EIS Section 32.2.4.5 and MSA Section 9.5.6.15, and that these views and Halalt / CNA views about potential effects of Project-associated vessel transit on Halalt / CNA (as referenced in MSA Appendix 5-B), were taken into consideration in the assessment of potential effects on their quality of experience.	No change in MSA predictions for Halalt / CNA in terms of quality of Current Use experience
IR10-16 (MSA)				
Present (the requested group-specific baseline information)[11]	N/A	N/A	No additional information available (refer to Halalt / CNA-specific information provided in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, per **Table IR10-A7-1** above, for available information)	No additional information available

[9] Implications identified in IR10-14 for consideration in the assessment: (1) Sufficiency of resources at alternate locations to meet the requirements of the community; (2) Constraints of displacement (areas further from their community or already alienated to other interests); (3) Extra expenses required in monetary terms or additional travel time or necessary changes in technology for the practice or access to resources; and (4) Constraints on current harvesting activities caused by development, regulatory restrictions, reduced resources, contamination and conservation concerns and impediments to the revival of traditions surrounding coastal harvesting activities.

[10] Four factors identified in IR10-15 for consideration in the assessment: (1) Sites of importance to Indigenous groups; (2) Decreased willingness, ability or avoidance by Indigenous peoples to access Current Use sites in or through the marine shipping lanes due to safety concerns and the perception of risk, reduced harvesting opportunities, and/or sensory disturbances; (3) Alienation from existing patterns of traditional harvesting due to the temporary or permanent displacement from areas of importance; and (4) Loss of opportunities for the cultural transmission of Indigenous Knowledge and practices due to the temporary or permanent displacement from those areas of importance.

[11] Additional baseline information requested in IR10-16: (1) The current activities taking place during the day or the night with a quantification of day and night duration; (2) The access required within, outside or through the shipping lanes; (3) The seasons that activities are practiced; (4) The frequency that each Indigenous group crosses the shipping lanes in the marine shipping area; and (5) The minimum and maximum number of vessels per hour in the shipping lanes, by Segment, encountered by Indigenous fishing vessels for Current Use activities in relation to the proposed Project-related ship movements.

Lake Cowichan First Nation[1] Group-specific Baseline Information Process Summary (EIS and MSA)

Environmental Impact Statement (EIS)

On April 16, 2014, the VFPA and Lake Cowichan First Nation signed a funding agreement to support Lake Cowichan's completion of a Traditional Use Study.

The VFPA requested information on Lake Cowichan First Nation's current use of the waters and terrestrial areas adjacent to the Project as well as any foreseeable changes or impacts to these areas that may result from the Project. Information was sought in relation to the location and timing of harvests, how these locations were accessed, specific species that were targeted, how the harvested species were utilised, and the cultural values associated with the harvest. In addition, the VFPA requested broader contextual information on traditional economy and knowledge, and culturally important places. The VFPA further requested information related to past use, existing use, and changes that Lake Cowichan First Nation anticipated to the landscape and their use of the area over time.

On July 11, 2014, the VFPA provided Lake Cowichan First Nation with a draft *"Lake Cowichan First Nation Community Profile"* for review and comment. Comments were received from Lake Cowichan First Nation on August 6, 2014, and changes were made to reflect input from Lake Cowichan First Nation.

On August 21, 2014, the Lake Cowichan First Nation provided the VFPA with a report titled "*Ts'uubaasatx Traditions: Roberts Bank Marine and Terrestrial Resource Use."*

On November 27, 2014, the VFPA provided Lake Cowichan First Nation with advance drafts of the existing conditions sections of the EIS "*Human Health Effects Assessment"* and "*Potential or Established Aboriginal and Treaty Rights and Related Interests, and including Current Use of Lands and Resources for Traditional Purposes*." The VFPA requested that Lake Cowichan First Nation confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final EIS.

On December 10, 2014, the VFPA met with Lake Cowichan First Nation along with Lyackson First Nation to provide information regarding the preliminary assessment of human health, including potential Project effects and cumulative effects on Aboriginal and treaty rights and related interests and current use of lands and resources for traditional purposes (Current Use), and to identify any additional information to inform the assessment. The presentation and discussion included content regarding the proposed methodology for this assessment, the VFPA's understanding of existing conditions, based on the information provided by Lake Cowichan First Nation, and preliminary conclusions of the assessment. Following the meeting, on January 6, 2015, the VFPA sent a summary of questions and comments raised by Lake Cowichan First Nation and Lyackson First Nation during the meeting for verification prior to incorporating the information into the EIS.

[1] Indigenous group listed in Table 1-A (EIS) and Table 1-C (MSA) of Attachment 2 to IR Package 10.

Comments on the draft "*Human Health Effects Assessment*," and the draft "*Potential or Established Aboriginal and Treaty Rights and Related Interests, and including Current Use of Lands and Resources for Traditional Purposes"* sections were received from Lake Cowichan First Nation on January 18, 2015, and changes were made to the sections as appropriate.

On March 25, 2015, the VFPA provided Lake Cowichan First Nation with a table outlining all Lake Cowichan First Nation's comments on the draft sections, responses to each comment from the VFPA, and a description of subsequent changes made to the sections in the EIS.

On April 2, 2015, the VFPA provided Lake Cowichan First Nation with a copy of the EIS.

Marine Shipping Addendum (MSA)

On May 25, 2015, the VFPA wrote a letter to Lake Cowichan First Nation explaining that the VFPA is considering effects from marine shipping associated with the Project on the current use of lands and resources by Lake Cowichan First Nation. The VFPA requested information from Lake Cowichan First Nation regarding Current Use, fisheries, or potential effects associated with marine shipping. In the letter, the VFPA explained its intent to rely on existing information to inform the assessment of potential effects associated marine shipping associated with the Project, including the report previously provided by Lake Cowichan First Nation titled "*Ts'uubaasatx Traditions: Roberts Bank Marine and Terrestrial Resource Use.*" The VFPA requested any additional information from Lake Cowichan First Nation that may help to inform the assessment. The VFPA also offered funding to facilitate Lake Cowichan First Nation's participation in consultation. The funding was accepted by Lake Cowichan First Nation on May 19, 2015.

On June 19, 2015, the VFPA provided Lake Cowichan First Nation with a draft document titled "*Marine Shipping Study: Lake Cowichan First Nation – Current Use of Lands and Resources for Traditional Purposes – Summary of Existing Conditions."* The VFPA requested that Lake Cowichan First Nation confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final MSA. Comments were not provided.

On November 9, 2015, the VFPA provided Lake Cowichan First Nation with a copy of the MSA.

Lake Cowichan First Nation Group-specific Index and Assessment Tables

Table IR10-A8-1 Lake Cowichan First Nation Index Table

EIS / MSA Section	Original EIS / MSA Information Presentation (Aggregated / Disaggregated)	Lake Cowichan First Nation
EIS Section 32.1.1 Aboriginal Groups (Community profiles)	Disaggregated	32.1.1.8 Lake Cowichan First Nation, pp. 32-11 to 32-12
EIS Section 32.2.4 Existing Conditions (Past, present, desired future use and list of rights identified by Indigenous groups as affected)	Disaggregated	32.2.4.6 Lake Cowichan First Nation, pp. 32-77 to 32-80
EIS Section 32.2.6 Future Conditions With the Project – Potential Project-Related Effects (on Current Use)	Overall level of potential effect on each Indigenous group's Current Use identified in introduction to section. For each Current Use indicator, only groups for whom a measurable potential effect was predicted were disaggregated from the aggregated discussion.	32.2.6 Future Conditions With the Project – Potential Project-Related Effects, Lake Cowichan First Nation, p. 32-100, para. 4 (negligible potential effect) 32.2.6.1 (Access), no differential effect (i.e., negligible)[1] 32.2.6.2 (Resource availability), no differential effect 32.2.6.3 (Resource quality), no differential effect 32.2.6.4 (Experiential quality), no differential effect
EIS Section 32.2.7 Mitigation Measures	For each Current Use indicator, only groups for whom a measurable potential effect was predicted were identified specifically in the aggregated discussion.	32.2.7.1 (Access), no differential measures 32.2.7.2 (Resource availability), no differential measures 32.2.7.3 (Resource quality), no differential measures 32.2.7.4 (Experiential quality), no differential measures
EIS Section 32.2.8 Residual Effects / Section 32.2.9 Cumulative Effects	N/A (no residual effects predicted)	N/A (no residual effects predicted)
EIS Section 32.3.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups	Disaggregated	32.3.2.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups, Lake Cowichan First Nation, pp. 32-137 to p. 32-138
EIS Section 32.3.3 Mitigation Measures	Disaggregated (but limited to groups with measurable potential impacts) Note: Measures identified are exactly the same as for Current Use (across all indicators, given that they were to be considered in the aggregate).	32.3.3.1 Summary of Mitigation Measures for Potential Adverse Impacts on the Exercise of Asserted or Established Aboriginal and Treaty Rights (same as Current use measures in Section 32.2.7), no differential measures 32.3.3.2 Summary of Mitigation Measures Suggested by Aboriginal Groups, no differential measures suggested by Lake Cowichan 32.3.3.3 Other Accommodations, Lake Cowichan First Nation, p. 32-148 32.3.3.4 Outstanding Aboriginal Issues, no differential issues
EIS IR/AIR	N/A	AIR-12.04.15-30 Rationale for (Current Use) Conclusions, Table AIR30-1 Rationale for Predicted Level of Effect, Lake Cowichan First Nation, p. 7 (CEAR Document #388)
MSA Section 9.5.4 Existing Conditions	Disaggregated	9.5.4.16 Lake Cowichan First Nation, pp. 9.5-114
MSA Section 9.5.5 Potential Interactions and Effects on Current Use	Aggregated (all Indigenous groups identified as experiencing a similar level of potential effect due to the linear activity of routine vessel transit)	9.5.5 Potential Interactions and Effects on Current Use, Table 9.5-35 (potential negligible-to-minor effect, all Indigenous groups) 9.5.5.1 Negligible Effects of Vessel Transit on Current Use, no differential effects[2] 9.5.5.2 Potential Effects of Vessel Transit on Current Use, no differential effects 9.5.5.3 Summary of Potential Transboundary Effects, not assessed
MSA Section 9.5.6 Suggested Mitigation Measures	Aggregated (to address the potentially minor linear effect on all Indigenous groups)	9.5.6 Suggested Mitigation Measures, no differential measures

[1] In this case, a potential effect is described as a "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be non-measurable in relation to the Project. Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-A and Table 1-B Indigenous groups, regardless of whether the predicted level of potential effect (before Current Use-specific mitigation) was identified as measurable or non-measurable in relation to the Project.
[2] In this case, a potential effect is described as a "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be the same for all groups (i.e., negligible-to-minor) as a result of marine shipping associated with the Project. Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-C and 1-D Indigenous groups.

EIS / MSA Section	Original EIS / MSA Information Presentation (Aggregated / Disaggregated)	Lake Cowichan First Nation
MSA Section 9.5.7 Residual Effects Assessment and Significance Determination / Section 9.5.8 Cumulative Effects Assessment / Section 9.5.9 Summary of Assessment / Section 9.5.10 Follow-Up Program	N/A (no residual effects predicted)	N/A (no residual effects predicted)
MSA Section 9.5.11 Potential Impacts on Asserted or Established Aboriginal and Treaty Rights	Aggregated (all Indigenous groups identified as experiencing a similar level of potential impact due to the linear activity of routine vessel transit) Note: Measures identified are exactly the same as for Current Use	9.5.11.1 Approach to the Rights Assessment, Lake Cowichan First Nation, p. 9.5-148 9.5.11.2 Results of the Rights Assessment, potential negligible-to-minor impact (all Indigenous groups, no differential impacts) 9.5.11.3 Suggested Mitigation Measures, no differential measures 9.5.11.4 Residual Effects, N/A (no residual effects predicted)

Table IR10-A8-2 Lake Cowichan First Nation Assessment Table (Information Request Package 10)

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[3]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR Package 10 (IR10)				
IR10-06 (EIS)				
Provide a group-specific assessment of the potential effects of the proposed Project and the characterisation and significance of any residual effect on current use in terms of changes in access, availability and quality of all preferred current use resources	*Note: A group-specific summary of the Current Use assessment for Lake Cowichan was presented in Table AIR30-1 (based on the analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388)* Access – Negligible potential change in access expected for Lake Cowichan (before Current Use-specific mitigation) as a result of Project-related displacement effects based on available information, which indicated approximately 50 to 100 crabs are currently harvested by Lake Cowichan on an annual basis at Roberts Bank, with no indication of licence type.	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Lake Cowichan access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	*Part 1 – Additional baseline information regarding FSC harvesting*[4] – No additional information (refer to Lake Cowichan-specific information provided in EIS Section 32.2.4.6 and MSA Section 9.5.4.16, per **Table IR10-A8-1** above, for available information) *Part 2 - Maps of marine harvest sites* –Spatial information for Lake Cowichan already considered by the VFPA in the EIS / MSA Current Use assessment *Part 3 – Consider effects on social conditions*[5] – None anticipated given the predicted access effect on Lake Cowichan is expected to be	No change in EIS predictions for Lake Cowichan in terms of Current Use access or availability and quality of Current Use resources

[3] The level of potential effect prediction identified in this column refers to the predicted level of effect *before* Current Use-specific measures are taken into account, but *after* measures related to linked valued components (if applicable) have been considered. The next column refers to the level of residual effect prediction after *both* linked valued component measures (if applicable) and Current Use-specific measures have been taken into account.
[4] Additional baseline information requested in IR10-06: (1) Preferred species and locations; (2) Timing of current use activities, such as frequency, duration, and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access, including an estimate of the number of vessels per hour per year in the local and regional assessment areas for harvesting purposes.
[5] Social effects identified in IR10-06 for consideration in the assessment: (1) Conditions of access to other family member(s) territory or other Indigenous group's territory for traditional harvesting purposes; (2) Access by non-Indigenous user(s); and (3) Alienation from current and traditional harvesting places resulting from government policies and regulations.

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[3]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Lake Cowichan with implementation of measures for linked valued components	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on availability of resources for Lake Cowichan use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)	negligible (the VFPA is of the view that its predictions in the EIS already sufficiently considered Lake Cowichan views regarding existing social constraints on access, as described in EIS Section 32.2.4.6 and MSA Section 9.5.4.16) *Part 4 – Views expressed by Indigenous groups regarding existing and potential effects on access and harvesting opportunities* – The VFPA is of the view that Lake Cowichan views regarding existing effects, as described in EIS Section 32.2.4.6 and MSA Section 9.5.4.16, as well as Lake Cowichan views regarding potential Project-related effects (provided in EIS Appendix 7.2-B and the Lake Cowichan-specific issue tracking table (refer to forthcoming IR10-01 response), were already sufficiently considered in the VFPA's predictions in EIS Section 32.2.6 (including the analysis in Section 32.2.6.1, Section 32.2.6.2, and Section 32.2.6.3, and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388). *Part 5 – Characterisation of residual effects and evaluation of significance* – No additional information (the VFPA is of the view that Lake Cowichan views on thresholds are reflected in EIS Section 32.2.4.6 and MSA Section 9.5.4.16, and were factored into the Current Use assessment for Project-related effects; refer also to responses to IR10-11 and IR10-12)	
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Lake Cowichan with implementation of measures for linked valued components	Negligible – Taking mitigation, including consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on quality of resources for Lake Cowichan use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)		
IR10-07 (EIS)				
Provide a group-specific assessment of the economic implications of permanent or temporary displacement as a result of the Project on current use	Access – Negligible potential change in access expected for Lake Cowichan (before Current Use-specific mitigation) as a result of Project-related displacement effects based on available information, which indicated approximately 50 to 100 crabs are currently harvested by Lake Cowichan on an annual basis at Roberts Bank, with no indication of licence type.	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Lake Cowichan access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that Lake Cowichan views regarding existing constraints on access, as described in EIS Section 32.2.4.6 and MSA Section 9.5.4.16, as well as Lake Cowichan views regarding potential Project-related effects (provided in EIS Appendix 7.2-B and the Lake Cowichan-specific issues tracking table in the forthcoming response to IR10-01), were already sufficiently considered in the VFPA's predictions in EIS Section 32.2.6 (including the analysis in Section 32.2.6.1 on access and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388).	As the predicted Current Use access effect (including the potential for increased competition) on Lake Cowichan is expected to be negligible (before Current Use-specific mitigation), no residual economic effects for Lake Cowichan are anticipated as a result of the Project
IR10-08 (EIS)				
Provide a group-specific assessment of the changes in quality of the current use experience resulting from the proposed Project	Quality of experience (Pathway #1) – Negligible potential change in Lake Cowichan sense of place, risks to safety and security, and sensory disturbance expected with implementation of measures for linked valued components	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Lake Cowichan's quality of experience at preferred locations is predicted		No change in EIS predictions for Lake Cowichan in terms of quality of Current Use experience

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[3]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
	Quality of experience (Pathway #2) – Negligible potential change across all indicators (i.e., access, availability and quality of resources, quality of experience (Pathway#1)) for Lake Cowichan; therefore, a negligible potential effect (before Current Use-specific mitigation) is expected on Lake Cowichan's ability to reproduce and transmit cultural heritage	(i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that the nine factors[6] identified in IR10-08 for consideration in a group-specific assessment of potential changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in EIS Section 32.2.6.4 (and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388). The VFPA notes that factors contributing to existing effects are reflected in Lake Cowichan's baseline summaries in EIS Section 32.2.4.6 and MSA Section 9.5.4.16, and that these views and Lake Cowichan views about potential Project-related effects (as provided in EIS Appendix 7.2-B and the Lake Cowichan-specific issues tracking table in the forthcoming response to IR10-01) were taken into consideration in the assessment of potential effects on their quality of experience.	
IR10-13 (MSA)				
Provide a group-specific assessment of potential effects and the characterisation of residual effects of the marine shipping associated with the proposed Project on current use in terms of changes to access and availability and quality of preferred marine resources	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Lake Cowichan as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Lake Cowichan's access to preferred locations as a result of Project-associated ship pass-bys is expected	*Part 1 – Additional baseline information regarding harvesting and other Current Use activities*[7] – No additional information (refer to Lake Cowichan-specific information provided in EIS Section 32.2.4.6 and MSA Section 9.5.4.16, per **Table IR10-A8-1** above, for available information) *Part 2 - Maps of marine harvest sites* – Spatial information for Lake Cowichan already considered by the VFPA in the EIS / MSA Current Use assessment *Part 3(1) – List of issues / concerns regarding Project-associated vessel transit* – Identified for Lake Cowichan in list of issues in MSA Appendix 5-B (also refer to the Lake Cowichan-specific issues tracking table in the forthcoming IR10-01 response) *Part 3(2) – Adequacy of Proponent's response* – Refer to IR10-13 response *Part 3(3) – Proponent's views on thresholds of acceptability and risk* - Refer to IR10-13 response	No change in MSA predictions for Lake Cowichan in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Lake Cowichan as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Lake Cowichan as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		

[6] Nine factors identified in IR10-08 for consideration in the assessment: (1) Loss of preferred harvesting sites; (2) How the quality of the Current Use experience could change due to the real and perceived contamination of traditional food sources; (3) Sensory disturbances from light, noise and vibration affecting oral traditions and sacred practices; (4) Safety risks and concerns due to increased vessel traffic; (5) Industrialization of the Project area, with subsequent loss and disruption of social and cultural values associated with the proposed Project area and the Fraser River estuary; (6) Increased alienation from traditional harvesting caused by industrial development on Roberts Bank, including the proposed expansion of navigational close areas; (7) Decreased willingness and ability by Indigenous peoples to access the Project area due to the perception of risk, reduced harvesting opportunities and aesthetic impacts; (8) Level of importance placed upon patters of use (past, present and future); and (9) Lost opportunities for the transmission of Indigenous Knowledge and practices due to avoidance of an expanded industrialized area.

[7] Additional baseline information requested in IR10-13 for consideration in the assessment: (1) Preferred species and locations; (2) Timing of the current use activities, such as frequency, duration and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access for groups using the shipping lanes for fishing, groups traveling through the shipping lanes to access fishing, harvesting and cultural sites and, groups using the marine shipping area adjacent to the marine shipping lanes.

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[3]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR10-14 (MSA)				
Consider (on a group-specific basis) the socio-economic implications of potential or necessary displacement (permanent or temporary)[8]	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Lake Cowichan as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Lake Cowichan's access to preferred locations as a result of Project-associated ship pass-bys is expected	The VFPA is of the view that Lake Cowichan's views regarding existing constraints on access, as described in EIS Section 32.2.4.6 and MSA Section 9.5.4.16, as well as Lake Cowichan's views regarding potential effects of Project-associated vessel transit, described in MSA Appendix 5-B, were already sufficiently considered in the VFPA's predictions in MSA Section 9.5.5 regarding a potential access effect on Lake Cowichan as a result of Project-associated vessel transit.	As the predicted Current Use access effect on Lake Cowichan is expected to be addressed through the suggested mitigation identified in MSA Section 9.5.6, no residual economic effects for Lake Cowichan are anticipated
IR10-15 (MSA)				
Provide a group-specific assessment of potential effect of the changes in quality of the current use experience resulting from marine shipping associated with the proposed Project and the characterisation and significance of residual effects	Quality of experience (Pathway #1) – Negligible potential change in Lake Cowichan sense of place, risks to safety and security, and sensory disturbance expected Quality of experience (Pathway #2) – Negligible potential change for all indicators except access. Potentially measurable (up to minor) effect (before Current Use-specific mitigation) is expected on Lake Cowichan's ability to reproduce and transmit cultural heritage associated with potentially measurable access / displacement effect (refer to response to IR10-13)	Pathway #1 – N/A (negligible before Current Use-specific mitigation) Pathway #2 - Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Lake Cowichan's quality of experience tied to access is expected	The VFPA is of the view that the 4 factors[9] identified in IR10-15 for consideration in the group-specific assessment of changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in MSA Section 9.5.5. The VFPA notes that factors contributing to existing effects are reflected in Lake Cowichan's baseline summaries in EIS Section 32.2.4.6 and MSA Section 9.5.6.16, and that these views and Lake Cowichan's views about potential effects of Project-associated vessel transit on Lake Cowichan (as referenced in MSA Appendix 5-B), were taken into consideration in the assessment of potential effects on their quality of experience.	No change in MSA predictions for Lake Cowichan in terms of quality of Current Use experience
IR10-16 (MSA)				
Present (the requested group-specific baseline information)[10]	N/A	N/A	No additional information available (refer to Lake Cowichan-specific information provided in EIS Section 32.2.4.6 and MSA Section 9.5.4.16, per **Table IR10-A8-1** above, for available information)	No additional information available

[8] Implications identified in IR10-14 for consideration in the assessment: (1) Sufficiency of resources at alternate locations to meet the requirements of the community; (2) Constraints of displacement (areas further from their community or already alienated to other interests); (3) Extra expenses required in monetary terms or additional travel time or necessary changes in technology for the practice or access to resources; and (4) Constraints on current harvesting activities caused by development, regulatory restrictions, reduced resources, contamination and conservation concerns and impediments to the revival of traditions surrounding coastal harvesting activities.
[9] Four factors identified in IR10-15 for consideration in the assessment: (1) Sites of importance to Indigenous groups; (2) Decreased willingness, ability or avoidance by Indigenous peoples to access Current Use sites in or through the marine shipping lanes due to safety concerns and the perception of risk, reduced harvesting opportunities, and/or sensory disturbances; (3) Alienation from existing patterns of traditional harvesting due to the temporary or permanent displacement from areas of importance; and (4) Loss of opportunities for the cultural transmission of Indigenous Knowledge and practices due to the temporary or permanent displacement from those areas of importance.
[10] Additional baseline information requested in IR10-16: (1) The current activities taking place during the day or the night with a quantification of day and night duration; (2) The access required within, outside or through the shipping lanes; (3) The seasons that activities are practiced; (4) The frequency that each Indigenous group crosses the shipping lanes in the marine shipping area; and (5) The minimum and maximum number of vessels per hour in the shipping lanes, by Segment, encountered by Indigenous fishing vessels for Current Use activities in relation to the proposed Project-related ship movements.

Lyackson First Nation[1] Group-specific Baseline Information Process Summary (EIS and MSA)

Environmental Impact Statement (EIS)

On July 11, 2014, the VFPA provided Lyackson First Nation with a draft *"Lyackson First Nation Community Profile"* for review and comment. Comments were received from Lyackson First Nation on August 6, 2014, and changes were made to the draft as appropriate.

On August 19, 2014 the VFPA and Lyackson First Nation signed a funding agreement to support Lyackson First Nation's completion of a Traditional Use study.

The VFPA requested information on Lyackson First Nation's current use of the waters and terrestrial areas adjacent to the Project as well as any foreseeable changes or impacts to these areas that may result from the Project. Information was sought in relation to the location and timing of harvests, how these locations were accessed, specific species that were targeted, how the harvested species were utilised, and the cultural values associated with the harvest. In addition, the VFPA requested broader contextual information on traditional economy and knowledge, and culturally important places. The VFPA further requested information related to past use, existing use, and changes that Lyackson First Nation anticipated to the landscape and their use of the area over time.

On August 31, 2014, Lyackson First Nation provided the VFPA with a report titled "*Lyackson First Nation Knowledge and Use: Existing Data Summary Report for Port Metro Vancouver's Proposed Roberts Bank Terminal 2 Project."*

On November 27, 2014, the VFPA provided Lyackson First Nation with advance drafts of the existing conditions sections of the EIS "*Human Health Effects Assessment"* and "*Aboriginal and Treaty Rights and Related Interests, and including Current Use of Lands and Resources for Traditional Purposes*." The VFPA requested that Lyackson First Nation confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final EIS.

On December 10, 2014, the VFPA met with Lyackson First Nation along with Lake Cowichan First Nation to provide information regarding the preliminary assessment of human health, including potential Project effects and cumulative effects on Aboriginal and treaty rights and related interests and current use of lands and resources for traditional purposes (Current Use), and to identify any additional information to inform the assessment. The presentation and discussion included content regarding the proposed methodology for this assessment, the VFPA's understanding of existing conditions based on the information provided, and preliminary conclusions of the assessment. Following the meeting, on January 6, 2015, the VFPA sent a summary of questions and comments raised by Lyackson First Nation and Lake Cowichan First Nation during the meeting for verification prior to incorporating the information into the EIS.

[1] Indigenous group listed in Table 1-A (EIS) and Table 1-C (MSA) of Attachment 2 to IR Package 10.

Comments on the draft "*Human Health Effects Assessment*" and the draft "*Potential or Established Aboriginal and Treaty Rights and Related Interests, and including Current Use of Lands and Resources for Traditional Purposes"* sections were received from Lyackson First Nation on January 17, 2015, and changes were made to reflect input from Lyackson First Nation.

On March 25, 2015, the VFPA provided Lyackson First Nation with a table outlining all Lyackson First Nation's comments on the draft sections, responses to each comment from the VFPA, and a description of subsequent changes made to the sections in the EIS.

On April 2, 2015, the VFPA provided Lyackson First Nation with a copy of the EIS.

Marine Shipping Addendum (MSA)

On May 25, 2015, the VFPA wrote a letter to Lyackson First Nation explaining that the VFPA is considering effects from marine shipping associated with the Project on the current use of lands and resources by Lyackson First Nation. The VFPA requested information from Lyackson First Nation regarding Current Use, fisheries, or potential effects associated with marine shipping. In the letter, the VFPA explained its intent to rely on existing information to inform the assessment of potential effects associated marine shipping associated with the Project, including the report previously provided by Lyackson First Nation titled "*Lyackson First Nation Knowledge Use: Existing Data Summary Report for Port Metro Vancouver's Proposed Roberts Bank Terminal 2 Project"* and the Application to the National Energy Board and the Lyackson First Nation oral hearing transcript for the Trans Mountain Expansion Project. The VFPA requested any additional information from Lyackson First Nation that may help to inform the assessment. The VFPA also offered funding to facilitate Lyackson First Nation's participation in consultation. The funding was accepted by Lyackson First Nation on February 26, 2016.

On July 27, 2015, the VFPA provided Lyackson First Nation with a draft document titled "*Roberts Bank Terminal 2 Project Marine Shipping Study: Lyackson First Nation – Current Use of Lands and Resources for Traditional Purposes – Summary of Existing Conditions."* The VFPA requested that Lyackson First Nation confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final MSA. Comments were received on October 20, 2015 along with additional information in the document "*Preliminary Lyackson Use and Occupancy Mapping Study for BC MoTI's George Massey Tunnel Replacement Project."* Changes were made to reflect input from Lyackson First Nation.

On November 9, 2015 the VFPA provided Lyackson First Nation with a copy of the MSA.

Lyackson First Nation Group-specific Index and Assessment Tables

Table IR10-A9-1 Lyackson First Nation Index Table

EIS / MSA Section	Original EIS / MSA Information Presentation (Aggregated / Disaggregated)	Lyackson First Nation
EIS Section 32.1.1 Aboriginal Groups (Community profiles)	Disaggregated	32.1.1.9 Lyackson First Nation, pp. 32-12 to 32-13
EIS Section 32.2.4 Existing Conditions (Past, present, desired future use and list of rights identified by Indigenous groups as affected)	Disaggregated	32.2.4.7 Lyackson First Nation, pp. 32-81 to 32-87
EIS Section 32.2.6 Future Conditions With the Project – Potential Project-Related Effects (on Current Use)	Overall level of potential effect on each Indigenous group's Current Use identified in introduction to section. For each Current Use indicator, only groups for whom a measurable potential effect was predicted were disaggregated from the aggregated discussion.	32.2.6 Future Conditions With the Project – Potential Project-Related Effects, Lyackson First Nation, p. 32-100, para. 4 (negligible potential effect) 32.2.6.1 (Access), no differential effect (i.e., negligible)[1] 32.2.6.2 (Resource availability), no differential effect 32.2.6.3 (Resource quality), no differential effect 32.2.6.4 (Experiential quality), no differential effect
EIS Section 32.2.7 Mitigation Measures	For each Current Use indicator, only groups for whom a measurable potential effect was predicted were identified specifically in the aggregated discussion.	32.2.7.1 (Access), no differential measures 32.2.7.2 (Resource availability), no differential measures 32.2.7.3 (Resource quality), no differential measures 32.2.7.4 (Experiential quality), no differential measures
EIS Section 32.2.8 Residual Effects / Section 32.2.9 Cumulative Effects	N/A (no residual effects predicted)	N/A (no residual effects predicted)
EIS Section 32.3.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups	Disaggregated	32.3.2.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups, Lyackson First Nation, pp. 32-139 to p. 32-141
EIS Section 32.3.3 Mitigation Measures	Disaggregated (but limited to groups with measurable potential impacts) Note: Measures identified are exactly the same as for Current Use (across all indicators, given that they were to be considered in the aggregate).	32.3.3.1 Summary of Mitigation Measures for Potential Adverse Impacts on the Exercise of Asserted or Established Aboriginal and Treaty Rights (same as Current Use measures in Section 32.2.7), no differential measures 32.3.3.2 Summary of Mitigation Measures Suggested by Aboriginal Groups, no differential measures suggested by Lyackson 32.3.3.3 Other Accommodations, Lyackson First Nation, p. 32-148 32.3.3.4 Outstanding Aboriginal Issues, no differential issues
EIS IR/AIR	N/A	AIR-12.04.15-30 Rationale for (Current Use) Conclusions, Table AIR30-1 Rationale for Predicted Level of Effect, Lyackson First Nation, p. 7 (CEAR Document #388)
MSA Section 9.5.4 Existing Conditions	Disaggregated	9.5.4.17 Lyackson First Nation, pp. 9.5-115 to 9.5-122
MSA Section 9.5.5 Potential Interactions and Effects on Current Use	Aggregated (all Indigenous groups identified as experiencing a similar level of potential effect due to the linear activity of routine vessel transit)	9.5.5 Potential Interactions and Effects on Current Use, Table 9.5-35 (potential negligible-to-minor effect, all Indigenous groups) 9.5.5.1 Negligible Effects of Vessel Transit on Current Use, no differential effects[2] 9.5.5.2 Potential Effects of Vessel Transit on Current Use, no differential effects 9.5.5.3 Summary of Potential Transboundary Effects, not assessed
MSA Section 9.5.6 Suggested Mitigation Measures	Aggregated (to address the potentially minor linear effect on all Indigenous groups)	9.5.6 Suggested Mitigation Measures, no differential measures

[1] In this case, a potential effect is described as a "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be non-measurable in relation to the Project. Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-A and Table 1-B Indigenous groups, regardless of whether the predicted level of potential effect (before Current Use-specific mitigation) was identified as measurable or non-measurable in relation to the Project.
[2] In this case, a potential effect is described as a "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be the same for all groups (i.e., negligible-to-minor) as a result of marine shipping associated with the Project. Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-C and 1-D Indigenous groups.

EIS / MSA Section	Original EIS / MSA Information Presentation (Aggregated / Disaggregated)	Lyackson First Nation
MSA Section 9.5.7 Residual Effects Assessment and Significance Determination / Section 9.5.8 Cumulative Effects Assessment / Section 9.5.9 Summary of Assessment / Section 9.5.10 Follow-Up Program	N/A (no residual effects predicted)	N/A (no residual effects predicted)
MSA Section 9.5.11 Potential Impacts on Asserted or Established Aboriginal and Treaty Rights	Aggregated (all Indigenous groups identified as experiencing a similar level of potential impact due to the linear activity of routine vessel transit) Note: Measures identified are exactly the same as for Current Use	9.5.11.1 Approach to the Rights Assessment, Lyackson First Nation, p. 9.5-148 9.5.11.2 Results of the Rights Assessment, potential negligible-to-minor impact (all Indigenous groups, no differential impacts) 9.5.11.3 Suggested Mitigation Measures, no differential measures 9.5.11.4 Residual Effects, N/A (no residual effects predicted)

Table IR10-A9-2 Lyackson First Nation Assessment Table (Information Request Package 10)

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[3]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR Package 10 (IR10)				
IR10-06 (EIS)				
Provide a group-specific assessment of the potential effects of the proposed Project and the characterisation and significance of any residual effect on current use in terms of changes in access, availability and quality of all preferred current use resources	*Note: A group-specific summary of the Current Use assessment for Lake Cowichan was presented in Table AIR30-1 (based on the analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388)* Access – Negligible potential change in access expected for Lyackson (before Current Use-specific mitigation) as a result of Project-related displacement effects based on available information, which indicated past use of Roberts Bank for crabbing, but current levels of use, if any, are not known to the VFPA.	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Lyackson access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	*Part 1 – Additional baseline information regarding FSC harvesting*[4] – No additional information (refer to Lyackson-specific information provided in EIS Section 32.2.4.7 and MSA Section 9.5.4.17, per **Table IR10-A9-1** above, for available information) *Part 2 - Maps of marine harvest sites* –Spatial information (including mapping) for Lyackson already considered by the VFPA in the EIS / MSA Current Use assessment *Part 3 – Consider effects on social conditions*[5] – None anticipated given the predicted access	No change in EIS predictions for Lyackson in terms of Current Use access or availability and quality of Current Use resources

[3] The level of potential effect prediction identified in this column refers to the predicted level of effect *before* Current Use-specific measures are taken into account, but *after* measures related to linked valued components (if applicable) have been considered. The next column refers to the level of residual effect prediction after *both* linked valued component measures (if applicable) and Current Use-specific measures have been taken into account.
[4] Additional baseline information requested in IR10-06: (1) Preferred species and locations; (2) Timing of current use activities, such as frequency, duration, and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access, including an estimate of the number of vessels per hour per year in the local and regional assessment areas for harvesting purposes.
[5] Social effects identified in IR10-06 for consideration in the assessment: (1) Conditions of access to other family member(s) territory or other Indigenous group's territory for traditional harvesting purposes; (2) Access by non-Indigenous user(s); and (3) Alienation from current and traditional harvesting places resulting from government policies and regulations.

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[3]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Lyackson with implementation of measures for linked valued components	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on availability of resources for Lyackson use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)	effect on Lyackson is expected to be negligible (the VFPA is of the view that its predictions in the EIS already sufficiently considered Lyackson views regarding existing social constraints on access, as described in EIS Section 32.2.476 and MSA Section 9.5.4.17) *Part 4 – Views expressed by Indigenous groups regarding existing and potential effects on access and harvesting opportunities* – The VFPA is of the view that Lyackson views regarding existing effects, as described in EIS Section 32.2.4.7 and MSA Section 9.5.4.17, as well as Lyackson views regarding potential Project-related effects (provided in EIS Appendix 7.2-B and the Lyackson-specific issue tracking table (refer to forthcoming IR10-01 response), were already sufficiently considered in the VFPA's predictions in EIS Section 32.2.6 (including the analysis in Section 32.2.6.1, Section 32.2.6.2, and Section 32.2.6.3, and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388). *Part 5 – Characterisation of residual effects and evaluation of significance* – No additional information (the VFPA is of the view that Lyackson views on thresholds are reflected in EIS Section 32.2.4.7 and MSA Section 9.5.4.17, and were factored into the Current Use assessment for Project-related effects; refer also to responses to IR10-11 and IR10-12)	
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Lyackson with implementation of measures for linked valued components	Negligible – Taking mitigation, including consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on quality of resources for Lyackson use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)		
IR10-07 (EIS)				
Provide a group-specific assessment of the economic implications of permanent or temporary displacement as a result of the Project on current use	Access – Negligible potential change in access expected for Lyackson (before Current Use-specific mitigation) as a result of Project-related displacement effects based on available information, which indicated past use of Roberts Bank for crabbing, but current levels of use, if any, are not known to the VFPA.	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Lyackson access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that Lyackson views regarding existing constraints on access, as described in EIS Section 32.2.4.7 and MSA Section 9.5.4.17, as well as Lyackson views regarding potential Project-related effects (provided in EIS Appendix 7.2-B and the Lake Cowichan-specific issues tracking table in the forthcoming response to IR10-01), were already sufficiently considered in the VFPA's predictions in EIS Section 32.2.6 (including the analysis in Section 32.2.6.1 on access and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388).	As the predicted Current Use access effect (including the potential for increased competition) on Lyackson is expected to be negligible (before Current Use-specific mitigation), no residual economic effects for Lyackson are anticipated as a result of the Project
IR10-08 (EIS)				
Provide a group-specific assessment of the changes in quality of the current use experience resulting from the proposed Project	Quality of experience (Pathway #1) – Negligible potential change in Lyackson sense of place, risks to safety and security, and sensory disturbance expected with implementation of measures for linked valued components	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Lyackson's quality of experience at preferred locations is predicted		No change in EIS predictions for Lyackson in terms of quality of Current Use experience

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[3]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
	Quality of experience (Pathway #2) – Negligible potential change across all indicators (i.e., access, availability and quality of resources, quality of experience (Pathway#1)) for Lyackson; therefore, a negligible potential effect (before Current Use-specific mitigation) is expected on Lyackson's ability to reproduce and transmit cultural heritage	(i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that the nine factors[6] identified in IR10-08 for consideration in a group-specific assessment of potential changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in EIS Section 32.2.6.4 (and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388). The VFPA notes that factors contributing to existing effects are reflected in Lyackson's baseline summaries in EIS Section 32.2.4.7 and MSA Section 9.5.4.17, and that these views and Lyackson views about potential Project-related effects (as provided in EIS Appendix 7.2-B and the Lyackson-specific issues tracking table in the forthcoming response to IR10-01) were taken into consideration in the assessment of potential effects on their quality of experience.	
IR10-13 (MSA)				
Provide a group-specific assessment of potential effects and the characterisation of residual effects of the marine shipping associated with the proposed Project on current use in terms of changes to access and availability and quality of preferred marine resources	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Lyackson as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Lyackson's access to preferred locations as a result of Project-associated ship pass-bys is expected	*Part 1 – Additional baseline information regarding harvesting and other Current Use activities*[7] – No additional information (refer to Lyackson-specific information provided in EIS Section 32.2.4.7 and MSA Section 9.5.4.17, per **Table IR10-A9-1** above, for available information) *Part 2 - Maps of marine harvest sites* – Spatial information (including mapping) for Lyackson already considered by the VFPA in the EIS / MSA Current Use assessment *Part 3(1) – List of issues / concerns regarding Project-associated vessel transit* – Identified for Lyackson in list of issues in MSA Appendix 5-B (also refer to the Lyackson-specific issues tracking table in the forthcoming IR10-01 response) *Part 3(2) – Adequacy of Proponent's response* – Refer to IR10-13 response *Part 3(3) – Proponent's views on thresholds of acceptability and risk* - Refer to IR10-13 response	No change in MSA predictions for Lyackson in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Lyackson as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Lyackson as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		

[6] Nine factors identified in IR10-08 for consideration in the assessment: (1) Loss of preferred harvesting sites; (2) How the quality of the Current Use experience could change due to the real and perceived contamination of traditional food sources; (3) Sensory disturbances from light, noise and vibration affecting oral traditions and sacred practices; (4) Safety risks and concerns due to increased vessel traffic; (5) Industrialization of the Project area, with subsequent loss and disruption of social and cultural values associated with the proposed Project area and the Fraser River estuary; (6) Increased alienation from traditional harvesting caused by industrial development on Roberts Bank, including the proposed expansion of navigational close areas; (7) Decreased willingness and ability by Indigenous peoples to access the Project area due to the perception of risk, reduced harvesting opportunities and aesthetic impacts; (8) Level of importance placed upon patters of use (past, present and future); and (9) Lost opportunities for the transmission of Indigenous Knowledge and practices due to avoidance of an expanded industrialized area.

[7] Additional baseline information requested in IR10-13 for consideration in the assessment: (1) Preferred species and locations; (2) Timing of the current use activities, such as frequency, duration and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access for groups using the shipping lanes for fishing, groups traveling through the shipping lanes to access fishing, harvesting and cultural sites and, groups using the marine shipping area adjacent to the marine shipping lanes.

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[3]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR10-14 (MSA)				
Consider (on a group-specific basis) the socio-economic implications of potential or necessary displacement (permanent or temporary)[8]	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Lyackson as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Lyackson's access to preferred locations as a result of Project-associated ship pass-bys is expected	The VFPA is of the view that Lyackson's views regarding existing constraints on access, as described in EIS Section 32.2.4.7 and MSA Section 9.5.4.17, as well as Lyackson's views regarding potential effects of Project-associated vessel transit, described in MSA Appendix 5-B, were already sufficiently considered in the VFPA's predictions in MSA Section 9.5.5 regarding a potential access effect on Lyackson as a result of Project-associated vessel transit.	As the predicted Current Use access effect on Lyackson is expected to be addressed through the suggested mitigation identified in MSA Section 9.5.6, no residual economic effects for Lyackson are anticipated
IR10-15 (MSA)				
Provide a group-specific assessment of potential effect of the changes in quality of the current use experience resulting from marine shipping associated with the proposed Project and the characterisation and significance of residual effects	Quality of experience (Pathway #1) – Negligible potential change in Lyackson sense of place, risks to safety and security, and sensory disturbance expected Quality of experience (Pathway #2) – Negligible potential change for all indicators except access. Potentially measurable (up to minor) effect (before Current Use-specific mitigation) is expected on Lyackson's ability to reproduce and transmit cultural heritage associated with potentially measurable access / displacement effect (refer to response to IR10-13)	Pathway #1 – N/A (negligible before Current Use-specific mitigation) Pathway #2 - Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Lyackson's quality of experience tied to access is expected	The VFPA is of the view that the 4 factors[9] identified in IR10-15 for consideration in the group-specific assessment of changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in MSA Section 9.5.5. The VFPA notes that factors contributing to existing effects are reflected in Lyackson's baseline summaries in EIS Section 32.2.4.7 and MSA Section 9.5.6.17, and that these views and Lyackson's views about potential effects of Project-associated vessel transit on Lyackson (as referenced in MSA Appendix 5-B), were taken into consideration in the assessment of potential effects on their quality of experience.	No change in MSA predictions for Lyackson in terms of quality of Current Use experience
IR10-16 (MSA)				
Present (the requested group-specific baseline information)[10]	N/A	N/A	No additional information available (refer to Lyackson-specific information provided in EIS Section 32.2.4.7 and MSA Section 9.5.4.17, per **Table IR10-A9-1** above, for available information)	No additional information available

[8] Implications identified in IR10-14 for consideration in the assessment: (1) Sufficiency of resources at alternate locations to meet the requirements of the community; (2) Constraints of displacement (areas further from their community or already alienated to other interests); (3) Extra expenses required in monetary terms or additional travel time or necessary changes in technology for the practice or access to resources; and (4) Constraints on current harvesting activities caused by development, regulatory restrictions, reduced resources, contamination and conservation concerns and impediments to the revival of traditions surrounding coastal harvesting activities.
[9] Four factors identified in IR10-15 for consideration in the assessment: (1) Sites of importance to Indigenous groups; (2) Decreased willingness, ability or avoidance by Indigenous peoples to access Current Use sites in or through the marine shipping lanes due to safety concerns and the perception of risk, reduced harvesting opportunities, and/or sensory disturbances; (3) Alienation from existing patterns of traditional harvesting due to the temporary or permanent displacement from areas of importance; and (4) Loss of opportunities for the cultural transmission of Indigenous Knowledge and practices due to the temporary or permanent displacement from those areas of importance.
[10] Additional baseline information requested in IR10-16: (1) The current activities taking place during the day or the night with a quantification of day and night duration; (2) The access required within, outside or through the shipping lanes; (3) The seasons that activities are practiced; (4) The frequency that each Indigenous group crosses the shipping lanes in the marine shipping area; and (5) The minimum and maximum number of vessels per hour in the shipping lanes, by Segment, encountered by Indigenous fishing vessels for Current Use activities in relation to the proposed Project-related ship movements.

Penelakut Tribe[1] Group-specific Baseline Information Process Summary (EIS and MSA)

Environmental Impact Statement (EIS)

On April 24, 2014, the VFPA and Cowichan Nation Alliance ("CNA"), which at that time consisted of Cowichan Tribes, Penelakut Tribes, Halalt First Nation, Stz'uminus First Nation, and Hwlitsum, signed a funding agreement to support the completion of a Traditional Use study.

The VFPA requested information on CNA's current use of the waters and terrestrial areas adjacent to the Project as well as any foreseeable changes or impacts to these areas that may result from the Project. Information was sought in relation to the location and timing of harvests, how these locations were accessed, specific species that were targeted, how the harvested species were utilised, and the cultural values associated with the harvest. In addition, the VFPA requested broader contextual information on traditional economy and knowledge, and culturally important places. The VFPA further requested information related to past use, existing use, and changes that CNA anticipated to the landscape and their use of the area over time.

On July 11, 2014, the VFPA provided Penelakut with a draft of the "*Penelakut Tribe Community Profile"* for review and comment. In August 2014, the VFPA wrote to Penelakut Tribe asking whether there is any specific cultural information that Penelakut Tribe would like to provide for inclusion in the EIS, specifically information related to special features, unique characteristics, or stories associated with Roberts Bank. No comments were provided by Penelakut Tribe.

On October 16, 2014, CNA provided the VFPA with a report titled "*Port Metro Vancouver: Roberts Bank Terminal 2: Cowichan Nation Alliance Current and Planned Use."*

On December 9, 2014, the VFPA provided Penelakut Tribe with an advance draft of the existing conditions section for "*Potential or Established Aboriginal and Treaty Rights and Related Interests, and including Current Use of Lands and Resources for Traditional Purposes"* of the EIS. The VFPA requested that Penelakut Tribe confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final EIS. Comments and feedback on the draft section was provided by Penelakut Tribe on January 5, 2015 and comments from CNA were provided on January 15, 2015. Changes were made to reflect input from Penelakut Tribe and CNA.

On December 11, 2014, the VFPA met with Penelakut Tribe and other members of CNA to provide information regarding the assessment of potential Project effects and cumulative effects on Aboriginal and treaty rights and related interests and current use of lands and resources for traditional purposes (Current Use), and to obtain feedback and identify any additional information to inform the assessment. The presentation and discussion included content regarding the proposed methodology for this assessment, the VFPA's understanding of existing conditions based on the information provided by Penelakut Tribe or CNA, and

[1] Indigenous group listed in Table 1-A (EIS) and Table 1-C (MSA) of Attachment 2 to IR Package 10.

preliminary conclusions of the assessment. Following the meeting, on January 14, 2015, the VFPA sent a summary of questions and comments raised by CNA during the meeting for verification prior to incorporating the information into the EIS.

On January 5, 2015, Penelakut provided the VFPA with comments on the draft EIS section "*Potential or Established Aboriginal and Treaty Rights and Related Interests, and including Current Use of Lands and Resources for Traditional Purposes."* On January 15, 2015, CNA also provided the VFPA with comments on the draft EIS section.

On March 25, 2015, the VFPA provided CNA with a table outlining all CNA's comments on the draft sections, responses to each comment from the VFPA, and a description of subsequent changes made to the sections in the EIS.

On April 2, 2015, the VFPA provided Penelakut Tribe with a copy of the EIS.

Marine Shipping Addendum (MSA)

On May 26, 2015, the VFPA wrote a letter to Penelakut Tribe explaining that the VFPA is considering effects from marine shipping associated with the Project on the current use of lands and resources by Penelakut Tribe. The VFPA requested information from Penelakut Tribe regarding Current Use, fisheries, or potential effects associated with marine shipping. In the letter, the VFPA explained its intent to rely on existing information to inform the assessment of potential effects associated marine shipping associated with the Project, including the report previously provided titled "*Port Metro Vancouver: Roberts Bank Terminal 2: Cowichan Nation Alliance Current and Planned Use."* The VFPA requested any additional information from Penelakut Tribe that may help to inform the assessment. The VFPA also offered funding to facilitate Penelakut Tribe's participation in consultation. The funding was accepted by Penelakut Tribe on May 12, 2015.

On June 17, 2015, the VFPA met with CNA to discuss marine shipping associated with the Project and reiterated its request for information regarding CNA's current use of the marine shipping area. CNA committed to reviewing the summaries once received.

On July 27, 2015, the VFPA provided CNA with a draft section of the MSA titled *"Cowichan Nation Alliance Current Use of Lands and Resources for Traditional Purposes."* The VFPA requested that CNA confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final MSA. Comments on the draft section were received from Penelakut Tribe on August 27, 2015 and changes were made to reflect input from Penelakut Tribe.

On November 9, 2015, the VFPA provided Penelakut Tribe with a copy of the final MSA.

On April 25, 2016, the VFPA provided CNA with a tracking table outlining all CNA's comments on the draft sections, responses to each comment from the VFPA, and a description of subsequent changes made to the sections in the MSA. On May 4, 2016, Penelakut Tribe provided the VFPA with their comments to the tracking table.

Penelakut Tribe Group-specific Index and Assessment Tables

Table IR10-A10-1 Penelakut Tribe Index Table

EIS / MSA Section	Original EIS / MSA Information Presentation (Aggregated / Disaggregated)	Penelakut Tribe
EIS Section 32.1.1 Aboriginal Groups (Community profiles)	Disaggregated	32.1.1.10 Penelakut Tribe, pp. 32-13 to 32-14
EIS Section 32.2.4 Existing Conditions (Past, present, desired future use and list of rights identified by Indigenous groups as affected)	Disaggregated	32.2.4.5 Cowichan Nation Alliance (including Penelakut Tribe), pp. 32-71 to 32-77
EIS Section 32.2.6 Future Conditions With the Project – Potential Project-Related Effects (on Current Use)	Overall level of potential effect on each Indigenous group's Current Use identified in introduction to section. For each Current Use indicator, only groups for whom a measurable potential effect was predicted were disaggregated from the aggregated discussion.	32.2.6 Future Conditions With the Project – Potential Project-Related Effects, member groups of CNA (including Penelakut Tribe), p. 32-100, para. 4 (negligible potential effect) 32.2.6.1 (Access), no differential effect (i.e., negligible)[1] 32.2.6.2 (Resource availability), no differential effect 32.2.6.3 (Resource quality), no differential effect 32.2.6.4 (Experiential quality), no differential effect
EIS Section 32.2.7 Mitigation Measures	For each Current Use indicator, only groups for whom a measurable potential effect was predicted were identified specifically in the aggregated discussion.	32.2.7.1 (Access), no differential measures 32.2.7.2 (Resource availability), no differential measures 32.2.7.3 (Resource quality), no differential measures 32.2.7.4 (Experiential quality), no differential measures
EIS Section 32.2.8 Residual Effects / Section 32.2.9 Cumulative Effects	N/A (no residual effects predicted)	N/A (no residual effects predicted)
EIS Section 32.3.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups	Disaggregated	32.3.2.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups, Cowichan Nation Alliance (including Penelakut Tribe), pp. 32-135 to p. 32-137
EIS Section 32.3.3 Mitigation Measures	Disaggregated (but limited to groups with measurable potential impacts) Note: Measures identified are exactly the same as for Current Use (across all indicators, given that they were to be considered in the aggregate).	32.3.3.1 Summary of Mitigation Measures for Potential Adverse Impacts on the Exercise of Asserted or Established Aboriginal and Treaty Rights (same as Current use measures in Section 32.2.7), no differential measures 32.3.3.2 Summary of Mitigation Measures Suggested by Aboriginal Groups, no differential measures suggested by Penelakut 32.3.3.3 Other Accommodations, Penelakut Tribe, p. 32-148 32.3.3.4 Outstanding Aboriginal Issues, no differential issues
EIS IR/AIR	N/A	AIR-12.04.15-30 Rationale for (Current Use) Conclusions, Table AIR30-1 Rationale for Predicted Level of Effect, Penelakut Tribe, p. 7 (CEAR Document #388)
MSA Section 9.5.4 Existing Conditions	Disaggregated	9.5.4.15 Cowichan Nation Alliance (including Penelakut Tribe), pp. 9.5-105 to 9.5-114
MSA Section 9.5.5 Potential Interactions and Effects on Current Use	Aggregated (all Indigenous groups identified as experiencing a similar level of potential effect due to the linear activity of routine vessel transit)	9.5.5 Potential Interactions and Effects on Current Use, Table 9.5-35 (potential negligible-to-minor effect, all Indigenous groups) 9.5.5.1 Negligible Effects of Vessel Transit on Current Use, no differential effects[2] 9.5.5.2 Potential Effects of Vessel Transit on Current Use, no differential effects 9.5.5.3 Summary of Potential Transboundary Effects, not assessed
MSA Section 9.5.6 Suggested Mitigation Measures	Aggregated (to address the potentially minor linear effect on all Indigenous groups)	9.5.6 Suggested Mitigation Measures, no differential measures

[1] In this case, a potential effect is described as a "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be non-measurable in relation to the Project. Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-A and Table 1-B Indigenous groups, regardless of whether the predicted level of potential effect (before Current Use-specific mitigation) was identified as measurable or non-measurable in relation to the Project.
[2] In this case, a potential effect is described as a "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be the same for all groups (i.e., negligible-to-minor) as a result of marine shipping associated with the Project. Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-C and 1-D Indigenous groups.

EIS / MSA Section	Original EIS / MSA Information Presentation (Aggregated / Disaggregated)	Penelakut Tribe
MSA Section 9.5.7 Residual Effects Assessment and Significance Determination / Section 9.5.8 Cumulative Effects Assessment / Section 9.5.9 Summary of Assessment / Section 9.5.10 Follow-Up Program	N/A (no residual effects predicted)	N/A (no residual effects predicted)
MSA Section 9.5.11 Potential Impacts on Asserted or Established Aboriginal and Treaty Rights	Aggregated (all Indigenous groups identified as experiencing a similar level of potential impact due to the linear activity of routine vessel transit) Note: Measures identified are exactly the same as for Current Use	9.5.11.1 Approach to the Rights Assessment, Penelakut Tribe, p. 9.5-148 9.5.11.2 Results of the Rights Assessment, potential negligible-to-minor impact (all Indigenous groups, no differential impacts) 9.5.11.3 Suggested Mitigation Measures, no differential measures 9.5.11.4 Residual Effects, N/A (no residual effects predicted)

Table IR10-A10-2 Penelakut Tribe Assessment Table (Information Request Package 10)

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[3]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR Package 10 (IR10)				
IR10-06 (EIS)				
Provide a group-specific assessment of the potential effects of the proposed Project and the characterisation and significance of any residual effect on current use in terms of changes in access, availability and quality of all preferred current use resources	*Note: A group-specific summary of the Current Use assessment for Penelakut Tribe / CNA was presented in Table AIR30-1 (based on the analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388)* Access – Negligible potential change in access expected for Penelakut Tribe / CNA (before Current Use-specific mitigation) as a result of Project-related displacement effects based on available information, which indicated that Penelakut Tribe has had one recent FSC access event at Roberts Bank (in April 2015), resulting in the harvest of 900 to 1500 crab, caught over 12 to 13 days. Penelakut Tribe has identified other crab harvesting locations but has said it now	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Penelakut Tribe / CNA access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	*Part 1 – Additional baseline information regarding FSC harvesting*[4] – No additional information (refer to Penelakut Tribe / CNA-specific information provided in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, per **Table IR10-A10-1** above, for available information) *Part 2 - Maps of marine harvest sites* –Spatial information (including mapping) for Penelakut Tribe / CNA already considered by the VFPA in the EIS / MSA Current Use assessment *Part 3 – Consider effects on social conditions*[5] – None anticipated given the predicted access effect on Penelakut Tribe / CNA is expected to be negligible (the VFPA is of the view that its predictions in the EIS already sufficiently considered Penelakut Tribe / CNA views regarding	No change in EIS predictions for Penelakut Tribe / CNA in terms of Current Use access or availability and quality of Current Use resources

[3] The level of potential effect prediction identified in this column refers to the predicted level of effect *before* Current Use-specific measures are taken into account, but *after* measures related to linked valued components (if applicable) have been considered. The next column refers to the level of residual effect prediction after *both* linked valued component measures (if applicable) and Current Use-specific measures have been taken into account.
[4] Additional baseline information requested in IR10-06: (1) Preferred species and locations; (2) Timing of current use activities, such as frequency, duration, and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access, including an estimate of the number of vessels per hour per year in the local and regional assessment areas for harvesting purposes.
[5] Social effects identified in IR10-06 for consideration in the assessment: (1) Conditions of access to other family member(s) territory or other Indigenous group's territory for traditional harvesting purposes; (2) Access by non-Indigenous user(s); and (3) Alienation from current and traditional harvesting places resulting from government policies and regulations.

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[3]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
	relies on Roberts Bank for crab harvesting due to contamination of crabbing grounds closer to their home communities based on Vancouver Island.		existing social constraints on access, as described in EIS Section 32.2.4.5 and MSA Section 9.5.4.15) *Part 4 – Views expressed by Indigenous groups regarding existing and potential effects on access and harvesting opportunities* – The VFPA is of the view that Penelakut Tribe / CNA views regarding existing effects, as described in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, as well as Penelakut Tribe / CNA views regarding potential Project-related effects (provided in EIS Appendix 7.2-B and the Penelakut Tribe / CNA-specific issue tracking table (refer to forthcoming IR10-01 response), were already sufficiently considered in the VFPA's predictions in EIS Section 32.2.6 (including the analysis in Section 32.2.6.1, Section 32.2.6.2, and Section 32.2.6.3, and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388). *Part 5 – Characterisation of residual effects and evaluation of significance* – No additional information (the VFPA is of the view that Penelakut Tribe / CNA views on thresholds are reflected in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, and were factored into the Current Use assessment for Project-related effects; refer also to responses to IR10-11 and IR10-12)	
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Penelakut Tribe / CNA with implementation of measures for linked valued components	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on availability of resources for Penelakut Tribe / CNA use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Penelakut Tribe / CNA with implementation of measures for linked valued components	Negligible – Taking mitigation, including consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on quality of resources for Penelakut Tribe / CNA use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)		
IR10-07 (EIS)				
Provide a group-specific assessment of the economic implications of permanent or temporary displacement as a result of the Project on current use	Access – Negligible potential change in access expected for Penelakut Tribe / CNA (before Current Use-specific mitigation) as a result of Project-related displacement effects based on available information, which indicated that Penelakut Tribe has had one recent FSC access event at Roberts Bank (in April 2015), resulting in the harvest of 900 to 1500 crab, caught over 12 to 13 days. Penelakut Tribe has identified other crab harvesting locations but has said it now relies on Roberts Bank for crab harvesting due to contamination of crabbing grounds closer to their home communities based on Vancouver Island.	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Penelakut Tribe / CNA access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that Penelakut Tribe / CNA views regarding existing constraints on access, as described in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, as well as Penelakut Tribe / CNA views regarding potential Project-related effects (provided in EIS Appendix 7.2-B and the Penelakut Tribe / CNA-specific issues tracking table in the forthcoming response to IR10-01), were already sufficiently considered in the VFPA's predictions in EIS Section 32.2.6 (including the analysis in Section 32.2.6.1 on access and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388).	As the predicted Current Use access effect (including the potential for increased competition) on Penelakut Tribe / CNA is expected to be negligible (before Current Use-specific mitigation), no residual economic effects for Penelakut Tribe / CNA are anticipated as a result of the Project
IR10-08 (EIS)				
Provide a group-specific assessment of the changes in quality of the current use experience resulting from the proposed Project	Quality of experience (Pathway #1) – Negligible potential change in Penelakut Tribe / CNA sense of place, risks to safety and security, and sensory disturbance expected with implementation of measures for linked valued components	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Penelakut Tribe / CNA quality of experience at preferred locations		No change in EIS predictions for Penelakut Tribe / CNA in terms of quality of Current Use experience

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[3]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
	Quality of experience (Pathway #2) – Negligible potential change across all indicators (i.e., access, availability and quality of resources, quality of experience (Pathway#1)) for Penelakut Tribe / CNA; therefore, a negligible potential effect (before Current Use-specific mitigation) is expected on Penelakut Tribe / CNA ability to reproduce and transmit cultural heritage	is predicted (i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that the nine factors[6] identified in IR10-08 for consideration in a group-specific assessment of potential changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in EIS Section 32.2.6.4 (and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388). The VFPA notes that factors contributing to existing effects are reflected in Penelakut Tribe / CNA baseline summaries in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, and that these views and Penelakut Tribe / CNA views about potential Project-related effects (as provided in EIS Appendix 7.2-B and the Penelakut Tribe / CNA-specific issues tracking table in the forthcoming response to IR10-01) were taken into consideration in the assessment of potential effects on their quality of experience.	
IR10-13 (MSA)				
Provide a group-specific assessment of potential effects and the characterisation of residual effects of the marine shipping associated with the proposed Project on current use in terms of changes to access and availability and quality of preferred marine resources	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Penelakut Tribe / CNA as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Penelakut Tribe / CNA access to preferred locations as a result of Project-associated ship pass-bys is expected	*Part 1 – Additional baseline information regarding harvesting and other Current Use activities*[7] – No additional information (refer to Penelakut Tribe / CNA-specific information provided in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, per **Table IR10-A10-1** above, for available information) *Part 2 - Maps of marine harvest sites* – Spatial information (including mapping) for Penelakut Tribe / CNA already considered by the VFPA in the EIS / MSA Current Use assessment *Part 3(1) – List of issues / concerns regarding Project-associated vessel transit* – Identified for Penelakut Tribe / CNA in list of issues in MSA Appendix 5-B (also refer to the Penelakut Tribe / CNA-specific issues tracking table in the forthcoming IR10-01 response) *Part 3(2) – Adequacy of Proponent's response* – Refer to IR10-13 response *Part 3(3) – Proponent's views on thresholds of acceptability and risk* - Refer to IR10-13 response	No change in MSA predictions for Penelakut Tribe / CNA in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Penelakut Tribe / CNA as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Penelakut Tribe / CNA as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		

[6] Nine factors identified in IR10-08 for consideration in the assessment: (1) Loss of preferred harvesting sites; (2) How the quality of the Current Use experience could change due to the real and perceived contamination of traditional food sources; (3) Sensory disturbances from light, noise and vibration affecting oral traditions and sacred practices; (4) Safety risks and concerns due to increased vessel traffic; (5) Industrialization of the Project area, with subsequent loss and disruption of social and cultural values associated with the proposed Project area and the Fraser River estuary; (6) Increased alienation from traditional harvesting caused by industrial development on Roberts Bank, including the proposed expansion of navigational close areas; (7) Decreased willingness and ability by Indigenous peoples to access the Project area due to the perception of risk, reduced harvesting opportunities and aesthetic impacts; (8) Level of importance placed upon patters of use (past, present and future); and (9) Lost opportunities for the transmission of Indigenous Knowledge and practices due to avoidance of an expanded industrialized area.

[7] Additional baseline information requested in IR10-13 for consideration in the assessment: (1) Preferred species and locations; (2) Timing of the current use activities, such as frequency, duration and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access for groups using the shipping lanes for fishing, groups traveling through the shipping lanes to access fishing, harvesting and cultural sites and, groups using the marine shipping area adjacent to the marine shipping lanes.

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[3]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR10-14 (MSA)				
Consider (on a group-specific basis) the socio-economic implications of potential or necessary displacement (permanent or temporary)[8]	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Penelakut Tribe / CNA as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Penelakut Tribe / CNA access to preferred locations as a result of Project-associated ship pass-bys is expected	The VFPA is of the view that Penelakut Tribe / CNA views regarding existing constraints on access, as described in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, as well as Penelakut Tribe / CNA views regarding potential effects of Project-associated vessel transit, described in MSA Appendix 5-B, were already sufficiently considered in the VFPA's predictions in MSA Section 9.5.5 regarding a potential access effect on Penelakut Tribe / CNA as a result of Project-associated vessel transit.	As the predicted Current Use access effect on Penelakut Tribe / CNA is expected to be addressed through the suggested mitigation identified in MSA Section 9.5.6, no residual economic effects for Penelakut Tribe / CNA are anticipated
IR10-15 (MSA)				
Provide a group-specific assessment of potential effect of the changes in quality of the current use experience resulting from marine shipping associated with the proposed Project and the characterisation and significance of residual effects	Quality of experience (Pathway #1) – Negligible potential change in Penelakut Tribe / CNA sense of place, risks to safety and security, and sensory disturbance expected Quality of experience (Pathway #2) – Negligible potential change for all indicators except access. Potentially measurable (up to minor) effect (before Current Use-specific mitigation) is expected on Penelakut Tribe / CNA ability to reproduce and transmit cultural heritage associated with potentially measurable access / displacement effect (refer to response to IR10-13)	Pathway #1 – N/A (negligible before Current Use-specific mitigation) Pathway #2 - Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Penelakut Tribe / CNA quality of experience tied to access is expected	The VFPA is of the view that the 4 factors[9] identified in IR10-15 for consideration in the group-specific assessment of changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in MSA Section 9.5.5. The VFPA notes that factors contributing to existing effects are reflected in Penelakut Tribe / CNA baseline summaries in EIS Section 32.2.4.5 and MSA Section 9.5.6.15, and that these views and Penelakut Tribe / CNA views about potential effects of Project-associated vessel transit on Penelakut Tribe / CNA (as referenced in MSA Appendix 5-B), were taken into consideration in the assessment of potential effects on their quality of experience.	No change in MSA predictions for Penelakut Tribe / CNA in terms of quality of Current Use experience
IR10-16 (MSA)				
Present (the requested group-specific baseline information)[10]	N/A	N/A	No additional information available (refer to Penelakut Tribe / CNA-specific information provided in EIS Section 32.2.4.5 and MSA Section 9.5.4.15, per **Table IR10—A10-1** above, for available information)	No additional information available

[8] Implications identified in IR10-14 for consideration in the assessment: (1) Sufficiency of resources at alternate locations to meet the requirements of the community; (2) Constraints of displacement (areas further from their community or already alienated to other interests); (3) Extra expenses required in monetary terms or additional travel time or necessary changes in technology for the practice or access to resources; and (4) Constraints on current harvesting activities caused by development, regulatory restrictions, reduced resources, contamination and conservation concerns and impediments to the revival of traditions surrounding coastal harvesting activities.

[9] Four factors identified in IR10-15 for consideration in the assessment: (1) Sites of importance to Indigenous groups; (2) Decreased willingness, ability or avoidance by Indigenous peoples to access Current Use sites in or through the marine shipping lanes due to safety concerns and the perception of risk, reduced harvesting opportunities, and/or sensory disturbances; (3) Alienation from existing patterns of traditional harvesting due to the temporary or permanent displacement from areas of importance; and (4) Loss of opportunities for the cultural transmission of Indigenous Knowledge and practices due to the temporary or permanent displacement from those areas of importance.

[10] Additional baseline information requested in IR10-16: (1) The current activities taking place during the day or the night with a quantification of day and night duration; (2) The access required within, outside or through the shipping lanes; (3) The seasons that activities are practiced; (4) The frequency that each Indigenous group crosses the shipping lanes in the marine shipping area; and (5) The minimum and maximum number of vessels per hour in the shipping lanes, by Segment, encountered by Indigenous fishing vessels for Current Use activities in relation to the proposed Project-related ship movements.

Métis Nation British Columbia[1] Group-specific Baseline Information Process Summary (EIS and MSA)

Environmental Impact Statement (EIS)

On June 2, 2014, the VFPA and Métis Nation British Columbia ("MNBC") signed a funding agreement to support MNBC's completion of a Traditional Use Study.

The VFPA requested information on MNBC's current use of the waters and terrestrial areas adjacent to the Project as well as any foreseeable changes or impacts to these areas that may result from the Project. Information was sought in relation to the location and timing of harvests, how these locations were accessed, specific species that were targeted, how the harvested species were utilised, and the cultural values associated with the harvest. In addition, the VFPA requested broader contextual information on traditional economy and knowledge and culturally important places. The VFPA further requested information related to past use, existing use, and changes that MNBC anticipated to the landscape and their use of the area over time.

On July 2, 2014, MNBC provided the VFPA with a report titled "*Métis Use & Occupancy Study."*

On July 11, 2014, the VFPA provided MNBC with a draft of the "*Métis Nation British Columbia Community Profile"* for the opportunity to review and provide comments. On August 22, 2014, MNBC notified the VFPA that they did not have any comments on the profile at this time.

The VFPA met with MNBC on November 28, 2014 to provide information regarding the preliminary assessment of human health, including potential Project effects and cumulative effects on Aboriginal and treaty rights and related interests and current use of lands and resources for traditional purposes (Current Use), and to identify any additional information to inform the assessment. The presentation and discussion included content regarding the proposed methodology for this assessment, the VFPA's understanding of existing conditions based on the information provided by MNBC, and preliminary conclusions of the assessment.

On December 9, 2014, the VFPA provided MNBC with advance drafts of the existing conditions sections of the EIS "*Human Health Effects Assessment,"* and "*Aboriginal and Treaty Rights and Related Interests, and including Current Use of Lands and Resources for Traditional Purposes*." The VFPA requested that MNBC confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final EIS.

Comments on the draft "*Human Health Effects Assessment,"* and draft "*Aboriginal and Treaty Rights and Related Interests, and including Current Use of Lands and Resources for Traditional Purposes"* sections were received from MNBC on January 15, 2015, and changes made to reflect input from MNBC.

[1] Indigenous group listed in Table 1-A (EIS) and Table 1-C (MSA) of Attachment 2 to IR Package 10.

On March 25, 2015 the VFPA provided MNBC with a table outlining all MNBC's comments on the draft sections, responses to each comment from the VFPA, and a description of subsequent changes made to the sections in the EIS.

On April 2, 2015, the VFPA provided MNBC with a copy of the EIS.

Marine Shipping Addendum (MSA)

On May 26, 2015, the VFPA wrote a letter to MNBC explaining that the VFPA is considering effects from marine shipping associated with the Project on the current use of lands and resources by MNBC. The VFPA requested information from MNBC regarding Current Use, fisheries, or potential effects associated with marine shipping. In the letter, the VFPA explained its intent to rely on existing information to inform the assessment of potential effects associated marine shipping associated with the Project, including the report previously provided by MNBC titled "*Metis Use & Occupancy Study: Port Metro Vancouver Roberts Bank Terminal 2 Project*." The VFPA requested any additional information from MNBC that may help to inform the assessment. The VFPA also offered funding to facilitate MNBC's participation in consultation. The funding was accepted by MNBC on May 12, 2015.

On June 26, 2015, the VFPA provided MNBC with a draft document titled "*Roberts Bank Terminal 2 Project Marine Shipping Study: Métis Nation British Columbia – Current Use of Lands and Resources for Traditional Purposes – Summary of Existing Conditions."* The VFPA requested that MNBC confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final MSA. Comments on the draft sections were received from MNBC on September 11, 2015 and changes were made to reflect input from MNBC.

On November 9, 2015, the VFPA provided MNBC with a copy of the final MSA.

Métis Nation British Columbia Group-specific Index and Assessment Tables

Table IR10-A11-1 Métis Nation British Columbia Index Table

EIS / MSA Section	Original EIS / MSA Information Presentation (Aggregated / Disaggregated)	Métis Nation British Columbia
EIS Section 32.1.1 Aboriginal Groups (Community profiles)	Disaggregated	32.1.1.11 Métis Nation British Columbia, pp. 32-14 to 32-15
EIS Section 32.2.4 Existing Conditions (Past, present, desired future use and list of rights identified by Indigenous groups as affected)	Disaggregated	32.2.4.8 Métis Nation British Columbia, pp. 32-87 to 32-90
EIS Section 32.2.6 Future Conditions With the Project – Potential Project-Related Effects (on Current Use)	Overall level of potential effect on each Indigenous group's Current Use identified in introduction to section. For each Current Use indicator, only groups for whom a measurable potential effect was predicted were disaggregated from the aggregated discussion.	32.2.6 Future Conditions With the Project – Potential Project-Related Effects, Métis Nation British Columbia, p. 32-100, para. 4 (negligible potential effect) 32.2.6.1 (Access), no differential effect (i.e., negligible)[1] 32.2.6.2 (Resource availability), no differential effect 32.2.6.3 (Resource quality), no differential effect 32.2.6.4 (Experiential quality), no differential effect
EIS Section 32.2.7 Mitigation Measures	For each Current Use indicator, only groups for whom a measurable potential effect was predicted were identified specifically in the aggregated discussion.	32.2.7.1 (Access), no differential measures 32.2.7.2 (Resource availability), no differential measures 32.2.7.3 (Resource quality), no differential measures 32.2.7.4 (Experiential quality), no differential measures
EIS Section 32.2.8 Residual Effects / Section 32.2.9 Cumulative Effects	N/A (no residual effects predicted)	N/A (no residual effects predicted)
EIS Section 32.3.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups	Disaggregated	32.3.2.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups, Métis Nation British Columbia, pp. 32-142 to 32-143
EIS Section 32.3.3 Mitigation Measures	Disaggregated (but limited to groups with measurable potential impacts) Note: Measures identified are exactly the same as for Current Use (across all indicators, given that they were to be considered in the aggregate).	32.3.3.1 Summary of Mitigation Measures for Potential Adverse Impacts on the Exercise of Asserted or Established Aboriginal and Treaty Rights (same as Current use measures in Section 32.2.7), no differential measures 32.3.3.2 Summary of Mitigation Measures Suggested by Aboriginal Groups, no measures suggested by Métis Nation British Columbia 32.3.3.3 Other Accommodations, Métis Nation British Columbia, p. 32-148 32.3.3.4 Outstanding Aboriginal Issues, no differential issues
EIS IR/AIR	N/A	AIR 30 Rationale for (Current Use) Conclusions, Table AIR30-1 Rationale for Predicted Level of Effect, Métis Nation British Columbia, p. 7
MSA Section 9.5.4 Existing Conditions	Disaggregated	9.5.4.18 Métis Nation British Columbia, pp. 9.5-122 to 9.5-125
MSA Section 9.5.5 Potential Interactions and Effects on Current Use	Aggregated (all Indigenous groups identified as experiencing a similar level of effect due to the linear activity of routine vessel transit)	9.5.5 Potential Interactions and Effects on Current Use, Table 9.5-35 (potential negligible-to-minor effect, all Indigenous groups) 9.5.5.1 Negligible Effects of Vessel Transit on Current Use, no differential effects[2] 9.5.5.2 Potential Effects of Vessel Transit on Current Use, no differential effects 9.5.5.3 Summary of Potential Transboundary Effects, not assessed
MSA Section 9.5.6 Suggested Mitigation Measures	Aggregated (to address the potentially minor linear effect on all Indigenous groups)	9.5.6 Suggested Mitigation Measures, no differential measures

[1] In this case, a potential effect is described as a "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be non-measurable in relation to the Project. Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-A and Table 1-B Indigenous groups, regardless of whether the predicted level of potential effect (before Current Use-specific mitigation) was identified as measurable or non-measurable in relation to the Project.
[2] In this case, a potential effect is described as a "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be the same for all groups (i.e., negligible-to-minor) as a result of marine shipping associated with the Project. Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-C and 1-D Indigenous groups.

Table IR10-A11-2 Métis Nation British Columbia Assessment Table (Information Request Package 10)

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[3]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR Package 10 (IR10)				
IR10-06 (EIS)				
Provide a group-specific assessment of the potential effects of the proposed Project and the characterisation and significance of any residual effect on current use in terms of changes in access, availability and quality of all preferred current use resources	*Note: A group-specific summary of the Current Use assessment for MNBC was presented in Table AIR30-1 (based on the analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388)* Access – Negligible potential change in access expected for MNBC members (before Current Use-specific mitigation) as a result of Project-related displacement effects based on available information, which indicated relatively low levels of use based on the activities of two Métis harvesters, with no indication of licence type or catch effort. Crab harvesting noted as occurring at certain but unspecified times of the year at Roberts Bank, which was described as	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on MNBC member access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	*Part 1 – Additional baseline information regarding FSC harvesting*[4] – No additional information (refer to MNBC-specific information provided in EIS Section 32.2.4.8 and MSA Section 9.5.4.18, per **Table IR10-A11-1** above, for available information) *Part 2 - Maps of marine harvest sites* – Maps contained in MNBC study already considered by the VFPA in the EIS / MSA Current Use assessment *Part 3 – Consider effects on social conditions*[5] – None anticipated given the predicted access effect on MNBC members is expected to be negligible (the VFPA is of the	No change in EIS predictions for MNBC members in terms of Current Use access or availability and quality of Current Use resources

[3] The level of potential effect prediction identified in this column refers to the predicted level of effect *before* Current Use-specific measures are taken into account, but *after* measures related to linked valued components (if applicable) have been considered. The next column refers to the level of residual effect prediction after *both* linked valued component measures (if applicable) and Current Use-specific measures have been taken into account.
[4] Additional baseline information requested in IR10-06: (1) Preferred species and locations; (2) Timing of current use activities, such as frequency, duration, and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access, including an estimate of the number of vessels per hour per year in the local and regional assessment areas for harvesting purposes.
[5] Social effects identified in IR10-06 for consideration in the assessment: (1) Conditions of access to other family member(s) territory or other Indigenous group's territory for traditional harvesting purposes; (2) Access by non-Indigenous user(s); and (3) Alienation from current and traditional harvesting places resulting from government policies and regulations.

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[3]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
	preferred or important for this activity, as well as at several other locations, including the Gulf Islands		view that its predictions in the EIS already sufficiently considered MNBC views regarding existing social constraints on access, as described in EIS Section 32.2.4.8 and MSA Section 9.5.4.18) *Part 4 – Views expressed by Indigenous groups regarding existing and potential effects on access and harvesting opportunities* – The VFPA is of the view that MNBC views regarding existing effects, as described in EIS Section 32.2.4.8 and MSA Section 9.5.4.18, as well as MNBC views regarding potential Project-related effects (provided in EIS Appendix 7.2-B and the MNBC-specific issue tracking table (refer to forthcoming IR10-01 response), were already sufficiently considered in the VFPA's predictions in EIS Section 32.2.6 (including the analysis in Section 32.2.6.1, Section 32.2.6.2, and Section 32.2.6.3, and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388). *Part 5 – Characterisation of residual effects and evaluation of significance* – No additional information (the VFPA is of the view that MNBC views on thresholds are reflected in EIS Section 32.2.4.8 and MSA Section 9.5.4.18, and were factored into the Current Use assessment for Project-related effects; refer also to responses to IR10-11 and IR10-12)	
	Availability of resources – Negligible potential change in availability of Current Use resources expected for MNBC members with implementation of measures for linked valued components	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on availability of resources for MNBC member use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for MNBC members with implementation of measures for linked valued components	Negligible – Taking mitigation, including consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on quality of resources for MNBC member use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)		
IR10-07 (EIS)				
Provide a group-specific assessment of the economic implications of permanent or temporary displacement as a result of the Project on current use	Access – Negligible potential change in access expected for MNBC members (before Current Use-specific mitigation) as a result of Project-related displacement effects based on available information, which indicated relatively low levels of use based on the activities of two Métis harvesters, with no indication of licence type or catch effort. Crab harvesting noted as occurring at certain but unspecified times of the year at Roberts Bank, which was described as preferred or important for this activity, as well as at several other locations, including the Gulf Islands	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on MNBC member access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that MNBC views regarding existing constraints on access, as described in EIS Section 32.2.4.8 and MSA Section 9.5.4.18, as well as MNBC views regarding potential Project-related effects (provided in EIS Appendix 7.2-B and the MNBC-specific issues tracking table in the forthcoming response to IR10-01), were already sufficiently considered in the VFPA's predictions in EIS Section 32.2.6 (including the analysis in Section 32.2.6.1 on access and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388).	As the predicted Current Use access effect (including the potential for increased competition) on MNBC members is expected to be negligible (before Current Use-specific mitigation), no residual economic effects for MNBC members are anticipated as a result of the Project
IR10-08 (EIS)				
Provide a group-specific assessment of the changes in quality of the current use experience resulting from the proposed Project	Quality of experience (Pathway #1) – Negligible potential change in MNBC member sense of place, risks to safety and security, and sensory disturbance expected with implementation of measures for linked valued components	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on MNBC members' quality of experience at preferred locations is predicted		No change in EIS predictions for MNBC members in terms of quality of Current Use experience

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[3]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
	Quality of experience (Pathway #2) – Negligible potential change across all indicators (i.e., access, availability and quality of resources, quality of experience (Pathway#1)) for MNBC members; therefore, a negligible potential effect (before Current Use-specific mitigation) is expected on MNBC members' ability to reproduce and transmit cultural heritage	(i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that the nine factors[6] identified in IR10-08 for consideration in a group-specific assessment of potential changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in EIS Section 32.2.6.4 (and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388). The VFPA notes that factors contributing to existing effects are reflected in MNBC's baseline summaries in EIS Section 32.2.4.8 and MSA Section 9.5.4.18, and that these views and MNBC views about potential Project-related effects (as provided in EIS Appendix 7.2-B and the MNBC-specific issues tracking table in the forthcoming response to IR10-01) were taken into consideration in the assessment of potential effects on their quality of experience.	
IR10-13 (MSA)				
Provide a group-specific assessment of potential effects and the characterisation of residual effects of the marine shipping associated with the proposed Project on current use in terms of changes to access and availability and quality of preferred marine resources	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for MNBC members as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on MNBC members' access to preferred locations as a result of Project-associated ship pass-bys is expected	*Part 1 – Additional baseline information regarding harvesting and other Current Use activities*[7] – No additional information (refer to MNBC-specific information provided in EIS Section 32.2.4.8 and MSA Section 9.5.4.18, per **Table IR10-A11-1** above, for available information) *Part 2 - Maps of marine harvest sites* – Maps contained in MNBC study already considered by the VFPA in the EIS / MSA Current Use assessment *Part 3(1) – List of issues / concerns regarding Project-associated vessel transit* – Identified for MNBC in list of issues in MSA Appendix 5-B (also refer to the MNBC-specific issues tracking table in the forthcoming IR10-01 response) *Part 3(2) – Adequacy of Proponent's response* – Refer to IR10-13 response *Part 3(3) – Proponent's views on thresholds of acceptability and risk* - Refer to IR10-13 response	No change in MSA predictions for MNBC members in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for MNBC members as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for MNBC members as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		

[6] Nine factors identified in IR10-08 for consideration in the assessment: (1) Loss of preferred harvesting sites; (2) How the quality of the Current Use experience could change due to the real and perceived contamination of traditional food sources; (3) Sensory disturbances from light, noise and vibration affecting oral traditions and sacred practices; (4) Safety risks and concerns due to increased vessel traffic; (5) Industrialization of the Project area, with subsequent loss and disruption of social and cultural values associated with the proposed Project area and the Fraser River estuary; (6) Increased alienation from traditional harvesting caused by industrial development on Roberts Bank, including the proposed expansion of navigational close areas; (7) Decreased willingness and ability by Indigenous peoples to access the Project area due to the perception of risk, reduced harvesting opportunities and aesthetic impacts; (8) Level of importance placed upon patters of use (past, present and future); and (9) Lost opportunities for the transmission of Indigenous Knowledge and practices due to avoidance of an expanded industrialized area.

[7] Additional baseline information requested in IR10-13 for consideration in the assessment: (1) Preferred species and locations; (2) Timing of the current use activities, such as frequency, duration and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access for groups using the shipping lanes for fishing, groups traveling through the shipping lanes to access fishing, harvesting and cultural sites and, groups using the marine shipping area adjacent to the marine shipping lanes.

IR10 Information Request	EIS / MSA Level of Potential Effect Prediction[3]	EIS / MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR10-14 (MSA)				
Consider (on a group-specific basis) the socio-economic implications of potential or necessary displacement (permanent or temporary)[8]	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for MNBC members as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on MNBC members' access to preferred locations as a result of Project-associated ship pass-bys is expected	The VFPA is of the view that MNBC's views regarding existing constraints on access, as described in EIS Section 32.2.4.8 and MSA Section 9.5.4.18, as well as MNBC's views regarding potential effects of Project-associated vessel transit, described in MSA Appendix 5-B, were already sufficiently considered in the VFPA's predictions in MSA Section 9.5.5 regarding a potential access effect on MNBC members as a result of Project-associated vessel transit.	As the predicted Current Use access effect on MNBC members is expected to be addressed through the suggested mitigation identified in MSA Section 9.5.6, no residual economic effects for MNBC members are anticipated
IR10-15 (MSA)				
Provide a group-specific assessment of potential effect of the changes in quality of the current use experience resulting from marine shipping associated with the proposed Project and the characterisation and significance of residual effects	Quality of experience (Pathway #1) – Negligible potential change in MNBC members' sense of place, risks to safety and security, and sensory disturbance expected Quality of experience (Pathway #2) – Negligible potential change for all indicators except access. Potentially measurable (up to minor) effect (before Current Use-specific mitigation) is expected on MNBC members' ability to reproduce and transmit cultural heritage associated with potentially measurable access / displacement effect (refer to response to IR10-13)	Pathway #1 – N/A (negligible before Current Use-specific mitigation) Pathway #2 - Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on MNBC members' quality of experience tied to access is expected	The VFPA is of the view that the 4 factors[9] identified in IR10-15 for consideration in the group-specific assessment of changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in MSA Section 9.5.5. The VFPA notes that factors contributing to existing effects are reflected in MNBC's baseline summaries in EIS Section 32.2.4.8 and MSA Section 9.5.6.18, and that these views and MNBC's views about potential effects of Project-associated vessel transit on MNBC members (as referenced in MSA Appendix 5-B), were taken into consideration in the assessment of potential effects on their quality of experience.	No change in MSA predictions for MNBC members in terms of quality of Current Use experience
IR10-16 (MSA)				
Present (the requested group-specific baseline information)[10]	N/A	N/A	No additional information available (refer to MNBC-specific information provided in EIS Section 32.2.4.8 and MSA Section 9.5.4.18, per **Table IR10-A11-1** above, for available information)	No additional information available

[8] Implications identified in IR10-14 for consideration in the assessment: (1) Sufficiency of resources at alternate locations to meet the requirements of the community; (2) Constraints of displacement (areas further from their community or already alienated to other interests); (3) Extra expenses required in monetary terms or additional travel time or necessary changes in technology for the practice or access to resources; and (4) Constraints on current harvesting activities caused by development, regulatory restrictions, reduced resources, contamination and conservation concerns and impediments to the revival of traditions surrounding coastal harvesting activities.
[9] Four factors identified in IR10-15 for consideration in the assessment: (1) Sites of importance to Indigenous groups; (2) Decreased willingness, ability or avoidance by Indigenous peoples to access Current Use sites in or through the marine shipping lanes due to safety concerns and the perception of risk, reduced harvesting opportunities, and/or sensory disturbances; (3) Alienation from existing patterns of traditional harvesting due to the temporary or permanent displacement from areas of importance; and (4) Loss of opportunities for the cultural transmission of Indigenous Knowledge and practices due to the temporary or permanent displacement from those areas of importance.
[10] Additional baseline information requested in IR10-16: (1) The current activities taking place during the day or the night with a quantification of day and night duration; (2) The access required within, outside or through the shipping lanes; (3) The seasons that activities are practiced; (4) The frequency that each Indigenous group crosses the shipping lanes in the marine shipping area; and (5) The minimum and maximum number of vessels per hour in the shipping lanes, by Segment, encountered by Indigenous fishing vessels for Current Use activities in relation to the proposed Project-related ship movements.

Hwlitsum[1] Group-specific Baseline Information Process Summary (EIS)

Environmental Impact Statement (EIS)

On April 24, 2014, the VFPA and Cowichan Nation Alliance ("CNA"), which at that time consisted of Cowichan Tribes, Penelakut Tribes, Halalt First Nation, Stz'uminus First Nation, and Hwlitsum signed a funding agreement to support completion of a Traditional Use study.

The VFPA requested information on CNA's current use of the waters and terrestrial areas adjacent to the Project as well as any foreseeable changes or impacts to these areas that may result from the Project. Information was sought in relation to the location and timing of harvests, how these locations were accessed, specific species that were targeted, how the harvested species were utilised, and the cultural values associated with the harvest. In addition, the VFPA requested broader contextual information on traditional economy and knowledge and culturally important places. The VFPA further requested information related to past use, existing use, and changes that CNA anticipated to the landscape and their use of the area over time.

On July 14, 2014, the VFPA provided Hwlitsum with the draft "*Hwlitsum Community Profile"* for the opportunity to review and provide comments. Comments were received from Hwlitsum on July 31, 2014.

On July 29, 2014, the VFPA agreed to provide additional funding for Hwlitsum to prepare a report regarding traditional food consumption by Hwlitsum members.

On August 26, 2014, Hwlitsum provided the VFPA with the report "*The Hwlitsum First Nation's Traditional Use and Occupation in the Area Now Known as British Columbia, Volume 1"* (Wilson et al. 2009), which examined the hunting, harvesting, and fishing activities of band members.

On August 26, 2014, Hwlitsum provided the VFPA with a report titled "*The Hwlitsum First Nation's Traditional Use and Occupation in the Area Now Known as British Columbia, Volume 2"* (Wilson et al. 2013), presenting information relating to Hwlitsum's traditional uses of the marine environment.

In September 2014, CNA notified the VFPA that Hwlitsum was no longer a representative member of CNA.

In the fall of 2014, the VFPA invited Hwlitsum to a meeting to provide information regarding the preliminary assessment of human health, including potential Project effects and cumulative effects on Aboriginal and treaty rights and related interests and current use of lands and resources for traditional purposes (Current Use), and to identify any additional information to inform the assessment. While the VFPA and Hwlitsum were not able to schedule a discussion, a presentation was sent to Hwlitsum for review and comment, which included content regarding the proposed methodology for this assessment, the VFPA's understanding

[1] Indigenous group listed in Table 1-A (EIS) of Attachment 2 to IR Package 10.

of existing conditions based on the information provided by Hwlitsum, and preliminary conclusions of the assessment.

On December 9, 2014, the VFPA provided Hwlitsum with an advance draft of the existing conditions section for "*Potential or Established Aboriginal and Treaty Rights and Related Interests and including Current Use of Lands and Resources for Traditional Purposes".* The VFPA requested that Hwlitsum confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final EIS. Comments were received from Hwlitsum on January 15, 2015, and changes were made to reflect input from Hwlitsum.

On March 25, 2015, the VFPA provided Hwlitsum with a table outlining all Hwlitsum's comments on the draft sections, responses to each comment from the VFPA, and a description of subsequent changes made to the sections in the EIS.

On April 2, 2015, the VFPA provided Hwlitsum with a copy of the EIS.

Hwlitsum Group-specific Index and Assessment Tables

Table IR10-A12-1 Hwlitsum Index Table

EIS Section	Original EIS Information Presentation (Aggregated / Disaggregated)	Hwlitsum
EIS Section 32.1.1 Aboriginal Groups (Community profiles)	Disaggregated	32.1.1.14 Hwlitsum First Nation, pp. 32-16 to 32-17
EIS Section 32.2.4 Existing Conditions (Past, present, desired future use and list of rights identified by Indigenous groups as affected)	Disaggregated	32.2.4.10 Hwlitsum First Nation, pp. 32-92 to 32-97
EIS Section 32.2.6 Future Conditions With the Project – Potential Project-Related Effects (on Current Use)	Overall level of potential effect on each Indigenous group's Current Use identified in introduction to section. For each Current Use indicator, only groups for whom a potential measurable effect was predicted were disaggregated from the aggregated discussion.	32.2.6 Future Conditions With the Project – Potential Project-Related Effects, p. 32-100, para. 4 (negligible potential effect) 32.2.6.1 (Access), no differential effect (i.e., negligible)[2] 32.2.6.2 (Resource availability), no differential effect 32.2.6.3 (Resource quality), no differential effect 32.2.6.4 (Experiential quality), no differential effect
EIS Section 32.2.7 Mitigation Measures	For each Current Use indicator, only groups for whom a potential measurable effect was predicted were identified specifically in the aggregated discussion.	32.2.7.1 (Access), no differential measures 32.2.7.2 (Resource availability), no differential measures 32.2.7.3 (Resource quality), no differential measures 32.2.7.4 (Experiential quality), no differential measures
EIS Section 32.2.8 Residual Effects / Section 32.2.9 Cumulative Effects	N/A (no residual effects predicted)	N/A (no residual effects predicted)
EIS Section 32.3.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups	Disaggregated	32.3.2.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups, Hwlitsum First Nation, p. 32-143 to p. 32-146
EIS Section 32.3.3 Mitigation Measures	Disaggregated (but limited to groups with measurable potential impacts) Note: Measures identified are exactly the same as for Current Use (across all indicators, given that they were to be considered in the aggregate).	32.3.3.1 Summary of Mitigation Measures for Potential Adverse Impacts on the Exercise of Asserted or Established Aboriginal and Treaty Rights (same as Current Use measures in Section 32.2.7), no differential measures 32.3.3.2 Summary of Mitigation Measures Suggested by Aboriginal Groups, no measures suggested by Hwlitsum 32.3.3.3 Other Accommodations, p. 32-148 32.3.3.4 Outstanding Aboriginal Issues, no differential issues
IR/AIR	N/A	AIR-12.04.15-30 Rationale for (Current Use) Conclusions, Table AIR30-1 Rationale for Predicted Level of Effect, Hwlitsum First Nation, p. 8 (CEAR Document #388)
Issues Tracking Tables	EIS – Aggregated	EIS – See forthcoming response to IR10-01 for disaggregated issues tracking tables
Indigenous Traditional Knowledge (ITK)	EIS – IR-7.31.15-04 (Aggregated) (CEAR Document #314)	EIS – See response to IR10-02 for disaggregated ITK

[2] In this table, a potential effect is described as a "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be non-measurable. Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-A and Table 1-B Indigenous groups, regardless of whether the predicted level of potential effect (before Current Use-specific mitigation) was identified as measurable or non-measurable.

Table IR10-A12-2 Hwlitsum Assessment Table (Information Request Package 10)

IR10 Information Request	EIS Level of Potential Effect Prediction[3]	EIS Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR Package 10 (IR10)				
IR10-06 (EIS)				
Provide a group-specific assessment of the potential effects of the proposed Project and the characterisation and significance of any residual effect on current use in terms of changes in access, availability and quality of all preferred current use resources	*Note: A group-specific summary of the Current Use assessment for Hwlitsum was presented in Table AIR30-1 (based on the analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388)* Access – Negligible potential change in access expected for Hwlitsum (before Current Use-specific mitigation) as a result of Project-related displacement effects based on available information, which did not indicate the licence type, catch effort, timing or frequency of crab harvesting at this location by Hwlitsum members, but did indicate crab harvesting by Hwlitsum members at several other locations, including the Gulf Islands	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Hwlitsum access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	*Part 1 – Additional baseline information regarding FSC harvesting*[4] – No additional information (refer to Hwlitsum-specific information provided in EIS Section 32.2.4.10, per **Table IR10-A12-1** above, for available information) *Part 2 - Maps of marine harvest sites* – Maps contained in Hwlitsum studies already considered by the VFPA in the EIS Current Use assessment *Part 3 – Consider effects on social conditions*[5] – None anticipated given the predicted access effect on Hwlitsum is expected to be negligible (the VFPA is of the view that its predictions in the EIS already sufficiently considered Hwlitsum views regarding existing social constraints on access, as described in EIS Section 32.2.4.10 *Part 4 – Views expressed by Indigenous groups regarding existing and potential effects on access and harvesting opportunities* – The VFPA is of the view that Hwlitsum views regarding existing effects, as described in EIS Section 32.2.4.10, as well as Hwlitsum views regarding potential Project-related effects (provided in EIS Appendix 7.2-B and the Hwlitsum-specific issue tracking table (refer to forthcoming IR10-01 response), were already sufficiently considered in the VFPA's predictions in EIS Section 32.2.6 (including the analysis in Section 32.2.6.1, Section 32.2.6.2, and Section 32.2.6.3, and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388). *Part 5 – Characterisation of residual effects and evaluation of significance* – No additional information (the VFPA is of the view that Hwlitsum views on thresholds are reflected in EIS Section 32.2.4.10, and were factored into the Current Use assessment for Project-related effects; refer also to responses to IR10-11 and IR10-12)	No change in EIS predictions for Hwlitsum in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Hwlitsum with implementation of measures for linked valued components	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on availability of resources for Hwlitsum use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Hwlitsum with implementation of measures for linked valued components	Negligible – Taking mitigation, including consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on quality of resources for Hwlitsum use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)		

[3] The level of potential effect prediction identified in this column refers to the predicted level of effect *before* Current Use-specific measures are taken into account, but *after* measures related to linked valued components (if applicable) have been considered. The next column refers to the level of residual effect prediction after *both* linked valued component measures (if applicable) and Current Use-specific measures have been taken into account.
[4] Additional baseline information requested in IR10-06: (1) Preferred species and locations; (2) Timing of current use activities, such as frequency, duration, and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access, including an estimate of the number of vessels per hour per year in the local and regional assessment areas for harvesting purposes.
[5] Social effects identified in IR10-06 for consideration in the assessment: (1) Conditions of access to other family member(s) territory or other Indigenous group's territory for traditional harvesting purposes; (2) Access by non-Indigenous user(s); and (3) Alienation from current and traditional harvesting places resulting from government policies and regulations.

IR10 Information Request	EIS Level of Potential Effect Prediction3	EIS Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR10-07 (EIS)				
Provide a group-specific assessment of the economic implications of permanent or temporary displacement as a result of the Project on current use	Access – Negligible potential change in access expected for Hwlitsum (before Current Use-specific mitigation) as a result of Project-related displacement effects based on available information, which did not indicate the licence type, catch effort, timing or frequency of crab harvesting at this location by Hwlitsum members, but did indicate crab harvesting by Hwlitsum members at several other locations, including the Gulf Islands	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Hwlitsum access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that Hwlitsum views regarding existing constraints on access, as described in EIS Section 32.2.4.10, as well as Hwlitsum views regarding potential Project-related effects (provided in EIS Appendix 7.2-B and the Hwlitsum-specific issues tracking table in the forthcoming response to IR10-01), were already sufficiently considered in the VFPA's predictions in EIS Section 32.2.6 (including the analysis in Section 32.2.6.1 on access and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388).	As the predicted Current Use access effect (including the potential for increased competition) on Hwlitsum is expected to be negligible (before Current Use-specific mitigation), no residual economic effects for Hwlitsum are anticipated as a result of the Project
IR10-08 (EIS)				
Provide a group-specific assessment of the changes in quality of the current use experience resulting from the proposed Project	Quality of experience (Pathway #1) – Negligible potential change in Hwlitsum sense of place, risks to safety and security, and sensory disturbance expected with implementation of measures for linked valued components Quality of experience (Pathway #2) – Negligible potential change across all indicators (i.e., access, availability and quality of resources, quality of experience (Pathway#1)) for Hwlitsum; therefore, a negligible potential effect (before Current Use-specific mitigation) is expected on Hwlitsum's ability to reproduce and transmit cultural heritage	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Hwlitsum's quality of experience at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that the nine factors[6] identified in IR10-08 for consideration in a group-specific assessment of potential changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in EIS Section 32.2.6.4 (and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388). The VFPA notes that factors contributing to existing effects are reflected in Hwlitsum's baseline summary in EIS Section 32.2.4.10, and that these views and Hwlitsum views about potential Project-related effects (as provided in EIS Appendix 7.2-B and the Hwlitsum-specific issues tracking table in the forthcoming response to IR10-01) were taken into consideration in the assessment of potential effects on their quality of experience.	No change in EIS predictions for Hwlitsum in terms of quality of Current Use experience

[6] Nine factors identified in IR10-08 for consideration in the assessment: (1) Loss of preferred harvesting sites; (2) How the quality of the Current Use experience could change due to the real and perceived contamination of traditional food sources; (3) Sensory disturbances from light, noise and vibration affecting oral traditions and sacred practices; (4) Safety risks and concerns due to increased vessel traffic; (5) Industrialization of the Project area, with subsequent loss and disruption of social and cultural values associated with the proposed Project area and the Fraser River estuary; (6) Increased alienation from traditional harvesting caused by industrial development on Roberts Bank, including the proposed expansion of navigational close areas; (7) Decreased willingness and ability by Indigenous peoples to access the Project area due to the perception of risk, reduced harvesting opportunities and aesthetic impacts; (8) Level of importance placed upon patters of use (past, present and future); and (9) Lost opportunities for the transmission of Indigenous Knowledge and practices due to avoidance of an expanded industrialized area.

Stó:lō Tribal Council[1] Group-specific Baseline Information Process Summary (EIS)

Environmental Impact Statement (EIS)

In 2012, the People of the River Referrals Office (PRRO), an organisation that has responded to project referrals on behalf of Stó:lō Tribal Council member groups, informed the VFPA that no review of the Project would be required from their office.

On April 9, 2014, the VFPA requested Stó:lō Tribal Council's participation in the provision of information regarding their use of lands and resources for traditional purposes in the vicinity of the Project to inform the current use of lands and resources for traditional purposes (Current Use) and potential and established Aboriginal and treaty rights section of the EIS. No response to this request was received.

On July 15, 2014, the VFPA provided Stó:lō Tribal Council with a draft community profile for review and comment. The VFPA was again informed by the PRRO that no review of the Project would be required from their office, and no comments were received.

On December 12, 2014, the VFPA provided Stó:lō Tribal Council with an advance draft of the existing conditions section of the EIS *"Potential or Established Aboriginal and Treaty Rights and Related Interests, and including Current Use of Lands and Resources for Traditional Purposes"* for review and comment. As Stó:lō Tribal Council had not responded to the VFPA's April 2014 request for information to support the summary, the VFPA relied on publicly available sources (i.e., primarily Fisheries and Oceans Canada records) for the summary. The VFPA therefore requested that Stó:lō Tribal Council confirm the accuracy of the information presented and identify any sensitive information that should be removed prior to submission of the EIS. No comments from Stó:lō Tribal Council were received.

[1] Indigenous group listed in Table 1-A (EIS) of Attachment 2 to IR Package 10. Stó:lō Tribal Council consists of 8 member groups, including Seabird Island First Nation, Scowlitz First Nation, Soowahlie Band, Kwaw'Kwaw'Apilt First Nation, Kwantlen First Nation, Shxw'ow'hamel First Nation, Chawathil First Nation, and Cheam Indian Band.

Stó:lō Tribal Council Group-specific Index and Assessment Tables

Table IR10-A13-1 Stó:lō Tribal Council Index Table

EIS Section	Original EIS Information Presentation (Aggregated / Disaggregated)	Stó:lō Tribal Council
EIS Section 32.1.1 Aboriginal Groups (Community profiles)	Disaggregated	32.1.1.12 Stó:lō Tribal Council, p. 32-15
EIS Section 32.2.4 Existing Conditions (Past, present, desired future use and list of rights identified by Indigenous groups as affected)	Disaggregated (at Stó:lō level)	32.2.4.9 Stó:lō Nation and Stó:lō Tribal Council, pp. 32-91 to 32-92
EIS Section 32.2.6 Future Conditions With the Project – Potential Project-Related Effects (on Current Use)	Overall level of potential effect on each Indigenous group's Current Use identified in introduction to section. For each Current Use indicator, only groups for whom a measurable potential effect was predicted were disaggregated from the aggregated discussion.	32.2.6 Future Conditions With the Project – Potential Project-Related Effects, p. 32-100, para. 4 (no potential effect) 32.2.6.1 (Access), p. 32-104, para. 3, no potential effect 32.2.6.2 (Resource availability), no potential effect 32.2.6.3 (Resource quality), no potential effect 32.2.6.4 (Experiential quality), no potential effect
EIS Section 32.2.7 Mitigation Measures	For each Current Use indicator, only groups for whom a measurable potential effect was predicted were identified specifically in the aggregated discussion.	32.2.7.1 (Access), no differential measures 32.2.7.2 (Resource availability), no differential measures 32.2.7.3 (Resource quality), no differential measures 32.2.7.4 (Experiential quality), no differential measures
EIS Section 32.2.8 Residual Effects / Section 32.2.9 Cumulative Effects	N/A (no residual effects predicted)	N/A (no residual effects predicted)
EIS Section 32.3.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups	Disaggregated	32.3.2.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups, no differential measures
EIS Section 32.3.3 Mitigation Measures	Disaggregated (but limited to groups with measurable potential impacts) Note: Measures identified are exactly the same as for Current Use (across all indicators, given that they were to be considered in the aggregate).	32.3.3.1 Summary of Mitigation Measures for Potential Adverse Impacts on the Exercise of Asserted or Established Aboriginal and Treaty Rights (same as Current Use measures in Section 32.2.7), no differential measures 32.3.3.2 Summary of Mitigation Measures Suggested by Aboriginal Groups, no measures suggested by Stó:lō Tribal Council 32.3.3.3 Other Accommodations, no differential accommodations 32.3.3.4 Outstanding Aboriginal Issues, no differential issues

Table IR10-A13-2 Stó:lō Tribal Council Assessment Table (Information Request Package 10)

IR10 Information Request	EIS Level of Potential Effect Prediction[2]	EIS Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR Package 10 (IR10)				
IR10-06 (EIS)				
Provide a group-specific assessment of the potential effects of the proposed Project and the characterisation and significance of any residual effect on current use in terms of changes in access, availability and quality of all preferred current use resources	*Note: A group-specific summary of the Current Use assessment for Stó:lō Tribal Council was presented in Table AIR30-1 (based on the analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388)* Access – No potential change in access to preferred locations (before Current Use-specific mitigation) expected for Stó:lō Tribal Council as a result of Project-related displacement effects based on available information, which did not indicate use of locations that may be affected by the Project	N/A (no effect before Current Use-specific mitigation)	*Part 1 – Additional baseline information regarding FSC harvesting* – No additional information (refer to Stó:lō-specific information provided in EIS Section 32.2.4.9, per **Table IR10-A13-1** above, for available information)[3] *Part 2 - Maps of marine harvest sites* – No maps or studies provided by Stó:lō to the VFPA for consideration by the VFPA in the EIS Current Use assessment *Part 3 – Consider effects on social conditions*[4] – None anticipated given no potential access effect on Stó:lō is expected *Part 4 – Views expressed by Indigenous groups regarding existing and potential effects on access and harvesting opportunities* – The VFPA is not aware of any views expressed by Stó:lō regarding existing effects or potential effects on access and harvesting opportunities as a result of the Project *Part 5 – Characterisation of residual effects and evaluation of significance* – No additional information	No change in EIS predictions for Stó:lō in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – No potential change in availability of Current Use resources at preferred locations expected for Stó:lō Tribal Council with implementation of measures for linked valued components	N/A (no effect before Current Use-specific mitigation)		
	Quality of resources – No potential change in quality of Current Use resources at preferred locations expected for Stó:lō Tribal Council with implementation of measures for linked valued components	N/A (no effect before Current Use-specific mitigation)		
IR10-07 (EIS)				
Provide a group-specific assessment of the economic implications of permanent or temporary displacement as a result of the Project on current use	Access – No potential change in access to preferred locations (before Current Use-specific mitigation) expected for Stó:lō Tribal Council as a result of Project-related displacement effects based on available information, which did not indicate use of locations that may be affected by the Project	N/A (no effect before Current Use-specific mitigation)	The VFPA is not aware of any views expressed by Stó:lō regarding existing effects or potential effects on access and harvesting opportunities as a result of the Project	As no potential effect on Current Use access (including the potential for increased competition) is expected for Stó:lō (before Current Use-specific mitigation), no residual economic effects for Stó:lō are anticipated as a result of the Project
IR10-08 (EIS)				
Provide a group-specific assessment of the changes in quality of the current use	Quality of experience (Pathway #1) – No potential change in Stó:lō Tribal Council sense of place, risks to safety and security, and sensory disturbance expected with	N/A (no effect before Current Use-specific mitigation)		No change in EIS predictions for Stó:lō in terms of quality of Current Use experience

[3] Additional baseline information requested in IR10-06: (1) Preferred species and locations; (2) Timing of current use activities, such as frequency, duration, and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access, including an estimate of the number of vessels per hour per year in the local and regional assessment areas for harvesting purposes.
[4] Social effects identified in IR10-06 for consideration in the assessment: (1) Conditions of access to other family member(s) territory or other Indigenous group's territory for traditional harvesting purposes; (2) Access by non-Indigenous user(s); and (3) Alienation from current and traditional harvesting places resulting from government policies and regulations.

IR10 Information Request	EIS Level of Potential Effect Prediction[2]	EIS Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
experience resulting from the proposed Project	implementation of measures for linked valued components		The VFPA is of the view that the nine factors[5] identified in IR10-08 for consideration in a group-specific assessment of potential changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed for Stó:lō under Pathway #1 and/or Pathway #2 in EIS Section 32.2.6.4 (and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388).	
	Quality of experience (Pathway #2) – No potential change in any indicator (i.e., access, availability and quality of resources, quality of experience (Pathway#1)) expected for Stó:lō Tribal Council; therefore, no potential effect (before Current Use-specific mitigation) is expected on Stó:lō Tribal Council's ability to reproduce and transmit cultural heritage associated with preferred locations and resources			

[5] Nine factors identified in IR10-08 for consideration in the assessment: (1) Loss of preferred harvesting sites; (2) How the quality of the Current Use experience could change due to the real and perceived contamination of traditional food sources; (3) Sensory disturbances from light, noise and vibration affecting oral traditions and sacred practices; (4) Safety risks and concerns due to increased vessel traffic; (5) Industrialization of the Project area, with subsequent loss and disruption of social and cultural values associated with the proposed Project area and the Fraser River estuary; (6) Increased alienation from traditional harvesting caused by industrial development on Roberts Bank, including the proposed expansion of navigational close areas; (7) Decreased willingness and ability by Indigenous peoples to access the Project area due to the perception of risk, reduced harvesting opportunities and aesthetic impacts; (8) Level of importance placed upon patters of use (past, present and future); and (9) Lost opportunities for the transmission of Indigenous Knowledge and practices due to avoidance of an expanded industrialized area.

Stó:lō Nation[1] Group-specific Baseline Information Process Summary (EIS)

Environmental Impact Statement (EIS)

In 2012, the People of the River Referrals Office (PRRO), an organisation that has responded to project referrals on behalf of Stó:lō Nation member groups, informed the VFPA that no review of the Project would be required from their office.

On April 9, 2014, the VFPA requested Stó:lō Nation's participation in the provision of information regarding their use of lands and resources for traditional purposes in the vicinity of the Project to inform the current use of lands and resources for traditional purposes (Current Use) and potential and established Aboriginal and treaty rights section of the EIS. No response to this request was received.

On July 25, 2014, the VFPA provided Stó:lō Nation with a draft community profile for review and comment. The VFPA was again informed by the PRRO that no review of the Project would be required from their office, and no comments were received.

On December 12, 2014, the VFPA provided Stó:lō Nation with an advance draft of the existing conditions section of the EIS *"Potential or Established Aboriginal and Treaty Rights and Related Interests, and including Current Use of Lands and Resources for Traditional Purposes"* for review and comment. As Stó:lō Nation had not responded to the VFPA's April 2014 request for information to support the summary, the VFPA relied on publicly available sources (i.e., primarily Fisheries and Oceans Canada records) for the summary. The VFPA therefore requested that Stó:lō Nation confirm the accuracy of the information presented and identify any sensitive information that should be removed prior to submission of the EIS. No comments from Stó:lō Nation were received.

[1] Indigenous group listed in Table 1-A (EIS) of Attachment 2 to IR Package 10. Stó:lō Nation consists of 11 member groups including Aitchelitz First Nation, Leq'a:mel First Nation, Matsqui First Nation, Popkum First Nation, Skawahlook First Nation, Skowkale First Nation, Shxwha:y Village, Squiala First Nation, Sumas First Nation, Tzeachten First Nation, and Yakweakwioose Band.

Stó:lō Nation Group-specific Index and Assessment Tables

Table IR10-A14-1 Stó:lō Nation Index Table

EIS Section	Original EIS Information Presentation (Aggregated / Disaggregated)	Stó:lō Nation
EIS Section 32.1.1 Aboriginal Groups (Community profiles)	Disaggregated	32.1.1.13 Stó:lō Nation, p. 32-16
EIS Section 32.2.4 Existing Conditions (Past, present, desired future use and list of rights identified by Indigenous groups as affected)	Disaggregated (at Stó:lō level)	32.2.4.9 Stó:lō Nation and Stó:lō Tribal Council, pp. 32-91 to 32-92
EIS Section 32.2.6 Future Conditions With the Project – Potential Project-Related Effects (on Current Use)	Overall level of potential effect on each Indigenous group's Current Use identified in introduction to section. For each Current Use indicator, only groups for whom a measurable potential effect was predicted were disaggregated from the aggregated discussion.	32.2.6 Future Conditions With the Project – Potential Project-Related Effects, p. 32-100, para. 4 (no potential effect) 32.2.6.1 (Access), p. 32-104, para. 3, no potential effect 32.2.6.2 (Resource availability), no potential effect 32.2.6.3 (Resource quality), no potential effect 32.2.6.4 (Experiential quality), no potential effect
EIS Section 32.2.7 Mitigation Measures	For each Current Use indicator, only groups for whom a measurable potential effect was predicted were identified specifically in the aggregated discussion.	32.2.7.1 (Access), no differential measures 32.2.7.2 (Resource availability), no differential measures 32.2.7.3 (Resource quality), no differential measures 32.2.7.4 (Experiential quality), no differential measures
EIS Section 32.2.8 Residual Effects / Section 32.2.9 Cumulative Effects	N/A (no residual effects predicted)	N/A (no measurable residual effects predicted)
EIS Section 32.3.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups	Disaggregated	32.3.2.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups, no differential measures
EIS Section 32.3.3 Mitigation Measures	Disaggregated (but limited to groups with measurable potential impacts) Note: Measures identified are exactly the same as for Current Use (across all indicators, given that they were to be considered in the aggregate).	32.3.3.1 Summary of Mitigation Measures for Potential Adverse Impacts on the Exercise of Asserted or Established Aboriginal and Treaty Rights (same as Current Use measures in Section 32.2.7), no differential measures 32.3.3.2 Summary of Mitigation Measures Suggested by Aboriginal Groups, no measures suggested by Stó:lō Nation 32.3.3.3 Other Accommodations, no differential accommodations 32.3.3.4 Outstanding Aboriginal Issues, no differential issues
IR/AIR	N/A	AIR-12.04.15-30 Rationale for (Current Use) Conclusions, Table AIR30-1 Rationale for Predicted Level of Effect, Stó:lō Nation member bands, p. 8 (CEAR Document #388)

IR10 Information Request	EIS Level of Potential Effect Prediction[2]	EIS Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR Package 10 (IR10)				
IR10-06 (EIS)				
Provide a group-specific assessment of the potential effects of the proposed Project and the characterisation and significance of any residual effect on current use in terms of changes in access, availability and quality of all preferred current use resources	*Note: A group-specific summary of the Current Use assessment for Stó:lō Nation was presented in Table AIR30-1 (based on the analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388)* Access – No potential change in access to preferred locations (before Current Use-specific mitigation) expected for Stó:lō Nation as a result of Project-related displacement effects based on available information, which did not indicate use of locations that may be affected by the Project	N/A (no effect before Current Use-specific mitigation)	*Part 1 – Additional baseline information regarding FSC harvesting*[3] – No additional information (refer to Stó:lō-specific information provided in EIS Section 32.2.4.9, per **Table IR10-A14-1** above, for available information) *Part 2 - Maps of marine harvest sites* – No maps or studies provided by Stó:lō to the VFPA for consideration by the VFPA in the EIS Current Use assessment *Part 3 – Consider effects on social conditions*[4] – None anticipated given no potential access effect on Stó:lō is expected *Part 4 – Views expressed by Indigenous groups regarding existing and potential effects on access and harvesting opportunities* – The VFPA is not aware of any views expressed by Stó:lō regarding existing effects or potential effects on access and harvesting opportunities as a result of the Project *Part 5 – Characterisation of residual effects and evaluation of significance* – No additional information	No change in EIS predictions for Stó:lō in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – No potential change in availability of Current Use resources at preferred locations expected for Stó:lō Nation with implementation of measures for linked valued components	N/A (no effect before Current Use-specific mitigation)		
	Quality of resources – No potential change in quality of Current Use resources at preferred locations expected for Stó:lō Nation with implementation of measures for linked valued components	N/A (no effect before Current Use-specific mitigation)		
IR10-07 (EIS)				
Provide a group-specific assessment of the economic implications of permanent or temporary displacement as a result of the Project on current use	Access – No potential change in access to preferred locations (before Current Use-specific mitigation) expected for Stó:lō Nation as a result of Project-related displacement effects based on available information, which did not indicate use of locations that may be affected by the Project	N/A (no effect before Current Use-specific mitigation)	The VFPA is not aware of any views expressed by Stó:lō regarding existing effects or potential effects on access and harvesting opportunities as a result of the Project	As no potential effect on Current Use access (including the potential for increased competition) is expected for Stó:lō (before Current Use-specific mitigation), no residual economic effects for Stó:lō are anticipated as a result of the Project
IR10-08 (EIS)				
Provide a group-specific assessment of the changes in quality of the current use experience resulting from the proposed Project	Quality of experience (Pathway #1) – No potential change in Stó:lō Nation sense of place, risks to safety and security, and sensory disturbance expected with implementation of measures for linked valued components	N/A (no effect before Current Use-specific mitigation)		No change in EIS predictions for Stó:lō in terms of quality of Current Use experience

[2] The level of potential effect prediction identified in this column refers to the predicted level of effect *before* Current Use-specific measures are taken into account, but *after* measures related to linked valued components (if applicable) have been considered. The next column refers to the level of residual effect prediction after *both* linked valued component measures (if applicable) and Current Use-specific measures have been taken into account.
[3] Additional baseline information requested in IR10-06: (1) Preferred species and locations; (2) Timing of current use activities, such as frequency, duration, and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access, including an estimate of the number of vessels per hour per year in the local and regional assessment areas for harvesting purposes.
[4] Social effects identified in IR10-06 for consideration in the assessment: (1) Conditions of access to other family member(s) territory or other Indigenous group's territory for traditional harvesting purposes; (2) Access by non-Indigenous user(s); and (3) Alienation from current and traditional harvesting places resulting from government policies and regulations.

IR10 Information Request	EIS Level of Potential Effect Prediction[2]	EIS Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
	Quality of experience (Pathway #2) – No potential change in any indicator (i.e., access, availability and quality of resources, quality of experience (Pathway#1)) expected for Stó:lō Nation; therefore, no potential effect (before Current Use-specific mitigation) is expected on Stó:lō Nation's ability to reproduce and transmit cultural heritage associated with preferred locations and resources		The VFPA is of the view that the nine factors[5] identified in IR10-08 for consideration in a group-specific assessment of potential changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in EIS Section 32.2.6.4 (and subsequent analysis in AIR-12.04.15-29 and AIR-12.04.15-30 of CEAR Document #388).	

[5] Nine factors identified in IR10-08 for consideration in the assessment: (1) Loss of preferred harvesting sites; (2) How the quality of the Current Use experience could change due to the real and perceived contamination of traditional food sources; (3) Sensory disturbances from light, noise and vibration affecting oral traditions and sacred practices; (4) Safety risks and concerns due to increased vessel traffic; (5) Industrialization of the Project area, with subsequent loss and disruption of social and cultural values associated with the proposed Project area and the Fraser River estuary; (6) Increased alienation from traditional harvesting caused by industrial development on Roberts Bank, including the proposed expansion of navigational close areas; (7) Decreased willingness and ability by Indigenous peoples to access the Project area due to the perception of risk, reduced harvesting opportunities and aesthetic impacts; (8) Level of importance placed upon patters of use (past, present and future); and (9) Lost opportunities for the transmission of Indigenous Knowledge and practices due to avoidance of an expanded industrialized area.

Tsawout First Nation[1] Group-specific Baseline Information Process Summary (MSA and AIEIS)

Marine Shipping Addendum (MSA)

On May 26, 2015, the VFPA wrote a letter to Tsawout First Nation explaining that the VFPA is considering effects from marine shipping associated with the Project on the current use of lands and resources by Tsawout First Nation. The VFPA requested information from Tsawout First Nation regarding current use of lands and resources for traditional purposes (Current Use), fisheries, or potential effects associated with marine shipping. In the letter, the VFPA explained the intent to rely on existing information to inform the assessment of potential effects associated marine shipping associated with the Project, including information from the Trans Mountain Expansion Project Application to the National Energy Board specific to Tsawout First Nation. The VFPA requested any additional information from Tsawout First Nation that may help to inform the assessment.

On July 20, 2015, the VFPA provided Tsawout First Nation with a draft of the existing conditions section for *"Tsawout First Nation Current Use of Lands and Resources for Traditional Purposes"* for the MSA and requested that Tsawout First Nation confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final MSA.

In subsequent letters and meetings, Tsawout First Nation requested additional funding to complete a traditional use study specific to marine shipping associated with the Project, and the VFPA and Tsawout First Nation agreed to a study scope and funding on September 16, 2015.

The VFPA requested information on the Tsawout First Nation's current use of the marine shipping area, including a description of potential interactions between marine shipping associated with the Project and current traditional uses of resources within the Project study area, from Tsawout First Nation's perspective. Information was sought in relation to the location and timing of harvests, how these locations were accessed, specific species that were targeted, how the harvested species were utilised, and the cultural values associated with the harvest. In addition, the VFPA requested broader contextual information on traditional economy and knowledge and culturally important places. The VFPA further requested information related to changes that Tsawout First Nation foresees to Current Use opportunities and practices in the area as a result of the marine shipping associated with the Project.

On September 24, 2015, Tsawout First Nation provided the VFPA with the report "*Preliminary Traditional Marine and Land Use Baseline."* The VFPA made revisions to the draft existing conditions sections of *"Tsawout First Nation Current Use of Lands and Resources for Traditional Purposes"* for the MSA accordingly.

On November 9, 2015, the VFPA provided Tsawout First Nation with a copy of the final MSA.

[1] Indigenous group listed in Table 1-B (AIEIS) and Table 1-C (MSA) of Attachment 2 to IR Package 10.

Additional Information to the Environmental Impact Statement – *WSÁNEĆ* Nation (AIEIS)

On August 22, 2016, the VFPA and Tsawout First Nation signed a funding agreement to support Tsawout First Nation's completion of a Traditional Use Study.

The VFPA requested information on Tsawout First Nation's use and reliance of the waters within the territory in relation to marine resources. Information was sought in relation to the location and timing of harvests, how these locations were accessed, specific species that were targeted, how the harvested species were utilised, and the cultural values associated with the harvest. The VFPA further requested information related to past use, existing use, and changes that Tsawout First Nation anticipated to the landscape and their use of the area over time.

On October 3, 2016, the VFPA was provided with the report "WSÁNEĆ *Traditional Use Study of the Roberts Bank Terminal 2 Project: DRAFT Preliminary Data Summary."* Information from the Report was integrated into the draft AIEIS as appropriate.

On November 23, 2016, the VFPA provided Tsawout First Nation with an advance draft of the *"Additional Information to the Environmental Impact Statement* – WSÁNEĆ *Nation."* The VFPA requested that Tsawout First Nation confirm the accuracy of the information presented, identify any sensitive information that should be removed, and also provide comments on the completeness, sufficiency, and technical merit of the draft AIEIS. Comments on the draft AIEIS were received from Tsawout First Nation on January 20, 2017, and changes were made to reflect input from Tsawout First Nation.

On February 10, 2017, the VFPA notified Tsawout First Nation that the AIEIS had been submitted to the Canadian Environmental Assessment Agency and enclosed an excerpt from AIEIS Appendix 2-B (Aboriginal Issues and Interests) showing Tsawout First Nation's comments on the AIEIS and the VFPA's response to those comments.

Tsawout First Nation Group-specific Index and Assessment Tables

Table IR10-A15-1 Tsawout First Nation Index Table

MSA / AIEIS Section	Original MSA / AIEIS Information Presentation (Aggregated / Disaggregated)	Tsawout First Nation
MSA Section 9.5.4 Existing Conditions	Disaggregated	9.5.4.1 Tsawout First Nation, pp. 9.5-6 to 9.5-19
MSA Section 9.5.5 Potential Interactions and Effects on Current Use	Aggregated (all Indigenous groups identified as experiencing a similar level of potential effect due to the linear activity of routine vessel transit)	9.5.5 Potential Interactions and Effects on Current Use, Table 9.5-35 (potential negligible-to-minor effect, all Indigenous groups) 9.5.5.1 Negligible Effects of Vessel Transit on Current Use, no differential effects[1] 9.5.5.2 Potential Effects of Vessel Transit on Current Use, no differential effects 9.5.5.3 Summary of Potential Transboundary Effects, not assessed
MSA Section 9.5.6 Suggested Mitigation Measures	Aggregated (to address the potentially minor linear effect on all Indigenous groups)	9.5.6 Suggested Mitigation Measures, no differential measures
MSA Section 9.5.7 Residual Effects Assessment and Significance Determination / Section 9.5.8 Cumulative Effects Assessment / Section 9.5.9 Summary of Assessment / Section 9.5.10 Follow-Up Program	N/A (no residual effects predicted)	N/A (no residual effects predicted)
MSA Section 9.5.11 Potential Impacts on Asserted or Established Aboriginal and Treaty Rights	Aggregated (all Indigenous groups identified as experiencing a similar level of potential impact due to the linear activity of routine vessel transit) Note: Measures identified are exactly the same as for Current Use	9.5.11.1 Approach to the Rights Assessment, Tsawout First Nation, p. 9.5-148 9.5.11.2 Results of the Rights Assessment, potential negligible-to-minor impact (all Indigenous groups, no differential impacts) 9.5.11.3 Suggested Mitigation Measures, no differential measures 9.5.11.4 Residual Effects, N/A (no measurable residuals)
MSA IR/AIR	N/A	MSA IR-02.24.16-13 Aboriginal and Treaty Rights and Related Interests, Table MSA IR13-1 Mitigation Measures Proposed by Aboriginal Groups for Potential Adverse Impacts to Potential or Established Aboriginal and Treaty Rights and Related Interests, Tsawout First Nation, p. 2 (CEAR Document #391)
AIEIS Section 7.2.4 Existing Conditions	Disaggregated	7.2.4.1 Tsawout First Nation, pp. 57 to 62
AIEIS Section 7.2.6 Future Conditions with the Project - Potential Project-related Effects	Effectively disaggregated given that each of the five *W̲SÁNEĆ* member groups was identified in the effects analysis	7.2.6 Future Conditions with the Project – Potential Project-related Effects, pp. 82-88 (Tsawout identified within each subsection, with potential group-specific effects identified as negligible)
AIEIS Section 7.2.7 Mitigation Measures	Effectively disaggregated given that each of the five *W̲SÁNEĆ* member groups was identified in relation to mitigation measures	7.2.7 Mitigation Measures, p. 89, no differential measures
AIEIS Section 7.2.8 Characterisation of Residual Effects and Context / Section 7.2.9 Cumulative Effects Assessment	N/A (no residual effects predicted)	N/A (no residual effects predicted)
AIEIS Section 7.3 Potential Adverse Impacts on Aboriginal and Treaty Rights and Related Interests	Effectively disaggregated given that each of the five *W̲SÁNEĆ* member groups was identified in the effects analysis and in relation to proposed mitigation measures Note: Proposed measures identified are exactly the same as for Current Use	7.3 Potential Adverse Impacts on Aboriginal and Treaty Rights and Related Interests, pp. 90 to 97 (Tsawout identified within each subsection, with potential group-specific impacts identified as negligible-to-minor) 7.3.3.2 Summary of Mitigation Measures Suggested by Aboriginal Groups, p. 96 (Table 7-2 Mitigation Measures Proposed by Aboriginal Groups for Potential Adverse Impacts to Potential or Established Aboriginal and Treaty Rights and Related Interests, Tsawout First Nation)
Issues Tracking Table	MSA – Aggregated AIEIS – Aggregated (all *W̲SÁNEĆ*)	MSA / AIEIS – See forthcoming response to IR10-01 for disaggregated issues tracking table

[1] In this table, a potential effect is described as a "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be non-measurable. Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-B Indigenous groups (for EIS measures) and Table 1-C Indigenous groups (for MSA measures), regardless of whether the predicted level of potential effect (before Current Use-specific mitigation) was identified as measurable or non-measurable.

IR Package 10 (IR10)				
IR10-06 (AIEIS)				
Provide a group-specific assessment of the potential effects of the proposed Project and the characterisation and significance of any residual effect on current use in terms of changes in access, availability and quality of all preferred current use resources	*Note: A group-specific assessment for Tsawout was effectively presented in the AIEIS for all indicators (AIEIS was specific to W̲SÁNEĆ)* Access – Negligible potential change in access expected for Tsawout (before Current Use-specific mitigation) as a result of Project-related displacement effects based on available information, which indicated relatively low and infrequent use at this location by Tsawout members	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Tsawout access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	*Part 1 – Additional baseline information regarding FSC harvesting* – No additional information (refer to Tsawout-specific information provided in AIEIS Section 7.2.4.1 and MSA Section 9.5.4.1, per **Table IR10-A15-1** above, for available information)[3] *Part 2 - Maps of marine harvest sites* – Spatial information (including mapping) for Tsawout already considered by the VFPA in the AIEIS / MSA Current Use assessment *Part 3 – Consider effects on social conditions* – None anticipated given the predicted access effect on Tsawout is expected to be negligible (the VFPA is of the view that its predictions in the AIEIS already sufficiently considered Tsawout views regarding existing social constraints on access, as described in AIEIS Section 7.2.4.1 and MSA Section 9.5.4.1[4] *Part 4 – Views expressed by Indigenous groups regarding existing and potential effects on access and harvesting opportunities* – The VFPA is of the view that Tsawout views regarding existing effects, as described in AIEIS Section 7.2.4.1 and MSA Section 9.5.4.1, as well as Tsawout views regarding potential Project-related effects (provided in AIEIS Appendix 2-B and the Tsawout-specific issue tracking table (refer to forthcoming IR10-01 response), were already sufficiently considered in the VFPA's predictions in AIEIS Section 7.2.6 (including	No change in AIEIS predictions for Tsawout in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Tsawout with implementation of measures for linked valued components	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on availability of resources for Tsawout use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Tsawout with implementation of measures for linked valued components	Negligible – Taking mitigation, including consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on quality of resources for Tsawout use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)		

[2] The level of potential effect prediction identified in this column refers to the predicted level of effect *before* Current Use-specific measures are taken into account, but *after* measures related to linked valued components (if applicable) have been considered. The next column refers to the level of residual effect prediction after *both* linked valued component measures (if applicable) and Current Use-specific measures have been taken into account.
[3] Additional baseline information requested in IR10-06: (1) Preferred species and locations; (2) Timing of current use activities, such as frequency, duration, and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access, including an estimate of the number of vessels per hour per year in the local and regional assessment areas for harvesting purposes.
[4] Social effects identified in IR10-06 for consideration in the assessment: (1) Conditions of access to other family member(s) territory or other Indigenous group's territory for traditional harvesting purposes; (2) Access by non-Indigenous user(s); and (3) Alienation from current and traditional harvesting places resulting from government policies and regulations.

IR10 Information Request	MSA / AIEIS Level of Potential Effect Prediction[2]	MSA / AIEIS Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
			the analysis in Section 7.2.6.1, Section 7.2.6.2, and Section 7.2.6.3). *Part 5 – Characterisation of residual effects and evaluation of significance* – No additional information (the VFPA is of the view that Tsawout views on thresholds are reflected in AIEIS Section 7.2.4.1 and MSA Section 9.5.4.1, and were factored into the Current Use assessment for Project-related effects; refer also to responses to IR10-11 and IR10-12)	
IR10-07 (AIEIS)				
Provide a group-specific assessment of the economic implications of permanent or temporary displacement as a result of the Project on current use	Access – Negligible potential change in access expected for Tsawout (before Current Use-specific mitigation) as a result of Project-related displacement effects based on available information, which indicated relatively low and infrequent use at this location by Tsawout members	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Tsawout access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that Tsawout views regarding existing constraints on access, as described in AIEIS Section 7.2.4.1 and MSA Section 9.5.4.1, as well as Tsawout views regarding potential Project-related effects (provided in AIEIS Appendix 2-B and the Tsawout-specific issues tracking table in the forthcoming response to IR10-01), were already sufficiently considered in the VFPA's predictions in AIEIS Section 7.2.6 (including the analysis in Section 7.2.6.1 on access),	As the predicted Current Use access effect (including the potential for increased competition) on Tsawout is expected to be negligible (before Current Use-specific mitigation), no residual economic effects for Tsawout are anticipated as a result of the Project
IR10-08 (AIEIS)				
Provide a group-specific assessment of the changes in quality of the current use experience resulting from the proposed Project	Quality of experience (Pathway #2) – Negligible potential change across all indicators (i.e., access, availability and quality of resources, quality of experience (Pathway#1)) for Tsawout; therefore, a negligible potential effect (before Current Use-specific mitigation) is expected on Tsawout's ability to reproduce and transmit cultural heritage Quality of experience (Pathway #2) – Negligible potential change across all indicators (i.e., access, availability and quality of resources, quality of experience (Pathway#1)) for Tsawout; therefore, a negligible potential effect (before Current Use-specific mitigation) is expected on Tsawout's ability to reproduce and transmit cultural heritage	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Tsawout's quality of experience at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that the nine factors[5] identified in IR10-08 for consideration in a group-specific assessment of potential changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in AIEIS Section 7.2.6.4. The VFPA notes that factors contributing to existing effects are reflected in Tsawout's baseline summaries in AIEIS Section 7.2.4.1 and MSA Section 9.5.4.1, and that these views and Tsawout views about potential Project-related effects (as provided in AIEIS Appendix 2-B and the Tsawout-specific issues tracking table in the forthcoming response to IR10-01) were taken into consideration in the assessment of potential effects on their quality of experience.	No change in AIEIS predictions for Tsawout in terms of quality of Current Use experience

[5] Nine factors identified in IR10-08 for consideration in the assessment: (1) Loss of preferred harvesting sites; (2) How the quality of the Current Use experience could change due to the real and perceived contamination of traditional food sources; (3) Sensory disturbances from light, noise and vibration affecting oral traditions and sacred practices; (4) Safety risks and concerns due to increased vessel traffic; (5) Industrialization of the Project area, with subsequent loss and disruption of social and cultural values associated with the proposed Project area and the Fraser River estuary; (6) Increased alienation from traditional harvesting caused by industrial development on Roberts Bank, including the proposed expansion of navigational close areas; (7) Decreased willingness and ability by Indigenous peoples to access the Project area due to the perception of risk, reduced harvesting opportunities and aesthetic impacts; (8) Level of importance placed upon patters of use (past, present and future); and (9) Lost opportunities for the transmission of Indigenous Knowledge and practices due to avoidance of an expanded industrialized area.

IR10 Information Request	MSA / AIEIS Level of Potential Effect Prediction[2]	MSA / AIEIS Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR10-13 (MSA)				
Provide a group-specific assessment of potential effects and the characterisation of residual effects of the marine shipping associated with the proposed Project on current use in terms of changes to access and availability and quality of preferred marine resources	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Tsawout as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Tsawout access to preferred locations as a result of Project-associated ship pass-bys is expected	*Part 1 – Additional baseline information regarding harvesting and other Current Use activities* – No additional information (refer to Tsawout information in AIEIS Section 7.2.4.1 and MSA Section 9.5.4.1, per **Table IR10-A15-1** above, for available information)[6] *Part 2 - Maps of marine harvest sites* – Spatial information (including mapping) for Tsawout already considered by the VFPA in the AIEIS / MSA Current Use assessment *Part 3(1) – List of issues / concerns regarding Project-associated vessel transit* – Identified for Tsawout in MSA Appendix 5-B (also refer to the Tsawout-specific issues tracking table in the forthcoming IR10-01 response) *Part 3(2) – Adequacy of Proponent's response* – Refer to IR10-13 response *Part 3(3) – Proponent's views on thresholds of acceptability and risk* - Refer to IR10-13 response	No change in MSA predictions for Tsawout in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Tsawout as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Tsawout as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
IR10-14 (MSA)				
Consider (on a group-specific basis) the socio-economic implications of potential or necessary displacement (permanent or temporary)[7]	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Tsawout as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Tsawout access to preferred locations as a result of Project-associated ship pass-bys is expected	The VFPA is of the view that Tsawout views regarding existing constraints on access, as described in AIEIS Section 7.2.4.1 and MSA Section 9.5.4.1, as well as Tsawout views regarding potential effects of Project-associated vessel transit, described in MSA Appendix 5-B (also refer to the Tsawout-specific issues tracking table in the forthcoming IR10-01 response), were already sufficiently considered in the VFPA's predictions in MSA Section 9.5.5 regarding a potential access effect on Tsawout as a result of Project-associated vessel transit.	As the predicted Current Use access effect on Tsawout is expected to be addressed through the suggested mitigation identified in MSA Section 9.5.6, no residual economic effects for Tsawout are anticipated.
IR10-15 (MSA)				
Provide a group-specific assessment of potential effect of the changes in quality of the current use experience resulting from marine shipping associated with the	Quality of experience (Pathway #1) – Negligible potential change in Tsawout sense of place, risks to safety and security, and sensory disturbance expected	Pathway #1 – N/A (negligible before Current Use-specific mitigation) Pathway #2 - Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual		No change in MSA predictions for Tsawout in terms of quality of Current Use experience

[6] Additional baseline information requested in IR10-13 for consideration in the assessment: (1) Preferred species and locations; (2) Timing of the current use activities, such as frequency, duration and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access for groups using the shipping lanes for fishing, groups traveling through the shipping lanes to access fishing, harvesting and cultural sites and, groups using the marine shipping area adjacent to the marine shipping lanes.

[7] Implications identified in IR10-14 for consideration in the assessment: (1) Sufficiency of resources at alternate locations to meet the requirements of the community; (2) Constraints of displacement (areas further from their community or already alienated to other interests); (3) Extra expenses required in monetary terms or additional travel time or necessary changes in technology for the practice or access to resources; and (4) Constraints on current harvesting activities caused by development, regulatory restrictions, reduced resources, contamination and conservation concerns and impediments to the revival of traditions surrounding coastal harvesting activities.

IR10 Information Request	MSA / AIEIS Level of Potential Effect Prediction[2]	MSA / AIEIS Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
proposed Project and the characterisation and significance of residual effects	Quality of experience (Pathway #2) – Negligible potential change for all indicators except access. Potentially measurable (up to minor) effect (before Current Use-specific mitigation) is expected on Tsawout's ability to reproduce and transmit cultural heritage associated with potentially measurable access / displacement effect (refer to response to IR10-13)	effect on Tsawout's quality of experience tied to access is expected	The VFPA is of the view that the 4 factors[8] identified in IR10-15 for consideration in the group-specific assessment of changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in MSA Section 9.5.5. The VFPA notes that factors contributing to existing effects are reflected in Tsawout baseline summaries in AIEIS Section 7.2.4.1 and MSA Section 9.5.4.1, and that these views and Tsawout views about potential effects of Project-associated vessel transit on Tsawout, as referenced in MSA Appendix 5-B (refer also to the Tsawout-specific issue-tracking table in the forthcoming IR10-01 response), were taken into consideration in the assessment of potential effects on their quality of experience.	
IR10-16 (MSA)				
Present (the requested group-specific baseline information)[9]	N/A	N/A	No additional information available (refer to Tsawout-specific information provided in AIEIS Section 7.2.4.1 and MSA Section 9.5.4.1, per **Table IR10-A15-1** above, for available information)	No additional information available

[8] Four factors identified in IR10-15 for consideration in the assessment: (1) Sites of importance to Indigenous groups; (2) Decreased willingness, ability or avoidance by Indigenous peoples to access Current Use sites in or through the marine shipping lanes due to safety concerns and the perception of risk, reduced harvesting opportunities, and/or sensory disturbances; (3) Alienation from existing patterns of traditional harvesting due to the temporary or permanent displacement from areas of importance; and (4) Loss of opportunities for the cultural transmission of Indigenous Knowledge and practices due to the temporary or permanent displacement from those areas of importance.

[9] Additional baseline information requested in IR10-16: (1) The current activities taking place during the day or the night with a quantification of day and night duration; (2) The access required within, outside or through the shipping lanes; (3) The seasons that activities are practiced; (4) The frequency that each Indigenous group crosses the shipping lanes in the marine shipping area; and (5) The minimum and maximum number of vessels per hour in the shipping lanes, by Segment, encountered by Indigenous fishing vessels for Current Use activities in relation to the proposed Project-related ship movements.

Pauquachin First Nation[1] Group-specific Baseline Information Process Summary (MSA and AIEIS)

Marine Shipping Addendum (MSA)

On May 25, 2015, the VFPA wrote a letter to Pauquachin First Nation explaining that the VFPA is considering effects from marine shipping associated with the Project on the current use of lands and resources by Pauquachin First Nation. The VFPA requested information from Pauquachin First Nation regarding current use of lands and resources for traditional purposes (Current Use), fisheries, or potential effects associated with marine shipping. In the letter, the VFPA explained its intent to rely on existing information to inform the assessment of potential effects associated marine shipping associated with the Project, including information from the Trans Mountain Expansion Project Application to the National Energy Board specific to Pauquachin First Nation. The VFPA requested any additional information from Pauquachin First Nation that may help to inform the assessment. The VFPA also offered funding to facilitate Pauquachin First Nation's participation in consultation. Pauquachin First Nation accepted the funding on June 19, 2015.

On July 14, 2015, the VFPA provided Pauquachin First Nation with a draft of the existing conditions section for *"Pauquachin First Nation Current Use of Lands and Resources for Traditional Purposes"* for the MSA and requested that Pauquachin First Nation confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final MSA. Comments on the Draft Current Use Summary were provided by Pauquachin First Nation on September 18, 2015 and changes were made to reflect input from Pauquachin First Nation.

On November 9, 2015, the VFPA provided Pauquachin First Nation with a copy of the final MSA.

On April 25, 2016, the VFPA provided Pauquachin First Nation with a table including all Pauquachin First Nation's comments on the draft sections, responses to each comment from the VFPA, and a description of subsequent changes made to the sections.

Additional Information to the Environmental Impact Statement – <u>W</u>SÁNEĆ Nation (AIEIS)

On March 17, 2016, the VFPA and Pauquachin First Nation signed a funding agreement to support Pauquachin First Nation's completion of a Traditional Use Study.

The VFPA requested that Pauquachin First Nation work collaboratively with the VFPA to address any potential gaps in VFPA's proposed Traditional Use program for the Project. Information was sought on Pauquachin First Nation's current use of the waters and terrestrial areas adjacent to the Project as well as the potential for interactions between the Project and current use of lands and resources within the Project area. Information was sought in relation to the location and timing of harvests, how these locations were accessed, specific species that were targeted, how the harvested species were utilised, and the cultural values

[1] Indigenous group listed in Table 1-B (AIEIS) and Table 1-C (MSA) of Attachment 2 to IR Package 10.

associated with the harvest. The VFPA further requested information related to past use, existing use, and changes that Pauquachin First Nation anticipated to the landscape and their use of the area over time.

On October 3, 2016, the VFPA was provided with the report "W̲SÁNEĆ *Traditional Use Study of the Roberts Bank Terminal 2 Project: DRAFT Preliminary Data Summary."* Information from the report was integrated into the draft AIEIS as appropriate.

On November 23, 2016, the VFPA provided Pauquachin First Nation with an advance draft of the *"Additional Information to the Environmental Impact Statement* – W̲SÁNEĆ *Nation."* The VFPA requested that Pauquachin First Nation confirm the accuracy of the information presented, identify any sensitive information that should be removed, and also provide comments on the completeness, sufficiency, and technical merit of the draft AIEIS. While comments were not provided by Pauquachin First Nation on the draft summary, they later confirmed the accuracy of the information presented in the AIEIS related to Pauquachin First Nation by email on May 2, 2018.

On February 10, 2017, the VFPA notified Pauquachin First Nation that the AIEIS had been submitted to the Canadian Environmental Assessment Agency.

Pauquachin First Nation Group-specific Index and Assessment Tables

Table IR10-A16-1 Pauquachin First Nation Index Table

MSA / AIEIS Section	Aggregate / Disaggregate	Pauquachin First Nation
MSA Section 9.5.4 Existing Conditions	Disaggregated	9.5.4.2 Pauquachin First Nation, pp. 9.5-19 to 9.5-27
MSA Section 9.5.5 Potential Interactions and Effects on Current Use	Aggregated (all Indigenous groups identified as experiencing a similar level of potential effect due to the linear activity of routine vessel transit)	9.5.5 Potential Interactions and Effects on Current Use, Table 9.5-35 (potential negligible-to-minor effect, all Indigenous groups) 9.5.5.1 Negligible Effects of Vessel Transit on Current Use, no differential effects[1] 9.5.5.2 Potential Effects of Vessel Transit on Current Use, no differential effects 9.5.5.3 Summary of Potential Transboundary Effects, not assessed
MSA Section 9.5.6 Suggested Mitigation Measures	Aggregated (to address the potentially minor linear effect on all Indigenous groups)	9.5.6 Suggested Mitigation Measures, no differential measures
MSA Section 9.5.7 Residual Effects Assessment and Significance Determination / Section 9.5.8 Cumulative Effects Assessment / Section 9.5.9 Summary of Assessment / Section 9.5.10 Follow-Up Program	N/A (no residual effects predicted)	N/A (no residual effects predicted)
MSA Section 9.5.11 Potential Impacts on Asserted or Established Aboriginal and Treaty Rights	Aggregated (all Indigenous groups identified as experiencing a similar level of potential impact due to the linear activity of routine vessel transit) Note: Measures identified are exactly the same as for Current Use	9.5.11.1 Approach to the Rights Assessment, Pauquachin First Nation, p. 9.5-148 9.5.11.2 Results of the Rights Assessment, potential negligible-to-minor impact (all Indigenous groups, no differential impacts) 9.5.11.3 Suggested Mitigation Measures, no differential measures 9.5.11.4 Residual Effects, N/A (no measurable residuals)
MSA IR/AIR	N/A	MSA IR-02.24.16-13 Aboriginal and Treaty Rights and Related Interests, Table MSA IR13-1 Mitigation Measures Proposed by Aboriginal Groups for Potential Adverse Impacts to Potential or Established Aboriginal and Treaty Rights and Related Interests, Pauquachin First Nation, p. 2 (CEAR Document #391)
AIEIS Section 7.2.4 Existing Conditions	Disaggregated	7.2.4.2 Pauquachin First Nation, pp. 62 to 68
AIEIS Section 7.2.6 Future Conditions with the Project - Potential Project-related Effects	Effectively disaggregated given that each of the five *W̲SÁNEĆ* member groups was identified in the effects analysis	7.2.6 Future Conditions with the Project – Potential Project-related Effects, pp. 82-88 (Pauquachin identified within each subsection, with potential group-specific effects identified as negligible)
AIEIS Section 7.2.7 Mitigation Measures	Effectively disaggregated given that each of the five *W̲SÁNEĆ* member groups was identified in relation to mitigation measures	7.2.7 Mitigation Measures, p. 89, no differential measures
AIEIS Section 7.2.8 Characterisation of Residual Effects and Context / Section 7.2.9 Cumulative Effects Assessment	N/A (no residual effects predicted)	N/A (no residual effects predicted)
AIEIS/AIMSA Section 7.3 Potential Adverse Impacts on Aboriginal and Treaty Rights and Related Interests	Effectively disaggregated given that each of the five *W̲SÁNEĆ* member groups was identified in the effects analysis and in relation to proposed mitigation measures Note: Proposed measures identified are exactly the same as for Current Use	7.3 Potential Adverse Impacts on Aboriginal and Treaty Rights and Related Interests, pp. 90 to 97 (Pauquachin identified within each subsection, with potential group-specific impacts identified as negligible-to-minor) 7.3.3.2 Summary of Mitigation Measures Suggested by Aboriginal Groups, p. 96 (Table 7-2 Mitigation Measures Proposed by Aboriginal Groups for Potential Adverse Impacts to Potential or Established Aboriginal and Treaty Rights and Related Interests, Pauquachin First Nation)

[1] In this table, a potential effect is described as a "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be non-measurable. Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-B Indigenous groups (for EIS measures) and Table 1-C Indigenous groups (for MSA measures), regardless of whether the predicted level of potential effect (before Current Use-specific mitigation) was identified as measurable or non-measurable.

IR10 Information Request	MSA /AIEIS Level of Potential Effect Prediction[2]	MSA /AIEIS Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR Package 10 (IR10)				
IR10-06 (AIEIS)				
Provide a group-specific assessment of the potential effects of the proposed Project and the characterisation and significance of any residual effect on current use in terms of changes in access, availability and quality of all preferred current use resources	Note: A group-specific assessment for Pauquachin was effectively presented in the AIEIS for all indicators (AIEIS was specific to W̲SÁNEĆ) Access – Negligible potential change in access expected for Pauquachin (before Current Use-specific mitigation) as a result of Project-related displacement effects based on available information, which indicated relatively low and infrequent use at this location by Pauquachin members	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Pauquachin access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	*Part 1 – Additional baseline information regarding FSC harvesting* – No additional information (refer to Pauquachin-specific information provided in AIEIS Section 7.2.4.2 and MSA Section 9.5.4.2, per **Table IR10-A16-1** above, for available information)[3] *Part 2 - Maps of marine harvest sites* – Spatial information (including mapping) for Pauquachin already considered by the VFPA in the AIEIS / MSA Current Use assessment *Part 3 – Consider effects on social conditions* – None anticipated given the predicted access effect on Pauquachin is expected to be negligible (the VFPA is of the view that its predictions in the AIEIS already sufficiently considered Pauquachin views regarding existing social constraints on access, as described in AIEIS Section 7.2.4.2 and MSA Section 9.5.4.2[4]	No change in AIEIS predictions for Pauquachin in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Pauquachin with implementation of measures for linked valued components	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on availability of resources for Pauquachin use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)		

[2] The level of potential effect prediction identified in this column refers to the predicted level of effect *before* Current Use-specific measures are taken into account, but *after* measures related to linked valued components (if applicable) have been considered. The next column refers to the level of residual effect prediction after *both* linked valued component measures (if applicable) and Current Use-specific measures have been taken into account.
[3] Additional baseline information requested in IR10-06: (1) Preferred species and locations; (2) Timing of current use activities, such as frequency, duration, and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access, including an estimate of the number of vessels per hour per year in the local and regional assessment areas for harvesting purposes.
[4] Social effects identified in IR10-06 for consideration in the assessment: (1) Conditions of access to other family member(s) territory or other Indigenous group's territory for traditional harvesting purposes; (2) Access by non-Indigenous user(s); and (3) Alienation from current and traditional harvesting places resulting from government policies and regulations.

IR10 Information Request	MSA /AIEIS Level of Potential Effect Prediction[2]	MSA /AIEIS Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Pauquachin with implementation of measures for linked valued components	Negligible – Taking mitigation, including consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on quality of resources for Pauquachin use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)	*Part 4 – Views expressed by Indigenous groups regarding existing and potential effects on access and harvesting opportunities* – The VFPA is of the view that Pauquachin views regarding existing effects, as described in AIEIS Section 7.2.4.2 and MSA Section 9.5.4.2, as well as Pauquachin views regarding potential Project-related effects (provided in AIEIS Appendix 2-B and the Pauquachin-specific issue tracking table (refer to forthcoming IR10-01 response), were already sufficiently considered in the VFPA's predictions in AIEIS Section 7.2.6 (including the analysis in Section 7.2.6.1, Section 7.2.6.2, and Section 7.2.6.3). *Part 5 – Characterisation of residual effects and evaluation of significance* – No additional information (the VFPA is of the view that Pauquachin views on thresholds are reflected in AIEIS Section 7.2.4.2 and MSA Section 9.5.4.2, and were factored into the Current Use assessment for Project-related effects; refer also to responses to IR10-11 and IR10-12)	
IR10-07 (AIEIS)				
Provide a group-specific assessment of the economic implications of permanent or temporary displacement as a result of the Project on current use	Access – Negligible potential change in access expected for Pauquachin (before Current Use-specific mitigation) as a result of Project-related displacement effects based on available information, which indicated relatively low and infrequent use at this location by Pauquachin members	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Pauquachin access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that Pauquachin views regarding existing constraints on access, as described in AIEIS Section 7.2.4.2 and MSA Section 9.5.4.2, as well as Pauquachin views regarding potential Project-related effects (provided in AIEIS Appendix 2-B and the Pauquachin-specific issues tracking table in the forthcoming response to IR10-01), were already sufficiently considered in the VFPA's predictions in AIEIS Section 7.2.6 (including the analysis in Section 7.2.6.1 on access),	As the predicted Current Use access effect (including the potential for increased competition) on Pauquachin is expected to be negligible (before Current Use-specific mitigation), no residual economic effects for Pauquachin are anticipated as a result of the Project
IR10-08 (AIEIS)				
Provide a group-specific assessment of the changes in quality of the current use experience resulting from the proposed Project	Quality of experience (Pathway #2) – Negligible potential change across all indicators (i.e., access, availability and quality of resources, quality of experience (Pathway#1)) for Pauquachin; therefore, a negligible potential effect (before Current Use-specific mitigation) is expected on Pauquachin's ability to reproduce and transmit cultural heritage	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Pauquachin's quality of experience at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that the nine factors[5] identified in IR10-08 for consideration in a group-specific assessment of potential changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in AIEIS Section 7.2.6.4. The VFPA notes that factors contributing to existing effects are reflected in	No change in AIEIS predictions for Pauquachin in terms of quality of Current Use experience

[5] Nine factors identified in IR10-08 for consideration in the assessment: (1) Loss of preferred harvesting sites; (2) How the quality of the Current Use experience could change due to the real and perceived contamination of traditional food sources; (3) Sensory disturbances from light, noise and vibration affecting oral traditions and sacred practices; (4) Safety risks and concerns due to increased vessel traffic; (5) Industrialization of the Project area, with subsequent loss and disruption of social and cultural values associated with the proposed Project area and the Fraser River estuary; (6) Increased alienation from traditional harvesting caused by industrial development on Roberts Bank, including the proposed expansion of navigational close areas; (7) Decreased willingness and ability by Indigenous peoples to access the Project area due to the perception of risk, reduced harvesting opportunities and aesthetic impacts; (8) Level of importance placed upon patters of use (past, present and future); and (9) Lost opportunities for the transmission of Indigenous Knowledge and practices due to avoidance of an expanded industrialized area.

IR10 Information Request	MSA /AIEIS Level of Potential Effect Prediction[2]	MSA /AIEIS Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
	Quality of experience (Pathway #2) – Negligible potential change across all indicators (i.e., access, availability and quality of resources, quality of experience (Pathway#1)) for Pauquachin; therefore, a negligible potential effect (before Current Use-specific mitigation) is expected on Pauquachin's ability to reproduce and transmit cultural heritage		Pauquachin's baseline summaries in AIEIS Section 7.2.4.2 and MSA Section 9.5.4.2, and that these views and Pauquachin views about potential Project-related effects (as provided in AIEIS Appendix 2-B and the Pauquachin-specific issues tracking table in the forthcoming response to IR10-01) were taken into consideration in the assessment of potential effects on their quality of experience.	
IR10-13 (MSA)				
Provide a group-specific assessment of potential effects and the characterisation of residual effects of the marine shipping associated with the proposed Project on current use in terms of changes to access and availability and quality of preferred marine resources	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Pauquachin as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Pauquachin access to preferred locations as a result of Project-associated ship pass-bys is expected	*Part 1 – Additional baseline information regarding harvesting and other Current Use activities* – No additional information (refer to Pauquachin information in AIEIS Section 7.2.4.2 and MSA Section 9.5.4.2, per **Table IR10-A16-1** above, for available information)[6] *Part 2 - Maps of marine harvest sites* – Spatial information (including mapping) for Pauquachin already considered by the VFPA in the AIEIS / MSA Current Use assessment *Part 3(1) – List of issues / concerns regarding Project-associated vessel transit* – Identified for Pauquachin in MSA Appendix 5-B (also refer to the Pauquachin-specific issues tracking table in the forthcoming IR10-01 response) *Part 3(2) – Adequacy of Proponent's response* – Refer to IR10-13 response *Part 3(3) – Proponent's views on thresholds of acceptability and risk* - Refer to IR10-13 response	No change in MSA predictions for Pauquachin in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Pauquachin as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Pauquachin as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
IR10-14 (MSA)				
Consider (on a group-specific basis) the socio-economic implications of potential or necessary displacement (permanent or temporary)[7]	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Pauquachin as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Pauquachin access to preferred locations as a result of Project-associated ship pass-bys is expected	The VFPA is of the view that Pauquachin views regarding existing constraints on access, as described in AIEIS Section 7.2.4.2 and MSA Section 9.5.4.2, as well as Pauquachin views regarding potential effects of Project-associated vessel transit, described in MSA Appendix 5-B (also refer to the Pauquachin-specific issues tracking table in the forthcoming IR10-01 response), were already sufficiently considered in the VFPA's predictions in MSA Section 9.5.5 regarding a potential access effect on Pauquachin as a result of Project-associated vessel transit.	As the predicted Current Use access effect on Pauquachin is expected to be addressed through the suggested mitigation identified in MSA Section 9.5.6, no residual economic effects for Pauquachin are anticipated.

[6] Additional baseline information requested in IR10-13 for consideration in the assessment: (1) Preferred species and locations; (2) Timing of the current use activities, such as frequency, duration and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access for groups using the shipping lanes for fishing, groups traveling through the shipping lanes to access fishing, harvesting and cultural sites and, groups using the marine shipping area adjacent to the marine shipping lanes.

[7] Implications identified in IR10-14 for consideration in the assessment: (1) Sufficiency of resources at alternate locations to meet the requirements of the community; (2) Constraints of displacement (areas further from their community or already alienated to other interests); (3) Extra expenses required in monetary terms or additional travel time or necessary changes in technology for the practice or access to resources; and (4) Constraints on current harvesting activities caused by development, regulatory restrictions, reduced resources, contamination and conservation concerns and impediments to the revival of traditions surrounding coastal harvesting activities.

IR10 Information Request	MSA /AIEIS Level of Potential Effect Prediction[2]	MSA /AIEIS Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR10-15 (MSA)				
Provide a group-specific assessment of potential effect of the changes in quality of the current use experience resulting from marine shipping associated with the proposed Project and the characterisation and significance of residual effects	Quality of experience (Pathway #1) – Negligible potential change in Pauquachin sense of place, risks to safety and security, and sensory disturbance expected Quality of experience (Pathway #2) – Negligible potential change for all indicators except access. Potentially measurable (up to minor) effect (before Current Use-specific mitigation) is expected on Pauquachin's ability to reproduce and transmit cultural heritage associated with potentially measurable access / displacement effect (refer to response to IR10-13)	Pathway #1 – N/A (negligible before Current Use-specific mitigation) Pathway #2 - Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Pauquachin's quality of experience tied to access is expected	The VFPA is of the view that the 4 factors[8] identified in IR10-15 for consideration in the group-specific assessment of changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in MSA Section 9.5.5. The VFPA notes that factors contributing to existing effects are reflected in Pauquachin baseline summaries in AIEIS Section 7.2.4.2 and MSA Section 9.5.4.2, and that these views and Pauquachin views about potential effects of Project-associated vessel transit on Pauquachin, as referenced in MSA Appendix 5-B (refer also to the Pauquachin-specific issue-tracking table in the forthcoming IR10-01 response), were taken into consideration in the assessment of potential effects on their quality of experience.	No change in MSA predictions for Pauquachin in terms of quality of Current Use experience
IR10-16 (MSA)				
Present (the requested group-specific baseline information)[9]	N/A	N/A	No additional information available (refer to Pauquachin-specific information provided in AIEIS Section 7.2.4.2 and MSA Section 9.5.4.2, per **Table IR10-A16-1** above, for available information)	No additional information available

[8] Four factors identified in IR10-15 for consideration in the assessment: (1) Sites of importance to Indigenous groups; (2) Decreased willingness, ability or avoidance by Indigenous peoples to access Current Use sites in or through the marine shipping lanes due to safety concerns and the perception of risk, reduced harvesting opportunities, and/or sensory disturbances; (3) Alienation from existing patterns of traditional harvesting due to the temporary or permanent displacement from areas of importance; and (4) Loss of opportunities for the cultural transmission of Indigenous Knowledge and practices due to the temporary or permanent displacement from those areas of importance.
[9] Additional baseline information requested in IR10-16: (1) The current activities taking place during the day or the night with a quantification of day and night duration; (2) The access required within, outside or through the shipping lanes; (3) The seasons that activities are practiced; (4) The frequency that each Indigenous group crosses the shipping lanes in the marine shipping area; and (5) The minimum and maximum number of vessels per hour in the shipping lanes, by Segment, encountered by Indigenous fishing vessels for Current Use activities in relation to the proposed Project-related ship movements.

Tsartlip First Nation[1] Group-specific Baseline Information Process Summary (MSA and AIEIS)

Marine Shipping Addendum (MSA)

On May 26, 2015, the VFPA wrote a letter to Tsartlip First Nation explaining that the VFPA is considering effects from marine shipping associated with the Project on the current use of lands and resources by Tsartlip First Nation. The VFPA requested information from Tsartlip First Nation regarding current use of lands and resources for traditional purposes (Current Use), fisheries, or potential effects associated with marine shipping. In the letter, the VFPA explained its intent to rely on existing information to inform the assessment of potential effects associated marine shipping associated with the Project, including information from the Trans Mountain Expansion Project Application to the National Energy Board specific to Tsartlip First Nation. The VFPA requested any additional information from Tsartlip First Nation that may help to inform the assessment. The VFPA also offered funding to facilitate Tsartlip First Nation's participation in consultation. The funding was not accepted.

On July 16, 2015, the VFPA provided Tsartlip First Nation with a draft of the existing conditions section for *"Tsartlip First Nation Current Use of Lands and Resources for Traditional Purposes"* for the MSA and requested that Tsartlip First Nation confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final MSA.

On September 18, 2015 Tsartlip First Nation indicated that they had decided not to participate in the consultation process for marine shipping or the RBT2 Project, and declined to provide comments on the draft summary.

On November 9, 2015, the VFPA provided Tsartlip First Nation with a copy of the final MSA.

Additional Information to the Environmental Impact Statement – *W*SÁNEĆ Nation (AIEIS)

In February 2016, Tsartlip First Nation indicated their intent to re-engage in the consultation process for the Project. The VFPA and Tsartlip First Nation signed a funding agreement on March 8, 2016 to support Tsartlip First Nation's completion of a Traditional Use Study.

The VFPA requested that Tsartlip First Nation work collaboratively with the VFPA to address any potential gaps in the VFPA's proposed Traditional Use program for the Project. Information was sought on Tsartlip First Nation's current use of the waters and terrestrial areas adjacent to the Project as well as the potential for interactions between the Project and current use of lands and resources within the Project area. Information was sought in relation to the location and timing of harvests, how these locations were accessed, specific species that were targeted, how the harvested species were utilised, and the cultural values associated with the harvest. The VFPA further requested information related to past use, existing use, and changes that Tsartlip First Nation anticipated to the landscape and their use of the area over time.

[1] Indigenous group listed in Table 1-B (AIEIS) and Table 1-C (MSA) of Attachment 2 to IR Package 10.

On October 3, 2016, the VFPA was provided with the report "WSÁNEĆ *Traditional Use Study of the Roberts Bank Terminal 2 Project: DRAFT Preliminary Data Summary."* Information from the report was integrated into the draft AIEIS as appropriate.

On November 23, 2016, the VFPA provided Tsartlip First Nation with an advance draft of the *"Additional Information to the Environmental Impact Statement* – WSÁNEĆ *Nation."* The VFPA requested that Tsartlip First Nation confirm the accuracy of the information presented, identify any sensitive information that should be removed, and also provide comments on the completeness, sufficiency, and technical merit of the draft AIEIS. No comments were received on the draft from Tsartlip First Nation.

On February 10, 2017, the VFPA notified Tsartlip First Nation that the AIEIS had been submitted to the Canadian Environmental Assessment Agency.

Tsartlip First Nation Group-specific Index and Assessment Tables

Table IR10-A17-1 Tsartlip First Nation Index Table

MSA / AIEIS Section	Original MSA / AIEIS Information Presentation (Aggregated / Disaggregated)	Tsartlip First Nation
MSA Section 9.5.4 Existing Conditions	Disaggregated	9.5.4.3 Tsartlip First Nation, pp. 9.5-27 to 9.5-32
MSA Section 9.5.5 Potential Interactions and Effects on Current Use	Aggregated (all Indigenous groups identified as experiencing a similar level of potential effect due to the linear activity of routine vessel transit)	9.5.5 Potential Interactions and Effects on Current Use, Table 9.5-35 (potential negligible-to-minor effects, all Indigenous groups) 9.5.5.1 Negligible Effects of Vessel Transit on Current Use, no differential effects[1] 9.5.5.2 Potential Effects of Vessel Transit on Current Use, no differential effects 9.5.5.3 Summary of Potential Transboundary Effects, not assessed
MSA Section 9.5.6 Suggested Mitigation Measures	Aggregated (to address the potentially minor linear effect on all Indigenous groups)	9.5.6 Suggested Mitigation Measures, no differential measures
MSA Section 9.5.7 Residual Effects Assessment and Significance Determination / Section 9.5.8 Cumulative Effects Assessment / Section 9.5.9 Summary of Assessment / Section 9.5.10 Follow-Up Program	N/A (no residual effects predicted)	N/A (no residual effects predicted)
MSA Section 9.5.11 Potential Impacts on Asserted or Established Aboriginal and Treaty Rights	Aggregated (all Indigenous groups identified as experiencing a similar level of potential impact due to the linear activity of routine vessel transit) Note: Measures identified are exactly the same as for Current Use	9.5.11.1 Approach to the Rights Assessment, Tsartlip First Nation, p. 9.5-148 9.5.11.2 Results of the Rights Assessment, potential negligible-to-minor impact (all Indigenous groups, no differential impacts) 9.5.11.3 Suggested Mitigation Measures, no differential measures 9.5.11.4 Residual Effects, N/A (no residual effects predicted)
MSA IR/AIR	N/A	MSA IR-02.24.16-13 Aboriginal and Treaty Rights and Related Interests, Table MSA IR13-1 Mitigation Measures Proposed by Aboriginal Groups for Potential Adverse Impacts to Potential or Established Aboriginal and Treaty Rights and Related Interests, Tsartlip First Nation, p. 2 (CEAR Document #391)
AIEIS Section 7.2.4 Existing Conditions	Disaggregated	7.2.4.3 Tsartlip First Nation, pp. 68 to 74
AIEIS Section 7.2.6 Future Conditions with the Project - Potential Project-related Effects	Effectively disaggregated given that each of the five *W̲SÁNEĆ* member groups was identified in the effects analysis	7.2.6 Future Conditions with the Project – Potential Project-related Effects, pp. 82-88 (Tsartlip identified within each subsection, with potential group-specific effects identified as negligible)
AIEIS Section 7.2.7 Mitigation Measures	Effectively disaggregated given that each of the five *W̲SÁNEĆ* member groups was identified in relation to mitigation measures	7.2.7 Mitigation Measures, p. 89, no differential measures
AIEIS Section 7.2.8 Characterisation of Residual Effects and Context / Section 7.2.9 Cumulative Effects Assessment	N/A (no residual effects predicted)	N/A (no residual effects predicted)
AIEIS Section 7.3 Potential Adverse Impacts on Aboriginal and Treaty Rights and Related Interests	Effectively disaggregated given that each of the five *W̲SÁNEĆ* member groups was identified in the effects analysis and in relation to proposed mitigation measures Note: Proposed measures identified are exactly the same as for Current Use	7.3 Potential Adverse Impacts on Aboriginal and Treaty Rights and Related Interests, pp. 90 to 97 (Tsartlip identified within each subsection, with potential group-specific impacts identified as negligible-to-minor) 7.3.3.2 Summary of Mitigation Measures Suggested by Aboriginal Groups, p. 96 (Table 7-2 Mitigation Measures Proposed by Aboriginal Groups for Potential Adverse Impacts to Potential or Established Aboriginal and Treaty Rights and Related Interests, Tsartlip First Nation)
Issues Tracking Table	MSA – Aggregated AIEIS – Aggregated (all *W̲SÁNEĆ*)	MSA / AIEIS – See forthcoming response to IR10-01 for disaggregated issues tracking table

[1] In this table, a potential effect is described as a "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be non-measurable. Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-B Indigenous groups (for EIS measures) and Table 1-C Indigenous groups (for MSA measures), regardless of whether the predicted level of potential effect (before Current Use-specific mitigation) was identified as measurable or non-measurable.

IR10 Information Request	MSA / AIEIS Level of Potential Effect Prediction[2]	MSA / AIEIS Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR Package 10 (IR10)				
IR10-06 (AIEIS)				
Provide a group-specific assessment of the potential effects of the proposed Project and the characterisation and significance of any residual effect on current use in terms of changes in access, availability and quality of all preferred current use resources	*Note: A group-specific assessment for Tsartlip was effectively presented in the AIEIS for all indicators (AIEIS was specific to* W̲SÁNEĆ*)* Access – Negligible potential change in access expected for Tsartlip (before Current Use-specific mitigation) as a result of Project-related displacement effects based on available information, which indicated relatively low and infrequent use at this location by Tsartlip members	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Tsartlip access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	*Part 1 – Additional baseline information regarding FSC harvesting* – No additional information (refer Tsartlip-specific information provided in AIEIS Section 7.2.4.3 and MSA Section 9.5.4.3, per **Table IR10-A17-1** above, for available information)[3] *Part 2 - Maps of marine harvest sites* – Spatial information (including mapping) for Tsartlip already considered by the VFPA in the AIEIS / MSA Current Use assessment *Part 3 – Consider effects on social conditions* – None anticipated given the predicted access effect on Tsartlip is expected to be negligible (the VFPA is of the view that its predictions in the AIEIS already sufficiently considered Tsartlip views regarding existing social constraints on access, as described in AIEIS Section 7.2.4.3 and MSA Section 9.5.4.3[4] *Part 4 – Views expressed by Indigenous groups regarding existing and potential effects on access and harvesting opportunities* – The VFPA is of the view that Tsartlip views regarding existing effects, as described in AIEIS Section 7.2.4.3 and MSA Section 9.5.4.3, as well as Tsartlip views regarding potential Project-related effects (provided in AIEIS Appendix 2-B and the Tsartlip-specific issue tracking table (refer to forthcoming IR10-01 response), were already sufficiently considered in the VFPA's predictions in AIEIS Section 7.2.6 (including the analysis in Section 7.2.6.1, Section 7.2.6.2, and Section 7.2.6.3).	No change in AIEIS predictions for Tsartlip in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Tsartlip with implementation of measures for linked valued components	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on availability of resources for Tsartlip use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Tsartlip with implementation of measures for linked valued components	Negligible – Taking mitigation, including consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on quality of resources for Tsartlip use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)		

[2] The level of potential effect prediction identified in this column refers to the predicted level of effect *before* Current Use-specific measures are taken into account, but *after* measures related to linked valued components (if applicable) have been considered. The next column refers to the level of residual effect prediction after *both* linked valued component measures (if applicable) and Current Use-specific measures have been taken into account.
[3] Additional baseline information requested in IR10-06: (1) Preferred species and locations; (2) Timing of current use activities, such as frequency, duration, and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access, including an estimate of the number of vessels per hour per year in the local and regional assessment areas for harvesting purposes.
[4] Social effects identified in IR10-06 for consideration in the assessment: (1) Conditions of access to other family member(s) territory or other Indigenous group's territory for traditional harvesting purposes; (2) Access by non-Indigenous user(s); and (3) Alienation from current and traditional harvesting places resulting from government policies and regulations.

IR10 Information Request	MSA / AIEIS Level of Potential Effect Prediction[2]	MSA / AIEIS Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
			Part 5 – Characterisation of residual effects and evaluation of significance – No additional information (the VFPA is of the view that Tsartlip views on thresholds are reflected in AIEIS Section 7.2.4.3 and MSA Section 9.5.4.3, and were factored into the Current Use assessment for Project-related effects; refer also to responses to IR10-11 and IR10-12)	
IR10-07 (AIEIS)				
Provide a group-specific assessment of the economic implications of permanent or temporary displacement as a result of the Project on current use	Access – Negligible potential change in access expected for Tsartlip (before Current Use-specific mitigation) as a result of Project-related displacement effects based on available information, which indicated relatively low and infrequent use at this location by Tsartlip members	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Tsartlip access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that Tsartlip views regarding existing constraints on access, as described in AIEIS Section 7.2.4.3 and MSA Section 9.5.4.3, as well as Tsartlip views regarding potential Project-related effects (provided in AIEIS Appendix 2-B and the Tsartlip-specific issues tracking table in the forthcoming response to IR10-01), were already sufficiently considered in the VFPA's predictions in AIEIS Section 7.2.6 (including the analysis in Section 7.2.6.1 on access)	As the predicted Current Use access effect (including the potential for increased competition) on Tsartlip is expected to be negligible (before Current Use-specific mitigation), no residual economic effects for Tsartlip are anticipated as a result of the Project
IR10-08 (AIEIS)				
Provide a group-specific assessment of the changes in quality of the current use experience resulting from the proposed Project	Quality of experience (Pathway #1) – Negligible potential change in Tsartlip sense of place, risks to safety and security, and sensory disturbance expected with implementation of measures for linked valued components Quality of experience (Pathway #2) – Negligible potential change across all indicators (i.e., access, availability and quality of resources, quality of experience (Pathway#1)) for Tsartlip; therefore, a negligible potential effect (before Current Use-specific mitigation) is expected on Tsartlip's ability to reproduce and transmit cultural heritage	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Tsartlip's quality of experience at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that the nine factors[5] identified in IR10-08 for consideration in a group-specific assessment of potential changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in AIEIS Section 7.2.6.4. The VFPA notes that factors contributing to existing effects are reflected in Tsartlip's baseline summaries in AIEIS Section 7.2.4.3 and MSA Section 9.5.4.3, and that these views and Tsartlip views about potential Project-related effects (as provided in AIEIS Appendix 2-B and the Tsartlip-specific issues tracking table in the forthcoming response to IR10-01) were taken into consideration in the assessment of potential effects on their quality of experience.	No change in AIEIS predictions for Tsartlip in terms of quality of Current Use experience
IR10-13 (MSA)				
Provide a group-specific assessment of potential effects and the characterisation of residual effects of the marine shipping associated with the proposed Project on current use in terms of changes to access	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Tsartlip as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Tsartlip access to preferred locations as a	*Part 1 – Additional baseline information regarding harvesting and other Current Use activities* – No additional information (refer to Tsartlip information in AIEIS Section 7.2.4.3 and MSA Section 9.5.4.3, per	No change in MSA predictions for Tsartlip in terms of Current Use access or availability and quality of Current Use resources

[5] Nine factors identified in IR10-08 for consideration in the assessment: (1) Loss of preferred harvesting sites; (2) How the quality of the Current Use experience could change due to the real and perceived contamination of traditional food sources; (3) Sensory disturbances from light, noise and vibration affecting oral traditions and sacred practices; (4) Safety risks and concerns due to increased vessel traffic; (5) Industrialization of the Project area, with subsequent loss and disruption of social and cultural values associated with the proposed Project area and the Fraser River estuary; (6) Increased alienation from traditional harvesting caused by industrial development on Roberts Bank, including the proposed expansion of navigational close areas; (7) Decreased willingness and ability by Indigenous peoples to access the Project area due to the perception of risk, reduced harvesting opportunities and aesthetic impacts; (8) Level of importance placed upon patters of use (past, present and future); and (9) Lost opportunities for the transmission of Indigenous Knowledge and practices due to avoidance of an expanded industrialized area.

	Quality of resources – Negligible potential change in quality of Current Use resources expected for Tsartlip as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
IR10-14 (MSA)				
Consider (on a group-specific basis) the socio-economic implications of potential or necessary displacement (permanent or temporary)[7]	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Tsartlip as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Tsartlip access to preferred locations as a result of Project-associated ship pass-bys is expected	The VFPA is of the view that Tsartlip views regarding existing constraints on access, as described in AIEIS Section 7.2.4.3 and MSA Section 9.5.4.3, as well as Tsartlip views regarding potential effects of Project-associated vessel transit, described in MSA Appendix 5-B (also refer to the Tsartlip-specific issues tracking table in the forthcoming IR10-01 response), were already sufficiently considered in the VFPA's predictions in MSA Section 9.5.5 regarding a potential access effect on Tsartlip as a result of Project-associated vessel transit.	As the predicted Current Use access effect on Tsartlip is expected to be addressed through the suggested mitigation identified in MSA Section 9.5.6, no residual economic effects for Tsartlip are anticipated.
IR10-15 (MSA)				
Provide a group-specific assessment of potential effect of the changes in quality of the current use experience resulting from marine shipping associated with the proposed Project and the characterisation and significance of residual effects	Quality of experience (Pathway #1) – Negligible potential change in Tsartlip sense of place, risks to safety and security, and sensory disturbance expected	Pathway #1 – N/A (negligible before Current Use-specific mitigation) Pathway #2 - Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Tsartlip's quality of experience tied to access is expected	The VFPA is of the view that the 4 factors[8] identified in IR10-15 for consideration in the group-specific assessment of changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in MSA Section 9.5.5. The VFPA notes that factors contributing to existing effects are reflected in Tsartlip baseline summaries in AIEIS Section 7.2.4.3 and MSA Section 9.5.4.3, and that these views and	No change in MSA predictions for Tsartlip in terms of quality of Current Use experience
	Quality of experience (Pathway #2) – Negligible potential change for all indicators except access. Potentially measurable (up to minor) effect (before Current Use-specific mitigation) is expected on Tsartlip's ability to			

[6] Additional baseline information requested in IR10-13 for consideration in the assessment: (1) Preferred species and locations; (2) Timing of the current use activities, such as frequency, duration and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access for groups using the shipping lanes for fishing, groups traveling through the shipping lanes to access fishing, harvesting and cultural sites and, groups using the marine shipping area adjacent to the marine shipping lanes.

[7] Implications identified in IR10-14 for consideration in the assessment: (1) Sufficiency of resources at alternate locations to meet the requirements of the community; (2) Constraints of displacement (areas further from their community or already alienated to other interests); (3) Extra expenses required in monetary terms or additional travel time or necessary changes in technology for the practice or access to resources; and (4) Constraints on current harvesting activities caused by development, regulatory restrictions, reduced resources, contamination and conservation concerns and impediments to the revival of traditions surrounding coastal harvesting activities.

[8] Four factors identified in IR10-15 for consideration in the assessment: (1) Sites of importance to Indigenous groups; (2) Decreased willingness, ability or avoidance by Indigenous peoples to access Current Use sites in or through the marine shipping lanes due to safety concerns and the perception of risk, reduced harvesting opportunities, and/or sensory disturbances; (3) Alienation from existing patterns of traditional harvesting due to the temporary or permanent displacement from areas of importance; and (4) Loss of opportunities for the cultural transmission of Indigenous Knowledge and practices due to the temporary or permanent displacement from those areas of importance.

IR10 Information Request	MSA / AIEIS Level of Potential Effect Prediction[2]	MSA / AIEIS Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
	reproduce and transmit cultural heritage associated with potentially measurable access / displacement effect (refer to response to IR10-13)		Tsartlip views about potential effects of Project-associated vessel transit on Tsartlip, as referenced in MSA Appendix 5-B (refer also to the Tsartlip-specific issue-tracking table in the forthcoming IR10-01 response), were taken into consideration in the assessment of potential effects on their quality of experience.	
IR10-16 (MSA)				
Present (the requested group-specific baseline information)[9]	N/A	N/A	No additional information available (refer to Tsartlip-specific information provided in AIEIS Section 7.2.4.3 and MSA Section 9.5.4.3, per **Table IR10-A17-1** above, for available information)	No additional information available

[9] Additional baseline information requested in IR10-16: (1) The current activities taking place during the day or the night with a quantification of day and night duration; (2) The access required within, outside or through the shipping lanes; (3) The seasons that activities are practiced; (4) The frequency that each Indigenous group crosses the shipping lanes in the marine shipping area; and (5) The minimum and maximum number of vessels per hour in the shipping lanes, by Segment, encountered by Indigenous fishing vessels for Current Use activities in relation to the proposed Project-related ship movements.

Tseycum First Nation[1] Group-specific Baseline Information Process Summary(MSA and AIEIS)

Marine Shipping Addendum (MSA)

On May 26, 2015, the VFPA wrote a letter to Tseycum First Nation explaining that the VFPA is considering effects from marine shipping associated with the Project on the current use of lands and resources by Tseycum First Nation. The VFPA requested information from Tseycum First Nation regarding current use of lands and resources for traditional purposes (Current Use), fisheries, or potential effects associated with marine shipping. In the letter, the VFPA explained its intent to rely on existing information to inform the assessment of potential effects associated marine shipping associated with the Project, including information from the Trans Mountain Expansion Project Application to the National Energy Board specific to Tseycum First Nation. The VFPA requested any additional information from Tseycum First Nation that may help to inform the assessment. The VFPA also offered funding to facilitate Tseycum First Nation's participation in consultation. Tseycum First Nation accepted the funding on June 4, 2015.

In a meeting on June 4, 2015, Tseycum First Nation provided additional information regarding Tseycum First Nation traditional use to be incorporated into the MSA.

On July 14, 2015, the VFPA provided Tseycum First Nation with a draft of the existing conditions section for *"Tseycum First Nation Current Use of Lands and Resources for Traditional Purposes"* for the MSA and requested that Tseycum First Nation confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final MSA. Comments from Tseycum First Nation were provided on the draft summary in a meeting on July 22, 2015. Changes were made to reflect input from Tseycum First Nation.

In August and September 2015, the VFPA reached out to the newly elected leadership at Tseycum First Nation to request additional comments on the draft of the existing conditions section for *"Tseycum First Nation Current Use of Lands and Resources for Traditional Purposes"* for the MSA, but no further comments were provided.

Additional Information to the Environmental Impact Statement – <u>W</u>SÁNEĆ Nation (AIEIS)

On February 26, 2016, the VFPA and Tseycum First Nation signed a funding agreement to support Tseycum First Nation's completion of a Traditional Use Study.

The VFPA requested that Tseycum First Nation work collaboratively with the VFPA to address any potential gaps in VFPA's proposed Traditional Use program for the Project. Information was sought on Tseycum First Nation's current use of the waters and terrestrial areas adjacent to the Project as well as the potential for interactions between the Project and current use of lands and resources within the Project area. Information was sought in relation to the location and timing of harvests, how these locations were accessed, specific species that were

[1] Indigenous group listed in Table 1-B (AIEIS) and Table 1-C (MSA) of Attachment 2 to IR Package 10.

targeted, how the harvested species were utilised, and the cultural values associated with the harvest. The VFPA further requested information related to past use, existing use, and changes that Tseycum First Nation anticipated to the landscape and their use of the area over time.

On October 3, 2016, the VFPA was provided with the report "WSÁNEĆ *Traditional Use Study of the Roberts Bank Terminal 2 Project: DRAFT Preliminary Data Summary."* Information from the report was integrated into the draft AIEIS as appropriate.

On November 23, 2016, the VFPA provided Tseycum First Nation with an advance draft of the *"Additional Information to the Environmental Impact Statement* – WSÁNEĆ *Nation."* The VFPA requested that Tseycum First Nation confirm the accuracy of the information presented, identify any sensitive information that should be removed, and also provide comments on the completeness, sufficiency, and technical merit of the draft AIEIS. No comments were received on the draft from Tseycum First Nation.

On February 10, 2017, the VFPA notified Tseycum First Nation that the AIEIS had been submitted to the Canadian Environmental Assessment Agency.

Tseycum First Nation Group-specific Index and Assessment Tables

Table IR10-A18-1 Tseycum First Nation Index Table

MSA / AIEIS Section	Original MSA / AIEIS Information Presentation (Aggregated / Disaggregated)	Tseycum First Nation
MSA Section 9.5.4 Existing Conditions	Disaggregated	9.5.4.4 Tseycum First Nation, pp. 9.5-32 to 9.5-37
MSA Section 9.5.5 Potential Interactions and Effects on Current Use	Aggregated (all Indigenous groups identified as experiencing a similar level of potential effect due to the linear activity of routine vessel transit)	9.5.5 Potential Interactions and Effects on Current Use, Table 9.5-35 (potential negligible-to-minor effect, all Indigenous groups) 9.5.5.1 Negligible Effects of Vessel Transit on Current Use, no differential effects[1] 9.5.5.2 Potential Effects of Vessel Transit on Current Use, no differential effects 9.5.5.3 Summary of Potential Transboundary Effects, not assessed
MSA Section 9.5.6 Suggested Mitigation Measures	Aggregated (to address the potentially minor linear effect on all Indigenous groups)	9.5.6 Suggested Mitigation Measures, no differential measures
MSA Section 9.5.7 Residual Effects Assessment and Significance Determination / Section 9.5.8 Cumulative Effects Assessment / Section 9.5.9 Summary of Assessment / Section 9.5.10 Follow-Up Program	N/A (no residual effects predicted)	N/A (no residual effects predicted)
MSA Section 9.5.11 Potential Impacts on Asserted or Established Aboriginal and Treaty Rights	Aggregated (all Indigenous groups identified as experiencing a similar level of potential impact due to the linear activity of routine vessel transit) Note: Measures identified are exactly the same as for Current Use	9.5.11.1 Approach to the Rights Assessment, Tseycum First Nation, p. 9.5-148 9.5.11.2 Results of the Rights Assessment, potential negligible-to-minor impact (all Indigenous groups, no differential impacts) 9.5.11.3 Suggested Mitigation Measures, no differential measures 9.5.11.4 Residual Effects, N/A (no measurable residuals)
MSA IR/AIR	N/A	MSA IR-02.24.16-13 Aboriginal and Treaty Rights and Related Interests, Table MSA IR13-1 Mitigation Measures Proposed by Aboriginal Groups for Potential Adverse Impacts to Potential or Established Aboriginal and Treaty Rights and Related Interests, Tseycum First Nation, p. 2 (CEAR Document #391)
AIEIS Section 7.2.4 Existing Conditions	Disaggregated	7.2.4.4 Tseycum First Nation, pp. 74 to 80
AIEIS Section 7.2.6 Future Conditions with the Project - Potential Project-related Effects	Effectively disaggregated given that each of the five *W̲SÁNEĆ* member groups was identified in the effects analysis	7.2.6 Future Conditions with the Project – Potential Project-related Effects, pp. 82-88 (Tseycum identified within each subsection, with potential group-specific effects identified as negligible)
AIEIS Section 7.2.7 Mitigation Measures	Effectively disaggregated given that each of the five *W̲SÁNEĆ* member groups was identified in relation to mitigation measures	7.2.7 Mitigation Measures, p. 89, no differential measures
AIEIS Section 7.2.8 Characterisation of Residual Effects and Context / Section 7.2.9 Cumulative Effects Assessment	N/A (no residual effects predicted)	N/A (no residual effect predicted)
AIEIS Section 7.3 Potential Adverse Impacts on Aboriginal and Treaty Rights and Related Interests	Effectively disaggregated given that each of the five *W̲SÁNEĆ* member groups was identified in the effects analysis and in relation to proposed mitigation measures Note: Proposed measures identified are exactly the same as for Current Use	7.3 Potential Adverse Impacts on Aboriginal and Treaty Rights and Related Interests, pp. 90 to 97 (Tseycum identified within each subsection, with potential group-specific impacts identified as negligible-to-minor) 7.3.3.2 Summary of Mitigation Measures Suggested by Aboriginal Groups, p. 96 (Table 7-2 Mitigation Measures Proposed by Aboriginal Groups for Potential Adverse Impacts to Potential or Established Aboriginal and Treaty Rights and Related Interests, Tseycum First Nation)
Issues Tracking Table	MSA – Aggregated	MSA / AIEIS – See forthcoming response to IR10-01 for disaggregated issues tracking table

[1] In this table, a potential effect is described as a "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be non-measurable. Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-B Indigenous groups (for EIS measures) and Table 1-C Indigenous groups (for MSA measures), regardless of whether the predicted level of potential effect (before Current Use-specific mitigation) was identified as measurable or non-measurable.

Table IR10-A18-2 Tseycum First Nation Assessment Table (Information Request Package 10)

IR10 Information Request	MSA /AIEIS Level of Potential Effect Prediction[2]	MSA /AIEIS Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR Package 10 (IR10)				
IR10-06 (AIEIS)				
Provide a group-specific assessment of the potential effects of the proposed Project and the characterisation and significance of any residual effect on current use in terms of changes in access, availability and quality of all preferred current use resources	*Note: A group-specific assessment for Tseycum was effectively presented in the AIEIS for all indicators (AIEIS was specific to* W̲SÁNEĆ*)* Access – Negligible potential change in access expected for Tseycum (before Current Use-specific mitigation) as a result of Project-related displacement effects based on available information, which indicated relatively low and infrequent use at this location by Tseycum members	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Tseycum access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	*Part 1 – Additional baseline information regarding FSC harvesting* – No additional information (refer to Tseycum-specific information provided in AIEIS Section 7.2.4.4 and MSA Section 9.5.4.4, per **Table IR10-A18-1** above, for available information)[3] *Part 2 - Maps of marine harvest sites* – Spatial information (including mapping) for Tseycum already considered by the VFPA in the AIEIS / MSA Current Use assessment *Part 3 – Consider effects on social conditions* – None anticipated given the predicted access effect on Tseycum is expected to be negligible (the VFPA is of the view that its predictions in the AIEIS already sufficiently considered Tseycum views regarding existing social constraints on access, as described in AIEIS Section 7.2.4.4 and MSA Section 9.5.4.4[4] *Part 4 – Views expressed by Indigenous groups regarding existing and potential effects on access and harvesting opportunities* – The VFPA is of the view that Tseycum views regarding existing effects, as described in AIEIS Section 7.2.4.4 and MSA Section 9.5.4.4, as well as Tseycum views regarding potential Project-related effects (provided in AIEIS Appendix 2-B and the Tseycum-specific issue tracking table (refer to forthcoming IR10-01 response), were already sufficiently considered in the VFPA's	No change in AIEIS predictions for Tseycum in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Tseycum with implementation of measures for linked valued components	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on availability of resources for Tseycum use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Tseycum with implementation of measures for linked valued components	Negligible – Taking mitigation, including consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on quality of resources for Tseycum use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)		

[2] The level of potential effect prediction identified in this column refers to the predicted level of effect *before* Current Use-specific measures are taken into account, but *after* measures related to linked valued components (if applicable) have been considered. The next column refers to the level of residual effect prediction after *both* linked valued component measures (if applicable) and Current Use-specific measures have been taken into account.
[3] Additional baseline information requested in IR10-06: (1) Preferred species and locations; (2) Timing of current use activities, such as frequency, duration, and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access, including an estimate of the number of vessels per hour per year in the local and regional assessment areas for harvesting purposes.
[4] Social effects identified in IR10-06 for consideration in the assessment: (1) Conditions of access to other family member(s) territory or other Indigenous group's territory for traditional harvesting purposes; (2) Access by non-Indigenous user(s); and (3) Alienation from current and traditional harvesting places resulting from government policies and regulations.

IR10 Information Request	MSA /AIEIS Level of Potential Effect Prediction[2]	MSA /AIEIS Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
			predictions in AIEIS Section 7.2.6 (including the analysis in Section 7.2.6.1, Section 7.2.6.2, and Section 7.2.6.3). *Part 5 – Characterisation of residual effects and evaluation of significance* – No additional information (the VFPA is of the view that Tseycum views on thresholds are reflected in AIEIS Section 7.2.4.4 and MSA Section 9.5.4.4, and were factored into the Current Use assessment for Project-related effects; refer also to responses to IR10-11 and IR10-12)	
IR10-07 (AIEIS)				
Provide a group-specific assessment of the economic implications of permanent or temporary displacement as a result of the Project on current use	Access – Negligible potential change in access expected for Tseycum (before Current Use-specific mitigation) as a result of Project-related displacement effects based on available information, which indicated relatively low and infrequent use at this location by Tseycum members	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Tseycum access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that Tseycum views regarding existing constraints on access, as described in AIEIS Section 7.2.4.4 and MSA Section 9.5.4.4, as well as Tseycum views regarding potential Project-related effects (provided in AIEIS Appendix 2-B and the Tseycum-specific issues tracking table in the forthcoming response to IR10-01), were already sufficiently considered in the VFPA's predictions in AIEIS Section 7.2.6 (including the analysis in Section 7.2.6.1 on access),	As the predicted Current Use access effect (including the potential for increased competition) on Tseycum is expected to be negligible (before Current Use-specific mitigation), no residual economic effects for Tseycum are anticipated as a result of the Project
IR10-08 (AIEIS)				
Provide a group-specific assessment of the changes in quality of the current use experience resulting from the proposed Project	Quality of experience (Pathway #2) – Negligible potential change across all indicators (i.e., access, availability and quality of resources, quality of experience (Pathway#1)) for Tseycum; therefore, a negligible potential effect (before Current Use-specific mitigation) is expected on Tseycum's ability to reproduce and transmit cultural heritage	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Tseycum's quality of experience at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that the nine factors[5] identified in IR10-08 for consideration in a group-specific assessment of potential changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in AIEIS Section 7.2.6.4. The VFPA notes that factors contributing to existing effects are reflected in Tseycum's baseline summaries in AIEIS Section 7.2.4.4 and MSA Section 9.5.4.4, and that these views and Tseycum views about potential Project-related effects (as provided in AIEIS Appendix 2-B and the Tseycum-specific issues tracking table in the forthcoming response to IR10-01) were taken into consideration in the assessment of potential effects on their quality of experience.	No change in AIEIS predictions for Tseycum in terms of quality of Current Use experience
	Quality of experience (Pathway #2) – Negligible potential change across all indicators (i.e., access, availability and quality of resources, quality of experience (Pathway#1)) for Tseycum; therefore, a negligible potential effect (before Current Use-specific mitigation) is expected on Tseycum's ability to reproduce and transmit cultural heritage			

[5] Nine factors identified in IR10-08 for consideration in the assessment: (1) Loss of preferred harvesting sites; (2) How the quality of the Current Use experience could change due to the real and perceived contamination of traditional food sources; (3) Sensory disturbances from light, noise and vibration affecting oral traditions and sacred practices; (4) Safety risks and concerns due to increased vessel traffic; (5) Industrialization of the Project area, with subsequent loss and disruption of social and cultural values associated with the proposed Project area and the Fraser River estuary; (6) Increased alienation from traditional harvesting caused by industrial development on Roberts Bank, including the proposed expansion of navigational close areas; (7) Decreased willingness and ability by Indigenous peoples to access the Project area due to the perception of risk, reduced harvesting opportunities and aesthetic impacts; (8) Level of importance placed upon patters of use (past, present and future); and (9) Lost opportunities for the transmission of Indigenous Knowledge and practices due to avoidance of an expanded industrialized area.

IR10 Information Request	MSA /AIEIS Level of Potential Effect Prediction[2]	MSA /AIEIS Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR10-13 (MSA)				
Provide a group-specific assessment of potential effects and the characterisation of residual effects of the marine shipping associated with the proposed Project on current use in terms of changes to access and availability and quality of preferred marine resources	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Tseycum as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Tseycum access to preferred locations as a result of Project-associated ship pass-bys is expected	*Part 1 – Additional baseline information regarding harvesting and other Current Use activities* – No additional information (refer to Tseycum information in AIEIS Section 7.2.4.4 and MSA Section 9.5.4.4, per **Table IR10-A18-1** above, for available information)[6] *Part 2 - Maps of marine harvest sites* – Spatial information (including mapping) for Tseycum already considered by the VFPA in the AIEIS / MSA Current Use assessment *Part 3(1) – List of issues / concerns regarding Project-associated vessel transit* – Identified for Tseycum in MSA Appendix 5-B (also refer to the Tseycum-specific issues tracking table in the forthcoming IR10-01 response) *Part 3(2) – Adequacy of Proponent's response* – Refer to IR10-13 response *Part 3(3) – Proponent's views on thresholds of acceptability and risk* - Refer to IR10-13 response	No change in MSA predictions for Tseycum in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Tseycum as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Tseycum as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
IR10-14 (MSA)				
Consider (on a group-specific basis) the socio-economic implications of potential or necessary displacement (permanent or temporary)[7]	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Tseycum as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Tseycum access to preferred locations as a result of Project-associated ship pass-bys is expected	The VFPA is of the view that Tseycum views regarding existing constraints on access, as described in AIEIS Section 7.2.4.4 and MSA Section 9.5.4.4, as well as Tseycum views regarding potential effects of Project-associated vessel transit, described in MSA Appendix 5-B (also refer to the Tseycum-specific issues tracking table in the forthcoming IR10-01 response), were already sufficiently considered in the VFPA's predictions in MSA Section 9.5.5 regarding a potential access effect on Tseycum as a result of Project-associated vessel transit.	As the predicted Current Use access effect on Tseycum is expected to be addressed through the suggested mitigation identified in MSA Section 9.5.6, no residual economic effects for Tseycum are anticipated.
IR10-15 (MSA)				
Provide a group-specific assessment of potential effect of the changes in quality of the current use experience resulting from marine shipping associated with the	Quality of experience (Pathway #1) – Negligible potential change in Tseycum sense of place, risks to safety and security, and sensory disturbance expected	Pathway #1 – N/A (negligible before Current Use-specific mitigation) Pathway #2 - Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual		No change in MSA predictions for Tseycum in terms of quality of Current Use experience

[6] Additional baseline information requested in IR10-13 for consideration in the assessment: (1) Preferred species and locations; (2) Timing of the current use activities, such as frequency, duration and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access for groups using the shipping lanes for fishing, groups traveling through the shipping lanes to access fishing, harvesting and cultural sites and, groups using the marine shipping area adjacent to the marine shipping lanes.

[7] Implications identified in IR10-14 for consideration in the assessment: (1) Sufficiency of resources at alternate locations to meet the requirements of the community; (2) Constraints of displacement (areas further from their community or already alienated to other interests); (3) Extra expenses required in monetary terms or additional travel time or necessary changes in technology for the practice or access to resources; and (4) Constraints on current harvesting activities caused by development, regulatory restrictions, reduced resources, contamination and conservation concerns and impediments to the revival of traditions surrounding coastal harvesting activities.

IR10 Information Request	MSA /AIEIS Level of Potential Effect Prediction[2]	MSA /AIEIS Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
proposed Project and the characterisation and significance of residual effects	Quality of experience (Pathway #2) – Negligible potential change for all indicators except access. Potentially measurable (up to minor) effect (before Current Use-specific mitigation) is expected on Tseycum's ability to reproduce and transmit cultural heritage associated with potentially measurable access / displacement effect (refer to response to IR10-13)	effect on Tseycum's quality of experience tied to access is expected	The VFPA is of the view that the 4 factors[8] identified in IR10-15 for consideration in the group-specific assessment of changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in MSA Section 9.5.5. The VFPA notes that factors contributing to existing effects are reflected in Tseycum baseline summaries in AIEIS Section 7.2.4.4 and MSA Section 9.5.4.4, and that these views and Tseycum views about potential effects of Project-associated vessel transit on Tseycum, as referenced in MSA Appendix 5-B (refer also to the Tseycum-specific issue-tracking table in the forthcoming IR10-01 response), were taken into consideration in the assessment of potential effects on their quality of experience.	
IR10-16 (MSA)				
Present (the requested group-specific baseline information)[9]	N/A	N/A	No additional information available (refer to Tseycum-specific information provided in AIEIS Section 7.2.4.4 and MSA Section 9.5.4.4, per **Table IR10-A18-1** above, for available information)	No additional information available

[8] Four factors identified in IR10-15 for consideration in the assessment: (1) Sites of importance to Indigenous groups; (2) Decreased willingness, ability or avoidance by Indigenous peoples to access Current Use sites in or through the marine shipping lanes due to safety concerns and the perception of risk, reduced harvesting opportunities, and/or sensory disturbances; (3) Alienation from existing patterns of traditional harvesting due to the temporary or permanent displacement from areas of importance; and (4) Loss of opportunities for the cultural transmission of Indigenous Knowledge and practices due to the temporary or permanent displacement from those areas of importance.
[9] Additional baseline information requested in IR10-16: (1) The current activities taking place during the day or the night with a quantification of day and night duration; (2) The access required within, outside or through the shipping lanes; (3) The seasons that activities are practiced; (4) The frequency that each Indigenous group crosses the shipping lanes in the marine shipping area; and (5) The minimum and maximum number of vessels per hour in the shipping lanes, by Segment, encountered by Indigenous fishing vessels for Current Use activities in relation to the proposed Project-related ship movements.

Malahat Nation[1] Group-specific Baseline Information Process Summary (MSA and AIEIS)

Marine Shipping Addendum (MSA)

On May 26, 2015, the VFPA wrote a letter to Malahat Nation explaining that the VFPA is considering effects from marine shipping associated with the Project on the current use of lands and resources by Malahat Nation. The VFPA requested information from Malahat Nation regarding current use of lands and resources for traditional purposes (Current Use), fisheries, or potential effects associated with marine shipping. In the letter, the VFPA explained its intent to rely on existing information to inform the assessment of potential effects associated marine shipping associated with the Project, including information from the Trans Mountain Expansion Project Application to the National Energy Board specific to Malahat Nation. The VFPA requested any additional information from Malahat Nation that may help to inform the assessment.

On June 19, 2015, the VFPA provided Malahat Nation with an advance draft of the existing conditions section for *"Malahat Nation Current Use of Lands and Resources for Traditional Purposes"* for the MSA and requested that Malahat Nation confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final MSA. In a letter and phone call in September 2015, Malahat Nation confirmed their preference that content from the Trans Mountain Expansion Project Application to the National Energy Board specific to Malahat Nation be removed from the MSA, and the VFPA complied with Malahat Nation's request.

On November 9, 2015, the VFPA provided Malahat Nation with a copy of the final MSA.

On April 25, 2016, the VFPA provided Malahat Nation with a table including all Malahat Nation's comments on the draft sections, responses to each comment from the VFPA, and a description of subsequent changes made to the sections.

Additional Information to the Environmental Impact Statement – <u>W</u>SÁNEĆ Nation (AIEIS)

On March 7, 2016, the VFPA and Malahat Nation signed a funding agreement to support Malahat Nation's completion of a Traditional Use study.

The VFPA requested information on Malahat Nation's current use of the waters and terrestrial areas adjacent to the Project as well as any foreseeable changes or impacts to these areas that may result from the Project. Information was sought in relation to the location and timing of harvests, how these locations were accessed, specific species that were targeted, how the harvested species were utilised, and the cultural values associated with the harvest. In addition, the VFPA requested broader contextual information on traditional economy and knowledge and culturally important places. The VFPA further requested information related to

[1] Indigenous group listed in Table 1-B (AIEIS) and Table 1-C (MSA) of Attachment 2 to IR Package 10.

past use, existing use, and changes that Malahat Nation anticipated to the landscape and their use of the area over time.

On September 12, 2016, Malahat Nation provided the VFPA with a report titled "*Malahat Effects related to and Mitigation for the Roberts Bank Terminal 2 Project."* Information from the report was integrated into the draft AIEIS as appropriate.

On November 23, 2016, the VFPA provided Malahat Nation with an advance draft of *the "Additional Information to the Environmental Impact Statement* – WSÁNEĆ *Nation."* The VFPA requested that Malahat Nation confirm the accuracy of the information presented, identify any sensitive information that should be removed, and also provide comments on the completeness, sufficiency, and technical merit of the draft AIEIS. Comments on the draft sections were received from Malahat Nation on January 5, 2017 and changes were made to reflect input from Malahat Nation.

On February 10, 2017, the VFPA notified Malahat Nation that the AIEIS had been submitted to the Canadian Environmental Assessment Agency and enclosed an excerpt from Appendix 2-B (Aboriginal Issues and Interests) showing Malahat Nation's comments on the AIEIS and the VFPA's response to those comments.

Malahat Nation Group-specific Index and Assessment Tables

Table IR10-A19-1 Malahat Nation Index Table

MSA / AIEIS Section	Original MSA / AIEIS Information Presentation (Aggregated / Disaggregated)	Malahat First Nation
MSA Section 9.5.4 Existing Conditions	Disaggregated	9.5.4.5 Malahat First Nation, pp. 9.5-37 to 9.5-38
MSA Section 9.5.5 Potential Interactions and Effects on Current Use	Aggregated (all Indigenous groups identified as experiencing a similar level of potential effect due to the linear activity of routine vessel transit)	9.5.5 Potential Interactions and Effects on Current Use, Table 9.5-35 (potential negligible-to-minor, all Indigenous groups) 9.5.5.1 Negligible Effects of Vessel Transit on Current Use, no differential effects[1] 9.5.5.2 Potential Effects of Vessel Transit on Current Use, no differential effects 9.5.5.3 Summary of Potential Transboundary Effects, not assessed
MSA Section 9.5.6 Suggested Mitigation Measures	Aggregated (to address the potentially minor linear effect on all Indigenous groups)	9.5.6 Suggested Mitigation Measures, no differential measures
MSA Section 9.5.7 Residual Effects Assessment and Significance Determination / Section 9.5.8 Cumulative Effects Assessment / Section 9.5.9 Summary of Assessment / Section 9.5.10 Follow-Up Program	N/A (no residual effects predicted)	N/A (no residual effects predicted)
MSA Section 9.5.11 Potential Impacts on Asserted or Established Aboriginal and Treaty Rights	Aggregated (all Indigenous groups identified as experiencing a similar level of potential impact due to the linear activity of routine vessel transit) Note: Measures identified are exactly the same as for Current Use	9.5.11.1 Approach to the Rights Assessment, Malahat Nation, p. 9.5-148 9.5.11.2 Results of the Rights Assessment, potential negligible-to-minor impact (all Indigenous groups, no differential impacts) 9.5.11.3 Suggested Mitigation Measures, no differential measures 9.5.11.4 Residual Effects, N/A (no measurable residuals)
MSA IR/AIR	N/A	MSA IR-02.24.16-13 Aboriginal and Treaty Rights and Related Interests, Table MSA IR13-1 Mitigation Measures Proposed by Aboriginal Groups for Potential Adverse Impacts to Potential or Established Aboriginal and Treaty Rights and Related Interests, Malahat Nation, p. 2 (CEAR Document #391)
AIEIS Section 7.2.4 Existing Conditions	Disaggregated	7.2.4.5 Malahat First Nation, pp. 80 to 82
AIEIS Section 7.2.6 Future Conditions with the Project - Potential Project-related Effects	Effectively disaggregated given that each of the five *W̲SÁNEĆ* member groups was identified in the effects analysis	7.2.6 Future Conditions with the Project – Potential Project-related Effects, pp. 82-88 (Malahat identified within each subsection, with potential group-specific effects identified as negligible)
AIEIS Section 7.2.7 Mitigation Measures	Effectively disaggregated given that each of the five *W̲SÁNEĆ* member groups was identified in relation to mitigation measures	7.2.7 Mitigation Measures, p. 89, no differential measures
AIEIS Section 7.2.8 Characterisation of Residual Effects and Context / Section 7.2.9 Cumulative Effects Assessment	N/A (no residual effects predicted)	N/A (no residual effects predicted)
AIEIS Section 7.3 Potential Adverse Impacts on Aboriginal and Treaty Rights and Related Interests	Effectively disaggregated given that each of the five *W̲SÁNEĆ* member groups was identified in the effects analysis and in relation to proposed mitigation measures Note: Proposed measures identified are exactly the same as for Current Use	7.3 Potential Adverse Impacts on Aboriginal and Treaty Rights and Related Interests, pp. 90 to 97 (Malahat identified within each subsection, with potential group-specific impacts identified as negligible-to-minor) 7.3.3.2 Summary of Mitigation Measures Suggested by Aboriginal Groups, p. 96 (Table 7-2 Mitigation Measures Proposed by Aboriginal Groups for Potential Adverse Impacts to Potential or Established Aboriginal and Treaty Rights and Related Interests, Malahat Nation)
Issues Tracking Table	MSA – Aggregated AIEIS – Aggregated (all *W̲SÁNEĆ*)	MSA / AIEIS – See forthcoming response to IR10-01 for disaggregated issues tracking table

[1] In this table, a potential effect is described as a "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be non-measurable. Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-B Indigenous groups (for EIS measures) and Table 1-C Indigenous groups (for MSA measures), regardless of whether the predicted level of potential effect (before Current Use-specific mitigation) was identified as measurable or non-measurable.

Table IR10-A19-2 Malahat Nation Assessment Table (Information Request Package 10)

IR10 Information Request	MSA /AIEIS Level of Potential Effect Prediction[2]	MSA /AIEIS Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR Package 10 (IR10)				
IR10-06 (AIEIS)				
Provide a group-specific assessment of the potential effects of the proposed Project and the characterisation and significance of any residual effect on current use in terms of changes in access, availability and quality of all preferred current use resources	*Note: A group-specific assessment for Malahat was effectively presented in the AIEIS for all indicators (AIEIS was specific to* W̲SÁNEĆ*)* Access – Negligible potential change in access expected for in (before Current Use-specific mitigation) as a result of Project-related displacement effects based on available information, which indicated relatively low and infrequent use at this location by Malahat members	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Malahat access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	*Part 1 – Additional baseline information regarding FSC harvesting* – No additional information (refer to Malahat-specific information provided in AIEIS Section 7.2.4.5 and MSA Section 9.5.4.5, per **Table IR10-A19-1** above, for available information)[3] *Part 2 - Maps of marine harvest sites* – Spatial information (including mapping) for Malahat already considered by the VFPA in the AIEIS / MSA Current Use assessment *Part 3 – Consider effects on social conditions* – None anticipated given the predicted access effect on Malahat is expected to be negligible (the VFPA is of the view that its predictions in the AIEIS already sufficiently considered Malahat views regarding existing social constraints on access, as described in AIEIS Section 7.2.4.5[4] *Part 4 – Views expressed by Indigenous groups regarding existing and potential effects on access and harvesting opportunities* – The VFPA is of the view that Malahat views regarding existing effects, as described in AIEIS Section 7.2.4.5, as well as Malahat views regarding potential Project-related effects (provided in AIEIS Appendix 2-B and the Malahat-specific issues tracking table (refer to forthcoming IR10-01 response), were already sufficiently considered in the VFPA's predictions in AIEIS Section 7.2.6 (including the analysis in Section 7.2.6.1, Section 7.2.6.2, and Section 7.2.6.3).	No change in AIEIS predictions for Malahat in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Malahat with implementation of measures for linked valued components	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on availability of resources for Malahat use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Malahat with implementation of measures for linked valued components	Negligible – Taking mitigation, including consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on quality of resources for Malahat use at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)		

[2] The level of potential effect prediction identified in this column refers to the predicted level of effect *before* Current Use-specific measures are taken into account, but *after* measures related to linked valued components (if applicable) have been considered. The next column refers to the level of residual effect prediction after *both* linked valued component measures (if applicable) and Current Use-specific measures have been taken into account.
[3] Additional baseline information requested in IR10-06: (1) Preferred species and locations; (2) Timing of current use activities, such as frequency, duration, and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access, including an estimate of the number of vessels per hour per year in the local and regional assessment areas for harvesting purposes.
[4] Social effects identified in IR10-06 for consideration in the assessment: (1) Conditions of access to other family member(s) territory or other Indigenous group's territory for traditional harvesting purposes; (2) Access by non-Indigenous user(s); and (3) Alienation from current and traditional harvesting places resulting from government policies and regulations.

IR10 Information Request	MSA /AIEIS Level of Potential Effect Prediction[2]	MSA /AIEIS Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
			Part 5 – Characterisation of residual effects and evaluation of significance – No additional information (the VFPA is of the view that Malahat views on thresholds are reflected in AIEIS Section 7.2.4.2 (or in their issues tracking tables), and were factored into the Current Use assessment for Project-related effects; refer also to responses to IR10-11 and IR10-12)	
IR10-07 (AIEIS)				
Provide a group-specific assessment of the economic implications of permanent or temporary displacement as a result of the Project on current use	Access – Negligible potential change in access expected for Malahat (before Current Use-specific mitigation) as a result of Project-related displacement effects based on available information, which indicated relatively low and infrequent use at this location by Malahat members	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Malahat access is predicted (i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that Malahat views regarding existing constraints on access, as described in AIEIS Section 7.2.4.5, as well as Malahat views regarding potential Project-related effects (provided in AIEIS Appendix 2-B and the Malahat-specific issues tracking table in the forthcoming response to IR10-01), were already sufficiently considered in the VFPA's predictions in AIEIS Section 7.2.6 (including the analysis in Section 7.2.6.1 on access)	As the predicted Current Use access effect (including the potential for increased competition) on Malahat is expected to be negligible (before Current Use-specific mitigation), no residual economic effects for Malahat are anticipated as a result of the Project
IR10-08 (AIEIS)				
Provide a group-specific assessment of the changes in quality of the current use experience resulting from the proposed Project	Quality of experience (Pathway #2) – Negligible potential change across all indicators (i.e., access, availability and quality of resources, quality of experience (Pathway#1)) for Malahat; therefore, a negligible potential effect (before Current Use-specific mitigation) is expected on Malahat's ability to reproduce and transmit cultural heritage Quality of experience (Pathway #2) – Negligible potential change across all indicators (i.e., access, availability and quality of resources, quality of experience (Pathway#1)) for Malahat; therefore, a negligible potential effect (before Current Use-specific mitigation) is expected on Malahat's ability to reproduce and transmit cultural heritage	Negligible – Taking mitigation, including ongoing consultation, into account (refer to responses to IR10-11 and IR10-12), no residual effect on Malahat's quality of experience at preferred locations is predicted (i.e., use at preferred locations will be consistent with existing conditions)	The VFPA is of the view that the nine factors[5] identified in IR10-08 for consideration in a group-specific assessment of potential changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in AIEIS Section 7.2.6.4. The VFPA notes that factors contributing to existing effects are reflected in Malahat in's baseline summaries in AIEIS Section 7.2.4.5, and that these views and Malahat views about potential Project-related effects (as provided in AIEIS Appendix 2-B and the Malahat-specific issues tracking table in the forthcoming response to IR10-01) were taken into consideration in the assessment of potential effects on their quality of experience.	No change in AIEIS predictions for Malahat in terms of quality of Current Use experience

[5] Nine factors identified in IR10-08 for consideration in the assessment: (1) Loss of preferred harvesting sites; (2) How the quality of the Current Use experience could change due to the real and perceived contamination of traditional food sources; (3) Sensory disturbances from light, noise and vibration affecting oral traditions and sacred practices; (4) Safety risks and concerns due to increased vessel traffic; (5) Industrialization of the Project area, with subsequent loss and disruption of social and cultural values associated with the proposed Project area and the Fraser River estuary; (6) Increased alienation from traditional harvesting caused by industrial development on Roberts Bank, including the proposed expansion of navigational close areas; (7) Decreased willingness and ability by Indigenous peoples to access the Project area due to the perception of risk, reduced harvesting opportunities and aesthetic impacts; (8) Level of importance placed upon patters of use (past, present and future); and (9) Lost opportunities for the transmission of Indigenous Knowledge and practices due to avoidance of an expanded industrialized area.

IR10 Information Request	MSA /AIEIS Level of Potential Effect Prediction[2]	MSA /AIEIS Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR10-13 (MSA)				
Provide a group-specific assessment of potential effects and the characterisation of residual effects of the marine shipping associated with the proposed Project on current use in terms of changes to access and availability and quality of preferred marine resources	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Malahat as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Malahat access to preferred locations as a result of Project-associated ship pass-bys is expected	*Part 1 – Additional baseline information regarding harvesting and other Current Use activities* – No additional information (refer to Malahat information in AIEIS Section 7.2.4.5, per **Table IR10-A19-1** above, for available information)[6] *Part 2 - Maps of marine harvest sites* – Spatial information (including mapping) for Malahat already considered by the VFPA in the AIEIS / MSA Current Use assessment *Part 3(1) – List of issues / concerns regarding Project-associated vessel transit* – Identified for Malahat in MSA Appendix 5-B (also refer to the Malahat-specific issues tracking table in the forthcoming IR10-01 response) *Part 3(2) – Adequacy of Proponent's response* – Refer to IR10-13 response *Part 3(3) – Proponent's views on thresholds of acceptability and risk* - Refer to IR10-13 response	No change in MSA predictions for Malahat in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Malahat as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Malahat as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
IR10-14 (MSA)				
Consider (on a group-specific basis) the socio-economic implications of potential or necessary displacement (permanent or temporary)[7]	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Malahat as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Malahat access to preferred locations as a result of Project-associated ship pass-bys is expected	The VFPA is of the view that Malahat views regarding existing constraints on access, as described in AIEIS Section 7.2.4.5, as well as Malahat views regarding potential effects of Project-associated vessel transit, described in MSA Appendix 5-B (also refer to the Malahat-specific issues tracking table in the forthcoming IR10-01 response), were already sufficiently considered in the VFPA's predictions in MSA Section 9.5.5 regarding a potential access effect on Malahat as a result of Project-associated vessel transit.	As the predicted Current Use access effect on Malahat is expected to be addressed through the suggested mitigation identified in MSA Section 9.5.6, no residual economic effects for Malahat are anticipated.
IR10-15 (MSA)				
Provide a group-specific assessment of potential effect of the changes in quality of the current use experience resulting from marine shipping associated with the	Quality of experience (Pathway #1) – Negligible potential change in Malahat sense of place, risks to safety and security, and sensory disturbance expected	Pathway #1 – N/A (negligible before Current Use-specific mitigation) Pathway #2 - Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual		No change in MSA predictions for Malahat in terms of quality of Current Use experience

[6] Additional baseline information requested in IR10-13 for consideration in the assessment: (1) Preferred species and locations; (2) Timing of the current use activities, such as frequency, duration and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access for groups using the shipping lanes for fishing, groups traveling through the shipping lanes to access fishing, harvesting and cultural sites and, groups using the marine shipping area adjacent to the marine shipping lanes.

[7] Implications identified in IR10-14 for consideration in the assessment: (1) Sufficiency of resources at alternate locations to meet the requirements of the community; (2) Constraints of displacement (areas further from their community or already alienated to other interests); (3) Extra expenses required in monetary terms or additional travel time or necessary changes in technology for the practice or access to resources; and (4) Constraints on current harvesting activities caused by development, regulatory restrictions, reduced resources, contamination and conservation concerns and impediments to the revival of traditions surrounding coastal harvesting activities.

IR10 Information Request	MSA /AIEIS Level of Potential Effect Prediction[2]	MSA /AIEIS Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
proposed Project and the characterisation and significance of residual effects	Quality of experience (Pathway #2) – Negligible potential change for all indicators except access. Potentially measurable (up to minor) effect (before Current Use-specific mitigation) is expected on Malahat's ability to reproduce and transmit cultural heritage associated with potentially measurable access / displacement effect (refer to response to IR10-13)	effect on Malahat's quality of experience tied to access is expected	The VFPA is of the view that the 4 factors[8] identified in IR10-15 for consideration in the group-specific assessment of changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in MSA Section 9.5.5. The VFPA notes that factors contributing to existing effects are reflected in Malahat's baseline summary in AIEIS Section 7.2.4.5, and that these views and Malahat views about potential effects of Project-associated vessel transit on Malahat, as referenced in MSA Appendix 5-B (refer also to the Malahat-specific issue-tracking table in the forthcoming IR10-01 response), were taken into consideration in the assessment of potential effects on their quality of experience.	
IR10-16 (MSA)				
Present (the requested group-specific baseline information)[9]	N/A	N/A	No additional information available (refer to Malahat-specific information provided in AIEIS Section 7.2.4.5 and MSA Section 9.5.4.5, per **Table IR10-A19-1** above, for available information)	No additional information available

[8] Four factors identified in IR10-15 for consideration in the assessment: (1) Sites of importance to Indigenous groups; (2) Decreased willingness, ability or avoidance by Indigenous peoples to access Current Use sites in or through the marine shipping lanes due to safety concerns and the perception of risk, reduced harvesting opportunities, and/or sensory disturbances; (3) Alienation from existing patterns of traditional harvesting due to the temporary or permanent displacement from areas of importance; and (4) Loss of opportunities for the cultural transmission of Indigenous Knowledge and practices due to the temporary or permanent displacement from those areas of importance.

[9] Additional baseline information requested in IR10-16: (1) The current activities taking place during the day or the night with a quantification of day and night duration; (2) The access required within, outside or through the shipping lanes; (3) The seasons that activities are practiced; (4) The frequency that each Indigenous group crosses the shipping lanes in the marine shipping area; and (5) The minimum and maximum number of vessels per hour in the shipping lanes, by Segment, encountered by Indigenous fishing vessels for Current Use activities in relation to the proposed Project-related ship movements.

Beecher Bay First Nation[1] Group-specific Baseline Information Process Summary (MSA)

Marine Shipping Addendum (MSA)

On May 25, 2015, the VFPA wrote a letter to Beecher Bay First Nation explaining that the VFPA is considering effects from marine shipping associated with the Project on the current use of lands and resources by Beecher Bay First Nation. The VFPA requested information from Beecher Bay First Nation regarding current use of lands and resources for traditional purposes (Current Use), fisheries, or potential effects associated with marine shipping. In the letter, the VFPA explained its intent to rely on existing information to inform the assessment of potential effects associated marine shipping associated with the Project, including information from the Trans Mountain Expansion Project Application to the National Energy Board specific to Beecher Bay First Nation. The VFPA also offered to provide funding to support Beecher Bay First Nation's participation in consultation. The funding was not accepted.

On July 16, 2015, the VFPA provided Beecher Bay First Nation with a draft section of the MSA titled *"Scia'new First Nation Current Use of Lands and Resources for Traditional Purposes."* The VFPA requested that Beecher Bay First Nation confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final MSA. Comments on the draft Current Use summary were provided by Beecher Bay First Nation on September 17, 2015 and changes were made to reflect input from Beecher Bay First Nation.

On October 29, 2015, the VFPA wrote to Beecher Bay First Nation stating that the comments on the draft summary of Beecher Bay's Current Use will be considered and incorporated into the MSA. The VFPA stated that it will additionally respond to each of these concerns directly in a letter at a later date.

On November 9, 2015, the VFPA provided Beecher Bay First Nation with a copy of the MSA.

On April 25, 2016, the VFPA provided Beecher Bay First Nation with a table including all Beecher Bay First Nation's comments on the draft sections, responses to each comment from the VFPA, and a description of subsequent changes made to the section in the MSA.

[1] Indigenous group listed in Table 1-C (MSA) of Attachment 2 to IR Package 10 (identified in that table as Beecher Bay Indian Band (Scia'new First Nation)).

Beecher Bay First Nation Group-specific Index and Assessment Tables

Table IR10-A20-1 Beecher Bay First Nation Index Table

MSA Section	Original MSA Information Presentation (Aggregated / Disaggregated)	Beecher Bay First Nation
MSA Section 9.5.4 Existing Conditions	Disaggregated	9.5.4.6 Beecher Bay First Nation, pp. 9.5-38 to 9.5-47
MSA Section 9.5.5 Potential Interactions and Effects on Current Use	Aggregated (all Indigenous groups identified as experiencing a similar level of potential effect due to the linear activity of routine vessel transit)	9.5.5 Potential Interactions and Effects on Current Use, Table 9.5-35 (potential negligible-to-minor effect, all Indigenous groups) 9.5.5.1 Negligible Effects of Vessel Transit on Current Use, no differential effects[1] 9.5.5.2 Potential Effects of Vessel Transit on Current Use, no differential effects 9.5.5.3 Summary of Potential Transboundary Effects, not assessed
MSA Section 9.5.6 Suggested Mitigation Measures	Aggregated (to address the potentially minor linear effect on all Indigenous groups)	9.5.6 Suggested Mitigation Measures, no differential measures
MSA Section 9.5.7 Residual Effects Assessment and Significance Determination / Section 9.5.8 Cumulative Effects Assessment / Section 9.5.9 Summary of Assessment / Section 9.5.10 Follow-Up Program	N/A (no residual effects predicted)	N/A (no residual effects predicted)
MSA Section 9.5.11 Potential Impacts on Asserted or Established Aboriginal and Treaty Rights	Aggregated (all Indigenous groups identified as experiencing a similar level of potential impact due to the linear activity of routine vessel transit) Note: Measures identified are exactly the same as for Current Use	9.5.11.1 Approach to the Rights Assessment, Beecher Bay First Nation, p. 9.5-148 9.5.11.2 Results of the Rights Assessment, potential negligible-to-minor impact (all Indigenous groups, no differential impacts) 9.5.11.3 Suggested Mitigation Measures, no differential measures 9.5.11.4 Residual Effects, N/A (no residual effects predicted)
IR/AIR	N/A	MSA IR-02.24.16-13 Aboriginal and Treaty Rights and Related Interests, Table MSA IR13-1 Mitigation Measures Proposed by Aboriginal Groups for Potential Adverse Impacts to Potential or Established Aboriginal and Treaty Rights and Related Interests, Beecher Bay First Nation, p. 2 (CEAR Document #391)
Issues Tracking Tables	MSA – Aggregated	MSA – See forthcoming response to IR10-01 for disaggregated issues tracking tables
Indigenous Traditional Knowledge (ITK)	MSA – MSA IR-02.24.16-08 (Aggregated) (CEAR Document #391)	MSA – See response to IR10-02 for disaggregated ITK

[1] In this table, a potential effect is described as a "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be the same for all groups (i.e., negligible-to-minor). Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-C and 1-D Indigenous groups.

Table IR10-A20-1 Beecher Bay First Nation Assessment Table (Information Request Package 10)

IR10 Information Request	MSA Level of Potential Effect Prediction[2]	MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR Package 10 (IR10)				
IR10-13 (MSA)				
Provide a group-specific assessment of potential effects and the characterisation of residual effects of the marine shipping associated with the proposed Project on current use in terms of changes to access and availability and quality of preferred marine resources	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Beecher Bay as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Beecher Bay access to preferred locations as a result of Project-associated ship pass-bys is expected	*Part 1 – Additional baseline information regarding harvesting and other Current Use activities* – No additional information (refer to Beecher Bay-specific information provided in MSA Section 9.5.4.6, per **Table IR10-A20-1** above, for available information)[3] *Part 2 - Maps of marine harvest sites* – Spatial information (including mapping) for Beecher Bay considered by the VFPA in the MSA Current Use assessment *Part 3(1) – List of issues / concerns regarding Project-associated vessel transit* – Identified for Beecher Bay in list of issues in MSA Appendix 5-B (also refer to the Beecher Bay-specific issues tracking table in the forthcoming IR10-01 response) *Part 3(2) – Adequacy of Proponent's response* – Refer to IR10-13 response *Part 3(3) – Proponent's views on thresholds of acceptability and risk* - Refer to IR10-13 response	No change in MSA predictions for Beecher Bay in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Beecher Bay as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Beecher Bay as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
IR10-14 (MSA)				
Consider (on a group-specific basis) the socio-economic implications of potential or necessary displacement (permanent or temporary)[4]	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Beecher Bay as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Beecher Bay access to preferred locations as a result of Project-associated ship pass-bys is expected	The VFPA is of the view that Beecher Bay First Nation's views regarding existing constraints on access, as described in MSA Section 9.5.4.6, as well as Beecher Bay First Nation's views regarding potential effects of Project-associated vessel transit, described in MSA Appendix 5-B, were already sufficiently considered in the VFPA's predictions in MSA Section 9.5.5 regarding a potential access effect on Beecher Bay First Nation as a result of Project-associated vessel transit.	As the predicted Current Use access effect on Beecher Bay is expected to be addressed through the suggested mitigation identified in MSA Section 9.5.6, no residual economic effects for Beecher Bay First Nation are anticipated

[2] The level of potential effect prediction identified in this column refers to the predicted level of effect *before* Current Use-specific measures are taken into account, but *after* measures related to linked valued components (if applicable) have been considered. The next column refers to the level of residual effect prediction after *both* linked valued component measures (if applicable) and Current Use-specific measures have been taken into account.
[3] Additional baseline information requested in IR10-13 for consideration in the assessment: (1) Preferred species and locations; (2) Timing of the current use activities, such as frequency, duration and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access for groups using the shipping lanes for fishing, groups traveling through the shipping lanes to access fishing, harvesting and cultural sites and, groups using the marine shipping area adjacent to the marine shipping lanes.
[4] Implications identified in IR10-14 for consideration in the assessment: (1) Sufficiency of resources at alternate locations to meet the requirements of the community; (2) Constraints of displacement (areas further from their community or already alienated to other interests); (3) Extra expenses required in monetary terms or additional travel time or necessary changes in technology for the practice or access to resources; and (4) Constraints on current harvesting activities caused by development, regulatory restrictions, reduced resources, contamination and conservation concerns and impediments to the revival of traditions surrounding coastal harvesting activities.

IR10 Information Request	MSA Level of Potential Effect Prediction[2]	MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR10-15 (MSA)				
Provide a group-specific assessment of potential effect of the changes in quality of the current use experience resulting from marine shipping associated with the proposed Project and the characterisation and significance of residual effects	Quality of experience (Pathway #1) – Negligible potential change in Beecher Bay sense of place, risks to safety and security, and sensory disturbance expected Quality of experience (Pathway #2) – Negligible potential change for all indicators except access. Potentially measurable (up to minor) effect (before Current Use-specific mitigation) is expected on Beecher Bay First Nation's ability to reproduce and transmit cultural heritage associated with potentially measurable access / displacement effect (refer to response to IR10-13)	Pathway #1 – N/A (negligible before Current Use-specific mitigation) Pathway #2 - Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Beecher Bay First Nation's quality of experience tied to access is expected	The VFPA is of the view that the 4 factors[5] identified in IR10-15 for consideration in the group-specific assessment of changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in MSA Section 9.5.5. The VFPA notes that factors contributing to existing effects are reflected in Beecher Bay's baseline summary in MSA Section 9.5.6.4, and that these views and Beecher Bay views about potential effects of Project-associated vessel transit on Beecher Bay (as referenced in MSA Appendix 5-B), were taken into consideration in the assessment of potential effects on their quality of experience.	No change in MSA predictions for Beecher Bay in terms of quality of Current Use experience
IR10-16 (MSA)				
Present (the requested group-specific baseline information)[6]	N/A	N/A	No additional information available (refer to Beecher Bay-specific information provided in MSA Section 9.5.4.6, per **Table IR10-A20-1** above, for available information)	No additional information available

[5] Four factors identified in IR10-15 for consideration in the assessment: (1) Sites of importance to Indigenous groups; (2) Decreased willingness, ability or avoidance by Indigenous peoples to access Current Use sites in or through the marine shipping lanes due to safety concerns and the perception of risk, reduced harvesting opportunities, and/or sensory disturbances; (3) Alienation from existing patterns of traditional harvesting due to the temporary or permanent displacement from areas of importance; and (4) Loss of opportunities for the cultural transmission of Indigenous Knowledge and practices due to the temporary or permanent displacement from those areas of importance.
[6] Additional baseline information requested in IR10-16: (1) The current activities taking place during the day or the night with a quantification of day and night duration; (2) The access required within, outside or through the shipping lanes; (3) The seasons that activities are practiced; (4) The frequency that each Indigenous group crosses the shipping lanes in the marine shipping area; and (5) The minimum and maximum number of vessels per hour in the shipping lanes, by Segment, encountered by Indigenous fishing vessels for Current Use activities in relation to the proposed Project-related ship movements.

Esquimalt Nation[1] Group-specific Baseline Information Process Summary (MSA)

Marine Shipping Addendum (MSA)

On May 25, 2015, the VFPA wrote a letter to Esquimalt Nation explaining that the VFPA is considering effects from marine shipping associated with the Project on the current use of lands and resources by Esquimalt Nation. The VFPA requested information from Esquimalt Nation regarding current use of lands and resources for traditional purposes (Current Use), fisheries, or potential effects associated with marine shipping. In the letter, the VFPA explained its intent to rely on existing information to inform the assessment of potential effects associated marine shipping associated with the Project, including information from the Trans Mountain Expansion Project Application to the National Energy Board specific to Esquimalt Nation. The VFPA also offered to provide funding to support Esquimalt Nation's participation in consultation. The funding was accepted by Esquimalt Nation on June 18, 2015.

On June 26, 2015, the VFPA provided Esquimalt Nation with a draft section of the MSA titled *"Esquimalt Nation Current Use of Lands and Resources for Traditional Purposes."* The VFPA requested that Esquimalt Nation confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final MSA.

On July 9, 2015 and July 23, 2015, the VFPA met with Esquimalt Nation to discuss marine shipping associated with the Project and its request for information from Esquimalt Nation regarding Current Use, fisheries, or potential effects associated with marine shipping.

On September 14, 2015, Esquimalt Nation provided comments from the draft *"Esquimalt Nation Current Use of Lands and Resources for Traditional Purposes"* and changes were made to reflect input from Esquimalt Nation.

On October 29, 2015, the VFPA wrote to Esquimalt Nation stating that their comments will be considered and incorporated into the MSA. The VFPA stated that it will additionally respond to each of these concerns directly in a letter at a later date.

On November 9, 2015, the VFPA provided Esquimalt Nation with a copy of the MSA.

On April 25, 2016, the VFPA provided Esquimalt Nation with a tracking table outlining all its comments on the draft section, responses to each comment from the VFPA, and a description of subsequent changes made to the section in the MSA.

[1] Indigenous group listed in Table 1-C (MSA) of Attachment 2 to IR Package 10.

the current use experience resulting from marine shipping associated with the proposed Project and the characterisation and significance of residual effects	Nation's sense of place, risks to safety and security, and sensory disturbance expected Quality of experience (Pathway #2) – Negligible potential change for all indicators except access. Potentially measurable (up to minor) effect (before Current Use-specific mitigation) is expected on Esquimalt Nation's ability to reproduce and transmit cultural heritage associated with potentially measurable access / displacement effect (refer to response to IR10-13)	Pathway #1 – N/A (negligible before Current Use-specific mitigation) Pathway #2 - Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Esquimalt Nation's quality of experience tied to access is expected	The VFPA is of the view that the 4 factors[5] identified in IR10-15 for consideration in the group-specific assessment of changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in MSA Section 9.5.5. The VFPA notes that factors contributing to existing effects are reflected in Esquimalt Nation's baseline summary in MSA Section 9.5.6.7, and that these views and Esquimalt Nation's views about potential effects of Project-associated vessel transit on Esquimalt Nation (as referenced in MSA Appendix 5-B), were taken into consideration in the assessment of potential effects on their quality of experience.	No change in MSA predictions for Esquimalt Nation in terms of quality of Current Use experience
IR10-16 (MSA)				
Present (the requested group-specific baseline information)[6]	N/A	N/A	No additional information available (refer to Esquimalt Nation-specific information provided in MSA Section 9.5.4.7, per **Table IR10-A21-1** above, for available information)	No additional information available

[5] Four factors identified in IR10-15 for consideration in the assessment: (1) Sites of importance to Indigenous groups; (2) Decreased willingness, ability or avoidance by Indigenous peoples to access Current Use sites in or through the marine shipping lanes due to safety concerns and the perception of risk, reduced harvesting opportunities, and/or sensory disturbances; (3) Alienation from existing patterns of traditional harvesting due to the temporary or permanent displacement from areas of importance; and (4) Loss of opportunities for the cultural transmission of Indigenous Knowledge and practices due to the temporary or permanent displacement from those areas of importance.
[6] Additional baseline information requested in IR10-16: (1) The current activities taking place during the day or the night with a quantification of day and night duration; (2) The access required within, outside or through the shipping lanes; (3) The seasons that activities are practiced; (4) The frequency that each Indigenous group crosses the shipping lanes in the marine shipping area; and (5) The minimum and maximum number of vessels per hour in the shipping lanes, by Segment, encountered by Indigenous fishing vessels for Current Use activities in relation to the proposed Project-related ship movements.

Songhees First Nation[1] Group-specific Baseline Information Process Summary (MSA)

Marine Shipping Addendum (MSA)

On May 25, 2015, the VFPA wrote a letter to Songhees First Nation explaining that the VFPA is considering effects from marine shipping associated with the Project on the current use of lands and resources by Songhees First Nation. The VFPA requested information from Songhees First Nation regarding current use of lands and resources for traditional purposes (Current Use), fisheries, or potential effects associated with marine shipping. In the letter, the VFPA explained its intent to rely on existing information to inform the assessment of potential effects associated marine shipping associated with the Project specific to Songhees First Nation. The VFPA also offered to provide funding to support Songhees First Nation's participation in consultation. The funding was not accepted.

On June 19, 2015, the VFPA provided Songhees First Nation with a draft of the existing conditions section for *"Songhees First Nation Current Use of Lands and Resources for Traditional Purposes"* for the MSA and requested that Songhees First Nation confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final MSA. The VFPA discussed the draft Current Use summary with Songhees by phone on August 4, 2015.

On September 11, 2015, Songhees First Nation informed the VFPA that they would not be participating in the review of the Project.

On November 9, 2015, the VFPA provided Songhees First Nation with a copy of the MSA.

[1] Indigenous group listed in Table 1-C (MSA) of Attachment 2 to IR Package 10.

Provide a group-specific assessment of potential effects and the characterisation of residual effects of the marine shipping associated with the proposed Project on current use in terms of changes to access and availability and quality of preferred marine resources	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Songhees First Nation as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Songhees First Nation's access to preferred locations as a result of Project-associated ship pass-bys is expected	*Part 1 – Additional baseline information regarding harvesting and other Current Use activities* – No additional information (refer to Songhees First Nation-specific information provided in MSA Section 9.5.4.8, per **Table IR10-A22-1** above, for available information)[3] *Part 2 - Maps of marine harvest sites* – No additional information (refer to Songhees First Nation-specific information provided in MSA Section 9.5.4.8, per **Table IR10-A22-1** above, for available information)[4] *Part 3(1) – List of issues / concerns regarding Project-associated vessel transit* – Identified for Songhees First Nation in list of issues in MSA Appendix 5-B (also refer to the Songhees First Nation-specific issues tracking table in the forthcoming IR10-01 response) *Part 3(2) – Adequacy of Proponent's response* – Refer to IR10-13 response *Part 3(3) – Proponent's views on thresholds of acceptability and risk* - Refer to IR10-13 response	No change in MSA predictions for Songhees First Nation in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Songhees First Nation as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Songhees First Nation as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
IR10-14 (MSA)				
Consider (on a group-specific basis) the socio-economic implications of potential or necessary displacement (permanent or temporary)[5]	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Songhees First Nation as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Songhees First Nation's access to preferred locations as a result of Project-associated ship pass-bys is expected	The VFPA is of the view that Songhees First Nation's views regarding potential effects of Project-associated vessel transit, described in MSA Appendix 5-B, were already sufficiently considered in the VFPA's predictions in MSA Section 9.5.5 regarding a potential access effect on Songhees First Nation as a result of Project-associated vessel transit.	As the predicted Current Use access effect on Songhees First Nation is expected to be addressed through the suggested mitigation identified in MSA Section 9.5.6, no residual economic effects for Songhees First Nation are anticipated

[2] The level of potential effect prediction identified in this column refers to the predicted level of effect *before* Current Use-specific measures are taken into account, but *after* measures related to linked valued components (if applicable) have been considered. The next column refers to the level of residual effect prediction after *both* linked valued component measures (if applicable) and Current Use-specific measures have been taken into account.
[3] Additional baseline information requested in IR10-13 for consideration in the assessment: (1) Preferred species and locations; (2) Timing of the current use activities, such as frequency, duration and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access for groups using the shipping lanes for fishing, groups traveling through the shipping lanes to access fishing, harvesting and cultural sites and, groups using the marine shipping area adjacent to the marine shipping lanes.
[4] Additional baseline information requested in IR10-13 for consideration in the assessment: (1) Preferred species and locations; (2) Timing of the current use activities, such as frequency, duration and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access for groups using the shipping lanes for fishing, groups traveling through the shipping lanes to access fishing, harvesting and cultural sites and, groups using the marine shipping area adjacent to the marine shipping lanes.
[5] Implications identified in IR10-14 for consideration in the assessment: (1) Sufficiency of resources at alternate locations to meet the requirements of the community; (2) Constraints of displacement (areas further from their community or already alienated to other interests); (3) Extra expenses required in monetary terms or additional travel time or necessary changes in technology for the practice or access to resources; and (4) Constraints on current harvesting activities caused by development, regulatory restrictions, reduced resources, contamination and conservation concerns and impediments to the revival of traditions surrounding coastal harvesting activities.

IR10 Information Request	MSA Level of Potential Effect Prediction[2]	MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR10-15 (MSA)				
Provide a group-specific assessment of potential effect of the changes in quality of the current use experience resulting from marine shipping associated with the proposed Project and the characterisation and significance of residual effects	Quality of experience (Pathway #1) – Negligible potential change in Songhees First Nation's sense of place, risks to safety and security, and sensory disturbance expected Quality of experience (Pathway #2) – Negligible potential change for all indicators except access. Potentially measurable (up to minor) effect (before Current Use-specific mitigation) is expected on Songhees First Nation's ability to reproduce and transmit cultural heritage associated with potentially measurable access / displacement effect (refer to response to IR10-13)	Pathway #1 – N/A (negligible before Current Use-specific mitigation) Pathway #2 - Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Songhees First Nation's quality of experience tied to access is expected	The VFPA is of the view that the 4 factors[6] identified in IR10-15 for consideration in the group-specific assessment of changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in MSA Section 9.5.5. The VFPA notes that Songhees First Nation's views about potential effects of Project-associated vessel transit on Songhees First Nation (as referenced in MSA Appendix 5-B), were taken into consideration in the assessment of potential effects on their quality of experience.	No change in MSA predictions for Songhees First Nation in terms of quality of Current Use experience
IR10-16 (MSA)				
Present (the requested group-specific baseline information)[7]	N/A	N/A	No additional information available (refer to Songhees First Nation-specific information provided in MSA Section 9.5.4.8, per **Table IR10-A22-1** above, for available information)	No additional information available

[6] Four factors identified in IR10-15 for consideration in the assessment: (1) Sites of importance to Indigenous groups; (2) Decreased willingness, ability or avoidance by Indigenous peoples to access Current Use sites in or through the marine shipping lanes due to safety concerns and the perception of risk, reduced harvesting opportunities, and/or sensory disturbances; (3) Alienation from existing patterns of traditional harvesting due to the temporary or permanent displacement from areas of importance; and (4) Loss of opportunities for the cultural transmission of Indigenous Knowledge and practices due to the temporary or permanent displacement from those areas of importance.
[7] Additional baseline information requested in IR10-16: (1) The current activities taking place during the day or the night with a quantification of day and night duration; (2) The access required within, outside or through the shipping lanes; (3) The seasons that activities are practiced; (4) The frequency that each Indigenous group crosses the shipping lanes in the marine shipping area; and (5) The minimum and maximum number of vessels per hour in the shipping lanes, by Segment, encountered by Indigenous fishing vessels for Current Use activities in relation to the proposed Project-related ship movements.

T'Sou-ke Nation[1] Group-specific Baseline Information Process Summary (MSA)

Marine Shipping Addendum (MSA)

On May 25, 2015, the VFPA wrote a letter to T'Sou-ke Nation explaining that the VFPA is considering effects from marine shipping associated with the Project on the current use of lands and resources by T'Sou-ke Nation. The VFPA requested information from T'Sou-ke Nation regarding current use of lands and resources for traditional purposes (Current Use), fisheries, or potential effects associated with marine shipping. In the letter, the VFPA explained its intent to rely on existing information to inform the assessment of potential effects associated marine shipping associated with the Project, including information from the Trans Mountain Expansion Project Application to the National Energy Board specific to T'Sou-ke Nation. The VFPA also offered to provide funding to support T'Sou-ke Nation's participation in consultation. The funding was not accepted.

On June 17, 2015, T'Sou-ke Nation responded with a letter detailing concerns over Project associated marine shipping and requesting a meeting to discuss. The VFPA responded to T'Sou-ke Nation with a letter outlining the concerns and the intent to discuss in person at a meeting.

On July 20, 2015, the VFPA provided T'Sou-ke Nation with a draft section of the MSA titled *"T'Sou-ke Nation Current Use of Lands and Resources for Traditional Purposes."* The VFPA requested that T'Sou-ke Nation confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final MSA. Comments from T'Sou-ke Nation were not received.

In a meeting on August 18, 2015 and letter on September 14, 2015, T'Sou-ke Nation requested additional funding to support a T'Sou-ke Nation report regarding current use in the marine shipping area. The VFPA responded on September 25, 2015 offering an increase in funding, extending the deadline for T'Sou-ke Nation's input into the MSA, and requesting comments on the draft Current Use summary. T'Sou-ke Nation responded to this letter on November 3, 2015 reiterating its request for funding to commission a traditional use study and stating that the funding offered to date was not sufficient.

On November 9, 2015, the VFPA provided T'Sou-ke Nation with a copy of the MSA.

On November 12, 2015, the VFPA responded to T'Sou-ke Nation's letter of November 3 explaining that it had been in discussions with T'Sou-ke Nation since May 2015, had offered funding to support T'Sou-ke Nation's participation, increased funding per T'Sou-ke Nation's request, and extended the timeline, but no agreement had been reached. The VFPA explained that it had submitted the MSA to the Canadian Environmental Assessment Agency on October 26, 2016, which referenced T'Sou-ke Nation's submissions to the National Energy Board regarding the Trans Mountain Pipeline Project, including the T'Sou-ke Nation Traditional Marine Resource Knowledge and Use Study Report, and prior to receiving T'Sou-ke Nation's

[1] Indigenous group listed in Table 1-C (MSA) of Attachment 2 to IR Package 10 (identified in that table and the Updated EIS Guidelines as T'sou-ke First Nation).

response on November 3, 2015. The VFPA noted that T'Sou-ke Nation may submit comments or evidence directly to the Panel.

T'Sou-ke Nation Group-specific Index and Assessment Tables

Table IR10-A23-1 T'Sou-ke Nation Index Table

MSA Section	Original MSA Information Presentation (Aggregated / Disaggregated)	T'Sou-ke Nation
MSA Section 9.5.4 Existing Conditions	Disaggregated	9.5.4.9 T'Sou-ke Nation, pp. 9.5-54 to 9.5-59
MSA Section 9.5.5 Potential Interactions and Effects on Current Use	Aggregated (all Indigenous groups identified as experiencing a similar level of potential effect due to the linear activity of routine vessel transit)	9.5.5 Potential Interactions and Effects on Current Use, Table 9.5-35 (potential negligible-to-minor effect, all Indigenous groups) 9.5.5.1 Negligible Effects of Vessel Transit on Current Use, no differential effects[1] 9.5.5.2 Potential Effects of Vessel Transit on Current Use, no differential effects 9.5.5.3 Summary of Potential Transboundary Effects, not assessed
MSA Section 9.5.6 Suggested Mitigation Measures	Aggregated (to address the potentially minor linear effect on all Indigenous groups)	9.5.6 Suggested Mitigation Measures, no differential measures
MSA Section 9.5.7 Residual Effects Assessment and Significance Determination / Section 9.5.8 Cumulative Effects Assessment / Section 9.5.9 Summary of Assessment / Section 9.5.10 Follow-Up Program	N/A (no residual effects predicted)	N/A (no residual effect predicted)
MSA Section 9.5.11 Potential Impacts on Asserted or Established Aboriginal and Treaty Rights	Aggregated (all Indigenous groups identified as experiencing a similar level of potential impact due to the linear activity of routine vessel transit) Note: Measures identified are exactly the same as for Current Use	9.5.11.1 Approach to the Rights Assessment, T'Sou-ke Nation, p. 9.5-148 9.5.11.2 Results of the Rights Assessment, potential negligible-to-minor impact (all Indigenous groups, no differential impacts) 9.5.11.3 Suggested Mitigation Measures, no differential measures 9.5.11.4 Residual Effects, N/A (no residual effects predicted)
IR/AIR	N/A	MSA IR-02.24.16-13 Aboriginal and Treaty Rights and Related Interests, Table MSA IR13-1 Mitigation Measures Proposed by Aboriginal Groups for Potential Adverse Impacts to Potential or Established Aboriginal and Treaty Rights and Related Interests, T'Sou-ke Nation, p. 2 (CEAR Document #391)
Issues Tracking Tables	MSA – Aggregated	MSA – See forthcoming response to IR10-01 for disaggregated issues tracking table
Indigenous Traditional Knowledge (ITK)	MSA – MSA IR-02.24.16-08 (Aggregated) (CEAR Document #391)	MSA – See response to IR10-02 for disaggregated ITK

[1] In this table, a potential effect is described as a "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be the same for all groups (i.e., negligible-to-minor). Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-C and 1-D Indigenous groups.

Table IR10-A23-2 T'Sou-ke Nation Assessment Table (Information Request Package 10)

IR10 Information Request	MSA Level of Potential Effect Prediction[2]	MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR Package 10 (IR10)				
IR10-13 (MSA)				
Provide a group-specific assessment of potential effects and the characterisation of residual effects of the marine shipping associated with the proposed Project on current use in terms of changes to access and availability and quality of preferred marine resources	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for T'Sou-ke as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on T'Sou-ke access to preferred locations as a result of Project-associated ship pass-bys is expected	*Part 1 – Additional baseline information regarding harvesting and other Current Use activities* – No additional information (refer to T'Sou-ke-specific information provided in MSA Section 9.5.4.9, per **Table IR10-A23-1** above, for available information)[3] *Part 2 - Maps of marine harvest sites* – Spatial information (including mapping) for T'Sou-ke considered by the VFPA in the MSA Current Use assessment *Part 3(1) – List of issues / concerns regarding Project-associated vessel transit* – Identified for T'Sou-ke in list of issues in MSA Appendix 5-B (also refer to the T'Sou-ke-specific issues tracking table in the forthcoming IR10-01 response) *Part 3(2) – Adequacy of Proponent's response* – Refer to IR10-13 response *Part 3(3) – Proponent's views on thresholds of acceptability and risk* - Refer to IR10-13 response	No change in MSA predictions for T'Sou-ke in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for T'Sou-ke as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for T'Sou-ke as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
IR10-14 (MSA)				
Consider (on a group-specific basis) the socio-economic implications of potential or necessary displacement (permanent or temporary)[4]	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for T'Sou-ke as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on T'Sou-ke access to preferred locations as a result of Project-associated ship pass-bys is expected	The VFPA is of the view that T'Sou-ke's views regarding existing constraints on access, as described in MSA Section 9.5.4.9, as well as T'Sou-ke's views regarding potential effects of Project-associated vessel transit, described in MSA Appendix 5-B, were already sufficiently considered in the VFPA's predictions in MSA Section 9.5.5 regarding a potential access effect on T'Sou-ke Nation as a result of Project-associated vessel transit.	As the predicted Current Use access effect on T'Sou-ke is expected to be addressed through the suggested mitigation identified in MSA Section 9.5.6, no residual economic effects for T'Sou-ke are anticipated
IR10-15 (MSA)				
Provide a group-specific assessment of potential effect of the changes in quality of	Quality of experience (Pathway #1) – Negligible potential change in T'Sou-ke			

[2] The level of potential effect prediction identified in this column refers to the predicted level of effect *before* Current Use-specific measures are taken into account, but *after* measures related to linked valued components (if applicable) have been considered. The next column refers to the level of residual effect prediction after *both* linked valued component measures (if applicable) and Current Use-specific measures have been taken into account.
[3] Additional baseline information requested in IR10-13 for consideration in the assessment: (1) Preferred species and locations; (2) Timing of the current use activities, such as frequency, duration and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access for groups using the shipping lanes for fishing, groups traveling through the shipping lanes to access fishing, harvesting and cultural sites and, groups using the marine shipping area adjacent to the marine shipping lanes.
[4] Implications identified in IR10-14 for consideration in the assessment: (1) Sufficiency of resources at alternate locations to meet the requirements of the community; (2) Constraints of displacement (areas further from their community or already alienated to other interests); (3) Extra expenses required in monetary terms or additional travel time or necessary changes in technology for the practice or access to resources; and (4) Constraints on current harvesting activities caused by development, regulatory restrictions, reduced resources, contamination and conservation concerns and impediments to the revival of traditions surrounding coastal harvesting activities.

IR10 Information Request	MSA Level of Potential Effect Prediction[2]	MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
the current use experience resulting from marine shipping associated with the proposed Project and the characterisation and significance of residual effects	sense of place, risks to safety and security, and sensory disturbance expected Quality of experience (Pathway #2) – Negligible potential change for all indicators except access. Potentially measurable (up to minor) effect (before Current Use-specific mitigation) is expected on T'Sou-ke's ability to reproduce and transmit cultural heritage associated with potentially measurable access / displacement effect (refer to response to IR10-13)	Pathway #1 – N/A (negligible before Current Use-specific mitigation) Pathway #2 - Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on T'Sou-ke's quality of experience tied to access is expected	The VFPA is of the view that the 4 factors[5] identified in IR10-15 for consideration in the group-specific assessment of changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in MSA Section 9.5.5. The VFPA notes that factors contributing to existing effects are reflected in T'Sou-ke's baseline summary in MSA Section 9.5.6.9, and that these views and T'Sou-ke views about potential effects of Project-associated vessel transit on T'Sou-ke (as referenced in MSA Appendix 5-B), were taken into consideration in the assessment of potential effects on their quality of experience.	No change in MSA predictions for T'Sou-ke in terms of quality of Current Use experience
IR10-16 (MSA)				
Present (the requested group-specific baseline information)[6]	N/A	N/A	No additional information available (refer to T'Sou-ke-specific information provided in MSA Section 9.5.4.6, per **Table IR10-A23-1** above, for available information)	No additional information available

[5] Four factors identified in IR10-15 for consideration in the assessment: (1) Sites of importance to Indigenous groups; (2) Decreased willingness, ability or avoidance by Indigenous peoples to access Current Use sites in or through the marine shipping lanes due to safety concerns and the perception of risk, reduced harvesting opportunities, and/or sensory disturbances; (3) Alienation from existing patterns of traditional harvesting due to the temporary or permanent displacement from areas of importance; and (4) Loss of opportunities for the cultural transmission of Indigenous Knowledge and practices due to the temporary or permanent displacement from those areas of importance.
[6] Additional baseline information requested in IR10-16: (1) The current activities taking place during the day or the night with a quantification of day and night duration; (2) The access required within, outside or through the shipping lanes; (3) The seasons that activities are practiced; (4) The frequency that each Indigenous group crosses the shipping lanes in the marine shipping area; and (5) The minimum and maximum number of vessels per hour in the shipping lanes, by Segment, encountered by Indigenous fishing vessels for Current Use activities in relation to the proposed Project-related ship movements.

Pacheedaht First Nation[1] Group-specific Baseline Information Process Summary (MSA)

Marine Shipping Addendum (MSA)

On May 25, 2015, the VFPA wrote a letter to Pacheedaht First Nation explaining that the VFPA is considering effects from marine shipping associated with the Project on the current use of lands and resources by Pacheedaht First Nation. The VFPA requested information from Pacheedaht First Nation regarding current use of lands and resources for traditional purposes (Current Use), fisheries, or potential effects associated with marine shipping. In the letter, the VFPA explained its intent to rely on existing information to inform the assessment of potential effects associated marine shipping associated with the Project, including information from the Trans Mountain Expansion Project Application to the National Energy Board specific to Pacheedaht First Nation.

On July 23, 2015, the VFPA provided Pacheedaht First Nation with a draft of the existing conditions section for *"Pacheedaht First Nation Current Use of Lands and Resources for Traditional Purposes"* for the MSA and requested that Pacheedaht First Nation confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final MSA.

In a meeting on August 14, 2015 and letter sent on August 17, 2015, Pacheedaht First Nation requested additional funding to support a Pacheedaht First Nation report regarding current use in the marine shipping area. On August 26, 2015, the VFPA and Pacheedaht First Nation signed a funding agreement to support Pacheedaht First Nation's completion of a Traditional Use Study.

The VFPA requested that the Traditional Use Study include information on Pacheedaht's current use of the waters and terrestrial areas adjacent to the Project as well as any foreseeable changes or impacts to these areas that may result from the Project. Information was sought in relation to the location and timing of harvests, how these locations were accessed, specific species that were targeted, how the harvested species were utilised, and the cultural values associated with the harvest.

On September 24, 2015, Pacheedaht First Nation provided the VFPA with a report titled "*Pacheedaht First Nation Traditional Use and Occupancy Study Report for Port Metro Vancouver Roberts Bank Terminal 2 Project."* Information from the report was integrated into the MSA as appropriate.

On November 9, 2015, the VFPA provided Pacheedaht First Nation with a copy of the MSA.

On April 25, 2016, the VFPA provided Pacheedaht First Nation with a table including all Pacheedaht First Nation's comments on the draft sections, responses to each comment from the VFPA, and a description of subsequent changes made to the section in the MSA.

[1] Indigenous group listed in Table 1-C (MSA) of Attachment 2 to IR Package 10.

Pacheedaht First Nation Group-specific Index and Assessment Tables

Table IR10-A24-1 Pacheedaht First Nation Index Table

MSA Section	Original MSA Information Presentation (Aggregated / Disaggregated)	Pacheedaht First Nation
MSA Section 9.5.4 Existing Conditions	Disaggregated	9.5.4.10 Pacheedaht First Nation, pp. 9.5-59 to 9.5-74
MSA Section 9.5.5 Potential Interactions and Effects on Current Use	Aggregated (all Indigenous groups identified as experiencing a similar level of potential effect due to the linear activity of routine vessel transit)	9.5.5 Potential Interactions and Effects on Current Use, Table 9.5-35 (potential negligible-to-minor effect, all Indigenous groups) 9.5.5.1 Negligible Effects of Vessel Transit on Current Use, no differential effects[1] 9.5.5.2 Potential Effects of Vessel Transit on Current Use, no differential effects 9.5.5.3 Summary of Potential Transboundary Effects, not assessed
MSA Section 9.5.6 Suggested Mitigation Measures	Aggregated (to address the potentially minor linear effect on all Indigenous groups)	9.5.6 Suggested Mitigation Measures, no differential measures
MSA Section 9.5.7 Residual Effects Assessment and Significance Determination / Section 9.5.8 Cumulative Effects Assessment / Section 9.5.9 Summary of Assessment / Section 9.5.10 Follow-Up Program	N/A (no residual effects predicted)	N/A (no residual effects predicted)
MSA Section 9.5.11 Potential Impacts on Asserted or Established Aboriginal and Treaty Rights	Aggregated (all Indigenous groups identified as experiencing a similar level of potential impact due to the linear activity of routine vessel transit) Note: Measures identified are exactly the same as for Current Use	9.5.11.1 Approach to the Rights Assessment, Pacheedaht First Nation, p. 9.5-148 9.5.11.2 Results of the Rights Assessment, potential negligible-to-minor impact (all Indigenous groups, no differential impacts) 9.5.11.3 Suggested Mitigation Measures, no differential measures 9.5.11.4 Residual Effects, N/A (no residual effects predicted)
IR/AIR	N/A	MSA IR-02.24.16-13 Aboriginal and Treaty Rights and Related Interests, Table MSA IR13-1 Mitigation Measures Proposed by Aboriginal Groups for Potential Adverse Impacts to Potential or Established Aboriginal and Treaty Rights and Related Interests, Pacheedaht First Nation, p. 2 (CEAR Document #391)
Issues Tracking Table	MSA – Aggregated	MSA – See forthcoming response to IR10-01 for disaggregated issues tracking table
Indigenous Traditional Knowledge (ITK)	MSA – MSA IR-02.24.16-08 (Aggregated) (CEAR Document #391)	MSA – See response to IR10-02 for disaggregated ITK

[1] In this table, a potential effect is described as a "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be the same for all groups (i.e., negligible-to-minor). Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-C and 1-D Indigenous groups.

Table IR10-A24-2 Pacheedaht First Nation Assessment Table (Information Request Package 10)

IR10 Information Request	MSA Level of Potential Effect Prediction[2]	MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR Package 10 (IR10)				
IR10-13 (MSA)				
Provide a group-specific assessment of potential effects and the characterisation of residual effects of the marine shipping associated with the proposed Project on current use in terms of changes to access and availability and quality of preferred marine resources	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Pacheedaht as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Pacheedaht access to preferred locations as a result of Project-associated ship pass-bys is expected	*Part 1 – Additional baseline information regarding harvesting and other Current Use activities* – No additional information (refer to Pacheedaht-specific information provided in MSA Section 9.5.4.10, per **Table IR10-A24-1** above, for available information)[3] *Part 2 - Maps of marine harvest sites* – Spatial information for Pacheedaht (including maps) considered by the VFPA in the MSA Current Use assessment *Part 3(1) – List of issues / concerns regarding Project-associated vessel transit* – Identified for in list of issues in MSA Appendix 5-B (also refer to the Pacheedaht-specific issues tracking table in the forthcoming IR10-01 response) *Part 3(2) – Adequacy of Proponent's response* – Refer to IR10-13 response *Part 3(3) – Proponent's views on thresholds of acceptability and risk* - Refer to IR10-13 response	No change in MSA predictions for Pacheedaht in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Pacheedaht as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Pacheedaht as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
IR10-14 (MSA)				
Consider (on a group-specific basis) the socio-economic implications of potential or necessary displacement (permanent or temporary)[4]	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Pacheedaht as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Pacheedaht access to preferred locations as a result of Project-associated ship pass-bys is expected	The VFPA is of the view that Pacheedaht's views regarding existing constraints on access, as described in MSA Section 9.5.4.10, as well as Pacheedaht's views regarding potential effects of Project-associated vessel transit, described in MSA Appendix 5-B, were already sufficiently considered in the VFPA's predictions in MSA Section 9.5.5 regarding a potential access effect on Pacheedaht as a result of Project-associated vessel transit.	As the predicted Current Use access effect on Pacheedaht is expected to be addressed through the suggested mitigation identified in MSA Section 9.5.6, no residual economic effects for Pacheedaht are anticipated
IR10-15 (MSA)				
Provide a group-specific assessment of potential effect of the changes in quality of	Quality of experience (Pathway #1) – Negligible potential change in Pacheedaht			

[2] The level of potential effect prediction identified in this column refers to the predicted level of effect *before* Current Use-specific measures are taken into account, but *after* measures related to linked valued components (if applicable) have been considered. The next column refers to the level of residual effect prediction after *both* linked valued component measures (if applicable) and Current Use-specific measures have been taken into account.
[3] Additional baseline information requested in IR10-13 for consideration in the assessment: (1) Preferred species and locations; (2) Timing of the current use activities, such as frequency, duration and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access for groups using the shipping lanes for fishing, groups traveling through the shipping lanes to access fishing, harvesting and cultural sites and, groups using the marine shipping area adjacent to the marine shipping lanes.
[4] Implications identified in IR10-14 for consideration in the assessment: (1) Sufficiency of resources at alternate locations to meet the requirements of the community; (2) Constraints of displacement (areas further from their community or already alienated to other interests); (3) Extra expenses required in monetary terms or additional travel time or necessary changes in technology for the practice or access to resources; and (4) Constraints on current harvesting activities caused by development, regulatory restrictions, reduced resources, contamination and conservation concerns and impediments to the revival of traditions surrounding coastal harvesting activities.

IR10 Information Request	MSA Level of Potential Effect Prediction[2]	MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
the current use experience resulting from marine shipping associated with the proposed Project and the characterisation and significance of residual effects	sense of place, risks to safety and security, and sensory disturbance expected Quality of experience (Pathway #2) – Negligible potential change for all indicators except access. Potentially measurable (up to minor) effect (before Current Use-specific mitigation) is expected on Pacheedaht's ability to reproduce and transmit cultural heritage associated with potentially measurable access / displacement effect (refer to response to IR10-13)	Pathway #1 – N/A (negligible before Current Use-specific mitigation) Pathway #2 - Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Pacheedaht's quality of experience tied to access is expected	The VFPA is of the view that the 4 factors[5] identified in IR10-15 for consideration in the group-specific assessment of changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in MSA Section 9.5.5. The VFPA notes that factors contributing to existing effects are reflected in Pacheedaht's baseline summary in MSA Section 9.5.6.10, and that these views and Pacheedaht's views about potential effects of Project-associated vessel transit on Pacheedaht (as referenced in MSA Appendix 5-B), were taken into consideration in the assessment of potential effects on their quality of experience.	No change in MSA predictions for Pacheedaht in terms of quality of Current Use experience

Present (the requested group-specific baseline information)[6]	N/A	N/A	No additional information available (refer to Pacheedaht-specific information provided in MSA Section 9.5.4.10, per **Table IR10-A24-1** above, for available information)	No additional information available

[5] Four factors identified in IR10-15 for consideration in the assessment: (1) Sites of importance to Indigenous groups; (2) Decreased willingness, ability or avoidance by Indigenous peoples to access Current Use sites in or through the marine shipping lanes due to safety concerns and the perception of risk, reduced harvesting opportunities, and/or sensory disturbances; (3) Alienation from existing patterns of traditional harvesting due to the temporary or permanent displacement from areas of importance; and (4) Loss of opportunities for the cultural transmission of Indigenous Knowledge and practices due to the temporary or permanent displacement from those areas of importance.
[6] Additional baseline information requested in IR10-16: (1) The current activities taking place during the day or the night with a quantification of day and night duration; (2) The access required within, outside or through the shipping lanes; (3) The seasons that activities are practiced; (4) The frequency that each Indigenous group crosses the shipping lanes in the marine shipping area; and (5) The minimum and maximum number of vessels per hour in the shipping lanes, by Segment, encountered by Indigenous fishing vessels for Current Use activities in relation to the proposed Project-related ship movements.

Ditidaht First Nation[1] Group-specific Baseline Information Process Summary (MSA)

Marine Shipping Addendum (MSA)

On May 25, 2015, the VFPA wrote a letter to Ditidaht First Nation explaining that the VFPA is considering effects from marine shipping associated with the Project on the current use of lands and resources by Ditidaht First Nation. The VFPA requested information from Ditidaht First Nation regarding current use of lands and resources for traditional purposes (Current Use), fisheries, or potential effects associated with marine shipping. In the letter, the VFPA explained its intent to rely on existing information to inform the assessment of potential effects associated marine shipping associated with the Project, including information from the Trans Mountain Expansion Project Application to the National Energy Board specific to Ditidaht First Nation. The VFPA also offered to provide funding to support Ditidaht First Nation's participation in consultation.

On June 22, 2015, Ditidaht First Nation responded requesting additional funding to support a Project-specific Indigenous Knowledge report. On July 31, 2015, the VFPA and Ditidaht First Nation signed a funding agreement to support Ditidaht First Nation's completion of a traditional use study.

On July 20, 2015, the VFPA provided Ditidaht First Nation with a draft section of the MSA titled *"Ditidaht First Nation Current Use of Lands and Resources for Traditional Purposes."* The VFPA requested that Ditidaht First Nation confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final MSA.

On July 31, 2015, Ditidaht First Nation provided the VFPA with the report "*Preliminary Issues and Concerns Regarding Port Metro Vancouver's Roberts Bank Terminal 2 Project*."

On September 30, 2015, the VFPA provided a revised draft of the existing conditions section for *"Ditidaht First Nation Current Use of Lands and Resources for Traditional Purposes"* for the MSA, which was updated to incorporate information contained in Ditidaht First Nation's report. The VFPA requested that Ditidaht First Nation confirm the accuracy of the information presented and whether any revisions, additions, or deletions are required. Additional comments were provided by Ditidaht First Nation on October 5, 2015 and were integrated into the final MSA as appropriate.

On October 10, 2015, Ditidaht First Nation replied that they were content with the *"Ditidaht First Nation Current Use of Lands and Resources for Traditional Purposes"* section of the MSA.

On November 9, 2015, the VFPA provided Ditidaht First Nation with a copy of the MSA.

On April 25, 2016, the VFPA provided Ditidaht First Nation with a table including all Ditidaht First Nation's comments on the draft section, responses to each comment from the VFPA, and a description of subsequent changes made to the section in the MSA.

[1] Indigenous group listed in Table 1-C (MSA) of Attachment 2 to IR Package 10.

[1] In this table, a potential effect is described as a "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be the same for all groups (i.e., negligible-to-minor). Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-C and 1-D Indigenous groups.

Table IR10-A25-2 Ditidaht First Nation Assessment Table (Information Request Package 10)

IR10 Information Request	MSA Level of Potential Effect Prediction[2]	MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR Package 10 (IR10)				
IR10-13 (MSA)				
Provide a group-specific assessment of potential effects and the characterisation of residual effects of the marine shipping associated with the proposed Project on current use in terms of changes to access and availability and quality of preferred marine resources	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Ditidaht as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Ditidaht access to preferred locations as a result of Project-associated ship pass-bys is expected	*Part 1 – Additional baseline information regarding harvesting and other Current Use activities* – No additional information (refer to Ditidaht-specific information provided in MSA Section 9.5.4.11, per **Table IR10-A25-1** above, for available information)[3] *Part 2 - Maps of marine harvest sites* – Spatial information for Ditidaht (including maps) considered by the VFPA in the MSA Current Use assessment *Part 3(1) – List of issues / concerns regarding Project-associated vessel transit* – Identified for Ditidaht in list of issues in MSA Appendix 5-B (also refer to the Ditidaht-specific issues tracking table in the forthcoming IR10-01 response) *Part 3(2) – Adequacy of Proponent's response* – Refer to IR10-13 response *Part 3(3) – Proponent's views on thresholds of acceptability and risk* - Refer to IR10-13 response	No change in MSA predictions for Ditidaht in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Ditidaht as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Ditidaht as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
IR10-14 (MSA)				
Consider (on a group-specific basis) the socio-economic implications of potential or necessary displacement (permanent or temporary)[4]	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Ditidaht as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Ditidaht access to preferred locations as a result of Project-associated ship pass-bys is expected	The VFPA is of the view that Ditidaht's views regarding existing constraints on access, as described in MSA Section 9.5.4.11, as well as Ditidaht's views regarding potential effects of Project-associated vessel transit, described in MSA Appendix 5-B, were already sufficiently considered in the VFPA's predictions in MSA Section 9.5.5 regarding a potential access effect on Ditidaht as a result of Project-associated vessel transit.	As the predicted Current Use access effect on Ditidaht is expected to be addressed through the suggested mitigation identified in MSA Section 9.5.6, no residual economic effects for Ditidaht are anticipated
IR10-15 (MSA)				
Provide a group-specific assessment of potential effect of the changes in quality of the current use experience resulting from marine shipping associated with the	Quality of experience (Pathway #1) – Negligible potential change in Ditidaht sense of place, risks to safety and security, and sensory disturbance expected	Pathway #1 – N/A (negligible before Current Use-specific mitigation) Pathway #2 - Negligible – Taking suggested mitigation into account (refer to responses	The VFPA is of the view that the 4 factors[5] identified in IR10-15 for consideration in the group-specific assessment of changes in the quality of Current Use experience resulting from	No change in MSA predictions for Ditidaht in terms of quality of Current Use experience

[2] The level of potential effect prediction identified in this column refers to the predicted level of effect *before* Current Use-specific measures are taken into account, but *after* measures related to linked valued components (if applicable) have been considered. The next column refers to the level of residual effect prediction after *both* linked valued component measures (if applicable) and Current Use-specific measures have been taken into account.
[3] Additional baseline information requested in IR10-13 for consideration in the assessment: (1) Preferred species and locations; (2) Timing of the current use activities, such as frequency, duration and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access for groups using the shipping lanes for fishing, groups traveling through the shipping lanes to access fishing, harvesting and cultural sites and, groups using the marine shipping area adjacent to the marine shipping lanes.
[4] Implications identified in IR10-14 for consideration in the assessment: (1) Sufficiency of resources at alternate locations to meet the requirements of the community; (2) Constraints of displacement (areas further from their community or already alienated to other interests); (3) Extra expenses required in monetary terms or additional travel time or necessary changes in technology for the practice or access to resources; and (4) Constraints on current harvesting activities caused by development, regulatory restrictions, reduced resources, contamination and conservation concerns and impediments to the revival of traditions surrounding coastal harvesting activities.
[5] Four factors identified in IR10-15 for consideration in the assessment: (1) Sites of importance to Indigenous groups; (2) Decreased willingness, ability or avoidance by Indigenous peoples to access Current Use sites in or through the marine shipping lanes due to safety concerns and the perception of risk, reduced harvesting opportunities, and/or sensory disturbances; (3) Alienation from existing patterns of traditional harvesting due to the temporary or permanent displacement from areas of importance; and (4) Loss of opportunities for the cultural transmission of Indigenous Knowledge and practices due to the temporary or permanent displacement from those areas of importance.

IR10 Information Request	MSA Level of Potential Effect Prediction[2]	MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
proposed Project and the characterisation and significance of residual effects	Quality of experience (Pathway #2) – Negligible potential change for all indicators except access. Potentially measurable (up to minor) effect (before Current Use-specific mitigation) is expected on Ditidaht's ability to reproduce and transmit cultural heritage associated with potentially measurable access / displacement effect (refer to response to IR10-13)	to IR10-17 through IR10-20), no residual effect on Ditidaht's quality of experience tied to access is expected	the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in MSA Section 9.5.5. The VFPA notes that factors contributing to existing effects are reflected in Ditidaht's baseline summary in MSA Section 9.5.6.11, and that these views and Ditidaht's views about potential effects of Project-associated vessel transit on Ditidaht (as referenced in MSA Appendix 5-B), were taken into consideration in the assessment of potential effects on their quality of experience.	
IR10-16 (MSA)				
Present (the requested group-specific baseline information)[6]	N/A	N/A	No additional information available (refer to Ditidaht-specific information provided in MSA Section 9.5.4.11, per **Table IR10-A25-1** above, for available information)	No additional information available

[6] Additional baseline information requested in IR10-16: (1) The current activities taking place during the day or the night with a quantification of day and night duration; (2) The access required within, outside or through the shipping lanes; (3) The seasons that activities are practiced; (4) The frequency that each Indigenous group crosses the shipping lanes in the marine shipping area; and (5) The minimum and maximum number of vessels per hour in the shipping lanes, by Segment, encountered by Indigenous fishing vessels for Current Use activities in relation to the proposed Project-related ship movements.

Huu-ay-aht First Nations[1] Group-specific Baseline Information Process Summary (MSA)

Marine Shipping Addendum (MSA)

On May 25, 2015, the VFPA wrote a letter to each member nation of the Maa-nulth First Nations[2], including Huu-ay-aht First Nations, explaining that the VFPA is considering effects from marine shipping associated with the Project on the current use of lands and resources by the Maa-nulth First Nations. The letter requested information from Huu-ay-aht First Nations regarding current use of lands and resources for traditional purposes (Current Use), fisheries, or potential effects associated with marine shipping. In the letter, the VFPA explained its intent to rely on existing information to inform the assessment of potential effects associated marine shipping associated with the Project. The VFPA also offered to provide funding to support Huu-ay-aht First Nations' participation in consultation, and the funding was accepted by Huu-ay-aht First Nations.

On July 27, 2015, the VFPA provided Huu-ay-aht First Nations with a draft of the section of the MSA titled *"Maa-nulth First Nations Current Use of Lands and Resources for Traditional Purposes."* The VFPA requested that they confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final MSA.

Comments on the draft Current Use summary were provided by Huu-ay-aht First Nations on August 27, 2015.

On September 18, 2015, the VFPA responded to Huu-ay-aht First Nations stating that comments on the draft summary will be considered and incorporated into the MSA.

On November 9, 2015, the VFPA provided Huu-ay-aht First Nations with a copy of the MSA.

On April 25, 2016, the VFPA wrote to Huu-ay-aht First Nations providing them with a table including all comments on the draft section, responses to each comment from the VFPA, and a description of subsequent changes made to the section in the MSA.

[1] Indigenous group listed in Table 1-C (MSA) of Attachment 2 to IR Package 10 (identified in that table without reference to the Maa-nulth First Nations, but identified only in relation to the Maa-nulth First Nations in the Updated EIS Guidelines).
[2] Maa-nulth First Nations include Huu-ay-aht First Nations, Ka:'yu:'k't'h'/Che:k'tles7et'h' First Nation, Toquaht Nation, Uchucklesaht Tribe, and Ucluelet First Nation.

Ka:'yu:'k't'h'/Che:k'tles7et'h First Nations[1] Group-specific Baseline Information Process Summary (MSA)

Marine Shipping Addendum (MSA)

On May 25, 2015, the VFPA wrote a letter to each member nation of the Maa-nulth First Nations, including Ka:'yu:'k't'h'/Che:k'tles7et'h First Nations, explaining that the VFPA is considering effects from marine shipping associated with the Project on the current use of lands and resources by the Maa-nulth First Nations. The letter requested information from Ka:'yu:'k't'h'/Che:k'tles7et'h First Nations regarding current use of lands and resources for traditional purposes (Current Use), fisheries, or potential effects associated with marine shipping. In the letter, the VFPA explained its intent to rely on existing information to inform the assessment of potential effects associated marine shipping associated with the Project. The VFPA also offered to provide funding to support Ka:'yu:'k't'h'/Che:k'tles7et'h First Nations' participation in consultation. The funding was accepted by Ka:'yu:'k't'h'/Che:k'tles7et'h First Nations.

On July 27, 2015, the VFPA provided the Maa-nulth Treaty Society[2] and Ka:'yu:'k't'h'/Che:k'tles7et'h First Nations with a draft of the section of the MSA titled *"Maa-nulth First Nations Current Use of Lands and Resources for Traditional Purposes."* The VFPA requested that they confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final MSA.

Comments on the draft Current Use summary were provided by the Maa-nulth Treaty Society, on behalf of Ka:'yu:'k't'h'/Che:k'tles7et'h First Nations, on September 16, 2015.

On October 29, 2015, the VFPA responded to the Maa-nulth Treaty Society stating that comments on the draft summary will be considered and incorporated into the MSA.

On November 9, 2015, the VFPA provided the Maa-nulth Treaty Society and Ka:'yu:'k't'h'/Che:k'tles7et'h First Nations with a copy of the MSA.

On April 25, 2016, the VFPA wrote to the Maa-nulth Treaty Society providing them with a table including all comments on the draft section, responses to each comment from the VFPA, and a description of subsequent changes made to the section in the MSA.

[1] Indigenous group listed in Table 1-C (MSA) of Attachment 2 to IR Package 10 (identified in that table without reference to the Maa-nulth First Nations, but identified only in relation to the Maa-nulth First Nations in the Updated EIS Guidelines).
[2] At this time, the Maa-nulth Treaty Society acted on behalf of Ka:'yu:'k't'h'/Che:k'tles7et'h First Nations, Toquaht Nation, Uchucklesaht Tribe, and Ucluelet First Nation.

	Quality of resources – Negligible potential change in quality of Current Use resources expected for Ka:'yu:'k't'h'/Che:k'tles7et'h as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
IR10-14 (MSA)				
Consider (on a group-specific basis) the socio-economic implications of potential or necessary displacement (permanent or temporary)[4]	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Ka:'yu:'k't'h'/Che:k'tles7et'h as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Ka:'yu:'k't'h'/Che:k'tles7et'h access to preferred locations as a result of Project-associated ship pass-bys is expected	The VFPA is of the view that Ka:'yu:'k't'h'/Che:k'tles7et'h's views regarding existing constraints on access, as described in MSA Section 9.5.4.7, as well as Ka:'yu:'k't'h'/Che:k'tles7et'h's views regarding potential effects of Project-associated vessel transit, described in MSA Appendix 5-B, were already sufficiently considered in the VFPA's predictions in MSA Section 9.5.5 regarding a potential access effect on Ka:'yu:'k't'h'/Che:k'tles7et'h as a result of Project-associated vessel transit.	As the predicted Current Use access effect on Ka:'yu:'k't'h'/Che:k'tles7et'h is expected to be addressed through the suggested mitigation identified in MSA Section 9.5.6, no residual economic effects for Ka:'yu:'k't'h'/Che:k'tles7et'h are anticipated

[2] The level of potential effect prediction identified in this column refers to the predicted level of effect *before* Current Use-specific measures are taken into account, but *after* measures related to linked valued components (if applicable) have been considered. The next column refers to the level of residual effect prediction after *both* linked valued component measures (if applicable) and Current Use-specific measures have been taken into account.
[3] Additional baseline information requested in IR10-13 for consideration in the assessment: (1) Preferred species and locations; (2) Timing of the current use activities, such as frequency, duration and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access for groups using the shipping lanes for fishing, groups traveling through the shipping lanes to access fishing, harvesting and cultural sites and, groups using the marine shipping area adjacent to the marine shipping lanes.
[4] Implications identified in IR10-14 for consideration in the assessment: (1) Sufficiency of resources at alternate locations to meet the requirements of the community; (2) Constraints of displacement (areas further from their community or already alienated to other interests); (3) Extra expenses required in monetary terms or additional travel time or necessary changes in technology for the practice or access to resources; and (4) Constraints on current harvesting activities caused by development, regulatory restrictions, reduced resources, contamination and conservation concerns and impediments to the revival of traditions surrounding coastal harvesting activities.

IR10 Information Request	MSA Level of Potential Effect Prediction[2]	MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR10-15 (MSA)				
Provide a group-specific assessment of potential effect of the changes in quality of the current use experience resulting from marine shipping associated with the proposed Project and the characterisation and significance of residual effects	Quality of experience (Pathway #1) – Negligible potential change in Ka:'yu:'k't'h'/Che:k'tles7et'h's sense of place, risks to safety and security, and sensory disturbance expected Quality of experience (Pathway #2) – Negligible potential change for all indicators except access. Potentially measurable (up to minor) effect (before Current Use-specific mitigation) is expected on Ka:'yu:'k't'h'/Che:k'tles7et'h's ability to reproduce and transmit cultural heritage associated with potentially measurable access / displacement effect (refer to response to IR10-13)	Pathway #1 – N/A (negligible before Current Use-specific mitigation) Pathway #2 - Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Ka:'yu:'k't'h'/Che:k'tles7et'h's quality of experience tied to access is expected	The VFPA is of the view that the 4 factors[5] identified in IR10-15 for consideration in the group-specific assessment of changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in MSA Section 9.5.5. The VFPA notes that factors contributing to existing effects are reflected in Ka:'yu:'k't'h'/Che:k'tles7et'h's baseline summary in MSA Section 9.5.6.12, and that these views and Ka:'yu:'k't'h'/Che:k'tles7et'h's views about potential effects of Project-associated vessel transit on Ka:'yu:'k't'h'/Che:k'tles7et'h (as referenced in MSA Appendix 5-B), were taken into consideration in the assessment of potential effects on their quality of experience.	No change in MSA predictions for Ka:'yu:'k't'h'/Che:k'tles7et'h in terms of quality of Current Use experience
IR10-16 (MSA)				
Present (the requested group-specific baseline information)[6]	N/A	N/A	No additional information available (refer to Ka:'yu:'k't'h'/Che:k'tles7et'h -specific information provided in MSA Section 9.5.4.12, per **Table IR10-A27-1** above, for available information)	No additional information available

[5] Four factors identified in IR10-15 for consideration in the assessment: (1) Sites of importance to Indigenous groups; (2) Decreased willingness, ability or avoidance by Indigenous peoples to access Current Use sites in or through the marine shipping lanes due to safety concerns and the perception of risk, reduced harvesting opportunities, and/or sensory disturbances; (3) Alienation from existing patterns of traditional harvesting due to the temporary or permanent displacement from areas of importance; and (4) Loss of opportunities for the cultural transmission of Indigenous Knowledge and practices due to the temporary or permanent displacement from those areas of importance.
[6] Additional baseline information requested in IR10-16: (1) The current activities taking place during the day or the night with a quantification of day and night duration; (2) The access required within, outside or through the shipping lanes; (3) The seasons that activities are practiced; (4) The frequency that each Indigenous group crosses the shipping lanes in the marine shipping area; and (5) The minimum and maximum number of vessels per hour in the shipping lanes, by Segment, encountered by Indigenous fishing vessels for Current Use activities in relation to the proposed Project-related ship movements.

Toquaht Nation[1] Group-specific Baseline Information Process Summary (MSA)

Marine Shipping Addendum (MSA)

On May 25, 2015, the VFPA wrote a letter to each member nation of the Maa-nulth First Nations, including Toquaht Nation, explaining that the VFPA is considering effects from marine shipping associated with the Project on the current use of lands and resources by the Maa-nulth First Nations. The letter requested information from Toquaht Nation regarding current use of lands and resources for traditional purposes (Current Use), fisheries, or potential effects associated with marine shipping. In the letter, the VFPA explained its intent to rely on existing information to inform the assessment of potential effects associated marine shipping associated with the Project. The VFPA also offered to provide funding to support Toquaht Nation's participation in consultation. The funding was accepted by Toquaht Nation.

On July 27, 2015, the VFPA provided the Maa-nulth Treaty Society[2] and Toquaht Nation with a draft of the section of the MSA titled *"Maa-nulth First Nations Current Use of Lands and Resources for Traditional Purposes."* The VFPA requested that they confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final MSA.

Comments on the draft Current Use summary were provided by the Maa-nulth Treaty Society, on behalf of Toquaht Nation, on September 16, 2015.

On October 29, 2015, the VFPA responded to the Maa-nulth Treaty Society stating that comments on the draft summary will be considered and incorporated into the MSA.

On November 9, 2015, the VFPA provided the Maa-nulth Treaty Society and Toquaht Nation with a copy of the MSA.

On April 25, 2016, the VFPA wrote to the Maa-nulth Treaty Society providing them with a table including all comments on the draft section, responses to each comment from the VFPA, and a description of subsequent changes made to the section in the MSA.

[1] Indigenous group listed in Table 1-C (MSA) of Attachment 2 to IR Package 10 (identified in that table without reference to the Maa-nulth First Nations, but identified only in relation to the Maa-nulth First Nations in the Updated EIS Guidelines).
[2] At this time, the Maa-nulth Treaty Society acted on behalf of Ka:'yu:'k't'h'/Che:k'tles7et'h First Nations, Toquaht Nation, Uchucklesaht Tribe, and Ucluelet First Nation.

Toquaht Nation Group-specific Index and Assessment Tables

Table IR10-A28-1 Toquaht Nation Index Table

MSA Section	Original MSA Information Presentation (Aggregated / Disaggregated)	Toquaht Nation
MSA Section 9.5.4 Existing Conditions	Disaggregated	9.5.4.12 Maa-nulth First Nations (including Toquaht Nation), pp. 9.5-84 to 9.5-95
MSA Section 9.5.5 Potential Interactions and Effects on Current Use	Aggregated (all Indigenous groups identified as experiencing a similar level of potential effect due to the linear activity of routine vessel transit)	9.5.5 Potential Interactions and Effects on Current Use, Table 9.5-35 (potential negligible-to-minor effect, all Indigenous groups) 9.5.5.1 Negligible Effects of Vessel Transit on Current Use, no differential effects[1] 9.5.5.2 Potential Effects of Vessel Transit on Current Use, no differential effects 9.5.5.3 Summary of Potential Transboundary Effects, not assessed
MSA Section 9.5.6 Suggested Mitigation Measures	Aggregated (to address the potentially minor linear effect on all Indigenous groups)	9.5.6 Suggested Mitigation Measures, no differential measures
MSA Section 9.5.7 Residual Effects Assessment and Significance Determination / Section 9.5.8 Cumulative Effects Assessment / Section 9.5.9 Summary of Assessment / Section 9.5.10 Follow-Up Program	N/A (no residual effects predicted)	N/A (no residual effects predicted)
MSA Section 9.5.11 Potential Impacts on Asserted or Established Aboriginal and Treaty Rights	Aggregated (all Indigenous groups identified as experiencing a similar level of potential impact due to the linear activity of routine vessel transit) Note: Measures identified are exactly the same as for Current Use	9.5.11.1 Approach to the Rights Assessment, Maa-nulth First Nations (including Toquaht Nation), p. 9.5-149 9.5.11.2 Results of the Rights Assessment, potential negligible-to-minor impact (all Indigenous groups, no differential impacts) 9.5.11.3 Suggested Mitigation Measures, no differential measures 9.5.11.4 Residual Effects, N/A (no residual effects predicted)
IR/AIR	N/A	MSA IR-02.24.16-13 Aboriginal and Treaty Rights and Related Interests, Table MSA IR13-1 Mitigation Measures Proposed by Aboriginal Groups for Potential Adverse Impacts to Potential or Established Aboriginal and Treaty Rights and Related Interests, Maa-nulth First Nations (including Toquaht Nation), p. 3 (CEAR Document #391)
Issues Tracking Tables	MSA – Aggregated	MSA – See forthcoming response to IR10-01 for disaggregated issues tracking tables
Indigenous Traditional Knowledge (ITK)	MSA – MSA IR-02.24.16-08 (Aggregated) (CEAR Document #391)	MSA – See response to IR10-02 for disaggregated ITK

[1] In this table, a potential effect is described as a "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be the same for all groups (i.e., negligible-to-minor). Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-C and 1-D Indigenous groups.

IR10 Information Request	MSA Level of Potential Effect Prediction[2]	MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR Package 10 (IR10)				
IR10-13 (MSA)				
Provide a group-specific assessment of potential effects and the characterisation of residual effects of the marine shipping associated with the proposed Project on current use in terms of changes to access and availability and quality of preferred marine resources	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Toquaht as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Toquaht's access to preferred locations as a result of Project-associated ship pass-bys is expected	*Part 1 – Additional baseline information regarding harvesting and other Current Use activities* – No additional information (refer to Toquaht-specific information provided in MSA Section 9.5.4.12, per **Table IR10-A28-1** above, for available information)[3] *Part 2 - Maps of marine harvest sites* – Spatial information for Toquaht (including maps) considered by the VFPA in the MSA Current Use assessment *Part 3(1) – List of issues / concerns regarding Project-associated vessel transit* – Identified for Toquaht / Maa-nulth in list of issues in MSA Appendix 5-B (also refer to the Maa-nulth-specific issues tracking table in the forthcoming IR10-01 response) *Part 3(2) – Adequacy of Proponent's response* – Refer to IR10-13 response *Part 3(3) – Proponent's views on thresholds of acceptability and risk* - Refer to IR10-13 response	No change in MSA predictions for Toquaht in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Toquaht as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Toquaht as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
IR10-14 (MSA)				
Consider (on a group-specific basis) the socio-economic implications of potential or necessary displacement (permanent or temporary)[4]	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Toquaht as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Toquaht's access to preferred locations as a result of Project-associated ship pass-bys is expected	The VFPA is of the view that Toquaht's views regarding existing constraints on access, as described in MSA Section 9.5.4.7, as well as Toquaht's views regarding potential effects of Project-associated vessel transit, described in MSA Appendix 5-B, were already sufficiently considered in the VFPA's predictions in MSA Section 9.5.5 regarding a potential access effect on Toquaht as a result of Project-associated vessel transit.	As the predicted Current Use access effect on Toquaht is expected to be addressed through the suggested mitigation identified in MSA Section 9.5.6, no residual economic effects for Toquaht are anticipated
IR10-15 (MSA)				
Provide a group-specific assessment of potential effect of the changes in quality of the current use experience resulting from marine shipping associated with the proposed Project and the	Quality of experience (Pathway #1) – Negligible potential change in Toquaht's sense of place, risks to safety and security, and sensory disturbance expected	Pathway #1 – N/A (negligible before Current Use-specific mitigation) Pathway #2 - Negligible – Taking suggested mitigation into account (refer to responses to	The VFPA is of the view that the 4 factors[5] identified in IR10-15 for consideration in the group-specific assessment of changes in the quality of Current Use experience resulting from	No change in MSA predictions for Toquaht in terms of quality of Current Use experience

[2] The level of potential effect prediction identified in this column refers to the predicted level of effect *before* Current Use-specific measures are taken into account, but *after* measures related to linked valued components (if applicable) have been considered. The next column refers to the level of residual effect prediction after *both* linked valued component measures (if applicable) and Current Use-specific measures have been taken into account.
[3] Additional baseline information requested in IR10-13 for consideration in the assessment: (1) Preferred species and locations; (2) Timing of the current use activities, such as frequency, duration and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access for groups using the shipping lanes for fishing, groups traveling through the shipping lanes to access fishing, harvesting and cultural sites and, groups using the marine shipping area adjacent to the marine shipping lanes.
[4] Implications identified in IR10-14 for consideration in the assessment: (1) Sufficiency of resources at alternate locations to meet the requirements of the community; (2) Constraints of displacement (areas further from their community or already alienated to other interests); (3) Extra expenses required in monetary terms or additional travel time or necessary changes in technology for the practice or access to resources; and (4) Constraints on current harvesting activities caused by development, regulatory restrictions, reduced resources, contamination and conservation concerns and impediments to the revival of traditions surrounding coastal harvesting activities.
[5] Four factors identified in IR10-15 for consideration in the assessment: (1) Sites of importance to Indigenous groups; (2) Decreased willingness, ability or avoidance by Indigenous peoples to access Current Use sites in or through the marine shipping lanes due to safety concerns and the perception of risk, reduced harvesting opportunities, and/or sensory disturbances; (3) Alienation from existing patterns of traditional harvesting due to the temporary or permanent displacement from areas of importance; and (4) Loss of opportunities for the cultural transmission of Indigenous Knowledge and practices due to the temporary or permanent displacement from those areas of importance.

IR10 Information Request	MSA Level of Potential Effect Prediction[2]	MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
characterisation and significance of residual effects	Quality of experience (Pathway #2) – Negligible potential change for all indicators except access. Potentially measurable (up to minor) effect (before Current Use-specific mitigation) is expected on Toquaht's ability to reproduce and transmit cultural heritage associated with potentially measurable access / displacement effect (refer to response to IR10-13)	IR10-17 through IR10-20), no residual effect on Toquaht's quality of experience tied to access is expected	the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in MSA Section 9.5.5. The VFPA notes that factors contributing to existing effects are reflected in Toquaht's baseline summary in MSA Section 9.5.6.12, and that these views and Toquaht's views about potential effects of Project-associated vessel transit on Toquaht (as referenced in MSA Appendix 5-B), were taken into consideration in the assessment of potential effects on their quality of experience.	
IR10-16 (MSA)				
Present (the requested group-specific baseline information)[6]	N/A	N/A	No additional information available (refer to Toquaht-specific information provided in MSA Section 9.5.4.12, per **Table IR10-A28-1** above, for available information)	No additional information available

[6] Additional baseline information requested in IR10-16: (1) The current activities taking place during the day or the night with a quantification of day and night duration; (2) The access required within, outside or through the shipping lanes; (3) The seasons that activities are practiced; (4) The frequency that each Indigenous group crosses the shipping lanes in the marine shipping area; and (5) The minimum and maximum number of vessels per hour in the shipping lanes, by Segment, encountered by Indigenous fishing vessels for Current Use activities in relation to the proposed Project-related ship movements.

Uchucklesaht Tribe[1] Group-specific Baseline Information Process Summary (MSA)

Marine Shipping Addendum (MSA)

On May 25, 2015, the VFPA wrote a letter to each member nation of the Maa-nulth First Nations, including Uchucklesaht Tribe, explaining that the VFPA is considering effects from marine shipping associated with the Project on the current use of lands and resources by the Maa-nulth First Nations. The letter requested information from Uchucklesaht Tribe regarding current use of lands and resources for traditional purposes (Current Use), fisheries, or potential effects associated with marine shipping. In the letter, the VFPA explained its intent to rely on existing information to inform the assessment of potential effects associated marine shipping associated with the Project. The VFPA also offered to provide funding to support Uchucklesaht Tribe's participation in consultation. The funding was accepted by Uchucklesaht Tribe.

On July 27, 2015, the VFPA provided the Maa-nulth Treaty Society[2] and Uchucklesaht Tribe with a draft of the section of the MSA titled *"Maa-nulth First Nations Current Use of Lands and Resources for Traditional Purposes."* The VFPA requested that they confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final MSA.

Comments on the draft Current Use summary were provided by the Maa-nulth Treaty Society, on behalf of Uchucklesaht Tribe, on September 16, 2015.

On October 29, 2015, the VFPA responded to the Maa-nulth Treaty Society stating that comments on the draft summary will be considered and incorporated into the MSA.

On November 9, 2015, the VFPA provided the Maa-nulth Treaty Society and Uchucklesaht Tribe with a copy of the MSA.

On April 25, 2016, the VFPA wrote to the Maa-nulth Treaty Society providing them with a table including all comments on the draft section, responses to each comment from the VFPA, and a description of subsequent changes made to the section in the MSA.

[1] Indigenous group listed in Table 1-C (MSA) of Attachment 2 to IR Package 10 (identified in that table without reference to the Maa-nulth First Nations, but identified only in relation to the Maa-nulth First Nations in the Updated EIS Guidelines).
[2] At this time, the Maa-nulth Treaty Society acted on behalf of Ka:'yu:'k't'h'/Che:k'tles7et'h First Nations, Toquaht Nation, Uchucklesaht Tribe, and Ucluelet First Nation.

Uchucklesaht Tribe Group-specific Index and Assessment Tables

Table IR10-A29-1 Uchucklesaht Tribe Index Table

MSA Section	Original MSA Information Presentation (Aggregated / Disaggregated)	Uchucklesaht Tribe
MSA Section 9.5.4 Existing Conditions	Disaggregated	9.5.4.12 Maa-nulth First Nations (including Uchucklesaht Tribe), pp. 9.5-84 to 9.5-95
MSA Section 9.5.5 Potential Interactions and Effects on Current Use	Aggregated (all Indigenous groups identified as experiencing a similar level of potential effect due to the linear activity of routine vessel transit)	9.5.5 Potential Interactions and Effects on Current Use, Table 9.5-35 (potential negligible-to-minor effect, all Indigenous groups) 9.5.5.1 Negligible Effects of Vessel Transit on Current Use, no differential effects[1] 9.5.5.2 Potential Effects of Vessel Transit on Current Use, no differential effects 9.5.5.3 Summary of Potential Transboundary Effects, not assessed
MSA Section 9.5.6 Suggested Mitigation Measures	Aggregated (to address the potentially minor linear effect on all Indigenous groups)	9.5.6 Suggested Mitigation Measures, no differential measures
MSA Section 9.5.7 Residual Effects Assessment and Significance Determination / Section 9.5.8 Cumulative Effects Assessment / Section 9.5.9 Summary of Assessment / Section 9.5.10 Follow-Up Program	N/A (no residual effects predicted)	N/A (no residual effects predicted)
MSA Section 9.5.11 Potential Impacts on Asserted or Established Aboriginal and Treaty Rights	Aggregated (all Indigenous groups identified as experiencing a similar level of potential impact due to the linear activity of routine vessel transit) Note: Measures identified are exactly the same as for Current Use	9.5.11.1 Approach to the Rights Assessment, Maa-nulth First Nations (including Uchucklesaht Tribe), p. 9.5-149 9.5.11.2 Results of the Rights Assessment, potential negligible-to-minor impact (all Indigenous groups, no differential impacts) 9.5.11.3 Suggested Mitigation Measures, no differential measures 9.5.11.4 Residual Effects, N/A (no residual effects predicted)
IR/AIR	N/A	MSA IR-02.24.16-13 Aboriginal and Treaty Rights and Related Interests, Table MSA IR13-1 Mitigation Measures Proposed by Aboriginal Groups for Potential Adverse Impacts to Potential or Established Aboriginal and Treaty Rights and Related Interests, Maa-nulth First Nations (including Uchucklesaht Tribe), p. 3 (CEAR Document #391)

[1] In this table, a potential effect is described as a "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be the same for all groups (i.e., negligible-to-minor). Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-C and 1-D Indigenous groups.

Table IR10-A29-2 Uchucklesaht Tribe Assessment Table (Information Request Package 10)

IR10 Information Request	MSA Level of Potential Effect Prediction[2]	MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR Package 10 (IR10)				
IR10-13 (MSA)				
Provide a group-specific assessment of potential effects and the characterisation of residual effects of the marine shipping associated with the proposed Project on current use in terms of changes to access and availability and quality of preferred marine resources	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Uchucklesaht as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Uchucklesaht's access to preferred locations as a result of Project-associated ship pass-bys is expected	*Part 1 – Additional baseline information regarding harvesting and other Current Use activities* – No additional information (refer to Uchucklesaht-specific information provided in MSA Section 9.5.4.12, per **Table IR10-A29-1** above, for available information)[3] *Part 2 - Maps of marine harvest sites* – Spatial information for Uchucklesaht (including maps) considered by the VFPA in the MSA Current Use assessment *Part 3(1) – List of issues / concerns regarding Project-associated vessel transit* – Identified for Uchucklesaht / Maa-nulth in list of issues in MSA Appendix 5-B (also refer to the Maa-nulth-specific issues tracking table in the forthcoming IR10-01 response) *Part 3(2) – Adequacy of Proponent's response* – Refer to IR10-13 response *Part 3(3) – Proponent's views on thresholds of acceptability and risk* - Refer to IR10-13 response	No change in MSA predictions for Uchucklesaht in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Uchucklesaht as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Uchucklesaht as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
IR10-14 (MSA)				
Consider (on a group-specific basis) the socio-economic implications of potential or necessary displacement (permanent or temporary)[4]	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Uchucklesaht as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Uchucklesaht's access to preferred locations as a result of Project-associated ship pass-bys is expected	The VFPA is of the view that Uchucklesaht's views regarding existing constraints on access, as described in MSA Section 9.5.4.7, as well as Uchucklesaht's views regarding potential effects of Project-associated vessel transit, described in MSA Appendix 5-B, were already sufficiently considered in the VFPA's predictions in MSA Section 9.5.5 regarding a potential access effect on Uchucklesaht as a result of Project-associated vessel transit.	As the predicted Current Use access effect on Uchucklesaht is expected to be addressed through the suggested mitigation identified in MSA Section 9.5.6, no residual economic effects for Uchucklesaht are anticipated
IR10-15 (MSA)				
Provide a group-specific assessment of potential effect of the changes in quality of	Quality of experience (Pathway #1) – Negligible potential change in Uchucklesaht's			

[2] The level of potential effect prediction identified in this column refers to the predicted level of effect *before* Current Use-specific measures are taken into account, but *after* measures related to linked valued components (if applicable) have been considered. The next column refers to the level of residual effect prediction after *both* linked valued component measures (if applicable) and Current Use-specific measures have been taken into account.
[3] Additional baseline information requested in IR10-13 for consideration in the assessment: (1) Preferred species and locations; (2) Timing of the current use activities, such as frequency, duration and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access for groups using the shipping lanes for fishing, groups traveling through the shipping lanes to access fishing, harvesting and cultural sites and, groups using the marine shipping area adjacent to the marine shipping lanes.
[4] Implications identified in IR10-14 for consideration in the assessment: (1) Sufficiency of resources at alternate locations to meet the requirements of the community; (2) Constraints of displacement (areas further from their community or already alienated to other interests); (3) Extra expenses required in monetary terms or additional travel time or necessary changes in technology for the practice or access to resources; and (4) Constraints on current harvesting activities caused by development, regulatory restrictions, reduced resources, contamination and conservation concerns and impediments to the revival of traditions surrounding coastal harvesting activities.

IR10 Information Request	MSA Level of Potential Effect Prediction[2]	MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
the current use experience resulting from marine shipping associated with the proposed Project and the characterisation and significance of residual effects	sense of place, risks to safety and security, and sensory disturbance expected Quality of experience (Pathway #2) – Negligible potential change for all indicators except access. Potentially measurable (up to minor) effect (before Current Use-specific mitigation) is expected on Uchucklesaht's ability to reproduce and transmit cultural heritage associated with potentially measurable access / displacement effect (refer to response to IR10-13)	Pathway #1 – N/A (negligible before Current Use-specific mitigation) Pathway #2 - Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Uchucklesaht's quality of experience tied to access is expected	The VFPA is of the view that the 4 factors[5] identified in IR10-15 for consideration in the group-specific assessment of changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in MSA Section 9.5.5. The VFPA notes that factors contributing to existing effects are reflected in Uchucklesaht's baseline summary in MSA Section 9.5.6.12, and that these views and Uchucklesaht's views about potential effects of Project-associated vessel transit on Uchucklesaht (as referenced in MSA Appendix 5-B), were taken into consideration in the assessment of potential effects on their quality of experience.	No change in MSA predictions for Uchucklesaht in terms of quality of Current Use experience
IR10-16 (MSA)				
Present (the requested group-specific baseline information)[6]	N/A	N/A	No additional information available (refer to Uchucklesaht-specific information provided in MSA Section 9.5.4.12, per **Table IR10-A29-1** above, for available information)	No additional information available

[5] Four factors identified in IR10-15 for consideration in the assessment: (1) Sites of importance to Indigenous groups; (2) Decreased willingness, ability or avoidance by Indigenous peoples to access Current Use sites in or through the marine shipping lanes due to safety concerns and the perception of risk, reduced harvesting opportunities, and/or sensory disturbances; (3) Alienation from existing patterns of traditional harvesting due to the temporary or permanent displacement from areas of importance; and (4) Loss of opportunities for the cultural transmission of Indigenous Knowledge and practices due to the temporary or permanent displacement from those areas of importance.
[6] Additional baseline information requested in IR10-16: (1) The current activities taking place during the day or the night with a quantification of day and night duration; (2) The access required within, outside or through the shipping lanes; (3) The seasons that activities are practiced; (4) The frequency that each Indigenous group crosses the shipping lanes in the marine shipping area; and (5) The minimum and maximum number of vessels per hour in the shipping lanes, by Segment, encountered by Indigenous fishing vessels for Current Use activities in relation to the proposed Project-related ship movements.

Ucluelet First Nation[1] Group-specific Baseline Information Process Summary (MSA)

Marine Shipping Addendum (MSA)

On May 25, 2015, the VFPA wrote a letter to each member nation of the Maa-nulth First Nations, including Ucluelet First Nation, explaining that the VFPA is considering effects from marine shipping associated with the Project on the current use of lands and resources by the Maa-nulth First Nations. The letter requested information from Ucluelet First Nation regarding current use of lands and resources for traditional purposes (Current Use), fisheries, or potential effects associated with marine shipping. In the letter, the VFPA explained its intent to rely on existing information to inform the assessment of potential effects associated marine shipping associated with the Project. The VFPA also offered to provide funding to support Ucluelet First Nation's participation in consultation. The funding was accepted by Ucluelet First Nation.

On July 27, 2015, the VFPA provided the Maa-nulth Treaty Society[2] and Ucluelet First Nation with a draft of the section of the MSA titled *"Maa-nulth First Nations Current Use of Lands and Resources for Traditional Purposes."* The VFPA requested that they confirm the accuracy of the information presented and identify any sensitive information that should be removed from the final MSA.

Comments on the draft Current Use summary were provided by the Maa-nulth Treaty Society, on behalf of Ucluelet First Nation, on September 16, 2015.

On October 29, 2015, the VFPA responded to the Maa-nulth Treaty Society stating that comments on the draft summary will be considered and incorporated into the MSA.

On November 9, 2015, the VFPA provided the Maa-nulth Treaty Society and Ucluelet First Nation with a copy of the MSA.

On April 25, 2016, the VFPA wrote to the Maa-nulth Treaty Society providing them with a table including all comments on the draft section, responses to each comment from the VFPA, and a description of subsequent changes made to the section in the MSA.

[1] Indigenous group listed in Table 1-C (MSA) of Attachment 2 to IR Package 10 (identified in that table without reference to the Maa-nulth First Nations, but identified only in relation to the Maa-nulth First Nations in the Updated EIS Guidelines).
[2] At this time, the Maa-nulth Treaty Society acted on behalf of Ka:'yu:'k't'h'/Che:k'tles7et'h First Nations, Toquaht Nation, Uchucklesaht Tribe, and Ucluelet First Nation.

Ucluelet First Nation Group-specific Index and Assessment Tables

Table IR10-A30-1 Ucluelet First Nation Index Table

MSA Section	Original MSA Information Presentation (Aggregated / Disaggregated)	Ucluelet First Nation
MSA Section 9.5.4 Existing Conditions	Disaggregated	9.5.4.12 Maa-nulth First Nations (including Ucluelet First Nation), pp. 9.5-84 to 9.5-95
MSA Section 9.5.5 Potential Interactions and Effects on Current Use	Aggregated (all Indigenous groups identified as experiencing a similar level of potential effect due to the linear activity of routine vessel transit)	9.5.5 Potential Interactions and Effects on Current Use, Table 9.5-35 (potential negligible-to-minor effect, all Indigenous groups) 9.5.5.1 Negligible Effects of Vessel Transit on Current Use, no differential effects[1] 9.5.5.2 Potential Effects of Vessel Transit on Current Use, no differential effects 9.5.5.3 Summary of Potential Transboundary Effects, not assessed
MSA Section 9.5.6 Suggested Mitigation Measures	Aggregated (to address the potentially minor linear effect on all Indigenous groups)	9.5.6 Suggested Mitigation Measures, no differential measures
MSA Section 9.5.7 Residual Effects Assessment and Significance Determination / Section 9.5.8 Cumulative Effects Assessment / Section 9.5.9 Summary of Assessment / Section 9.5.10 Follow-Up Program	N/A (no residual effects predicted)	N/A (no residual effects predicted)
MSA Section 9.5.11 Potential Impacts on Asserted or Established Aboriginal and Treaty Rights	Aggregated (all Indigenous groups identified as experiencing a similar level of potential impact due to the linear activity of routine vessel transit) Note: Measures identified are exactly the same as for Current Use	9.5.11.1 Approach to the Rights Assessment, Maa-nulth First Nations (including Ucluelet First Nation), p. 9.5-149 9.5.11.2 Results of the Rights Assessment, potential negligible-to-minor impact (all Indigenous groups, no differential impacts) 9.5.11.3 Suggested Mitigation Measures, no differential measures 9.5.11.4 Residual Effects, N/A (no residual effects predicted)
IR/AIR	N/A	MSA IR-02.24.16-13 Aboriginal and Treaty Rights and Related Interests, Table MSA IR13-1 Mitigation Measures Proposed by Aboriginal Groups for Potential Adverse Impacts to Potential or Established Aboriginal and Treaty Rights and Related Interests, Maa-nulth First Nations (including Ucluelet First Nation), p. 3 (CEAR Document #391)
Issues Tracking Table	MSA – Aggregated	MSA – See forthcoming response to IR10-01 for disaggregated issues tracking table
Indigenous Traditional Knowledge (ITK)	MSA – MSA IR-02.24.16-08 (Aggregated) (CEAR Document #391)	MSA – See response to IR10-02 for disaggregated ITK

[1] In this table, a potential effect is described as a "no differential effect" when the level of effect (before Current Use-specific mitigation) was predicted to be the same for all groups (i.e., negligible-to-minor). Mitigation measures that are described as "no differential measures" are those that are potentially applicable to all Table 1-C and 1-D Indigenous groups.

Table IR10-A30-2 Ucluelet First Nation Assessment Table (Information Request Package 10)

IR10 Information Request	MSA Level of Potential Effect Prediction[2]	MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
IR Package 10 (IR10)				
IR10-13 (MSA)				
Provide a group-specific assessment of potential effects and the characterisation of residual effects of the marine shipping associated with the proposed Project on current use in terms of changes to access and availability and quality of preferred marine resources	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Ucluelet as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Ucluelet's access to preferred locations as a result of Project-associated ship pass-bys is expected	*Part 1 – Additional baseline information regarding harvesting and other Current Use activities* – No additional information (refer to Ucluelet-specific information provided in MSA Section 9.5.4.12, per **Table IR10-A30-1** above, for available information)[3] *Part 2 - Maps of marine harvest sites* – Spatial information for Ucluelet (including maps) considered by the VFPA in the MSA Current Use assessment *Part 3(1) – List of issues / concerns regarding Project-associated vessel transit* – Identified for Ucluelet / Maa-nulth in list of issues in MSA Appendix 5-B (also refer to the Maa-nulth-specific issues tracking table in the forthcoming IR10-01 response) *Part 3(2) – Adequacy of Proponent's response* – Refer to IR10-13 response *Part 3(3) – Proponent's views on thresholds of acceptability and risk* - Refer to IR10-13 response	No change in MSA predictions for Ucluelet in terms of Current Use access or availability and quality of Current Use resources
	Availability of resources – Negligible potential change in availability of Current Use resources expected for Ucluelet as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
	Quality of resources – Negligible potential change in quality of Current Use resources expected for Ucluelet as a result of Project-associated vessel transit	N/A (negligible before Current Use-specific mitigation)		
IR10-14 (MSA)				
Consider (on a group-specific basis) the socio-economic implications of potential or necessary displacement (permanent or temporary)[4]	Access – Potentially measurable (up to minor) change in access (before Current Use-specific mitigation) expected for Ucluelet as a result of displacement from Project-related ship pass-bys	Negligible – Taking suggested mitigation into account (refer to responses to IR10-17 through IR10-20), no residual effect on Ucluelet's access to preferred locations as a result of Project-associated ship pass-bys is expected	The VFPA is of the view that Ucluelet's views regarding existing constraints on access, as described in MSA Section 9.5.4.7, as well as Ucluelet's views regarding potential effects of Project-associated vessel transit, described in MSA Appendix 5-B, were already sufficiently considered in the VFPA's predictions in MSA Section 9.5.5 regarding a potential access effect on Ucluelet as a result of Project-associated vessel transit.	As the predicted Current Use access effect on Ucluelet is expected to be addressed through the suggested mitigation identified in MSA Section 9.5.6, no residual economic effects for Ucluelet are anticipated
IR10-15 (MSA)				
Provide a group-specific assessment of potential effect of the changes in quality of the current use experience resulting from marine shipping associated with the	Quality of experience (Pathway #1) – Negligible potential change in Ucluelet's sense of place, risks to safety and security, and sensory disturbance expected	Pathway #1 – N/A (negligible before Current Use-specific mitigation) Pathway #2 - Negligible – Taking suggested mitigation into account (refer to responses		No change in MSA predictions for Ucluelet in terms of quality of Current Use experience

[2] The level of potential effect prediction identified in this column refers to the predicted level of effect *before* Current Use-specific measures are taken into account, but *after* measures related to linked valued components (if applicable) have been considered. The next column refers to the level of residual effect prediction after *both* linked valued component measures (if applicable) and Current Use-specific measures have been taken into account.
[3] Additional baseline information requested in IR10-13 for consideration in the assessment: (1) Preferred species and locations; (2) Timing of the current use activities, such as frequency, duration and seasonality; (3) FSC harvest achieved and desired to meet the FSC requirements of the community; and (4) Existing and future conditions of travel and access for groups using the shipping lanes for fishing, groups traveling through the shipping lanes to access fishing, harvesting and cultural sites and, groups using the marine shipping area adjacent to the marine shipping lanes.
[4] Implications identified in IR10-14 for consideration in the assessment: (1) Sufficiency of resources at alternate locations to meet the requirements of the community; (2) Constraints of displacement (areas further from their community or already alienated to other interests); (3) Extra expenses required in monetary terms or additional travel time or necessary changes in technology for the practice or access to resources; and (4) Constraints on current harvesting activities caused by development, regulatory restrictions, reduced resources, contamination and conservation concerns and impediments to the revival of traditions surrounding coastal harvesting activities.

IR10 Information Request	MSA Level of Potential Effect Prediction[2]	MSA Characterisation and Significance of Residual Effects	Additional Information Requested	Response to Information Request
proposed Project and the characterisation and significance of residual effects	Quality of experience (Pathway #2) – Negligible potential change for all indicators except access. Potentially measurable (up to minor) effect (before Current Use-specific mitigation) is expected on Ucluelet's ability to reproduce and transmit cultural heritage associated with potentially measurable access / displacement effect (refer to response to IR10-13)	to IR10-17 through IR10-20), no residual effect on Ucluelet's quality of experience tied to access is expected	The VFPA is of the view that the 4 factors[5] identified in IR10-15 for consideration in the group-specific assessment of changes in the quality of Current Use experience resulting from the Project were already sufficiently considered and assessed under Pathway #1 and/or Pathway #2 in MSA Section 9.5.5. The VFPA notes that factors contributing to existing effects are reflected in Ucluelet's baseline summary in MSA Section 9.5.6.12, and that these views and Ucluelet's views about potential effects of Project-associated vessel transit on Ucluelet (as referenced in MSA Appendix 5-B), were taken into consideration in the assessment of potential effects on their quality of experience.	
IR10-16 (MSA)				
Present (the requested group-specific baseline information)[6]	N/A	N/A	No additional information available (refer to Ucluelet-specific information provided in MSA Section 9.5.4.12, per **Table IR10-A30-1** above, for available information)	No additional information available

[5] Four factors identified in IR10-15 for consideration in the assessment: (1) Sites of importance to Indigenous groups; (2) Decreased willingness, ability or avoidance by Indigenous peoples to access Current Use sites in or through the marine shipping lanes due to safety concerns and the perception of risk, reduced harvesting opportunities, and/or sensory disturbances; (3) Alienation from existing patterns of traditional harvesting due to the temporary or permanent displacement from areas of importance; and (4) Loss of opportunities for the cultural transmission of Indigenous Knowledge and practices due to the temporary or permanent displacement from those areas of importance.

[6] Additional baseline information requested in IR10-16: (1) The current activities taking place during the day or the night with a quantification of day and night duration; (2) The access required within, outside or through the shipping lanes; (3) The seasons that activities are practiced; (4) The frequency that each Indigenous group crosses the shipping lanes in the marine shipping area; and (5) The minimum and maximum number of vessels per hour in the shipping lanes, by Segment, encountered by Indigenous fishing vessels for Current Use activities in relation to the proposed Project-related ship movements.
