MNBC-24.1	Asked about the projected economic benefits of the RBT2 project generally. Asked if there are any agreements proposed about job quotas for local Aboriginal workers for the construction phase. Expressed challenges in taking advantage of procurement opportunities in the past (need more time and better communication). Stated that Métis own businesses are always looking for contract opportunities. Asked for information about the Aboriginal procurement policies, for RBT2 work. Asked if Métis will be recognized in procurement policies for RBT2 work. Asked why the Aboriginal component of the VFPA's Procurement Policy is not mandatory. Asked about the projected economic benefits to Aboriginal groups in the LAA and RAA. Stated the EIS details specific benefits of the project to the general population. What is the share of this benefit for the Aboriginal population?	11-Sep-2015, Letter from Métis Nation of Greater Victoria 22-Jun-2016, Meeting with Métis Nation British Columbia 29-Oct-2016, Letter to Panel from Métis Nation British Columbia (CEAR Document #656)	**13-Oct-2015, Letter from the VFPA:** *"More information on economic benefits associated with the Project can be found at the following link: http://www.robertsbankterminal2.com/project-benefits/benefits-overview/. The effects of the Project on economic development are addressed in EIS Section 20.0. Opportunities for training and employment opportunities for Indigenous groups related to the Project are described in the EIS Section 32.3.3.3.* *As accommodation for any potential effects to specified Indigenous groups' ability to exercise their Aboriginal rights, the VFPA proposes to assist these Indigenous groups, which include Métis Nation British Columbia, in accessing opportunities resulting from the Project. In addition to making contracting opportunities available to specified Indigenous groups, the VFPA will ensure that construction employment opportunities are also made available. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs. Through ongoing engagement, the VFPA will seek input from these Indigenous communities with respect to plans to ensure access to Project-related benefits."* **22-Jun-2016, Meeting:** Acknowledged and asked for further feedback or examples. Requested a list of Métis businesses that it can then add to its Indigenous business database, which is shared with terminal operators. **27-Jun-2016, Email from the VFPA:** The process for selecting a terminal operator and infrastructure developer is provided at the following link: http://www.robertsbankterminal2.com/business-opportunities/procurement-approach/ and a short-list of terminal operators is provided at the following link: http://www.robertsbankterminal2.com/news-updates/terminal-operator-procurement/. Provided a graphic that shows the projected timelines, which are of course heavily dependent on the timing of the review process. This timeline has construction starting at the end of 2017. **12-May-2016, Letter from the VFPA:** Requested to meet with Métis Nation British Columbia and enclosed an Information Sheet specific to Employment Opportunities related to the Project.	**Addressed in EIS Section 32.3.3.3:** As accommodation for any potential effects to specified Indigenous groups' ability to exercise their Aboriginal rights, the VFPA proposes to assist these Indigenous groups, which include Métis Nation British Columbia, in accessing opportunities resulting from the Project. In addition to making contracting opportunities available to specified Indigenous groups, the VFPA will ensure that construction employment opportunities are also made available. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs. Through ongoing engagement, the VFPA will seek input from these Indigenous communities with respect to plans to ensure access to Project-related benefits. **Addressed in EIS Appendix 7.2-B (#145):** The VFPA's Aboriginal Procurement approach is part of the *Sustainable Procurement Guidelines* included in the Procurement Policy. All of the VFPA's corporate policies are approved by the VFPA Board of Directors. The language used is based upon the Federal Aboriginal Procurement language used by various Federal departments. The language was developed by the VFPA's Procurement Administrator and subsequently approved by both the VFPA Executive and Board of Directors and came into effect on January 13, 2013. The VFPA has shared the Aboriginal Procurement language below with several Indigenous groups upon request. The definition of an Aboriginal Business is also included on VFPA website in relation to the Aboriginal Business Directory. The language in the VFPA Procurement Policy currently reads as follows: The VFPA is committed to identifying greater development and employment opportunities for Aboriginal entrepreneurs and businesses that may assist in building capacity within Aboriginal communities. To be considered an Aboriginal business the following criteria must be met: At least 51 percent of the business is owned and controlled by Aboriginal people, and at least one third of the employees are aboriginal. If the business is a sole proprietorship, it must be wholly owned by an Aboriginal person. In the case of a joint venture or consortium, at least 51 percent of the joint venture or consortium must be controlled and beneficially owned by an Aboriginal business or businesses, as defined above. Additionally, at least one-third of the value of the work performed under a contract is completed by an Aboriginal business, either by the Aboriginal partner/contractor or by an Aboriginal sub-contractor. In the spirit of satisfying the goals of this section, when entering into an agreement with an Aboriginal business, the employment and development opportunities for Aboriginal communities or members will be an important factor. VFPA may, where the capacity/ability within the local aboriginal community is demonstrated, directly award a contract to that aboriginal business to assist in the development of the community and to foster improved communication with the Port. Where capabilities are known by more than one aboriginal business in the local community, a limited	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 20.0 Economic Development 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.3.3.3. Other Accommodations

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
			16-Jun-2017, Letter from the VFPA: The VFPA is interested in initiating discussions with Métis Nation British Columbia regarding potential legacy benefits from the Project. Legacy benefits are intended to benefit Indigenous groups if the Project proceeds, and would be over and above the economic benefits resulting from the Project. Examples of types of legacy benefits are: restoring fisheries, training, funding cultural initiatives, enhancing environmentally sensitive areas, or revitalising aquaculture. It is our intent to develop this concept into a plan that reflect the interests, objectives, and priorities of Indigenous groups involved in the Project. **24-Nov-2017, Letter from the VFPA:** *"In addition to general Legacy Benefits, the Vancouver Fraser Port Authority ("VFPA") is interested in entering into direct discussions with MNBC regarding a potential mutual benefits agreement ('MBA") for the Project… We would like to hear whether negotiating an MBA is of interest to MNBC."* **01-Dec-2017, Email from Semiahmoo First Nation:** Stated that they are interested in discussing a Mutual Benefits Agreement. **11-Dec-2017, Meeting:** The VFPA and Métis Nation British Columbia began discussions around a Mutual Benefits Agreement. Discussions are ongoing.	competitive process may also be followed. In accordance with the Procurement Policy, when single sourcing applies additional levels of approval must be obtained. For projects where it is deemed beneficial, proponents may be asked in the solicitation documents to demonstrate in their submission how aboriginal participation and representation will be met and maintained during the contract period. When considering sourcing options with an aboriginal business, consultation with the VFPA's Manager, Aboriginal Affairs and/or an Aboriginal Affairs Advisor is recommended.

MNBC-25.1	Asked if existing disposal sites will be used for disposal at sea. Stated that past dumpsites have not been deep enough and have resulted in snags where you cannot fish.	07-Oct-2014, Preliminary EIS Workshop #1	**07-Oct-2014, Workshop:** Responded that there are three locations that the VFPA is proposing for DAS at -45 m depth (120 feet), adjacent to the Project area. This is similar to construction activity done for DP3. Stated that there are transportation costs and emissions to consider with regard to using existing dump sites, such as Sand Heads. The VFPA will be doing an environmental assessment of what the impact of disposing at sea in the adjacent areas will be, similar to what was done for DP3. Ultimately the decision will be Environment Canada's. Referred to slide 64 in the RBT2 Project Overview presentation, which describes the permits that may be required by various government agencies for different aspects of the Project. **26-Jun-2017, Letter from the VFPA:** *"The concerns brought forward by Métis Nation British Columbia with regard to Dungeness Crabs and DAS highlighted the need for the VFPA to re-evaluate our planned construction approach and use of the ITP as a part of the RBT2 Project. The Project team has been actively exploring alternative construction methods to address concerns raised by Indigenous groups and regulatory agencies since the development of the EIS in 2014.* *After undertaking a thorough investigation that included further engineering work, consideration of new locally available dredging equipment, and relaxation of the Coasting Trade Act as a result of approving the Canadian European Trade Agreement, the port authority determined that the Project could proceed without the use of an ITP. In addition, the elimination of the ITP, along with other changes will result in a Project that does not require a DAS permit."*	**Addressed in responses to IR3-25 to IR3-40:** For further information concerning this change, please see Information Request Package 3 Preamble in Support of Responses to IR3-25 to IR3-40 – General and Disposal at Sea-related Project Construction Update.	**EIS** 4.0 Project Description 5.0 Alternative Means of Carrying out the Project 5.3.1 Increase Capacity and Efficiency of Existing Container Terminals within VFPA Jurisdiction 7.0 Engagement and Consultation 7.2 Aboriginal Groups Engagement and Consultation 7.2.1 Engagement and Consultation Process Overview 12.0 Marine Invertebrates 12.5.3 Dungeness crabs 12.7 Mitigation Measures 27.0 Human Health 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes **Information Requests** IR Package 3 Preamble in Support of Responses to IR3-25 to IR3-40 – General and Disposal at Sea-related Project Construction Update (CEAR Document #928)

Table 26: Traffic / Transportation

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
MNBC-26.1	Stated that truck staging areas are required and should be discussed during the planning stages of the Project. This is a safety issue on the roads, a nuisance, and the fact that engines are running while waiting is a huge issue.	07-Oct-2014, Preliminary EIS Workshop #1	**07-Oct-2014, Workshop:** Responded that the Gateway Transportation Collaboration Forum will be looking at the issue of staging. Refers to the VFPA's implementation of its SmartFleet GPS program, which helps to inform the understanding of truck congestion and wait time issues. The forum has been exploring options for a system similar to what is used at border crossings, wherein when vehicles arrive and line up, lights are activated, and advances are made in holding groups. It is thought such a system will help address the issue of idling.	**Addressed in EIS Appendix 7.2-B (#218):** The economic development assessment (EIS Section 20.0) considers economic effects in Metro Vancouver and B.C. related to an increase in trucking activity related to the Project. Environmental and social effects associated with Project-related increases in truck traffic on the causeway are considered in the assessments of air quality (EIS Section 9.2), noise and vibration (EIS Section 9.3), services and infrastructure (EIS Section 23.0), human health (EIS Section 27.0), and Current Use (EIS Section 32.2). The VFPA will ensure the Infrastructure Developer and Terminal Operator will work with federal and provincial regulatory authorities and local governments, including B.C. Ministry of Transportation and Infrastructure, City of Delta, BC Ferries, and Tsawwassen First Nation to develop the land-based portion of the Land and Marine Traffic Management Plan. The plan will provide for public and worker safety and the timely exchange of information regarding traffic management during Project construction, including traffic control measures, short-term traffic interruptions, and temporary road restrictions and re-routing with Tsawwassen First Nation, City of Delta, Delta Police Department, Delta Fire and Emergencies Services, and B.C. Ambulance Services. The GTCF was established in 2014 to identify and prioritise development of transportation and related infrastructure necessary for supporting continued gateway growth and to provide overall net benefits to host communities. It brings together Transport Canada, the B.C. Ministry of Transportation and Infrastructure, TransLink, the Greater Vancouver Gateway Council, and the VFPA to collaboratively pursue infrastructure solutions and funding opportunities under the New Building Canada Plan*. The GTCF builds on the success of past initiatives, including the Roberts Bank Rail Corridor Program, South Fraser Perimeter Road, North Shore and South Shore Trade Area projects, Ashcroft Terminal's Expansion Project, and the Regional Transportation Management Centre. It was not created in relation to, nor is it in any way solely focused on, the Project. The GTCF consists of four trade areas, including the Roberts Bank Trade Area. The GTCF leverages existing reports and conduct new studies, as necessary, to guide identification and evaluation of regional projects that relate to additional truck and train traffic from increasing demand for trade through the gateway. The GTCF works in consultation with municipal governments, regional agencies, Indigenous groups, industry, and other stakeholders, to consider how best to meet long-term trade demand while reducing impacts to local communities and the environment. Much of this work will focus on addressing the increased truck and train traffic within Metro Vancouver that is anticipated as demand for trade through the gateway grows. *The New Building Canada Plan is the name of the previous funding program. The current funding program for trade corridor infrastructure is the National Trade Corridor Fund. **Additional information provided by the VFPA:** The Deltaport truck staging facility is located at the intersection of Highway 17, Highway 17A, and Deltaport Way in Delta, B.C. on provincial land. The VFPA will operate the facility under a long-term lease from the B.C. Ministry of Transportation and Infrastructure. The facility will address road safety concerns by alleviating traffic congestion. The facility will have the capacity to accommodate up to 140 trucks, including early arrivals. The project also includes a secure vehicle access gate requiring a valid Port Pass, a Commercial Vehicle Safety and Enforcement (CVSE) area for truck safety inspections, a new highway exit ramp to facilitate access from Highway 17 and an additional road exit to allow traffic access onto Deltaport Way.	**EIS** 2.0 Project Overview 2.2 Project Context 2.2.7 Roberts Bank as a Terminal Location Appendix 7.2-B Aboriginal Groups Issues and Interests Table 9.2 Air Quality 9.3 Noise and Vibration 20.0 Economic Development 23.0 Services and Infrastructure 27.0 Human Health 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Land and Resources for Traditional Purposes 33.0 Environmental Management Program 33.3 Construction Environmental Management Plans 33.3.7 Land and Marine Traffic Management Plan 35.0 Effects Assessment Summaries Table 35-2 Proposed Mitigation Measures and Commitments

				The first phase of construction of the Deltaport truck staging facility began in August 2017, with embankment construction, procurement of sand and gravel, and preloading. This advanced works stage was completed ahead of schedule and is now done. Preparation for the second phase of construction, which includes procurement of major work construction, is underway. Construction is expected to start in the fall of 2018 and be completed by late 2019 or early 2020. Further information is available at: https://www.portvancouver.com/development-and-permits/development/deltaport-truck-staging-facility/	
MNBC-26.2	Asked whether the VFPA can regulate train size when they leave the terminal, noting concern over potential for derailment.	07-Oct-2014, Preliminary EIS Workshop #1	**07-Oct-2014, Workshop:** Responded that the VFPA cannot regulate train size.	**Addressed in EIS Appendix 7.2-B (#217):** An assessment of safety risks related to increased rail traffic outside of VFPA jurisdiction is not included in the EIS. Potential effects related to rail-related incidents within VFPA jurisdiction are addressed in EIS Section 30.0. The federal *Railway Safety Act* promotes the safety and security of the public and personnel, and the protection of property and the environment, in railway operations within the legislative authority of the Canadian government.	**EIS** 4.0 Project Description Appendix 7.2-B Aboriginal Groups Issues and Interests Table 30.0 Potential Accidents or Malfunctions

MNBC-28.1	Asked if the VFPA's mechanism for two-way dialogue to identify opportunities to improve the compatibility of port adjacent land uses across jurisdictional boundaries include Métis Nation British Columbia. Stated that Métis Nation British Columbia land users rely on harvested foods and time spent on the land for their wellbeing and the wellbeing of their families.	29-Oct-2016, Letter to Panel from Métis Nation British Columbia (CEAR Document #656)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Appendix 7.2-B (#15):** Since January 2011, the VFPA has consulted with Indigenous groups regarding Project planning, components and activities, selection of VCs, the potential effects of the Project, proposed mitigation measures, and potential changes to the environment related to the Project. The VFPA also held technical workshops with Indigenous groups at which the VFPA and technical specialists engaged directly with members of Indigenous groups, discussing specific areas of Indigenous interest and reviewing related technical topics. The intent of the fall 2014 workshops, as described in EIS Section 7.2.2 and detailed in EIS Appendix 7.2-A, was to provide preliminary results and proposed mitigation measures and obtain feedback in a simplified presentation and plain language format. Materials were provided to Indigenous groups approximately two weeks in advance of workshops, to provide time to read the material, so that questions and comments could be raised in the workshops. The VFPA also provided an opportunity to provide further comment following the workshops. Most questions asked during consultation are addressed in this appendix. Some questions, comments, and requests were addressed at the workshops or through follow-up communications. The process identified for responding to Indigenous interests and/or issues is provided in the EIS. The VFPA continues to be open to hear concerns and will notify Indigenous groups when the EIS is submitted.	**EIS** 7.0 Engagement and Consultation 7.2 Aboriginal Engagement and Consultation 7.2.2 Pre-EIS Submission Consultation Process 7.2.3 Future Planned Engagement and Consultation Appendix 7.2-A Consultation Activities by Aboriginal Group Appendix 7.2-B Aboriginal Groups Interests and Issues Table

HWLITSUM: ISSUES, VIEWS, AND CONCERNS RELATED TO THE PROPOSED PROJECT AND MARINE SHIPPING ASSOCIATED WITH THE PROJECT

Hwlitsum

Table 1: Air Quality – Intermediate Component

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Hwlit-1.1	Stated that the Vancouver Fraser Port Authority's (VFPA's) assertion that traffic will improve noise and air quality seems counter-intuitive.	15-Apr-2014, Technical Working Group Meeting #2	**15-Apr-2014, Workshop:** Responded that both the Roberts Bank Rail Corridor (RBRC) Program and the South Fraser Perimeter Road projects are examples on how these reductions can occur. Stated that the purpose of RBRC Program was to: • improve traffic (road and rail) by creating better free flow for traffic; • improve safety (by removing interactions at grade road – rail crossings); • improve noise (by reducing the whistling and idling of auto/truck traffic at grade road – rail crossings); and • improve air quality. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#42):** An assessment was carried out to predict potential changes in air quality as a result of Roberts Bank Terminal 2 (RBT2 or Project). The results of the air quality assessment were used in the assessments of human health and current use of land and resources for traditional purposes (Current Use). The assessment modelled Project-related emission sources during the construction phase, and fuel combustion during the construction and operation phases, and compared them to modelled existing conditions and future expected conditions. Existing conditions considered emissions from marine vessels, trains, trucks, vehicles, and equipment from the existing Westshore Terminals, Deltaport Terminal, and BC Ferries Terminal, while emissions from industrial, commercial and residential sources within Delta were represented through measured air quality levels in Tsawwassen. A general trend of decreasing concentrations of contaminants has been observed and is expected in the Lower Fraser Valley for some criteria air contaminants, as well as for some trace organic contaminants. Coal dust is included in the assessment of air quality in existing conditions, in the future with the Project, and in the cumulative effects assessment. Hypothetical maximum emissions scenarios were used to conservatively estimate existing conditions and potential changes from the Project. Estimated emissions and predicted ambient concentrations did not account for the inclusion of shore power as part of the Project, which is expected to decrease future emissions from ships at berth ultimately improving air quality. The assessment concludes that: • Air quality will improve in the future, with or without the Project, as a result of improvements in engine technologies and the use of cleaner fuels. • Cumulative changes, incorporating the Project and other certain and reasonably foreseeable projects and activities, are predicted to be small relative to expected future ambient air quality levels. • Project construction activities are predicted to cause a small increase in concentrations of some contaminants. • Criteria air contaminant (i.e., carbon monoxide, nitrogen oxides, sulphur dioxide, particulate matter, and ground-level ozone) and trace organic contaminant (i.e., formaldehyde and other contaminants related to fuel combustion) levels are predicted to be below air quality criteria on land, with limited exceptions. • The Project is expected to have a negligible effect on future ozone levels and to increase greenhouse gas emissions (i.e., carbon dioxide, methane, and nitrous oxide). • Although Project activities would emit black carbon, black carbon is expected to decrease in the future with the Project due to equipment fleet turnover at existing Roberts Bank terminals to newer engines that meet more stringent emission standards for particulate matter. The Project is not expected to result in any significant adverse effect on human health, including from changes in air quality. During operation, it is unlikely that Project-related exposures to air emissions would result in health effects. The only residual effect associated with air quality changes would be experienced by individuals on the water near the terminal during construction due to short-term and infrequent dust generation. The benefits of existing initiatives are realised in the existing emissions monitored at local air quality stations in Metro Vancouver. Future benefits to air quality, such as improvements in fuel, are described in the EIS based on their anticipated level of benefit to future air quality emissions.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 9.0 Physical Setting 9.2 Air Quality 9.2.5 Methods 9.2.6 Existing Conditions Table 9.2-4 Air Quality Criteria for Criteria Air Contaminants Table 9.2-5 Air Quality Criteria for Toxic Organic Contaminants 9.2.7 Expected Conditions 9.2.8 Future Conditions with the Project 9.2.9 Future Conditions with the Project and Other Projects and Activities Appendix 9.2-A Air Quality Study Main Report Appendix A Emissions Inventory Appendix B Existing Air Quality Appendix C Air Dispersion Modelling Appendix F Ships Underway Appendix H Westshore Coal Dust Assessment

Table 2: Archaeological and Heritage Resources – Valued Component

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Hwlit-2.1	Stated that the Archaeological Overview Assessment (AOA) only recognizes Tsawwassen First Nation's use patterns. Suggested to include additional ethno-graphical sources, including the 2009 and 2013 Traditional Use Studies conducted by Dr. Bruce Miller, other scholars, and members of the Hwlitsum. Noted that all First Nations have special places on the river and disagreed with the draft AOA and the CEA Agency's assessment of Cowichan Nation Alliance's "moderate" interest on the Fraser River.	15-Mar-2014, Letter 31-Mar-2014, Meeting	**31-Mar-2014, Meeting:** Explained that the AOA includes recommendations from other communities, and that all comments have been given to Millennia for them to consider in revising the report. If the comments are not addressed in the AOA, they will be included in the EIS. Noted that the AOA ethnography section is a standard section for an AOA and not a comprehensive account of all ethnographic information – the revised version may not be as detailed as Hwlitsum might like, but it will have considered First Nation comments where relevant. **06-May-2014, Letter from the VFPA:** The purpose of the AOA is not to provide a detailed ethnographic history, but an ethnographic overview of the study area. The ethnography section has been revised to include a listing of all First Nations that have a potential claim to the study area, according to GeoBC's Consultative Areas Database as well as First Nations that have expressed an interest in the Project Study Area with the VFPA. The VFPA appreciates the receipt of the 2009 and 2013 Traditional Use Studies. They will be reviewed, and relevant information included in the Environmental Impact Statement (EIS, CEAR Document #181). **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#151):** The purpose of the archaeological and heritage resources assessment was to determine whether there is potential for archaeological and heritage resources to exist in the assessment area, and to determine any Project-related effects on these resources, if they are present. The assessment was supported by an Archaeology Overview Assessment, which included an ethnographic overview of the area and a review of the potential for undocumented heritage sites to exist in the local assessment area. The results of the archaeological and heritage resources assessment were considered in the assessment of Current Use of Land and Resources for Traditional Purposes (EIS Section 32.0). The local assessment area included the physical footprint of the Project plus a 100 metre buffer zone, as well as a zone of coastal-geomorphological influence. The regional assessment area considered a four kilometre area around the Project area. No archaeological sites were identified in the local assessment area, either using the BC Archaeology Branch's online heritage registry or through the Archaeological Overview Assessment. If archaeological or historical resources remain in the intertidal area, it is likely that they have not been preserved in the sediment layers, if not affected by previous construction. The Project may affect archaeological resources, namely, fish trap stakes, if present in the Project area. Direct effects could result from Project-related construction activities, and indirect effects could result from changes to sediment deposition or erosion. Through mitigation, including excavation of test trenches prior to construction activities and the implementation of an Archaeological Monitoring and Management Plan, potential damage to archaeological resources would be avoided and the opportunity for future archaeological study would be protected. The Project is not expected to result in significant residual effects to archaeological and heritage resources. The Project is not expected to result in any incremental cumulative effects to archaeological or heritage resources. A description of the past use of the Roberts Bank area by Indigenous groups is provided in EIS Section 32.0. The presentation of information on past use of the area in the assessment of archaeological and heritage resources is tailored to those Indigenous groups whose past uses is directly linked to the type of physical archaeological resources that have the potential to be present in the study area, and have the potential to be affected by the Project. The scope or methods of the Archaeological and Heritage Resources assessment are described in the EIS. **Additional information provided by the VFPA:** EIS Section 32.2.4.10 describes the existing conditions of current use related to the Hwlitsum as part of the broader assessment of Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes. The following sources were included in the assessment: • Wilson, R., B. Granville Miller, B. Angelback, and A. Grove. 2009. The Hwlitsum First Nation's Traditional Use and Occupation in the Area now known as British Columbia, Volume 1. • Wilson, R., B. Granville Miller, B. Angelback, and A. Grove. 2013. The Hwlitsum First Nation's Traditional Use and Occupation in the Area now known as British Columbia, Volume 2: Hwlitsum Marine Traditional Use Study.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 28.0 Archaeological and Heritage Resources 28.2 Selection of Archaeological and Heritage Resources VC 28.3 Assessment Boundaries 28.4 Information Sources 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Land and Resources for Traditional Purposes

Table 3: Climate, Coastal Conditions and Geotechnical Considerations

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Hwlit-3.1	Concerned that industry is warming the water, both directly (through operations and machinery) as well as indirectly (global warming).	21-May-2015, Meeting	**21-May-2015, Meeting:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#41):** The Project design places priority on the safe and efficient handling of containers and provision of a functional interface with intermodal carriers, consistent with the current design of other such terminals worldwide. Project-related changes in greenhouse gases and climate-forcing particulate matter are assessed in the air quality assessment. The carbon footprint for the Project will be reduced through the use of electrically-powered equipment at the terminal and shore power for berthed vessels. Shore power is a part of the VFPA's overall EcoAction Program, which also includes projects that minimise emissions of trucks, cargo handling equipment and trains. The VFPA has already provided shore power connections for cruise ships at Canada Place and is actively working on increasing the use of shore power to include cargo ships. The Project has been designed to include connections for vessel shore power. Shore power connections will enable ships to be plugged into electrical power sources at the wharf so that their diesel engines and associated electrical generators can be turned off, thus reducing air and noise emissions. Electrical services for tug shore power connections will be extended, or added from the existing tug basin services. Mitigation measures related to air quality are included in EIS Section 27.0 Human Health, and in EIS Section 35.0 Effects Assessment Summaries.	**EIS** 4.0 Project Description 4.2.1 Project Component Details, Marine Terminal 4.4.2 Project Activities, Operation-phase Activities Appendix 7.2-B Aboriginal Groups Issues and Interests Table 9.2 Air Quality 9.2.8 Future Conditions with the Project

Table 4: Coastal Birds – Valued Component

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Hwlit-4.1	Requested studies on potential impacts to bird habitat and migrating bird populations.	15-Apr-2014, Technical Working Group Meeting #2	**15-Apr-2014, Workshop:** Stated that many studies have been conducted over the years. A technical advisory group of various experts and agencies met between November 2012 and May 2013 and considered how to best conduct these studies. Stated that further information on the technical advisory group is available on the VFPA's website. Stated that the VFPA is also engaging with Indigenous groups to hear directly from potentially affected groups their concerns / issues on this subject. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#93):** The Fraser River estuary is an important area to many coastal birds because of the abundant food sources. The Roberts Bank area supports an abundance and diversity of bird species. An assessment was undertaken to determine the effects of the Project on coastal birds. The scope and methods of the coastal birds assessment is described in the EIS. The Shorebird Opportunity Model evaluates food availability (biofilm and benthic invertebrates) for foraging shorebirds under different levels of predation risk, and assesses changes in physical factors (e.g., water velocity, wave height) on their ability to forage. The assessment of coastal birds focused on seven sub-components: • Shorebirds, represented by Pacific dunlin and western sandpiper; • Waterfowl, represented by American wigeon and brant; • Herons, represented by great blue heron; • Diving birds, represented by surf scoter and western grebe; • Raptors, represented by bald eagle, barn owl and peregrine falcon; • Gulls and terns, represented by Caspian tern and glaucous-winged gull; and • Passerines, also known as songbirds, represented by barn swallow. Anticipated Project-related changes to coastal birds were assessed by considering potential changes in productivity, abundance, density, species diversity, distribution and suitable habitat area, for the seven sub-components. For some sub-components, foraging opportunity and contaminant levels were also examined. The use of the Fraser River estuary and the Project area by trumpeter swan and tundra swan is described in the EIS. The assessment concludes that the Project is not expected to result in any significant adverse residual effects or significant residual cumulative effects to coastal birds. Changes in the productive potential of shorebirds, herons, raptors, gulls and terns, and passerines are not anticipated. Decreases to the productive potential of waterfowl and diving birds are expected to be minor. Effects to diving birds can be partially offset through the creation of onsite eelgrass and subtidal rock reef habitats, which would create habitat for their prey, which include mussels and other invertebrates. More information on field studies can be found on the Project website at the following link: http://www.robertsbankterminal2.com/environment/field-studies/.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 15.0 Coastal Birds 15.2 Selection of Coastal Birds Valued Component 15.5.4 Existing Conditions, Waterfowl 15.7.2 Future Conditions with the Project, Potential Effect – Changes in Productivity Appendix 15-B Shorebird Foraging Opportunity during Migration Appendix 15-C Overwintering Dunlin Foraging Opportunity
Hwlit-4.2	Concerned that toxins emitted as a result of the Project could accumulate and affect raptor species. Requested more information on toxins.	29-Oct-2014, Preliminary EIS Workshop #4	**29-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#97):** With the exception of air emissions, routine construction and operation activities are not expected to result in the discharge of pollutants or other deleterious substances to the environment. The EIS considers potential changes to air quality related to the Project, and to the Project in combination with other certain and reasonably foreseeable projects and activities. Air quality will improve in the future, with or without the Project, as a result of improvements in engine technologies and the use of cleaner fuels. The EIS considers effects on coastal birds related to contaminants (i.e., disturbance of marine sediments and the potential re-suspension of contaminants during construction; and changes in water quality, including total suspended sediment levels and effluent discharge (e.g., wastewater, stormwater, hydrocarbons, bilge and ballast water)). Due to the implementation of management and treatment measures, and adherence to regulatory requirements and guidelines, no changes to discharges to marine waters are expected. Consequently, no adverse effects to coastal birds related to effluent discharges are expected.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 9.2 Air Quality 9.2.8 Future Conditions with the Project 15.0 Coastal Birds 15.7 Future Conditions with the Project 15.7.1 Negligible Effects 30.0 Potential Accidents or Malfunctions 30.4 Potential Marine-based Accidents and Malfunctions 30.5 Potential Land-based Accidents and Malfunctions 30.6 Assessment of Plausible Worst-case Scenarios

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Hwlit-5.1	Asked if enabling water to flow under the causeway had been considered.	28-Oct-2014, AG EIS Workshop #3	**08-Oct-2014, AG EIS Workshop #2:** Responded that the consideration of enabling flow under the causeway was discussed at the Aboriginal Groups EIS Workshop #2 held on 08-Oct-2014. Hwlitsum was invited to the workshop, however, a representative from Hwlitsum did not attend. **28-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. **05-Nov-2014, Package:** A package including materials from workshops 1, 2, 3, and 4 was sent to Hwlitsum. This included a presentation from the AG EIS Workshop #2 on coastal geomorphology. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#3):** The extent of widening along the causeway is determined by road and rail infrastructure requirements for the Project. To minimise the marine footprint, widening will vary from 0 m to approximately 140 m. Past experience at Roberts Bank has indicated that the tidal flats are sensitive to disturbance. In particular, past development has resulted in localised development and expansion of tidal channels and associated changes in the degree of influence of the Fraser River outflow plume on the inter-causeway area. During Project design, the addition of a flow passage channel (i.e. an opening) between the existing Westshore Terminals and the Project was evaluated to determine if the volume of water that would otherwise flow around the northwest corner could be reduced. It was determined that a 100-m-wide flow passage would slightly reduce flow velocities at the northwest corner, but it would generate additional local scour in the passage itself and adjacent areas unless other mitigation measures were installed. An independent technical study, "Potential Effects of Opening the Causeway," was undertaken for the Vancouver Port Authority in 2005 to clarify issues related to physical processes and hydraulic behaviour in the causeway area of Roberts Bank. This report determined that there is a substantial risk that a new opening in the causeway could initiate a new sequence of morphological changes on the tidal flats, which could adversely affect the existing habitat conditions. The report is available on the Project website: http://www.robertsbankterminal2.com/wp-content/uploads/RBT2-Potential-Effects-of-Opening-the-Causeway-June-2005-NHC-Memo-January-2014.pdf. Based on the findings of this report, and the evaluation of adding a flow passage channel, the VFPA does not propose to open the Roberts Bank causeway. **Addressed in Response to IR1-13:** The potential effects of opening the causeway were further discussed in IR1-13. During the Deltaport Third Berth Project (DP3), the VFPA, regulators, and Indigenous groups discussed the potential for opening the causeway by installing a culvert. Such a breach in the causeway was considered to allow flow exchange (i.e., to measurably change the salinity or delivery of sediment) to the inter-causeway area. Results of calculations and analyses are summarised in the technical noted above. The results showed that a culvert would not pass sufficient Fraser River flow to measurably change the salinity or delivery of sediment to the inter-causeway area.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table See Project website for more information: http://www.robertsbankterminal2.com/wp-content/uploads/RBT2-Potential-Effects-of-Opening-the-Causeway-June-2005-NHC-Memo-January-2014.pdf **Information Requests** Response to Sufficiency Information Request #13 (IR1-13 of CEAR Document #897)

Table 6: Economic Development – Valued Component

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information

Hwlit-6.1	Disagreed with the conclusion that there will not be a residual adverse effects to the economic development Valued Component.	29-Oct-2014, Preliminary EIS Workshop #4	**29-Oct-2014, Workshop:**
			Stated that the VFPA considered the balance between supply and demand that will be generated through the Project (e.g. jobs, business needs).
			Stated that it considered the existing available workforce and existing available business capacity. Part of the analysis looked at whether or not this Project would potentially create an imbalance that could adversely affect the local economy. For example, the VFPA considered if the Project was large enough, would it absorb so much of the available business services that those services wouldn't be available to support other projects' activities. Similarly, the VFPA considered if the Project could absorb a large enough portion of the available labour force resulting in an imbalance such that other businesses or sectors couldn't get the workforce they need, that would be an adverse effect.
			01-Apr-2015, Letter from the VFPA:
			Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.
				Addressed in EIS Appendix 7.2-B (#113):
				The economic development assessment evaluated potential Project-related effects on local and regional economies, and focused on:
				• Business revenues associated with the direct supply of materials, goods and services to the Project for construction and operation;
				• Business revenues associated with supply of inputs to the businesses that are directly supplying goods and services to the Project;
				• Induced revenues for businesses related to household spending by workers employed as a result of the Project;
				• Construction sand supply and consumption; and
				• Consistency with economic development plans.
				The economic development assessment concluded that:
				• The Project is expected to result in the following positive effects on economic development in Metro Vancouver:
				  ○ During the 5.5-year construction phase:
				  ▪ $837 million in additional gross revenues to businesses in Metro Vancouver
				  ▪ $238 million in induced household spending in Metro Vancouver
				  ○ During operation:
				  ▪ $31 million annually in materials, good, and services contracting revenue to the economy of Metro Vancouver
				  ▪ $71 million of annual induced household spending in in Metro Vancouver
				• The Project is expected to result in an increase in materials, goods and services contracting revenues for Indigenous businesses located in Metro Vancouver.
				• The Project is expected to result in negligible effects on construction sand availability and price.
				• The Project is consistent with economic development strategies in Metro Vancouver's Regional Growth Strategy, the economic development objectives of the Corporation of Delta, and the general directions set out in the Tsawwassen Land Use Plan of Tsawwassen First Nation (TFN).
				The Project is expected to result in positive effects to economic development in Metro Vancouver; therefore, the Project is not expected to result in measurable adverse residual effects. The Project is not expected to result in incremental adverse cumulative effects on economic development.
				The Economic Development assessment includes assessment of potential adverse effects on local sand supply, resulting from the Project-related demand, as well as potential adverse effects on labour market balance (including wage inflation or labour shortages). Further details on rationale for the scope, methods and conclusions are provided in the EIS.

Table 7: Effects Assessment Methods (including Cumulative Effects)

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Hwlit-7.1	Requested a list of foreseeable projects for assessing cumulative effects, including dates the Projects are due to come on line, and anticipated effects.	28-Oct-2014, Preliminary EIS Workshop #3	**28-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. **05-Nov-2014, Package:** Provided an electronic copy of the materials shared with Indigenous groups at the 07-Oct-2014 EIS Workshop #1, where a Project Inclusion List was provided with other workshop materials. This list was limited to each project's name and provided a brief description of each; it did not include expected dates or anticipated project effects and cumulative effects. Hwlitsum was invited to the workshop, however, a representative of Hwlitsum did not attend this workshop. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#30):** The list of certain and reasonably foreseeable projects and activities that have the potential to interact cumulatively with the Project-related effects is in EIS Table 8-8. This list includes all projects with the potential for a cumulative interaction with the Project. A Project Inclusion List was provided as a handout with the materials for Workshop #1, on October 7, 2014. This list was limited to each project's name and provided a brief description of each; it did not include expected dates or anticipated project effects and cumulative effects. The materials from this workshop were provided to Hwlitsum in hard and electronic copy on November 5, 2014. **Addressed in Response to MSA IR-02.24.16-7:** The VFPA's response to MSA IR-02.24.16-7 verifies that MSA Appendix 6-A reflects all the certain and reasonably foreseeable projects and activities that should be considered in the cumulative effects assessments for marine shipping associated with the Project and updates the list of projects and activities considered and the rationale for exclusion, where appropriate.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 9.0 Physical Setting 9.5.8 Coastal Geomorphology, Future Conditions with the Project Table 9.5-6 Predicted Morphological Changes from the Project Footprint Figure 9.5-35 Approximate Spatial Extent of Potential Changes Associated with the Project Footprint 9.6.8 Surficial Geology and Marine Sediment, Future Conditions with the Project 9.7.8 Marine Water Quality, Future Conditions with the Project **Information Requests** Response to Additional Information Request #7 (MSA IR-02.24.16-7 of CEAR Document #386)
Hwlit-7.2	Concerned about the cumulative shipping effects associated with Tsawwassen First Nation LNG plant and the Kinder Morgan project.	10-Dec-2015, Meeting	**10-Dec-2015, Meeting:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (39):** The list of certain and reasonably foreseeable projects and activities that have the potential to interact cumulatively with the Project-related effects is in EIS Table 8-8. This list includes all projects with the potential for a cumulative interaction with the Project. The CEA Agency is the appropriate authority to address questions related to *CEAA 2012* and designated projects. **Addressed in MSA Appendix 5-B (24):** The assessment of potential effects of marine shipping associated with the Project incorporates the existing vessel traffic within the marine shipping area (defined in Section 4.0). The list of certain and reasonably foreseeable projects and activities considered in the cumulative effects assessment is included in MSA Appendix 6-A. **Addressed in EIS Section 8.0:** No significant adverse cumulative effects are anticipated from the Project, with the exception of a significant cumulative effect to southern resident killer whales. Due to their endangered status and a lack of recovery of the population, the VFPA has assumed that southern resident killer whales have already been significantly adversely affected and therefore cumulative effects are expected to remain significant. **Addressed in Response to IR4-09:** In the VFPA's response to IR4-09, updated project status and vessel movement information is provided as available for the projects listed in the EIS and MSA (north of Segment B), plus other new projects considered to be certain or reasonably foreseeable (as of July 1, 2017). **Further response provided by the VFPA:** As noted in EIS Section 8.0, the Kinder Morgan Pipeline Expansion Project (Transmountain Pipeline) is included in the list of Certain and Reasonably Foreseeable Project/Activities. At the time of EIS writing insufficient information was publicly available for the inclusion of the Tsawwassen First Nation	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 8.0 Affects Assessment Methods **Marine Shipping Addendum (MSA, CEAR Document #316)** Appendix 5-B Aboriginal Issues and Interests 6.0 Effects Assessment Approach 6.7 Cumulative Effects Assessment **Information Requests** Response to Sufficiency Information Request #09 (IR4-09 of CEAR Document #1051)

				LNG concept in the assessment of cumulative effects; regardless, on December 16, 2015, Tsawwassen First Nation announced that its Members have voted against the proposed development of a liquefied natural gas (LNG) export facility on Tsawwassen Lands.	
Hwlit-7.3	Requested more information on the ecosystem productivity model and the technical boundaries of the assessment. Asked if tides are included in the ecosystem productivity model and whether they have made a difference.	28-Oct-2014, Preliminary EIS Workshop #3	**28-Oct-2014, Workshop:** Responded that the ecosystem model is a tool to make predictions, which must be tested using other analyses and professional experience. Stated that the uncertainties and limitations of the model will be described and answered more fully in the EIS. Responded that tides are included in the ecosystem productivity model. There is great tide variability at Roberts Bank. Tides occur two times a day with two highs, two lows. The model considers tides over the course of a year, incorporating higher and lower tide variability. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Section 10.3 Overview of Assessing Ecosystem Productivity.	**Addressed in EIS Section 10.3:** The VFPA used an ecosystem-based approach to assess Project-related effects to the productivity of marine biophysical VCs. Modelling of ecosystem productivity was one of several tools used to inform effects assessments. Productivity is a measure of the amount of plant and animal biological material (or biomass) produced within an area over a given amount of time. A predator-prey food web for the Roberts Bank ecosystem was developed to represent the linkages and interactions between marine vegetation, invertebrates, fish, mammals and coastal bird species that influence the productivity of the ecosystem. The model was also used to predict the productivity of proposed on-site habitat that would be created to offset expected Project-related effects on the productivity of marine biophysical VCs. **Additional response provided by the VFPA:** Additional information concerning the VFPA's selection and use of the model in the RBT2 environmental assessment is available in Information Request Package 3 Preamble in Support of Responses to IR3-01 to IR3-24 – Roberts Bank Ecosystem Model (CEAR Document #928).	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 10.0 Biophysical Setting 10.3 Overview of Assessing Ecosystem Productivity Appendix 10.3-A Roberts Bank Ecopath with Ecosim and Ecospace Model Parameter Estimates Appendix 10.3-B Roberts Bank Ecosystem Model Development and Key Run Appendix 10.3-C Roberts Bank Spatial Ecosystem Model Sensitivity Analysis Appendix 10-D Roberts Bank Spatial Ecosystem Model Sensitivity Analysis **Information Requests** Information Request Package 3 Preamble in Support of Responses to IR3-01 to IR3-24 – Roberts Bank Ecosystem Model (CEAR Document #928)
Hwlit-7.4	Requested a list of the studies carried out as part of the assessment including any technical reports.	01-Nov-2013, Meeting 28-Oct-2014, Preliminary EIS Workshop #3	**01-Nov-2013, Meeting:** Recorded comment for consideration by the Project team. **18-Jun-2014, Letter from the VFPA:** An offer was made to Hwlitsum to review Technical Reports and Technical Data Reports, providing a confidentiality agreement was signed. **28-Oct-2014, Workshop:** Stated that a list of studies was sent out in on June 18, 2014. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included the technical studies.	**Addressed in EIS Volumes 2, 3 and 4:** Each Intermediate Component (IC) and Valued Component (VC) section of the EIS contains information on field studies that were undertaken in support of the assessment. Some Technical Data Reports are appendices to EIS chapters, while others are available publicly on the RBT2 website: http://www.robertsbankterminal2.com/environmental-assessment/technical-data-reports/	**EIS** Volume 2 – Effects Assessment Methods and Physical Setting (Sections 8.0–9.0) Volume 3 – Biophysical Effects Assessments (Sections 10.0–17.0) Volume 4 – Socio-Economic Effects Assessments (Sections 18.0–28.0)
Hwlit-7.5	Stated that the broad drafting of the Valued Components risks insufficient coverage of environmental	09-May-2014, Letter - VC Selection and Rationale - CNA	**09-May-2014:** Recorded comment for consideration by the Project team. **06-Jun-2014, Workshop:**	**Addressed in EIS Volume 3:** i. Marine vegetation: Green seaweed (EIS Section 11.0 has been included as the marine vegetation sub-component macroalgae, which includes Ulva spp., as well as other brown algal species (bull kelp, rockweed).	**EIS** 11.0 Marine Vegetation 11.2.1 Subcomponents 12.0 Marine Invertebrates

Hwlitsum

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
	components of importance to the Cowichan Nation Alliance. Requested that the following species be listed under the relevant Valued Component heading: i. Marine vegetation: green seaweed ii. Coastal terrestrial vegetation: bull rush, reeds, cranberries, blueberries, camas iii. Marine fish: Coho, Spring, Chum, Pink, Chinook, and Sockeye Salmon, eulachon, herring, cod, halibut, flounder and sturgeon iv. Marine invertebrates: red sea urchin, sea cucumber and mussels v. Marine mammals: harbour seal vi. Migratory birds: Brant geese, canvasback duck, Common Merganser and Mallard		The VFPA hosted a workshop for Indigenous groups to provide an opportunity to comment on the VCs. Hwlitsum was invited to the workshop, however, a representative from Hwlitsum did not attend. **03-Jul-2014, Workshop:** The VFPA hosted a workshop for Indigenous groups to provide an opportunity to comment on the Valued Components. Hwlitsum was invited to the workshop, however, a representative from Hwlitsum did not attend.	ii. Coastal terrestrial vegetation: bull rush, reeds, cranberries, blueberries, camas (EIS Section 11.0). This was considered when selecting marine vegetation sub-components (EIS Section 11.2.1). As the Project is located in the marine environment and Project-related interactions with terrestrial vegetation species are not anticipated, these species were not incorporated into the effects assessment (without an interaction, there is no potential for an effect on these species). iii. Marine fish: coho, spring, chum, pink, Chinook, and sockeye salmon, eulachon, herring, cod, halibut, flounder, and sturgeon (EIS Section 13.0). • All Pacific salmon were considered in the assessment under the sub-component Pacific salmon. Chum and Chinook were selected as representative species for the five salmon species, as they are more estuarine dependent (any predicted effects to chum and Chinook are representative of effects to the other species). Refer to EIS Section 13.2.1 for more information. • Eulachon were assessed through representative forage fish species (see EIS Sections 13.6.2.1 and 13.6.3.3). Eulachon was not selected as a representative species as it is rare within the marine fish LAA based on surveys conducted at Roberts banks and Sturgeon Bank in past years (EIS Section 13.2). • Pacific herring was included in the assessment as a representative species under the forage fish sub-component. • Lingcod was included in the assessment as a representative species under the reef fish sub-component. Rock cod were assessed through their representation by rockfish, as discussed in EIS Section 13.5.2. • Starry flounder was included in the assessment as a representative species under the flatfish sub-component. Pacific halibut are not typically found in estuarine environments (including the Fraser River estuary) and therefore would not interact with and be adversely affected by the project. • Sturgeon were assessed through the use of Chinook and chum salmon representative species. Sturgeon was not selected as a representative species as it is also rare within the marine fish LAA. Refer to EIS Section 13.2.1 for more information. iv. Marine invertebrates: red sea urchin, sea cucumber and mussels (EIS Section 12.0). • Red sea urchin and sea cucumbers were assessed through the use of Dungeness crab representative species. Red sea urchin and sea cucumbers were considered when selecting marine invertebrate sub-components, but were not selected as representative species as their typical habitat is not an estuarine sand-dominated environment like Roberts Bank. As such, Project-related effects to these species are anticipated to be very limited. • Mussels (specifically the bay mussel (*Mystilus trossulus*)) was included in the assessment under the bivalve shellfish sub-component. v. Marine mammals: harbour seal (EIS Section 14.0). • Harbour seal was considered and included in the marine mammals effects assessment under the seals and sea lions sub-component. vi. Migratory birds: Brant were included in the coastal birds effects assessment as a representative species of the waterfowl sub-component. American Wigeon represented Mallard, while common merganser and canvasback duck are represented within the diving bird sub-component. These latter two species were not selected as representative species as they are not common at Roberts Bank, nevertheless, any potential effects to these species are assessed through more common species (that have been selected as representative species).	13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component 14.0 Marine Mammals

Hwlitsum

Table 8: Engagement and Consultation

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Hwlit-8.1	Requested that the VFPA provide its views regarding the strength of consultation to which Hwlitsum is entitled and that the VFPA advocate with the CEA Agency for Hwlitsum's inclusion in the EIS guidelines.	06-Mar-2014, Meeting	**06-Mar-2014, Meeting:** Asked for Hwlitsum's views regarding how it should address Hwlitsum concerns or issues in the EIS if the CEA Agency does not add Hwlitsum as an Indigenous group. Hwlitsum indicated that it wanted to wait to see how the Agency responds.	**Additional information provided by the VFPA:** As described in EIS Section 7.2 and EIS Appendix 7.2-A, the VFPA has consulted with Hwlitsum in the same fashion as all Indigenous groups identified by the CEA Agency as requiring moderate consultation.	**EIS** 7.2 Aboriginal Groups Engagement and Consultation Appendix 7.2-A Consultation Activities by Aboriginal Group
Hwlit-8.2	Requested funding to support review of Project. Stated that there needs to be funding available to participate in a meaningful way. Stated that any participant funding amounts that are subject to a "hard cap" fail to recognize that respective Aboriginal groups have differing levels of capacity and levels of need.	06-Mar-2014, Meeting 31-Mar-2014, Meeting 22-Sep-2014, Letter to the CEA Agency (CEAR Document #125)	**29-Jan-2014, Letter:** Offered funding for participation in the consultation program. **06-Feb-2014, Letter:** Hwlitsum accepted funding. **29-Jul-2014, Letter:** Offered to provide funding for the Hwlitsum Current Use report. **15-Sep-2014, Letter:** Provided funding. **22-Aug-2014, Letter:** Offered funding for fall 2014 consultation activities. **25-Aug-2014, Letter:** Hwlitsum accepted funding.		
Hwlit-8.3	Requested an extension of the timeline for application for Participant Funding due to changes in government. Stated that funding would be used to complete traditional, current use and marine studies.	17-Aug-2017, Letter to Panel	The VFPA understands that this comment is directed to the Review Panel. The VFPA has reviewed this letter and has no additional information to provide.		
Hwlit-8.4	Stated that it is problematic that the environmental assessment does not set out a detailed process for the Crown to utilize information regarding the nature and scope of Aboriginal rights, nor do they provide a pathway for consultation and accommodation as a result of any concerns brought forward in this information gathering process.	22-Sep-2014, Letter to the CEA Agency (CEAR Document #125)	**24-Jul-2017, Letter from the Review Panel (CEAR Document #1021):** *"The Review Panel has considered the submission [of September 22, 2014] from Hwlitsum First Nation to the Canadian Environmental Assessment Agency and acknowledges the information that Hwlitsum First Nation has provided, including information relevant to the potential environmental effects of the proposed Project."*		

Hwlitsum

Table 9: Environmental Assessment and Permitting Process

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Hwlit-9.1	Concerned that the VFPA considers section 19 of *CEAA 2012* separately from Section 5.1 (a) of *CEAA 2012*, which weakens the analysis of cumulative environmental effects on First Nations.	27-May-2014, Technical Working Group #3	**27-May-2014, Working Group:** Noted the concern and committed to clarifying how 5.1 (a) is being addressed. Stated the presentation on cumulative effects may address this concern, and if it is not addressed during this meeting, it can be included on the agenda for 06-Jun-2014 workshop. **06-Jun-2014, Workshop:** Discussed cumulative effects at this workshop, but a representative from Hwlitsum did not attend.	**Addressed in EIS Appendix 7.2-B (#38):** The cumulative effects assessment takes into consideration the potential residual effects of the Project in combination with the effects of other projects and activities that have been or will be carried out, including effects on local and Indigenous communities. A review of previous studies, effects assessments, and commitments from other projects was conducted and has informed the Project's environmental assessment, as discussed in the EIS. Projects and activities contributing to existing and expected conditions in the Project area are identified and described. Information sources considered in the characterisation and assessment of each IC and VC are identified in the respective effects assessment section of the EIS.	**EIS** 3.0 Geographical Setting 3.4 Geographical Setting, Projects and Activities Contributing to Existing and Expected Conditions Appendix 7.2-B Aboriginal Groups Interests and Issues Table IC Effects Assessment Sections: Physical ICs (Sections 9.2 through 9.8) Population (18.4) VC Effects Assessment Sections: Biophysical VCs (Sections 11.0 through 16.0) Socio-economic VCs (Sections 19.0 through 28.0)
Hwlit-9.2	Asked how Hwlitsum can be sure that monitoring will take place.	28-Oct-2014, Preliminary EIS Workshop #3	**28-Oct-2014, Workshop:** Stated that monitoring will occur, the details of which will be determined through the environmental assessment process. **30-Aug-2017, Follow-up Program Workshop:** The VFPA hosted a Follow-up Program Workshop. The presentation provided lessons learned on DP3 and a proposed approach to developing the RBT2 Follow-up Program.	**Addressed in EIS Section 33.5:** Similar to the Adaptive Management Strategy for the Deltaport Third Berth Project, as described in EIS Section 33.5, the VFPA is committed to developing and implementing a Follow-up Program for the Project. The purpose of the Follow-up Program is to verify the accuracy of residual effect predictions made in the EIS, and determine the effectiveness of any measures taken to mitigate the adverse environmental effects of the Project. To ensure the Program's elements adequately reflect conditions of Project approvals, final designs, and construction or operation approaches, as well as public, Indigenous group, and regulator feedback received during the review of the EIS, the VFPA will lead the development of the Follow-up Program after the submission of the EIS. The Follow-Up Program will include: • An evaluation of the adequacy of existing data to provide a benchmark against which to test Project-related effects; • A monitoring design drawing on the measurable parameters identified to be field-tested; • A methodological approach for using field-collected data to measure and verify the accuracy of the effects predicted in the EIS; • A reporting framework that defines frequency of reporting, distribution and feedback mechanisms; and • Details of the VFPA's approach to adaptive management for the Project through construction and operation. The Follow-Up Program will be developed in consultation with federal agencies, including the CEA Agency, Fisheries and Oceans Canada (DFO), and Environment Canada. Complete drafts of the Roberts Bank Terminal 2 Follow-up Program will be made available prior to the start of field measurements to ensure parties consulted on the program and approving agencies have an opportunity to evaluate and approve the Program. Feedback from Indigenous groups regarding the draft Program will be sought through the VFPA's ongoing engagement initiatives.	**EIS** 33.5 Roberts Bank Terminal 2 Follow-Up Program

#	Interest / Concern Raised	Date(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Hwlit-9.3	Stated that the current environmental assessment process does not allow First Nations to participate as decision makers. Stated that the process needs to be reformulated to allow Hwlitsum and other First Nations to engage in a participatory and even-handed process that enables timely First Nation engagement and accepts that First Nations have the inherent right to exercise self-determination in their Traditional Lands.	22-Sep-2014, Letter to the CEA Agency (CEAR Document #125)	The VFPA understands that this comment is directed to the CEA Agency. The VFPA has reviewed this letter and has no additional information to provide.		
Hwlit-9.4	Expressed concern that the Terms of Reference: • fail to define the purpose, need and justification for the Project; • fail to provide a specific description of the Project; • fail to discuss specific credible, economical alternatives to the Project; • fail to outline specific information and parameters for an effective cumulative effects assessment; • fail to specify environmental impacts and their implications; • fail to identify Species at Risk and accountability of protection of those species.	22-Sep-2014, Letter to the CEA Agency (CEAR Document #125)	**24-Jul-2017, Letter from the Review Panel (CEAR Document #1021):** *"The Review Panel has considered the submission [of September 22, 2014] from Hwlitsum First Nation to the Canadian Environmental Assessment Agency and acknowledges the information that Hwlitsum First Nation has provided, including information relevant to the potential environmental effects of the proposed Project."*

Table 10: Human Health – Valued Component

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Hwlit-10.1	Concerned with changes to liveability and quality of life.	29-Oct-2014, Preliminary EIS Workshop #4	**29-Oct-2014, Workshop:** Responded that projects like RBT2 are large-scale, and when planned in populated areas concerns about quality of life are important. Stated that the health assessment in the EIS will include a qualitative analysis of health and well-being. Stated that the EIS will also address quality of experience, how it may change and information on current use of land and resources. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#114):** An overview of the multiple components that make up the larger socio-economic assessment is provided in EIS Section 18.0 Social and Economic Setting. Project-related effects on the fishing industry are assessed in EIS Section 21.0 Marine Commercial Use. The assessment of potential Project-related effects on the Economic Development VC concluded that the Project will be consistent with the economic development objectives of the Corporation of Delta. An assessment of potential Project-related effects on traditional activities is provided in EIS Section 32.2. **Addressed in EIS Appendix 7.2-B (#170):** An assessment of Project-related changes to light and noise and vibration and the potential effect of those changes on the Current Use of lands and resources for traditional purposes is included in the EIS. The EIS does not include an assessment of potential effects related to smell. The findings of this study are included in the Current Use assessment, as the quality of experience of carrying out traditional uses is included as an indicator in this assessment.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 18.0 Social and Economic Setting 21.0 Marine Commercial Use 26.0 Land and Water Use 26.7.2 Potential Effect #1 – Consistency with Land Use Planning Designations 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Land and Resources for Traditional Purposes
Hwlit-10.2	Commented that coal trains are affecting human health. Asked what the parameters of the health assessment are.	29-Oct-2014, Preliminary EIS Workshop #4	**29-Oct-2014, Workshop:** Stated that a meeting to discuss human health will be offered to each Indigenous Group individually. Offered to meet with Hwlitsum to review preliminary results of the health assessment in the EIS prior to submission; however, Hwlitsum did not respond to the VFPA's offer. The VFPA continues to be open to discuss the human health assessment. **12-Dec-2014, Meeting:** Shared with Hwlitsum information on how Hwlitsum's interests and concerns will be addressed in EIS. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#6):** The proposed Project is a container terminal and does not include any coal-related elements. There are no plans to modify the Project to handle bulk oil or coal. The Project will not contribute to coal dust. Coal dust from Westshore Terminals (the existing coal terminal at Roberts Bank) was included in the examination of air quality existing conditions and air quality cumulative effects assessment. The human health assessment considered the potential for contamination of edible shellfish related to Project activities resulting in re-suspension of historical deposits of coal in sediments. The assessment concluded that there were no risks to human health related to re-suspension of sediments containing coal. **Addressed in EIS Appendix 7.2-B (#132):** The air quality parameters relevant to the RBT2 Project are included in the Human Health Risk Assessment for Air Quality. **Addressed in EIS Appendix 7.2-B (#133):** Coal dust from Westshore Terminals (the existing coal terminal at Roberts Bank) was included in the characterisation of air quality existing conditions and the assessment of potential cumulative changes to air quality. Release of coal dust into the environment is not Project-related; however, re-suspension of sediments containing historical coal dust deposits may occur during the construction phase, potentially leading to short-term uptake of contaminants by both bivalve shellfish and Dungeness crab. To address concerns about the health of these species, studies on both bivalve shellfish (including clams) and Dungeness crabs examined the edible tissue concentrations of coal dust-derived contaminants (including polycyclic aromatic hydrocarbons (PAHs) and heavy metals).	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 27.0 Human Health 27.5.4 Exposure to Shellfish Contamination Appendix 27-A Air Quality HHRA Technical Report Appendix 27-C Shellfish Harvesting Potential and Contaminant-related Consumption Risks at Roberts Bank

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				Results from lab analyses demonstrated that bivalve shellfish (including clams) uptake PAHs found in the surrounding sediments. The human health risk assessment, however, found concentrations in edible tissues were not high enough to pose a consumption risk. The assumptions used to estimate the consumption risk (i.e., total Incremental Lifetime Cancer Risk (ILCR)) are relatively conservative. The maximum observed PAH tissue concentration had a very high annual shellfish consumption rate. The total ILCR for exposure to potentially carcinogenic PAHs was estimated to be approximately in the order of magnitude lower than 1 in 100,000, the valued considered by Health Canada and the B.C. Ministry of Environment to be an acceptable low risk potential. On this basis, it was concluded that PAHs at Roberts Bank in edible bivalve tissues pose a negligible consumption human health risk.	
Hwlit-10.3	Stated that if the human health assessment omits diesel particulates, or the scope is very narrow, it will not be useful to Hwlitsum.	29-Oct-2014, Preliminary EIS Workshop #4	**29-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. Offered to meet with Hwlitsum to review preliminary results of the health assessment in the EIS prior to submission; however, Hwlitsum did not respond to the VFPA's offer. The VFPA continues to be open to discuss the human health assessment. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Section 9.2.5 to 9.2.9:** The Air Quality Assessment models Project-related emission sources during the construction phase, and fuel combustion during the construction and operation phases, and compared them to modelled existing conditions and future expected conditions. **Addressed in EIS Appendix 7.2-B (#127):** An assessment was conducted to determine potential Project-related effects on human health. The assessment was carried out using both a quantitative human health risk assessment and a qualitative health impact assessment and considered: • Exposure to air emissions; • Exposure to noise and vibration; • Exposure to shellfish contamination; • Stress and annoyance; • Employment and income; • Food security, including potential changes in availability of traditional food; and • Health inequity, referring to the distribution of Project-related risks and benefits. The health inequity sub-component assessed potential effects related to unequal distribution of Project-related benefits and Project-related adverse effects. The sub-components of stress and annoyance and employment and income assessed factors related to mental wellbeing. The rationale for selection of VC subcomponents and indicators is provided in the EIS. The human health assessment concludes that: • The Project is not expected to result in any significant adverse effects on human health. Incremental adverse cumulative effects to human health are expected to be negligible. • Potential Project-related effects on human health are expected to be fully or partially mitigated through the implementation of environmental management plans and additional mitigation measures. • The Project would result in measurable residual effects for exposure to air emissions during construction and exposure to noise during construction and operation. • Mitigation is expected to reduce all other residual effects to a negligible (i.e., not measureable) level.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.2.5 Methods 9.2.9 Future Conditions with the Project and Other Projects and Activities 27.0 Human Health 27.6.1 Rationale for Determination of Negligible Effects 27.6.5 Potential Effect #4 – Adverse Health Outcomes due to Changes in Health Inequity

Hwlitsum

Table 11: Light – Intermediate Component

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Hwlit-11.1	Asked if mitigation for light trespass can be applied to the existing terminal. Stated that the Port can be seen clearly from Crescent Beach due to the light it emits.	29-Oct-2014, Preliminary EIS Workshop #4	**29-Oct-2014, Workshop:** Responded that mitigation included in the EIS will be specific to the RBT2 Project. Currently, as the lights on the cranes expire, they are being replaced with LED lights, which are easier to control, in terms of light direction and trespass. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#45):** The potential changes in light that may be caused by the Project, and the potential effects of those changes on VCs and on Current Use of land and resources for traditional purposes are considered in the EIS. The results of the light assessment informed the assessments of marine fish, coastal birds, visual resources and human health, and Current Use of land and resources for traditional purposes. The assessment concluded that: • Overall, the Project is not expected to change the general light environment of the Lower Mainland and the Gulf Islands and no measurable incremental cumulative changes related to light are expected. • Project-related lighting is expected to result in a minimal increase in light trespass levels. • Increases in sky glow levels are expected, but are not anticipated to result in a noticeable change from existing conditions. Suggested mitigations were considered in the effects assessment. Mitigation measures to address effects on visual resources and coastal birds consist of implementing Environmental Management Plans, including Light Management Plans, for construction and operation phases. The Light Management Plans will describe measures to reduce excess lighting and sky glow, including: orienting lights downwards and away from residential and marine areas, using shielding to minimise light trespass, controlling light levels and limiting light use to areas where activities are occurring. Where possible, using fixtures that emit light at wavelengths shown to minimise disorienting effects to birds will also be considered. During construction, management plans will ensure that dredge lighting system shields light from spilling outside the basic working footprint of the dredge. During operation, a centralised lighting control system will be utilised so that specific lighting can be selected. **Addressed in EIS Section 9.4.7:** A process is underway to change the current outdoor lighting fixtures at the Deltaport Terminal to light-emitting diodes (LEDs). LEDs are more directional and easier to control in terms of where light is focused. It is anticipated that the change to LEDs will reduce both light trespass and sky glow from the Deltaport Terminal, provided good lighting design practices are followed (specifically, the use of full cut-off light fixtures to limit up-light and only lighting areas that are required to be lit). At this time, the lighting on one crane at Deltaport has been fully replaced with LED lights.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.4.7 Expected Conditions 9.4.8 Light, Future Conditions with the Project 33.0 Environmental Management Program 33.3.5 Construction EMP, Light Management Plan 33.4.3 Operation EMP, Light Management Plan

Table 12: Marine Commercial Use – Valued Component

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Hwlit-12.1	Stated that the Hwlitsum have two fishing wharves in Canoe Pass. Stated that no one has consulted with community members for the commercial fisheries studies.	01-Nov-2013, Meeting	**01-Nov-2013, Meeting:** Recorded comment for consideration by the Project team.	**Additional information provided by the VFPA:** Numerous literature and data sources (e.g., DFO) were consulted for information on CRA fisheries, as described in the EIS, in addition to consultation with Indigenous groups and publicly available Indigenous traditional marine use or harvest data reports. Project-specific studies with respect to Current Use and/or Traditional Knowledge were provided by Indigenous groups, as well as a study completed by Hwlitsum. This study – *The Hwlitsum First Nation's Traditional Use and Occupancy of the area known as British Columbia* - was considered in the environmental assessment.	**EIS** 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries 16.2 Selection of Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries Valued Component 16.4 Information Sources 16.5.2 Existing Conditions, Recreational Fisheries
Hwlit-12.2	Noted that there has been a decline in fisheries, and asked for more information regarding VFPA`s statement that there has been sustained successful fisheries over long time frames.	29-Oct-2014, Preliminary EIS Workshop #4	**29-Oct-2014, Workshop:** Responded that in terms of looking at the effects of the Project, the VFPA recognises that there are relatively high levels of natural take away/harvest from those fisheries already. The VFPA wants to ensure that the context of the effect is discussed in the context of other things that are occurring.	**Additional information provided by the VFPA:** The cumulative effects assessment takes into consideration the potential residual effects of the Project in combination with the effects of other projects and activities that have been or will be carried out, including those in the lower Fraser River.	**EIS** 8.0 Effects Assessment Methods 8.1.9 Effects Assessment Methods, Environmental Assessment Methods, Cumulative Effects Assessment 21.0 Marine Commercial Use 21.2 Selection of Marine Commercial Use Valued Component 21.3.1 Spatial Boundaries
Hwlit-12.3	Asked about how far back DFO's data went; if it pre-dated construction of the terminals in the area. Requested information source(s).	29-Oct-2014, Preliminary EIS Workshop #4	**29-Oct-2014, Workshop:** Responded that the data considered was that which was available, which was largely DFO management data. Committed to following up on how far back the data went. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Section 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries.	**Addressed in EIS Section 16.0:** As noted in EIS Section 16.0, DFO data on Indigenous fisheries extends as far back as 2009, and recreational fisheries to 1986 and commercial to 1996. The Cohen Inquiry report, which canvassed data extending back to the 1920s, is referenced in Section 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes.	**EIS** 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes
Hwlit-12.4	Concerned with crab harvesters in the Project and how they will be displaced to other areas which will affect crab harvesters in these secondary areas.	29-Oct-2014, Preliminary EIS Workshop #4	**29-Oct-2014, Workshop:** Responded that the VFPA's understanding is that every three years current licence holders may re-select the crab management area for which their license applies through a type of application process. They can request to hold the licence for another crab management area. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#119):** The EIS describes potential effects on fishing activity (EIS Section 21.0 Marine Commercial Use, and EIS Section 24.0 Outdoor Recreation) and effects in other areas (e.g., Boundary Bay) that are not otherwise directly affected by the Project but that may be affected by displacement. This is covered in Section 32.2 Current Use of Land and Resources for Traditional Purposes. **Addressed in EIS Appendix 7.2-B (#117):** Marine commercial use, or the use of marine waters and resources to generate revenue, has been identified as an important economic factor in local and regional communities, and for Indigenous groups. The marine commercial use assessment included four sub-components: • Seafood harvesting; • Marine fish harvesting; • Guided sport fishing; and • Marine-based tourism.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 21.0 Marine Commercial Use 21.7.1 Seafood harvesting - Mitigation Measure #1 - Changes in Area, Harvest and Revenue 24.0 Outdoor Recreation 24.7.1 Recreational Seafood Harvesting Mitigation Measure #1 – Changes in Harvesting Area Use and Displacement 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Land and Resources for Traditional Purposes

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				Potential effects on marine commercial use include displacement of commercial crab harvesting during construction and operation, resulting in a potential change of harvesting area, total harvest, and revenue, due to the Project footprint and the proposed expansion of the area closed to commercial crabbing. The VFPA will work with DFO to engage commercial crab harvesters to identify and implement feasible mitigation measures; and will implement construction and operation environmental management plans related to construction phase communication, construction monitoring and crab salvages effects from displacement of commercial crab harvesting during construction and operations. The Project is anticipated to result in a negligible effect to marine fish harvesting, guided sport fishing and marine-based tourism. These negligible effects are related to changes in area, access, resource availability and harvesting revenues. The Project is expected to result in a residual effect of changes to seafood harvesting area, harvest and revenue. The residual effect is determined to be not significant, as Dungeness crab are known to move substantial distances to baited traps, and harvest activity can be moved to another open area. Other planned or reasonably foreseeable projects and activities would also displace crab harvesting, and this effect would combine with that of the Project to result in an incremental cumulative effect on commercial crab fishing. This adverse incremental cumulative effect is determined to be not significant.	
Hwlit-12.5	Concerned with marine shipping and safety risks for small fishing vessels.	29-Oct-2014, Preliminary EIS Workshop #4	**29-Oct-2014, Workshop:** Responded that the Quantitative Risk Assessment will be an Appendix in the EIS. That study indicated that this project will have increased vessel traffic and container traffic. It also asked what other types of vessels it will interact with. One of the subsets of vessels was commercial fishing vessels. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in MSA Appendix 5-B (#73):** The assessment of current use of lands and resources for traditional purposes (MSA Section 9.5) considers the risk of collision and perceptions of safety in the assessments of access to preferred Current Use locations, and quality of Current Use experience. The assessment of potential accidents or malfunctions (MSA Section 10.0) includes consideration of a plausible worst-case collision scenario between a container ship and a smaller vessel such as a fishing vessel. Potential effects of such an event are assessed for the following VCs: marine commercial use, outdoor recreation, and human health, as well as Current Use. The assessment of current use of lands and resources for traditional purposes (MSA Section 9.5) considers cultural practices, such as the acquisition of traditional foods and the transmission of traditional knowledge. Perceptions of safety, as well as access to preferred harvesting locations and visual or auditory disturbances, are covered in the assessment of potential changes to the following: Access to preferred Current Use locations; and Quality of Current Use experience. **Addressed in MSA Section 9.5:** MSA Section 9.5 considers the current use of lands and resources for traditional purposes (Current Use) by Indigenous peoples, including intangible cultural heritage considerations, and in the marine shipping area. The section also considers potential impacts on the ability to exercise asserted or established Aboriginal or treaty rights in the marine shipping area, including in the context of potential accidents and malfunctions. Potential effects on current use as a result of Project associated vessel transit activities are considered negligible before mitigation for access to	**MSA** Appendix 5-B Aboriginal Issues and Interests 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 10.0 Potential Accidents or Malfunctions **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				preferred current use locations, due to Project-associated ship wake, the availability and quality of preferred current use resources, and the quality of the current use experience (i.e., cultural practices) tied to those aspects of current use. Residual effects on access to preferred current use locations due to Project associated container ship pass-bys, and on cultural practices tied to that aspect of current use, are considered negligible after the implementation of mitigation. Considering the conclusions of the current use assessment, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the marine shipping area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location. These mitigation measures for addressing potential incremental effects on current use are expected to also be effective at addressing the potential incremental impact to the exercise of Aboriginal and treaty rights. No additional mitigation measures have therefore been suggested for the potential incremental impact to the exercise of Aboriginal and treaty rights. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954) and letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provide additional information on the Government of Canada's Oceans Protection Plan which includes information on proactive vessel management, in which Transport Canada will work with partners to develop regulatory and other tools to engage Indigenous and coastal communities to better respond to local marine traffic issues.	
Hwlit-12.6	Concerned with loss of areas for marine commercial use.	29-Oct-2014, Preliminary EIS Workshop #4	**29-Oct-2014, Workshop:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#117):** Marine commercial use, or the use of marine waters and resources to generate revenue, has been identified as an important economic factor in local and regional communities, and for Indigenous groups. The marine commercial use assessment included four sub-components: • Seafood harvesting; • Marine fish harvesting; • Guided sport fishing; and • Marine-based tourism. Potential effects on marine commercial use include displacement of commercial crab harvesting during construction and operation resulting in a potential change of harvesting area, total harvest, and revenue, due to the Project footprint and the proposed expansion of the area closed to commercial crabbing. #	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				The Project is anticipated to result in a negligible effect to marine fish harvesting, guided sport fishing and marine-based tourism. These negligible effects are related to changes in area, access, resource availability and harvesting revenues. The Project is expected to result in a residual effect of changes to seafood harvesting area, harvest and revenue. The residual effect is determined to be not significant, as Dungeness crab are known to move substantial distances to baited traps, and harvest activity can be moved to another open area. Other planned or reasonably foreseeable projects and activities would also displace crab harvesting, and this effect would combine with that of the Project to result in an incremental cumulative effect on commercial crab fishing. This adverse incremental cumulative effect is determined to be not significant. **Addressed in Response to IR7-33:** The VFPA's response to IR7-33 discusses potential reductions in commercial crab harvest levels and the potential reductions in revenue from the proposed decrease in the size of the fishing areas in DFO Area 29-6. In summary, the Project terminal and proposed navigational closure expansion would displace a large portion of commercial crab harvesting in the LAA, and result in a demonstrable change to harvest landings and revenues, particularly from sub-area 29-6. The re-establishment of displaced commercial crab harvesters and effects on commercial crab harvest landings and revenues accrued to displaced harvesters and other harvesters harvesting outside of the proposed closure boundary, would be similar to that which occurred with the 2009 Closure, and be within historical norms.	**Information Requests** Response to Sufficiency Information Request #33 (IR7-33)
Hwlit-12.7	Stated that the Project footprint is located in a prime crab fishing area.	10-Dec-2015, Meeting	**10-Dec-2015, Meeting:** Recorded comment for consideration by the Project team.	**Addressed in EIS Appendix 7.2-B (#117):** Marine commercial use, or the use of marine waters and resources to generate revenue, has been identified as an important economic factor in local and regional communities, and for Indigenous groups. The marine commercial use assessment included four sub-components: • Seafood harvesting; • Marine fish harvesting; • Guided sport fishing; and • Marine-based tourism. Potential effects on marine commercial use include displacement of commercial crab harvesting during construction and operation, resulting in a potential change of harvesting area, total harvest, and revenue, due to the Project footprint and the proposed expansion of the area closed to commercial crabbing. The VFPA will work with DFO to engage commercial crab harvesters to identify and implement feasible mitigation measures; and will implement construction and operation environmental management plans related to construction phase communication, construction monitoring and crab salvages effects from displacement of commercial crab harvesting during construction and operations. The Project is anticipated to result in a negligible effect to marine fish harvesting, guided sport fishing and marine-based tourism. These negligible effects are related to changes in area, access, resource availability and harvesting revenues. The Project is expected to result in a residual effect of changes to seafood harvesting area, harvest and revenue. The residual effect is	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 12.0 Marine Invertebrates 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries 21.0 Marine Commercial Use 21.6 Future Conditions with the Project – Potential Project-related Effects 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Land and Resources for Traditional Purposes 32.2.6 Future Conditions with the Project - Potential Project-Related Effects

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Hwlit-13.1	Asked if any studies were conducted on eulachon, and if eulachon have occurred in the Project area in the past.	29-Oct-2014, Preliminary EIS Workshop #4	**29-Oct-2014, Workshop:** Responded that eulachon were not studied separately. Stated that a literature review was done, and experts informed the VFPA that eulachon do not occur in the LAA. It is known that they occur widely within the Fraser River, but there is no evidence of eulachon occurring in the LAA. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#80):** Potential Project-related effects on eulachon are considered in the marine fish assessment within the forage fish sub-component. Eulachon was not assessed directly as a representative species within the forage fish sub-component due to the rarity of eulachon in the Roberts Bank area. However, the assessment recognises eulachon as a species of high economic, societal, and cultural importance to Indigenous communities. Representative species in the forage fish sub-component include Pacific sand lance, surf smelt, Pacific herring, and shiner perch. Qualitative and empirical evidence indicates that there will be minor decreases in forage fish productive potential driven by loss of subtidal sand habitat and disturbance of Pacific herring from underwater noise.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component 13.2.1 Sub-components 13.4.1 Information Sources, Desktop and Field Studies 13.6.3 Potential Effect - Changes in Productivity
Hwlit-13.2	Asked about the effects of geomorphology on marine fish, including effects to salmon migrating in and out of the Fraser River through Canoe Passage.	01-Nov-2013, Meeting	**01-Nov-2013, Meeting:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix, 7.2-B (#78):** Field studies, air photo review, and modelling were undertaken during the coastal geomorphology assessment at Roberts Bank, including Canoe Passage. Changes are anticipated around the terminal and within the intertidal zone shoreward of the terminal. The potential effects of these changes on marine fish are considered in the EIS. An assessment was undertaken to determine the effects of the Project on the productivity of marine fish, including Pacific salmon. The assessment of marine fish, as well as marine vegetation and invertebrates upon which fish depend, consider seasonal influences, and potential Project-related changes on these influences. Terminal footprint-related changes to coastal process such as currents and freshwater-marine water mixing near and shoreward of the terminal are anticipated. Project-related changes in salinity and turbidity are discussed with respect to marine water quality. A discussion of the potential effects of these changes on marine fish, including different fish life stages, is presented in the marine fish assessment. Potential Project-related effects on marine fish, including all five species of Pacific salmon, are considered in the EIS. Chum and Chinook salmon are evaluated as being representative of all Pacific salmon species, as they are the most estuarine-dependent species of salmon, and therefore most likely to be affected by the Project.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.0 Physical Setting 9.5.8 Coastal Geomorphology, Future Conditions with the Project 9.7.8 Marine Water Quality, Future Conditions with the Project 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component 13.2.1 Sub-components 13.4.1 Information Sources, Desktop and Field Studies 13.5.1 Existing Conditions, Pacific Salmon 13.6 Future Conditions with the Project Table 13-6 Desktop and Field Studies Related to Marine Fish to Support the Assessment Table 13-10 Summary of Roberts Bank Ecosystem Model Productivity Results for Marine Fish 13.6.3 Potential Effect - Changes in Productivity
Hwlit-13.3	Asked if and how sturgeon will be assessed and considered within the EIS. Noted that some Hwlitsum community members were sturgeon fishers and they	31-Mar-2014, Meeting 28-Oct-2014, Preliminary EIS Workshop #3	**31-Mar-2014, Meeting:** Recorded comment for consideration by the Project team. **28-Oct-2014, Workshop:** Stated that the Technical Advisory Group (TAG) knowledge was used to identify species occurring at Roberts Bank. Primary species were	**Addressed in EIS Appendix 7.2-B (#79):** Potential Project-related effects on sturgeon (white sturgeon and green sturgeon) are considered in the marine fish assessment within the demersal fish (fish living near or on the seabed) sub-component. Sturgeon species were not selected as a representative species due to their rarity in the Roberts Bank area. Representative species in the demersal fish sub-component include three-spine stickleback and Pacific staghorn sculpin. Based on qualitative and empirical evidence	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
	remember how, when and where they fished. Noted that Hwlitsum have always fished and have never stopped.		considered to be important drivers from an ecosystem perspective. Stated that records show that sturgeon do not occur around the terminal at Roberts Bank, and therefore are not a good candidate as a focal species. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	considered during the marine fish assessment, minor, short-term decreases in productivity to demersal fish species are anticipated due to direct mortality (e.g., entrainment of larvae) and acoustic disturbance (i.e., if impact pile driving is used) during the Project's construction phase. Effects on demersal fish associated with changes in water quality and lighting are considered negligible.	13.2.1 Sub-components 13.4.1 Information Sources, Desktop and Field Studies 13.6.3 Potential Effect - Changes in Productivity
Hwlit-13.4	Asked what effect will the terminal have on the freshet. Asked if changes in salinity have an effect on juvenile fish in the area.	28-Oct-2014, Preliminary EIS Workshop #3	**28-Oct-2014, Workshop:** Stated that effects on the freshet were considered. During the freshet period a change in salinity is expected. The change in salinity would have an effect on juvenile fish, however a residual effect is not expected. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Sections 9.7 and 13.0:** As noted in EIS Section 9.7 the Project is expected to result in changes to marine water quality. As a result of the terminal footprint, localised changes in salinity and turbidity are predicted in the intertidal zone, but within the natural ranges currently experienced. **Addressed in EIS Section 13.0:** As noted in EIS Section 13.6.2.1, changes in salinity are anticipated to have a negligible influence on the productivity of marine fish sub-components. Marine fish species occurring in estuaries are well adapted to a wide range of salinities, and decreases in mean water column salinity are unlikely to trigger major adverse effects, such as mortality.	**EIS** 9.7 Marine Water Quality 13.6.2.1 Changes in Water Quality
Hwlit-13.5	Stated that one very specific area of is the assured destruction of the "Spring Salmon Hole", from which Hwlitsum has harvested and continues to harvest salmon since time immemorial. Stated that at the site for the proposed RBT2 terminal, there is a lucrative salmon fishing hole where spring salmon rest or hold before they return to spawn. Stated that salmon hold there, go to the shallows and then leave when the tide changes. Elaborated that everyone uses this spot as it fills up with fish and is a sacred spot and it is good for sockeye.	22-Sep-2014, Letter to the CEA Agency (CEAR Document #125) 10-Dec-2015, Meeting 21-May-2015, Meeting	**10-Dec-2015, Meeting:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Section 13.0 Marine Fish. **21-May-2015, Meeting:** Recorded comment for consideration by the Project team.	**Addressed in EIS Section 13.0 Marine Fish:** While there is evidence that adult sockeye pass through the estuary annually en route to the Fraser River to spawn, available information indicates that most stocks enter the Fraser River with little or no delay (i.e., perhaps one day); hence, any potential interaction between the Project and migrating or passing individual adult sockeye salmon would be limited to approximately several days per year. A potential exception is a portion of the late-run timing group, which typically holds in the outer estuary for several weeks prior to starting upriver migration; however, since 1995, large segments of the late-run sockeye have ceased their holding behaviour and entered the Fraser River three to six weeks earlier than historically observed. As noted in EIS Section 13.2.1, there is no scientific evidence that waters at or near Roberts Bank represent holding areas for adult sockeye. **Addressed in Response to IR5-15:** In its response to *IR5-15 Marine Fish – Representative Species* issued by the RBT2 Review Panel on June 6, 2017 (CEAR #975), the VFPA specifically discusses existing conditions related to sockeye and describes the status and management practices associated with the species. The IR response also further assesses potential effects of the project on Sockeye directly. As further described in the response to IR5-15 (CEAR Document #1078), based on existing literature, there is no formally defined holding area within the Fraser River estuary for returning adult sockeye. It appears that the brackish layer or plume within which adult sockeye may hold can extend as far north as Gibsons Landing, as far west and south as the Gulf Islands (from Gabriola Island near Nanaimo to Saturna Island at Boundary Passage), and as far east at Point Roberts area. However, since 1995, sockeye holding behaviour appears to have ceased.	**EIS** 13.0 Marine Fish 13.2.1 Sub-components **Information Requests** Response to Sufficiency Information Request #15 (IR5-15 of CEAR Document #1078)
Hwlit-13.6	Concerned with habitat for smolts or fingerlings when	10-Dec-2015, Meeting	**11-Dec-2015, Email from the VFPA:** Provided the following information for Hwlitsum's consideration:	**Addressed in EIS Appendix 7.2-B (#78):** Field studies, air photo review, and modelling were undertaken during the coastal geomorphology assessment at Roberts Bank, including Canoe Passage. Changes are	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table

	they go to sea, particularly eelgrass. Stated that if smaller ones aren't healthy when they go to sea they will not come back or survive.		EIS Section 11.0 Marine Vegetation includes information on the saltwater and freshwater mixing in the Fraser River Estuary, and resulting impacts to marine vegetation. This information can be found at the following link: http://www.ceaa-acee.gc.ca/050/document-eng.cfm?document=101482. Attached a short presentation on marine vegetation. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	anticipated around the terminal and within the intertidal zone shoreward of the terminal. The potential effects of these changes on marine fish are considered in the EIS. An assessment was undertaken to determine the effects of the Project on the productivity of marine fish, including Pacific salmon. The assessment of marine fish, as well as marine vegetation and invertebrates upon which fish depend, consider seasonal influences, and potential Project-related changes on these influences. Terminal footprint-related changes to coastal process such as currents and freshwater-marine water mixing near and shoreward of the terminal are anticipated. Project-related changes in salinity and turbidity are discussed with respect to marine water quality. A discussion of the potential effects of these changes on marine fish, including different fish life stages, is presented in the marine fish assessment. Potential Project-related effects on marine fish, including all five species of Pacific salmon, are considered in the EIS. Chum and Chinook salmon are evaluated as being representative of all Pacific salmon species, as they are the most estuarine-dependent species of salmon, and therefore most likely to be affected by the Project. A field sampling program for salmon was conducted at Roberts Bank in 2012 and 2013. While it is possible that 2012 to 2013 seasonal surveying for the Project did not capture all salmon species present at Roberts Bank, historical survey data add to the weight of evidence, suggesting a realistic representation of species composition and abundance at Roberts Bank. Potential underwater noise-related effects on marine fish during both Project construction and operation phases are considered in the EIS. **Addressed in EIS Section 11.0 and Section 13.0:** Habitat for smolts and fingerlings, including eelgrass, was considered in the EIS Sections 11.0 (Marine Vegetation) and 13.0 (Marine Fish). In planning RBT2, several measures to avoid, reduce or offset potential effects to eelgrass habitat were considered, including placement of terminal in subtidal waters (which reduces footprint effects to eelgrass specifically). Other measures that avoid effects to eelgrass habitat are a reduced footprint of causeway widening and rounded northwest terminal corner to reduce scour. Using a weight of evidence approach, the assessment presented in the EIS predicts changes in eelgrass (native and non-native) with the Project are expected to be negligible over the long-term. Although marine vegetation productivity losses due to Project construction and operation are not anticipated for eelgrass, native eelgrass transplants are planned within the LAA as part of the proposed on-site offsetting framework. The effectiveness of eelgrass transplants for marine fish specifically has been proven during previous projects at or near Roberts Bank. **Addressed in EIS Section 17.0:** As described in EIS Section 17.0, Eelgrass beds are highly productive habitats in the Roberts Bank ecosystem, serving numerous critical functions, such as food, shelter and rearing habitat for numerous species. Approximately three hectares of native eelgrass would be established through transplants in the inter-causeway area.	9.0 Physical Setting 9.5.8 Coastal Geomorphology, Future Conditions with the Project 9.7.8 Marine Water Quality, Future Conditions with the Project 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component 13.2.1 Sub-components 13.4.1 Information Sources, Desktop and Field Studies 13.5.1 Existing Conditions, Pacific Salmon 13.6 Future Conditions with the Project Table 13-6 Desktop and Field Studies Related to Marine Fish to Support the Assessment Table 13-10 Summary of Roberts Bank Ecosystem Model Productivity Results for Marine Fish 13.6.3 Potential Effect - Changes in Productivity 17.0 Mitigation Framework for Marine Biophysical Valued Components
Hwlit-13.7	Expressed interest in the effect of the Project on salinity, and in turn the effect changes in salinity have on biomass. Asked if Roberts Bank productivity model includes this change in salinity.	28-Oct-2014, Preliminary EIS Workshop #3 21-May-2015, Meeting 10-Dec-2015, Meeting	**28-Oct-2014, Workshop:** Responded that yes, it is shown in the model. The model has helped the VFPA's understanding of how salinity may change, and if it were to change, what the effects of that would be. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous	**Addressed in EIS Appendix 7.2-B (#56):** Existing conditions, including the effects of the existing Roberts Bank causeway on nearshore habitat and species that use that habitat, are described in the relevant marine biophysical VC sections. In general, the existing causeway has diversified habitat at Roberts Bank. In developing its offsetting framework for RBT2, the VFPA has explored habitat creation and enhancement options, including onsite habitat offsetting concepts along the widened causeway.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.6 Surficial Geology and Marine Sediment 9.6.6 Existing Conditions

	Stated that at the meeting place [of salt and freshwater], mix is high in nutrients for fish. Concerned with the area where the salt water and fresh water meet. Noted the importance of nutrients for fish was emphasized.		issues and interests and provided the VFPA's responses. **21-May-2015, Meeting:** Recorded comment for consideration by the Project team. **10-Dec-2015, Meeting:** Responded that salt water and fresh water mixing is covered in the EIS. Stated that the VFPA can follow up with the exact section reference. **11-Dec-2015, Email from the VFPA:** EIS Section 11.0 Marine Vegetation includes information on the saltwater and freshwater mixing in the Fraser River estuary, and resulting impacts to marine vegetation. This information can be found at the following link: https://www.ceaa-acee.gc.ca/050/documents/p80054/103668E.pdf	Current levels and potential changes in marine sediment and water quality, including changes in salinity and contaminants, were evaluated as described in the intermediate component assessment sections of EIS Section 9.6. Potential changes to marine water quality and sediment quality or sediment deposition due to the Project are expected to be minimal, relative to existing natural variability in the ecosystem. Sediments that will be re-suspended or disposed of during construction activities are not contaminated. With the exception of temporary, reversible changes in the biofilm community assemblage from salinity changes during freshet, the potential effects of Project-related changes in marine water quality and sediment quality on marine vegetation, marine invertebrates, marine fish and marine mammals are considered to be negligible due to the range of conditions that marine species naturally experience. Baseline levels of heavy metals and other contaminants along the causeway are included in Section 9.6 Surficial Geology and Marine Sediment. The VFPA used an ecosystem model to predict changes to marine species productivity at Roberts Bank. The model takes into account potential future changes in the environmental factors (i.e., salinity, depth, bottom current, wave height, and hard or soft substrate). The model findings informed the assessment of Project-related effects on marine species productivity.	9.6.8 Future Conditions with the Project 9.7.6 Marine Water Quality, Existing Conditions 9.7.8 Future Conditions with the Project 10.0 Biophysical Setting 10.3 Overview of Assessing Ecosystem Productivity 11.0 Marine Vegetation 11.6.3 Potential Effect – Changes in Productivity 12.0 Marine Invertebrates 12.6.3 Potential Effect – Changes in Productivity 13.0 Marine Fish 13.6.2 Negligible Effects 14.0 Marine Mammals 14.6.2 Potential Effects of the Project on Southern Resident Killer Whales 14.6.4 Potential Effects of the Project on Steller Sea Lions 17.0 Mitigation for Marine Biophysical Valued Components 17.3.2 Offsetting Potential Effects, Offsetting Framework

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Hwlit-14.1	Noted the presence of black crabs in the study area, and expressed concern regarding impacts from coal to marine invertebrates and crab harvests. Suggested that the VFPA have a First Nations' harvester present to witness testing of coal on crabs.	01-Nov-2013, Meeting 27-May-2014, Technical Working Group Meeting #3 21-May-2015, Meeting	**01-Nov-2013, Meeting:** Committed to provide information in regards to impacts to crabs. **27-May-2014, Working Group:** Stated that that [working with First Nation harvesters] is one of the measures being taken in work being done to support the assessment of surficial geology and marine sediment. **07-Aug-2014, Email from the VFPA:** "We would like to inform you of a study that Port Metro Vancouver is undertaking related to black material observed in Dungeness crabs previously harvested from the Fraser River estuary. This black material has been noticed by Tsawwassen and Musqueam First Nation crabbers in DFO Fisheries Management Areas 28 and 29 and as such we are working with these communities in the collection of crabs for testing." **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **09-Jul-2015, Email from the VFPA:** "I write in follow up to previous communications and the Dungeness Crab field study notification of August 2014. Please find attached a letter and memorandum regarding the studies undertaken by Hemmera in response to reports from Aboriginal groups to VFPA regarding blackening of Dungeness crab and concerns related to potential contamination." **12-Apr-2018, Letter from the VFPA:** Stated that since your concerns were raised, the Project team has conducted further work on these topics to respond to information requests from the Review Panel, to better understand potential effects and suggested mitigation, and to gain deeper understanding of the viewpoints of Indigenous groups and stakeholders. Provided the following documents review: • IR4-33 - Crab Hepatopancreas Additional Study Summary • IR4-34 - Black Crab Additional Studies Summary Stated that the VFPA is interested in hearing views regarding options to mitigate potential effects to crabs and crabbing in the Project area.	**With respect to coal, see EIS Appendix 7.2-B (#6):** The proposed Project is a container terminal and does not include any coal-related elements. There are no plans to modify the RBT2 Project to handle bulk oil or coal. The Project will not contribute to coal dust. Coal dust from Westshore Terminals (the existing coal terminal at Roberts Bank) was included in the examination of air quality existing conditions and air quality cumulative effects assessment. The human health assessment considered the potential for contamination of edible shellfish related to Project activities resulting in re-suspension of historical deposits of coal in sediments. The assessment concluded that there were no risks to human health related to re-suspension of sediments containing coal. **With respect to black crabs, see EIS Appendix 7.2-B (#74):** Potential Project-related effects on Dungeness crabs are described in the EIS. An Edible Shellfish Study was undertaken to quantify bivalve shellfish and Dungeness crab soft tissue contaminant concentrations. The results of this study are provided in the EIS in the marine invertebrates and human health sections. In late 2014, samples of crab were collected by Indigenous crab harvesters concerned about contamination, and the VFPA has submitted these for tissue testing for various substances of concern, including PAHs, metals, and fungus. Preliminary observational results indicate that the causes of black colouration of crabs is consistent with shell disease, and not likely related to contamination from coal dust (Appendix 27-C, Section 4.76). The detailed results of laboratory tests will be shared with Indigenous groups when available. **Addressed in Responses to IR4-33 and IR4-34:** Further information concerning the VFPA's investigations into 'blackened' crabs is provided in IR4-34 Marine Invertebrates: Blackened Crab Study (CEAR 946). Tsawwassen First Nation (TFN), Musqueam First Nation, Penelakut Tribes, and Hwlitsum crab harvesters operating under licenses in DFO Fisheries Management Areas 28 and 29 were asked to retain trapped specimens of Dungeness crab displaying evidence of blackening. Collection kits, including instructions for handling, were provided to crab harvesters participating in the study. A total of 15 kits were distributed. Five legal-sized male crabs were collected from DFO Fisheries Management Area 29-7 at Roberts Bank in August 2014 by a participating TFN crab harvester. In summary, black lesions were observed on four of the five crabs collected by Indigenous harvesters. The black lesions were concluded to be consistent with chitinolytic shell disease, generically referred to as "shell disease", a condition common to crab and other crustaceans. This disease is caused by a	**EIS** 4.0 Project Description Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.2 Air Quality 12.0 Marine Invertebrates 12.4.1 Desktop and Field Studies Table 12-4 Marine Invertebrates Studies to Support the Assessment 12.5.3 Existing Conditions, Dungeness Crabs 12.6.2 Future Conditions with the Project, Negligible Effects 27.0 Human Health 27.6.4 Potential Effect # 3 – Adverse Health Effects due to Stress and Annoyance - Perceived Contamination Appendix 27-C Shellfish Harvesting Potential and Contaminant-related Consumption Risks at Roberts Bank **Information Requests** Response to Sufficiency Information Request #33 (IR4-33 of CEAR Document #1078) Response to Sufficiency Information Request #34 (IR4-34 of CEAR Document #1051)

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				bacterial or fungal infection of an area where the outer layer of the shell has been previously damaged. Shell disease has not been linked to contamination. The disease is not specific to the Roberts Bank area and is present across the Pacific Northwest, including Alaska and British Columbia and in Atlantic Canada. In its response to *IR4-33 Marine Fish – Marine Invertebrates: Contaminants in Crab Hepatopancreas* issued by the RBT2 Review Panel on March 31, 2017 (CEAR # 1078), the VFPA provided results of the study. In summary: A crab hepatopancreas study was conducted at Roberts Bank to determine the concentrations of contaminants of concern in crab hepatopancreas in the local assessment area. In June 2017, Dungeness crab were collected from five traps placed at each of the three study locations (15 traps total). Twelve adult male crabs were harvested from each of the three sites (36 crab total). Samples were submitted under chain of custody to analytical laboratories accredited by the Canadian Association for Laboratory Accreditation (CALA) for the analysis requested. The analysis was completed in August 2017. Collectively, the results of a statistical comparison across sites indicate that the average concentrations of PCBs, coal indicator elements, arsenic compounds, and PAHs measured in hepatopancreas from crab collected from the RBT2 and ITP sites are not statistically higher than those measured in crab from the Canoe Passage reference site. This suggests that existing sediment and water quality in and around the existing terminal and proposed RBT2 terminal are not contributing to contaminant concentrations in crab hepatopancreas that are higher than levels found in crab hepatopancreas from the Canoe Passage reference site.	
Hwlit-14.2	Asked about the basis for the statement that the copper is naturally occurring. Asked about the presence of copper in sediment have an effect on marine invertebrates. Asked about the human health effects from ingesting crabs.	28-Oct-2014, Preliminary EIS Workshop #3	**28-Oct-2014, Workshop:** Responded that copper is naturally occurring, and has been there for a long time and seems to be a natural phenomenon. Whatever lives in the area is used to it, and adapted to it. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS 9.6 Surficial Geology and Marine Sediment.	**Addressed in EIS Section 9.6.6.3:** While most of the sediment samples exhibited a copper concentration greater than the ISQG, this is attributed to the presence of geological-origin, naturally occurring concentrations. Elevated copper levels are consistent with observations for previous studies in areas relevant to the Project, and throughout the Fraser River estuary (EIS Section 9.6.6.2). Copper levels in the Project activity areas are therefore not considered to be contaminated relative to natural conditions. More information concerning copper content in sampled bivalves and crabs is available in EIS Appendix 27-C, which discusses shellfish harvesting potential and contaminant-related consumption risks at Roberts Bank. Copper is not identified as a concern.	**EIS** 9.0 Physical Setting 9.6 Surficial Geology and Marine Sediment Appendix 27-C Shellfish Harvesting Potential and Contaminant-Related Consumption Risks at Roberts Bank

Hwlit-15.1	Concerned that increased vessel traffic will increase strikes on marine mammals. Stated that the quality of vessel strike data is poor as generally whale strikes go unnoticed by ship operators.	28-Oct-2014, Preliminary EIS Workshop #3	**28-Oct-2014, Workshop:** Responded that the potential for vessel strikes will be assessed. When vessels enter VFPA jurisdiction they are travelling slowly, escorted by a pilot. Additionally, baleen whales are only very rarely observed in the area, and that's why the VFPA has a high level of confidence that the risk for potential vessel strikes is very low. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **10-May-2017, Email from the VFPA:** Attached the Enhancing Cetacean Habitat and Observation (ECHO) program annual report for 2016. The ECHO program is a Vancouver Fraser Port Authority-led collaborative initiative aimed at better understanding and managing the cumulative impacts of shipping activities on at-risk whales throughout the southern coast of British Columbia.	**Addressed in EIS Appendix 7.2-B (#89):** The assessment considers the potential effects on marine mammals from marine vessel traffic associated with Project construction and operation, including the potential for physical disturbance due to a Project-related vessel strike. As described in the EIS, as a result of mitigation measures during construction and operation, no detectable or measureable residual adverse effects from vessel strikes are predicted for marine mammals. The marine mammal assessment considers the potential for cumulative effects with respect to the potential residual effect (i.e., increased underwater noise produced by container ships and support tugs during Project operation), in combination with other projects and activities within the RAA, including underwater noise from incremental marine vessel traffic outside VFPA jurisdiction.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 14.0 Marine Mammals 14.6 Future Conditions with the Project 14.6.2 Potential Effects of the Project on Southern Resident Killer Whales 14.6.3 Potential Effects of the Project on North Pacific Humpback Whale 14.6.4 Potential Effects of the Project on Steller Sea Lions Table 14-19 Injury and Disturbance Radii for Steller Sea Lions during Impulsive Construction Noise 14.10 Cumulative Effects Assessment

Table 16: Marine Shipping Addendum

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Hwlit-16.1	Stated that the RBT2 study area and the VFPA's jurisdiction are limited and do not include marine shipping activities.	10-Dec-2015, Meeting	**10-Dec-2015, Meeting:** Stated that those concerns, heard through the environmental assessment process, informed the CEA Agency's request for additional work.	**Additional information provided by the VFPA:** The MSA fulfils the requirements of Section 17 of the "*Updated Guidelines for the Preparation of an Environmental Impact Statement*" (issued April 17, 2015) regarding the assessment of marine shipping associated with the RBT2 Project beyond Port Metro Vancouver's care and control and extending to the 12 nautical mile limit of Canada's territorial sea.	***Updated Guidelines for the Preparation of an Environmental Impact Statement*** **(CEAR Document #177)**
Hwlit-16.2	Concerned with the impact of marine shipping on the migratory pattern of sockeye, which follow the shipping route.	10-Dec-2015, Meeting	**10-Dec-2015, Meeting:** Recorded comment for consideration by the Project team.	**Addressed in MSA Appendix 5-B (#38):** The assessment of potential effects of marine shipping associated with the Project on marine fish, including salmon, is included in MSA Section 8.1. Physical disruption or vessel strikes of salmon are not anticipated to be a form of interaction between marine shipping and marine fish, and therefore these aspects are not included in the assessment.	**MSA** Appendix 5-B Aboriginal Issues and Interests 8.1 Marine Fish and Fish Habitat 8.1.6 Potential Interactions and Effects
Hwlit-16.3	Stated that spill response is weak; WCMRC does not have sufficient capacity to respond.	10-Dec-2015, Meeting	**10-Dec-2015, Meeting:** Recorded comment for consideration by the Project team.	**Addressed in MSA Section 10.4.4.1:** Spill response procedures, capacities, equipment, response times, and areas of response are described in the MSA. Specifically, MSA Section 10.4.4.1 describes the Western Canada Marine Response Corporation (WCMRC) capabilities at the time of writing. WCMRC is the Transport Canada-certified Response Organisation for the west coast of Canada. To maintain its certification, WCMRC must demonstrate to Transport Canada that it has logistical arrangements in place to meet response time standards in the Geographic Area of Response (see MSA Section 10.4.4.3). **Additional response provided by the VFPA:** The *Canada Shipping Act (2001)* is Transport Canada's regulatory framework surrounding marine pollution and its enforcement. In the case of a report of pollution in the water, including oil or fuel spills, Canada operates under the National Spill Response Protocol, which specifies that the Canadian Coast Guard is responsible for ensuring the clean-up of ship sourced spills of oil and other pollutants. On the west coast, the Canadian Coast Guard contracts spill clean-up to Western Canada Marine Response Corporation. This is also the agency that ships or terminal operators are required to call if they discover they have been the source of a spill. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954) and letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provide additional information on the Government of Canada's Oceans Protection Plan which includes information on emergency response.	**MSA** 10.4.4.1 Western Canada Marine Response Corporation Capabilities www.portvancouver.com/about-us/topics-of-interest/emergencies-and-spill-response/ **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**
Hwlit-16.4	Concerned with the increase in volume of vessel traffic in confined areas (i.e., Boundary Pass). Stated that Hwlitsum asserts an Aboriginal right to fish in the area.	10-Dec-2015, Meeting	**10-Dec-2015, Meeting:** Recorded comment for consideration by the Project team.	**Addressed in MSA Section 10.3:** MSA Section 10.3 provides an overview of vessel incidents in the MSA and considers potential accidents or malfunctions within the MSA arising from marine shipping associated with the Project. As acknowledged in MSA Section 10.3.2.2, collisions and associated spills in the marine shipping area will have the highest probability of occurrence where the probability of an encounter between ships is highest, based on the relative risk of overtaking, head-on, and crossing encounters. The most likely encounter locations in the marine shipping area are near East Point on Saturna Island at the eastern entrance to Boundary Passage, and near Turn Point on Stuart Island at the entrance to Haro Strait at the southwest end of Boundary Passage (see **Figure 10-1**). Risk mitigation, emergency response planning and incident management are presented in MSA Section 10.4. As concluded in EIS Section 32.2.6, the Project is not expected to have an effect on the Current Use of or access to marine resources for traditional purposes by Hwlitsum. Consequently, the Project is not expected to impact the ability of the Hwlitsum to exercise the asserted right to harvest marine resources.	**EIS** 32.2.6 Future Conditions with the Project - Potential Project-Related Effects 32.3.2.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups **MSA** 10.3 Potential Accidents or Malfunctions 10.3.2.2 Collisions In-transit

Hwlitsum

Table 17: Marine Vegetation – Valued Component

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Hwlit-17.1	Asked how will changes to biofilm be assessed and monitored. Concerned that biofilm is increasing and taking over other plant species.	28-Oct-2014, Preliminary EIS Workshop #3	**28-Oct-2014, Workshop:** Areas of biofilm are being monitored and will continue to be monitored. As part of the RBT2 assessment, a hyperspectral survey by airplane was carried out, which is costly. That survey resulted in biofilm being observed in a larger area than was originally thought. Historically, there was no access to that. Monitoring plans will emerge from the environmental assessment process. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **24-Apr-2017, Email from the VFPA:** The VFPA is conducting a study in April and May 2017 to assess the spatial and temporal variability of biofilm community composition at Roberts Bank. Biofilm is a thin (~2 mm), dense layer of predominantly organic substances (e.g., diatoms, bacteria, and organic detritus) found on the surface of shallow freshwater, marine, and estuarine sediments. Biofilm is known to form an important component of the western sandpiper diet at Roberts Bank during the northward migration. This study, in conjunction with past biofilm studies conducted in 2012, 2013, 2014 and 2016, will strengthen the existing understanding of biofilm community dynamics at Roberts Bank, and may inform future monitoring programs at Roberts Bank.	**Addressed in EIS Appendix 7.2-B (#65):** Biofilm, a thin dense layer of microscopic photosynthetic algae and bacteria, sediment and organic matter, is found within the upper intertidal zone and is an important food source for invertebrates, fish, and bird species (including migratory western sandpiper and dunlin). Biofilm, biomat, and intertidal marsh are considered in the effects assessment as sub-components of the marine vegetation VC. The existing conditions (including ecological function) for biomat and biofilm in the Project area and the potential effects of the Project on these marine vegetation sub-components, as well as on coastal birds, are described in the EIS. The assessment concludes that, overall, net productivity of marine vegetation is expected to increase with the Project, without mitigation, and would be further increased with the implementation of environmental management plans and the creation of habitat. During Project construction and operation, changes in the productivity of biofilm and biomat would be negligible (i.e., not measurable or detectable), while increases in the productivity of intertidal marsh are expected. The Project is expected to temporarily influence community composition of biofilm during freshet from terminal footprint-related changes in salinity. Biofilm community composition is expected to return to existing conditions outside of the annual freshet period. As described in the EIS, the temporary, reversible changes in the biofilm community assemblage from salinity changes during freshet are not predicted to affect shorebirds. Further information: Biofilm was only discovered in 2008 (see EIS Section 11.0). At that time biofilm was known to exist in the upper intertidal zone close to Brunswick Dyke. It was not until 2012 that biologists looked for biofilm beyond the area close to the Dyke. In 2012, the VFPA mapped biofilm distribution within the LAA by plane using hyperspectral imagery. This was the first survey (ever) of the entire Roberts Bank (LAA) area and confirmed that where conditions are appropriate (e.g., upper intertidal zone, with fine sediments, and low wave energy) biofilm is common. It is believed that biofilm has been in these areas for a long time (hundreds or thousands of years) as biofilm appears to be a common feature of estuaries. In the VFPA's response to IR8-04, the results of additional biofilm studies are presented as Appendices IR8-04-A and IR8-04-B. The results of the 2016 additional studies complement the findings of the EIS and adds to the overall understanding of biofilm science. In summary, the results align with the following conclusions in the EIS: • Impacts to western sandpiper (WESA) have largely been avoided through the placement of the marine terminal almost six kilometres away from their main feeding areas on Roberts Bank; • The availability of food at Roberts Bank with the Project in place will not be limiting for migrating WESA; • Ongoing salinity monitoring continues to show that under existing conditions there is large variation in salinity across Roberts Bank due to variable Fraser River flow and tidal mixing; Biofilm is abundant across the existing salinity gradient, found in both freshwater- and marine-influenced locations; and	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 11.0 Marine Vegetation 11.5.4 Existing Conditions, Biomat 11.5.5 Existing Conditions, Biofilm 11.6 Future Conditions with the Project 11.6.4 Potential Effect – Changes in Biofilm Assemblage Composition 15.0 Coastal Birds 15.7.2 Potential Effect – Changes in Productivity **Information Requests** Response to Sufficiency Information Request #4 (IR8-04 of CEAR Document #1110)

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				• The Project will not affect the availability or quality of food available to migrating WESA.	
Hwlit-17.2	Asked about the relationship between the existing terminal and eelgrass. Asked what effect RBT2 is expected to have on eelgrass.	28-Oct-2014, Preliminary EIS Workshop #3	**28-Oct-2014, Workshop:** Responded that there is good information available about eelgrass before development. Stated that RBT2's effects on marine vegetation as a whole are expected to result in an overall increase. Stated that in the case of eelgrass, the VFPA plans to undertake eelgrass transplants as a mitigation measure, after which it is expected there would be no net effect. Stated that there are two types of eelgrass. An increase in non-native eelgrass is anticipated, which will be good for fish. A slight decrease in native eelgrass is anticipated, for which we would apply mitigation, which would also be good for fish. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#68):** Eelgrass beds are highly productive habitats in the Roberts Bank ecosystem, serving numerous critical functions, such as food, shelter, and rearing habitat for numerous species. Eelgrass is a sub-component of the marine vegetation assessment. The assessment concludes that changes in productivity of eelgrass are predicted to be negligible (i.e., not measurable or detectable). Increases in productivity of eelgrass are anticipated with the implementation of standard management practices and environmental management plans, and the creation of onsite habitat. Approximately three hectares of native eelgrass will be established through transplants in the inter-causeway area.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 11.0 Marine Vegetation 11.6.3 Potential Effect – Changes in Productivity 11.7.2 Reduction and Off-setting Measures 12.0 Marine Invertebrates 12.6.3 Potential Effect – Changes in Productivity 12.7.2 Mitigation #1 for Direct Mortality
Hwlit-17.3	Asked if values have been assigned to different items, such as biomat being deemed more valuable than eelgrass, or native species being more valuable than non-native species.	28-Oct-2014, Preliminary EIS Workshop #3	**28-Oct-2014, Workshop:** Responded that value judgements are not being assigned to different species, only effects are being looked at. For the most part outputs (i.e., biomass) can be quantified. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#70):** The EIS provides a description of the marine vegetation sub-components, including eelgrass, intertidal marsh, macroalgae (seaweed), biomat, and biofilm, and the importance of each to maintaining the physical form and function of the Roberts Bank ecosystem. Non-native eelgrass and English cordgrass (*Spartina anglica*) are considered to be less desirable species. Following terminal construction, there is an opportunity to transplant up to 3 ha of native eelgrass within the Roberts Bank study area as a mitigation measure. The proposed transplant site overlaps with an existing stand of sparse eelgrass (i.e., less than 30% cover). The existing presence of eelgrass at this location is an indication of suitable conditions for establishment and growth of eelgrass.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.0 Physical Setting 9.5.6 Coastal Geomorphology, Existing Conditions 11.0 Marine Vegetation 11.2.1 Sub-components Figure 11-2 Roberts Bank Marine Vegetation Habitat Map (2012) 11.6 Future Conditions with the Project 17.0 Mitigation for Marine Biophysical Valued Components 17.3.2 Offsetting Potential Effects, Offsetting Framework Figure 17-1 Overview of Proposed Onsite Habitat Concept Locations
Hwlit-17.4	Asked what happens if effects are not as predicted, or mitigations do not work as planned. Asked about the duration of the monitoring period.	28-Oct-2014, Preliminary EIS Workshop #3	**28-Oct-2014, Workshop:** Responded that the VFPA's analyses of environmental effects will be tested through the Review Panel process. People will have opportunities to contest and contribute to the process and to question the predictions. If the	**Addressed in EIS Appendix 7.2-B (#32):** Onsite habitat selection considered lessons learned from previous habitat creation programs (e.g., Deltaport Third Berth Project (DP3)). The effectiveness monitoring reports for DP3 increased the understanding of the successes and challenges of previous habitat projects. The concepts	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 33.0 Environmental Management Program

Hwlitsum

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
			predictions are wrong or mitigation measures don't work, the Follow Up Program will include adaptive management. The duration of the monitoring period and the specific plan has not yet been determined. As the environmental assessment progresses, these details will emerge. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **29-Aug-2017, Meeting with Hwlitsum, Lake Cowichan First Nation, Metis Nation of British Columbia, and Tsleil-Waututh First Nation on the Follow-up Program:** The VFPA presented information on the DP3's Environmental Management Program and lessons learned. The VFPA presented information on the RBT2 Follow-up Program. The VFPA sought input from participants.	presented in the EIS have been presented to communities, stakeholders, Indigenous groups, public, and regulators in fall 2014. The expected benefits to species productivity from proposed onsite offsetting concepts have been evaluated in the marine biophysical VCs, where relevant. An adaptive management approach will be taken as indicated in EIS Section 33.5 Roberts Bank Terminal 2 Follow-up Program. The VFPA is committed to developing and implementing a Follow-up Program for the Project. The purpose of the Follow-up Program is to verify the accuracy of residual effect predictions made in the EIS, and determine the effectiveness of any measures taken to mitigate the adverse environmental effects of the Project. The VFPA will lead the development of the Follow-up Program after the submission of the EIS. The Follow-Up Program will include: • An evaluation of the adequacy of existing data to provide a benchmark against which to test Project-related effects; • A monitoring design drawing on the measurable parameters identified to be field-tested; • A methodological approach for using field-collected data to measure and verify the accuracy of the effects predicted in the EIS; • A reporting framework that defines frequency of reporting, distribution and feedback mechanisms; and • Details of the VFPA's approach to adaptive management for the Project through construction and operation. The Follow-Up Program will be developed in consultation with federal agencies, including the CEA Agency, DFO, and Environment Canada. Complete drafts of the Roberts Bank Terminal 2 Follow-up Program will be made available prior to the start of field measurements to ensure parties consulted on the program and approving agencies have an opportunity to evaluate and approve the Program. Feedback from Indigenous groups regarding the draft Program will be sought through the VFPA's ongoing engagement initiatives.	33.5 Roberts Bank Terminal 2 Follow-up Program
Hwlit-17.5	Asked about the percentage of landmass is being removed from habitat in the building of the Project. Asked about the displacement of marine vegetation.	28-Oct-2014, Preliminary EIS Workshop #3	**28-Oct-2014, Workshop:** Responded that the Project footprint is approximately 180 hectares. Stated that while some species will decrease due to the footprint others will not because some species (for example, Dungeness crab) broadcast their spawn, while other species will simply move (swim) to somewhere else perhaps in proximity to the terminal. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#64):** The mitigation requirements, and monitoring and follow-up programs to be undertaken with respect to marine vegetation, are described in EIS Section 11.0 Marine Vegetation, and in EIS Appendix 33-A. Proposed measures to avoid, reduce or offset effects for marine vegetation include: • Placing marine terminal in subtidal waters to eliminate direct effects to intertidal habitats (predominantly native eelgrass and biofilm); • Minimising causeway widening and optimising the footprint within the upper intertidal biofilm zone to reduce direct losses; and • Rounding of northwest terminal corner to reduce the potential area of scour. Incorporating rocky shoreline in portions of the terminal perimeter and causeway perimeters. The VFPA is committed to developing and implementing a Follow-up Program for the Project. The purpose of the Follow-up Program is to verify the accuracy of residual effect predictions made in the EIS, and determine the effectiveness of any measures taken to mitigate the residual environmental effects of the Project.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 11.0 Marine Vegetation
Hwlit-17.6	Noted the recent deterioration of the intertidal marsh (south of the	21-May-2015, Meeting	**21-May-2015, Meeting:** Recorded comment for consideration by the Project team.	**Addressed in EIS Appendix 7.2-B (#66):**	**EIS**

Hwlitsum

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
	causeway) and asked if marsh deterioration will be addressed in the EIS. Stated that cattails and bulrush are important culturally. There has been an 80% decimation of habitat in the Roberts Bank area.		**01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	The technical data report for *RBT2 Intertidal Marsh, Foreshore Habitat and Invertebrate, Eelgrass, Ulva and Biomat Survey Results* discusses the existing conditions of intertidal marsh both north and south of the Roberts Bank Causeway. The report notes that marsh mapping undertaken for RBT2 (2013/4) vs. data collected by the Canadian Wildlife Service in 1994 suggests a decrease in marsh area, but does not identify the cause. The report also notes the presence of cattails and bulrush, but does not discuss these species' spatial or density trends. [Current and/or traditional use of cattails and bulrush are acknowledged as in EIS Section 32.3.2.2.]. The TDR informed the EIS's section on existing conditions for marine vegetation at Roberts Bank (Section 11.0), which characterised representative species for each of eelgrass, intertidal marsh, macroalgae, biomat, and biofilm. Existing conditions for marine vegetation are acknowledged to be influenced by previous developments, including the development of the Roberts Bank and BC Ferries terminals, the dynamic natural environment, and species that forage on marine vegetation. Intertidal marsh south of the causeway would be unaffected by RBT2, and therefore not directly addressed in the EIS. Considering the whole of the RBT2 study area, the EIS notes that marine vegetation productivity losses due to Project construction and operation are not anticipated for intertidal marsh. Onsite creation of intertidal marsh on the north side of the causeway is proposed as mitigation for potential effects of the Project on other VCs (e.g., marine invertebrates, marine fish, and coastal birds).	Appendix 7.2-B Aboriginal Groups Interests and Issues Table 11.0 Marine Vegetation 11.5.2 Existing Conditions, Intertidal Marsh 11.6.3 Potential Effect – Changes in Productivity Table 11-17 Summary of Roberts Bank Ecosystem Model Productivity Results for Marine Vegetation 11.7.2 Reduction and Offsetting Measures 17.0 Mitigation for Marine Biophysical Valued Components 17.3.2 Offsetting Potential Effects, Offsetting Framework 32.3.2.2 Potential Impacts on the Exercise of Asserted or Established Aboriginal Rights – Non-Treaty Aboriginal Groups
Hwlit-17.7	Concerned that the assessment excludes marine vegetation that is culturally important to CNA and could be impacted by the Project. Requested that 'coastal terrestrial vegetation' be identified as a distinct Valued Component.	09-May-2014, Letter - VC Selection and Rationale – CNA 09-Nov-2015, Meeting	**09-May-2014:** Recorded comment for consideration by the Project team. **06-Jun-2014 and 03-Jul-2014, Workshops:** The VFPA hosted two workshops for Indigenous groups on the VCs providing them with an opportunity to comment and provide input for consideration. Sought input on biophysical VCs, including marine vegetation. Representatives from Hwlitsum were invited but did not attend. **09-Nov-2015, Meeting:** Recorded comment for consideration by the Project team.	**Additional information provided by the VFPA:** For coastal terrestrial vegetation, there is no interaction with the Project and the terrestrial environment, either directly or indirectly, due to the marine-based nature of the Project, and therefore no effects are anticipated.	

Hwlitsum

Table 18: Noise and Vibration – Intermediate Component

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Hwlit-18.1	Asked about vibration from the construction of the Project, pile driving, and trains and what effect underwater noise has on bivalves and invertebrates.	28-Oct-2014, Preliminary EIS Workshop #3	**28-Oct-2014, Workshop:** Stated that the VFPA has been looking at effects mostly in the context of underwater noise. Stated that vibration will be discussed in greater detail in the EIS. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#61):** The scope and methods of the underwater noise studies are summarised in the EIS section, and detailed in the supporting appendix. Underwater noise considers the level of underwater sound in the marine environment. An assessment was undertaken to determine potential changes in underwater noise as a result of the Project and focused on construction and operation activities that would produce underwater noise. Modelling was undertaken to predict future underwater noise as a result of construction activities, such as dredging, pile driving, vibro-densification, and movements of support vessels, and operation activities, such as movements of container ships and tug boats associated with terminal approach and departure, and berthing and unberthing. The assessment concludes that: • Underwater noise levels during construction are predicted to be comparable on average to existing levels measured at Roberts Bank, with the exception of some periods when certain activities, such as dredging, pile-driving, vibro-densification, or construction support vessel movement, would occur. • Overall, average underwater noise from Project construction and operation activities is expected to be comparable to average existing levels of underwater noise due to existing high levels, but will at times exceed existing conditions. Underwater noise related to conservative levels of Project commercial vessel movements is predicted to increase over existing underwater noise levels for only approximately 3% of a year for vessel berthing and unberthing, and for approximately 2% of a year for vessel approach and departure. • Future cumulative increases in commercial vessel traffic in the region are expected to make a relatively small incremental contribution to overall underwater noise levels. This prediction reflects the existing high levels of vessel traffic within the study area and the already-dominant contribution of commercial vessel traffic noise to the acoustic environment. The results of the underwater noise assessment were considered in the assessments of marine fish, marine mammals, and coastal birds. An interaction between Project-related underwater noise and marine invertebrates is not anticipated, and therefore was not assessed.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.8 Underwater Noise 9.8.2 Assessment of Purpose and Approach 9.8.6 Underwater Noise, Methods Appendix 9.8-A Construction and Terminal Activity Underwater Noise Modelling Study Technical Report Appendix 9.8-B Regional Commercial Vessel Traffic Underwater Noise Modelling Study Technical Report 13.0 Marine Fish 13.6 Future Conditions with the Project 14.0 Marine Mammals 14.6 Future Conditions with the Project 15.0 Coastal Birds 15.7 Future Conditions with the Project
Hwlit-18.2	Asked about the current ambient noise level.	28-Oct-2014, Preliminary EIS Workshop #3	**28-Oct-2014, Workshop:** Stated that as part of the assessment, ambient noise was recorded at various times of year, in various locations. Stated that precise data is not currently available; however, detailed information will be provided in the EIS. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Section 9.3.7 Existing Conditions.	**Addressed in EIS Section 9.3.7:** The description of existing conditions considered sources of noise and vibration, including the existing Roberts Bank terminals, BC Ferries terminal and road and rail traffic within the upland study area. Existing noise levels are typical of suburban areas, and noise within the upland study area comes from many diverse sources, including the following: • Activity at Roberts Bank terminals and BC Ferries terminal; • Road and rail traffic on the Roberts Bank causeway; • Road and rail traffic on routes within the study area (including Highway 17 and Deltaport Way); • Construction activities on TFN land; • Farming activities; • Aircraft; • Marine vessels; • Local activities; and • Natural sounds (e.g., wildlife, wind).	**EIS** 9.3 Noise and Vibration 9.3.7 Existing Conditions

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				No single source tends to dominate these noise environments; noises from all of these sources contribute in varying degrees to the overall average daily noise levels.	
	Asked if there is a relationship between underwater noise and bathymetry. Asked about whether bathymetry interferes sufficiently with sound that it doesn't extend north, east or northeast or up Sturgeon Bank.	28-Oct-2014, Preliminary EIS Workshop #3	**28-Oct-2014, Workshop:** Responded that the study uses a mathematical model to predict how far and how loud construction and operation noises will extend. Sound is bounces off different islands and off the bottom of the ocean. Stated that the VFPA has double checked with the acousticians, who confirmed the areas where noise is expected. Sound distribution changes based on bathymetry and bottom type. The bathymetry interferes sufficiently with the sound that sound doesn't travel north and east of the terminal. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#61):** The scope and methods of the underwater noise study are summarised in the EIS section, and detailed in the supporting appendix. Underwater noise considers the level of underwater sound in the marine environment. An assessment was undertaken to determine potential changes in underwater noise as a result of the Project and focused on construction and operation activities that would produce underwater noise. Modelling was undertaken to predict future underwater noise as a result of construction activities, such as dredging, pile driving, vibro-densification, and movements of support vessels, and operation activities, such as movements of container ships and tug boats associated with terminal approach and departure, and berthing and unberthing. The assessment concludes that: • Underwater noise levels during construction are predicted to be comparable on average to existing levels measured at Roberts Bank, with the exception of some periods when certain activities, such as dredging, pile-driving, vibro-densification, or construction support vessel movement, would occur. • Overall, average underwater noise from Project construction and operation activities is expected to be comparable to average existing levels of underwater noise due to existing high levels, but will at times exceed existing conditions. Underwater noise related to conservative levels of Project commercial vessel movements is predicted to increase over existing underwater noise levels for only approximately 3% of a year for vessel berthing and unberthing, and for approximately 2% of a year for vessel approach and departure. • Future cumulative increases in commercial vessel traffic in the region are expected to make a relatively small incremental contribution to overall underwater noise levels. This prediction reflects the existing high levels of vessel traffic within the study area and the already-dominant contribution of commercial vessel traffic noise to the acoustic environment. The results of the underwater noise assessment were considered in the assessments of marine fish, marine mammals, and coastal birds. An interaction between Project-related underwater noise and marine invertebrates is not anticipated, and therefore was not assessed.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.8 Underwater Noise 9.8.2 Assessment of Purpose and Approach 9.8.6 Underwater Noise, Methods Appendix 9.8-A Construction and Terminal Activity Underwater Noise Modelling Study Technical Report Appendix 9.8-B Regional Commercial Vessel Traffic Underwater Noise Modelling Study Technical Report 13.0 Marine Fish 13.6 Future Conditions with the Project 14.0 Marine Mammals 14.6 Future Conditions with the Project 15.0 Coastal Birds 15.7 Future Conditions with the Project

Table 19: Potential Accidents or Malfunctions

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Hwlit-19.1	Asked how quickly emergency response could react to an emergency in area around Canoe Pass. Expressed an interest becoming involved in emergency response.	21-May-2015, Meeting	**21-May-2015, Meeting:** Recorded comment for consideration by the Project team. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#207):** The EIS describes the parties who would be notified and assume responsibility as On Scene Commander for spill clean-up in the event of a marine spill within VFPA jurisdiction, including Roberts Bank. These parties include the Canadian Coast Guard and the WCMRC. The VFPA's role following a spill would be to maintain situational awareness and coordinate the incident response. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954) and letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provide additional information on the Government of Canada's Oceans Protection Plan which includes information on emergency response.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 30.0 Potential Accidents or Malfunctions 30.3.3 VFPA Practices and Procedures Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment Appendix B – Tables **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**
Hwlit-19.2	Asked about the potential effects of a coal spill, container spill, vessel collision or oil spill and how this has been assessed. Concerned about a potential accident or malfunction causing a leak of ship fuel.	28-Oct-2014, Preliminary EIS Workshop #3	**28-Oct-2014, Workshop:** Responded that accidents and malfunctions was covered in the first workshop on 07-Oct-2014]. Stated that the workshop provided information on the selection of the plausible worst-case the scenarios. [Hwlitsum was invited to the workshop, but a representative from Hwlitsum did not attend. A package of materials from workshops 1, 2, 3, and 4 was sent to Hwlitsum on 05-Nov-2014.] Stated that potential effects related to coal are not assessed because coal is not within the scope of this Project. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Additional information provided by the VFPA:** The proposed Project is a container terminal and does not include any coal-related elements. **Addressed in EIS Appendix 7.2-B (#204):** Potential spills of deleterious materials (e.g., hydrocarbons) and their environmental effects are discussed in the EIS. Plausible worst-case scenarios involving a marine vessel, motor vehicle, and train accident, each assumed to result in a spill of deleterious materials, are assessed. The regulatory management framework, standard practices, and Project-specific measures to reduce the risk of accidents or malfunctions, including spills, as well as the emergency response and mitigation measures to be implemented in the event of a spill are described. Three worst-case scenarios involving hydrocarbon spills were assessed: a container ship impact incident at the terminal, a tanker truck accident on Roberts Bank Way North, and a yard locomotive derailment on the widened causeway. The assessment determined that a ship impact scenario involving a marine spill of heavy fuel oil at the terminal would result in adverse residual effects to all marine biophysical VCs, as well as marine commercial use, outdoor recreation, and land and water use. While the residual effects on southern resident killer whales, coastal birds, and Current Use of land and resources for traditional purposes were considered significant, due to the extremely low probability of such a scenario, all residual effects were considered unlikely. Since the diesel spill in each of the land-based scenarios would occur away from the marine environment, no potential interactions with marine biophysical VCs were identified. Further, no residual adverse effects were identified with respect to socio-economic VCs, including services and infrastructure and human health. As with any activity, the potential for unplanned incidents during Project construction and operation exists. The VFPA, its tenants, contractors, operators, and intermodal partners are committed to continue to improve port-wide operational practices and procedures to ensure the safety of workers and the public, and protection of the environment. The composition and number of hazardous goods containers handled at Deltaport Terminal in 2012 was reviewed during the development of the Quantitative Risk Assessment (see Table B-4 (Appendix B) of EIS Appendix 30-A).	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 30.0 Potential Accidents or Malfunctions Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment Appendix B – Tables **MSA** 10.0 Potential Accidents or Malfunctions

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
			09-Nov-2015, Letter from the VFPA: Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	The estimated probability and potential consequences of a range of accidents or malfunctions, including spills of deleterious materials from ships during Project construction and operation, are described in the EIS. **Addressed in MSA Section 10.0:** Further consideration of potential accidents and malfunctions outside of the VFPA's navigational jurisdiction (marine shipping associated with the project) are included in MSA Section 10.5. Several independent studies informed the assessment, including a quantitative risk assessment that estimated probabilities for different types of potential marine vessel accidents from a container ship in transit in the marine shipping area. Two plausible worst-case scenarios were selected for the assessment, based on the analysed probabilities of occurrence, higher risk areas, and possible consequences: • A powered grounding of a container ship on a hard substrate, resulting in a spill of 7,500 m3 of heavy fuel oil; and • A collision between a container ship and a small vessel within an existing shipping lane, resulting in damage to the vessel and/or gear as well as serious injury or fatality. The assessment for the plausible worst-case spill scenario concluded that with the exception of human health, measurable residual adverse effects are predicted for all VCs. In all cases, the identified residual adverse effects of a spill are unlikely to occur, because of the very low probability of an accident or malfunction that could result in a spill. With the exceptions of residual effects on marine mammals (southern resident killer whale), marine commercial use (guided sport fishing and marine-based tourism sub-components), outdoor recreation, archaeological and heritage resources, and current use, adverse residual effects were considered not significant. A serious residual adverse impact on the ability of Indigenous groups to exercise Aboriginal and treaty rights in areas overlapping or near the hypothetical spill area would be expected in the event of such a spill. The plausible worst-case collision scenario has the potential to result in measurable residual adverse effects on human health, marine commercial use, outdoor recreation, current use, and asserted or established Aboriginal and treaty rights. In all cases, the identified residual adverse effects of a collision are unlikely to occur, because of the very low probability of collision. The assessment concluded that residual adverse effects are expected to be not significant for marine commercial use and outdoor recreation, but significant for human health. For current use, the residual effect could range from not significant to significant, depending on the capacity of the affected Indigenous group to continue to undertake current use. In the event of a collision between a vessel engaged in traditional use activities and a container ship, a minor to serious adverse residual impact on the ability of the affected Indigenous group to exercise Aboriginal and treaty rights associated with those activities would be expected.	
Hwlit-19.3	Concerned with the risk of a collision between vessels.	10-Dec-2015, Meeting	**10-Dec-2015, Meeting:** Recorded comment for consideration by the Project team.	**Addressed in MSA Section 10.3.2.2:** EIS Appendix 30-A and EIS Appendix 10-A provide the evaluation of the potential for a collision between a container vessel and each of four types of marine vessels in the marine shipping area: crude tankers, other tankers (product and chemical), bulk carriers, and other container ships. After considering a series of variables, including the outcome that a spill is associated with the collision, the analysis found the following: • Minimum return period (at 95% confidence level) for collisions of RBT2-bound container ships with other traffic in the marine shipping area of 133 years; • Container ship-tanker collision return periods of over 10,000 years and those for laden crude oil tankers even lower, due to the fact that only outbound crude oil tankers are expected to be laden with crude oil; and • Minimum return period for a container ship collision with another container ship is approximately 250 years.	**EIS** Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment **MSA** 10.3.2.2 Collisions In-transit Appendix 10-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment: Marine Shipping Supplemental Report

Table 20: Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Lands and Resources for Traditional Purposes

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Hwlit-20.1	Concerned with increased vessel traffic and interference with constitutionally protected Aboriginal right to fish. Concerned with accidents and malfunctions affecting fishing.	15-Apr-2014, Technical Working Group #2 18-Jun-2015, Phone call	**15-Apr-2014, Technical Working Group:** Responded that RBT2 has a relatively small footprint and the frequency of vessel arrivals and departures is relatively low compared to BC Ferries. Stated that the VFPA is undertaking consultation with Indigenous Groups to hear directly from potentially affected groups regarding their interests and issues on this subject. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Appendix 7.2-B that summarised Indigenous issues and interests and provided the VFPA's responses. **18-Jun-2015, Phone call:** Recorded comment for consideration by the Project team.	**Addressed in EIS Appendix 7.2-B (#169):** The assessment of Current Use of lands and resources for traditional purposes includes the potential effects of the Project on the ability of Indigenous groups to access and use preferred harvesting areas. The assessment concluded that the Project is not expected to impact the ability of Hwlitsum to exercise their asserted right to harvest marine resources. **Addressed in EIS Appendix 7.2-B (#204):** Potential spills of deleterious materials (e.g., hydrocarbons) and their environmental effects are discussed in the EIS. Plausible worst-case scenarios involving a marine vessel, motor vehicle, and train accident, each assumed to result in a spill of deleterious materials, are assessed. The regulatory management framework, standard practices, and Project-specific measures to reduce the risk of accidents or malfunctions, including spills, as well as the emergency response and mitigation measures to be implemented in the event of a spill are described. Three worst-case scenarios involving hydrocarbon spills were assessed: a container ship impact incident at the terminal, a tanker truck accident on Roberts Bank Way North, and a yard locomotive derailment on the widened causeway. The assessment determined that a ship impact scenario involving a marine spill of heavy fuel oil at the terminal would result in adverse residual effects to all marine biophysical VCs, as well as marine commercial use, outdoor recreation, and land and water use. While the residual effects on southern resident killer whales, coastal birds, and Current Use of land and resources for traditional purposes were considered significant, due to the extremely low probability of such a scenario, all residual effects were considered unlikely. Since the diesel spill in each of the land-based scenarios would occur away from the marine environment, no potential interactions with marine biophysical VCs were identified. Further, no residual adverse effects were identified with respect to socio-economic VCs, including services and infrastructure and human health. As with any activity, the potential for unplanned incidents during Project construction and operation exists. The VFPA, its tenants, contractors, operators, and intermodal partners are committed to continue to improve port-wide operational practices and procedures to ensure the safety of workers and the public, and protection of the environment. The composition and number of hazardous goods containers handled at Deltaport Terminal in 2012 was reviewed during the development of the Quantitative Risk Assessment (see Table B-4 (Appendix B) of EIS Appendix 30-A). The estimated probability and potential consequences of a range of accidents or malfunctions, including spills of deleterious materials from ships during Project construction and operation, are described in the EIS. **Addressed in MSA Section 10.0:** Further consideration of potential accidents and malfunctions outside of the VFPA's navigational jurisdiction (marine shipping associated with the project) are included in MSA Section 10.5. Several independent studies informed the assessment, including a quantitative risk assessment that estimated probabilities for different types of potential marine vessel accidents from a container ship in transit in the marine shipping area. Two plausible worst-case scenarios were selected for the assessment, based on the analysed probabilities of occurrence, higher risk areas, and possible consequences: • A powered grounding of a container ship on a hard substrate, resulting in a spill of 7,500 m3 of heavy fuel oil; and • A collision between a container ship and a small vessel within an existing shipping lane, resulting in damage to the vessel and/or gear as well as serious injury or fatality. The assessment for the plausible worst-case spill scenario concluded that, with the exception of human health, measurable residual adverse effects are predicted for all VCs. In all cases, the identified residual adverse effects of a spill are unlikely to occur, because of the very low	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 30.0 Potential Accidents and Malfunctions 30.4 Potential Marine-Based Accidents and Malfunctions 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Lands and Resources for Traditional Purposes 33.0 Environmental Management Program 33.3.9 Land and Marine Traffic Management Plan **MSA** 10.0 Potential Accidents and Malfunctions

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				probability of an accident or malfunction that could result in a spill. With the exceptions of residual effects on marine mammals (southern resident killer whale), marine commercial use (guided sport fishing and marine-based tourism sub-components), outdoor recreation, archaeological and heritage resources, and current use, adverse residual effects were considered not significant. A serious residual adverse impact on the ability of Indigenous groups to exercise Aboriginal and treaty rights in areas overlapping or near the hypothetical spill area would be expected in the event of such a spill. The plausible worst-case collision scenario has the potential to result in measurable residual adverse effects on human health, marine commercial use, outdoor recreation, current use, and asserted or established Aboriginal and treaty rights. In all cases, the identified residual adverse effects of a collision are unlikely to occur, because of the very low probability of collision. The assessment concluded that residual adverse effects are expected to be not significant for marine commercial use and outdoor recreation, but significant for human health. For current use, the residual effect could range from not significant to significant, depending on the capacity of the affected Indigenous group to continue to undertake current use. In the event of a collision between a vessel engaged in traditional use activities and a container ship, a minor to serious adverse residual impact on the ability of the affected Indigenous group to exercise Aboriginal and treaty rights associated with those activities would be expected. A Land and Marine Traffic Management Plan is included in the Environmental Management Program (EIS Section 33.0) in order to mitigate potential marine vessel traffic issues.	
Hwlit-20.2	Stated that elders have raised concerns regarding land creation and how it will affect Hwlitsum way of life (i.e., fishing) and constitutionally protected rights. Stated that construction of Deltaport, Westshore Terminals and BC Ferries causeway and terminal has infringed Hwlitsum's S35 rights and construction of the Project will further diminish the ability of Hwlitsum members to meaningfully exercise their rights in their preferred areas.	01-Nov-2013, Meeting	**01-Nov-2013, Meeting:** Responded that effects from the marine terminal footprint will be looked at as part of the EA process with residual effects assessed and mitigation included at as part of the assessment of the Project. Stated that information on this will be included in the EIS. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Section 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes.	**Addressed in EIS Section 32.0:** Potential effects on Current Use of lands and resources for traditional purposes and potential impacts on Aboriginal rights and related interests are addressed in Section 32.0. The assessment considers potential effects of the Project on the ability of Indigenous groups to access and use preferred harvesting areas. The assessment concluded that the Project is not expected to impact the ability of Hwlitsum to exercise their asserted right to harvest marine resources.	**EIS** 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes
Hwlit-20.3	Stated that although there are overlaps in First Nations' traditional territories, each First Nation's claim should be viewed and considered. Stated that it is not appropriate for the VFPA to make definitive claims regarding historic and contemporary use of the study area by First Nations.	15-Mar-2014, Letter – Comments on draft Archaeological Overview Assessment	**06-May-2014, Letter from the VFPA:** The purpose of the Archaeological Overview Assessment was not intended to provide detailed ethnographic history. However, revisions to the Ethnography Section were implemented. **01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Section 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes.	**Addressed in EIS Section 32.0:** EIS Section 32.0 considers established and asserted rights, as the VFPA understands them, of multiple First Nations. As noted in EIS Section 32.2.4.10, key sources relied upon to describe the asserted rights and Current Use of the Hwlitsum in the vicinity of the Project were previous regulatory filings, submissions, and reports for nearby projects (e.g., EAO and VFPA 2012), two studies prepared by Hwlitsum in the context of other projects and provided to PMV for consideration in the EIS (Wilson et al. 2009, 2013), and ongoing consultation between the VFPA and Hwlitsum regarding the Project.	**EIS** Appendix 7.2-A Consultation Activities by Aboriginal Group 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2.4.10 Hwlitsum

Hwlitsum

#	Interest / Concern Raised	Dates(s) / Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Hwlit-20.4	Stated that the Project as proposed, will negatively impact sensitive ecological areas from which Hwlitsum has continued to fish, hunt and harvest since a time predating the arrival of settlers in the area now known as British Columbia.	22-Sep-2014, Letter to the CEA Agency (CEAR Document #125)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Appendix 7.2-B (#169):** The assessment of Current Use of lands and resources for traditional purposes includes the potential effects of the Project on the ability of Indigenous groups to access and use preferred harvesting areas. The assessment concluded that the Project is not expected to impact the ability of Hwlitsum to exercise their asserted right to harvest marine resources. **Addressed in EIS Appendix 7.2-B (#78):** Field studies, air photo review, and modelling were undertaken during the coastal geomorphology assessment at Roberts Bank, including Canoe Passage. Changes are anticipated around the terminal and within the intertidal zone shoreward of the terminal. The potential effects of these changes on marine fish are considered in the EIS. An assessment was undertaken to determine the effects of the Project on the productivity of marine fish, including Pacific salmon. The assessment of marine fish, as well as marine vegetation and invertebrates upon which fish depend, consider seasonal influences, and potential Project-related changes on these influences. Terminal footprint-related changes to coastal process such as currents and freshwater-marine water mixing near and shoreward of the terminal are anticipated. Project-related changes in salinity and turbidity are discussed with respect to marine water quality. A discussion of the potential effects of these changes on marine fish, including different fish life stages, is presented in the marine fish assessment. Potential Project-related effects on marine fish, including all five species of Pacific salmon, are considered in the EIS. Chum and Chinook salmon are evaluated as being representative of all Pacific salmon species, as they are the most estuarine-dependent species of salmon, and therefore most likely to be affected by the Project. As described in EIS Section 13.0, minor decreases in productivity are anticipated during the construction and operation phases for all marine fish sub-components, with the exceptions of negligible changes in productivity for certain species including adult Chinook and chum salmon (representative species for sockeye and other Pacific salmon species) and lingcod, and an increase in productivity for shiner perch during the operation phase. Productivity decreases can be partially mitigated through the implementation of environmental management plans and the creation of habitat. Residual effects are anticipated for flatfish and forage fish as a result of permanent loss of subtidal sand habitat associated with the terminal footprint and disturbance from underwater noise. The assessment concludes there are no significant adverse effects from the Project, as marine fish productivity or long-term integrity would not be compromised. The Project is not expected to result in measurable incremental adverse cumulative effects to marine fish.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.0 Physical Setting 9.5.8 Coastal Geomorphology, Future Conditions with the Project 9.7.8 Marine Water Quality, Future Conditions with the Project 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component 13.2.1 Sub-components 13.4.1 Information Sources, Desktop and Field Studies 13.5.1 Existing Conditions, Pacific Salmon 13.6 Future Conditions with the Project Table 13-6 Desktop and Field Studies Related to Marine Fish to Support the Assessment Table 13-10 Summary of Roberts Bank Ecosystem Model Productivity Results for Marine Fish 13.6.3 Potential Effect - Changes in Productivity
it-20.5	Requested an MOU where the VFPA recognises Hwlitsum's claim to Roberts Bank area.	21-May-2015, Meeting	**01-Apr-2015, Letter from the VFPA:** Provided a copy of the EIS, which included EIS Section 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes. **21-May-2015, Meeting:** Recorded comment for consideration by the Project team.	**Additional response provided by the VFPA:** The VFPA does not have the authority to affirm Aboriginal rights or title.	

APPENDIX IR10-01-C13

TSAWOUT FIRST NATION: ISSUES, VIEWS, AND CONCERNS RELATED TO THE PROPOSED PROJECT AND MARINE SHIPPING ASSOCIATED WITH THE PROJECT

Table 1: Air Quality – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsawout-1.1	Requested community-based air quality monitoring.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Stated that there are plans for continued monitoring after the assessment, and that there are air quality monitoring stations located in Burrard Inlet, Delta, and at Tsawwassen First Nation. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, including Appendix 2-B summarizing the issues raised by Tsawout First Nation and the VFPA's responses.	**Addressed in AIEIS Appendix 2-B Table 8 (#46):** Community-based air quality monitoring has been implemented in communities adjacent to the Roberts Bank Terminal 2 Project (RBT2 or Project) area, where changes in air quality as a result of the Project have the potential to occur. As part of the Deltaport Third Berth Project (DP3), the VFPA funded the establishment of the Tsawwassen Air Quality Monitoring Station. The location of the station, at Pebble Hill Reservoir located at 411 Milsom Wynd in Delta, was chosen by the Delta Air Quality Monitoring Technical Working Group (composed of representatives from Corporation of Delta, Environment Canada, Metro Vancouver, Tsawwassen First Nation, and the VFPA). The station is comprised of state-of-the-art monitoring equipment, including ozone and particulate monitoring technologies. Since this station is part of Metro Vancouver's regional air quality monitoring network, results from the station can be viewed in real-time at www.bcairquality.ca/readings. **Addressed in EIS Appendix 7.2-B (#42):** An assessment was carried out to predict potential changes in air quality as a result of the Project. The results of the air quality assessment were used in the assessments of human health and Current Use of land and resources for traditional purposes (Current Use). The assessment modelled Project-related emission sources during the construction phase, and fuel combustion during the construction and operation phases, and compared them to modelled existing conditions and future expected conditions. Existing conditions considered emissions from marine vessels, trains, trucks, vehicles, and equipment from the existing Westshore Terminals, Deltaport Terminal, and BC Ferries Terminal, while emissions from industrial, commercial and residential sources within Delta were represented through measured air quality levels in Tsawwassen. A general trend of decreasing concentrations of contaminants has been observed and is expected in the Lower Fraser Valley for some criteria air contaminants, as well as for some trace organic contaminants. Coal dust is also included in the assessment of air quality in existing conditions, in the future with the Project, and in the cumulative effects assessment. Hypothetical maximum emissions scenarios were used to conservatively estimate existing conditions and potential changes from the Project. Estimated emissions and predicted ambient concentrations did not account for the inclusion of shore power as part of the Project, which is expected to decrease future emissions from ships at berth ultimately improving air quality. The assessment concludes that: • Air quality will improve in the future, with or without the Project, as a result of improvements in engine technologies and the use of cleaner fuels. • Cumulative changes, incorporating the Project and other certain and reasonably foreseeable projects and activities, are predicted to be small relative to expected future ambient air quality levels. • Project construction activities are predicted to cause a small increase in concentrations of some contaminants. • Criteria air contaminant (i.e., carbon monoxide, nitrogen oxides, sulphur dioxide, particulate matter, and ground-level ozone) and trace organic contaminant (i.e., formaldehyde and other contaminants related to fuel combustion) levels are predicted to be below air quality criteria on land, with limited exceptions. • The Project is expected to have a negligible effect on future ozone levels and to increase greenhouse gas emissions (i.e., carbon dioxide, methane, and nitrous oxide). • Although Project activities would emit black carbon, black carbon is expected to decrease in the future with the Project due to equipment fleet turnover at existing Roberts Bank terminals to newer engines that meet more stringent emission standards for particulate matter. The Project is not expected to result in any significant adverse effect on human health, including from changes in air quality. During operation, it is unlikely that Project-related exposures to air emissions would result in health effects. The only residual effect associated with air quality changes would be experienced by individuals on the water near the terminal during construction due to short-term and infrequent dust generation. The benefits of existing initiatives are realised in the existing emissions monitored at local air quality stations in Metro Vancouver. Future benefits, such as improvements in fuel, are described based on their anticipated level of benefit to future air quality emissions.	**Environmental Impact Statement (EIS, CEAR Document #181)** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.0 Physical Setting 9.2.5 Air Quality, Methods Appendix 9.2-A Air Quality Study Main Report Appendix A - Emissions Inventory Appendix B – Existing Air Quality Appendix C - Air Dispersion Modelling Appendix F - Ships Underway Appendix H – Westshore Coal Dust Assessment 9.2.6 Existing Conditions Table 9.2-4 Air Quality Criteria for Criteria Air Contaminants Table 9.2-5 Air Quality Criteria for Toxic Organic Contaminants 9.2.7 Air Quality Existing Conditions 9.2.8 Future Conditions with the Project 9.2.9 Future Conditions with the Project and Other Projects and Activities **Additional Information to the EIS – *W̲SÁNEĆ* Nation (AIEIS; CEAR Document #930)** Appendix 2-B Aboriginal Issues and Interests – *W̲SÁNEĆ* Nation – Table 8 Air Quality

Table 2: Archaeological and Heritage Resources – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsawout-2.1	Asked whether there is any potential for cultural heritage resources other than fish trap stakes in the Roberts Bank area.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	**27-Nov-2015, Workshop:** Stated there were no fish stakes found, and that here is nothing in the database for the area. Stated that there are reports and traditional knowledge indicating that these areas were used for trapping sturgeon. Stated that the archaeologist who conducted the overview assessment predicted that fish stakes were more likely be found in the historic draining channel. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, including Appendix 2-B summarizing the issues raised by Tsawout First Nation and the VFPA's responses.	**Addressed in AIEIS Appendix 2-B Table 27:** Physical and cultural heritage resources in the Roberts Bank area are described in EIS Sections 28.0 and 32.2, and in AIEIS Sections 6.0 and Section 7.0. Fish trap stakes were identified as the only potential archaeological or heritage resource that has the potential to be affected by the Project construction or operation activities. No archaeological sites were identified in the local assessment area (LAA), either using the B.C. Archaeology Branch's online heritage registry or through the Archaeological Overview Assessment. If archaeological or historical materials remain in the intertidal area, it is likely that they have been preserved in the sediment layers, if not affected by previous construction. **Addressed in EIS Section 28.0:** EIS Section 28.0 provides information on the archaeology assessment that was undertaken for the Project.	**EIS** 28.0 Archaeological and Heritage Resources 28.4 Information Sources 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Land and Resources for Traditional Purposes **AIEIS** Appendix 2-B Aboriginal Issues and Interests, Table 27 Archaeological and Heritage Resources 6.0 Archaeological and Heritage Resources 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes
Tsawout-2.2	Requested inclusion in cultural/ archaeological work undertaken in the Project area. Stated that historically the Tsawwassen area was a stop for the *W̲SÁNEĆ* Nation, a gathering place. They never stayed for long because the area is wide open.	30-Jan-2017, *W̲SÁNEĆ* All-Chiefs Meeting (Pauquachin, Tsartlip, Tsawout, Tseycum)	**30-Jan-2017, Meeting:** Recorded comment for consideration by the Project team. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, including Appendix 2-B summarizing the issues raised by Tsawout First Nation and the VFPA's responses.	**Addressed in AIEIS Appendix 2-B Table 27 (#126):** The Project has the potential to affect archaeological resources, namely, fish trap stakes, if present in the Project area. Direct effects could result from Project construction activities, and indirect effects could result from changes to sediment deposition or erosion. Mitigation measures, including proposed archaeological monitoring, are described in the EIS. Mitigation for effects on heritage and archaeological resources includes the following measures: • The VFPA will excavate a test trench, or series of trenches, across the eastern end of the causeway expansion area within the area of moderate archaeological potential (the historic drainage channel) to enable concurrent inventory (and preservation where possible) of potential fish trap stakes and mitigate future Project-related effects of crushing or degradation of stakes, or reduced access for future study; and • The VFPA will ensure annual monitoring, for a period of four years, of predicted erosion of the historic tidal channel (northwest of the terminal, formerly draining Canoe Passage) to mitigate potential exposure of potential fish trap stakes. Any stakes found will be inventoried and preserved where possible. In addition, the Construction Environmental Management Plan will include an Archaeological Monitoring and Management Plan, describing the procedures to be followed by the Infrastructure Developer in the event that an archaeological site is discovered during Project construction (also referred to as a 'chance find'). The plan will also describe the role and responsibilities of a professional archaeologist designated by the Infrastructure Developer to conduct archaeological monitoring, as needed.	**EIS** 28.0 Archaeological and Heritage Resources 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Land and Resources for Traditional Purposes 33.0 Environmental Management Program 33.3.4 Archaeological Monitoring and Management Plan **AIEIS** Appendix 2-B Aboriginal Issues and Interests, Table 27 Archaeological and Heritage Resources 6.0 Archaeological and Heritage Resources 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				The VFPA acknowledges the request to have a First Nations observer present during construction, and will consider this suggestion as mitigation measures and monitoring plans are finalised.	Resources for Traditional Purposes
Tsawout-2.3	Stated that the archaeological assessment is restricted to registered heritage sites, and does not engage the wider associated meaning of "cultural, and historical resources, sites, or practices." Stated that these issues are not addressed in the Current Use Section, but might include, among other things, multiple-use locations, named places, story sites, etc.	16-Dec-2015, Letter to the CEA Agency (CEAR Document #375)	**12-May-2016, Letter from the CEA Agency:** "The Agency requested additional information on cultural heritage in AIR #10 Cultural Heritage Assessment."	**Addressed in Response to MSA IR-02.24.16-10:** The VFPA's response to MSA IR-02.24.16-10 further describes how the MSA assesses potential effects on cultural heritage of Indigenous peoples. **Addressed in Response to IR10-21:** The VFPA's response to IR10-21, as requested by the Review Panel, discusses potential project effects to sites of physical and cultural importance to Indigenous peoples.	**Information Requests** Response to Additional Information Request #10 (MSA IR-02.24.16-10 of CEAR Document #386) Response to Sufficiency Information Request #21 (IR10-21)
Tsawout-2.4	Stated that there is no baseline discussion of cultural heritage, no attempt to link it to the effects assessment, and no assessment of the Project's impacts upon it. Stated that cultural heritage currently falls between the cracks of the discrete chapters, but is necessary to understand the linkage between the biophysical and social environments.	16-Dec-2015, Letter to the CEA Agency (CEAR Document #375)	**12-May-2016, Letter from the CEA Agency:** "The Agency requested additional information on cultural heritage in AIR #10 Cultural Heritage Assessment."	**Addressed in Response to MSA IR-02.24.16-10:** The VFPA's response to MSA IR-02.24.16-10 further describes how the MSA assesses potential effects on cultural heritage of Indigenous peoples. **Addressed in Response to IR10-21:** The VFPA's response to IR10-21, as requested by the Review Panel, discusses potential project effects to sites of physical and cultural importance to Indigenous peoples.	**Information Requests** Response to Additional Information Request #10 (MSA IR-02.24.16-10 of CEAR Document #386) Response to Sufficiency Information Request #21 (IR10-21)
Tsawout-2.5	Concerned with the disturbance or destruction of heritage sites: including burial and archaeological sites from shoreline erosion due to vessel wake Expressed concern with the effects of shipping on erosion and exposing of gravesites. Requested funding to protect sites, and assistance with reburial and ceremonies that follow.	23-Sep-2015, Tsawout Preliminary Traditional Marine and Land Use Baseline 19-Jun-2017, Meeting with Chief, Councillor, Administrative and Consulting Staff	**23-Sep-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Section 9.4 Archaeological and Heritage Resources. **19-Jun-2017, Meeting:** Asked what a financial contribution would look like. Asked what Tsawout is doing to protect the gravesites. Asked if Tsawout is engaging with Archaeology Branch on this issue. Noted the challenges where many agencies are involved. Reiterated the mitigation measures suggested for erosion by Tsawout, including inventory of vulnerable sites, building physical structures and contingencies. Noted that the VFPA will compile these suggestions and present them to the federal government. Stated that the VFPA could bring back an archaeologist to discuss this matter further.	**Addressed in MSA Section 9.4:** All potential incremental effects on archaeological and heritage resources related to Project-associated vessel transit activities, including shoreline erosion from vessel wake, were determined to be negligible, as wake waves predicted from Project-associated marine vessel traffic are predicted to be within the range of natural conditions. **Addressed in Response to IR10-21:** The VFPA's response to IR10-21, as requested by the Review Panel, discusses potential project effects to sites of physical and cultural importance to Indigenous peoples. **Addressed in Response to IR10-23:** The VFPA's response to IR10-23, as requested by the Review Panel, discusses potential loss or deterioration of archaeological sites resulting from natural and ship-wake waves greater than 10 cm.	**Marine Shipping Addendum (MSA, CEAR Document #316)** 9.4 Archaeological and Heritage Resources 9.4.5 Existing Conditions 9.4.6.1 Negligible Effect #1 – Disturbance from Vessel Wake **Information Requests** Response to Sufficiency Information Request #21 (IR10-21) Response to Sufficiency Information Request #23 (IR10-23)

Table 3: Coastal Geomorphology – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsawout-3.1	Concerned about increased wave action caused by larger size and volume of vessels in the shipping lane will lead to greater impacts than currently experienced.	23-Sep-2015, Tsawout Preliminary Traditional Marine and Land Use Baseline	**23-Sep-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Appendix 5-B summarising concerns raised by Tsawout First Nation and the VFPA's responses. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, including Appendix 2-B summarizing the issues raised by Tsawout First Nation and the VFPA's responses.	**Addressed in AIEIS Appendix 2-B Table 11 (#51):** Potential changes to the wave environment from ship wake (from Project-associated vessels) was assessed for a representative container vessel with approximately 9,000 to 9,500 twenty-foot equivalent unit (TEU) capacity in MSA Section 7.2. In addition to the study of a representative vessel, a sensitivity analysis of other vessel types with differing hulls was also conducted (see MSA Appendix 7.2-B). The analysis of wake height varied by a little over 10 cm in response to the vessel hull type, compared to the representative vessel. Coastal geomorphic conditions are not expected to change from wake-generated waves as vessel wake is a small component of the existing wave climate, which is influenced by wind-generated waves and ocean swell. **Addressed in MSA Appendix 5-B (#31):** The assessment of effects from marine shipping associated with the Project is based on a representative ship size of 9,000 to 9,500 TEU capacity, which is likely to be the type of ship calling on RBT2 most frequently (MSA Section 4.0). If container ship capacity (ship size) increases faster than predicted, the number of Project-associated vessels in the marine shipping area in 2030 would be fewer. The assessment of potential changes in waves is provided in MSA Section 7.2. The assessment of potential changes in atmospheric noise is provided in MSA Section 7.4. The assessment of potential changes in underwater noise is provided in MSA Section 7.6. **Addressed in Response to IR7-18:** The VFPA's response to IR7-18 presents model results showing vessel wake of five types of vessels: • Category A – 215 m length for a 2,500 TEU vessel; • Category B – 290 m length for a 3,400 to 4,500 TEU vessel; • Category C – 300 m length for a 6,000 to 8,000 TEU vessel; • Category D – 366 m length for a 12,500 vessel; and • Category E – 400 m length for a 18,000 TEU vessel. The results of the modelling demonstrate that larger ships minimally change wave height and the conclusions of the EIS and MSA remain the same.	**MSA** 4.0 Activity Description 4.2.1.1 Type of RBT2 Container Vessels Appendix 5-B Aboriginal Issues and Interests 7.2 Wave Environment Appendix 7.2-B Ship Wake Calculations 7.2.5 Incremental Changes to the Wave Environment from Marine Shipping Associated with the Project 7.4 Atmospheric Noise 7.6 Underwater Noise **AIEIS** Appendix 2-B Issues and Interests, Table 11 Coastal Geomorphology **Information Requests** Response to Sufficiency Information Request #18 (IR7-18 of CEAR Document #1141)

Table 4: Effects Assessment Methods (including Cumulative Effects)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsawout-4.1	Asked if the Tsawwassen First Nation LNG Project has been considered in the cumulative effects assessment. Requested clarification regarding which other projects were included in the cumulative effects assessment.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Responded Tsawwassen First Nation's proposed LNG Project was not considered. Explained how the Project's assessment has considered reasonably foreseeable projects such as Trans Mountain. Stated that EIS Section 3.0 lists existing and expected projects and activities that will contribute cumulatively to conditions, and those that were determined to be reasonably foreseeable are listed in the EIS Section 8.0, which also reports on the methodology used for the cumulative effects assessment. **26-Apr-2016, Email from the VFPA:** Post-meeting note: Please refer to the EIS Table 8-8 for the list of Projects included in the incremental future cumulative effects assessment. **10-Feb-2017, Letter from the VFPA:** Provide a copy of the AIEIS, including Appendix 2-B summarizing the issues raised by Tsawout First Nation and the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#38):** The cumulative effects assessment takes into consideration the potential residual effects of the Project in combination with the effects of other projects and activities that have been or will be carried out, including effects on local and Indigenous communities. A review of previous studies, effects assessments, and commitments from other projects was conducted and has informed the Project's environmental assessment (EA), as discussed in the EIS. Projects and activities contributing to existing and expected conditions in the Project area are identified and described. Information sources considered in the characterisation and assessment of each intermediate component (IC) and valued component (VC) are identified in the respective effects assessment section. **Addressed in AIEIS Appendix 2-B Table 6 (#41):** Other projects and activities considered in each VC- or IC-specific cumulative effects assessment are identified in the Project Inclusion List developed for the EIS (see EIS Table 8-8 and Figure 8-3). This list includes all reasonably foreseeable projects with the potential for a cumulative interaction with the proposed Project. **Addressed in Response to MSA IR-02.24.16-7:** The Tsawwassen First Nation LNG Project was excluded from the assessment of cumulative effects in the EIS because it was not reasonably foreseeable at the time the assessment was undertaken. Tsawwassen First Nation has indicated that they will not be moving forward with any additional discussion regarding the proposed LNG concept.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 8.0 Effects Assessment Methods 8.1.9 Cumulative Effects Assessment 8.1.9.1 Identification of Other Certain and Reasonably Foreseeable Projects and Activities 8.1.9.2 Identification of the Effects of Other Certain and Reasonably Foreseeable Projects and Activities 8.1.9.3 Identification of Cumulative Interactions and Potential Cumulative Effects Table 8-8 Project and Activity Inclusion List Figure 8-3 Other Certain and Reasonably Foreseeable Projects **AIEIS** Appendix 2-B Aboriginal Issues and Interests, Table 6 Cumulative Effects Assessment **Information Requests** Response to Additional Information Request #7 (MSA IR-02.24.16-7 of CEAR Document #386)
Tsawout-4.2	Asked if the VFPA will be conducting a Technical Review Process of Marine Terminal Systems and Transhipment Sites (TERMPOL) for RBT2.	24-Aug-2015, Meeting	**24-Aug-2015, Meeting:** Stated that TERMPOL studies are conducted on shipment of bulk fuel, and does not apply to a container shipping project. Offered to send Tsawout a written response to that question. **25-Aug-2015, Email from the VFPA:** "TERMPOL is a voluntary review process in which proponents involved in building and operating a marine terminal system for bulk handling of oil, chemicals and liquefied gases can participate. A TERMPOL review was not required for the Project, as RBT2 is a proposed terminal that will handle containers only, not bulk fuel." **10-Feb-2017, Letter from the VFPA:**	**Addressed in EIS Appendix 7.2-B (#10):** A summary of the permitting process and requirements for the Project is included in EIS Section 6.0. The Project is undergoing a federal EA by an independent review panel, under the *Canadian Environmental Assessment Act, 2012* (*CEAA, 2012*). The Project is also undergoing an assessment under the *British Columbia Environmental Assessment Act*. The Project requires other permits and authorisations before it can proceed. TERMPOL is a voluntary review process in which proponents involved in building and operating a marine terminal system for bulk handling of oil, chemicals and liquefied gases can participate. A TERMPOL review was not required for the Project, as RBT2 is a proposed terminal that will handle containers only, not bulk fuel.	**EIS** 6.0 Environmental Assessment and Permitting Process 7.0 Engagement and Consultation 7.1.1.4 Federal Authority and Agency Engagement (2014 to 2015) Appendix 7.2-B Aboriginal Groups Interests and Issues Table **AIEIS** Appendix 2-B Aboriginal Issues and Interests, Table 4 Environmental Assessment

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			Provided a copy of the AIEIS, including Appendix 2-B summarizing the issues raised by Tsawout First Nation and the VFPA's responses.	**Addressed in AIEIS Appendix 2-B Table 4 (#28):** TERMPOL is a voluntary review process in which proponents involved in building and operating a marine terminal system for bulk handling of oil, chemicals, and liquefied gases can participate. A TERMPOL review was not relevant for the Project, as RBT2 is a proposed terminal that will handle containers only, not bulk oil, chemicals, or liquefied gases.	Process and Regulatory Framework
Tsawout-4.3	Concerned that the use of intermediate components (ICs) and valued components (VCs) results in effects to ICs being scoped out if they are below a certain threshold, and are therefore subsequently not considered in the assessment of Aboriginal Current Use.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Explained that the idea of VCs and ICs is to focus the assessment. EA has evolved over the last 40 years and referred to a document from the B.C. Environmental Assessment Office (BC EAO), *Guidelines for VC Selection*. The Project went with the evolution of EA, which incorporates ICs. Added that physical components (i.e., ICs) reflect a change that could have either positive or negative effects on a particular receptor (i.e., VC) depending on the VC's preferences. For example, water quality: some species might like warmer water and others may prefer colder water. It is with the VC a determination of significance is made. Stated that every IC and VC was considered in the assessments undertaken, but if there was no residual effect, the IC or VC would not have been carried into the section concerning current use and rights, as shown in the effects pathway matrix. **26-Aug-2015, Email from the VFPA:** Please refer to EIS Table 8-1 Intermediate Component and Valued Component Linkages. The binders distributed at the workshop included a diagram of VC and IC linkages to demonstrate interlinkages between components. **10-Feb-2017, Letter from the VFPA:** Provide a copy of the AIEIS, including Appendix 2-B summarizing the issues raised by Tsawout First Nation and the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#25):** ICs, VCs, and VC sub-components are identified in EIS Section 8.0 which describes the overall 3-step VC selection process, including the rationale for focusing the assessment on VC sub-components. The rationale for selection of specific ICs, VCs and VC sub-components is described in each assessment section. For example, discussion regarding sub-component selection relative to species of importance to Indigenous groups, including eulachon and sturgeon, is captured in EIS Section 13.0. **Addressed in AIEIS Appendix 2-B Table 5 (#34):** The ICs are described in EIS Section 8.0. The ICs are considered to be the components along the pathway through which the effect is transmitted to the receptor (VC) at the end of the effect pathway. The methods applied to assess potential changes of the Project on ICs followed the methods used to assess the potential effects of the Project on the VCs. As such, the existing conditions and the expected conditions of each IC were described, the changes anticipated to result from the Project were predicted, and the cumulative changes that may result from other projects and activities were assessed. If the Project was predicted to result in a change to an IC, this change was used to inform the assessment of other VCs, as relevant. IC and VC assessments were reviewed independently for potential effect pathways on Current Use, and were not scoped out from consideration if these assessments fell "below a certain threshold." A list of IC and VC assessments considered in the Current Use assessment is found in AIEIS Section 7.0. An assessment of potential impacts of the Project on Tsawout First Nation's established treaty rights is included in the AIEIS. The VFPA will continue to consult with Indigenous groups and there will be further opportunities to provide information through the EA process.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 8.0 Effects Assessment Methods Appendix 8-A Valued Component Selection Rationale 8.1.2 Selection of Valued Components Figure 8-1 Valued Component Selection Process 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component **AIEIS** Appendix 2-B Aboriginal Issues and Interests, Table 5 Effects Assessment Methods 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsawout-4.4	Concerned with cumulative effects of increased marine shipping in Tsawout traditional territory, including vessel wake, access to fishing, hunting and gathering sites.	25-Jun-2015, Letter	**30-Jun-2015, Letter from the VFPA:** Restated Tsawout's concern with cumulative effects of increased marine shipping and requested to meet to discuss concerns. **24-Aug-2015, Meeting:** The VFPA and Tsawout discussed a cumulative effects study. **11-Sep-2015, Letter from the VFPA:** Offered funding for a study of Tsawout's use of lands and resources in the marine shipping study area of the MSA. **16-Sep-2015, Letter from Tsawout First Nation:** Tsawout accepted the funding. **23-Sep-2015:** Provided a report entitled "Preliminary Traditional Marine and Land Use Baseline Report prepared for Tsawout's Review of the Roberts Bank Terminal 2 Project Marine Shipping Assessment." **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Appendix 5-B summarising concerns raised by Tsawout First Nation and the VFPA's responses.	**Addressed in MSA Appendix 5-B (#23):** The approach to the cumulative effects assessment is provided in MSA Section 6.0. Each IC and VC assessment section considers cumulative changes and cumulative effects to which the Project contributes. This entails consideration of residual effects of routine marine shipping associated with the Project, if any such effects are predicted, in combination with effects of other projects and activities that have been or will be carried out. MSA Section 9.5 describes how Current Use activities have been affected by other projects and activities that have been carried out. As residual effects to Current Use as a result of marine shipping associated with the Project are not predicted, an assessment of future cumulative effects was not carried out. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans Protection Plan which includes information on the cumulative effects of marine shipping.	**MSA** Appendix 5-B Aboriginal Issues and Interests 6.0 Effects Assessment Approach
Tsawout-4.5	Stated that is impossible to tell at present how the information was put together to produce the "negligible" findings. Requested a description of the data available to inform the Current Use assessment and the Treaty Rights section.	16-Dec-2015, Letter to the CEA Agency (CEAR Document #375)	**12-May-2016, Letter from the CEA Agency:** "The Agency requested additional information on Port Metro Vancouver's [the VFPA] assessment methodology in AIR #2 Rationale for Effects Characterization."	**Addressed in Response to MSA IR-02.24.16-2:** In relation to the assessment of potential effects of marine shipping associated with the Project on the Current Use by Indigenous groups and potential adverse impacts on their exercise of Aboriginal and Treaty rights, response to MSA IR-02.24.16-2 identifies the receptors of these potential effects and impacts, and provides an explanation of how these potential effects and impacts were determined to be negligible or measurable in the MSA.	**Information Requests** Response to Additional Information Request #2 (MSA IR-02.24.16-2 of CEAR Document #386)
Tsawout-4.6	Requested that VFPA provide information on the effects of past projects and activities on current use of lands and resources for traditional purposes, and on the exercise of Aboriginal and Treaty rights. Stated that the cumulative effects assessment methodology employed by the proponent is not useful in so far as it restricts the scope of the assessment to only cumulative future effects, without taking into account the effect of past or ongoing projects or activities on the VC. Stated that this methodology is not capable of adequately describing the baseline ability of Tsawout harvesters to undertake marine use activities or exercise their	16-Dec-2015, Letter to the CEA Agency (CEAR Document #375) 20-Jan-2017, Letter	**12-May-2016, Letter from the CEA Agency:** *"The Crown will be using the Review Panel process to the extent possible to collect information about potential impacts to the exercise of Tsawout's rights from the Project and marine shipping associated with the Project and we encourage you to provide your perspective on this topic to the Review Panel. This includes information on Tsawout's experience over time as the environment has changed with the exercise of rights.* *In addition, the Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."* **10-Feb-2017, Letter from the VFPA:** *"Comment #21: The approach to the assessment of cumulative effects on Current Use in the EIS and AIEIS follows the approach adopted for VCs. These methods are described in EIS Section 8.0, and were further explained in the response to IR-7.31.15-13 and AIR-12.04.15-13. The VFPA notes that it is not a requirement of the Updated EIS Guidelines to assess the cumulative effects of other*	**Additional information provided by the VFPA:** **10-Feb-2017, Letter from the VFPA:** *"Comment #19 - As required by the Updated EIS Guidelines, AIEIS Section 7.2.4 describes information, where provided to the VFPA by W̱SÁNEĆ bands, that would assist the Panel in understanding intensity of use. For example, per section 17.5 of the Updated EIS Guidelines, the assessment endeavours to provide information on "types, number, size and capacity of fishing vessels used in the area, gear types, and existing interactions with shipping," "commercial, recreational and aboriginal fisheries statistics (e.g., species, annual catch and number of licences)." The VFPA requested this information from W̱SÁNEĆ bands.* *The Updated EIS Guidelines also requires the assessment to distinguish between interactions that could potentially result in measurable effects from those that are not expected to be measurable (i.e., negligible effects) and why. As described in EIS Section 32.2.5, "Potential Project-related effects to Current Use have…been described based on a qualitative assessment of change from existing conditions," as these were understood by the VFPA at the time of filing. In the responses to AIR-12.04.15-30 and MSA IR-02.24.16-2,*	**EIS** 3.0 Geographical Setting 3.4.1 Projects Contributing to Existing Conditions 3.4.2 Activities Contributing to Existing Conditions 8.0 Effects Assessment Methods 8.1.9.1 Identification of Other Certain and Reasonably Foreseeable Projects and Activities Table 8-8 Project and Activity Inclusion List 32.2 Current Use of Lands and Resources for Traditional Purposes 32.2.5 Expected Conditions 32.2.7 Mitigation Measures

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	Aboriginal and Douglas Treaty rights, of locating thresholds beyond which they would no longer be able to do so, or predicting future outcomes Commented on Draft RBT2 AIEIS - Pg. 89 Cumulative Effects Assessment (Current Use) The VFPA notes throughout the document that the *WSÁNEĆ* have expressed that cumulative effects within their territory are a priority issue, but the VFPA did not conduct an assessment of cumulative effects on the current use for the *WSÁNEĆ* on the grounds that it predicts no residual effects. We have already noted several problems with the baseline and the assessment approach – for e.g., the failure to assess the secondary impacts of displacement on *WSÁNEĆ* resource use and the ability to exercise rights; misinterpretation of the information provided by the *WSÁNEĆ* to arrive at erroneous conclusions of low levels and frequency of use – which call VFPA's rationale into question. The VFPA's cumulative effects approach is narrowly project-specific and should include a historical baseline. It doesn't take into the consideration the extensive cumulative effects that have occurred within *WSÁNEĆ* marine territory in living memory, or the *WSÁNEĆ* perspectives on those changes, or on the demonstrated impacts those changes have had on *WSÁNEĆ* culture. It is recommended that the WNA should include a section where the VFPA describes, in alignment with *WSÁNEĆ* knowledge, changes in the environment and ability to use and exercise rights within the area around the Project. Such a section should include the original port, development of the Tsawwassen terminal, expansion of existing facilities, signing of the Tsawwassen agreement, etc.… The Project		*projects and activities (past, present, or future) unless the Project itself is expected to contribute to those cumulative effects; however, changes over time were considered in the assessment, as those cumulative effects over time are reflected in existing conditions that are seen today. A description of cumulative effects to date on components of the natural environment upon which Current Use depends can be found in Part 3 of the response to AIR-12.04.15-13, Schedule 13.* *All information provided by WSÁNEĆ to the VFPA regarding WSÁNEĆ perspectives on cumulative effects in WSÁNEĆ marine territory over time has been described in existing conditions sections of the MSA and the AIEIS. This information includes WSÁNEĆ perspectives on changes to the environment and ability to use and exercise rights within and around the Project.* *While potential Project-related incremental effects on Current Use by WSÁNEĆ are not predicted in the AIEIS based on limited reported use of the Project area (see response above to Comment #19 regarding levels and frequency of use), the AIEIS assessed potential effects for WSÁNEĆ based on potential future use (i.e., their expressed desire to restore or increase use based on past use), and therefore applied the mitigation measures described in EIS Section 32.2.7 to the WSÁNEĆ. As these measures are expected to be effective, there are no measurable residual effects predicted that could contribute to cumulative effects in the future. In accordance with the methodology for the assessment, an assessment of future incremental cumulative effects was therefore not carried out. The VFPA wishes to emphasise that the measures identified in EIS Section 32.2.7, and applied in the AIEIS, include measures that would serve to confirm the conclusions of the Current Use assessment (i.e., as a means of monitoring circumstances during Project construction and operation, through ongoing engagement with WSÁNEĆ bands).* *With regard to cumulative effects considerations in the EIS as a whole, the other projects and activities, including shipping activities, considered in relation to cumulative effects (where such effects were identified on VCs) are identified in EIS Section 8.0 (Table 8-8). As described in EIS Section 32.2.5, projects that had been or were being carried out in the assessment area at the time of writing the EIS were considered for their contribution to the existing conditions of Current Use, which reflect the cumulative effects to date of those past and present projects and activities. These projects and activities are described in EIS Sections 3.4.1 and 3.4.2, which describes the history of development in the Project area, and includes the projects and activities referenced in the comment. The incremental marine shipping associated with the Project (i.e., marine traffic outside VFPA jurisdiction) was also considered in the cumulative effects*	*the qualitative nature of this assessment is further explained, providing clarification on the meaning of "negligible" and "measurable" in the Current Use assessment. Cross-references to these responses are provided in AIEIS Sections 7.2.6 and 7.3.2.* *With regard to the use of "infrequent" and "low levels" in the AIEIS, the AIEIS employs this terminology specifically in relation to crab harvesting for traditional purposes by WSÁNEĆ (see AIEIS Sections 7.2.6.1, p. 84 and 7.2.6.4, pp. 86 and 87). As described in the WSÁNEĆ Study and recounted in AIEIS Section 7.2.4, one WSÁNEĆ harvester reported a crab fishing area in the WSÁNEĆ Study's local study area that he said he frequented with his grandfather. The band affiliation of this harvester was not identified in the WSÁNEĆ Study. As also reported in AIEIS Section 7.2.4, Tseycum First Nation informed the VFPA that they have harvested crab in the Tsawwassen Water Lots on either side of the BC Ferries Terminal causeway, and that they require a Tsawwassen First Nation Member to be with them while using these areas. Specific information about how many crab may have been harvested at Roberts Bank, while requested, was not provided, but the context of the information suggested it was not occurring at a frequency or at levels that would be expected to experience a measurable displacement effect based on information available to the VFPA. See AIEIS Section 7.2.6.1 and the response to AIR-12.04.15-30 for further details.* *Comment #25: The VFPA acknowledges and is in agreement with the comment that there are multiple definitions and concepts of Indigenous traditional knowledge (ITK), as stated in the responses to IR-7.31.15-08 and MSA IR-02.24.16-04.* *As also stated in these responses, the EIS and MSA (as well as the AIEIS and AIMSA) were prepared in consideration of all forms of information from Indigenous groups, including knowledge about the environment itself (defined for the purposes of this EIS as ITK), as well as knowledge about past effects on the environment, cumulative change, risk, notions of health, etc. This knowledge is included and referenced throughout the EIS, MSA, AIMSA, and AIEIS.* *The WSÁNEĆ bands were invited to provide any information they wished to share with the VFPA, and all information provided was considered and incorporated into the MSA, and the AIEIS."*	32.2.5 Expected Conditions **AIEIS** 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including the Current Use of Lands and Resources for Traditional Purposes 7.2.4 Existing Conditions 7.2.6 Future Conditions with the Project – Potential Project-Related Effects 7.3.2 Results of the Rights Assessment **Information Requests** Response to Information Request #13 (IR-7.31.15-13 of CEAR Document #314) Response to Additional Information Request #13 (AIR-12.04.15-13 of CEAR Document #388) Response to Additional Information Request #30 (AIR-12.04.15-30 of CEAR Document #388) Response to Additional Information Request #2 (MSA IR-02.24.16-2 of CEAR Document #386)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	assessment should include, at the very least, within its cumulative effects assessment, its own project marine shipping contiguous with the Project area.		*assessment for the Project for those VCs and components for which residual Project effects were predicted.* *See the response below to Comment #25 regarding the integration of ITK in the EIS and AIEIS."*		
Tsawout-4.7	Commented on Draft RBT2 AIEIS - Re: Input to VCs and links to rights Table 7.1 presents the VFPA's interpretation of the relationship between the valued components (marine vegetation, marine invertebrates, marine fish, marine mammals, coastal birds, marine commercial use, outdoor recreation, visual resources, human health, and archaeological and heritage resources) of the assessment and Aboriginal rights, but it likely does not represent *WSÁNEĆ* perspectives on these issues. Further, since *WSÁNEĆ* were engaged after the EA process began, they had no input into the selection of Valued Components. It is recommended that the VFPA consult with the *WSÁNEĆ* to better understand the relationship between the valued components and their understanding of their rights.	20-Jan-2017, Letter	**10-Feb-2017, Letter from the VFPA:** *"Comment #23: With regard to the concern that WSÁNEĆ were not consulted on the selection of VCs, please see the response above to Comment #2.* *As described in the AIEIS, the VFPA has indicated a desire to continue to consult the WSÁNEĆ in relation to the Project (see AIEIS Sections 7.2.7 and 7.3.3). Part of this ongoing consultation includes this review and comment on the AIEIS prior to submission to the CEA Agency and the Panel. This review process and other parallel VFPA engagement efforts with WSÁNEĆ bands are intended to provide an opportunity to present the perspectives referenced in the comment. The VFPA remains open to receiving specific information from WSÁNEĆ regarding their perspectives on the relationship between VCs and their asserted or established rights."*	**Addressed in AIEIS Section 2.3:** AIEIS Section 2.3 summarises the engagement and consultation process undertaken for the EIS, AIEIS, and MSA with the *WSÁNEĆ* bands. **Additional information provided by the VFPA:** **10-Feb-2017, Letter from the VFPA:** *"Comment #2: In response to this comment, the referenced section of the AIEIS has been revised to read "In August 2015, the VFPA was engaged in discussion with each of the WSÁNEĆ bands regarding marine shipping associated with the Project outside of the VFPA's jurisdiction.* *During consultation with the WSÁNEĆ bands in support of preparation of the MSA, some expressed an interest in being consulted on the Project itself, and the associated environmental assessment."* *As described in AIEIS Section 2.3, the WSÁNEĆ bands were each contacted by the VFPA in early 2014 and invited to participate in consultation related to RBT2. As no response was received by the VFPA, and as the CEA Agency had not included the WSÁNEĆ bands in the list of Indigenous groups in the EIS Guidelines issued in January 2013, the WSÁNEĆ bands were not included in the phases of consultation prior to EIS submission. These phases included the 'Project Description Engagement and Consultation' phase, and the 'EIS Development Engagement and Consultation' phase. The activities that took place during these phases of consultation are described in EIS Section 7.2. AIEIS Section 2.3 has been revised as requested to include this information.* *By way of providing the draft AIEIS for review, the VFPA has provided the opportunity for individual bands to comment on the statements in the AIEIS related to consultation."*	**EIS** 7.2 Aboriginal Groups Consultation and Engagement 7.2.1 Engagement and Consultation Process Overview 7.2.2 Pre-EIS Submission Consultation and Engagement 7.2.2.2 Project Description Engagement and Consultation 7.2.2.3 EIS Development Engagement and Consultation **AIEIS** 2.0 Aboriginal Groups Engagement and Consultation 2.3 Engagement and Consultation Process 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including the Current Use of Lands and Resources for Traditional Purposes 7.2.7 Mitigation Measures (Current Use) 7.3.3 Mitigation Measures (Rights)
Tsawout-4.8	Commented on Draft RBT2 AIEIS - Pg. 100 Aboriginal Traditional Knowledge There is no "official" definition of ATK as noted on p. 100 and in response to EIS IR-80 because none is needed. the CEA Agency themselves noted this in their guidance document which the VFPA refers to. There are dozens, if not hundreds, of definitions of traditional knowledge. In other sectors of EA, practitioners would be reasonably expected to draw on their professional knowledge of the academic literature on a subject (fisheries, for e.g.)	20-Jan-2017, Letter	**10-Feb-2017, Letter from the VFPA:** *"Comment #25: The VFPA acknowledges and is in agreement with the comment that there are multiple definitions and concepts of ITK, as stated in the responses to IR-7.31.15-08 and MSA IR-7.31.15-04.* *As also stated in these responses, the EIS and MSA (as well as the AIEIS and AIMSA) were prepared in consideration of all forms of information from Indigenous groups, including knowledge about the environment itself (defined for the purposes of this EIS as ITK), as well as knowledge about past effects on the environment, cumulative change, risk, notions of health, etc. This knowledge is included and referenced throughout the EIS, MSA, AIMSA, and AIEIS.* *The WSÁNEĆ bands were invited to provide any information they wished to share with the VFPA, and all*	**Addressed in Response to IR-7.31.15-08:** The Canadian Environmental Assessment (CEA) Agency interim principles on considering ITK in EAs (CEA Agency 2015) were considered in the development of the EIS, and in the development of the response. As stated in the interim principles, there is no one universally accepted definition of ITK. The interim guidelines refer to ITK generally as 'knowledge that is held by, and unique to, Indigenous peoples'. ITK is also described as 'a body of knowledge, built up by a group of people through generations of living in close contact with nature. ITK is cumulative and dynamic. It builds upon the historic experiences of a people and adapts to social, economic, environmental, spiritual, and political change'. The term traditional ecological knowledge refers to a subset of ITK that is primarily concerned with the environment (CEAA 11 Agency 2015). In the absence of an official definition of ITK, the EIS was developed based on the CEA Agency's interim principles. For the purposes of the EIS, ITK refers to knowledge about the natural environment and is	**EIS** 7.2.1.7 Collection of Aboriginal Traditional Knowledge **Information Requests** Response to Information Request #8 (IR-7.31.15-08 of CEAR Document #314) Response to Additional Information Request #4 (MSA IR-7.31.15-04 of CEAR Document #386)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	(Comment abridged for purposes of tabulation.) The important thing about all these definitions is that they make it clear that traditional knowledge is about much more than just environmental knowledge, as VFPA has used it (p. 101). The VFPA's approach to inclusion of traditional knowledge reduces W̱SÁNEĆ knowledge into a series of what Nadasdy (2003) has called "TK nuggets" to be dropped devoid of context into a spreadsheet. But TK also includes embedded cultural notions of acceptable risk, cumulative change over time, management practices, notions of health and wellness, etc., the W̱SÁNEĆ hold considerable knowledge and expertise on these subjects.		*information provided was considered and incorporated into the MSA, and the AIEIS."*	synonymous with TEK. ITK in the EIS refers to information provided by Indigenous groups *specifically about* an IC or VC. This is distinguished from other types of information provided by Indigenous groups, such as information about the *use of* a resource or component by Indigenous groups (considered to be 'Current Use') and *concerns about effects to* a resource or component, expressed by Indigenous groups in consultation or other documentation (considered to be 'interests and issues'). The overall approach taken for collection and integration of ITK is described in EIS Section 7.2.1.7.	
Tsawout-4.9	Commented on Draft RBT2 AIEIS - It is impossible for a Proponent to undertake an impact assessment on their current and traditional use and exercise of Douglas Treaty and other rights without giving the communities co-authorship of the analysis/ interpretation of results.	20-Jan-2017, Letter	**10-Feb-2017, Letter from the VFPA:** *"Comment #26: As described in AIEIS Section 2.0, the VFPA provided funding to each W̱SÁNEĆ band for a traditional use study and for participation in consultation, engaged in ongoing consultation with the W̱SÁNEĆ Nation throughout the development of the AIEIS, and provided a full draft of the AIEIS for review. Through these measures, the W̱SÁNEĆ Nation was provided the opportunity for input to the AIEIS, including the analysis and interpretation of results."*	**Addressed in AIEIS Section 2.0:** In support of Project planning and for information-gathering purposes, the VFPA has provided or offered funding support to ensure the ongoing participation of the W̱SÁNEĆ Nation in the Project's consultation processes. Additional agreements were also initiated to support the development of studies regarding Current Use and ITK. As a result of these engagement and consultation activities, each of the W̱SÁNEĆ bands has provided traditional use information relating to the Project area (see AIEIS Section 7.0).	**AIEIS** 2.0 Aboriginal Groups Engagement and Consultation 2.3 Engagement and Consultation Process

Table 5: Engagement and Consultation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsawout-5.1	Stated that the VFPA has not consulted Tsawout First Nation to establish an engagement approach. Requested a meaningful engagement process. Stated that there are some shortcomings with the Consultation Plan document and they would like to meet with the VFPA to discuss. Stated that Tsawout would respond to the Consultation Plan with written comments.	25-Jun-2015, Letter 15-Mar-2016, Letter 25-May-2017, Letter 19-Jun-2017, Meeting	**30-Jun-2015, Letter from the VFPA:** Requested to set up a time to meet to discuss concerns. **24-Aug-2015, Meeting:** The VFPA met with Tsawout First Nation and discussed its proposed consultation activities in relation to the Project and noted its interest in getting feedback from Tsawout on these suggested activities. **23-Mar-2016, Letter from the VFPA:** The VFPA shares Tsawout First Nation's commitment towards a meaningful engagement process. 22-Feb-2015, 18-Aug-2016 and 10-Jan-2017, the VFPA shared with Tsawout a draft Consultation Plan for discussion. The VFPA asked for Tsawout's comments and thoughts on the draft stating that the VFPA would like for the draft to reflect Tsawout's interests. **05-Sep-2017, Email from the VFPA:** The VFPA followed-up with Tsawout to see if they had a chance to review and comment on the Consultation Plan. No response has been received.		
Tsawout-5.2	Requested clarification concerning VFPA's role as a regulator and as a proponent, and whether the VFPA is acting as the Crown in consultations for RBT2. Asked whether the Crown is planning on consulting with the Saanich groups, or whether they are discharging their duty to consult to the VFPA.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations 15-Mar-2016, Letter	**26-Nov-2015, Workshop:** Responded that the VFPA reports to the [federal] Minister of Transport. Responded that the CEA Agency is the Crown consultation coordinator. Offered to provide the contact information for the CEA Agency. Added that the Panel review is a good opportunity to raise these concerns. The Panel will result in recommendations being made to Ministers. **26-Apr-2016, Email from the VFPA:** Post-meeting note: The CEA Agency is responsible for Crown consultation under the CEA Agency process. The VFPA is the proponent for the RBT2 Project. Federal powers, duties, or functions that may be exercised with respect to the Project, and the federal departments and agencies involved in the EA process are identified in Section 6.0 in the EIS. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, including Appendix 2-B summarizing the issues raised by Tsawout First Nation and the VFPA's responses.	**Addressed in AIEIS Appendix 2-B Table 3 (#18):** The Project is undergoing an EA led by the CEA Agency, which is also the Crown consultation coordinator. As the proponent for the proposed Project, the VFPA is conducting Indigenous consultation and engagement as directed by the CEA Agency. The BC EAO has stated that it will actively participate in the federal panel process and will coordinate its assessment and consultation with the federal process where possible. The federal decision maker for the Project is either the Minister of Environment and Climate Change or Governor in Council, taking into account the report of the three-member Review Panel. The Executive Director of the BC EAO will rely principally on the Review Panel's report, along with additional information, to make a recommendation to two provincial Ministers: The Minister of Environment and Minister of Transportation and Infrastructure. The Ministers will then decide whether to issue an EA certificate. The EA and permitting process is described in Section 6.0 of the EIS. On completion of the EA, if the Project were to proceed, it would require a VFPA project permit. Under the *Canada Marine Act*, the VFPA has been delegated the authority to manage specified federal lands and waters and therefore conducts Indigenous consultation on behalf of Transport Canada when operations or developments on those lands and waters have the potential to adversely impact asserted or established Aboriginal or treaty rights. The VFPA would consult and, where appropriate accommodate, Indigenous groups prior to issuing a project permit. Consultation relating to VFPA project permit would relate to those aspects of the Project not already considered as part of the CEA Agency's EA. AIEIS Section 2.0 describes the engagement process undertaken by the VFPA with the *W̱SÁNEĆ* groups in support of this document.	**EIS** 6.0 Environmental Assessment and Permitting Process 7.0 Engagement and Consultation **MSA** 5.0 Aboriginal Groups Engagement and Consultation **AIEIS** 2.0 Aboriginal Groups Engagement and Consultation Appendix 2-B Issues and Interests, Table 3 Engagement and Consultation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				Details regarding the engagement and consultation program with Indigenous groups initially consulted in preparation of the EIS are provided in EIS Section 7.0. Details regarding the engagement and consultation program associated with the MSA, including previous and future planned engagement and consultation with the *W̲SÁNEĆ* groups, are provided in MSA Section 5.0. The VFPA shares Tsawout First Nation's interest in a meaningful engagement process and is working with Tsawout First Nation to develop a consultation workplan that meets the needs of Tsawout First Nation.	
Tsawout-5.3	Stated that the VFPA timelines are unreasonable. Requested an extension to the timeline. Reiterated request to discuss timeline for input. Requested an extension of the timeline to complete a Traditional Use Study to August 1, 2016.	25-Jun-2015, Letter 30-Jul-2015, Letter 24-Aug-2015, Meeting	**17-Sep-2015, Email from the VFPA:** Agreed to extension to 21-Sep-2015 for the provision of a summary of Tsawout First Nation's current use, Douglas Treaty Rights and Aboriginal rights and title within the marine shipping area. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Appendix 5-B summarising concerns raised by Tsawout First Nation and the VFPA's responses.	**Addressed in MSA Appendix 5-B (#7):** The VFPA acknowledges the challenges associated with participating in consultation during summer months, and as such has been in contact with each Indigenous group about their desire to provide comments or additional information, and has extended timelines for participation into the fall in order to accommodate these expressed interests to participate. **Addressed in MSA Appendix 5-B (#8):** Concern is noted. The VFPA considers the amount of funding offered to be adequate and proportionate to the level of effort required by each Indigenous group to participate, given the scope of work. The VFPA increased the funding provided in some circumstances in response to specific requests.	**MSA** Appendix 5-B Aboriginal Issues and Interests
Tsawout-5.4	Stated that the VFPA participation funding offer is unreasonable. Requested additional participation funding. Criticised the VFPA's use of NEB TMX materials for Tsawout Current Use. Reiterated request to discuss capacity funding. Noted interest in funding for cumulative effects study and MTUS. Acknowledged offer of funding from the VFPA, but requested more funding to complete MTUS work. Requested funding to study current and traditional use within Tsawout territory and potential impacts associated with the Project as well as funding for initial engagement. Requested funding to gather further information to be included in the marine shipping addendum, to respond to the	25-Jun-2015, Letter 30-Jul-2015, Letter 24-Aug-2015, Meeting 02-Sep-2015, Letter 16-Dec-2015, Letter to the CEA Agency (CEAR Document #375) 15-Mar-2016, Letter 14-Apr-2016, Letter 19-Jun-2017, Meeting with Chief, Councillor, Administrative and Consulting Staff	**26-May-2015, Letter from the VFPA:** Offered funding for participation regarding Marine Shipping associated with the Project. **11-Sep-2015, Letter from the VFPA:** Offered funding for a study of Tsawout's use of lands and resources in the marine shipping study area of MSA. **16-Sep-2015, Letter from Tsawout First Nation:** Tsawout accepted the funding. **23-Sep-2015:** Provided a report entitled "Preliminary Traditional Marine and Land Use Baseline Report prepared for Tsawout's Review of the Roberts Bank Terminal 2 Project Marine Shipping Assessment." **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Appendix 5-B summarising concerns raised by Tsawout First Nation and the VFPA's responses. **23-Mar-2016, Letter from the VFPA:** Stated that in response to requests for additional funding from Tsawout First Nation and other Saanich Nations, the VFPA is prepared to increase its funding offer to support research, study work and engagement over the next phase. **22-Aug-2016, Letter from the VFPA:** Offered funding for Traditional Use Study and participation and engagement. Tsawout accepted the funding.	**Addressed in MSA Appendix 5-B (#67):** The VFPA has engaged with each of the Indigenous groups listed in the *Updated EIS Guidelines* and provide drafts of Current Use existing conditions sections, and to request any additional Current Use information that the Indigenous group may wish to provide. The revised Current Use summary, following incorporation of any additional input from Indigenous groups is provided in the assessment of Current Use (MSA Section 9.5). **Addressed in MSA Appendix 5-B (#7):** The VFPA acknowledges the challenges associated with participating in consultation during summer months, and as such has been in contact with each Indigenous group about their desire to provide comments or additional information, and has extended timelines for participation into the fall in order to accommodate these expressed interests to participate. **Addressed in MSA Appendix 5-B (#8):** Concern is noted. The VFPA considers the amount of funding offered to be adequate and proportionate to the level of effort required by each Indigenous group to participate, given the scope of work. The VFPA increased the funding provided in some circumstances in response to specific requests.	**MSA** 5.0 Aboriginal Groups Engagement and Consultation Appendix 5-B Aboriginal Issues and Interests 5.1.2 Consultation Objectives 5.1.4 Aboriginal Groups Engagement and Consultation Methods

	information requests from the CEA Agency. Requested further funding to support the CEA Agency's request. Suggested capacity funding for a marine biologist to review some of the IRs on behalf of all the *W*SÁNEĆ bands to advise them on the interpretation of the technical information.		**03-Oct-2016, Email from Tsawout:** Attached "*W*SÁNEĆ Traditional Use Study of the Roberts Bank Terminal 2 Project: DRAFT Preliminary Data Summary." **24-Oct-2017, Letter from the VFPA:** Offered additional funding for participation in consultation activities for the RBT2 Project. **30-Oct-2017, Letter from Tsawout First Nation:** Accepted additional funding.		
Tsawout-5.5	Asked whether or not the design of the Project is final.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Presented the alternative design options in the workshop. Explained that several location, orientation, layout and configuration alternatives were considered and assessed for the marine terminal (including berth pocket and marine approach areas), causeway, rail and road corridors, and the tug basin. **12-Dec-2017, Meeting:** The VFPA met with Tsawout First Nation to discuss lessons learned from DP3 and the RBT2 Follow-up Program.	**Addressed in EIS Section 4.0:** EIS Section 4.0 describes the Project components as designed in the Preliminary Engineering phase and as assessed in this EIS. Final designs and construction methodology will be produced and determined by the chosen Terminal Operator Concessionaire and Infrastructure Developer upon Project approval, and as such may vary slightly from those described in this section. Any design or construction changes will be required to meet any commitments made by the VFPA, or conditions stipulated during the EA and regulatory review process.	**EIS** 4.0 Project Description
Tsawout-5.6	Disagreed that the level to consult with Tsawout is moderate for marine shipping. Stated that in the Trans Mountain Expansion Project, which has a similar marine shipping route to the Roberts Bank Project, the Crown acknowledged Tsawout's established s. 35 rights, and that deep consultation by the Crown with Tsawout would be required. Requested deep consultation. Stated that the Crown must consult with Tsawout, not only in respect of the marine shipping component of the Project but on the Project itself. Stated that the Crown's proposed Consultation Plan is wholly inadequate and is not consistent with a nation-to-nation relationship between Tsawout and the Crown.	16-Dec-2015, Letter to the CEA Agency (CEAR Document #375)	**02-May-2016, Letter from the CEA Agency:** *"Thank you for your comment. The Agency directed [the] Vancouver Fraser Port Authority (then Port Metro Vancouver) to consult with Tsawout on the effects of the Project on January 13, 2016."*	**Addressed in MSA Section 1.0:** The MSA has been developed in accordance with the "*Updated Guidelines for the Preparation of an Environmental Impact Statement*" issued by the CEA Agency on April 17, 2015. **Addressed in AIEIS Section 2.0:** AIEIS Section 2.0 describes the engagement process undertaken by the VFPA with Tsawout First Nation, Pauquachin First Nation, Tsartlip First Nation, Tseycum First Nation, and Malahat Nation (collectively, the *W*SÁNEĆ Nation) regarding the Project. **Additional information provided by the VFPA:** The CEA Agency provided additional instructions to the VFPA to consult with Tsartlip First Nation regarding the Project on January 13, 2016. The VFPA has been in touch with Tsawout First Nation regarding the Project and associated marine shipping since February 2014.	***Updated Guidelines for the Preparation of an Environmental Impact Statement*** **(CEAR Document #177)** **MSA** 1.0 Introduction **AIEIS** 2.0 Aboriginal Groups Engagement and Consultation
Tsawout-5.7	Commented on Draft RBT2 AIEIS - Pg. 8 Consultation	20-Jan-2017, Letter	**10-Feb-2017, Letter from the VFPA:** *"Comment #25: In response to this comment, the referenced section of the AIEIS has been revised to read*	**Addressed in AIEIS Section 2.3:**	**EIS**

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	The VFPA states that "In August 2015… During consultation with the *W̲SÁNEĆ* groups in support of preparation of the Marine Shipping Addendum, some expressed interests related to the Project." For the sake of clarity, the *W̲SÁNEĆ* have expressed in many ways over the decades that the VFPA's facilities are within their traditional territory. The VFPA lays out a timeline of consultation on pages 3-16 which describes the communications activities it undertook with the *W̲SÁNEĆ*. For clarity, this account should include a description of the assessment processes that the *W̲SÁNEĆ* did not have input into, such as the selection of VC's, opportunities to shape the assessment methodology, etc. In addition, there are a number of statements in the document related to consultation that may require confirmation or additional information from the individual bands themselves.		*"In August 2015, the VFPA was engaged in discussion with each of the W̲SÁNEĆ bands regarding marine shipping associated with the Project outside of the VFPA's jurisdiction. During consultation with the W̲SÁNEĆ bands in support of preparation of the Marine Shipping Addendum, some expressed an interest in being consulted on the Project itself, and the associated environmental assessment."* *As described in AIEIS Section 2.3, the W̲SÁNEĆ bands were each contacted by the VFPA in early 2014 and invited to participate in consultation related to RBT2. As no response was received by the VFPA, and as the CEA Agency had not included the W̲SÁNEĆ bands in the list of Indigenous groups in the EIS Guidelines issued in January 2013, the W̲SÁNEĆ bands were not included in the phases of consultation prior to EIS submission. These phases included the 'Project Description Engagement and Consultation' phase, and the 'EIS Development Engagement and Consultation' phase. The activities that took place during these phases of consultation are described in EIS Section 7.2. AIEIS Section 2.3 has been revised as requested to include this information.* *By way of providing the draft AIEIS for review, the VFPA has provided the opportunity for individual bands to comment on the statements in the AIEIS related to consultation."*	AIEIS Section 2.3 summarises the engagement and consultation process undertaken for the EIS, AIEIS, and MSA with the *W̲SÁNEĆ* bands.	7.2 Aboriginal Groups Consultation and Engagement 7.2.1 Engagement and Consultation Process Overview 7.2.2 Pre-EIS Submission Consultation and Engagement 7.2.2.2 Project Description Engagement and Consultation 7.2.2.3 EIS Development Engagement and Consultation **AIEIS** 2.0 Aboriginal Groups Engagement and Consultation 2.3 Engagement and Consultation Process

Table 6: Environmental Assessment and Permitting Process

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsawout-6.1	Requested confirmation that the VFPA does not have any idea about the procedural aspects of the panel before it is struck. Asked whether or not it will be like Kinder Morgan's Trans Mountain Expansion (TMX) Project. Asked if the Terms of Reference (TOR) explain how evidence is examined.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Noted that the final terms of reference for the Panel are posted on the registry, and then the panel determines the process for carrying out the hearings and making decisions. Explained that the TMX review is different as it is undergoing the National Energy Board (NEB) process. Confirmed that the TOR explains how evidence is examined, and that the process is entirely up to the panel. **26-Apr-2016, Email from the VFPA:** Post-meeting note: Please see the updated *EIS Guidelines*: http://www.ceaa-acee.gc.ca/050/documents/p80054/101303E.pdf and the Panel Terms of Reference http://www.ceaa-acee.gc.ca/050/documents/p80054/101301E.pdf or contact the CEA Agency for more information related to process. Questions regarding the EA process can be directed the Crown Consultation Coordinator at the CEA Agency.		
Tsawout-6.2	Concerned that it will be easier to build an additional terminal at Roberts Bank in the future due to the environmental assessment and permitting completed for RBT2. Concerned that shipping will continue to increase and affect the environment. Concerned that when capacity is no longer adequate at RBT2, the VFPA will expand the terminal or build a new terminal.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Stated that any new projects coming on line would have to do an assessment of their activity. A past project is not able to do an assessment that covers all future assessments. Stated that the Port of Vancouver is one piece of a supply chain that goes across Canada, and is not involved in the decisions made by others within the supply chain. The VFPA's mandate is to facilitate trade, and provide the ship to shore transfer of goods. Railways, transportation hubs, etc. are beyond the VFPA's jurisdiction is outside the VFPA's mandate. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, including Appendix 2-B summarizing the issues raised by Tsawout First Nation and the VFPA's responses.	**Addressed in AIEIS Appendix 2-B Table 2 (#13):** Additional shipping in the future is taken into account in the cumulative effects assessments. Marine vessel traffic projections for certain and reasonably foreseeable projects (EIS Table 8-8) are sourced from EIS Appendix 30-A. Projects on the list were included as of October 1, 2013. The VFPA has no plans for expansion at Roberts Bank beyond the proposed Project. The VFPA will continue to monitor the growth of container traffic through the Pacific Gateway, and will consider all available options to deliver additional capacity as it is required. Any future development at Roberts Bank would be subject to project-specific environmental approvals as appropriate.	**EIS** 2.0 Project Overview 2.2.5 Current Canadian West Coast Container Traffic Forecasts 2.2.5.2 North American Container Port Demand 2.2.5.4 Trends in Container Shipping 2.2.6 The Container Capacity Improvement Program: Meeting Increasing Demand for Containerised Trade 8.0 Effects Assessment Methods 8.1.9 Cumulative Effects Assessment Table 8-8 Project and Activity Inclusion List 30.0 Potential Accidents or Malfunctions Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment; Table B-2 and Table B-3 **AIEIS** Appendix 2-B Issues and Interests, Table 2 Project Planning, Development, and Implementation
Tsawout-6.3	Criticised the use of representative species.	27-Nov-2015, EIS Results	**27-Nov-2015, Workshop:** Responded that a series of workshops over six months were undertaken with Indigenous groups, the CEA Agency	**Addressed in EIS Appendix 7.2-B (#25):** ICs, VCs, and VC sub-components are identified in EIS Section 8.0 which describes the overall 3-step VC selection process, including the	**EIS**

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	Stated that the Site C Panel stressed the importance of studying species that align with current use and are tied to Aboriginal or treaty rights. Concerned that assessing a representative species does not equate to assessing the represented species themselves. Commented that the concept of a representative species is a culturally laden idea.	Workshop #2 – Saanich Nations	and the federal regulators to determine the representative species. Stated that Eulachon was not raised in these workshops, but crab and salmon were heard more frequently. Stated that the justification for why each VC and representative species was chosen is provided in the EIS, and specific answers are provided for sockeye and eulachon. Stated that a number of specialists that worked on the EIS also were involved in the Site C assessment. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, including Appendix 2-B summarizing the issues raised by Tsawout First Nation and the VFPA's responses.	rationale for focusing the assessment on VC sub-components. The rationale for selection of specific ICs, VCs and VC sub-components is described in each assessment section. For example, discussion regarding sub-component selection relative to species of importance to Indigenous groups, including eulachon and sturgeon, is captured in EIS Section 13.0 Marine Fish. **Addressed in EIS Section 8.0:** Subsequent to VC selection, VC sub-components were identified to further structure and streamline the assessment as appropriate. For example, for biophysical VCs, sub-component species or groups were chosen for the ability to represent other species that are similar in nature, occupy comparable types of habitats, serve similar ecological roles, or could otherwise be affected by the Project in an analogous way. In selecting representative species, or in some cases species groups, consideration was given to species of specific importance to regulatory agencies, Indigenous groups, and the public, as identified by community knowledge and ITK, and during consultation and engagement, and assessment planning. **Addressed in AIEIS Appendix 2-B Table 5 (#35):** The rationale for relying on representative species in the assessment is described in EIS Section 8.0. Subsequent to VC selection, VC sub-components were identified to further structure and streamline the assessment as appropriate. For example, for biophysical VCs, sub-component species or groups were chosen for their ability to represent other species that are similar in nature, occupy comparable types of habitats, serve similar ecological roles, or could otherwise be affected by the Project in an analogous way. In selecting representative species, or in some cases species groups, consideration was given to species of specific importance to regulatory agencies, Indigenous groups, and the public, as identified by community knowledge and ITK, during consultation and engagement, and assessment planning. Additional information on representative species was provided in the response to AIR-12.04.15-09. This response provides rationale for the selection of each representative species, including why each one is an appropriate proxy for other species, both in the characterisation of existing conditions as well as the assessment of effects, including cumulative effects where applicable. **Addressed in Information Request Package 5 – Preamble to the IR5 Representative Species Grouping:** Representative species are considered in terms of the biological and ecological similarities they share with other species within the sub-component, and for potential similarities in how the Project may interact with and affect them. In some cases, biological attributes may differ within a sub-component grouping, but their interactions with the Project and mechanisms contributing to potential effects from the Project are considered to be analogous. As a result, the VFPA selected representative species for each sub-component for which sufficient information is known, in order to provide an assessment that considers all potential interactions and Project-related effects. For example, substantial information exists for the southern resident killer whale (SRKW) (the representative species used for toothed marine mammals) and much less so for the transient killer whale. While there are some biological differences between the two, they are	Appendix 7.2-B Aboriginal Groups Interests and Issues Table 8.0 Effects Assessment Methods 8.1.2 Selection of Valued Components Figure 8-1 Valued Component Selection Process Appendix 8-A Valued Component Selection Rationale **AIEIS** Appendix 2-B Issues and Interests, Table 5 Effects Assessment Methods **Information Requests** Response to Information Request #09 (AIR-12.04.15-09 of CEAR Document #388) Information Request Package 5 – Preamble to the IR5 Representative Species Grouping (CEAR Document #1078)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				considered the same species; both rely on underwater noise for prey detection; and potential Project effects and mitigation measures are the same. In this example, it would be both impractical and inefficient to undertake an assessment on both species as the conclusions of the assessment would be the same. Moreover, in selecting representative species, or in some cases species groups, consideration was given to species of specific importance to regulatory agencies, Indigenous groups, and the public, as identified by community knowledge and ITK, and during consultation and engagement, and assessment planning. This approach was taken as it would be impractical to characterise existing conditions and assess effects on every species that may frequent the Roberts Bank area. In this way, the use of VCs, sub-components, or representative species improves the effectiveness and efficiency of assessment by focusing on the key Project interactions.	
Tsawout-6.4	Asked whether or not regulators (for e.g. DFO) provide guidance regarding the thresholds for effects assessment.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	**27-Nov-2015, Workshop:** Responded that there are specific thresholds for contaminants, and there may be thresholds for underwater noise in the future. Stated that there is no threshold for changes in productivity. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, including Appendix 2-B summarizing the issues raised by Tsawout First Nation and the VFPA's responses.	**Addressed in EIS Table 13-10:** EIS Table 13-10 summarises the assessment of the impact to productivity, and defines the thresholds used to evaluate whether an impact is negligible or minor. **Addressed in AIEIS Appendix 2-B Table 5 (#32):** As required in the *EIS Guidelines* (part 2, section 13), the EIS presents a detailed analysis of the significance of the residual environmental effects on VCs, which is consistent with the approach described in the CEA Agency's Reference Guide Determining Whether a Project is Likely to Cause Significant Adverse Environmental Effects. As stated in EIS Section 7.0, regulatory bodies, including Fisheries and Oceans Canada (DFO), participating in the Technical Advisory Group process provided input on the definition of, and methods to assess and determine, the significance of potential effects (SRKW Technical Advisory Group only). The threshold of significance is defined for each VC, taking into consideration any relevant applicable quantifiable thresholds that may be established by regulation or policy (e.g., an air or water quality limit), as well as the resilience of the VC and other factors that influence the long-term sustainability of the VC (e.g., factors affecting its population). In this regard, the key "barometer" of significance determination is usually the long-term integrity or sustainability of the VC. The EIS describes a range of residual (adverse environmental) effects of the Project, including some that are predicted to be negligible and reversible and some that are predicted to be not reversible, not significant, or (in the case of marine mammals) significant.	**EIS** 7.0 Engagement and Consultation 7.4 Technical Advisory Group Process (2012 to 2013) 8.0 Environmental Assessment Methods 13.0 Marine Fish 13.6 Future Conditions with the Project 13.6.3 Potential Effect - Changes in Productivity Table 13-10 Summary of Roberts Bank Ecosystem Model Productivity Results for Marine Fish **AIEIS** Appendix 2-B Issues and Interests, Table 5 Effects Assessment Methods
Tsawout-6.5	Asked whether Project-related marine shipping was included in the assessment. Concerned with the distinction in the environmental assessment process.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	**27-Nov-2015, Workshop:** Stated that Project shipping was included in the cumulative effects assessment as a reasonably foreseeable activity. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, including Appendix 2-B summarizing the issues raised by Tsawout First Nation and the VFPA's responses.	**Addressed in AIEIS Appendix 2-B Table 4 (#30):** The environmental effects of marine shipping associated with the Project that is beyond the care and control of the proponent and extending to the 12 nautical mile limit of Canada's territorial sea ("marine shipping associated with the Project"), were assessed in the MSA, in accordance with the requirements of the *EIS Guidelines*. Marine shipping in the vicinity of the Project is considered in the EIS in two ways:	**AIEIS** Appendix 2-B Issues and Interests, Table 4 Environmental Assessment Process and Regulatory Framework

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				1. The effects of vessel traffic related to the Project, travelling within the VFPA 's jurisdiction, were assessed in the EIS as Project-related effects; and 2. The cumulative effects of Project-associated vessel traffic, travelling outside of the VFPA's jurisdiction, were further considered in the cumulative effects assessments in the EIS (see Table 8-8).	
Tsawout-6.6	Expressed frustration at the review panel process, which relies on the review of three people.	30-Jan-2017, *W̱SÁNEĆ* All-Chiefs Meeting (Pauquachin, Tsartlip, Tsawout, Tseycum)	**30-Jan-2017, Meeting:** Stated that the review panel takes into consideration the comments made during different review periods and First Nations can apply to present to the review panel. Stated that the panel has a serious responsibility to take those comments into consideration.		

Table 7: Environmental Management Program

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsawout-7.1	Interested in the details of the monitoring and follow-up program: • Specific to salmon • Specific to noise. Suggested to include the Aboriginal populations who will be affected by the Project to enable a robust monitoring program that can incorporate their values, perspectives and knowledge in a way the EIS process fails to do. Stated that noise and vibration, sound and visual effects are examples where data can be gathered through community monitoring programs and citizen science projects. Stated that hand held noise monitoring that could be part of a monitoring program can also create employment for people. Noted literature and examples from Europe where this kind of monitoring has been successful.	28-Jul-2016, Issues Workshop – Island Nations	**28-Jul-2016, Workshop:** Responded there will be construction compliance monitoring to ensure that during construction, all the guidelines for water quality and noise are met. The VFPA has also committed to a follow-up monitoring program that is still being developed and for which input, and involvement is being sought to meet the needs of Indigenous groups and address concerns. Stated that the intent of the monitoring is to test EIS predictions and see that they're unfolding as predicted, and to look for early warning signs to adapt to unexpected changes. Noted that the VFPA has a strong track record with adaptive management. DP3 had a successful eight-year adaptive management strategy implemented that was successful. Responded that the details of the follow-up monitoring plan have not yet been drafted, which means people can have their input integrated into the plan. Stated that if Tsawout has suggestions, please share them. The VFPA would appreciate hearing of good examples of programs that have worked well. Responded part of the Current Use section of the EIS speak to not only the participation of Indigenous groups in the monitoring and follow-up programs but also community participation in the development of those monitoring follow-up programs. It's contained within the mitigation measures subsection of EIS Section 32.0. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, including Appendix 2-B summarizing the issues raised by Tsawout First Nation and the VFPA's responses.	**Addressed in AIEIS Appendix 2-B Table 5 (#36):** Each technical appendix produced to support the RBT2 assessment includes a section documenting the points of uncertainty and limitations pertaining to the study. Each effects assessment section of the EIS includes information on data quality and reliability, and any uncertainty or gaps in knowledge associated with the existing conditions of each VC. The effectiveness of identified mitigation measures, as well as any uncertainty regarding their effectiveness, is described. The level of confidence in each residual effect prediction considers the level of uncertainty associated with both the significance and likelihood determinations. Each assessment section presents the nature and source of any uncertainty that lowers the level of confidence in the residual effect prediction. The VFPA is committed to developing and implementing a Follow-up Program for RBT2. The purpose of the RBT2 Follow-up Program is to verify the accuracy of residual effect predictions made in this EIS, and determine the effectiveness of any measures taken to mitigate the adverse environmental effects of the Project. As described in EIS Section 33.0, the Follow-up Program will also report on implementation of mitigation measures resulting from Indigenous engagement, which will include the following: • Verification of predictions of environmental effects with respect to Indigenous people, as well as residual effects that could not be addressed within the context of the EA; • Determination of the effectiveness of mitigation measures as they relate to environmental effects with respect to Indigenous people; • Support for the implementation of adaptive management measures to address previously unanticipated adverse environmental effects with respect to Indigenous people, or unanticipated adverse effects to Aboriginal or treaty rights; • Verification of the measures identified to prevent and mitigate potential adverse effects of the Project on potential or established Aboriginal rights; and • Provision of information that can be used to improve and support future EAs and Indigenous engagement processes.	**EIS** 8.0 Effects Assessment Methods 8.1.4 Description of Existing Conditions 8.1.6 Mitigation Measures 8.1.8 Determination of Significance of Residual Adverse Effects 8.1.9 Cumulative Effects Assessment 32.3.3 Mitigation Measures 33.0 Environmental Management Program 33.5 Roberts Bank Terminal 2 Follow-up Program **AIEIS** Appendix 2-B Aboriginal Issues and Interests, Table 5 Effects Assessment Methods
Tsawout-7.2	Requested the VFPA to describe follow-up programs for current use and Aboriginal and Douglas Treaty rights. Stated that there is not enough context information provided on the characterization of residual effects (certainty, confidence, etc.) or on the proposed mitigations to determine whether or not follow-up programs may be warranted.	16-Dec-2015, Letter to the CEA Agency (CEAR Document #375) 28-Jul-2016, Issues Workshop – Island Nations	**12-May-2016, Letter from the CEA Agency:** "The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review." **28-Jul-2016, Workshop:** Other consultation mechanisms have been identified to continue engagement with Indigenous groups regarding monitoring and follow-up programs for resources that are relied upon for use. The opportunity for future VFPA-Indigenous group collaboration has been identified. **12-Dec-2017, Meeting:** The VFPA met with Tsawout First Nation and presented information on lessons learned from DP3 and the RBT2Follow-up Program. The VFPA sought input from Tsawout on the Follow-up Program.	**Addressed in EIS Section 33.5:** The VFPA is committed to developing and implementing a Follow-up Program for RBT2. The purpose of the RBT2 Follow-up Program is to verify the accuracy of residual effect predictions made in this EIS, and determine the effectiveness of any measures taken to mitigate the adverse environmental effects of the Project. As described in EIS Section 33.0, the Follow-up Program will also report on implementation of mitigation measures resulting from Indigenous engagement, which will include the following: • Verification of predictions of environmental effects with respect to Indigenous people, as well as residual effects that could not be addressed within the context of the EA; • Determination of the effectiveness of mitigation measures as they relate to environmental effects with respect to Indigenous people; • Support for the implementation of adaptive management measures to address previously unanticipated adverse environmental effects	**EIS** 32.0 Current Use of Land and Resources for Traditional Purposes, Characterisation of Residual Effects and Context 33.5 Roberts Bank Terminal 2 Follow-up Program

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	Stated that this information is essential when approaching a qualitative assessment, where both the effects prediction and the characterizations appear uncertain. Asked if the VFPA foresees some kind of monitoring program around effects to current use or Aboriginal rights, for example access and availability.			with respect to Indigenous people, or unanticipated adverse effects to Aboriginal or treaty rights; • Verification of the measures identified to prevent and mitigate potential adverse effects of the Project on potential or established Aboriginal rights; and • Provision of information that can be used to improve and support future EAs and Indigenous engagement processes.	
Tsawout-7.3	Requested more information about lessons learned from building the Deltaport Third Berth Project.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Recorded comment for consideration by the Project team. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, including Appendix 2-B summarizing the issues raised by Tsawout First Nation and the VFPA's responses. **12-Dec-2017, Meeting with Tsawout:** The VFPA met with Tsawout First Nation and presented information on lessons learned from DP3 and the RBT2 Follow-up Program. The VFPA sought input from Tsawout on the Follow-up Program.	**Addressed in AIEIS Appendix 2-B Table 2 (#6):** EIS Section 4.0 describes the components of the Project (i.e., the preferred option) as designed in the Preliminary Engineering phase and as assessed in the EIS. Final designs will be produced, and construction methodology will be determined, by the chosen Terminal Operator Concessionaire and Infrastructure Developer upon Project approval, and as such may vary slightly from those described in EIS Section 4.0. Any design or construction changes will be required to meet any commitments made by the VFPA, or conditions stipulated during the EA and regulatory review process. Lessons learned from DP3 were considered in the evaluation of alternative means of carrying out the Project and in the selection of onsite habitat offsetting, and will also be considered in the development of the follow-up program: • EIS Section 5.0 provides a summary of alternative design options that were considered, and the rationale for the selected option. As part of the process for identifying and selecting alternatives, the VFPA reviewed and considered Indigenous input provided as part of the EA processes for prior projects at Roberts Bank, including DP3. • Onsite habitat selection considered lessons learned from previous habitat creation programs (e.g., DP3). The effectiveness monitoring reports for DP3 increased the understanding of the successes and challenges of previous habitat projects. The concepts presented in the EIS were presented to communities, stakeholders, Indigenous groups, the public, and regulators in fall 2014. An adaptive management approach is proposed for RBT2 as indicated in EIS Section 33.5 and will consider lessons learned from the DP3 Adaptive Management Program.	**EIS** 33.5 Roberts Bank Terminal 2 Follow-up Program **AIEIS** Appendix 2-B Aboriginal Issues and Interests, Table 2 Project Planning, Development and Implementation

Table 8: Human Health – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsawout-8.1	Requested that theVFPA provide more information on the importance and reliance upon marine foods to *WSÁNEĆ*. Stated that the EIS Guidelines (9.1) call for this information, but that it is not provided in such a way as to inform the assessment with useful indicators or qualitative information. Stated that there is information available in the public realm.	16-Dec-2015, Letter to the CEA Agency (CEAR Document #375)	**12-May-2016, Letter from the CEA Agency:** "The Agency requested additional information on traditional foods in AIR #11 Country Foods."	**Addressed in MSA Section 9.5.4.1:** Information on reliance on country foods reported by Tsawout First Nation can be found in MSA Section 9.5.4.1. Specific information on country food reliance is further discussed in MSA IR-02.24.16-11.	**MSA** 9.5.4.1 Tsawout First Nation **Information Requests** Response to Additional Information Request #11 (MSA IR-02.24.16-11 of CEAR Document #386) Appendix MSA IR11-A Summary of Reliance on Country Foods by Aboriginal Group (CEAR Document #386)
Tsawout-8.2	Commented on Draft RBT2 AIEIS - Pg. 31-40 Human Health Assessment Re: Health data and methodology The Human Health Effects Assessment begins at page 31 and looks at the following effect pathways: • exposure to air emissions; • exposure to noise and vibration; • exposure to shellfish contamination; • stress and annoyance; • employment and income; • food security; and • health inequity. Stated that nothing presented in this section, as theVFPA notes, changes the findings in Section 27.0 of the EIS: "Findings of the environmental assessment of the Project on human health for the *WSÁNEĆ* Nation did not change based [on] this additional information" (32). By their own admission, VFPA has little data of direct relevance to the *WSÁNEĆ*; the data which it does have — for e.g., the employment and income data in table 5-3 from Indigenous and Northern Affairs Canada – is several years old and notoriously unreliable. A much more appropriate methodology would have been to hire *WSÁNEĆ* health agencies to conduct surveys with their members on a range of health and social topics. In their review of the document, the *WSÁNEĆ* suggested that this could be a subject for further discussion with the VFPA.	20-Jan-2017, Letter	**10-Feb-2017, Letter from the VFPA:** *"Comment #8: The responses to IR-7.31.15-31 and AIR-12.04.15-31 provide a description of the methods by which health information was solicited from Indigenous groups in support of the EIS health assessment.* *These same methods were followed in the preparation of the AIEIS; the WSÁNEĆ bands were each asked to provide information related to health, in particular to food security and consumption of traditional foods. As stated in the response to IR-7.31.15-31, given the private and sensitive nature of health information, the VFPA respects that individual Indigenous groups may not wish to share such information. No information specific to human health was provided by the WSÁNEĆ bands, and the assessment was conducted relying on other information sources as available. Sources include those referenced in the response to MSA IR-02.24.16-11, which provides a summary of all country food reliance information available for the WSÁNEĆ bands."*	**Addressed in Response to AIR-12.04.15-31:** As noted in the VFPA's response to AIR-12.04.15-31, there is small to no potential for an increase in the concentrations of contaminants in the tissues of country foods in association with Project construction or operation. Moreover, the information presented in the EIS is sufficient to support the Health Impact Assessment and Human Health Risk Assessment conclusions.	**MSA** 9.5.4.1 Tsawout First Nation **Information Requests** Response to Information Request #31 (IR-7.31.15-31 of CEAR Document #314) Response to Additional Information Request #31 (AIR-12.04.15-31 of CEAR Document #388) Response to Additional Information Request #11 (MSA IR-02.24.16-11 of CEAR Document #386) Appendix MSA IR11-A Summary of Reliance on Country Foods by Aboriginal Group (CEAR Document #386)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsawout-8.3	Commented on Draft RBT2 AIEIS - Re: Food Security Food security is a critical issue for *WSÁNEĆ* communities. The VFPA acknowledges that the 2011 First Nations Food, Nutrition & Environment Study (FNFNES) study it refers to does not include survey data from the *WSÁNEĆ*, and rightly includes information drawn from studies produced for Tsawout and Pauquachin for the Trans Mountain hearings, although the Tsawout harvest study did not examine food security as an issue. Again, a much more appropriate methodology would have been to hire WSÁNEĆ researchers to conduct surveys with their members on the topic of food security. In their review of the document, the *WSÁNEĆ* suggested that this could be a subject for further discussion with the VFPA. Nevertheless the FNFNES study indicates a high rate of food insecurity in Ecozone 6, which would include the southern Gulf Islands and the *WSÁNEĆ*. The VFPA notes that the *WSÁNEĆ* study (2016) "supports the importance of traditional foods as an important component of the modern diet" and notes that *WSÁNEĆ* people have identified a number of serious concerns, threats, and existing impacts to their food security.	20-Jan-2017, Letter	**10-Feb-2017, Letter from the VFPA:** *"Comment #9: The previous response (#8) provides information on the methods used to elicit information on traditional food reliance, which supports the assessment of potential effects on food security.* *AIEIS Section 5.1.7 provides a summary of the existing conditions for food security, which is reflective of the comments made here. This section provides detailed information on food security, as available, for each of the WSÁNEĆ bands.* *Existing and historical impacts on food security notwithstanding, the Project is not anticipated to result in a measurable effect on human health due to increased food insecurity. This determination is noted in the AIEIS Section 5.2, and the rationale for the negligible effect is provided in EIS Section 27.6.1.5. As stated in that section, there are no anticipated residual effects to the ability to harvest traditional foods, or to the harvested resources themselves."*	**Addressed in AIEIS Section 5.1.7:** Provides a summary of the existing conditions of food security and detailed information on food security, as available, for each of the *WSÁNEĆ* bands. **Additional information provided by the VFPA:** **10-Feb-2017, Letter from the VFPA:** *"Comment #8: The responses to IR-7.31.15-31 and AIR-12.04.15-31 provide a description of the methods by which health information was solicited from Indigenous groups in support of the EIS health assessment.* *These same methods were followed in the preparation of the AIEIS; the WSÁNEĆ bands were each asked to provide information related to health, in particular to food security and consumption of traditional foods. As stated in the response to IR-7.31.15-31, given the private and sensitive nature of health information, the VFPA respects that individual Indigenous groups may not wish to share such information. No information specific to human health was provided by the WSÁNEĆ bands, and the assessment was conducted relying on other information sources as available. Sources include those referenced in the response to MSA IR-02.24.16-11, which provides a summary of all country food reliance information available for the WSÁNEĆ bands."*	**EIS** 27.0 Human Health (revised June 2016) 27.6.1.5 Negligible Effects Related to Food Security **AIEIS** 5.0 Human Health 5.1.7 Food Security 5.2 Future Conditions with the Project – Potential Project- Related Effects **Information Requests** Response to Information Request #31 (IR-7.31.15-31 of CEAR Document #314) Response to Additional Information Request #31 (AIR-12.04.15-31 of CEAR Document #388) Response to Additional Information Request #11 (MSA IR-02.24.16-11 of CEAR Document #386) Appendix MSA IR11-A Summary of Reliance on Country Foods by Aboriginal Group (CEAR Document #386)
Tsawout-8.4	Commented on Draft RBT2 AIEIS - Re: Vulnerability The VFPA identifies the *WSÁNEĆ* as "vulnerable populations because they ranked lower in key determinants of health (income, employment, and education)" compared to other populations examined in the EIS. Nevertheless, for the five effect pathways – exposure to air emissions; exposure to noise and vibration; exposure to shellfish contamination; stress and annoyance; employment and income; food security; health inequity — they determined that there was nothing in the new information supplied by *WSÁNEĆ* to alter the findings presented in the EIS that determined only "negligible" effects.	20-Jan-2017, Letter	**10-Feb-2017, Letter from the VFPA:** *"Comment #10: The VFPA acknowledges the comment, which is reflective of information provided to support the existing conditions section of the human health assessment in the AIEIS, as well as the 'context' section of the EIS, where vulnerability and resilience are considered.* *Existing conditions and vulnerability notwithstanding, the Project is not anticipated to result in measurable health effects for the WSÁNEĆ Nation, for the reasons outlined in AIEIS Section 5.2. The potential effects of the Project on human health are either determined to be negligible, for all human receptors including the WSÁNEĆ bands, or measurable but only for people living in communities in close proximity to the Project, which does not include the WSÁNEĆ bands."*		**EIS** 27.0 Human Health (revised June 2016) 27.8 Characterisation of Residual Effects and Context **AIEIS** 5.0 Human Health 5.1. Existing Conditions 5.2 Future Conditions with the Project – Potential Project- Related Effects

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsawout-8.5	Commented on Draft RBT2 AIEIS - Re: Consideration of Prior/existing conditions In their review of the document, the *WSÁNEĆ* highlighted how important the relationship is between the health of their members, the health of their communities, the health of their relatives of the deep and the environment, and their ability to sustain their way of life. As one elder noted, "people are dying from lack of seafoods." Any effects assessment examining environment and health must take into account the existing conditions limiting ability of *WSÁNEĆ* to access resources, including ongoing clam closures, historically low salmon returns and the effects of DFO's management, among other things, and existing impediments to exercising their right to "fish as formerly" throughout their territory. As one *WSÁNEĆ* councillor noted, "stress is already there. It's constant in a way of life that's disrupted, the constant stress of crossing boundaries."	20-Jan-2017, Letter	**10-Feb-2017, Letter from the VFPA:** *"Comment #11: The relationship between health of individuals, community, environment, and culture is acknowledged in AIEIS Section 5.1. The importance of seafoods to health is also noted in the description of existing conditions for food security in AIEIS Section 5.1.7.* *The descriptions of existing conditions in the human health assessments in EIS Section 27.0 and AIEIS Section 5.0 take into consideration the effects of past and present projects and activities, including a variety of barriers to harvesting traditional foods. As explained in the EIS and AIEIS, the Project is not predicted to result in a residual effect on human health due to changes in availability of traditional foods (assessed via the 'food security' sub-component). Therefore, the Project is not anticipated to contribute to existing or future cumulative effects on food security."*		**EIS** 27.0 Human Health (revised June 2016) 27.5.7.1 Traditional Food Consumption and Health **AIEIS** 5.0 Human Health 5.1. Existing Conditions 5.1.7 Food Security
Tsawout-8.6	Commented on Draft RBT2 AIEIS - Re: Spatial focus These effect predictions look only at receptor sites that were not informed by engagement with the *WSÁNEĆ* and do not include IRs or harvesting locations in the southern Gulf Islands or harvesting locations identified by the *WSÁNEĆ* as overlapping the Project area. In other words, they do not actually look at the places and pathways where the effects themselves are and will be felt by the *WSÁNEĆ*.	20-Jan-2017, Letter	**10-Feb-2017, Letter from the VFPA:** *"Comment #12: WSÁNEĆ harvesting locations in the Southern Gulf Islands are addressed in the MSA, and are not the subject of this AIEIS. All harvesting locations identified by the WSÁNEĆ as overlapping the Project area and the areas affected by the Project (as defined in section 3.1 of the Updated EIS Guidelines) were considered in the assessment in the AIEIS. The LAA for the human health assessment, including receptor sites, are based on the farthest spatial extent of any potential changes from the Project on air quality, noise, or other components. These assessment areas therefore do not extend to the harvesting locations identified by the WSÁNEĆ if the anticipated effect of the Project is not predicted to extend to that area. A description of the spatial boundaries of the human health assessment is provided in EIS Section 27.0."*		**EIS** 27.0 Human Health (revised June 2016) 27.3.1 Spatial Boundaries

Table 9: Labour Market – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsawout-9.1	Concerned that the EIS did not account for people coming from the island for jobs. Asked whether there are potential benefits that could be captured on the island. Criticised of the use of the Lower Mainland as the study area for the socio-economic assessment. Interested in whether Saanich people are working in jobs at the existing terminals at Roberts Bank, and the potential for workers to commute to the Project from the Island, where rental housing is cheaper. Commented that it is difficult and expensive for people to travel to the mainland for work. Requested for a private First Nations ferry system to transport community members to jobs at the terminal. Asked whether there will be accommodation on site for workers. Interested in the number of First Nations people working in port jobs.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations 30-Jan-2017, *W̱SÁNEĆ* All-Chiefs Meeting (Pauquachin, Tsartlip, Tsawout, Tseycum)	**27-Nov-2015, Workshop:** Responded that this is entirely possible, and noted the VFPA is here today to learn from the Saanich groups what potential benefits and mitigations might be. Stated that for the labour profile, the Lower Mainland area was looked at for both Indigenous and non- Indigenous workers. Stated that temporary residents of Metro Vancouver would be captured as part of the labour force statistics. There would be a small percentage of the total labour force that will be outside of Metro Vancouver and the Lower Mainland area. Approximately 5% of the total workforce, which may include a small percentage of people at Roberts Bank. This was determined based on trends analysis, and in looking at what has happened for other projects at Roberts Bank. **30-Jan-2017, Meeting:** Stated that the VFPA does not know the number of First Nations working in port-related jobs across Canada but there are many First Nations working as longshoremen at the port. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, including Appendix 2-B summarizing the issues raised by Tsawout First Nation and the VFPA's responses.	**Addressed in AIEIS Appendix 2-B Table 23 (#104):** Detailed population and demographic information is presented in EIS Section 18.4, and detailed labour market information in EIS Section 19.0. The LAA for labour market and economic development was defined as Metro Vancouver. The LAA was structured to capture the Project's potential labour market and economic development effects that will occur locally and are measurable or detectable. While there may be members of Indigenous groups located outside of Metro Vancouver that participate in one or more aspects of Project employment, or other economic effects, the effects on the labour market and economies of these Indigenous groups were not considered to be measurable or detectable. The VFPA is working with Indigenous groups to facilitate access to Project benefits, including training, employment opportunities, and Project contracting opportunities. **Addressed in EIS Section 32.3.3:** The VFPA proposes to assist certain Indigenous groups in accessing potential economic opportunities resulting from the Project, including contracting opportunities as well as construction employment opportunities. The VFPA proposes to extend the same opportunities to Tsawout First Nation, Pauquachin First Nation, Tseycum First Nation, Tsartlip First Nation, and Malahat Nation. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs. **Addressed in EIS Appendix 7.2-B (#111):** The LAA for labour market and economic development was defined as Metro Vancouver. The LAA was structured to capture the Project's potential labour market and economic development effects that will occur locally and are measurable or detectable. While there may be members of Indigenous groups located outside of Metro Vancouver that participate in one or more aspects of Project employment, or other economic effects, the effects on the labour market and economies of these Indigenous groups were not considered to be measurable or detectable. **Additional information provided by the VFPA:** The VFPA acknowledges Tsawout First Nation's interest in the potential for workers to commute to the proposed Project area. The VFPA acknowledges Tsawout First Nation's suggestion of a ferry service for First Nations workers, and will consider this suggestion as mitigation measures are finalised.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 18.0 Social and Economic Setting 18.4 Population 19.0 Labour Market 20.0 Economic Development 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.3.3 Mitigation Measures 34.0 Benefits to Canadians 34.2 Benefits of the Project 35.0 Effects Assessment Summaries Table 35-2 Proposed Mitigation Measures and Commitments **AIEIS** Appendix 2-B Issues and Interests, Table 23 Labour Market 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 7.2.7 Mitigation Measures

Table 10: Marine Commercial Use – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsawout-10.1	Asked whether or not the Salish Aboriginal fisheries are included as commercial license holders. Asked if spatial/license information was used, or just the number of licenses in the area.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	Stated that yes, the Salish Seas Limited Partnership was included as commercial license holders. Clarified that DFO provided the number of licenses in the area and not spatial data. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Section 9.2.4 on Existing Conditions. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, including Appendix 2-B summarizing the issues raised by Tsawout First Nation and the VFPA's responses.	**Addressed in MSA Section 9.2.4:** The Salish Strait Seafoods Association is referenced in MSA Section 9.2.4. **Addressed in AIEIS Appendix 2-B Table 25 (#106):** Information on commercial fish and seafood harvesting by Indigenous groups in the LAA was included in the EIS where available, and interviews were conducted with representatives of Indigenous groups where possible.	**EIS** 21.0 Marine Commercial Use 21.5.2.1 Aboriginal Commercial Fishing and Seafood Harvesting **MSA** 9.2.4 Existing Conditions 9.2.4.1 Overview of Marine Commercial Use in the Regional Assessment Area **AIEIS** Appendix 2-B Issues and Interests, Table 25 Marine Commercial Use 3.0 Marine Commercial Use
Tsawout-10.2	Stated that the VFPA should supply quantitative and qualitative data and analysis on the Aboriginal fishery and aquaculture relevant to the Local Study Area (LSA) and Regional Study Area (RSA). Stated that this information should discuss both Aboriginal companies (Salish Straits Seafood, etc.) and the participation of *W̱SÁNEĆ* individuals in the commercial fishery. Stated that this discussion should link to the assessment of the subsistence fishery in 9.5 and the assessment on impacts to rights in 9.5.11. Stated that there is a paucity of information in the addendum dealing with Aboriginal commercial harvesting to support the EIS Addendum's findings of "negligible" effects. Stated that more information is available in the public record, or from key interviews with Aboriginal fishers.	16-Dec-2015, Letter to the CEA Agency (CEAR Document #375)	**12-May-2016, Letter from the CEA Agency:** "The Agency requested additional information on Port Metro Vancouver's [the VFPA] assessment methodology in AIR #2 Rationale for Effects Characterization."	**Addressed in Response to MSA IR-02.24.16-2:** In relation to the assessment of potential effects of marine shipping associated with the Project on the Current Use by Indigenous groups and potential adverse impacts on their exercise of Aboriginal and Treaty rights, response to MSA IR-02.24.16-2 identifies the receptors of these potential effects and impacts, and provides an explanation of how these potential effects and impacts were determined to be negligible or measurable in the MSA.	**Information Requests** Response to Additional Information Request #2 (MSA IR-02.24.16-2 of CEAR Document #386)
Tsawout-10.3	Stated that spatial and numerical data and information on the Aboriginal fishery including vessel number, size, type, statistics etc. currently lacking in the Addendum. Stated that these statistics shape both the baseline and provide the indicators for this VC and without them, it is not possible to	16-Dec-2015, Letter to the CEA Agency (CEAR Document #375)	**12-May-2016, Letter from the CEA Agency:** "The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."	**Addressed in Responses to IR10-06 and IR10-13:** The VFPA's responses to IR10-06 and IR10-13, as requested by the Review Panel, provide additional information concerning the rationale for the current use effects assessment conclusions.	**Information Requests** Response to Sufficiency Information Request #06 (IR10-06) Response to Sufficiency Information Request #13 (IR10-13)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	understand and evaluate the assessors' conclusions of "negligible" effects. Stated that here may be important differences between the non-Aboriginal and Aboriginal fishery which would result in effects of different magnitude.				
Tsawout-10.4	Commented on Draft RBT2 AIEIS - Pg. 16 Marine Commercial Use Effects Assessment Re: Salish Straits Seafood Marine commercial use lumps together marine fish harvesting, seafood harvesting, guided sport fishing and marine-based tourism, and looks for its effect pathways at Area use, Access, Resource availability and resource presence, and Quality of environmental setting. There are several serious problems with the marine commercial use assessment. For e.g., none of the information relating to Salish Straits Seafood is accurate, as the *W̲SÁNEĆ* are no longer active in that entity and have not been for more than a year.	20-Jan-2017, Letter	**10-Feb-2017, Letter from the VFPA:** *"Comment #3: As indicated in EIS Section 21.2.1, the four sub-components identified for the marine commercial use assessment are the main categories of marine commercial uses in the vicinity of the Project. These marine commercial uses share certain spatial areas, including marine waters in the vicinity of the Project, but they are sufficiently different in other attributes that warranted them being considered as sub-components.* *As indicated in EIS Section 21.7 and AIEIS Section 3.2, potential effects of the Project were assessed separately for each of these sub-components. In subsequent verbal correspondence on February 9, 2017, Tsawout First Nation advised the VFPA that the comment provided in relation to Salish Strait Seafoods was incorrect. In light of this correspondence, the final AIEIS includes the text pertaining to W̲SÁNEĆ (Tsawout First Nation and Malahat Nation) participation in Salish Strait Seafoods."*		**EIS** 21.0 Marine Commercial Use 21.2.1 Sub-components 21.7 Expected Conditions with the Project – Potential Project related Effects **AIEIS** 3.0 Marine Commercial Use 3.2 Future Conditions with the Project – Potential Project- Related Effects
Tsawout-10.5	Commented on Draft RBT2 AIEIS - Re: Individual Licenses There is an over-emphasis on community licenses. The effects assessment emphasizes band-owned or commercial/communal entities or licenses, and pays little attention to individual license holders, for whom fishing is an important past, current, and future activity with a high economic as well as social/cultural value, which they understand as related to their Douglas Treaty rights.	20-Jan-2017, Letter	**10-Feb-2017, Letter from the VFPA:** *"Comment #4: As indicated in EIS Section 21.4, the sources of information for commercial fish and seafood harvesting activities in the marine commercial use assessment included secondary and primary sources. The secondary source information was primarily obtained from the DFO website and documents on DFO licences, harvesting statistics, and fisheries management plans; DFO and academic reports and studies; and publicly available information from Indigenous groups on commercial fish and seafood harvesting. DFO publishes information on the number of communal commercial fish and seafood harvesting licences held by specific Indigenous groups for specific fisheries and Pacific Fisheries Management Areas. Information published by DFO on individual commercial fish and seafood harvesting licences identifies individual licence holders by name, but does not discern or identify individual licences held by Indigenous individuals.* *In the case of Indigenous groups, primary information collection was focused on interviews with representatives of Indigenous groups in order to acquire additional information, including to address data gaps (in the secondary sources) and to identify marine commercial use interests and concerns related to the Project. Information was requested from each*		**EIS** 21.0 Marine Commercial Use 21.4 Information Sources **AIEIS** 2.0 Aboriginal Groups Engagement and Consultation 2.3.2 Direct Communication 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests Including Current Use of Lands and Resources

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			of the WSÁNEĆ bands, and information provided by Indigenous groups was included in the AIEIS. *As indicated in AIEIS Section 2.3.2, the VFPA directly engaged with WSÁNEĆ through meetings, workshops, telephone calls, letters, reports, and emails on the Project. In this context, the VFPA contacted each of the WSÁNEĆ bands to request information from community and fishery representatives on commercial fish and seafood harvesting activity under commercial licences (individual and communal), including the number and types of licences held; harvest activity locations in the waters surrounding Roberts Bank; harvest access routes; trends in harvest activity; and other aspects of commercial harvesting of interest with respect to the Project. In response to the VFPA's requests, interviews were conducted with representatives from Malahat Nation and Tseycum First Nation. Any information provided to the VFPA on individual licences held by community members obtained through these interviews was included in the AIEIS. Project effects on commercial crab harvesting as indicated in AIEIS Section 3.2, mitigation measures as indicated in AIEIS Section 3.3, residual effects as indicated in AIEIS Section 3.4, and determination of significance of residual effects as indicated in AIEIS Section 3.5, apply to both individual and communal commercial crab licence holders.* *AIEIS Section 7.0 addresses social/cultural value, and rights, associated with fishing.* *If there is additional information regarding individual licence holders, the VFPA is receptive to receiving additional information. Alternatively, the WSÁNEĆ Nation may submit additional information separately to the Panel."*		
Tsawout-10.6	Commented on Draft RBT2 AIEIS - Re: MCU Mitigation In reference to the *WSÁNEĆ* Nation Addendum, the *WSÁNEĆ* Nation Addendum Review document (pg. 3) states that "VFPA employs the "go elsewhere" argument to mitigate the effects of the Project on commercial harvesting. The main mitigation available to harvesters, the VFPA notes, will be their ability to simply fish elsewhere outside the affected area, in accordance with DFO licensing and management framework. As noted elsewhere in this memo, the VFPA has not taken any steps to understand and describe what effects those displaced harvesters may have on existing harvesters and resources, or whether the activities can simply be transferred to another area, as no assessment of the ability of other	20-Jan-2017, Letter	**10-Feb-2017, Letter from the VFPA:** *"Comment #5: As indicated in EIS Section 21.7.5, it is anticipated that crab licensees who have been using marine waters that overlap with the marine waters of the proposed navigational closure expansion and the new terminal footprint would shift crab harvesting activity to the west; i.e., the marine waters of the open area near the western boundary of the proposed navigational closure expansion during construction and operations.* *As described in EIS Section 21.1.1 and shown in EIS Figure 21-6, a navigational closure area was put in place in the vicinity of the Roberts Bank terminals and the BC Ferries Terminal on January 1, 2009 to ensure and maintain a safe approach for deep-sea vessels, ferries, and berthing tugs transiting in and out of the Roberts Bank terminals and BC Ferries Terminal. A similar process occurred with the establishment of the navigational closure area in 2009, whereby commercial crab licensees relocated their harvesting activities from inside the area affected by the navigational closure to the open area near the closure's western boundary.* *As indicated in EIS Section 16.0, the assessment of potential Project-related effects on the ongoing productivity of commercial, recreational, and Aboriginal fisheries was*		**EIS** 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries 16.3.1 Spatial Boundaries 21.0 Marine Commercial Use 21.1.1 Marine Fish and Seafood Harvesting and Guided Sport Fishing Figure 21-6 Commercial Crab Harvesting Activity Areas and Navigational Closure Area 21.5.1.1 Seafood Harvesting 21.7.5 Seafood Harvesting – Potential Effect #1 – Changes in Area, Harvest and Revenue 21.8 Mitigation Measures **AIEIS** 3.0 Marine Commercial Use Assessment 3.3 Mitigation Measures

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	areas to absorb the harvest is offered.		*undertaken. EIS Section 16.3.1 presents the spatial boundaries (EIS Figures 16-1 and 16-2), where the ongoing productivity of commercial, recreational, and Aboriginal fisheries was assessed. As indicated in EIS Section 21.7.5, the assessment considered effects in the form of greater competition due to the re-located activity anticipated for crab harvesters who currently use the area along the new western boundary. This competition could take the form of greater effort (although current Area I management rules, such as trap and haul limits, constrain this avenue) and gear conflicts.* *It is expected that the proposed navigational closure expansion would not apply to crab harvesting for food, social, or ceremonial (FSC) or domestic purposes by Indigenous groups, but would apply to Aboriginal groups and persons harvesting under an individual commercial or communal commercial crab licence.* *EIS Section 21.8 outlines the proposed mitigation measures, and the VFPA's commitment to work with DFO to ensure that consultation with commercial crab harvesters and Aboriginal groups is undertaken. Where identified and agreed upon through this consultation process, the VFPA will work with DFO and commercial crab harvesters and Aboriginal groups to implement additional mitigation measures to address effects from displacement of commercial crab harvesting associated with the proposed navigational closure expansion during construction and operation. This commitment was reiterated in AIEIS Section 3.3."*		
Tsawout-10.7	Commented on Draft RBT2 AIEIS - Re: Uncertainty and Monitoring In reference to the *W̱SÁNEĆ* Nation Addendum, the *W̱SÁNEĆ* Nation Addendum Review document (pg. 3) states that "The ability to go somewhere else to fish plays into VFPA's definition of "resilience," which it used as context for the characterization of residual effects, and described as "...the capacity to effectively respond to imposed stresses through some combination of collaborative planning, arrangements, compensation, and agreements)." The VFPA says that, "where individual Aboriginal group commercial crab harvesters and/or the broader Aboriginal communities may be highly reliant on the revenues generated by the affected commercial vessel, there could be a lower degree of economic resilience" (p. 24). This statement suggests a high degree of uncertainty about the effects prediction, which is not reflected in the confidence with	20-Jan-2017, Letter	**10-Feb-2017, Letter from the VFPA:** *"Comment #6: EIS Section 21.9 and AIEIS Section 3.4 identify a residual Project effect on commercial seafood (crab) harvesting. As indicated in EIS Section 21.10.2, the level of confidence in this residual effects prediction is high based on availability of DFO information on vessel activity, harvest and revenue by subarea in the LAA, and key interviews, including interviews with Indigenous commercial crab harvesters on harvesting locations, practices, and revenues. This information was used to inform the VFPA's understanding of Indigenous groups' resilience to Project effects of commercial crab harvesting, where known communal and individual licensed based commercial crab harvesting takes place based on available information.* *In the context of EAs, follow-up regarding residual project effects is recommended to understand the effectiveness of applied mitigation, to identify unanticipated effects, and/or to identify adaptive management mechanisms where mitigation is not deemed to be effective. No monitoring or follow-up programs were proposed for the marine commercial use VC; however, as stated in EIS Section 21.8, the VFPA will work with DFO to ensure that consultation with commercial crab harvesters and Indigenous groups is undertaken regarding the proposed navigational closure and associated displacement of harvesting."*		**EIS** 21.0 Marine Commercial Use 21.8 Mitigation Measures 21.9 Characterisation of Residual Effects and Context 21.10.2 Significance Determination **AIEIS** 3.0 Marine Commercial Use Assessment 3.4 Characterisation of Residual Effects and Context

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	which the VFPA makes the final determination of "not significant." This is why confidence is an important aspect of an effects assessment. Wherever there are uncertainties in effects prediction, there should be clearly defined follow-up and monitoring proposals				
Tsawout-10.8	Commented on Draft RBT2 AIEIS - Pg. 25 Cumulative Interactions On p. 25, the VFPA notes that it has determined there will likely be a cumulative interaction between effects from the Trans Mountain expansion and the RB[T]2 Project on marine commercial use for area, harvest, and revenue, which it predicts will be of moderate magnitude and is "not considered to be beyond historical norms." The VFPA does not say what timescale and data it is using to establish a "historical norm." It will be "not significant," according to theVFPA. In their review of the document, the W̲SÁNEĆ identified cumulative effects as a critical issue requiring more attention by the VFPA. In particular, they want to see an accurate baseline reflecting environmental and administrative changes over time that have impacted W̲SÁNEĆ use of the area and the ability to exercise their Aboriginal and Douglas treaty rights there.	20-Jan-2017, Letter	**10-Feb-2017, Letter from the VFPA:** *"Comment #7: As indicated in the response to AIR-12.04.15-13, Schedule 13-6 Marine Commercial Use Total Cumulative Effects Assessment, with respect to timescale used in the assessment of marine commercial use, the assessment of cumulative effects considers past and present projects and activities that have been or are being carried out during the period from the late 1950s to 2018. This temporal boundary includes existing conditions, which reflect the cumulative effects to date of past and present projects and activities occurring from the late 1950s to 2013, and expected conditions, which will reflect the cumulative effects of present projects and activities occurring between 2014 and 2018. Environmental and administrative changes in marine commercial use over time due to past and present projects and activities were described in Part 3 of the response to AIR-12.04.15-13, Schedule 13-6. As indicated in Schedule 13-6 of AIR-12.04.15-13, as well as in EIS Sections 21.4 and 21.15, numerous literature and data sources were taken into account in the marine commercial use Project effects and cumulative effects analysis, including ITK, scientific literature, previous studies, and interviews.* *A moderate-magnitude adverse cumulative effect was determined on change in seafood harvesting area, harvest volumes, and revenue, with moderate magnitude defined as an "effect that would result in demonstrable change, but remain within historic norms". The assessment considered the cumulative change in marine commercial use due to past and present projects and activities over the period from the late 1950s to 2018 (described in Part 3 of AIR-12.04.15-13, Schedule 13-6, as noted above), to understand the range of historical norms in marine commercial use. In particular, the experience with the navigational closure established in 2009 near the Roberts Bank terminals was drawn upon (see references to such on pages 21-48, 21-52, and 21-61 of EIS Section 21.0).* *Understanding of this experience was obtained through discussions with DFO representatives, interviews with commercial crab harvesters (including Indigenous commercial crab harvesters), and other information sources.* *The VFPA is interested in receiving any additional information from the W̲SÁNEĆ on other environmental and administrative changes over time that have impacted W̲SÁNEĆ use of the area that are not already considered in the EIS or AIEIS.*	**Additional information provided by the VFPA:** **10-Feb-2017, Letter from the VFPA:** *"Comment #21: The approach to the assessment of cumulative effects on Current Use in the EIS and AIEIS follows the approach adopted for VCs. These methods are described in EIS Section 8.0, and were further explained in the response to IR-7.31.15-13 and AIR-12.04.15-13. The VFPA notes that it is not a requirement of the Updated EIS Guidelines to assess the cumulative effects of other projects and activities (past, present, or future) unless the Project itself is expected to contribute to those cumulative effects; however, changes over time were considered in the assessment, as those cumulative effects over time are reflected in existing conditions that are seen today. A description of cumulative effects to date on components of the natural environment upon which Current Use depends can be found in Part 3 of the response to EIS AIR-12.04.15-13, Schedule 13.* *All information provided by W̲SÁNEĆ to the VFPA regarding W̲SÁNEĆ perspectives on cumulative effects in W̲SÁNEĆ marine territory over time has been described in existing conditions sections of the MSA and the AIEIS. This information includes W̲SÁNEĆ perspectives on changes to the environment and ability to use and exercise rights within and around the Project.* *While potential Project-related incremental effects on Current Use by W̲SÁNEĆ are not predicted in the AIEIS based on limited reported use of the Project area (see response above to Comment #19 regarding levels and frequency of use), the AIEIS assessed potential effects for W̲SÁNEĆ based on potential future use (i.e., their expressed desire to restore or increase use based on past use), and therefore applied the mitigation measures described in EIS Section 32.2.7 to the W̲SÁNEĆ. As these measures are expected to be effective, there are no measurable residual effects predicted that could contribute to cumulative effects in the future. In accordance with the methodology for the assessment, an assessment of future incremental cumulative effects was therefore not carried out. The VFPA wishes to emphasise that the measures identified in EIS Section 32.2.7, and applied in the AIEIS, include measures that would serve to confirm the conclusions of the Current Use assessment (i.e., as a means of monitoring circumstances during Project*	**EIS** 3.0 Geographical Setting 3.4.1 Projects Contributing to Existing Conditions 3.4.2 Activities Contributing to Existing Conditions 8.0 Effects Assessment Methods 8.1.9.1 Identification of Other Certain and Reasonably Foreseeable Projects and Activities Table 8-8 Project and Activity Inclusion List 21.0 Marine Commercial Use 21.4 Information Sources 21.15 References 21.9 Characterisation of Residual Effects and Context 32.2 Current Use of Lands and Resources for Traditional Purposes 32.2.7 Mitigation Measures **Information Requests** Response to Information Request #13 (IR-7.31.15-13 of CEAR Document #314) Response to Additional Information Request #13 (AIR-12.04.15-13 of CEAR Document #388) Schedule 13-6 Marine Commercial Use Total Cumulative Effects (CEAR Document #388) Response to Information Request #8 (IR-7.31.15-08 of CEAR Document #314) Response to Additional Information Request #4 (MSA IR-7.31.15-04 of CEAR Document #386)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			See also the response to Comment #21 regarding the incorporation of W̲SÁNEĆ perspectives on cumulative effects."	*construction and operation, through ongoing engagement with W̲SÁNEĆ bands).* *With regard to cumulative effects considerations in the EIS as a whole, the other projects and activities, including shipping activities, considered in relation to cumulative effects (where such effects were identified on VCs) are identified in EIS Section 8.0, Table 8-8. As described in EIS Section 32.2.5, projects that had been or were being carried out in the assessment area at the time of writing the EIS were considered for their contribution to the existing conditions of Current Use, which reflect the cumulative effects to date of those past and present projects and activities. These projects and activities are described in EIS Sections 3.4.1 and 3.4.2, which describes the history of development in the Project area, and includes the projects and activities referenced in the comment. The incremental marine shipping associated with the Project (i.e., marine traffic outside VFPA jurisdiction) was also considered in the cumulative effects assessment for the Project for those VCs and components for which residual Project effects were predicted.* *See the response below to Comment #25 regarding the integration of ITK in the EIS and AIEIS.* *Comment #25: The VFPA acknowledges and is in agreement with the comment that there are multiple definitions and concepts of ITK, as stated in the responses to IR-7.31.15-08 and MSA IR-7.31.15-04.* *As also stated in these Information Request responses, the EIS and MSA (as well as the AIEIS and AIMSA) were prepared in consideration of all forms of information from Indigenous groups, including knowledge about the environment itself (defined for the purposes of this EIS as ITK), as well as knowledge about past effects on the environment, cumulative change, risk, notions of health, etc. This knowledge is included and referenced throughout the EIS, MSA, AIMSA, and AIEIS.* *The W̲SÁNEĆ bands were invited to provide any information they wished to share with the VFPA, and all information provided was considered and incorporated into the MSA, and the AIEIS.* *Comment #19 - As required by the Updated EIS Guidelines, AIEIS Section 7.2.4 describes information, where provided to the VFPA by W̲SÁNEĆ bands, that would assist the Panel in understanding intensity of use. For example, per section 17.5 of the Updated EIS Guidelines, the assessment endeavours to provide information on "types, number, size and capacity of fishing vessels used in the area, gear types, and existing interactions with shipping," "commercial, recreational and aboriginal fisheries statistics (e.g., species, annual catch and number of licences)." The VFPA requested this information from W̲SÁNEĆ bands.*	

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				The Updated EIS Guidelines also requires the assessment to distinguish between interactions that could potentially result in measurable effects from those that are not expected to be measurable (i.e., negligible effects) and why. As described in EIS Section 32.2.5, "Potential Project-related effects to Current Use have…been described based on a qualitative assessment of change from existing conditions," as these were understood by the VFPA at the time of filing. In the responses to AIR-12.04.15-30 and MSA IR-7.31.15-02, the qualitative nature of this assessment is further explained, providing clarification on the meaning of "negligible" and "measurable" in the Current Use assessment. Cross-references to these responses are provided in AIEIS Sections 7.2.6 and 7.3.2. *With regard to the use of "infrequent" and "low levels" in the AIEIS, the AIEIS employs this terminology specifically in relation to crab harvesting for traditional purposes by W̱SÁNEĆ (see AIEIS Sections 7.2.6.1, p. 84 and 7.2.6.4, pp. 86 and 87). As described in the W̱SÁNEĆ Study and recounted in AIEIS Section 7.2.4, one W̱SÁNEĆ harvester reported a crab fishing area in the W̱SÁNEĆ Study's local study area that he said he frequented with his grandfather. The band affiliation of this harvester was not identified in the W̱SÁNEĆ Study. As also reported in AIEIS Section 7.2.4, Tseycum First Nation informed the VFPA that they have harvested crab in the Tsawwassen Water Lots on either side of the BC Ferries Terminal causeway, and that they require a Tsawwassen First Nation Member to be with them while using these areas. Specific information about how many crab may have been harvested at Roberts Bank, while requested, was not provided, but the context of the information suggested it was not occurring at a frequency or at levels that would be expected to experience a measurable displacement effect based on information available to the VFPA. See AIEIS Section 7.2.6.1 and the response to AIR-12.04.15-30 for further details.*	

Table 11: Marine Fish – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsawout-11.1	Concerned that halibut fishing will be impacted by increased traffic, especially at reefs close to US border, throughout Haro Strait and Boundary Pass.	23-Sep-2015, Tsawout Preliminary Traditional Marine and Land Use Baseline	**23-Sep-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Appendix 5-B summarising concerns raised by Tsawout First Nation and the VFPA's responses.	**Addressed in MSA Section 9.2.5.1:** Potential effects of vessel transit from Project-associated shipping on commercial fish and seafood harvesting marine area displacement, access, fish and seafood availability, and gear damage or loss would not be measurable from existing conditions and are therefore considered to be negligible. Potential consequential effects on harvest and associated revenues of commercial fishing and seafood enterprises are also considered to be negligible. When all lines of evidence are considered, the effect of vessel transit on commercial fishing and seafood harvesting is considered to be negligible.	**MSA** 9.2.5.1 Negligible Effects
Tsawout-11.2	Requested more information on why chum and Chinook were used as representative species. Concerned with the exclusion of sockeye as representative species within the EIS and what this means for the assessed or non-assessed impacts to these species.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations 28-Jul-2016, Issues Workshop – Island Nations	**27-Nov-2015, Workshop:** Responded that chum and Chinook were chosen as representative species because they are the most estuarine dependent, use the area as juveniles, and are thus most likely to interact with the Project. Sockeyes come through the river and head straight out to sea. Stated that this is a conservative approach: it is assumed that the pathway of effects for sockeye will be similar to those for chum and Chinook, but chum and Chinook are more likely to experience potential Project effects based on their estuarine use. Another reason for choosing Chinook is that it is a preferred food source for the SRKW, which have an endangered status. **28-Jul-2016, Workshop:** Explained that sockeye salmon and all salmon species were assessed through the detailed assessment of chum and Chinook salmon. They were also in the EcoPath with EcoSim (EWE) model, but not explicitly. The rationale behind this is that juvenile Chinook and chum are the most estuarine dependent species. Juvenile Chinook and chum spend the most time in the estuary relative to other species of salmon, and therefore are most likely to interact with the Project. Therefore, any predicted Project effects to Chinook or chum will conservatively predict effects to other species, as well as other anadromous species such as Steelhead and trout. The use of representative species is a fairly common EIS approach. The rationale is based on habitat use predominately, but taking a deeper dive into sockeye habitat use and history – the information includes past studies from DFO, academia, field data collected as part of the RBT2 base line studies and past EAs indicate that juvenile sockeye don't use Roberts Bank (RB) in abundance. They tend to use lakes for rearing and smoltification and migrate out the river immediately. So, the spatial overlap of the Project with sockeye is considered fairly limited. The information that we have on adult sockeye habitat use indicates they don't spend much time in the RB area either. They typically enter the Fraser River with little or no delay, so again, there is	**Addressed in EIS Appendix 7.2-B (#78):** Potential Project-related effects on marine fish, including all five species of Pacific salmon, are considered in the EIS. Chum and Chinook salmon are evaluated as being representative of all Pacific salmon species, as they are the most estuarine-dependent species of salmon, and therefore most likely to be affected by the Project. A field sampling program for salmon was conducted at Roberts Bank in 2012 and 2013. While it is possible that 2012 to 2013 seasonal surveying for the Project did not capture all salmon species present at Roberts Bank, historical survey data add to the weight of evidence, suggesting a realistic representation of species composition and abundance at Roberts Bank. **Addressed in EIS Appendix 7.2-B (#107):** Sockeye salmon was not selected as a representative species within the Pacific salmon subcomponent, as studies indicate that juvenile sockeye salmon do not use the Roberts Bank area in high abundance, relative to chum and Chinook salmon (which have been selected as representative species in the assessment). Since chum and Chinook are the most estuarine-dependent species of salmon, the potential for Project-related interactions with these species is greatest. Results of the assessment based on these two species represent a more conservative approach, given the life histories and habitat use of chum and Chinook. Therefore, potential Project-related effects on sockeye salmon are considered within the assessment through the assessment on the subcomponent Pacific salmon, as represented by chum and Chinook. Sockeye salmon are considered in the assessment of marine commercial use as the primary species of salmon sought in the assessment area. The economic component of sockeye fishing is addressed in this section (EIS Section 21.0). **Addressed in Response to IR5-15:** In its response to *IR5-15 Marine Fish – Representative Species* issued by the Review Panel on June 6, 2017 (CEAR Document #975), the VFPA specifically discusses existing conditions related to Cultus Lake sockeye and describes the status and management practices associated with the species. The IR response also further assesses potential effects of the project on Sockeye directly.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component 13.2.1 Sub-components 13.4.1 Information Sources, Desktop and Field Studies 13.6.3 Potential Effect - Changes in Productivity 13.6.3.3 Changes in Productivity of Forage Fish **Information Requests** Response to Sufficiency Information Request #15 (IR5-15 of CEAR Document #1078)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			limited spatial and temporal overlap with the Project. So, to sum that up, the EA is about capturing Project interactions and pathways of effects and we definitely recognise and understand the importance of sockeye – and took the approach that we believe represents the most conservative assessment by assessing the species that spend the most time in the estuary.		
Tsawout-11.3	Concerned with the exclusion of eulachon as representative species within the EIS and what this means for the assessed or non-assessed impacts to these species.	28-Jul-2016, Issues Workshop – Island Nations	**28-Jul-2016, Workshop:** Explained that aspects of eulachon life history are captured through the assessment of other species. For example, salmon are anadromous, herring are hearing sensitive, and Pacific sand lance have a similar diet to eulachon (they both eat zooplankton) – so the unique features of eulachon have been assessed by proxy. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, including Appendix 2-B summarizing the issues raised by Tsawout First Nation and the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#80):** Potential Project-related effects on eulachon are considered in the marine fish assessment within the forage fish sub-component. Eulachon was not assessed directly as a representative species within the forage fish sub-component due to the rarity of eulachon in the Roberts Bank area. The assessment recognises eulachon as a species of high economic, societal, and cultural importance to Indigenous communities. Representative species in the forage fish sub-component include Pacific sand lance, surf smelt, Pacific herring, and shiner perch. Qualitative and empirical evidence indicates that there will be minor decreases in forage fish productive potential driven by loss of subtidal sand habitat and disturbance of Pacific herring from underwater noise. **Addressed in AIEIS Appendix 2-B Table 18 (#77):** Potential Project-related effects on eulachon are considered in the marine fish assessment within the forage fish sub-component. Eulachon was not assessed directly as a representative species within the forage fish sub-component due to the rarity of eulachon in the Roberts Bank area. The assessment recognises eulachon as a species of high economic, societal, and cultural importance to Indigenous communities. Representative species in the forage fish sub-component include Pacific sand lance, surf smelt, Pacific herring, and shiner perch. Qualitative and empirical evidence indicates that there will be minor decreases in forage fish productive potential driven by loss of subtidal sand habitat and disturbance of Pacific herring from underwater noise. **Addressed in Response to IR5-15:** The VFPA specifically discusses existing conditions related to eulachon and describes the status and management practices associated with the species. Rationale as to how eulachon were assessed via use of Pacific herring and surf smelt as representative species, as well as similarities between species as they pertain to existing conditions (e.g., life history and habitat requirements), the mechanisms through which the Project may affect eulachon, as well as effectiveness of mitigation, are presented in AIR-12.04.15-09 (CEAR Document #388), including Appendix AIR-12.04.15-09 Table 2.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component 13.2.1 Sub-components 13.4.1 Information Sources, Desktop and Field Studies 13.6.3 Potential Effect - Changes in Productivity 13.6.3.3 Changes in Productivity of Forage Fish **Information Requests** Response to Additional Information Request #9 (AIR-12.04.15-09 of CEAR Document #388) Response to Sufficiency Information Request #15 (IR5-15 of CEAR Document #1078)
Tsawout-11.4	Interested in whether the VFPA will be undertaking additional field studies around salmon.	28-Jul-2016, Issues Workshop – Island Nations	**28-Jul-2016, Workshop:** Responded there will be more shorebird studies to look at some things brought up by the Canadian Wildlife Service, but there are no additional salmon field studies planned. Asked what *W̱SÁNEĆ* nations would be interested in the VFPA undertaking. Noted the VFPA would consider suggestions and ideas for additional studies related to salmon.		
Tsawout-11.5	Concerned with shipping effects of migrating salmon with the number of ships that will go	23-Sep-2015, Tsawout Preliminary Traditional Marine and	**19-Jun-2017, Meeting:** Explained that the ships would go along the same route as they do now.	**Addressed in AIEIS Appendix 2-B Table 18 (#80):** An assessment was undertaken to determine the effects of the Project on the productivity of marine fish, including Pacific salmon. Information regarding effects in relation to changes in habitat availability and migration is available in EIS Section 13.0.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table **AIEIS**

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	along the route and the risk of invasive species being introduced.	Land Use Baseline 19-Jun-2017, Meeting with Chief, Councillor, Administrative and Consulting Staff	Committed to provide Tsawout with information on Transport Canada's regulations regarding invasive species and vessels. **12-Jul-2017, Email from the VFPA:** The Chief requested additional information related to ballast water exchange and invasive species – please see some information on this topic below. The VFPA was the first port in North America to prohibit in-port ballast water exchange without prior mid-ocean exchange, a practice which became the basis of government requirements now enforced by Transport Canada. To prevent the invasion of foreign species into local waters, international regulations, through the International Maritime Organization (IMO), are managed by Transport Canada. All commercial deep sea vessels are required to carry out a ballast water exchange prior to entering Canadian waters. This is done outside the exclusive economic zone of 200 nautical miles (nm) and in water deeper than 2,000 m. By requiring vessels to complete this ballast "flush" well outside Canadian waters, the aim is to prevent any foreign organisms from entering into the local ecosystem. The U.S. has similar requirements, and vessels arriving from the Puget Sound area need to forward the completed U.S. forms to Canadian authorities prior to entry into Canadian waters. Section 8 of MSA Appendix 3-A, Canada's Marine Safety and Security System describes the current domestic regulations and international conventions implemented in Canada's legislative framework governing ballast water management, biofouling of ships hulls, air emissions from vessel engines and other discharges including garbage, sewage, and bilge water. Ballast water is covered in subsection 8.1, and bilge water in subsection 8.3. In their recent response to the Review Panel (TC IR-04 and TC IR-05), Transport Canada provided some additional information about the regulations around vessel ballast and bilge water. More information on this topic can be found in: EIS Appendix 7.2-B #100 (page 110): https://www.ceaa-acee.gc.ca/050/documents/p80054/101378E.pdf MSA Appendix 3-A, Subsection 8.1 (page 43) and Subsection 8.3 (page 45): https://www.ceaa-acee.gc.ca/050/documents/p80054/103690E.pdf Transport Canada Responses to TC IR-04 and TC IR-05 (pages 5-9): https://www.ceaa-acee.gc.ca/050/documents/p80054/119300E.pdf	As outlined in EIS Section 13.6.3.1, while terminal placement will result in the loss of wetted area, this is unlikely to measurably affect adult salmon returning to their freshwater spawning grounds as they are not considered habitat-limited within the LAA or regional assessment area. For out-migrating juvenile Pacific salmon, terminal placement will increase travel distance and time spent in deeper waters along the terminal length, assuming migration is linear. Effects to vegetated habitats used by juvenile salmon, including eelgrass and intertidal marsh, are predicted to be negligible and positive, respectively. Overall, Project-related changes in juvenile salmon migration and habitats are predicted to have a minor adverse effect on productivity. **Addressed in MSA Appendix 5-B (#38):** The assessment of potential effects of marine shipping associated with the Project on marine fish, including salmon, is included in Section 8.1. Physical disruption or vessel strikes of salmon are not anticipated to be a form of interaction between marine shipping and marine fish, and therefore these aspects are not included in the assessment. **Addressed in Responses to IR5-18 and IR-22:** Potential Project-related effects on juvenile salmon migration due to changes in habitat availability (i.e., terminal placement) are assessed in EIS Section 13.6.3.1 as minor. Additional rationale on the effect characterisation is provided in responses to IR5-18 and IR5-22. With mitigation, including onsite offsetting in the form of eelgrass transplants and tidal marsh creation, effects on juvenile salmon migration are assessed as negligible. **Addressed in EIS Appendix 7.2-B (#100):** The VFPA was the first port in North America to prohibit in-port ballast water exchange without prior mid-ocean exchange, a practice which became the basis of government requirements now enforced by Transport Canada. To prevent the invasion of foreign species into local waters, international regulations, through the IMO, are managed by Transport Canada. All commercial deep sea vessels are required to carry out a ballast water exchange prior to entering Canadian waters. This is done outside the exclusive economic zone of 200 nautical miles (nm) and in water deeper than 2,000 m. By requiring vessels to complete this ballast "flush" well outside Canadian waters, the aim is to prevent any foreign organisms from entering into the local ecosystem. The U.S. has similar requirements, and vessels arriving from the Puget Sound area need to forward the completed U.S. forms to Canadian authorities prior to entry into Canadian waters. Import containers are generally not opened at the terminal. Canada Border Services Agency inspects the contents of a percentage of import containers off-terminal in Richmond, and in the future will be done at the facility on Tsawwassen First Nation land currently being developed. All ships use rat guards on their mooring lines to ensure that rats and other rodents do not crawl up or down the mooring lines between the ship and the wharf. The VFPA is a part of the B.C. Spartina Working Group, which maps, tests eradication methods, and supports the removal of invasive English cordgrass from the Fraser River estuary. **Addressed in Responses to IR02 to IR06:** Additional information regarding enforcement and compliance related to Marine Water Quality was provided by Transport Canada in their responses to Review Panel TC IR #02 to 06. Available on the CEA Agency Registry at: https://www.ceaa-acee.gc.ca/050/documents/p80054/119300E.pdf.	Appendix 2-B Issues and Interests, Table 18 Marine Fish **Information Requests** Response to Sufficiency Information Request #18 (IR5-18 of CEAR Document #1153) Response to Sufficiency Information Request #22 (IR5-22 of CEAR Document #1153) **From Transport Canada to the Review Panel re: Response to Information Requests issued by the Review Panel on May 10, 2017 (CEAR Document #962)**

Table 12: Marine Invertebrates

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsawout-12.1	Concerned about crabs during molting season from vessel wake. Stated that when crabs molt, they change their shells, and during this time they are very light and get disturbed and damaged by sudden changes in wave action. Stated that one Tsawout superharvester observed: "you go there [to Taylor's Beach] at zero tide I could show you. Because of the [shipping] wake they don't have time to bury themselves in the sand and it's just like a big windy day [under water]. (MUS 2014:76. Stated that increased wake and wave action may be greater on culturally significant species such as urchins, and other species that are unable to bury themselves in the sand for protection.	23-Sep-2015, Tsawout Preliminary Traditional Marine and Land Use Baseline	**23-Sep-2015:** Recorded comment for consideration by the Project team.	**Addressed in MSA Section 8.1:** MSA Section 8.1 presents an effects assessment of marine shipping associated with the Project on fish and fish habitat (including marine invertebrates). Potential effects of vessel wake-generated waves on marine fish and fish habitat were characterised as negligible, because only 2% of coastline in the LAA is within the wake-related zone of influence, and because wake-generated wave heights at shorelines are predicted to be well within the range of natural wave conditions. Fish and fish habitat are already adapted to the natural conditions; therefore, any wake-related influences would not be distinguishable from existing conditions. Similarly, potential effects of underwater noise were also considered to be negligible because noise associated with Project-associated marine vessel activity and future cumulative shipping activities would not exceed injury thresholds for fish species or the Pacific salmon species behavioural threshold. Further, while noise-induced behavioural changes are possible for Pacific herring, potential effects would be localised to within 20 m of a container ship and of short duration (as the ship passes by) and are therefore not anticipated to affect the integrity of populations within the LAA.	**MSA** 8.1 Fish and Fish Habitat

Table 13: Marine Mammals – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsawout-13.1	Asked what the Project-related contribution to the cumulative effect to SRKW would be. Requested confirmation on whether this is typically how assessments on endangered species are conducted. Concerned that this approach shifts the focus away from specific projects (i.e., 100 projects could all conclude no new effects).	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	**27-Nov-2015, Workshop:** Stated that detailed information is available in the EIS. Committed to follow-up with the section of the EIS that contains this information. Stated that some EAs do not use this methodology. More recently, cumulative effects are focused on past, present and future, which may result in a determination that past effects are significant. Responded that in both underwater noise and marine mammals, the EIS articulates the Project's contribution to existing effects. There is a lot of focus on the methodology for SRKW because they are endangered. The EIS determined that the background noise remains similar when the noise levels from the Project are added. **26-Apr-2016, Email from the VFPA:** Post-meeting note: Please refer to EIS Section 14.10 Marine Mammals, Cumulative Effects Assessment. An electronic copy of the EIS is available at the following link: http://www.ceaa-acee.gc.ca/050/document-eng.cfm?document=101482.	**Addressed in EIS Appendix 7.2-B (#92):** Project-related adverse residual effects to SRKW (and all toothed whales) are expected to be not significant. The Project contribution of effects above existing conditions is very small and is not anticipated to adversely affect individuals or affect critical habitat features (acoustic environment, the availability of prey, and water and sediment quality) when needed by SRKW for their life functions of foraging, mating, resting, or socialising. Destruction of SRKW critical habitat from Project construction and operation is not anticipated, and the Project will not limit the survival or recovery of SRKW. Cumulative effects to baleen whales and seals and sea lions are expected to be not significant. However, due to their Endangered status and lack of recovery of the population, the VFPA has assumed that past activities and projects, including those described in the recovery strategy issued by DFO, have had a significant adverse effect on SRKW. Therefore, the Project, in combination with past projects and activities that have been carried out, and certain and reasonably foreseeable projects that will be carried out, will result in a continued significant cumulative effect to SRKW. **Addressed in AIEIS Appendix 2-B Table 19 (#86):** Project-related adverse residual effects to SRKW (and all toothed whales) are described in EIS Section 14.6, and are expected to be not significant. The Project contribution of effects above existing conditions is very small and is not anticipated to adversely affect individuals or affect critical habitat features (acoustic environment, the availability of prey, and water and sediment quality) when needed by SRKW for their life functions of foraging, mating, resting, or socialising. Destruction of SRKW critical habitat from Project construction and operation is not anticipated. Due to their Endangered status and lack of recovery of the population, the VFPA has assumed that past activities and projects, including those described in the recovery strategy issued by DFO, have had a significant adverse effect on SRKW. Therefore, the Project, in combination with past projects and activities that have been carried out, and certain and reasonably foreseeable projects that will be carried out, will result in a continued significant cumulative effect to SRKW. The approach to assessing cumulative effects on SRKW is consistent with the CEA Agency Guidance for cumulative effects assessments including the Operational Policy Statement Assessing Cumulative Environmental Effects Under the *Canadian Environmental Assessment Act, 2012* (CEA Agency 2013) and Determining Whether a Project is Likely to Cause Significant Adverse Environmental Effects (CEA Agency 1994), the Cumulative Effects Assessment Practitioners' Guide (Hegmann et al. 1999).	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 8.0 Effects Assessment Methods 14.0 Marine Mammals 14.5 Existing Conditions 14.6 Future Conditions with the Project 14.7 Mitigation Measures 14.9 Determination of Significance of Residual Adverse Effects 14.10 Cumulative Effects Assessment **AIEIS** Appendix 2-B Issues and Interests, Table 19 Marine Mammals **Information Requests** Response to Additional Information Request #13 (AIR-12.04.15-13 of CEAR Document #388) Schedule 13-4 Marine Mammals Total Cumulative Effects (CEAR Document #388)

Table 14: Marine Shipping Addendum

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsawout-14.1	Asked whether or not there is historical data on the number of vessel transits.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Explained that one ship causes two movements amounting to 520 movements. Noted that container ships are growing in size. In the EIS Executive Summary there is a graph that shows how the numbers of TEU's have grown.	**Additional information provided by the VFPA:** As part of its 2016 container traffic forecast, Ocean Shipping Consultants presents historical containerised trade throughput (TEU and tonnage) at various west coast, Pacific Northwest and VFPA ports. C*ontainer Traffic Forecast Study – Port of Vancouver, 2016* by Ocean Shipping Consultants is available as Appendix IR1-03-A. Historical vessel movement information is available in the technical volume: Seaport Consultants Canada Inc. (2013). Projections of Vessel Movements. Vancouver, which is Appendix B of Report TR 8C-2 TEMPOL 3.2 Origin, Destination & marine Traffic Volume Survey of the Trans Mountain Expansion Termpol Review Process. Available at: https://apps.neb-one.gc.ca/REGDOCS/File/Download/2393050.	**Information Requests** Response to Sufficiency Information Request #02 (IR1-02 of CEAR Document #897) Ocean Shipping Consultants 2016 Container Traffic Forecast Report http://www.robertsbankterminal2.com/wp-content/uploads/2016-Ocean-Shipping-Consultants-Container-Forecast.pdf
Tsawout-14.2	Asked whether or not there has been a consideration of night time vessel traffic light in the viewscape modelling, and, if so, how it was incorporated in the visual resources assessment.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Responded that night time vessel traffic light is not included in the EIS. The MSA includes a light assessment for vessels in transit. The EIS includes terminal light, and light along the causeway. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Appendix 5-B summarising concerns raised by Tsawout First Nation and the VFPA's responses. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, including Appendix 2-B summarizing the issues raised by Tsawout First Nation and the VFPA's responses.	**Addressed in MSA Section 7.5:** An assessment was conducted to determine the potential changes to the light environment related to vessel transit activities for representative points of reception along the shipping lanes throughout the MSA. Existing light conditions vary within the study area, depending on surrounding sources of light. Existing light trespass characteristics at assessed points of reception in the study area are similar to those in residential rural areas, whereas sky glow characteristics range from areas of low district brightness to areas of high district brightness. The incremental light from vessel transit activities is not expected to result in a change in light trespass classifications. Sky glow classifications are expected to temporarily change during the nighttime at two points of reception: Saturna Island and Stuart Island. However, these predicted changes are overestimated, based on the conservative assumption of two ships passing at the same time. The anticipated changes in light conditions related to Project-associated vessel transit activities are representative of a cumulative case (two ships passing at the same time). Although there would be more marine shipping activity in the future, it is highly unlikely that there would ever be more than two vessels passing in the shipping lanes at any given time. **Addressed in AIEIS Appendix 2-B Table 9 (#47):** The visual resources assessment included both daytime and nighttime components and was based on the *B.C. Visual Landscape Inventory Guidelines*. The daytime component was based on the character and extent of visual changes as a result of the Project. The nighttime component focused on changes in light trespass and sky glow. Predictions of light from Project sources were modelled. The model incorporated the preliminary lighting designs for the Project (see EIS Appendix 9.4-A), which includes high mast lighting, flood lighting, and crane lighting on RBT2, and road and rail switch lighting on the causeway. The preliminary RBT2 lighting design includes more than 900 fixtures and indicates the proposed location, type, luminous output, and quantity of each additional light fixture on the terminal and causeway. The light model does not include light from vessel traffic as a Project source, and therefore this source of light is not considered in the visual resources assessment. The MSA includes an assessment of light from Project-associated vessels in transit in the marine shipping area (MSA Section 7.5).	**EIS** 9.4 Light 9.4.4 Relevant Guidelines 9.4.5.3 Study Methods 9.4.8 Future Conditions with the Project Appendix 9.4-A Roberts Bank Terminal 2 Light Assessment Study 25.0 Visual Resources 25.1 Component Overview and Regulatory Setting 25.4 Information Sources 25.6 Future Conditions with The Project - Potential Project-Related Effects **MSA** 7.5 Light **AIEIS** Appendix 2-B Issues and Interests, Table 9 Light/Visual
Tsawout-14.3	Asked whether noise monitoring was focused only on construction. Commented that noise would be expected to	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	**27-Nov-2015, Worksop:** Responded that noise was modelled during construction and during operations and that extensive work was	**Addressed in EIS Section 33.3.1:** The Construction Compliance Monitoring Plan will describe the environmental compliance monitoring and reporting framework for the Project's construction phase. The purpose of compliance monitoring is to verify compliance with the terms and conditions of Project approval and other legislation, industry standards, regulatory requirements, and with the	**EIS** 33.3.1 Construction Compliance Monitoring Plan **MSA**

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	travel to the other side of the Gulf Islands from the shipping activities.		done to look at the broader shipping area. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Appendix 5-B summarising concerns raised by Tsawout First Nation and the VFPA's responses.	other sub-plans of the Construction EMP. The Plan will outline the approach to be taken with respect to the scope of compliance monitoring activities to be undertaken by the construction Environmental Monitors, including routine compliance-checking sample collection of measurable parameters at locations, frequencies, and durations to be determined in consultation with regulators (likely including above-ground noise). **Addressed in MSA Section 7.4:** As noted in MSA Section 7.4, the container ships associated with the Project are expected to result in minor and mostly imperceptible (less than 1 dBA) changes in the noise environment. At a setback of approximately 800 m, ship pass-by noise levels are predicted to be lower than the ambient daytime noise level, and lower than the ambient nighttime noise level at a setback of approximately 2 km. Most populated land areas within the MSA are located further than 2 km from the shipping routes. As a result of future marine vessel activity in the MSA, in combination with vessel activity associated with the Project, cumulative average daytime and nighttime atmospheric noise levels due to vessel transit are expected to increase imperceptibly by approximately 1 dBA.	7.4 Atmospheric Noise
Tsawout-14.4	Noted recent observation of more small-boat fishers in proximity to the BC Ferries terminal. Asked if all shipping is included in the Marine Shipping Addendum.	28-Jul-2016, Issues Workshop – Island Nations	**28-Jul-2016, Workshop:** Responded that the MSA accounts for shipping between the VFPA's jurisdiction and the 12-nautical mile limit. **26-Apr-2017, Email from the VFPA:** Shared workshop notes and clarified that shipping within VFPA jurisdiction is accounted for in the EIS.		

Table 15: Marine Vegetation – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsawout-15.1	Requested more information regarding the state of eelgrass in Roberts Bank in relation to the presence of eelgrass in other areas. Commented that fishers have observed eelgrass health declining and eelgrass beds disappearing. Asked whether there is confidence in the prediction that levels of eelgrass will increase. Interested in the presence of types of eelgrass (i.e. Japanese/non-native and native) in the Project area. Concerned the Project and related vessel traffic will disturb existing eelgrass sites.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations 30-Jan-2017, *W̱SÁNEĆ* All-Chiefs Meeting (Pauquachin, Tsartlip, Tsawout, Tseycum) 19-Jun-2017, Meeting with Chief, Councillor, Administrative and Consulting Staff	**27-Nov-2015, Workshop:** Stated that Roberts Bank is the biggest eelgrass bed in the Salish Sea, on the south coast of B.C. The assessment predicts that there will be an increase in eelgrass resulting from the Project, largely because the footprint blocks wave action, providing a good environment (i.e., calm conditions) for eelgrass. There was a huge expansion of eelgrass resulting from the Roberts Bank and BC Ferries causeways. Eelgrass beds at Roberts Bank are comparatively healthy and large compared to other areas of the Salish Sea. Referred to EIS Section 9.5 Coastal Geomorphology, which includes air photos of the area, and figures showing the expansion of eelgrass in the area since the 1970s. Stated that confidence in the predictions in the EIS is fairly high. The assessment drew upon information about the effects of the Deltaport and the BC Ferries causeways, which tests the hypothesis that blocking of wave action and turbidity leads to flourishing of eelgrass. Turbidity blocks access to light, which is important for eelgrass to photosynthesise. **30-Jan-2017, Meeting:** Noted that species of both Japanese and native eelgrass currently exist in the Roberts Bank area. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, including Appendix 2-B summarizing the issues raised by Tsawout First Nation and the VFPA's responses. **19-Jun-2017, Meeting:** Explained that with studies and mitigation an overall increase in eelgrass is expected. Explained some of the Habitat Enhancement Program work the VFPA is doing related to eelgrass.	**Addressed in AIEIS Appendix 2-B Table 16 (#63):** Eelgrass beds are highly productive habitats in the Roberts Bank ecosystem, serving numerous critical functions, such as food, shelter, and rearing habitat for numerous species, including juvenile salmon. Eelgrass is a sub-component of the marine vegetation assessment. Existing conditions, as well as potential effects on eelgrass habitat, are described in EIS Section 11.0. The assessment concludes that changes in productivity of eelgrass are predicted to be negligible (i.e., not measurable or detectable). Increases in productivity of eelgrass are anticipated with the implementation of standard management practices and environmental management plans, and the creation of onsite habitat. Following terminal construction, up to 3 ha of native eelgrass would be established through transplants in the inter-causeway area at Roberts Bank as a mitigation measure. The proposed transplant site overlaps with an existing stand of sparse eelgrass (i.e., less than 30% cover). The existing presence of eelgrass at this location is an indication of suitable conditions for establishment and growth of eelgrass. Although eelgrass populations are considered to be in decline, both in B.C. and globally, this does not appear to be the case for Roberts Bank. Studies show that, although some eelgrass areas in the Fraser River estuary have expanded and contracted over time, the native eelgrass area at Roberts Bank has been, and continues to be, increasing since the early 1970s. The native eelgrass bed north of the Roberts Bank causeway has increased over 15-fold since 1994. **Specific to Japanese eelgrass, information is provided in AIEIS Appendix 2-B Table 16 (#66):** The location of non-native eelgrass (*Zostera japonica*) at Roberts Bank is included in the Eelgrass Survey technical study, as listed and referenced in EIS Table 11-4. It is also shown on EIS Figure 11-2 (as *Z. japonica*).	**EIS** 11.0 Marine Vegetation 11.2.1 Sub-components 11.4.1 Desktop and Field Studies Table 11-4 Desktop and Field Studies Related to Marine Vegetation Figure 11-2 Roberts Bank Marine Vegetation Habitat Map (2012) 11.5.1 Existing Conditions, Eelgrass 11.6 Future Conditions with the Project 11.8.1 Residual Effect – Changes in Biofilm Assemblage Composition 17.3.2 Offsetting Potential Effects, Offsetting Framework 17.3.2.2 Onsite Habitat Concepts, Eelgrass **AIEIS** Appendix 2-B Issues and Interests, Table 16 Marine Vegetation
Tsawout-15.2	Concerned about impacts to seaweed and eelgrass caused by increased wave action due to greater size and volume of shipping lane traffic may lead to corresponding impacts to traditional marine resources that feed on seaweed	23-Sep-2015, Tsawout Preliminary Traditional Marine and Land Use Baseline	**23-Sep-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Section 8.1 on Fish and Fish Habitat.	**Addressed in MSA Section 8.1:** MSA Section 8.1 presents an effects assessment of marine shipping associated with the Project on fish and fish habitat (including marine vegetation). Potential effects of vessel wake-generated waves on marine fish and fish habitat were characterised as negligible, because only 2% of coastline in the LAA is within the wake-related zone of influence, and because wake-generated wave heights at shorelines are predicted to be well within the range of natural wave conditions. Fish and fish habitat are already adapted to the natural conditions; therefore, any wake-related influences would not be distinguishable from existing conditions.	**MSA** 8.1 Fish and Fish Habitat

Table 16: Marine Water Quality

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsawout-16.1	Concerned with reduction or removal of water visibility: Required for harvesting of marine invertebrates due to ship wake disturbing the seafloor at otherwise productive harvesting areas.	23-Sep-2015, Tsawout Preliminary Traditional Marine and Land Use Baseline	**23-Sep-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Appendix 5-B summarising concerns raised by Tsawout First Nation and the VFPA's responses.	**Addressed in MSA Section 7.2:** An assessment of the wave environment was conducted to determine potential changes from vessel transits associated with the Project on wake-generated waves. The existing wind-wave climate varies greatly across the local study area in response to differences in local wind conditions, variations in fetch length, and incoming swell from Juan de Fuca Strait. The majority of wind-generated wave heights are in the range of 10 to 50 cm, but they can reach up to 200 cm. Vessel wake is a small component of the existing wave climate. Wake waves generated by a representative-size container ship travelling at typical speeds through the MSA were calculated. The results showed that wake waves larger than 10 cm (wave heights smaller than this height are considered to reflect calm conditions) would reach shorelines adjacent to the shipping lanes only in Segment B of the MSA in three zones – near Tumbo and Saturna Islands, at the western end of Stuart Island, and in the vicinity of Victoria, including Discovery Island. Based on the spectrum of wind-generated waves, ship wake would be indistinguishable from wind-generated waves except during calm conditions. Calm conditions are experienced 40%, 46%, and 25% of the time within these three identified zones in Segment B. Therefore, container ship wake waves are expected to be exceeded by (and indistinguishable from) natural waves 60%, 54%, and 75% of the time in these Segment B zones. Vessel wake height calculations indicate that the majority of wake-related waves approaching shorelines in the three zones would be between 10 cm and 12.5 cm in height. Project-associated traffic is expected to increase vessel traffic through Segment B by 6% compared to existing conditions; therefore, the potential for wake-generated waves to occur during calm conditions is also expected to increase by 6%. With all future vessels transiting the MSA, including Project-associated traffic (a cumulative vessel traffic increase of 36%), the potential for these small wake-related waves (10 cm to 12.5 cm) is anticipated to cumulatively increase by 36%. The length of shoreline that falls within the zone of influence of existing vessel wake is not anticipated to change with future increases in the number of vessel movements. **Addressed in MSA Section 7.3:** Marine water quality in the MSA is influenced by many factors, including freshwater inputs, tidal currents, seasonal influences, and other natural physical factors that affect temperature, dissolved oxygen levels, salinity, and other parameters. Due to federal and international pollution prevention provisions and regulations, discharges of bilge water or ballast water are not expected to alter marine water quality within the MSA. Routine Project-associated shipping activities are therefore not expected to affect marine water quality.	**MSA** 7.2 Wave Environment 7.3 Marine Quality

Table 17: Mitigation for Marine Biophysical Valued Components (including Onsite Habitat Concepts)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsawout-17.1	Asked whether or not the VFPA will be consulting on monitoring plans, and if there will be opportunities for First Nations involvement in monitoring. Asked what the requirements/ qualifications would be.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	**27-Nov-2015, Workshop:** Stated that the VFPA will be consulting with Indigenous groups on some, all or most of the monitoring plans. This is still being determined. Stated that local First Nations have been heavily involved in the work previously conducted. Community members were trained as marine mammal observers during the EIS field studies. The authority for marine mammal observers to shut down an activity is stated in the EIS as a commitment. Numerous opportunities can be expected to be available as part of on-going monitoring work. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, including Appendix 2-B summarizing the issues raised by Tsawout First Nation and the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#32):** An adaptive management approach will be taken as indicated in Section 33.5 RBT2 Follow-up Program. The VFPA is committed to developing and implementing a Follow-up Program for the Project. The purpose of the Follow-up Program is to verify the accuracy of residual effect predictions made in the EIS, and determine the effectiveness of any measures taken to mitigate the adverse environmental effects of the Project. To ensure the Program's elements adequately reflect conditions of Project approvals, final designs, and construction or operation approaches, as well as public, Indigenous group, and regulator feedback received during the review of the EIS, the VFPA will lead the development of the Follow-up Program after the submission of the EIS. The Follow-Up Program will include: • An evaluation of the adequacy of existing data to provide a benchmark against which to test Project-related effects; • A monitoring design drawing on the measurable parameters identified to be field-tested; • A methodological approach for using field-collected data to measure and verify the accuracy of the effects predicted in the EIS; • A reporting framework that defines frequency of reporting, distribution and feedback mechanisms; and • Details of the VFPA's approach to adaptive management for the Project through construction and operation. The Follow-Up Program will be developed in consultation with federal agencies, including the CEA Agency, DFO, and Environment Canada. Complete drafts of the RBT2 Follow-up Program will be made available prior to the start of field measurements to ensure parties consulted on the program and approving agencies have an opportunity to evaluate and approve the Program. Feedback from Indigenous groups regarding the draft Program will be sought through the VFPA's ongoing engagement initiatives. **Addressed in AIEIS Appendix 2-B Table 30 (#162):** The VFPA is committed to developing and implementing a Follow-up Program for the Project. The purpose of the Follow-up Program is to verify the accuracy of residual effect predictions made in the EIS, and determine the effectiveness of any measures taken to mitigate the adverse environmental effects of the Project. To ensure the Program's elements adequately reflect conditions of Project approvals, final designs, and construction or operation approaches, as well as public, Indigenous group, and regulator feedback received during the review of the EIS, the VFPA has committed to undertaking the development of the Follow-up Program following the submission of the EIS. The Follow-up Program will be developed in consultation with federal agencies, including the CEA Agency, DFO, and Environment and Climate Change Canada. Complete drafts of the RBT2 Follow-up Program will be made available prior to the start of field measurements to ensure parties consulted on the program and approving agencies have an opportunity to evaluate and approve the Program. Feedback from Indigenous groups regarding the draft program will be sought through the VFPA's ongoing engagement initiatives. Drawing on the elements described in EIS Appendix 33-A and ongoing post-EIS submission regulator consultation, the VFPA will lead the development of the RBT2 Follow-up Program document, which will include details on the duration and frequency of field data collection, based on an evaluation of the length of time needed to detect effects given observed environmental variability, likely magnitude of environmental effect, and desired level of statistical confidence in the results.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2.7 Mitigation Measures 32.2.7.1 Mitigation Measure #1: Changes in Access to Preferred Current Use Locations 32.2.7.2 Mitigation Measure #2: Changes in Availability of Preferred Current Use Resources 33.0 Environmental Management Program 33.5 Roberts Bank Terminal 2 Follow-up Program Appendix 33-A Proposed Draft Follow-up Program Elements **AIEIS** Appendix 2-B Issues and Interests, Table 30 Environmental Management Program 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 7.3.3 Mitigation Measures

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				Participation by Indigenous groups in follow-up monitoring is discussed in EIS Section 32.0, and in AIEIS Section 7.0. The measures related to participation in environmental monitoring and follow-up programs are specifically extended to the *W̲SÁNEĆ* Nation. AIEIS Section 7.3 also includes the suggestion of *W̲SÁNEĆ* participation in monitoring in the list of mitigation measures suggested by Indigenous groups.	
Tsawout-17.2	Asked whether or not there will be monitoring opportunities related to marine shipping, and who is responsible for mitigations for marine shipping.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	**27-Nov-2015, Workshop:** Stated that marine shipping is within the purview of the federal government. Stated that information provided as part of the MSA was provided to the federal government to inform federal programs.	**Addressed in MSA Appendix 5-B (#21):** Follow-up measures are addressed in EIS Section 11.0. Follow-up programs to verify predicted effects are generally proposed to address uncertainty, such as any gaps in knowledge or understanding related to key conclusions. Because confidence in the residual effect predictions for this assessment is moderate to high, no follow-up programs are suggested specifically related to the predicted effects of marine shipping associated with the Project in the marine shipping area.	**EIS** 11.0 Follow-up Program **MSA** Appendix 5-B Aboriginal Issues and Interests
Tsawout-17.3	Interested in the success of previous efforts to transplant eelgrass. Interested in enhancement opportunities for eelgrass, clam and oyster beds.	30-Jan-2017, *W̲SÁNEĆ* All-Chiefs Meeting (Pauquachin, Tsartlip, Tsawout, Tseycum) 19-Jun-2017, Meeting with Chief, Councillor, Administrative and Consulting Staff	**30-Jan-2017, Workshop:** Explained that previous eelgrass transplants have been undertaken successfully. Explained the work that was done for DP3. **19-Jun-2017, Meeting:** Explained the types of projects undertaken for the Habitat Enhancement Program, including eelgrass transplants.	**Addressed in EIS Appendix 7.2-B (#201) and EIS Section 17.0:** Onsite eelgrass habitat creation is proposed through transplanting in an area approximating 3 ha. Based on the review of previous habitat creation programs (e.g., DP3), eelgrass transplants are considered to be an effective means of increasing productivity of marine vegetation. The VFPA will implement a Follow-up Program, which will include monitoring to confirm that all offsetting measures meet intended objectives and function as designed. Monitoring will include methods and success measures to confirm that offsetting measures have been effective. The *Fisheries Act* Authorisation will require that functional objectives are met. **Addressed in Response to IR-7.31.15-12:** In response to IR-7.31.15-12 – Mitigation Measures, on 26-Oct-2015 the VFPA provided Appendix IR12-A – Summary of Proposed Mitigation and Anticipated Effectiveness, which summarises the various mitigation measures proposed in the EIS (including habitat offsetting), and indicates their anticipated effectiveness and risks. Appendix IR12-A notes that the creation of eelgrass habitat is anticipated to be effective, based on the proven success of previous habitat creation projects within the Fraser River Estuary and similar environments.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 17.0 Mitigation for Marine Biophysical Valued Components 17.3.2 Offsetting Potential Effects, Offsetting Framework 17.6 Mitigation for Marine Biophysical Valued Components, Monitoring and Reporting **Information Requests** Response to Information Request #12 (IR-7.31.15-12 of CEAR Document #314) Appendix IR12-A – Summary of Proposed Mitigation and Anticipated Effectiveness (CEAR Document #314)

Table 18: Noise and Vibration – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsawout-18.1	Asked whether vehicular traffic and routes for construction were included in the local study area for noise and vibration. Asked whether the CEA Agency had not given VFPA the direction to scope the study area in that way.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Stated that the sources of noise considered in the noise and vibration assessment included activities on the terminal, and truck and train traffic on the causeway. Stated that noise from construction, and truck and train traffic once they leave the causeway are considered in the cumulative effects assessment as a certain or reasonably foreseeable activity. Stated that the scope of the study was defined by the CEA Agency. Pointed out the dividing line (VFPA jurisdiction), which changes whether activities were considered as a Project activity, or a reasonably foreseeable activity in the cumulative effects assessment. Stated that it is typical for the CEA Agency to determine the spatial scope of the Project. Believes it makes sense for traffic associated with the Project to be included in some way, so it's included as a cumulative effect. Cannot speak to the professional judgement involved or opinions on how the study was scoped. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, including Appendix 2-B summarizing the issues raised by Tsawout First Nation and the VFPA's responses.	**Addressed in EIS Section 8.0:** The methods used to assess the potential effects of the Project, including both residual effects of the Project and cumulative effects, are described in EIS Section 8.0. These methods are consistent with existing federal guidance. The cumulative effects assessment takes into consideration the potential residual effects of the Project in combination with the effects of other projects and activities that have been or will be carried out, including incremental road, rail, and marine vessel traffic associated with RBT2 and other projects. **Addressed in AIEIS Appendix 2-B Table 10 (#49):** The spatial boundaries for the noise and vibration assessment, and the rationale for their selection, is included in EIS Section 9.3. • The upland study area extends to Canoe Passage. • The marine study area includes all marine areas within 10 km of the proposed terminal, including areas at the mouth of the Fraser River and Canoe Passage, north of the northern tip of Westham Island. The noise and vibration assessment considers construction phase activities, based on the list of construction equipment provided in EIS Appendix 4-F.	**EIS** 4.0 Project Description Appendix 4-F Construction Equipment Peak Analysis 8.0 Effects Assessment Methods 8.1.9 Effects Assessment Methods, Environmental Assessment Methods, Cumulative Effects Assessment 9.3 Noise and Vibration 9.3.6.2 Methods, Study Area VC Effects Assessment Sections: Biophysical VCs (Sections 11.0 through 16.0) Socio-economic VCs (Sections 19.0 through 28.0) **AIEIS** Appendix 2-B Issues and Interests, Table 10 Noise and Vibration

Table 19: Port Operations

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsawout-19.1	Asked how the VFPA determines which ships can come into port, and whether there is any quality control.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Stated that this is regulated by Transport Canada. Explained that the VFPA has incentives for better environmental performers, and these incentives are described on the VFPA's website. The incentive program is called EcoAction. There are financial incentives for using shorepower, where vessels plug into the hydro grid for power as opposed to burning diesel. Stated that for trucking, the VFPA has no real control over trucking after it leaves VFPA jurisdiction. However, the VFPA restricts the type of engines that are allowed to operate on VFPA property, which provides a method of regulation. Stated that the VFPA has engaged with the BC Ministry of Transportation and Infrastructure to encourage improvements in infrastructure such as truck staging areas, which decrease truck idling. Added that the VFPA sits on the board for an independent organisation, Clear Seas, which aims to be at the global forefront of environmental protections for shipping on the west coast. It is noted other parts of Canada are interested and joining. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, including Appendix 2-B summarizing the issues raised by Tsawout First Nation and the VFPA's responses.	**Addressed in AIEIS Appendix 2-B Table 1 (#1):** EIS Section 1.0 provides an overview of the VFPA's mandate and jurisdiction. The VFPA is a port authority created pursuant to the *Canada Marine Act*, accountable to the federal Minister of Transport. The *Canada Marine Act* gives port authorities the authority to take, permit, or prevent certain activities within a port, which is defined as "the navigable waters under the jurisdiction of a port authority and the real property and immovables that the port authority manages, holds or occupies as set out in the letters patent". The letters patent issued for the VFPA describe the geographic boundaries of the navigation jurisdiction of the VFPA, the federal real property that it manages, and the lands other than federal real property, namely lands that the VFPA holds in its own name. The VFPA's territorial jurisdiction therefore includes the federal lands and lands other than federal real property that it manages, together with the navigable waters over which it has navigation jurisdiction. The federal real property managed by the VFPA and its navigation jurisdiction are shown in EIS Figure 1-3. In fulfilling the mandate under the *Canada Marine Act*, the port authority carries out a variety of duties, including safety and security of all land and waters, in collaboration with other agencies, using technology and land and water patrols. For core activities related to shipping and navigation, the VFPA acts as agent to the federal Crown. In accordance with this statutory authority, the VFPA has issued a Port Information Guide for marine operations within its jurisdiction (http://www.portvancouver.com/marine-operations/port-information-guide/). The guide's purpose is to promote safe and efficient navigation within the local waters of the port and to protect the marine environment. The practices and procedures apply to all vessels in the port, including pleasure craft and recreational vessels, and to all persons responsible for the planning, operation, conduct, and safe navigation of such vessels, including tenants. Among other things, the Port Information Guide outlines practices and procedures related to arrival and departure checklists, navigation, movement of dangerous goods, waste removal, marine mammal critical habitat, speed, use of pilots, anchorage procedures, environmental requirements, vessel discharges, noise and lights, adverse weather conditions, bunkering, and cargo operations, including loading/discharging and cleaning. Appendices to the Port Information Guide provide data sheets for all terminals within the Port of Vancouver. Every vessel either in or seeking to enter the port is subject to the orders of the port authority with respect to its entry, departure, draught, berth, anchorage, location, speed, direction, and means and method of movement, whether or not such orders are issued through or by the Canadian Coast Guard's Marine Communications and Traffic Services. The VFPA asserts its authority on vessels that intend to enter, or are within the waters controlled by the port authority by monitoring and enforcing the practices and procedures described in the Port Information Guide. Additional information regarding the VFPA's jurisdiction and scope of authority, including how the VFPA asserts its jurisdictional authority on vessels that intend to enter or are within VFPA navigable waters, is provided in the VFPA's response to IR1-01. The Port Information Guide is provided as an appendix to the response to IR1-01. **Additional information provided by the VFPA:** Links to various initiatives are provided at the following link: http://www.portvancouver.com/environment/ More information on the Clear Seas initiative can be found at the following link: http://clearseas.org/	**EIS** 1.0 Introduction 1.3.2 VFPA Overview 1.3.2.2 Mandate and Jurisdiction Figure 1-3 VFPA Managed Federal Lands and Navigation Jurisdiction 1.3.3 Governance and Corporate Structure 1.3.3.1 Insurance and Liability Management 1.3.3.2 Environmental Policy **AIEIS** Appendix 2-B Issues and Interests, Table 1 Port Operations **Information Requests** Response to Sufficiency Information Request #1 (IR1-01 of CEAR Document #897)

Table 20: Potential Accidents or Malfunctions

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsawout-20.1	Requested more information on the predictions of the likelihood of accident occurring during a particular time frame, and noted that there was huge discrepancy in these numbers for Northern Gateway. Stated that a quantitative risk assessment is controversial and subject to debate. Concerned with the accuracy of predictions of the likelihood of an accident occurring. Requested information regarding previous incidents at Roberts Bank. Concerned with potential accidents and malfunctions and potential effects to the environment, including sea life, birds, eagles, whales, and mammals.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Stated that the approach is described in Section 30 and EIS Appendix 30-A. Stated that an independent consultant determined the probabilities by looking at those types of accidents globally for vessels and container ships, which is reflected in EIS Appendix 30-A. Predictions incorporated global and local information. Container ships have a high level of controllability, and a lower likelihood of an accident compared to other types of ships. Stated that quantitative risk assessment is a well-recognised method for assessing the risks associated with these activities. The findings will be open to debate through the independent panel process, which includes expert review. The VFPA has been transparent in providing the information on how the assessment was calculated in the EIS. Stated that the Panel will review the modelling approach and the calculations in the EIS. Where possible, the VFPA has tried to learn from other EAs. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, including Appendix 2-B summarizing the issues raised by Tsawout First Nation and the VFPA's responses.	**Addressed in AIEIS Appendix 2-B Table 29 (#158):** The probabilities of various accident scenarios are provided in the RBT2 Quantitative Risk Assessment (QRA) in EIS Appendix 30-A. The QRA also includes information on historical incidents, including at Roberts Bank, in EIS Appendix 30-A, Section 3.1.1. The sensitivity and level of certainty associated with accident rate predictions is described in EIS Appendix 30-A, Section 4.2. The frequency assessment conducted indicates that all shipping-related accidents can be considered improbable, with or without RBT2. The QRA explicitly included uncertainty in analyses and utilised 95% confidence bounds to make that assessment. The regulatory management framework, standard practices, and Project-specific measures to reduce the risk of accidents or malfunctions, including spills, as well as the emergency response and mitigation measures to be implemented in the event of a spill are described in EIS Section 30.0. Three worst-case scenarios involving hydrocarbon spills were assessed: a container ship impact incident at the terminal, a tanker truck accident on Roberts Bank Way North, and a yard locomotive derailment on the widened causeway. The assessment determined that a ship impact scenario involving a marine spill of heavy fuel oil at the terminal would result in adverse residual effects to all marine biophysical VCs, as well as marine commercial use, outdoor recreation, and land and water use. While the residual effects on SRKW, coastal birds, and Current Use were considered significant, due to the extremely low probability of such a scenario, all residual effects were considered unlikely. Since the diesel spill in each of the land-based scenarios would occur away from the marine environment, no potential interactions with marine biophysical VCs were identified. Further, no residual adverse effects were identified with respect to socio-economic VCs, including services and infrastructure and human health. As with any activity, the potential for unplanned incidents during Project construction and operation exists. The VFPA, its tenants, contractors, operators, and intermodal partners are committed to continue to improve port-wide operational practices and procedures to ensure the safety of workers and the public, and protection of the environment. The estimated probability and potential consequences of a range of accidents or malfunctions, including spills of deleterious materials from ships during Project construction and operation, are described in the EIS.	**EIS** 3.1.1 Representative Historical Container Ship Accident Scenarios 4.2 Sensitivity to Key Assumptions 30.0 Potential Accidents or Malfunctions 30.4 Potential Marine-Based Accidents and Malfunctions 30.6 Assessment of Plausible Worst-Case Scenarios 30.6.1 Container Vessel Allision and Fuel Spill at RBT2 Terminal Berth Face 30.6.1.3 Plausible Worst-case Scenario #1 Effects Assessment Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment **MSA** 10.0 Potential Accidents or Malfunctions **AIEIS** Appendix 2-B Issues and Interests, Table 29 Potential Accidents or Malfunctions 8.0 Potential Accidents or Malfunctions
Tsawout-20.2	Commented that the VFPA has used the determination of likelihood differently than other environmental assessments. Stated that the VFPA has determined the likelihood that an adverse effect will occur, given that an accident has occurred. Other environmental assessments determine the likelihood	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Clarified that some EAs are incorrect in their methodology of determining significance after likelihood. The event itself is unlikely. In *CEAA, 2012*, a cumulative effects assessment is not required to be conducted on unlikely events. In other sections of the EIS, cumulative effects assessments have been conducted on factors such as changes in air	**Addressed in AIEIS Appendix 2-B Table 29 (#159):** The determination of likelihood of residual effects related to potential accidents or malfunctions is applied consistently with common EA practice. The characterisation of all residual effects, and determination of significance of those effects, is carried out in addition to the determination of likelihood.	**AIEIS** Appendix 2-B Issues and Interests, Table 29 Potential Accidents or Malfunctions 8.0 Potential Accidents or Malfunctions **EIS** 30.0 Potential Accidents or Malfunctions

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	of an adverse effect occurring without assuming the occurrence of an accident.		quality or human health, because these potential changes or effects are likely to occur. In the case of accidents or malfunctions, if the event is unlikely, then a cumulative effects analysis is not required. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, including Appendix 2-B summarizing the issues raised by Tsawout First Nation and the VFPA's responses.		Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment Appendix B – Tables 30.6.1.3 Plausible Worst Case Scenario #1 Effects Assessment 30.6.2.3 Plausible Worst Case Scenario #2 Effects Assessment 30.6.3.3 Plausible Worst Case Scenario #3 Effects Assessment
Tsawout-20.3	Asked what location is for the grounding accident scenario.	24-Aug-2015, Meeting	**24-Aug-2015, Meeting:** Committed to follow-up. **25-Aug-2015, Email from the VFPA:** Confirmation of exact location for accident scenario: EIS Section 30.0 of the (existing) EIS evaluates a worst-case scenario involving a container ship impact incident at the terminal. The MSA evaluates a worst-case scenario involving a container ship experiencing a hard grounding in Boundary Passage near South Pender Island. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Appendix 5-B summarising concerns raised by Tsawout First Nation and the VFPA's responses.	**Addressed in MSA Appendix 5-B (#98):** The assessment of potential accidents or malfunctions (EIS Section 10.0) considers a plausible worst-case spill scenario located in Boundary Passage at the south end of South Pender Island, within Segment B of the marine shipping area. Moresby and Stuart islands are located within this area. The assessment considers potential effects of a spill on marine commercial use, as well as outdoor recreation.	**EIS** 30.0 Potential Accidents or Malfunctions **MSA** Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents or Malfunctions
Tsawout-20.4	Asked why the VFPA's worst case scenario is different than the one in the TMX assessment, which considered a grounding at Turning Point, in between Stuart and Moresby Islands.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Stated that the VFPA's site is very close to the TMX site. The assessment considered a powered grounding south of Pender Island. Stated that an independent consultant reviewed the sites used in the TMX assessment, and associated probabilities of an accident occurring, and considered this information in choosing a site for the MSA assessment. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Appendix 5-B summarising concerns raised by Tsawout First Nation and the VFPA's responses.	**Addressed in MSA Appendix 5-B (#98):** The assessment of potential accidents or malfunctions (EIS Section 10.0) considers a plausible worst-case spill scenario located in Boundary Passage at the south end of South Pender Island, within Segment B of the marine shipping area. Moresby and Stuart islands are located within this area. The assessment considers potential effects of a spill on marine commercial use, as well as outdoor recreation.	**MSA** Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents or Malfunctions 10.5.10 Marine Commercial Use 10.5.11 Outdoor Recreation
Tsawout-20.5	Commented on Draft RBT2 AIEIS - Pg. 96 Potential Accidents or Malfunctions (8.1), Potential Effects of Accidents and Malfunctions on Rights (8.5) Aboriginal Traditional Knowledge (9.0):	20-Jan-2017, Letter	**10-Feb-2017, Letter from the VFPA:** Comment #24: For the purposes of assessing the effects of accidents and malfunctions, the EIS and AIEIS both assume that the accident would occur, and then assess the effects that could result from that accident. Any predicted residual effects of the accident or malfunction		**AIEIS** 2.0 Aboriginal Groups Engagement and Consultation Appendix 2-B Aboriginal Issues and Interests

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	The VFPA describes three different accident scenarios, and concludes that one of them, a vessel collision and heavy fuel spill at the wharf, would result in a significant adverse residual effect on marine use and the exercise of Aboriginal and treaty rights. The VFPA argues that such an event has an extremely low chance of occurring, and as a result no [cumulative] impact assessment on rights and use was undertaken. This is an excellent example of the inability of *CEAA 2012*'s definition of "ATK" to capture Aboriginal knowledge in a way that could improve project assessment. Aboriginal people have their own notions of "risk," that should be reflected in this assessment, but which are excluded by the scientific assessment of risk instead.		are then characterised and evaluated for significance, and then a determination of likelihood of the residual effects actually occurring is made. The determination of likelihood of residual effects in the EIS (and AIEIS) and the determination of the need to consider the residual effects of accidents and malfunctions in the assessment of cumulative effects are consistent with the requirements of applicable federal guidance, including the CEA Agency's Operational Policy Statements Determining Whether a Designated Project is Likely to Cause Significant Adverse Environmental Effects under *CEAA, 2012* and Assessing Cumulative Environmental Effects under the *CEAA, 2012*. As per these policy statements, residual effects of accidents and malfunctions must be considered in an assessment of cumulative effects, if the residual effects are considered likely to occur. As noted in the EIS (and AIEIS), the residual effects of the accidents and malfunctions are not considered likely to occur. The VFPA acknowledges that the *W̲SÁNEĆ* Nation may hold different views on the determination of likelihood, and the VFPA remains open to receiving specific information from *W̲SÁNEĆ* regarding their perspectives on 'risk' and likelihood as they pertain to accidents and malfunctions.		

Table 21: Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Lands and Resources for Traditional Purposes

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsawout-21.1	Stated that there is a lot of room for interpretation for current use, and the CEA Agency allows for that. Commented that how it is used here in the EIS is restrictive. Stated that future use is supposed to be included.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Responded that is why setting temporal boundaries are important. Stated that "Current Use" is the language in the *CEAA, 2012*. The VFPA has no choice in the matter; it is written in the Act as current use of lands and resources. Added that the author of the current use portion is not present today to fully explain the requirements and methodology. There is a historic component incorporated into the section, and this is reflected in EIS Section 32.0. If there is interest, the VFPA can arrange a meeting to provide further detail. Requested participants to advise the VFPA if there is intended use as well. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, including Appendix 2-B summarizing the issues raised by Tsawout First Nation and the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#157):** The methods used to assess the potential effects of the Project, including both residual effects of the Project and cumulative effects, are described in EIS Section 8.0 Effects Assessment Methods. These methods are consistent with existing federal guidance. The effects of other projects and activities that have been carried out are reflected in the existing (and expected) conditions of the ICs and VCs, and in EIS Section 32.0. By assessing potential Project-related effects against those conditions, the cumulative effects of the Project and other past projects and activities are inherently considered. The EIS also includes historical data, where available and applicable, to assist interested parties to understand the potential effects, including cumulative effects, of the Project. The EIS does not include an assessment of historical infringements on the ability of Indigenous groups to exercise rights or impacts to traditional use. **Addressed in AIEIS Appendix 2-B Table 28 (#129):** The terminology "current use of lands and resources for traditional purposes" (Current Use) is the language of subsection 5(1)(c) of *CEAA, 2012*. The assessment of potential effects on Current Use in EIS Section 32.0 and AIEIS Section 7.0 reflects the understanding of Current Use outlined in the CEA Agency's draft Technical Guidance on Current Use of Lands and Resources for Traditional Purposes under the *Canadian Environmental Assessment Act, 2012*, dated December 2015. The EIS was filed in March 2015, prior to that draft guidance being issued; however, EIS Section 32.0 and AIEIS Section 7.0 considered use for traditional purposes that may not be occurring presently or occurring at sufficient levels to meet community needs, but was reported by Indigenous groups to have occurred in the past. As part of that consideration, the EIS and AIEIS included Indigenous groups' perspectives on the effects over time (as a result of other projects and activities) that have contributed to existing conditions of use. The EIS and AIEIS also considered the desire to restore use (based on past use) or increase use (over present or recent limited levels), where this desire was expressed by Indigenous groups to the VFPA.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Lands and Resources for Traditional Purposes 32.3 Potential Adverse Impacts on Aboriginal and Treaty Rights and Related Interests Analysis **AIEIS** Appendix 2-B Issues and Interests, Table 28 Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Lands and Resources for Traditional Purposes 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 7.2 Current Use of Lands and Resources for Traditional Purposes Assessment 7.3 Potential Adverse Impacts on Aboriginal and Treaty Rights and Related Interests
Tsawout-21.2	Commented that *W̱SÁNEĆ* traditional territory is not accurately represented on the map provided by the VFPA.	24-Aug-2015, Meeting	**24-Aug-2015, Meeting:** Explained the source of the map and noted that Tsawout First Nation can provide a preferred map for the VFPA to include in the marine shipping report if there is one available. **23-Sep-2015:** Tsawout provided the VFPA with *Preliminary Traditional Marine and Land Use Baseline* marine shipping report, which included a map of Tsawout traditional territory.		
Tsawout-21.3	Stated that the Point Roberts area is the location of the *W̱SÁNEĆ* First Nations' most important village site, and the only reason the *W̱SÁNEĆ* people left the most important reef nets sites at	24-Aug-2015, Meeting 23-Sep-2015, Tsawout Preliminary Traditional	**24-Aug-2015, Meeting:** Recorded comment for consideration by the Project team. **23-Sep-2015:** Recorded comment for consideration by the Project team.	**Addressed in Response to IR7-21:** As requested by the Review Panel, IR7-21 discusses the potential effects of waves generated by Project-associated vessels during calm conditions on small craft engaged in activities in open water at various points and various distances from shore throughout the marine shipping area. For all segments discussed in	**Information Requests** Response to Sufficiency Information Request #21 (IR7-21 of CEAR Document #1141)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	Point Roberts is because they were kicked out. Stated that the increased size and volume of vessel traffic may negatively impact community efforts to revitalize the traditional reef net fishery. Stated that as a stationary, anchored fishing technique practiced using small vessels such as canoes, it will be significantly impacted by vessel wake.	Marine and Land Use Baseline		the MSA, vessel wakes from Project-associated vessels are not expected to introduce new navigational hazards for small-craft operators.	
Tsawout-21.4	Stated that gathering dietary staples and culturally significant resources such as sea crab, urchin, seaweed, etc. from sites along rocky shores throughout the shipping lane will be negatively impacted by increased vessel wake.	23-Sep-2015, Tsawout Preliminary Traditional Marine and Land Use Baseline	**23-Sep-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Section 9.5.5.1 Negligible Effects of Vessel Transit on Current Use.	**Addressed in MSA Section 9.5.5.1:** As reported in EIS Sections 9.2 Marine Commercial Use and 9.3 Outdoor Recreation (based on the findings of MSA Section 7.2 Wave Environment), ship wake from Project-associated vessels is not expected to be distinguishable from existing wave action on vessels engaged in commercial or recreational activities except in calm conditions (i.e., when wave heights are below 10 cm), given that ship-related wake is within the wave-height spectrum of wind-generated waves. In Segment B of the MSA, the only segment in which shorelines fall within the potential zone of influence of wake-generated waves (or those waves potentially greater than 10 cm in height when they reach the shoreline), calm conditions are experienced 40%, 46%, and 25% of the time in Zone 1, 2, and 3 of that segment, respectively (see MSA Section 7.2 Wave Environment and MSA Figure 7.2-1). Ship wake waves are therefore expected to be exceeded in these zones by natural waves 60%, 54%, and 75% of the time, respectively. In calm conditions, waves may be more readily identifiable as generated by passing ships as opposed to wind during Current Use activities that coincide with ship pass-bys, and the ability to make this distinction may increase in calm conditions by the same factor that Project-associated shipping is expected to increase shipping traffic within the MSA (i.e., by 9% (Segment D) to 12% (Segment B)); however, waves from vessel wake generally dissipate to a height of less than 25 cm in most areas of the MSA by 50 m from the point of origin (except near Discovery Island in Segment B, where wake waves are not expected to dissipate to a height of less than 25 cm until approximately 1.25 km away from the point of origin). As a result, Current Use activities that would be expected to experience wake wave heights of above 10 cm in calm conditions would be taking place within or very near the shipping lanes (i.e., in open water); however, since ship-related wave heights are expected to be within the spectrum of wind-generated waves (i.e., smaller than 10 cm) for a larger percentage of the time, and since Current Use activities would not be expected to always occur during calm conditions, wake from Project-associated vessel traffic is not expected to result in a measurable change in access to preferred Current Use locations, either in open water or along the shorelines within the MSA.	**MSA** 9.5.5.1 Negligible Effects of Vessel Transit on Current Use
Tsawout-21.5	Expressed concern that *W̱SÁNEĆ* were not included in the EIS, as there is no evidentiary reason to exclude them.	24-Aug-2015, Meeting	**24-Aug-2015, Meeting:** Stated that the CEA Agency and the VFPA reached out to the *W̱SÁNEĆ* First Nations previously [in early 2014] regarding the RBT2 project and did not receive a response.	**Addressed in AIEIS Appendix 2-B Table 28 (#131):** *W̱SÁNEĆ* use of Point Roberts is described in AIEIS Section 7.0 and MSA Section 9.5. Cumulative effects on this use to date, from the perspective of the *W̱SÁNEĆ*, are also described in AIEIS Section 7.0 and MSA Section 9.5. **Addressed in AIEIS Appendix 2-B Table 3 (#25):**	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			Stated that the VFPA is approaching Tsawout First Nation again now to ask if Tsawout would like to participate in consultation for the RBT2 project. Clarified that the VFPA's intention is to engage Tsawout at the same level as the Cowichan groups. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, including Appendix 2-B summarizing the issues raised by Tsawout First Nation and the VFPA's responses.	As described in AIEIS Section 2.3, the *W̲SÁNEĆ* bands were each contacted by the VFPA in early 2014 and invited to participate in consultation related to RBT2. As no response was received by the VFPA, and as the CEA Agency had not included the *W̲SÁNEĆ* bands in the list of Indigenous groups in the *EIS Guidelines* issued in January 2013, the *W̲SÁNEĆ* bands were not included in the phases of consultation prior to EIS submission. These phases included the 'Project Description Engagement and Consultation' phase, and the 'EIS Development Engagement and Consultation' phase. The activities that took place during these phases of consultation are described in EIS Section 7.2. AIEIS Section 2.3 has been revised as requested to include this information. By way of providing the draft AIEIS for review, the VFPA has provided the opportunity for individual bands to comment on the statements in the AIEIS related to consultation.	**AIEIS** Appendix 2-B Issues and Interests, Table 3 Engagement and Consultation Table 28 Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Lands and Resources for Traditional Purposes 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes
Tsawout-21.6	Stated that vessel wake impacts both the safety and the practice of harvesting marine invertebrates and fishing. Stated that there is a personal risk travelling and anchoring by small vessel from shipping activity, including wake. Stated that vessel wake reduced the brief window of time Tsawout members have to harvest at peak low tide periods by making harvesting too risky or removing the sitelines required to harvest certain species. Stated that this includes crossing the shipping lanes to access harvesting locations. Stated that Tsawout members have to travel slowly during ship transits and have to wait for ships to pass. Stated that Tsawout members express concerns and experience reticence about accessing preferred harvesting locations on the other side of the shipping lane. Concerned that increased frequency of vessel traffic in	23-Sep-2015, Tsawout Preliminary Traditional Marine and Land Use Baseline 26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**23-Sep-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Appendix 5-B summarising concerns raised by Tsawout First Nation and the VFPA's responses. **26-Nov-2015, Workshop:** Responded that the assessment determines adverse effects to current use associated with vessel collisions in the MSA. The MSA is currently undergoing a completeness review, and the public and Indigenous groups may comment on the completeness or sufficiency of the assessment. Suggested that Tsawout review the assessment and follow up with the VFPA with any questions.	**Addressed in EIS Section 30.0:** Using information from DFO, EIS Appendix 30-A also provided calculations for collisions involving RBT2-associated ships with fishing and recreational vessels. For the portion of the marine shipping area that incorporates the waters between the proposed RBT2 terminal and the eastern shore of Saturna Island, the probability of a collision occurring between a commercial fishing vessel and a container ship or other large vessel, which reflects 2012 conditions, has a return period of 57 years, i.e., the potential to occur once in 57 years (EIS Appendix 30-A). In 2030 without the Project, due to the increased vessel traffic expected at that time even without the Project, the probability of a collision in this portion of the marine shipping area increases compared to the 2012 circumstance, and is estimated as having a return period of 51 years. The estimated probability of a collision would increase only slightly in 2030 when Project-associated shipping is taken into account; the estimated return period for this scenario is 50 years (EIS Appendix 30-A). **Addressed in MSA Section 10.0:** The assessment of potential accidents or malfunctions (MSA Section 10.0) includes consideration of a plausible worst-case collision scenario between a container ship and a smaller vessel such as a fishing vessel. Potential effects of such an event are assessed for the following VCs: marine commercial use, outdoor recreation, and human health, as well as Current Use. The plausible worst-case collision scenario has the potential to result in measurable residual adverse effects on human health, marine commercial use, outdoor recreation, current use, and asserted or established Aboriginal and treaty rights. The assessment concluded that residual adverse effects are expected to be not significant for marine commercial use and outdoor recreation, but significant for human health. For current use, the residual effect could range from not significant to significant, depending on the capacity of the affected Indigenous group to continue to undertake current use. In the event of a collision between a vessel engaged in traditional use activities and a container ship, a minor to serious adverse residual impact on the ability of the affected Indigenous group to exercise Aboriginal and treaty rights associated with those activities would be expected. In all cases, the identified residual adverse effects of a collision are unlikely to occur, because of the very low probability of collision. The assessment of Current Use (MSA Section 9.5) considers cultural practices, such as the acquisition of traditional foods and the transmission of traditional knowledge. Perceptions of safety, as well as access to preferred harvesting locations and visual or auditory disturbances, are covered in the assessment of	**EIS** 30.0 Potential Accident and Malfunctions 30.4.4 Vessel Collision Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment **MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.5.1 Negligible Effects of Vessel Transit on Current Use Access to Preferred Current Use Locations Quality of Current Use Experience 9.5.5.2 Potential Effects of Vessel Transit on Current Use 10.0 Potential Accidents or Malfunctions 10.3.3 Identification of Plausible Worst-case Accident or Malfunction Scenarios 10.4 Mitigation Measures **Information Requests** Response to Sufficiency Information Requests #06 (IR10-06) Response to Sufficiency I Information Requests #13 (IR10-13)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	the shipping lane will effectively cut harvesters off from some of their most reliable traditional harvesting sites in the San Juan Islands or make traveling to these sties considerably more dangerous. Stated that community members frequently express concern with small vessel strikes, and increased congestion around shipping lanes. Stated that increases in the number of vessels directly impacts Aboriginal harvesters. Stated that an increase in shipping makes it impossible to move through the shipping lane in small boats, and alienates the community from much of their territory.			potential changes to the following: Access to preferred Current Use locations; and Quality of Current Use experience. **Addressed in Responses to IR10-06 and IR10-13:** The VFPA's responses to IR10-06 and IR10-13, as requested by the Review Panel, provide additional information concerning the rationale for the current use effects assessment conclusions.	
Tsawout-21.7	Commented on the conclusion that there are existing cumulative effects to orcas. This logic could apply to Aboriginal or treaty rights. There are fewer harvesters supporting communities than there are SRKWs, so they could be determined to be endangered.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	**27-Nov-2015, Workshop:** Recorded comment for consideration on the Project team. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, including Appendix 2-B summarizing the issues raised by Tsawout First Nation and the VFPA's responses.	**Addressed in AIEIS Appendix 2-B Table 28 (#133):** Existing (cumulative) effects on *W̲SÁNEĆ* use, from the perspective of the *W̲SÁNEĆ*, are described in AIEIS Section 7.0 and MSA Section 9.5. Existing effects on asserted or established rights associated with *W̲SÁNEĆ* use are also considered in AIEIS Section 7.0 and MSA Section 9.5.	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights **AIEIS** 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes Appendix 2-B Issues and Interests, Table 28 Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Lands and Resources for Traditional Purposes
Tsawout-21.8	Concerned with the anchorages located in the Gulf Islands. Stated that the anchorages disrupt travellers in small boats. Concerned that the anchorages located in the Gulf Islands are unsettling contaminated sediment.	30-Jan-2017, *W̲SÁNEĆ* All-Chiefs Meeting (Pauquachin, Tsartlip, Tsawout, Tseycum)	**30-Jan-2017, Meeting:** Recorded comment for consideration by the Project team.	**Addressed in MSA Appendix 5-B (#3):** Anchorage is discussed in MSA Section 4.0. Container ships operate on a scheduled service, and adjust their speeds as required to arrive at the terminal within their assigned arrival window; thus, anchorage is not a normal requirement and there are no plans or requirements for off-terminal anchoring of container ships waiting for a berth at the new RBT2 marine terminal. Exceptions to this could occur in the event of an extreme storm event in the Pacific, resulting in refuge anchorage requirement for safety reasons, or to accommodate unexpected ship-specific maintenance, personnel, or operation issues that may arise. The assessment of marine shipping associated with the Project is based on a routine vessel transit scenario. Because anchorage only	**MSA** 4.0 Activity Description 4.2.2.2 Anchorage Appendix 5-B Aboriginal Issues and Interests

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				occurs in rare circumstances, anchorage is not assessed as an activity related to marine shipping associated with the Project. **Additional information provided by the VFPA:** An interim protocol for the use of Southern B.C. anchorages has been developed by Transport Canada (TC) in collaboration with the Chamber of Shipping of B.C., the Shipping Federation of Canada, the Pacific Pilotage Authority, the VFPA and the Port of Nanaimo (working group members). It also takes into account comments provided to TC by coastal communities about the impact of increased use of anchorages in their surrounding waters. Drafts of the interim protocol were also shared with coastal communities and First Nations. Under the protocol, the VFPA assigns anchorages as equitably as possible, subject to individual anchorage size restrictions, using their computerised queueing system which takes into account the dimensions of the vessel and specific anchorage usage over the previous 30 days. The objective of this approach is to balance the usage, so that no single anchorage is in constant use, and that that there is an equitable rotation of use through all suitable anchorages. Noise and Lights All vessels, while at anchor, should minimise noise levels and light usage in consideration of local residents. The following guidelines apply: Noise: • Generator usage should be reduced to the minimum required generator(s) to operate essential services and systems; • External doors and hatches to machinery spaces must be kept closed as often as possible; • Use of power tools and chipping hammers must be kept to a minimum and is not permitted on deck on weekends, nor between 1900 and 0700 hours on weekdays. Lights: • While the vessel is to be lit in compliance with the Collision Regulations, deck lights must be kept to a minimum; and • Lighting used to illuminate. Concerns with any of the specifics related to the responsibilities of ships at anchor (e.g., noise, light) within the protocol, can be reported to the VFPA Operations Centre. The VFPA Operations Centre will relay the complaints to the vessel agent with a copy to the Chamber of Shipping of B.C., the Shipping Federation of Canada and Transport Canada with the request to follow up with the vessel. The Interim Protocol is a temporary and voluntary measure that addresses some of the concerns Canada and the Port have heard in recent years. The Oceans Protection Plan, National Anchorage Framework will be undertaking the studies and consultation necessary to develop principles that determine the location and management practices for anchorages outside of ports in the future. In 2017, Transport Canada announced the Oceans Protection Plan's Anchorages initiative. The Anchorages Initiative will engage governments, marine industry, Indigenous groups, community organisations and stakeholders to: • Develop a process to identify anchorage locations; • Analyse and respond to environmental, economic, cultural, safety and security concerns now and over the long-term;	

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				• Draft a "best practices at anchor" manual; and • Propose oversight/management options for anchorage locations outside port authority's boundaries. The comprehensive review will use an evidence-based approach, and includes hearing feedback on issues from First Nations, coastal communities, other levels of governments, and industry. Results and lessons learned from the Interim Protocol will help inform the national Anchorages Initiative.	
Tsawout-21.9	Stated that although different rights regimes are identified, the spatial extent of established treaty rights and asserted Aboriginal rights is not discussed in detail. Stated that there is limited discussion, or visualization, of the existence of established treaty rights and asserted Aboriginal title and rights. Stated that Tsawout's Douglas Treaty right to "fish as formerly" requires a more extensive treatment in order to accurately inform the effects assessment.	16-Dec-2015, Letter to the CEA Agency (CEAR Document #375)	**12-May-2016, Letter from the CEA Agency:** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review.* *The Crown will be using the Review Panel process to the extent possible to collect information about potential impacts to the exercise of Tsawout's rights from the Project and marine shipping associated with the Project and we encourage you to provide your perspective on this topic to the Review Panel."*		
Tsawout-21.10	Requested that VFPA assess the adverse effects of shipping associated with the Project on the current use of lands and resources for traditional purposes for each First Nation or by group, in respect of their unique marine use patterns and rights. Stated that this approach should also be followed in the rights section (9.5.11), given that there are several different rights frameworks contiguous with the study areas. Stated that First Nations have different subsistence economies, resource use patterns, territories, rights regimes, etc. A biophysical effect on a species at a particular locale might have different magnitudes of	16-Dec-2015, Letter to the CEA Agency (CEAR Document #375)	**12-May-2016, Letter from the CEA Agency:** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in Response to IR10-13:** The VFPA's response to IR10-13, as requested by the Review Panel, provides additional information concerning the rationale for the effects assessment conclusions. **Addressed in Response to IR10-15:** The VFPA's response to IR10-15, as requested by the Review Panel, further discusses potential effects to the quality of the Current Use experience resulting from marine shipping associated with the project.	**Information Requests** Response to Sufficiency Information Request #13 (IR10-13) Response to Sufficiency Information Request #15 (IR10-15)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	effect on current use for different First Nations.				
Tsawout-21.11	Commented on Draft RBT2 AIEIS - Pg. 1 Description of WSÁNEĆ Nation Stated that the VFPA's description "together, these five groups are known as 'the *WSÁNEĆ* Nation' and are referred to collectively as such herein" messily conflates a number of interrelated issues such as ethnicity and political alliance. Semiahmoo should be referenced, and other Sencoten-speaking communities, such as the Lummi. It is recommended that the VFPA go with the description provided to it by the *WSÁNEĆ*. Additionally, references to the bands as "groups" is somewhat confusing.	20-Jan-2017, Letter	**10-Feb-2017, Letter from the VFPA:** *"Comment #1: AIEIS Section 1.1 has been revised to include a description of the WSÁNEĆ Nation as provided in the WSÁNEĆ Study. Additional ethnographic information, including the relationship of Semiahmoo First Nation and the Lummi to the WSÁNEĆ Nation, is included in EIS Section 32.2 and MSA Section 9.5.* *Throughout the AIEIS, references to the WSÁNEĆ bands as 'groups' have all been changed to 'bands', except where the WSÁNEĆ report is directly quoted and the term 'groups' is used."*		**EIS** 32.2 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including the Current Use of Lands and Resources for Traditional Purposes **MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4.1 Tsawout First Nation **AIEIS** 1.0 Introduction
Tsawout-21.12	Commented on Draft RBT2 AIEIS - Pg. 53 Indicators Chosen for Rights and Current Use Assessment Stated that the indicators chosen by VFPA – access to preferred Current Use locations; Availability of preferred Current Use resources; Quality of preferred Current Use resources; and Quality of Current Use experience – do not facilitate such an analysis of impacts to their Aboriginal rights. Stated that the *WSÁNEĆ* had no input into the selection of VCs or indicators. The notions of "practice, traditions, and custom" are essential ideas to examining effects on Aboriginal rights, because it is through practices that Aboriginal rights acquire their unique character.	20-Jan-2017, Letter	**10-Feb-2017, Letter from the VFPA:** *"Comment #13: The assessment of potential effects on the "current use of lands and resources for traditional purposes" (Current Use) is a statutory requirement under subsection 5(1)(c) of the CEAA, 2012, which uses this language to denote traditional use (i.e., a continuum of past, present, and future use for traditional purposes).* *The assessment of potential impacts on the exercise of rights is a common law requirement of the Crown pursuant to the duty to consult and accommodate, rooted in Section 35 of the Constitution Act, 1982. Given these differing requirements, the Updated EIS Guidelines draws a distinction between the assessment of Current Use and the assessment of rights.* *This distinction is described in EIS Section 32.1 and has been applied to the assessments in EIS Section 32.0, MSA Section 9.5, and AIEIS Section 7.0. Notwithstanding that distinction, the description of "existing" or current conditions of use presented in AIEIS Section 7.2.4 understands traditional use as lying along a continuum of past, present, and future use. As explained in AIEIS Section 7.2.4, information on past use was included to help "support an understanding of the context in which any*		**EIS** 27.0 Human Health (revised June 2016) 32.1 Component Overview and Regulatory Setting 32.2 Current Use of Lands and Resources for Traditional Purposes 32.2.1 Indicators 32.2.4 Existing Conditions 32.2.6.3 Potential Effect 3: Changes in Quality of Preferred Current Use Resources 32.2.7.3 Mitigation Measure #3: Changes in Quality of Preferred Current Use Resources **MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4 Existing Conditions **AIEIS** 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including the

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	The heart of the thing that we need to have understanding about – how will the project affect the ability of W̲SÁNEĆ to exercise their rights in the event the Project goes ahead, is no clearer than it was before. In their review of the document, the W̲SÁNEĆ suggested that the VFPA needs to tell them in very clear terms, as part of this assessment, all the ways in which this project will affect their Douglas Treaty rights to "fish as formerly."		*incremental effects to Current Use may occur [as presented in AIEIS Section 7.2.6]; it also serves to provide an understanding of use that grounds, or has the potential to ground, the exercise of Aboriginal rights, including title, and treaty rights. The descriptions of existing conditions also include information regarding desired future use, where such information was provided to the VFPA by Tsawout First Nation, Pauquachin First Nation, Tsartlip First Nation, Tseycum First Nation, or Malahat Nation." This approach is reiterated in the rights analysis (AIEIS Section 7.3.2).* *The VFPA is of the view that information provided by W̲SÁNEĆ to the VFPA to date regarding W̲SÁNEĆ perspectives on access to locations in the Project area for the exercise of rights; the availability and quality of resources in the Project area for the exercise of rights; and the quality of experience while exercising or tied to the exercise of rights in the Project area, has therefore been described in existing conditions sections of both MSA Sections 9.5.4.1 through 9.5.4.4) and Section 7.2.4.* *The VFPA is also of the view that the Current Use indicators selected for the assessment of potential effects on Current Use also account for potential impacts to W̲SÁNEĆ practices, customs, or traditions associated with the exercise of asserted or established rights, where information on these practices, customs, or traditions was provided by W̲SÁNEĆ to the VFPA. The assessment of potential Project-related effects on W̲SÁNEĆ asserted and established rights, including Douglas Treaty rights to fish as formerly, are specifically addressed in AIEIS Section 7.3.* *The rationale for the selection of indicators is presented in EIS Section 32.2.1, as cross-referenced in AIEIS Section 7.2.1. In relation to the example provided in the comment regarding the "Quality of Preferred Current Use Resources" indicator, and specifically the concern regarding perception of quality of those resources, the rationale for the selection of that indicator, as presented in EIS Section 32.2.1, states: "Considers changes to the real or perceived quality of preferred Current Use resources…" (p. 32-17). Perceived issues with the quality of resources, from the perspective of Indigenous groups (as presented in EIS Section 32.2.4), is directly addressed in the discussion of potential effects on the quality of preferred Current Use resources (see EIS Section*		Current Use of Lands and Resources for Traditional Purposes 7.2.1 Indicators 7.2.4 Existing Conditions 7.2.7 Mitigation Measures 7.3.2 Results of the Rights Assessment

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			32.2.6.3, p. 32-108). The WSÁNEĆ were specifically asked to provide their perspectives on changes in the quality of resources (among other things) through consultation with the VFPA and through WSÁNEĆ studies funded by the VFPA. All information provided by WSÁNEĆ to the VFPA regarding WSÁNEĆ perspectives on quality of resources in the Project area was incorporated into AIEIS Section 7.2.4. *While incremental Project-related changes in the measurable quality of marine resources that have been identified as currently or formerly harvested in or near the Project area by WSÁNEĆ for traditional purposes are not expected, the mitigation measures proposed in EIS Section 32.2.7.3 to address perception of issues with quality of resources, and specifically those identified in EIS Section 27.0 Human Health, have also been applied to the WSÁNEĆ, per the analysis in AIEIS Section 7.2.7."*		
Tsawout-21.13	Commented on Draft RBT2 AIEIS - Pg. 54 Existing Conditions (Current Use) The VFPA's [separating] of the material supplied by the WSÁNEĆ together into four sections — one for each "band" – doesn't work. It results in statements sourced to bands who did not make those statements. VFPA writes "while the VFPA recognizes that the study information may therefore apply equally to all WSÁNEĆ groups, descriptions of existing conditions have been supplied for each of the four WSÁNEĆ groups that collaborated on the WSÁNEĆ Study" (Tsawout, Pauquachin, Tsartlip, and Tseycum) and for Malahat. As a solution, it is suggested that the VFPA redrafts the WSÁNEĆ section to clarify who the WSÁNEĆ are, following the community WSÁNEĆ report (2016) more closely. Secondly, the existing conditions sections for the bands should be blended into one section. Where the VFPA wishes to	20-Jan-2017, Letter	**10-Feb-2017, Letter from the VFPA:** *"Comment #14: A description of who the WSÁNEĆ are and their relationship to each other and to the Semiahmoo First Nation and Lummi Nation has been referenced in EIS Section 32.2.4 and MSA Section 9.5.4 (EIS Section 32.2.4.3, MSA Sections 9.5.4.1 and 9.5.4.3). Building on this previously provided information, the AIEIS reiterates who the WSÁNEĆ are and their relationship to each other in AIEIS Section 7.1.1 and in the introduction to AIEIS Section 7.2.4, where the WSÁNEĆ Study is directly referenced and quoted.* *While the relationship between the WSÁNEĆ bands is acknowledged in the AIEIS, each band was identified separately by the CEA Agency in Section 17.5 of the Updated EIS Guidelines and in its direction to the VFPA in January 2016. The VFPA has been consulting with each WSÁNEĆ band on the Project separately and has received no direction from the WSÁNEĆ that they wish to consult collectively. Through individual meetings with each WSÁNEĆ band, the VFPA has received information specific to each band. Based on direction from the CEA Agency and the structure of the MSA, which identifies or describes each band separately, the AIEIS was structured to be consistent with the way information has been previously supplied to the CEA Agency, and subsequently, the Panel.* *Information in the WSÁNEĆ Study, received by the VFPA in October 2016, was thoroughly incorporated into draft Current Use summaries*		**EIS** 32.2 Current Use of Lands and Resources for Traditional Purposes 32.2.4 Existing Conditions 32.2.4.3 Semiahmoo First Nation **MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4 Existing Conditions 9.5.4.1 Tsawout First Nation 9.5.4.3 Tsartlip First Nation **AIEIS** 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including the Current Use of Lands and Resources for Traditional Purposes 7.1.1 Aboriginal Groups 7.2.4 Existing Conditions

	add in additional material derived from its contacts with individual bands, it should do so. The text would simply move back and forth between the general *WSÁNEĆ* view to the specific band-level view. This would result in a more readable and more accurate report.		*that had already been developed for each band based on information received through consultation, which has yielded unique information and perspectives from each band. Descriptions common to all subsections within AIEIS Section 7.2.4 were only used where it was reasonably clear the information applied to all WSÁNEĆ bands. If there are common descriptions that do not apply to specific bands, the VFPA is receptive to receiving specific information that helps the VFPA understand to which bands they do not apply, either in whole or in part.* *The VFPA notes that WSÁNEĆ are at liberty to submit the WSÁNEĆ Study to the Panel if there is a preference to share the information on the WSÁNEĆ Nation as a collective."*		
Tsawout-21.14	Commented on Draft RBT2 AIEIS - Pg. 58 Reefnetting (Current Use) Please include more information on the *WSÁNEĆ* revival of reef-netting.	20-Jan-2017, Letter	**10-Feb-2017, Letter from the VFPA:** *"Comment #15: The revival of reef-netting has been described in relation to WSÁNEĆ in MSA Section 9.5.4 (see Sections 9.5.4.1 through 9.5.4.4) and in AIEIS Section 7.2.4, drawing on several sources of information, including meetings between the VFPA and the WSÁNEĆ bands. If there is specific information about the revival of reef-netting that WSÁNEĆ bands feel is missing from the AIEIS, the VFPA is receptive to receiving that information. At this time, the VFPA is of the view the information contained in the MSA and the AIEIS is sufficient to inform the Panel about the practice and revival of reef-netting among WSÁNEĆ."*		**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4 Existing Conditions **AIEIS** 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including the Current Use of Lands and Resources for Traditional Purposes 7.2.4 Existing Conditions
Tsawout-21.15	Commented on Draft RBT2 AIEIS - Pg. 58 Marine Vegetation (Current Use) Fishing stations were villages that were occupied for the majority of the year; *WSÁNEĆ* people conducted all of their traditional land and marine use activities from those locations, and would have harvested over a wide region centered on the village sites. In identifying their village sites, harvesting of other resources in the surrounding area is of course assumed.	20-Jan-2017, Letter	**10-Feb-2017, Letter from the VFPA:** *"Comment #16: AIEIS Section 7.2.4 explains, for each WSÁNEĆ band, that use of marine vegetation for traditional purposes is described in the MSA, which focused on such use in the marine shipping area. AIEIS Section 7.2.4 also explains that harvesting of marine vegetation by each band in the Project area (which lies north of the marine shipping area) "was not identified in sources reviewed" for either the MSA or the AIEIS. If there is specific information regarding the harvesting of marine vegetation (e.g., species targeted in the Project area or the area affected by the Project and the timing and frequency of such harvesting), the VFPA is receptive to receiving this information, which the VFPA has previously requested from each WSÁNEĆ band."*		**AIEIS** 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including the Current Use of Lands and Resources for Traditional Purposes 7.2.4 Existing Conditions

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsawout-21.16	Commented on Draft RBT2 AIEIS - Pg. 81 Expected Conditions (7.2.5) (Current Use) The VFPA, both here and in the main EIS (Section 32.2.5) uses the existing conditions as described in the WNA as its baseline against which to assess future project effects, rather than the conditions at the time the project would likely proceed, were it to be permitted. As its assessment, the VFPA imagines a future in which the existing conditions continue, and adds the Project in. However, there is no description of future conditions without the Project, which is an important part of a full assessment picture. The VFPA notes that its assessment logic – i.e., the analysis it uses, or technique, to arrive at conclusions about whether the project will affect the W̲SÁNEĆ and how – is reproduced from Section 32.2.6 of the EIS and is also used in the Marine Shipping Addendum (7.2.6, p. 82). I have already noted above that, in my opinion, the VFPA's indicators are flawed because they do not include practices, customs, or traditions, especially practices which are Treaty rights.	20-Jan-2017, Letter	**10-Feb-2017, Letter from the VFPA:** *"Comment #17: The methods applied in the Current Use assessment follow the methodology adopted for the assessment of effects on VCs.* *EIS Section 32.2.5 acknowledges that other projects and activities could contribute to potential effects on Current Use in the future without the Project, and a detailed description of these projects and activities, as well as their interactions with Current Use, is provided in this section. The rationale for assessing potential effects of the Project on Current Use (qualitatively) against "existing" rather than "expected" conditions (future without the Project) is also explained in EIS Section 32.2.5 (pp. 32-97 to 32-99), and cross-referenced in AIEIS Section 7.2.5.* *See the response above to Comment #13 regarding the concern that the indicators do not account for practices, customs, or traditions associated with the exercise of asserted or established rights."*	**Additional information provided by the VFPA:** **10-Feb-2017, Letter from the VFPA:** *"Comment #13: The assessment of potential effects on the "current use of lands and resources for traditional purposes" (Current Use) is a statutory requirement under subsection 5(1)(c) of the CEAA, 2012, which uses this language to denote traditional use (i.e., a continuum of past, present, and future use for traditional purposes). The assessment of potential impacts on the exercise of rights is a common law requirement of the Crown pursuant to the duty to consult and accommodate, rooted in Section 35 of the Constitution Act, 1982. Given these differing requirements, the Updated EIS Guidelines draws a distinction between the assessment of Current Use and the assessment of rights. This distinction is described in EIS Section 32.1 and has been applied to the assessments in EIS Section 32.0, MSA Section 9.5, and AIEIS Section 7.0.* *Notwithstanding that distinction, the description of "existing" or current conditions of use presented in AIEIS Section 7.2.4 understands traditional use as lying along a continuum of past, present, and future use. As explained in AIEIS Section 7.2.4, information on past use was included to help "support an understanding of the context in which any incremental effects to Current Use may occur [as presented in AIEIS Section 7.2.6]; it also serves to provide an understanding of use that grounds, or has the potential to ground, the exercise of Aboriginal rights, including title, and treaty rights. The descriptions of existing conditions also include information regarding desired future use, where such information was provided to the VFPA by Tsawout First Nation, Pauquachin First Nation, Tsartlip First Nation, Tseycum First Nation, or Malahat Nation." This approach is reiterated in the rights analysis (AIEIS Section 7.3.2).* *The VFPA is of the view that information provided by W̲SÁNEĆ to the VFPA to date regarding W̲SÁNEĆ perspectives on access to locations in the Project area for the exercise of rights; the availability and quality of resources in the Project area for the exercise of rights; and the quality of experience while exercising or tied to the exercise of rights in the Project area, has therefore been described in existing conditions sections of both the MSA (Sections 9.5.4.1 through 9.5.4.4) and the AIEIS (Section 7.2.4).* *The VFPA is also of the view that the Current Use indicators selected for the assessment of potential effects on Current Use also account for potential impacts to W̲SÁNEĆ practices, customs, or traditions associated with the exercise of asserted or established rights, where information on these practices, customs, or traditions was provided by W̲SÁNEĆ to the VFPA. The assessment of potential Project-related effects on W̲SÁNEĆ asserted and established rights, including Douglas Treaty rights to fish as formerly, are specifically addressed in AIEIS Section 7.3.* *The rationale for the selection of indicators is presented in EIS Section 32.2.1, as cross-referenced in AIEIS Section 7.2.1. In relation to the example provided in the comment regarding the "Quality of Preferred Current Use Resources" indicator, and specifically the concern regarding perception of quality of those resources, the rationale for the selection of that indicator, as presented in EIS Section 32.2.1, states: "Considers changes to the real or perceived quality of preferred Current Use resources…" (p. 32-17). Perceived issues with the quality of resources, from the perspective of Indigenous groups (as presented in EIS Section 32.2.4), is directly addressed in the discussion of potential effects on the quality of preferred Current Use resources (see EIS Section 32.2.6.3, p. 32-108). The W̲SÁNEĆ were specifically asked to provide their perspectives on changes in the quality of resources (among other things) through consultation*	**EIS** 27.0 Human Health (revised June 2016) 32.1 Component Overview and Regulatory Setting 32.2 Current Use of Lands and Resources for Traditional Purposes 32.2.1 Indicators 32.2.4 Existing Conditions 32.2.6.3 Potential Effect 3: Changes in Quality of Preferred Current Use Resources 32.2.7.3 Mitigation Measure #3: Changes in Quality of Preferred Current Use Resources 32.2.5 Expected Conditions **MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4 Existing Conditions **AIEIS** 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including the Current Use of Lands and Resources for Traditional Purposes 7.2.1 Indicators 7.2.4 Existing Conditions 7.2.5 Expected Conditions 7.2.7 Mitigation Measures 7.3.2 Results of the Rights Assessment

				with the VFPA and through WSÁNEĆ studies funded by the VFPA. All information provided by WSÁNEĆ to the VFPA regarding WSÁNEĆ perspectives on quality of resources in the Project area was incorporated into AIEIS Section 7.2.4. *While incremental Project-related changes in the measurable quality of marine resources that have been identified as currently or formerly harvested in or near the Project area by WSÁNEĆ for traditional purposes are not expected, the mitigation measures proposed in EIS Section 32.2.7.3 to address perception of issues with quality of resources, and specifically those identified in EIS Section 27.0 Human Health, have also been applied to the WSÁNEĆ, per the analysis in AIEIS Section 7.2.7."*	
Tsawout-21.17	Commented on Draft RBT2 AIEIS - Pg. 83 Calculation of "displacement" Effects in 7.2.6.1 (Current Use) The VFPA predicts a certain amount of "displacement" of harvesters from the area of the Project as a result of Project construction and operation, but they go no further in describing the effects of displacement on areas outside the project area, other users, or on other aspects of the Environment. If harvesters are displaced from the project area – or the shipping lanes – they will move their harvesting activity elsewhere: this effect, and the effects that arise from it, including increased competition for resources, are direct effects of the Project and are currently not accounted for. These effects will occur and will adversely impact the *WSÁNEĆ*. This problem cuts across the EIS and the Marine Shipping Addendum. If the VFPA is aware of the likelihood of a direct effect of the Project, that effect should be described, and the area in which it is likely to occur should be included in the study area for that VC. That is why we used a slightly larger study area in the *WSÁNEĆ* report.	20-Jan-2017, Letter	**10-Feb-2017, Letter from the VFPA:** *"Comment #18: The "displacement of harvesters from the area of the Project" is predicted in the EIS in relation to crab harvesting for traditional purposes by certain Indigenous groups for whom the area is, and has been, a primary crab harvesting area for traditional purposes (see the response to Comment #5 regarding commercial crab harvesting displacement). In the MSA, the potential displacement effect on Current Use relates to incremental ship pass bys within established shipping lanes in the marine shipping area, where ship pass bys are already occurring and where WSÁNEĆ report continued use for traditional purposes.* *Based on information provided by WSÁNEĆ bands, the incremental displacement effect on crab harvesting in the area of the Project (or on cultural heritage associated with accessing this location for this purpose) is not predicted to apply to WSÁNEĆ bands, as explained in the AIEIS (see Sections 7.2.6 and 7.3.3). The WSÁNEĆ may wish to consult the VFPA's response to AIR-12.04.15-29 for further information regarding the VFPA's rationale for describing these effects as either negligible (not measurable) or measurable for a given Indigenous group. The assessment's conclusion notwithstanding, the VFPA has indicated a desire to continue to consult the WSÁNEĆ in relation to the Project (see AIEIS Sections 7.2.7 and 7.3.3).* *Based on information provided by WSÁNEĆ bands, the incremental displacement effect as a result of Project-associated ship pass-bys within established shipping lanes (and on cultural heritage associated with accessing this location) in the marine shipping area is predicted to apply to WSÁNEĆ bands, as explained in the MSA (see Sections 9.5.5.2 and 9.5.11.2) and in the VFPA's response to MSA IR-02.24.16-2.*	**Additional information provided by the VFPA:** **10-Feb-2017, Letter from the VFPA:** *"Comment #5: As indicated in EIS Section 21.7.5, it is anticipated that crab licensees who have been using marine waters that overlap with the marine waters of the proposed navigational closure expansion and the new terminal footprint would shift crab harvesting activity to the west; i.e., the marine waters of the open area near the western boundary of the proposed navigational closure expansion during construction and operations.* *As described in EIS Section 21.1.1 and shown in EIS Figure 21-6, a navigational closure area was put in place in the vicinity of the Roberts Bank terminals and the BC Ferries Terminal on January 1, 2009 to ensure and maintain a safe approach for deep-sea vessels, ferries, and berthing tugs transiting in and out of the Roberts Bank terminals and BC Ferries Terminal. A similar process occurred with the establishment of the navigational closure area in 2009, whereby commercial crab licensees relocated their harvesting activities from inside the area affected by the navigational closure to the open area near the closure's western boundary.* *As indicated in EIS Section 16.0, the assessment of potential Project-related effects on the ongoing productivity of commercial, recreational, and Aboriginal fisheries was undertaken. EIS Section 16.3.1 presents the spatial boundaries (EIS Figures 16-1 and 16-2), where the ongoing productivity of commercial, recreational, and Aboriginal fisheries was assessed. As indicated in EIS Section 21.7.5, the assessment considered effects in the form of greater competition due to the re-located activity anticipated for crab harvesters who currently use the area along the new western boundary. This competition could take the form of greater effort (although current Area I management rules, such as trap and haul limits, constrain this avenue) and gear conflicts.* *It is expected that the proposed navigational closure expansion would not apply to crab harvesting for food, social, or ceremonial (FSC) or domestic purposes by Indigenous groups, but would apply to Indigenous groups and persons harvesting under an individual commercial or communal commercial crab licence.* *EIS Section 21.8 outlines the proposed mitigation measures, and the VFPA's commitment to work with DFO to ensure that consultation with commercial crab harvesters and Indigenous groups is undertaken. Where identified and agreed upon through this consultation process, the VFPA will work with DFO and commercial crab harvesters and Indigenous groups to implement additional mitigation measures to address effects from displacement of commercial crab harvesting associated with the proposed navigational closure expansion during construction and operation. This commitment was reiterated in AIEIS Section 3.3."*	**EIS** 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries 16.3.1 Spatial Boundaries 21.0 Marine Commercial Use 21.1.1 Marine Fish and Seafood Harvesting and Guided Sport Fishing Figure 21-6 Commercial Crab Harvesting Activity Areas and Navigational Closure Area 21.5.1.1 Seafood Harvesting 21.7.5 Seafood Harvesting – Potential Effect #1 – Changes in Area, Harvest and Revenue 21.8 Mitigation Measures **MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4 Existing Conditions **AIEIS** 3.0 Marine Commercial Use Assessment 3.3 Mitigation Measures 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including the Current Use of Lands and Resources for Traditional Purposes 7.2.6 Future Conditions with the Project – Potential Project- Related Effects 7.3.3 Mitigation Measures **Information Requests** Response to Additional Information Request #29 (AIR-12.04.15-29 of CEAR Document #388)

			Mitigation measures to address this potential incremental effect are also identified."		Response to Additional Information Request #2 (MSA IR-02.24.16-2 of CEAR Document #386)
Tsawout-21.18	Commented on Draft RBT2 AIEIS - Pg. 82 onward: Calculation of "levels and frequencies" throughout Effects Assessment (Current Use) The VFPA erroneously uses the information it was able to glean on *WSÁNEĆ* marine use or which was supplied to it to inform its effects assessment, in particular to arrive at conclusions about the intensity of *WSÁNEĆ* marine and land use in the area of the Project, which it characterizes in terms of "levels and frequencies." [Sited examples]. It is unclear what the VFPA means by its repeated assertions that *WSÁNEĆ* use is "infrequent" and occurring at "low levels." The information provided to it by the *WSÁNEĆ* cannot be used to quantify use in the area of the Project in terms of intensity, levels, or frequency of harvest. The information, gathered from life-world interviews and then visualized on maps, is qualitative. The fact that it has been represented on maps in no way makes it quantitative data capable of supporting this kind of analysis. There is nothing in it to suggest "levels" or frequency of harvest, or size of user group relative to the population as a whole: it is not known how many active harvesters there are in the communities, nor how many of them use the Project area. The interviews are not a representative sample for the rest of the community population (which, in any	20-Jan-2017, Letter	**10-Feb-2017, Letter from the VFPA:** *"Comment #19: As required by the Updated EIS Guidelines, AIEIS Section 7.2.4 describes information, where provided to the VFPA by WSÁNEĆ bands, that would assist the Panel in understanding intensity of use. For example, per section 17.5 of the Updated EIS Guidelines, the assessment endeavours to provide information on "types, number, size and capacity of fishing vessels used in the area, gear types, and existing interactions with shipping," "commercial, recreational and aboriginal fisheries statistics (e.g., species, annual catch and number of licences)." The VFPA requested this information from WSÁNEĆ bands.* *The Updated EIS Guidelines also requires the assessment to distinguish between interactions that could potentially result in measurable effects from those that are not expected to be measurable (i.e., negligible effects) and why. As described in EIS Section 32.2.5, "Potential Project-related effects to Current Use have…been described based on a qualitative assessment of change from existing conditions," as these were understood by the VFPA at the time of filing. In the responses to AIR-12.04.15-30 and MSA IR-02.24.16-2, the qualitative nature of this assessment is further explained, providing clarification on the meaning of "negligible" and "measurable" in the Current Use assessment. Cross-references to these responses are provided in AIEIS Sections 7.2.6 and 7.3.2.* *With regard to the use of "infrequent" and "low levels" in the AIEIS, the AIEIS employs this terminology specifically in relation to crab harvesting for traditional purposes by WSÁNEĆ (see AIEIS Sections 7.2.6.1, p. 84 and 7.2.6.4, pp. 86 and 87). As described in the WSÁNEĆ Study and recounted in AIEIS Section 7.2.4, one WSÁNEĆ harvester reported a crab fishing area in the WSÁNEĆ Study's local study area that he said he frequented with his grandfather. The band affiliation of this harvester was not identified in the WSÁNEĆ Study. As also reported in AIEIS Section 7.2.4, Tseycum First Nation informed the VFPA that they have harvested crab in the Tsawwassen Water Lots on either side of the BC Ferries Terminal causeway, and that they require a Tsawwassen First Nation Member to be with them while using*		**EIS** 32.2 Current Use of Lands and Resources for Traditional Purposes 32.2.5 Expected Conditions **AIEIS** 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including the Current Use of Lands and Resources for Traditional Purposes 7.2.4 Existing Conditions 7.2.6.1 Access to Preferred Current Use Locations 7.3.2 Results of the Rights Assessment **Information Requests** Response to Additional Information Request #30 (AIR-12.04.15-30 of CEAR Document #388) Response to Additional Information Request #2 (MSA IR-02.24.16-2 of CEAR Document #386)

	case, is too small for a statistically representative sample) and one cannot determine rates or levels of use based on their information. Although it might have been possible to gather information that could support an analysis like this, through a harvest study, for example, it would have required much more time and resources. The information describes use of an area by a certain number of individuals, their history with the area, and the cultural values associated with it. This narrative is a representation of some aspects of *W̲SÁNEĆ* knowledge of and relationships with the Project area. The findings of "negligible" effect have been arrived at by incorporating the notion that *W̲SÁNEĆ* use of the area is at a low level and infrequent. Since the data is silent on this, the VFPA's conclusions are flawed.		*these areas. Specific information about how many crab may have been harvested at Roberts Bank, while requested, was not provided, but the context of the information suggested it was not occurring at a frequency or at levels that would be expected to experience a measurable displacement effect based on information available to the VFPA. See AIEIS Section 7.2.6.1 and the response to AIR-12.04.15-30 for further details."*		
Tsawout-21.19	Commented on Draft RBT2 AIEIS - Moreover, the information provided by Tsawout First Nation in the Trans Mountain review militates against this interpretation, in demonstrating that a small number of "providers" may be gathering a large quantity of some marine resources relied upon by the community, and that this may be a traditional structure of the *W̲SÁNEĆ* communities. If you interpret the activities of these providers through GIS data alone, you miss all the nuance and context of what's going on. Further, there is an inherent	20-Jan-2017, Letter	**10-Feb-2017, Letter from the VFPA:** *"Comment #20: With regard to the comment that there is a small number of providers gathering a large quantity of some marine resources relied upon by the community, this element of W̲SÁNEĆ resource reliance was described in the MSA (e.g., MSA Section 9.5.4.1). As residual effects on Current Use were predicted as a result of a potential accident and malfunction in the MSA (see Section 10.5.13), this element was also considered when developing the concept of resiliency (or sensitivity to further change) applied in characterisation of residual effects on Current Use, and determination of significance of those effects.* *The W̲SÁNEĆ Study was reviewed carefully by the VFPA to identify additional information regarding Current Use and the exercise of rights in the Project area not captured in the MSA or sources reviewed for that addendum. This information was incorporated into the existing*	**Additional information provided by the VFPA:** **10-Feb-2017, Letter from the VFPA:** *"Comment #21: The approach to the assessment of cumulative effects on Current Use in the EIS and AIEIS follows the approach adopted for VCs. These methods are described in EIS Section 8.0, and were further explained in the response to IR-7.31.15-13 and AIR-12.04.15-13. The VFPA notes that it is not a requirement of the Updated EIS Guidelines to assess the cumulative effects of other projects and activities (past, present, or future) unless the Project itself is expected to contribute to those cumulative effects; however, changes over time were considered in the assessment, as those cumulative effects over time are reflected in existing conditions that are seen today. A description of cumulative effects to date on components of the natural environment upon which Current Use depends can be found in Part 3 of the response to AIR-12.04.15-13, Schedule 13.* *All information provided by W̲SÁNEĆ to the VFPA regarding W̲SÁNEĆ perspectives on cumulative effects in W̲SÁNEĆ marine territory over time has been described in existing conditions sections of the MSA and the AIEIS. This information includes W̲SÁNEĆ perspectives on changes to the environment and ability to use and exercise rights within and around the Project.* *While potential Project-related incremental effects on Current Use by W̲SÁNEĆ are not predicted in the AIEIS based on limited reported use of the Project area*	**EIS** 32.2 Current Use of Lands and Resources for Traditional Purposes 32.2.7 Mitigation Measures **MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4 Existing Conditions 9.5.4.1 Tsawout First Nation 10.0 Potential Accidents or Malfunctions 10.5.13 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights **AIEIS – WSÁNEĆ Nation** 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including the

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	vulnerability in such a system that needs to be taken into account in any effects assessment. In other EA processes where proponents have confronted this problem – that the qualitative information on traditional use does not support quantitative analysis – they have made better efforts to incorporate the perspectives of the Indigenous group in the existing conditions descriptions and in the analysis and characterization of effects, or they have described the effects qualitatively and stated that no significance determination could be made. It is recommended that the VFPA address the issues both with the characterization of *W̲SÁNEĆ* use and the effects analysis. In addition, the VFPA should commit to follow-up and monitoring programs specifically to address uncertainty in its effects prediction (and therefore the mitigation).		*conditions descriptions of AIEIS Section 7.0, using as much as possible the words and expression used in the W̲SÁNEĆ Study.* *While the W̲SÁNEĆ Study was incorporated wherever possible into the AIEIS, the assessment of potential Project-related effects was based on multiple avenues of inquiry, including direct consultation by the VFPA with representatives of each of the W̲SÁNEĆ bands, some of whom stated that use was not currently occurring in the Project area. Notwithstanding those statements, as reviewed in the response below to Comment #21, desired future use (based on past use) was considered in the assessment.* *As explained in the response above to Comment #19, the assessment of potential Project-related effects was qualitative not quantitative, and explicitly acknowledged that the descriptions of traditional (past, present, future) use described in AIEIS Section 7.2.4 were not considered by the VFPA to be exhaustive (see p. 56). Additional caveats regarding the information informing the assessment was also provided in the EIS (e.g., see EIS Section 32.2.2 with regard to assessment boundaries, which are cross-referenced in AIEIS Section 7.2.2). With regard to the comment that requests that the VFPA commit to follow-up and monitoring programs specifically to address uncertainty in its effects prediction, the VFPA notes that uncertainty in the assessment is acknowledged in AIEIS Section 7.2.7 (i.e., "Taking a precautionary approach, EIS Section 32.2.7 proposed measures to assist with confirming the conclusions of the Current Use assessment (i.e., as a means of monitoring circumstances during Project construction and operation), through ongoing engagement," p. 88). As stated in AIEIS Section 7.2.7, the VFPA has extended the measures described in EIS Section 32.2.7 to W̲SÁNEĆ."*	*(see response above to Comment #19 regarding levels and frequency of use), the AIEIS assessed potential effects for W̲SÁNEĆ based on potential future use (i.e., their expressed desire to restore or increase use based on past use), and therefore applied the mitigation measures described in EIS Section 32.2.7 to the W̲SÁNEĆ. As these measures are expected to be effective, there are no measurable residual effects predicted that could contribute to cumulative effects in the future. In accordance with the methodology for the assessment, an assessment of future incremental cumulative effects was therefore not carried out. The VFPA wishes to emphasise that the measures identified in EIS Section 32.2.7, and applied in the AIEIS, include measures that would serve to confirm the conclusions of the Current Use assessment (i.e., as a means of monitoring circumstances during Project construction and operation, through ongoing engagement with W̲SÁNEĆ bands).* *With regard to cumulative effects considerations in the EIS as a whole, the other projects and activities, including shipping activities, considered in relation to cumulative effects (where such effects were identified on VCs) are identified in EIS Section 8.0 (Table 8-8). As described in EIS Section 32.2.5, projects that had been or were being carried out in the assessment area at the time of writing the EIS were considered for their contribution to the existing conditions of Current Use, which reflect the cumulative effects to date of those past and present projects and activities. These projects and activities are described in EIS Sections 3.4.1 and 3.4.2, which describes the history of development in the Project area, and includes the projects and activities referenced in the comment. The incremental marine shipping associated with the Project (i.e., marine traffic outside VFPA jurisdiction) was also considered in the cumulative effects assessment for the Project for those VCs and components for which residual Project effects were predicted.* *See the response below to Comment #25 regarding the integration of ITK in the EIS and AIEIS.* *Comment #25: The VFPA acknowledges and is in agreement with the comment that there are multiple definitions and concepts of ITK, as stated in the responses to IR-7.31.15-08 and MSA IR-02.26.16-04.* *As also stated in these Information Request responses, the EIS and MSA (as well as the AIEIS and AIMSA) were prepared in consideration of all forms of information from Indigenous groups, including knowledge about the environment itself (defined for the purposes of this EIS as ITK), as well as knowledge about past effects on the environment, cumulative change, risk, notions of health, etc. This knowledge is included and referenced throughout the EIS, MSA, AIMSA, and AIEIS.* *The W̲SÁNEĆ bands were invited to provide any information they wished to share with the VFPA, and all information provided was considered and incorporated into the MSA, and the AIEIS.* *Comment #19 - As required by the Updated EIS Guidelines, AIEIS Section 7.2.4 describes information, where provided to the VFPA by W̲SÁNEĆ bands, that would assist the Panel in understanding intensity of use. For example, per section 17.5 of the Updated EIS Guidelines, the assessment endeavours to provide information on "types, number, size and capacity of fishing vessels used in the area, gear types, and existing interactions with shipping," "commercial, recreational and aboriginal fisheries statistics (e.g., species, annual catch and number of licences)." The VFPA requested this information from W̲SÁNEĆ bands.* *The Updated EIS Guidelines also requires the assessment to distinguish between interactions that could potentially result in measurable effects from*	Current Use of Lands and Resources for Traditional Purposes 7.2.2 Assessment Boundaries 7.2.4 Existing Conditions 7.2.7 Mitigation Measures

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				those that are not expected to be measurable (i.e., negligible effects) and why. As described in EIS Section 32.2.5, "Potential Project-related effects to Current Use have…been described based on a qualitative assessment of change from existing conditions," as these were understood by the VFPA at the time of filing. In the responses to AIR-12.04.15-30 and MSA IR-02.26.16-02, the qualitative nature of this assessment is further explained, providing clarification on the meaning of "negligible" and "measurable" in the Current Use assessment. Cross-references to these responses are provided in AIEIS Sections 7.2.6 and 7.3.2. *With regard to the use of "infrequent" and "low levels" in the AIEIS, the AIEIS employs this terminology specifically in relation to crab harvesting for traditional purposes by W̲SÁNEĆ (see AIEIS Sections 7.2.6.1, p. 84 and 7.2.6.4, pp. 86 and 87). As described in the W̲SÁNEĆ Study and recounted in AIEIS Section 7.2.4, one W̲SÁNEĆ harvester reported a crab fishing area in the W̲SÁNEĆ Study's local study area that he said he frequented with his grandfather. The band affiliation of this harvester was not identified in the W̲SÁNEĆ Study. As also reported in AIEIS Section 7.2.4, Tseycum First Nation informed the VFPA that they have harvested crab in the Tsawwassen Water Lots on either side of the BC Ferries Terminal causeway, and that they require a Tsawwassen First Nation Member to be with them while using these areas. Specific information about how many crab may have been harvested at Roberts Bank, while requested, was not provided, but the context of the information suggested it was not occurring at a frequency or at levels that would be expected to experience a measurable displacement effect based on information available to the VFPA. See AIEIS Section 7.2.6.1 and the response to AIR-12.04.15-30 for further details."*	
Tsawout-21.20	Commented on Draft RBT2 AIEIS - Pg. 90 Potential Adverse Impacts on Aboriginal and Treaty Rights and Related Interests Re: Overlap of territory and Project area Problems that have been identified in the assessment affect the section purporting to assess impacts on rights because, as the VFPA notes, the assessment on rights "relies on the summary of existing conditions of use for each W̲SÁNEĆ band…" and on "the same methods as the Current Use assessment presented above in Section 7.2, and draws forward the results of that assessment to support the analysis presented below in Section 7.3.2" (WNA, p. 90). On p. 90, the VFPA writes that "[t]he W̲SÁNEĆ nation territory is reported to	20-Jan-2017, Letter	**10-Feb-2017, Letter from the VFPA:** *"Comment #22: With regard to the concern pertaining to the reliance of the rights assessment on the descriptions of traditional use contained in AIEIS Section 7.2.4, see the VFPA's responses to Comment #13 through #21 and #23. As described in AIEIS Sections 7.2.4.1 (p. 56), 7.2.4.2 (p. 62), 7.2.4.3 (p. 68), and 7.2.4.4 (p. 73), "The W̲SÁNEĆ Study states that the RBT2 Project is entirely within W̲SÁNEĆ territory." While the VFPA is of the view that the language on p. 90 (AIEIS Section 7.3.1) is consistent with the description in the earlier sections, the text on p. 90 has been revised, based on comments received, to read: "The W̲SÁNEĆ Study states that the RBT2 Project is entirely within W̲SÁNEĆ territory (W̲SÁNEĆ Nation 2016), but Malahat Nation's Statement of Intent / Agreement-in-Principle Area (AIEIS Figure 7-2) does not overlap the Project area."*		**AIEIS** 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including the Current Use of Lands and Resources for Traditional Purposes 7.2.4 Existing Conditions 7.2.4.1 Tsawout First Nation 7.2.4.2 Pauquachin First Nation 7.2.4.3 Tsartlip First Nation 7.2.4.4 Tseycum First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	overlap the Project area (*W̱SÁNEĆ* Nation 2016)" (WNA, p. 90). VFPA should be able to simply state in clear language that their Project is within the traditional territory of the *W̱SÁNEĆ*.				

Table 22: Project Benefits

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsawout-22.1	Asked how the harvesters benefit in compensation for the effects. Asked about a Mutual Benefits Agreement.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations 19-Jun-2017, Meeting	**27-Nov-2015, Workshop:** Recorded comment for consideration by the Project team. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, including Appendix 2-B summarizing the issues raised by Tsawout First Nation and the VFPA's responses. **16-Jun-2017, Letter from VFPA:** *"The VFPA is interested in initiating discussions with Tsawout First Nation regarding potential legacy benefits from the Project. Legacy benefits are intended to benefit Indigenous groups if the Project proceeds, and would be over and above the economic benefits resulting from the Project. Examples of types of legacy benefits are: restoring fisheries, training, funding cultural initiatives, enhancing environmentally sensitive areas or revitalising aquaculture. It is our intent to develop this concept into a plan that reflect the interests, objectives and priorities of Indigenous groups involved in the RBT2 Project.* *We welcome input regarding potential legacy benefits for Indigenous groups that could be provided as part of the Project. With that in mind, we request a meeting with Tsawout First Nation to hear about your community's priorities in relation to this funding.* *In addition to general legacy benefits, the VFPA is interested in entering into direct discussions with Tsawout First Nation regarding a potential mutual benefits agreement ("MBA") for the Project."* **19-Jun-2017, Meeting:** Tsawout First Nation indicated that they would advise the VFPA when they are ready to begin MBA discussions. **23-May-2018, Letter from the VFPA:** *"On June 19, 2017, the Vancouver Fraser Port Authority ("the port authority") met with Tsawout First Nation regarding the Project; potential benefits associated with the Project, including legacy benefits and potential negotiation of a mutual benefits agreement ("MBA"); and the port authority's Habitat Enhancement Program ("HEP"). In this meeting, the port authority and Tsawout First Nation discussed next steps with respect to the consultation plan for the Project and several areas of interest to Tsawout First Nation.* *The port authority remains interested in continuing conversations with Tsawout First Nation."*	**Addressed in EIS Section 32.3.3:** The VFPA proposes to assist certain Indigenous groups in accessing potential economic opportunities resulting from the Project, including contracting opportunities as well as construction employment opportunities. The VFPA proposes to extend the same opportunities to Tsawout First Nation, Pauquachin First Nation, Tseycum First Nation, Tsartlip First Nation, and Malahat Nation. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs. **Addressed in AIEIS Appendix 2-B Table 21 (#93):** Potential effects to Indigenous fishing are assessed in EIS Sections 21.0, 24.0, and 32.2, and in AIEIS Sections 3.0 and 7.0. Proposed mitigation for effects related to Indigenous harvesting are described in the marine commercial use assessments in EIS Section 21.0 and AIEIS Section 3.0, as well as the Current Use assessments in both documents (EIS Section 32.2 and AIEIS Section 7.3). As stated in EIS Section 21.8, the VFPA will work with DFO to ensure that consultation with commercial crab harvesters and Indigenous groups is undertaken to provide a process for commercial crab harvesters and Indigenous groups to ask questions and submit concerns about the proposed navigational closure expansion and associated displacement of commercial crab harvesting, and where identified and agreed upon through this consultation process, the VFPA will work with DFO and commercial crab harvesters and Indigenous groups to implement additional mitigation measures to address effects from displacement of commercial crab harvesting associated with the Project.	**EIS** 21.0 Marine Commercial Use 21.8 Mitigation Measures 24.0 Outdoor Recreation 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.3.3 Mitigation Measures 35.0 Effects Assessment Summaries Table 35-2 Proposed Mitigation Measures and Commitments **AIEIS** Appendix 2-B Issues and Interests, Table 21 Commercial, Recreational, or Aboriginal Fisheries 3.0 Marine Commercial Use 3.3 Mitigation Measures 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 7.2.7 Mitigation Measures (Current Use) 7.3.3 Mitigation Measures (Rights)

Table 23: Underwater Noise – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsawout-23.1	Interested in being provided with additional and more detailed information about the ECHO program.	30-Jan-2017, *WSÁNEĆ* All-Chiefs Meeting (Pauquachin, Tsartlip, Tsawout, Tseycum)	**30-Jan-2017, Meeting:** Offered to provide an in-depth presentation with ECHO Program representatives who can provide more detailed information at a future date. **10-May-2017, Email from the VFPA:** Provided Tsawout with the Echo Program 2016 Annual Report, and stated that the port authority is available to provide a presentation about the program at a time convenient for the group. **19-Jun-2017, Meeting:** The VFPA met with Tsawout. The ECHO program was discussed, explaining that it is a program separate from the Project, but it does monitoring on underwater noise i.e., research on what types of ships make more or less noise, changes that can be made to limit noise. Also referenced a new incentive program with discounts that shippers can get if they generate less noise coming in to incentivise quieter ships. **12-Dec-2017, Meeting:** The VFPA met with Tsawout First Nation and provided a presentation on the ECHO program.	**Addressed in Response to IR4-10:** As noted in response to IR4-10, in 2014, the VFPA-led ECHO Program is a collaborative initiative aimed at better understanding and managing the impact of shipping activities on at-risk whales throughout the southern coast of B.C. The VFPA-led ECHO Program engages and involves key regional interested parties to maximise program success and help ensure that mitigation and management measures developed through the program are informed by social, cultural, economic, and environmental sustainability interests. The ECHO Program is guided by the advice and input of an advisory working group, and supported by a federal government advisory committee and associated technical committees. Through engagement and consultation with stakeholders, including Indigenous individuals, the ECHO Program has initiated or supported short-term projects, scientific studies, and educational initiatives to fill knowledge gaps necessary to inform the development of credible, science-based threat reduction solutions and management options to reduce cumulative effects of shipping to at-risk whales in the region. Further information about ECHO Program can be found at: https://www.portvancouver.com/environment/water-land-wildlife/echo-program/.	**Information Requests** Response to Sufficiency Information Request #10 (IR4-10 of CEAR Document #1051)

APPENDIX IR10-01-C14

PAUQUACHIN FIRST NATION: ISSUES, VIEWS, AND CONCERNS RELATED TO THE PROPOSED PROJECT AND MARINE SHIPPING ASSOCIATED WITH THE PROJECT

Table 1: Air Quality – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
PFN-1.1	Asked whether wind force was a consideration in the air quality assessment, noting that pilots can see effects.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Responded that Environment Canada asked the Vancouver Fraser Port Authority (VFPA) to do a sensitivity analysis using a data set called ACARS (aircraft communications addressing and reporting system). Explained that aircraft have monitoring data and it was used to run a sensitivity analysis, which aligned well.	**Addressed in EIS Appendix 9.2-A:** EIS Appendix 9.2-A discusses how air quality modelling used comparisons of vertical temperature and wind speed and direction to aircraft-derived data (ACARS) in support of validating meteorological model outputs. Attachment C in Appendix C of EIS Appendix 9.2-A presents the original technical analysis memo.	**Environmental Impact Statement (EIS, CEAR Document #181)** Appendix 9.2-A Roberts Bank Terminal 2 Technical Report Air Quality Study
PFN-1.2	Asked why the study area for the air quality assessment is focused east of the RBT2 footprint and if it was because of traffic associated with moving containers.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Explained that the focus was on the east side of the Roberts Bank Terminal 2 (RBT2 or Project) footprint because of meteorological conditions in the area.	**Addressed in AIEIS Appendix 2-B, Table 8 (#44):** The local study area (LSA) for the assessment of air quality included a 19 km by 16 km area, which extended beyond the RBT2 footprint as far east as Boundary Bay, south to the tip of Point Roberts, U.S.A., and north to the southern boundary of Richmond. The LSA captures the extent of emissions originating within the Project footprint. Characterisation of the existing climate and meteorological conditions in the vicinity of the Project is important because these are the main forces driving the transport (dispersion or mixing) of emissions in the atmosphere. To ensure that the meteorological conditions were adequately represented, the area over which the air dispersion model was run included all of North Delta and most of Richmond, a domain of approximately 26 km x 24 km (EIS Figure 9.2-1). The air dispersion model included site-specific meteorological data inputs, as described in Appendix C of EIS Appendix 9.2-A.	**Additional Information to the EIS – *W̲SÁNEĆ* Nation (AIEIS, CEAR Document #930)** Appendix 2-B Aboriginal Issues and Interests, Table 8 Air Quality
PFN-1.3	Concerned with air quality and pollution, and associated effects on the environment.	30-Jan-2017, *W̲SÁNEĆ* All-Chiefs Meeting (Pauquachin, Tsartlip, Tsawout, Tseycum)	**30-Jan-2017, Meeting:** Responded that there is a predicted increase in emissions because of the Project, but in the long-term there will be a decrease because of stringent standards on new trucks, and ship emissions going down. Committed to organising a technical presentation on air quality.	**Addressed in AIEIS Appendix 2-B, Table 8 (#45):** An assessment was carried out to predict potential changes in air quality as a result of the Project. A general trend of decreasing concentrations of contaminants has been observed and is expected in the Lower Fraser Valley for some criteria air contaminants, as well as for some trace organic contaminants. Hypothetical maximum emissions scenarios were used to conservatively estimate existing conditions and potential changes from the Project. Estimated emissions and predicted ambient concentrations did not account for the inclusion of shore power as part of the Project, which is expected to decrease future emissions from ships at berth, ultimately improving air quality. The assessment concludes the following: • Air quality will improve in the future, with or without the Project, as a result of improvements in engine technologies and the use of cleaner fuels; • Cumulative changes incorporating the Project and other certain and reasonably foreseeable projects and activities are predicted to be small relative to expected future ambient air quality levels; • Project construction activities are predicted to cause a small increase in concentrations of some contaminants; • Criteria air contaminant (i.e., carbon monoxide, nitrogen oxides, sulphur dioxide, particulate matter, and ground-level ozone) and trace organic contaminant (i.e., formaldehyde and other contaminants related to fuel combustion) levels are predicted to be below air quality criteria on land, with limited exceptions; • The Project is expected to have a negligible effect on future ozone levels and an increase in greenhouse gas emissions (i.e., carbon dioxide, methane, and nitrous oxide); and	**EIS** 9.2 Air Quality 9.2.5 Methods 9.2.6 Existing Conditions 9.2.8 Future Conditions with the Project 9.2.9 Future Conditions with the Project and Other Projects and Activities Appendix 9.2-A Air Quality Study Main Report **AIEIS** Appendix 2-B Aboriginal Issues and Interests, Table 8 Air Quality

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				• Although the Project activities would emit black carbon, black carbon emissions are expected to decrease in the future with the Project due to equipment fleet turnover at existing Roberts Bank terminals to newer engines that will meet more stringent emission standards for particulate matter.	
PFN-1.4	In the context of air quality, interested in how the assessment results conclude that black carbon will decrease. Expressed the view that the amount of black carbon will increase. Interested in who is responsible for regulating emission standards.	30-Jan-2017, *W̱SÁNEĆ* All-Chiefs Meeting (Pauquachin, Tsartlip, Tsawout, Tseycum),	**30-Jan-2017, Meeting:** Responded that there is a predicted incremental increase in emissions because of RBT2, but in the long-term there will be a decrease because of stringent standards on new trucks, and ship emissions going down.	**Addressed in AIEIS Appendix 2-B, Table 8 (#45):** An assessment was carried out to predict potential changes in air quality as a result of the Project. A general trend of decreasing concentrations of contaminants has been observed and is expected in the Lower Fraser Valley for some criteria air contaminants, as well as for some trace organic contaminants. Hypothetical maximum emissions scenarios were used to conservatively estimate existing conditions and potential changes from the Project. Estimated emissions and predicted ambient concentrations did not account for the inclusion of shore power as part of the Project, which is expected to decrease future emissions from ships at berth, ultimately improving air quality. The assessment concludes the following: • Air quality will improve in the future, with or without the Project, as a result of improvements in engine technologies and the use of cleaner fuels; • Cumulative changes incorporating the Project and other certain and reasonably foreseeable projects and activities are predicted to be small relative to expected future ambient air quality levels; • Project construction activities are predicted to cause a small increase in concentrations of some contaminants; • Criteria air contaminant (i.e., carbon monoxide, nitrogen oxides, sulphur dioxide, particulate matter, and ground-level ozone) and trace organic contaminant (i.e., formaldehyde and other contaminants related to fuel combustion) levels are predicted to be below air quality criteria on land, with limited exceptions; • The Project is expected to have a negligible effect on future ozone levels and an increase in greenhouse gas emissions (i.e., carbon dioxide, methane, and nitrous oxide); and • Although the Project activities would emit black carbon, black carbon emissions are expected to decrease in the future with the Project due to equipment fleet turnover at existing Roberts Bank terminals to newer engines that will meet more stringent emission standards for particulate matter. **Additional information provided by the VFPA:** Metro Vancouver, the B.C. Ministry of the Environment, and Environment Canada all have established Ambient Air Quality Objectives and Standards. As a conservative measure in the EIS, study criteria were selected based on the most stringent criteria from federal and provincial objectives or standards. Regional objectives or standards were considered for comparison purposes only. Regulatory initiatives and their incorporation in the assessment of future emissions are briefly described in EIS Section 9.2.7.1. Initiatives for specific types of engines (marine, cargo handling equipment, on-road and off-road vehicles, and rail locomotives) are discussed in more detail in EIS Appendix 9.2-A (Section 3.1.4 and Appendix A).	**EIS** 9.2 Air Quality 9.2.4 Applicable Standards and Criteria for Compounds of Potential Concern 9.2.6.2 Existing Conditions, Modelling of Existing Conditions 9.2.7.1 Regulatory Initiatives Appendix 9.2-A Air Quality Study Main Report 3.1.4 Regulatory Initiatives Appendix A – Emissions Inventory **AIEIS** Appendix 2-B Aboriginal Issues and Interests, Table 8 Air Quality

Table 2: Alternative Means of Carrying out the Project

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
PFN-2.1	Concerned that the proponent's market projections may be unrealistic, and thus that there may be no need to the Project. Requested that Canada conduct a rigorous assessment of the proponent's market projections. Stated that if Canada concludes that the proponent's market projections are reasonable and that there is indeed a need for the Project, Pauquachin First Nation seeks written rationale for that conclusion. Requested that Canada conduct a rigorous assessment of all potentially viable alternatives to this Project, including the PATH Project, and should consult with Pauquachin First Nation both during and regarding the outcome of that assessment. Stated that the submissions in the CEA Agency process to date suggest there is no need for the Project.	28-Oct-2016, Letter to Panel (CEAR Document #639)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** All levels of government have plans to capitalise on a growing global economy, which requires Canada to be prepared for the trade that will come to Canadian ports. At the Port of Vancouver, we handled a record 3.25 million 20-foot-equivalent unit containers (also called TEUs) in 2017. Historical trade figures and third-party forecasts have long signalled that the ability of west coast ports to serve this growth is becoming constrained, and by the mid-2020s we will not have the capacity to handle anticipated future growth of trade in containers at the Port of Vancouver The role of the VFPA is to ensure the port is ready for Canada's trading future. As we plan, we must consider how to provide needed port facilities within a growing metropolitan area. To date, we have partnered with industry, governments, and communities to improve road and rail networks, investing to help goods flow smoothly throughout our region. We have also consulted with local governments, Indigenous groups, and residents on the ways we can grow responsibly. Investments in increased size and improved efficiency are being, or have been, made to west coast container terminals, including recent improvements at the Port of Vancouver's Deltaport, Canada's largest container terminal, and Fairview in Prince Rupert. However, even with these investments, we will not have enough space to accommodate the shortfall in needed capacity. The RBT2 Project represents the best option to accommodate growth and is needed to deliver the capacity we need as demand for goods shipped in containers continue to grow. **Additional information provided by the VFPA in regards to independent container capacity forecasts:** Since 2011, the port authority has commissioned independent forecasts which consider many factors that influence container traffic demand, including: • Gross Domestic Product growth; • World demand for Canadian resources; • Increased consumer demand for trade with Asia; • Opening of the expanded Panama Canal; • Planned container terminal expansion at the Port of Prince Rupert; • Macroeconomic trends in North America; • North American container port demand and competitive developments; • Trends in container shipping; and • Vancouver's competitive position compared to other North American ports. The 2016 Ocean Shipping Consultants forecast shows continued growth in container trade through the west coast of Canada at a compound annual growth rate of about 4%, and reinforces the need for planned increases of capacity to ship goods in containers through the existing container terminals in Vancouver and the Fairview Terminal in Prince Rupert. The 2016 Ocean Shipping Consultants forecast also confirms that the proposed Project will be needed by the mid-2020s. **Addressed in response to IR1-06:** For each marine terminal alternative location considered in EIS Section 5.3, Table IR1-06-1 in Appendix IR1-06-A summarises the criteria used to assess technical feasibility and provides the conclusion of the feasibility assessment along with supporting rationale. To be considered technically feasible, potential	**EIS** 4.0 Project Description 5.0 Alternative Means of Carrying out the Project Description 5.7 Identification of the Preferred Means Table 5-10 Summary of Preferred Alternative Means **Information Requests** Response to Sufficiency Information Request #06 (IR1-06 of CEAR Document #897) **Ocean Shipping Consultants 2016 Container Traffic Forecast Report** http://www.robertsbankterminal2.com/wp-content/uploads/2016-Ocean-Shipping-Consultants-Container-Forecast.pdf

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				alternatives to the location of the marine terminal within B.C. needed to first meet all technical criteria (as stated in EIS Section 5.2), which included the following: • Meeting the long-term container capacity growth by the mid-2020s, through operating efficiencies and a sufficient land base to accommodate growth; • Meeting the requirement for the necessary road and rail connections to efficiently transport containers to and from the market; and • Providing the ability for larger container ships to safely navigate the waterways. Safe navigation includes a minimum berth depth requirement of approximately 18.4 m and the ability to safely turn the vessel around, even in situations of sufficient draught. In addition, consideration was given to terminals with other uses (e.g., serving bulk or break-bulk markets) and if they could retain these capabilities if conversion to container handling was undertaken. The marine terminal location alternatives evaluated (including a combination of these alternatives) were determined not to be technically feasible, and therefore, an evaluation of economic feasibility was not conducted, and an assessment of environmental effects was not required. Based on the analyses of the location alternatives (see Table IR1-06-1), RBT2 was deemed to be the only viable option to meet the anticipated long-term growth and demand of containerised trade on the west coast of Canada, and a full assessment of environmental effects on this preferred alternative was conducted and is described in the EIS. **Further information provided by the VFPA in response to alternative supply chain concepts:** Several options for how containers move through the supply chain beyond the main container terminals, such as inland ports, have been proposed as a way to increase container capacity and/or improve efficiency. Shippers will ultimately decide how best to contract supply chain options for moving cargo, and the VFPA supports any opportunity for greater efficiency. However, these options could only ever be complementary to a new container terminal, rather than replacing it, because capacity is needed to manage ship-to-shore container movements.	

Table 3: Economic Development – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
PFN-3.1	Concerned about potential impacts the Project may have on its economic interests, including potential impacts on the development potential of Pauquachin First Nation lands. Asked that their economic interests be reflected in the Marine Shipping Addendum Current Use Summary.	18-Sep-2015, Letter	**29-Oct-2015, Letter from the VFPA:** Stated that comments on the contents of the draft summary of Pauquachin First Nation's current use of lands and resources for traditional purposes (Current Use) will be considered and incorporated into the MSA. The VFPA will additionally respond to each of these concerns directly in a letter at a later date.	**Addressed in MSA Section 9.2:** As potential adverse effects due to vessel transit from Project-associated shipping on marine area displacement, access, presence of southern resident killer whales (SRKWs) and marine birds, and environmental conditions are considered to be negligible, potential effects on activities and revenue from marine-based tourism are also considered to be negligible. When all lines of evidence are considered, a negligible effect is expected for the marine-based tourism sub-component. **Addressed in MSA Appendix 5-B (#5):** The assessment of potential effects on marine commercial use (MSA Section 9.2) considers potential effects on relevant economic interests of Indigenous groups that have been identified through a review of existing information as well as information provided directly to the VFPA by Indigenous groups engaged in consultation. **Additional information provided by the VFPA:** Potential effects on all types of marine commercial use assessed were determined to be negligible. These negligible effects include changes in each of: area use and access; biophysical conditions for marine fish, invertebrates, and mammals; availability of fish and seafood; marine mammal presence; and environmental setting due to marine shipping associated with the Project. **Addressed in response to IR10-27:** The VFPA's response to IR10-27, as requested by the Review Panel, discusses potential effects of the proposed Project on existing business ventures that have been identified by Indigenous groups.	**EIS** 2.0 Project Overview **Marine Shipping Addendum (MSA, CEAR Document #316)** Appendix 5-B Aboriginal Issues and Interests 9.2 Marine Commercial Use **Information Requests** Response to Sufficiency Information Request #27 (IR10-27)

Table 4: Effects Assessment Methods (including Cumulative Effects)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
PFN-4.1	Concerned with increased marine traffic associated with RBT2, including cumulative effects. Stated that there are a number of current and proposed projects that would utilize marine shipping lanes within and near the Strait of Juan de Fuca, including this Project, the proposed Trans Mountain Expansion Project, the Neptune Terminals Upgrade Project and the Fraser Surrey Docks Upgrade Project. Stated that they share concerns raised by other parties that the proponent's cumulative impacts assessment fails to include several projects that should have been assessed. Stated that the Panel should require the proponent to expand the projects included in its cumulative effects assessment to include projects that are reasonably foreseeable, and are either not mentioned in or are mentioned in the proponent's EIS but excluded from the cumulative effects assessment, including the following projects: • the Wespac Tilbury Marine Jetty Project (a proposed LNG marine jetty), • the Woodfibre LNG Project, and • the BURNCO Aggregate Project.	18-Sep-2015, Letter 26-Nov-2015, EIS Results Workshop #1 – Saanich Nations 22-Jul-2015, Meeting 28-Oct-2016, Letter to Panel (CEAR Document #639)	**26-Nov-2015, Workshop:** Responded that if something is reasonably foreseeable then it has been considered in the cumulative effects assessment. Stated that there are projects considered within the region, both for marine shipping and for the Project. **22-Jul-2015, Meeting:** Recorded comment for consideration by Project team. **26-Apr-2016, Email from the VFPA:** Provided a copy of the 26-Nov-2015 draft meeting notes, which included a post-meeting note: Please refer to EIS Section 8.0 Effects Assessment Methods, Table 8-8 Project and Activity Inclusion List for the list of Projects included in the incremental future cumulative effects assessment. **05-Jan-2018, Email from the VFPA:** Shared information that was recently posted to the panel registry for the Project that the VFPA thought Pauquachin may find helpful. The submission to the registry (attached) came from Transport Canada, and provides more information on the Oceans Protection Plan, including the Cumulative Effects of Marine Shipping Initiative, which is a joint initiative between Transport Canada and Fisheries and Oceans Canada (DFO) to find better, more pro-active ways to look at the cumulative impacts of marine vessel activities in specific pilots sites across Canada. Copied Transport Canada on the email so that Pauquachin could follow-up directly with Transport Canada if interested.	**Addressed in EIS Appendix 7.2-B (#38):** The cumulative effects assessment takes into consideration the potential residual effects of the Project in combination with the effects of other projects and activities that have been or will be carried out, including effects on local and Indigenous communities. A review of previous studies, effects assessments, and commitments from other projects was conducted and has informed the Project's environmental assessment, as discussed in the EIS. Projects and activities contributing to existing and expected conditions in the Project area are identified and described. Information sources considered in the characterisation and assessment of each intermediate component (IC) and valued component (VC) are identified in the respective effects assessment section. **Addressed in EIS Appendix 7.2-B (#39):** The list of certain and reasonably foreseeable projects and activities that have the potential to interact cumulatively with the Project-related effects is in Table 8-8. This list includes all projects with the potential for a cumulative interaction with the Project. The Canadian Environmental Assessment Agency (CEA Agency) is the appropriate authority to address questions related to the *Canadian Environmental Assessment Act* (*CEAA*)*, 2012* and designated projects. **Addressed in MSA Appendix 5-B (#23):** The approach to the cumulative effects assessment is provided in MSA Section 6.0. Each IC and VC assessment section considers cumulative changes and cumulative effects to which the Project contributes. This entails consideration of residual effects of routine marine shipping associated with the Project, if any such effects are predicted, in combination with effects of other projects and activities that have been or will be carried out. The assessment of Current Use (MSA Section 9.5) describes how Current Use activities have been affected by other projects and activities that have been carried out. As residual effects to Current Use as a result of marine shipping associated with the Project are not predicted, an assessment of future cumulative effects was not carried out. **Addressed in MSA Appendix 5-B (#24):** The assessment of potential effects of marine shipping associated with the Project incorporates the existing vessel traffic within the marine shipping area (defined in MSA Section 4.0). The list of certain and reasonably foreseeable projects and activities considered in the cumulative effects assessment is included in MSA Appendix 6-A. **Addressed in response to IR4-09:** In responding to IR4-09, updated project status and vessel movement information is provided as available for the projects listed in the EIS and MSA (north of Segment B), plus other new	**EIS** 3.0 Geographical Setting 3.4 Projects and Activities Contributing to Existing and Expected Conditions Appendix 7.2-B Aboriginal Issues and Interests IC Effects Assessment Sections: Physical ICs (Section 9.2 through 9.8) Population (18.4) VC Effects Assessment Sections: Biophysical VCs (Sections 11.0 through 16.0) Socio-economic VCs (Sections 19.0 through 28.0) **MSA** Appendix 5-B Aboriginal Issues and Interests 6.0 Effects Assessment Approach 6.7 Cumulative Effects Assessment 7.1 through 9.4 (All IC and VC assessments) 9.5 Current Use of Lands and Resources for Traditional Purposes, and Aboriginal and Treaty Rights **Response to IR4-09 from Transport Canada to the Review Panel re: Additional information regarding the Government of Canada's Ocean Protection Plan (CEAR Document #954)**

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				projects considered to be certain or reasonably foreseeable (as of July 1, 2017). As part of this update, Woodfibre LNG Project, Wespac Tilbury Marine Jetty Project, and Neptune Terminals Coal Handling – Replacement Stacker Reclaimer vessel projections are updated. However, because the Burnco Aggregate project's activities fall outside the marine shipping area, it is not updated as part of the response.	
PFN-4.2	Asked about the ecosystem modelling and food web diagram: • Asked why chum salmon is highlighted in the food web diagram but Chinook and chum are separated out. • Asked if chum or Chinook are included in the generic salmon bucket. • Asked whether human beings could be added to the food web as part of the ecosystem, to connect Aboriginal fisheries to the salmon species, eelgrass, to determine how reliant these species and activities are on each other. • Criticised the assumption in the ecosystem modelling that current human consumption rates will be the same as future consumption rates.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	**27-Nov-2015, Workshop:** Responded that for the assessment, representative species were used to assess impacts on salmon. Chum and Chinook are used as representative species for Pacific salmon. The biomass of other species still had to be accounted for, so they were lumped into a generic salmon bucket. Stated that chum or Chinook are not in the generic bucket to avoid double counting (as these species were assessed separately). Stated that an assumption was made regarding consumption rates that were fed into the model. It was assumed that the consumption rates for today would continue. Consumption rates are difficult to predict, and are dependent on such things as use, management by DFO, etc. Responded that the VFPA will look into whether human beings can be incorporated into the model but noted that this may not be possible.	**Addressed in EIS Section 10.3:** The ecosystem model is described in EIS Section 10.3. The model incorporated predator-prey relationships (biotic factors) and environmental factors within the marine environment. Potential Project-related effects on marine fish, including all five species of Pacific salmon, are considered in the EIS. Chum and Chinook salmon are evaluated as being representative of all Pacific salmon species, as they are the most estuarine-dependent species of salmon, and therefore most likely to be affected by the Project. The model does not explicitly incorporate anthropogenic influences such as fishing. Since changes are determined by comparing productivity in the future with the Project, to the future without the Project, the level of human influence is deemed to be the same with and without the Project, and humans are not explicitly included in the food web. However, the existing conditions for species included in the model are reflective of existing harvesting levels by humans; therefore, human interaction within the model is implicit. **Addressed in response to IR3-09:** IR3-09 asked the VFPA to re-run the Roberts Bank ecosystem model to incorporate the predominant source of fishing mortality at Roberts Bank: Dungeness crab fishing. Salmon harvesting was not included as salmon harvesting occurs over large geographic areas (i.e., Gillnet Salmon Area E, Seine Net Salmon Area B, Troll Salmon Area H), and is considered limited at Roberts Bank, with only a small proportion of the salmon catch coming from areas in the periphery of or adjacent to Roberts Bank; as such, salmon fishing mortality was considered to be unlikely to influence model results. The results showed that biomass and production ratios (with/without Project) from the Roberts Bank ecosystem model re-run, including Dungeness crab fishing mortality, are generally the same when compared to the ratios described in the EIS.	**EIS** 10.0 Biophysical Setting 10.3 Overview of Assessing Ecosystem Productivity 10.3.4 Roberts Bank Ecosystem Model Predictions Appendix 10-B Roberts Bank Ecopath with Ecosim and Ecospace Model Parameter Estimates Appendix 10-C Roberts Bank Ecosystem Model Development and Key Run Appendix 10-D Roberts Bank Spatial Ecosystem Model Sensitivity Analysis **Information Requests** Response to Sufficiency Information Request #9 (IR3-09 CEAR Document #984)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
PFN-4.3	Concerned with cumulative impacts of development on the Salish Sea, including the proposed Project, and the long term health of the Salish Sea as a result of that development. Recommended establishing a Salish Sea Environmental Foundation. To better understand the cumulative impacts of development on the Salish Sea and take steps to monitor its health and recommend policy changes aimed at ensuring its long term health.	28-Oct-2016, Letter to Panel (CEAR Document #639)	The VFPA has reviewed this letter and provides the following additional information	**Additional information provided by the VFPA:** The VFPA acknowledges concerns about cumulative effects of development on the Salish Sea. Although the regulated care and control of vessels calling at the Port of Vancouver is limited to its marine jurisdiction, the VFPA is leading and encouraging several regional environmental initiatives that enhance the cumulative environmental performance of the shipping industry and port operations in and around the Salish Sea. More information on the VFPA's environmental initiatives can be found at https://www.portvancouver.com/environment/. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans Protection Plan which includes information on the *Cumulative Effects of Marine Shipping initiative*.	**https://www.portvancouver.com/environment/** **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**
PFN-4.4	Commented that proponents never state that they anticipate significant and severe effects; effects are always characterized as negligible and reversible. Requested that more information (data) be presented, so that the listener can determine whether the effect is significant or not. Disagreed with statements in the EIS that the proposed Project will not result in significant environmental effects; sizable projects like this do create significant environmental impacts. Requested clarification regarding what barometer is used for determining whether a significant environmental effect will occur.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	**27-Nov-2015, Workshop:** Acknowledged the scepticism associated with the environmental assessment process. Many projects never get off the ground because they are predicted to have significant effects, and as a result, never reach the environmental assessment phase. For RBT2, assessments were conducted on multiple design options in order to choose the option with the least impact. All predicted productivity changes, the supporting rationale, and all of the associated data are presented in the EIS.	**Addressed in AIEIS Appendix 2-B, Table 5 (#32):** As required in the *EIS Guidelines* (part 2, section 13), the EIS presents a detailed analysis of the significance of the residual environmental effects on VCs, consistent with the approach described in the CEA Agency's Reference Guide "*Determining Whether a Project is Likely to Cause Significant Adverse Environmental Effects"*. The threshold of significance is defined for each VC, taking into consideration any relevant applicable quantifiable thresholds that may be established by regulation or policy (e.g., an air or water quality limit), as well as the resilience of the VC and other factors that influence the long-term sustainability of the VC (e.g., factors affecting its population). In this regard, the key 'barometer' of significance determination is usually the long-term integrity or sustainability of the VC. The EIS describes a range of residual effects of the Project, including some that are predicted to be negligible and reversible and some that are predicted to be not reversible, not significant, or (in the case of cumulative effects on marine mammals) significant.	**EIS** 8.0 Environmental Assessment Methods 11.0 Marine Vegetation 12.0 Marine Invertebrates 13.0 Marine Fish 14.0 Marine Mammals 15.0 Coastal Birds 21.0 Marine Commercial Use 25.0 Visual Resources 26.0 Land and Water Use 27.0 Human Health (revised June 2016) 28.0 Archaeological and Heritage Resources **AIEIS** Appendix 2-B Aboriginal Issues and Interests, Table 5 Effects Assessment Methods 3.0 Marine Commercial Use 5.0 Human Health 6.0 Archaeological and Heritage Resources

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
PFN-5.1	Criticized the budget and timeline as insufficient for their review of the Marine Shipping Addendum Current Use Summary.	18-Sep-2015, Letter	**29-Oct-2015, Letter from the VFPA:** *"In your letter, you also express concern with the sources of information used by VFPA to compile the draft summary, and the amount of time and budget provided to Pauquachin First Nation to conduct a detailed review of the summary. In recent correspondence with Pauquachin First Nation, VFPA invited Pauquachin First Nation to participate in the RBT2 Project, and in this capacity, VFPA offered additional funding for participation and to support work on a Traditional Use Study.* *Comments on the contents of the draft summary of Pauquachin First Nation's Current Use of Lands and Resources for Traditional Purposes will be considered and incorporated into the [MSA]. VFPA will additionally respond to each of these concerns directly in a letter at a later date."* **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which includes MSA Appendix 5-B Aboriginal Issues and Interests.	**Addressed in MSA Appendix 5-B (#7):** The VFPA acknowledges the challenges associated with participating in consultation during summer months, and as such has been in contact with each Indigenous group about their desire to provide comments or additional information, and has extended timelines for participation into the fall in order to accommodate these expressed interests to participate. **Addressed in MSA Appendix 5-B (#8):** Concern is noted. The VFPA considers the amount of funding offered to be adequate and proportionate to the level of effort required by each Indigenous group to participate, given the scope of work. The VFPA increased the funding provided in some circumstances in response to specific requests. **Additional information provided by the VFPA:** **25-May-2015, Letter from the VFPA:** Provided information on marine shipping associated with the Project. Stated it is expected that information required for the assessment can be gathered from existing materials, and the VFPA is currently compiling information from the Trans Mountain Expansion Project Application to the National Energy Board specific to Pauquachin First Nation. Asked if there any additional current use and fisheries information that Pauquachin First Nation would like the VFPA to consider in the assessment. Noted that the VFPA plans to provide a draft summary of our understanding of Pauquachin First Nation's Current Use in the marine shipping area, based on existing information, to Pauquachin First Nation for your review and comment in 1 to 2 months. Offered Pauquachin First Nation with funding to support this participation in this process. **14-Jul-2015, Letter from the VFPA:** Provided Pauquachin with the document Roberts Bank Terminal 2 Project Marine Shipping Study: Pauquachin First Nation – Current Use of Lands and Resources for Traditional Purposes – Summary of Existing Conditions. Requested that Pauquachin First Nation review the report and confirm if the information is accurately presented and whether any revisions, additions, or deletions are required. Requested a response comments on the document by 14-Aug-2015. **10-Sep-2015, Email from the VFPA:** The VFPA extended the timeline to 21-Sep-2015. **18-Sep-2015:** Pauquachin provided comments on the MSA draft Current Use Summary.	**MSA** 5.0 Aboriginal Groups Engagement and Consultation 5.1.2 Consultation Objectives 5.1.4 Aboriginal Groups Engagement and Consultation Methods Appendix 5-B Aboriginal Issues and Interests

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
PFN-5.2	Requested additional studies and participation funding. Stated they could possibly pool resources with other Saanich groups and develop a joint study.	18-Sep-2015, Meeting 17-Feb-2016, Meeting	**18-Sep-2015, Meeting:** Committed to following up with Pauquachin about funding and the Traditional Use Study. **03-Dec-2015, Letter from VFPA:** Offered funding to support a Project-specific study and to support Pauquachin First Nation in gathering information on current use and rights in the Project area. **17-Feb-2016, Meeting:** Referred to the VFPA's letter of 03-Dec-2015 regarding consultation on RBT2 and its offer of funding to support Pauquachin First Nation in gathering information on Current Use and rights in the Project area. Noted that funding was previously made available from the CEA Agency specific to marine shipping, and that there is also a stream of funding available as part of the Project as a whole, for which Pauquachin First Nation can apply. **10-Mar-2016:** Offered funding for Project Traditional Use Information Gathering. **17-Mar-2016:** Accepted the funding. **03-Oct-2016:** The VFPA was provided with *W̲SÁNEĆ* Traditional Use Study of the Project. Prepared on behalf of Tsawout, Tseycum, Tsartlip, and Pauquachin (*W̲SÁNEĆ* Nations). **23-Nov-2016, Letter from the VFPA:** The VFPA has worked with Pauquachin First Nation to share information regarding RBT2 and the EIS, and in turn, has received input from Pauquachin First Nation, including through Pauquachin First Nation's submittal of the *W̲SÁNEĆ* Traditional Use Study of the Roberts Bank Terminal 2 Project: DRAFT Preliminary Data Summary to the VFPA. Information provided to the VFPA by Pauquachin First Nation has been summarised and incorporated into the draft AIEIS.	**Addressed in AIEIS Appendix 2-B, Table 5 (#39):** As described in AIEIS Section 2.0, the VFPA provided funding to each *W̲SÁNEĆ* band for a traditional use study and for participation in consultation, engaged in ongoing consultation with the *W̲SÁNEĆ* Nation throughout the development of the AIEIS, and provided a full draft of the AIEIS for review. Through these measures, the *W̲SÁNEĆ* Nation was provided the opportunity for input to the AIEIS, including the analysis and interpretation of results.	
PFN-5.3	Requested participation funding for consultation for RBT2. Requested funding to complete a TMUS [traditional marine use study].	18-Sep-2015, Meeting 18-Sep-2015, Letter 17-Feb-2016, Meeting	**26-May-2015:** Offered funding for participation for marine shipping. **19-Jun-2015:** Accepted funding. **25-Nov-2015:** Offered funding for Project participation. **25-Nov-2015:** Accepted funding. **17-Feb-2016:** Recorded comment for follow-up. **10-Mar-2016:** Offered funding for additional Project participation. **17-Mar-2016:** Accepted funding for additional Project participation.	**Addressed in AIEIS Section 2.1.3:** Participation funding agreements have been negotiated between the VFPA and each of the *W̲SÁNEĆ* bands and were designed to support the consultation process for the Project.	**AIEIS** 2.1.3 Participation Funding

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
			24-Oct-2017: Offered additional funding for participation in consultation activities for the Project. **01-Mar-2018:** Re-offered additional funding for participation in consultation activities for the Project. **19-Mar-2018:** Accepted additional funding offer.		
PFN-5.4	Asked what the VFPA's intention is in talking with First Nations and whether the VFPA has a First Nations strategy. Stated that they are hoping to incorporate indigenous law into the consultation process. Proposed that the VFPA work with Pauquachin First Nation to describe areas where Project-related marine traffic is likely to impact Pauquachin First Nation rights and interests, and invite Pauquachin First Nation to describe its marine use and knowledge within those areas.	18-Sep-2015, Meeting 18-Sep-2015, Letter 20-Nov-2017, Meeting	**18-Sep-2015, Meeting:** Shared with Pauquachin a draft consultation plan for review comment during the meeting. **29-Oct-2015, Letter from the VFPA:** *"The document provided by VFPA to Pauquachin First Nation for review included a summary of Pauquachin First Nation's current use of lands and resources for traditional purposes, and not the entirety of the [MSA]. The [MSA] will include an assessment of potential impacts associated with marine shipping and proposed mitigation. Issues and concerns expressed during meetings or in your letter have been recorded and considered, and VFPA will provide responses to each concern in the [MSA]."* **14-Oct-2015, Email from the VFPA:** More information on the VFPA's approach to Indigenous consultation can be found at the following link: http://www.portmetrovancouver.com/community/aboriginal-relations/. Specifically, EIS Section 7.0 and the associated appendices provide additional information regarding consultation with Indigenous groups for the Project, and provides a description the VFPA's consultation approach. This can be found at the following link: http://www.ceaa-acee.gc.ca/050/document-eng.cfm?document=101482. **22-Feb-2016, Email from the VFPA:** Shared a draft consultation plan and requested input. **18-Aug-2016, Email from the VFPA:** Shared a draft consultation plan and requested input. **19-Dec-2017, Email from the VFPA:** Shared a draft consultation plan and requested input. Provided a diagram showing the activities, timelines, and process over the next few months—starting with meetings, issues resolution, and leading to potentially negotiating an agreement, introducing the project to the community, and ultimately finalising/ratifying an agreement. Stated that everything in this document is tentative/draft at this point, and the VFPA would like to hear from Pauquachin whether it accurately captures our discussion. **15-Feb-2018, Email from the VFPA:** Shared a draft consultation plan and requested input.	**Addressed in EIS Section 7.2.1.1:** The primary objective of the VFPA's Indigenous engagement and consultation process is to support positive, productive, and lasting relationships between the VFPA and Indigenous groups while ensuring all applicable legal, regulatory, and policy requirements are effectively addressed. Accordingly, communications materials and activities have been and will continue to be designed and delivered to meet the following objectives: • Provide potentially affected Indigenous groups with timely access to relevant information that allows them to understand the proposed Project and determine its impacts on their community, activities, and other interests; • Consider the input of Indigenous groups with respect to methods of engagement and consultation; • Facilitate Indigenous participation in the environmental assessment process through provision of capacity funding and access to technical expertise as it relates to the Project; • Seek Indigenous input into environmental assessment processes and methods, such as the selection of VCs; • Facilitate the identification and collection of Indigenous traditional knowledge (ITK), including the consideration and incorporation of ITK into the EIS; • Provide Indigenous groups with reasonable opportunities to present and communicate their interests and issues in relation to the Project to both the VFPA and relevant regulatory agencies throughout Project planning; • Consider the feedback of Indigenous groups related to potential effects on their asserted or established rights or interests during the development and implementation of the Project, and address concerns raised by avoiding, mitigating, or otherwise accommodating such issues; and • Facilitate effective working relationships among the VFPA, regulatory agencies, and potentially affected Indigenous groups. The VFPA is committed to continued and active engagement with Indigenous groups with interests that may be potentially affected by the Project.	**EIS** 7.2.1.1 Consultation Objectives

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
PFN-5.5	Asked if there are any project requirements from Washington State.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Explained the transboundary requirements.	**Addressed in EIS Appendix 7.2-B (#54):** The VFPA has undertaken initial engagement with the U.S. Environmental Protection Agency (U.S. EPA) and the Washington State Department of Ecology by introducing the Project and the VFPA. Project information was shared through key website links (Project website and the CEA Agency Project website). In addition, the VFPA discussed the Project with the U.S. EPA (Region 10) and offered to provide additional information about the Project, if requested. The VFPA will take direction from the CEA Agency and the B.C. Environmental Assessment Office (EAO) regarding transboundary engagement with U.S. agencies during all phases of the proposed Project. EIS Appendices 29-B and 29-C summarise changes the Project may cause to the environment (for ICs and VCs, respectively) on federal lands or lands outside of B.C. (including outside of Canada), as well as the mitigation measures, follow-up and related commitments, and the residual environmental effects (including cumulative environmental effects) identified in relation to this category of environmental effects. **Addressed in response to IR-7.31.15-14:** The VFPA's response to IR-7.31.15-14 summarises the nature and characteristics of transboundary changes to ICs or potential effects to VCs related to the Project. **Addressed in response to MSA IR-02.24.16-12:** Some of the Current Use locations described in MSA Section 9.5.4 as lying within the marine shipping area, but outside traditional territorial boundaries, were identified in the U.S.A. As stated in MSA Section 9.5.5.3, the "assessment of potential effects of marine shipping associated with the Project on Current Use has only addressed those effects which occur in Canada, in accordance with the requirements of *CEAA, 2012*" (p. 9.5-145), and specifically subsection 5(1)(c) of that legislation, which states, "with respect to aboriginal peoples, an effect occurring in Canada of any change that may be caused to the environment on …" and subsection 5(1)(c)(iii), which continues, "the current use of lands and resources for traditional purposes."	**EIS** Appendix 7.2-B Aboriginal Issues and Interests Appendix 29-B Changes to the Environment that would occur on Federal or Transboundary Lands (Intermediate Components) Appendix 29-C Changes to the Environment that would occur on Federal or Transboundary Lands (Valued Components) **Information Requests** Response to Information Request #14 (IR-7.31.15-14 of CEAR Document #314) Response to Additional Information Request #12 (MSA IR-02.24.16-12 of CEAR Document #386)

Table 6: Environmental Assessment and Permitting Process

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
PFN-6.1	Asked about the federal panel and who the panel members will be.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Responded that the CEA Agency is leading the federal environmental assessment and a three-member Panel subsequently takes over the process. The Minister of Environment selects the Panel members. **22-Feb-2016, Email from the VFPA:** Provided contact information for the Crown Consultation Coordinator at the CEA Agency, who can provide more information about the review process. **26-Apr-2016, Email from the VFPA:** Provided a copy of the 26-Nov-2015 draft meeting notes, which included a post-meeting note: The CEA Agency is responsible for Crown consultation under the CEA Agency process. The VFPA is the proponent for the Project. Federal powers, duties, or functions that may be exercised with respect to the Project, and the federal departments and agencies involved in the environmental assessment process are identified in EIS Section 6.0. **02-Jun-2016, Email from the VFPA:** Provided the announcement regarding the Panel members: *"Earlier this week the Honourable Catherine McKenna, Minister of Environment and Climate Change, announced the establishment of an independent three-member review panel to conduct the environmental assessment of the Vancouver Fraser Port Authority's proposed Roberts Bank Terminal 2 project.* *Ms. Jocelyne Beaudet has been appointed as the chair of the review panel. Dr. Diana Valiela and Dr. David Levy have been appointed as members of the review panel."*	**Addressed in EIS Section 6.1:** On November 7, 2013, the CEA Agency issued a Notice of Determination indicating that the Project would require a federal environmental assessment, and on the following day issued a Notice of Commencement of an Environmental Assessment. On January 7, 2014, the CEA Agency posted a Notice of Referral to a Review Panel, indicating that the Honourable Leona Aglukkaq, Minister of the Environment and Minister responsible for the CEA Agency, had referred the Project to an independent review panel. The timelines for the environmental assessment were set as follows: • Establishment of the review panel (pre-panel phase) up to 150 days (5 months) from the date of referral of the Project; • Submission of the review panel's report (panel review phase) 430 days (14 months) from the date of establishment of the review panel; and • Issuance of a decision statement by the federal Minister (post-panel phase) 150 days (5 months) from the date of submission of the review panel's report. **Additional information provided by the VFPA:** On December 22, 2016, Honourable Catherine McKenna, Minister of Environment and Climate Change, accepted the resignation of Dr. Diana Valiela from the Review Panel. As noted in CEAR Document #939, on March 17, 2017 the Minister announced the appointment of Dr. Douw Steyn as a new member of the Review Panel established to conduct the environment assessment of the proposed Project.	**EIS** 6.0 Environmental Assessment and Permitting Process 6.1 Federal Involvement and Process **From the Minister of Environment and Climate Change to Dr. Diana Valiela re: Acceptance of resignation from the Review Panel (CEAR Document #913)** **News Release: Roberts Bank Terminal 2 Project - New Member Appointed to Review Panel (CEAR Document #939)**
PFN-6.2	Asked if the VFPA needs the cooperation of Pauquachin in order to proceed with the Project.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Provided clarification on the review process and input being sought.	**Addressed in AIEIS Appendix 2-B, Table 4 (#27):** The Project is undergoing an environmental assessment led by the CEA Agency, which is also the Crown consultation coordinator. As the proponent for the proposed Project, the VFPA is conducting Indigenous consultation and engagement as directed by the CEA Agency. The B.C. EAO has stated that it will actively participate in the federal panel process and will coordinate its assessment and consultation with the federal process to the extent possible. The federal decision maker for the Project is either the Minister of Environment and Climate Change or Governor in Council, taking into account the report of the three-member Review Panel. The Executive Director of the B.C. EAO will rely principally on the Review Panel's report, along with additional information, to make a recommendation to two provincial Ministers, Minister of Environment and Minister of	**EIS** 1.0 Introduction 1.3.2 VFPA Overview 1.3.2.2 Mandate and Jurisdiction Figure 1-3 VFPA Managed Federal Lands and Navigation Jurisdiction 1.3.3 Governance and Corporate Structure 1.3.3.1 Insurance and Liability Management 1.3.3.2 Environmental Policy 6.0 Environmental Assessment and Permitting Process

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				Transportation and Infrastructure. The Ministers will then decide whether to issue an environmental assessment certificate. The environmental assessment and permitting process is described in EIS Section 6.0. Indigenous groups potentially affected by the Project are invited to participate in the panel review process by providing written submissions, as well as oral presentations at the Panel's public hearings. In the case of RBT2, the VFPA is considered a private project proponent with respect to environmental assessment decision making. If the Environment and Climate Change Minister or Governor in Council determines that the project can proceed, the CEA Agency would ensure that the VFPA fulfils any Project conditions. The *Canada Marine Act* sets out the VFPA's mandate.	**AIEIS** Appendix 2-B Aboriginal Issues and Interests – *W̱SÁNEĆ* Nation, Table 4 Environmental Assessment Process and Regulatory Framework
PFN-6.3	Commented that the Valued Components are all connected, and should not be treated as separate categories that do not depend on each other.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	**26-Apr-2016, Email from the VFPA:** Provided a copy of the 26-Nov-2015 draft meeting notes, which included a post-meeting note: Please refer to EIS Table 8-1. The binders distributed at the workshop included a diagram of VC and IC linkages to demonstrate interlinkages between components.	**Addressed in EIS Appendix 7.2-B (#25):** ICs, VCs, and VC sub-components are identified in EIS Section 8.0 which describes the overall 3-step VC selection process, including the rationale for focusing the assessment on VC sub-components. The rationale for selection of specific ICs, VCs, and VC sub-components is described in each assessment section. For example, discussion regarding sub-component selection relative to species of importance to Indigenous groups, including eulachon and sturgeon, is captured in EIS Section 13.0. **Addressed in AIEIS Appendix 2-B, Table 5 (#33):** The methods used to assess the potential effects of the Project are described in EIS Section 8.0. The use of VCs together with other aspects of the assessment methodology allows the assessment to focus on those components of the natural and human environment and the potential effects that are most important. These are well-established methods consistent with existing federal and provincial guidance for environmental assessment. The assessment of potential effects of the Project takes into account relationships between various components of the natural and human environment (shown in EIS Table 8-1), including dependencies, such as predator-prey relationships and food webs. The EIS also uses complex ecosystem modelling to model and predict effects on ecosystem productivity. The outcome of some assessments of VCs were used to inform the assessment of other VCs where there was an interconnection. For example, the findings of the assessment of the potential effects of the Project on marine fish was used to inform the assessment of potential effects of the Project on marine commercial use, human health, and Current Use.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 8.0 Environmental Assessment Methods 8.1.2 Selection of Valued Components Figure 8-1 Valued Component Selection Process Table 8-1 Intermediate Component and Valued Component Linkages Appendix 8-A Valued Component Selection Rationale 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component **AIEIS** Appendix 2-B Aboriginal Issues and Interests, Table 5 Effects Assessment Methods
PFN-6.4	Asked whether Project construction will be impacted if the Panel determines that there are effects associated with marine shipping.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	**27-Nov-2015, Workshop:** Stated that the VFPA is unable to answer this question; it is under the Panel's authority to make this assessment.	**Additional information provided by the VFPA:** Questions regarding the environmental assessment process can be directed to Crown Consultation Coordinator, the CEA Agency.	

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
			Stated that the VFPA will respond to changes as they come and cannot speculate what the federal government will do.		
PFN-6.5	Concerned with allegations made by the Corporation of Delta and Roger Emsley, Executive Director of the Against Port Expansion Community Group that federal and provincial agencies are engaging in private meetings with the proponent while the environmental assessment is underway. Stated that they seek an explanation from British Columbia and Canada regarding these allegations, and a commitment to make public any discussions with the proponent outside the CEAA process.	28-Oct-2016, Letter to Panel (CEAR Document #639)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in CEAR Document #489:** The VFPA requested guidance from the Review Panel Manager with respect to continuing vital inter-departmental engagement and coordination with other federal and provincial agencies and departments concerning the proposed Project. The VFPA asked for confirmation from the Panel regarding the appropriateness of the proposed approach to ongoing engagement and requested the Panel to (a) advise the VFPA regarding its potential needs or preferences for documentation of such engagement and (b) advise other federal and provincial agencies and departments that they may continue to engage with the VFPA on these matters while the panel process is underway. **Addressed in CEAR Document #498:** The Review Panel indicated that interaction between participants—especially between the VFPA and bodies that may have legislative authority regarding the Project—can take place during the sufficiency review period of the environmental assessment. The Review Panel Manager stated that transparency must be maintained and emphasised that the Panel and the participants in the environmental assessment must be informed of the substance of any interactions that are relevant to the environmental assessment as the process proceeds.	**From the VFPA to the Review Panel re: Inter-departmental engagement and coordination (CEAR Document #489)** **From the Review Panel to the VFPA re: Inter-departmental engagement and coordination (CEAR Document #498)**
PFN-6.6	Stated that the exclusion of marine shipping from the Project is flawed and contrary to *CEAA 2012*. Requested that the Minister amend the 'designated project' to include marine shipping.	28-Oct-2016, Letter to Panel (CEAR Document #639)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Appendix 5-B (#17):** The VFPA advised the CEA Agency of this concern through MSA Appendix 5-B (#17).	**MSA** 1.0 Introduction Appendix 5-B Aboriginal Issues and Interests ***Updated Guidelines for the Preparation of an Environmental Impact Statement* (*Updated EIS Guidelines*; CEAR Document #177)**

Table 7: Environmental Management Program

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
PFN-7.1	Asked about the certainty of the predictions, and whether human error has been accounted for. Asked what measures will be taken if the terminal is constructed and it turns out that there are unforeseen issues.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	**27-Nov-2015, Workshop:** Stated that there is a long history of development at Roberts Bank, most recently with the Deltaport Third Berth Project (DP3) environmental assessment. Due to past work, the team is confident that there is a good understanding of the ecosystem. A long-term management program and adaptive management strategies will ensure that any deviations from the predictions will be tracked and responded to. Stated that for DP3, the VFPA has published adaptive management reports annually that detail the results of on-going monitoring. Many people involved in the committee overseeing monitoring for DP3 have informed the assessment for RBT2. **26-Apr-2016, Email from the VFPA:** Provided a copy of the 26-Nov-2015 draft meeting notes, which included a post-meeting note: Adaptive management reports are available on the Port's website: http://www.portvancouver.com/development-and-permits/status-of-applications/deltaport-third-berth-project/?doing_wp_cron=1460415089.0463271141052246093750. **12-Dec-2017, Meeting:** The VFPA organised a meeting on the Follow-up Program with the *WSÁNEĆ* Chiefs. Pauquachin was invited but did not attend.	**Addressed in AIEIS - *WSÁNEĆ* Nation, Appendix 2-B, Table 5 (#36):** Each technical appendix produced to support an assessment includes a section documenting the points of uncertainty and limitations pertaining to the study. Each effects assessment section of the EIS includes information on data quality and reliability, and any uncertainty or gaps in knowledge associated with the existing conditions of each VC. The effectiveness of identified mitigation measures, as well as any uncertainty regarding their effectiveness, is described. The level of confidence in each residual effect prediction considers the level of uncertainty associated with both the significance and likelihood determinations. Each assessment section presents the nature and source of any uncertainty that lowers the level of confidence in the residual effect prediction. The VFPA is committed to developing and implementing a Follow-up Program for RBT2. The purpose of the RBT2 Follow-up Program is to verify the accuracy of residual effect predictions made in this EIS, and determine the effectiveness of any measures taken to mitigate the adverse environmental effects of the Project. As described in EIS Section 33.0, the Follow-up Program will also report on implementation of mitigation measures resulting from Indigenous engagement, which will include the following: • Verification of predictions of environmental effects with respect to Indigenous people, as well as residual effects that could not be addressed within the context of the environmental assessment; • Determination of the effectiveness of mitigation measures as they relate to environmental effects with respect to Indigenous people; • Support for the implementation of adaptive management measures to address previously unanticipated adverse environmental effects with respect to Indigenous people, or unanticipated adverse effects to Aboriginal or treaty rights; • Verification of the measures identified to prevent and mitigate potential adverse effects of the Project on potential or established Aboriginal rights; and • Provision of information that can be used to improve and support future environmental assessments and Indigenous engagement processes.	**EIS** 8.0 Effects Assessment Methods 8.1.4 Description of Existing Conditions 8.1.6 Mitigation Measures 8.1.8 Determination of Significance of Residual Adverse Effects 8.1.9 Cumulative Effects Assessment 33.0 Environmental Management Program 33.5 Roberts Bank Terminal 2 Follow-up Program **AIEIS – *WSÁNEĆ* Nation** Appendix 2-B Aboriginal Issues and Interests, Table 5 Effects Assessment Methods

Table 8: Human Health – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
PFN-8.1	Expressed concern regarding toxic chemicals, not just oil and gas, going through Pauquachin's waters.	20-Nov-2017, Meeting	**20-Nov-2017, Meeting:** Recorded comment for consideration by Project team.	**Addressed in MSA Appendix 5-B (#109):** The potential for an accident involving a spilled container, and hazardous contents of containers, is addressed in MSA Section 10.0. Details on the types of hazardous materials shipped in containers are provided in EIS Appendix 30-A (Table G-3 in Appendix G). Regulations for securing containers, and for the transport of dangerous goods, are set by the International Maritime Organization (IMO): http://www.imo.org/en/About/Conventions/ListOfConventions/Pages/International-Convention-for-the-Safety-of-Life-at-Sea-(SOLAS),-1974.aspx The International Maritime Dangerous Goods Code is the international code that establishes where dangerous goods should be loaded on a ship. Some should be loaded below deck, others should be loaded on deck, some dangerous goods need to be separated by certain distances from other types of goods, and some dangerous goods need to be segregated in different holds from other goods. The implementation of the Code is mandatory under the International Convention for the Safety of Life at Sea (SOLAS) and the International Convention for the Prevention of Pollution from Ships (MARPOL 73/78). **Addressed in MSA Section 10.3.2.1:** Containers may be lost overboard in the event of a collision or grounding and could conceivably release hazardous and noxious substances to the environment. While removal of containers lost overboard would involve a salvage operation, the combination of low collision or grounding accident frequencies with the low percentage of hazardous and noxious substances containers at risk of being lost overboard (approximately 0.7% for Deltaport in 2012; see EIS Appendix 30-A), and the requirement for the container being compromised to release its contents, led to the assessment that the frequency of spills of hazardous and noxious substances from containers lost overboard is low enough to not require further consideration as a plausible accident or malfunction arising from marine shipping associated with the Project. **Additional information provided by the VFPA:** In 2017, the top ten container cargos accounting for approximately 73% of total inbound and outbound container cargo were household goods; lumber; woodpulp; specialty crops, construction and materials; industrial, auto, and vehicle parts; basic metals; meat, fish, and poultry; and waste paper. More information can be found in the VFPA's 2017 statistics overview.	**MSA** Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents or Malfunctions 10.3.2.1 Loss Overboard of Containers from Ships In-transit in Semi-protected Waters **VFPA Statistics Overview 2017** https://www.portvancouver.com/wp-content/uploads/2018/03/2017-Stats-Overview-1.pdf

Table 9: Labour Market – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
PFN-9.1	Requested clarification regarding effects to the labour market if the Panel determines that there should be no more ships, or if the proposed Project should not get built.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	**27-Nov-2015, Workshop:** Responded that the VFPA would respond to changes in regulations as necessary. **10-Feb-2017, Letter to Pauquachin First Nation:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues and interests raised by Indigenous groups and the VFPA's responses.	**Addressed in AIEIS Appendix 2-B, Table 23 (#101):** EIS Section 19.0 examines the potential effects of the Project on the unemployment rate. The Project's total employment of Greater Vancouver residents in 2018 could account for an approximate 0.1% decrease in the local assessment area's (LAA) unemployment rate for that year. This effect is a one-time event during the construction phase; i.e., there would be no further decrease but this 0.1% decrease would endure for most of the term of the construction phase. This positive change in unemployment rate to the labour market in the Greater Vancouver area would not occur if the Project does not proceed.	**EIS** 19.0 Labour Market 19.7.3 Change in Unemployment and Participation Rates **AIEIS** Appendix 2-B Aboriginal Issues and Interests, Table 23 Labour Market

Table 10: Marine Fish – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
PFN-10.1	Asked if eulachon were considered in the assessment. Suggested that there are thousands of years of Traditional Knowledge from Aboriginal groups as an information source on eulachon. Asked whether eulachon have the same connections as forage fish in the food web. Concerned with the exclusion of eulachon as representative species within the EIS.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	**27-Nov-2015, Workshop:** Responded that eulachon are captured in the forage fish component (i.e., surf smelt, herring). Eulachon are notoriously difficult to study, and there is limited data available to inform the assessment. Much more information is available on other species, and one can assume that the pathways affecting eulachon will be similar to other forage fish species for which more information is available. Stated that eulachon are considered in the forage fish sub-component, and their biomass is accounted for in the model. They have not been directly assessed because there is no data speaking to their presence in the study area, which limits the ability to conduct an assessment. It is believed that the representative species are similar enough to represent how the Project would affect eulachon.	**Addressed in AIEIS Appendix 2-B, Table 18 (#77):** Potential Project-related effects on eulachon are considered in the marine fish assessment within the forage fish sub-component. Eulachon was not assessed directly as a representative species within the forage fish sub-component due to the rarity of eulachon in the Roberts Bank area. The assessment recognises eulachon as a species of high economic, societal, and cultural importance to Indigenous communities. Representative species in the forage fish sub-component include Pacific sand lance, surf smelt, Pacific herring, and shiner perch. Qualitative and empirical evidence indicates that there will be minor decreases in forage fish productive potential driven by loss of subtidal sand habitat and disturbance of Pacific herring from underwater noise. **Addressed in response to IR-7.31.15-08:** As described in the VFPA's response to IR-7.31.15-08, all relevant ITK that was available was considered and incorporated into the EIS.	**EIS** 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component 13.2.1 Sub-components 13.4.1 Information Sources, Desktop and Field Studies 13.6.3 Potential Effect - Changes in Productivity 13.6.3.3 Changes in Productivity of Forage Fish **Information Requests** Response to Information Request #8 (IR-7.31.15-08 of CEAR Document #314) **AIEIS** Appendix 2-B Aboriginal Issues and Interests – *WSÁNEĆ* Nation, Table 18 Marine Fish
PFN-10.2	Concerned with the exclusion of sockeye as representative species within the EIS and what this means for the assessed or non-assessed impacts to these species.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	**27-Nov-2015, Workshop:** Responded that chum and Chinook were chosen as representative species because they are the most estuarine dependent, use the area as juveniles, and are thus most likely to interact with the Project. Sockeyes come through the river and head straight out to sea. Stated that this is a conservative approach: it is assumed that the pathway of effects for sockeye will be similar to those for chum and Chinook, but chum and Chinook are more likely to experience potential Project effects based on their estuarine use. Another reason for choosing Chinook is that it is a preferred food source for SRKW, which have an endangered status.	**Addressed in EIS Appendix 7.2-B (#78):** Potential Project-related effects on marine fish, including all five species of Pacific salmon, are considered in the EIS. Chum and Chinook salmon are evaluated as being representative of all Pacific salmon species, as they are the most estuarine-dependent species of salmon, and therefore most likely to be affected by the Project. A field sampling program for salmon was conducted at Roberts Bank in 2012 and 2013. While it is possible that 2012 to 2013 seasonal surveying for the Project did not capture all salmon species present at Roberts Bank, historical survey data add to the weight of evidence, suggesting a realistic representation of species composition and abundance at Roberts Bank. **Addressed in EIS Appendix 7.2-B (#107):** In EIS Section 13.0, sockeye salmon was not selected as a representative species within the Pacific salmon sub-component, as studies indicate that juvenile sockeye salmon do not use the Roberts Bank area in high abundance, relative to chum and Chinook salmon (which have been selected as representative species in the assessment). Since chum and Chinook are the most estuarine-dependent species of salmon, the potential for Project-related interactions with these species is greatest. Results of the assessment based on these two species represent a more conservative approach, given the life histories and habitat use of chum and Chinook. Therefore, potential Project-related effects on sockeye salmon are considered within the assessment through the assessment on the sub-component Pacific salmon, as represented by chum and Chinook. Sockeye salmon are considered in the assessment of marine commercial use as the primary species of salmon sought in the	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 13.0 Marine Fish 13.2.1 Sub-components 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries 16.2.1 Sub-components 21.0 Marine Commercial Use 21.5.2 Existing Conditions, Aboriginal Commercial Fishing and Seafood Harvesting **Information Requests** Response to Sufficiency Information Request #15 (IR5-15 of CEAR Document #1078)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				assessment area. The economic component of sockeye fishing is addressed in EIS Section 21.0. **Addressed in response to IR5-15:** In its response to IR5-15, the VFPA specifically discusses existing conditions related to sockeye and describes the status and management practices associated with the species. The response also further assesses potential effects of the project on sockeye directly. Overall, multiple lines of evidence suggest a minor adverse effect for this sub-component.	
PFN-10.3	Requested the specific data associated with the prediction of a minor effect on the productivity of adult and juvenile salmon.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	**27-Nov-2015, Workshop:** Responded that for adult salmon, a change in productivity of around 4% is predicted. The change in productivity for juvenile salmon is under 10% (the different results reflect how the ecosystem model addressed juvenile and adult salmon separately). Committed to following up with the exact numbers. Stated that most of the effects associated with the Project are under 15%. Salmon populations have a high level of natural variability year to year, as high as 60 to 70%, which adds context to this figure.	**Addressed in EIS Section 13.6:** The assessment of potential effects of the Project to juvenile salmon is discussed in detail in EIS Section 13.6. Qualitative and empirical evidence indicates there will be minor decreases in Pacific salmon productivity resulting from direct mortality (entrainment), and changes in the acoustic and light environments during the construction phase. Effects on productivity from total suspended solids and sediment deposition from dredging and disposal at sea (DAS) activities are anticipated to be negligible. During the operation phase and in the longer term, key mechanisms influencing Pacific salmon productivity relate to changes in light (expected to play a role in structuring predator-prey interactions), terminal placement (expected to disrupt juvenile migration, especially given remaining uncertainties around juvenile salmon movement patterns and residency times in the LAA), and positive biotic interactions (increased macrofaunal prey). Additionally, indirect habitat effects (e.g., increased productivity of tidal marsh) not captured in the ecosystem model may positively affect juvenile salmon productivity by providing additional refuge and foraging opportunities within the LAA. The ecosystem model predicts negligible changes in adult salmon productive potential, and minor increases in juvenile salmon productive potential; sensitivity analyses indicates these values are robust, but that the magnitude of increase of juvenile productivity is likely over-estimated. Other lines of evidence suggest a minor decrease, particularly considering mechanisms that were not captured in the ecosystem model, such as acoustic and light disturbance. Overall, multiple lines of evidence suggest a minor adverse effect for this sub-component. **Addressed in AIEIS Appendix 2-B, Table 18 (#78):** The results of the Roberts Bank ecosystem model are provided in EIS Section 10.3, and associated appendices for model inputs and outputs. In addition, in the response to AIR-12.04.15-10, a technical data report specific to juvenile salmon is provided within Appendix AIR10-C.	**EIS** 10.3 Overview of Assessing Ecosystem Productivity 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component 13.2.1 Sub-components 13.4.1 Information Sources, Desktop and Field Studies 13.5.1 Existing Conditions, Pacific Salmon 13.6 Future Conditions with the Project Table 13-6 Desktop and Field Studies Related to Marine Fish to Support the Assessment Table 13-10 Summary of Roberts Bank Ecosystem Model Productivity Results for Marine Fish 13.6.3 Potential Effect - Changes in Productivity **Information Requests** Response to Additional Information Request #10 (AIR-12.04.15-10 of CEAR Document #388) Appendix AIR10-C Technical Data Reports Containing Habitat Maps at Local and Regional Scale; TDR MF 3 Juvenile Salmon Surveys TDR **AIEIS** Appendix 2-B Aboriginal Issues and Interests, Table 18 Marine Fish

Table 11: Marine Invertebrates – Valued Component

Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Commented there is a remarkable association between areas of sea pen distribution and the Project. Asked how many other areas, like the Project area, are good sea pen habitat. Concerned that the overlap between sea pen distribution and the Project will result in a high number of sea pen mortalities. Asked whether sea pen distribution has a relationship with the propeller wash out area.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	**27-Nov-2015, Workshop:** Explained that the distribution can change year over year, and the habitat maps show the distribution for 2012. Agreed that sea pens are concentrated around the Project. Stated that there are no other known aggregations elsewhere in the Fraser River estuary. There is anecdotal evidence of sea pens in other areas of the Strait of Georgia (e.g., Gulf Islands) and Tofino. Sea pens used to carpet the bottom of Puget Sound, but their range has been reduced. Stated that sea pens have not been studied thoroughly in the past, so they may exist in some areas that are not known. Stated that it is predicted that 55% of the sea pens at Roberts Bank will be directly affected. The effect is determined to be moderate in part because of planned transplants. Further, it is believed that the remaining 45% of sea pen productivity is enough to support the persistence of sea pens in the area in the future, due to broadcast spawning and high fecundity. Commented that the VFPA will try to provide these details for future presentations, but that this information is also available in the EIS. **07-Feb-2018, Letter from the VFPA:** Starting in 2014, the Project team conducted a pilot study to test a method for transplanting orange sea pens, which involved transplant of 1,200 orange sea pens to three sites within the LAA for the Project. Please find attached a report titled Orange Sea Pen Transplant Pilot and Monitoring Program. The results of the study show that the pilot sea pen transplant was successful, with stable densities and evidence of recruitment at two of the three transplant sites. This report will be submitted to the Review Panel shortly with the VFPA's response to IR5-05.	**Addressed in EIS Appendix 7.2-B (#73):** Orange sea pens are a soft coral species that depend on habitat with strong tidal outflows and oceanic currents for food delivery. Sea pen beds provide habitat for many benthic (bottom dwelling) species and likely play a role in maintaining productive near-shore communities for clams, sea stars, marine worms, Dungeness crabs, and several fish species. Orange sea pens were assessed as a sub-component of the marine invertebrates VC. The assessment concludes that a decrease in the productivity of orange sea pens due to direct mortality and changes in habitat availability is expected as a result of permanent loss of subtidal sand habitat associated within the terminal footprint. This decrease can be partially mitigated through the implementation of environmental management plans, including the collection and transplantation of orange sea pens to nearby undisturbed sites identified as suitable through habitat modelling. While the Project is predicted to cause losses of productivity of orange sea pens, the scale of change is minor in the context of natural variability and will not compromise the population integrity or ecological function. The residual effect was determined to be not significant. **Addressed in AIEIS Appendix 2-B, Table 17 (#70):** As described in EIS Section 12.5, a Local Knowledge Study was undertaken in January 2013, which polled people with relevant direct knowledge (i.e., scientific experts, dive shop and tourism operators, fishers, and aquarists) on the life history, spatial extent, and ecological importance of orange sea pens. Nearby aggregations were reported from the Gulf Islands, Puget Sound, and the San Juan Islands, as well as Howe Sound, but no other aggregations were reported from elsewhere in the Fraser River estuary; as such, the orange sea pen beds within the LAA are assumed to be a unique feature. As outlined in EIS Section 12.0, the proposed terminal and dredge basin overlap with 92 hectares of orange sea pen distribution that corresponds to approximately 55% of orange sea pen productivity at Roberts Bank; 100% mortality was assumed for sea pens in areas of overlap with the Project footprint. Habitat suitability modelling indicated that 27% of suitable (i.e., high plus moderate suitability) orange sea pen habitat is predicted to be permanently lost to construction; this implies that there is abundant (i.e., 73%) remaining suitable habitat at Roberts Bank for orange sea pens to occupy (see EIS Table 12-10 and EIS Figure 12 13). Mitigation measures proposed to avoid sea pen mortality include the collection and pre-construction transplantation of orange sea pens to nearby undisturbed sites identified as suitable through habitat modelling. There is no evidence to suggest sea pen distribution has a relationship with the propeller wash out area. It was hypothesised in EIS Section 12.6.3.4 that sea pen distribution may be driven by local accelerations of bottom current velocities around the edges of the existing terminal structure, which may enhance food delivery rates. **Addressed in responses to IR5-05 and IR5-06:** The VFPA's response to IR5-05 provides the Orange Sea Pen Transplant Pilot and Monitoring Program report (Appendix IR5-05-A). In summary,	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 12.0 Marine Invertebrates 12.5.4.3 Orange Sea Pens, Population Characteristics 12.6.3 Potential Effect – Changes in Productivity 12.6.3.4 Changes in Productivity of Orange Sea Pens Table 12-8 Summary of Roberts Bank Ecosystem Model Productivity Results for Marine Invertebrates Table 12-10 Habitat Suitability (ha) for Orange Sea Pens in the Local Assessment Area in Future Cases With and Without Roberts Bank Terminal 2 12.7.2 Mitigation #1 for Direct Mortality 12.8.1 Residual Effect – Characterisation of Productivity Losses 12.9.2 Significance Determination Figure 12-13 Probability of Orange Sea Pen Occurrence at Roberts Bank, Pre-Project Table 12-10 Habitat Suitability (ha) for Orange Sea Pens in the Local Assessment Area in Future Cases With and Without Roberts Bank Terminal 2 Table 12-15 Summary of Determination of Significance of Residual Effects for Marine Invertebrates **AIEIS** Appendix 2-B Aboriginal Issues and Interests, Table 17 Marine Invertebrates **Information Requests** Response to Sufficiency Information Request #05 (IR5-05 of CEAR Document #1145) Response to Sufficiency Information Request #06 (IR5-06 of CEAR Document #1145)

Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
			the pilot sea pen transplant was successful. Stable densities, and evidence of recruitment, at two of the three transplant sites demonstrate that not only can environmental conditions successfully be used to predict habitat suitability for orange sea pens across a larger study area, but also attests to the ecological viability of transplantation as a potential mitigation method. As noted in EIS Section 12.0, the VFPA stated that the proposed Project would result in a moderate reduction in orange sea pen productivity, and that the level of confidence in this assessment was considered to be moderate. IR5-06 discusses the confidence in the rating. In summary, the moderate confidence ranking was rooted in four main points (each of which are described below): • The success of the orange sea pen pilot transplant and monitoring program (see IR5-05); • Remaining orange sea pen productivity with the Project (before mitigation) is considerable (45%) such that the population will persist at Roberts Bank; • Reproductive and larval biological characteristics of orange sea pens, which confer a high ability to replenish stocks; and • Coral transplants are common and successful elsewhere.	

Table 12: Marine Mammals – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
PFN-12.1	Asked what the Project-related contribution to the cumulative effect to SRKW would be. Requested information on the Project-related contribution to cumulative effects to SRKW. Commented on the conclusion that SRKW are already significantly adversely affected. Requested confirmation on whether this is typically how assessments on endangered species are conducted. Concerned that 100 projects could all conclude no new effects. Concerned with disruption of whales by ships, noting that they have observed whales leaving the area when ships are nearby.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	**27-Nov-2015, Workshop:** Stated that detailed information is available in the EIS. Committed to follow-up with the EIS section that contains this information. Stated that some environmental assessments do not use this methodology. More recently, cumulative effects are focused on past, present, and future, which may result in a determination that past effects are significant. Responded that in both underwater noise and marine mammals, the EIS articulates the Project's contribution to existing effects. There is a lot of focus on the methodology for SRKW because they are endangered. The EIS determined that the background noise remains similar when the noise levels from the Project are added. **26-Apr-2016, Email from the VFPA:** The VFPA provided the 27-Nov-2015 meeting notes, which included information on where to find more information in the EIS on marine mammals (EIS Section 14.0) and cumulative effects assessment (EIS Section 14.10).	**Addressed in EIS Appendix 7.2-B (#92):** Project-related adverse residual effects to SRKW (and all toothed whales) are expected to be not significant. The Project contribution of effects above existing conditions is very small and is not anticipated to adversely affect individuals or affect critical habitat features (acoustic environment, the availability of prey, and water and sediment quality) when needed by SRKW for their life functions of foraging, mating, resting, or socialising. Destruction of SRKW critical habitat from Project construction and operation is not anticipated, and the Project will not limit the survival or recovery of SRKW. Cumulative effects to baleen whales and seals and sea lions are expected to be not significant. However, due to their Endangered status and lack of recovery of the population, the VFPA has assumed that past activities and projects, including those described in the recovery strategy issued by DFO, have had a significant adverse effect on SRKW. Therefore, the Project, in combination with past projects and activities that have been carried out, and certain and reasonably foreseeable projects that will be carried out, will result in a continued significant cumulative effect to SRKW. **Addressed in AIEIS Appendix 2-B, Table 19 (#86):** Project-related adverse residual effects to SRKW (and all toothed whales) are described in EIS Section 14.6, and are expected to be not significant. The Project contribution of effects above existing conditions is very small and is not anticipated to adversely affect individuals or affect critical habitat features (acoustic environment, the availability of prey, and water and sediment quality) when needed by SRKW for their life functions of foraging, mating, resting, or socialising. Destruction of SRKW critical habitat from Project construction and operation is not anticipated. Due to their Endangered status and lack of recovery of the population, the VFPA has assumed that past activities and projects, including those described in the recovery strategy issued by DFO, have had a significant adverse effect on SRKW. Therefore, the Project, in combination with past projects and activities that have been carried out, and certain and reasonably foreseeable projects that will be carried out, will result in a continued significant cumulative effect to SRKW. The approach to assessing cumulative effects on SRKW is consistent with the CEA Agency Guidance for cumulative effects assessments including the Operational Policy Statement Assessing Cumulative Environmental Effects Under the *Canadian Environmental Assessment Act, 2012* (CEA Agency 2013) and Determining Whether a Project is Likely to Cause Significant Adverse Environmental Effects (CEA Agency 1994), the Cumulative Effects Assessment Practitioners' Guide (Hegmann et al. 1999).	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 14.0 Marine Mammals **Information Requests** Response to Additional Information Request #13 (AIR-12.04.15-13 of CEAR Document #388) Schedule 13-4 Marine Mammals Total Cumulative Effects **MSA** 8.1 Marine Fish and Fish Habitat 8.1.6 Potential Interactions and Effects 8.1.6.1 Negligible Effects 8.2 Marine Mammals 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.5.1 Negligible Effects of Vessel Transit on Current Use **AIEIS** Appendix 2-B - Aboriginal Issues and Interests, Table 19 Marine Mammals
PFN-12.2	Interested in being provided with additional and more detailed information about the ECHO Program.	30-Jan-2017, *WSÁNEĆ* All-Chiefs Meeting (Pauquachin, Tsartlip, Tsawout, Tseycum),	**30-Jan-2017, Meeting:** Offered to provide an in-depth presentation with Enhancing Cetacean Habitat and Observation (ECHO) Program representatives who can provide more detailed information at a future date. **10-May-2017:** The VFPA provided Pauquachin First Nation with the ECHO Program 2016 Annual Report. The VFPA restated its commitment to present to Pauquachin on the ECHO Program at a time convenient to the group. **12-Dec-2017:** The VFPA held a *WSÁNEĆ* All Chiefs meeting where a presentation on the ECHO Program was provided. Pauquachin was invited, but unable to attend.	**Addressed in EIS Appendix 7.2-B (#88):** The methods used to study underwater noise and the results of the assessment of potential underwater noise-related effects on marine mammals are described in the EIS. The ECHO Program has been established by the VFPA, in collaboration with government agencies, Indigenous groups, marine industry users, non-government organisations, and scientific experts, to better understand and manage the potential impacts to cetaceans (whales, porpoises, and dolphins) from commercial vessel activities throughout the southern coast of B.C. Further information about ECHO can be found at: http://www.portmetrovancouver.com/en/environment/initiatives/marine-mammals **Addressed in response to IR4-10:** The VFPA-led ECHO Program is a collaborative initiative aimed at better understanding and managing the impact of shipping activities on at-risk whales throughout the southern coast of B.C. The VFPA-led ECHO Program engages and involves key regional interested parties to maximise program success and help ensure that mitigation and management measures developed through the program are informed by social, cultural, economic, and environmental sustainability interests. The ECHO Program is guided by the advice and input of an advisory working group, and supported by a federal government advisory committee and associated technical committees. Through	**EIS** Appendix 7.2-B Aboriginal Issues and Interests **Information Requests** Response to Sufficiency Information Request #10 (IR4-10 of CEAR Document #1051)

				engagement and consultation with stakeholders, including Indigenous individuals, the ECHO Program has initiated or supported short-term projects, scientific studies, and educational initiatives to fill knowledge gaps necessary to inform the development of credible, science-based threat reduction solutions and management options to reduce cumulative effects of shipping to at-risk whales in the region. Further information about ECHO Program can be found at: https://www.portvancouver.com/environment/water-land-wildlife/echo-program/	

Table 13: Marine Shipping Addendum

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
PFN-13.1	Requested more information on tonnage for different types of vessels that will be at Roberts Bank and through the shipping route, to provide an understanding of size of ships.	18-Sep-2015, Meeting	**18-Sep-2015, Meeting:** Recorded comment for follow-up. **26-Nov-2015:** Included a slide on the tonnage for different types of vessels in the Saanich workshop presentation.	**Addressed in AIEIS Appendix 2-B, Table 2 (#12):** The Project has been designed to accommodate container ships as large as the Maersk Triple-E class ships, representative of ultra-large container ships with length greater than 390 m and/or capacity greater than 15,000 TEUs. These are currently used on the Asia Europe route and are not expected to be in regular service to the west coast of North America in the near future. Ship size is discussed in the EIS in terms of TEU capacity. With triple-E class introduction on the Asia Europe route, it is anticipated that 12,000 to 15,000 TEU-capacity ships will begin calling on the west coast of North America. The VFPA has prepared additional information for the Review Panel on ship sizes. This information is available on the CEA Agency Registry: https://www.ceaa-acee.gc.ca/050/details-eng.cfm?evaluation=80054.	**EIS** 4.0 Project Description 4.4 Project Activities 4.4.2 Operation-phase Activities, Ship Calls **AIEIS** Appendix 2-B Aboriginal Issues and Interests, Table 2 Project Planning, Development and Implementation **Undertaking for the Review Panel** From the VFPA to the Review Panel re: Orientation Session #2 Undertaking #1: Estimate of the Number of Ultra-large Ships that would call on RBT2 (CEAR Document #667)
PFN-13.2	Referred to the shipping routes and asked if they are already in place. Asked if bigger ships will be passing through that same route.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Confirmed that shipping routes are in place. Noted that there is information in the MSA related to shipping and shipping routes.	**Addressed in MSA Section 4.0:** MSA Section 4.0 provides a description of shipping associated with RBT2. Although the three-berth wharf for the Project has been designed to accept ultra large container ships, these vessels are not anticipated to make regular scheduled calls at RBT2 by 2030. The forecast distribution of vessel sizes calling on RBT2 between Project opening and the forecast 2.4 million vessel-TEU terminal throughput in 2030 is shown in MSA Table 4-3 for the anticipated 260 vessel calls per year when the terminal is operating at design capacity. As shown in the table, smaller ships are being replaced by larger ships and by 2030, 65% of the container ships will still be in the 8,000 to 10,000 TEU range. The increase in container ship sizes in terms of TEU carrying capacity is anticipated to continue. In 2011, the Maersk Triple E type vessels were in design with an anticipated 18,000 TEU capacity. These ultra large container ships are now in service in the Asia to Europe routes, and newer vessels with a 19,200 TEU capacity are on order, with larger vessels with 20,000 TEU capacity anticipated. Container ships are of a specific design that has evolved since the mid-1950s, and continues to do so as stated above. MSA Figure 4-4 provides a graphic representation of the vessel size increase up to 2012. With this steady increase in vessel sizes, the smaller, older container ships will eventually be taken out of service and replaced. Larger container ships displaced by the ultra large vessels on Asia – Europe routes will be routed elsewhere (such as to west coast North American routes), and the frequency of ships calling on the Project is anticipated to decrease (as fewer ships will be required to carry the same number of containers). This size increase has been factored into the vessel frequency of movements described in MSA Section 4.2.1.2.	**MSA** 4.0 Activity Description 4.2.1.1 Type of RBT2 Container Vessels
PFN-13.3	Concerned that marine shipping will disrupt the ecosystem, which may infringe on First Nations' use and harvesting and that would be an impact on Pauquachin.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Recorded comment for consideration by Project team.	**Addressed in MSA Section 9.5:** The MSA addresses potential effects from routine (day-to-day) marine shipping associated with the Project on components of the physical, biophysical, and social environment. MSA Section 9.5 assesses potential effects of marine shipping associated with the Project on Current Use activities occurring within the marine shipping area (MSA Section 4.0). **Addressed in MSA Section 9.5:** MSA Section 9.5 considers the Current Use by Indigenous peoples, including intangible cultural heritage considerations, and in the marine shipping area. The section also considers potential impacts on the ability to exercise asserted or established Aboriginal or treaty rights in the marine shipping area, including in the context of potential accidents and malfunctions. Potential effects on Current Use as a result of Project-associated vessel transit activities are considered negligible before mitigation for access to preferred Current Use locations, due to Project-associated ship wake,	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights **AIEIS** 7.2.6.2 Availability of Preferred Current Use Resources **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				the availability and quality of preferred Current Use resources, and the quality of the Current Use experience (i.e., cultural practices) tied to those aspects of Current Use. Residual effects on access to preferred Current Use locations due to Project-associated container ship pass-bys, and on cultural practices tied to that aspect of Current Use, are considered negligible after the implementation of mitigation. Considering the conclusions of the current use assessment, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the Marine Shipping Area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups to identify measures that would reduce the impact of the international shipping lanes to fishing by Indigenous groups. These mitigation measures for addressing potential incremental effects on current use are expected to also be effective at addressing the potential incremental impact to the exercise of Aboriginal and treaty rights. No additional mitigation measures have therefore been suggested for the potential incremental impact to the exercise of Aboriginal and treaty rights. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans Protection Plan which includes information on the Enhanced Maritime Situational Awareness and Proactive Vessel Management initiative. **Addressed in IR13-20:** The VFPA's forthcoming response to IR13-20 will further discuss Project-related changes to the wave environment and their potential effects on current use activities, access, and navigation.	**Information Requests** Response to Sufficiency Information Request#20 (IR13-20)
PFN-13.4	Asked whether the public has the ability to submit comments and concerns on marine shipping, and how comments can be submitted.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Offered to send the contact information for the representative at the CEA Agency. **26-Apr-2016, Email from the VFPA:** Provided a copy of the 26-Nov-2015 draft meeting notes, and provided the contact information for the Crown Consultation Coordinator at the CEA Agency.	**Additional information provided by the VFPA:** All interested parties are able to provide comments to the Canadian Environmental Assessment Registry by contacting: Review Panel, RBT2 Project Canadian Environmental Assessment Agency 22nd Floor, 160 Elgin Street Ottawa, Ontario K1A 0H3 Telephone: 1-866-582-1884 Fax: 613-957-0941 Email: Panel.RBT2@ceaa.gc.ca	
PFN-13.5	Concerned with increased marine traffic associated with the Project, and impacts to local vegetation on the Saanich Peninsula.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	**27-Nov-2015, Worksop:** Recorded comment for consideration by Project team.	**Addressed in MSA Section 6.1:** The ICs and VCs in the MSA were selected based on a component having the potential to interact with and be affected by marine shipping. Terrestrial vegetation was determined not to have an interaction with marine shipping, and therefore it was not included in the assessment. **Addressed in MSA Section 8.1:** An assessment was undertaken to evaluate the potential effects of Project-associated marine shipping on marine fish and fish habitat (including marine vegetation and marine invertebrates) within the marine shipping area and located within the Salish Sea. Potential effects of vessel wake-generated waves on marine fish and fish habitat were characterised as negligible, because only 2% of coastline in the LAA is within the wake-related zone of influence, and because wake-generated wave heights at shorelines are predicted to be well within the range of natural wave conditions. Fish and fish habitat are already adapted to the natural conditions; therefore, any wake-related influences would not be distinguishable from existing conditions.	**MSA** 6.2 Selection of Valued Components 8.1 Marine Fish and Fish Habitat

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
PFN-13.6	Stated that there are many effects associated with marine shipping but not the Project; the Project will undeniably result in an increase in vessel traffic. Asked how impacts from marine shipping on other marine-based activities will be addressed.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations 27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	**26-Nov-2015, Workshop:** Stated that the Panel review process is an opportunity to present concerns to federal agencies. The purpose of the MSA is to inform the federal government if there are impacts.	**Addressed in MSA Section 1.0:** The MSA addresses the requirements of section 17 of the *Updated EIS Guidelines* by assessing potential environmental effects of marine shipping associated with the Project outside the VFPA's jurisdiction (beyond the VFPA's care and control) to the 12 nautical mile limit of the Canadian territorial sea.	**MSA** 1.1 Purpose of the [MSA] ***Updated EIS Guidelines***
PFN-13.7	Asked whether or not the VFPA knows how marine traffic from the Project will impact the Saanich First Nations.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	**27-Nov-2015, Workshop:** Stated that the MSA includes an assessment of the effects of vessel traffic on marine commercial use, access, interactions with transit, harvesting, etc. Stated that the MSA includes conclusions regarding the effects of marine shipping. The report will be subject to the Panel process, where the government will determine the effects. Clarified that marine shipping is not part of the Project.	**Addressed in MSA Section 9.5:** As noted in MSA Section 9.5, an assessment of potential effects on the Current Use and potential impacts to the exercise of asserted or established Aboriginal and treaty rights that may result from marine shipping associated with the Project was undertaken. Potential effects on Current Use as a result of Project-associated vessel transit activities are considered negligible before mitigation for access to preferred Current Use locations, due to Project-associated ship wake, the availability and quality of preferred Current Use resources, and the quality of the Current Use experience (i.e., cultural practices) tied to those aspects of Current Use. Residual effects on access to preferred Current Use locations due to Project-associated container ship pass-bys, and on cultural practices tied to that aspect of Current Use, are considered negligible after the implementation of mitigation. Taking a precautionary approach, the assessment of potential impacts to Indigenous groups' ability to exercise asserted or established Aboriginal and treaty rights as a result of Project-associated shipping was based on the assumption that traditional use presently occurring in the marine shipping area (i.e., Current Use) is an expression of the exercise of Aboriginal or treaty rights. Where traditional use was not identified as occurring at present within the marine shipping area, but similar use was identified as practiced in the past in the marine shipping area, asserted as an Aboriginal right, or protected under treaty, this use was assumed to be potentially exercisable as an Aboriginal or treaty right, and subject to potential impacts as a result of Project-associated shipping in much the same way as potential effects on Current Use. Considering the conclusions of the Current Use assessment, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the marine shipping area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location. These mitigation measures for addressing potential incremental effects on current use are expected to also be effective at addressing the potential incremental impact to the exercise of Aboriginal and treaty rights. No additional mitigation measures have therefore been suggested for the potential incremental impact to the exercise of Aboriginal and treaty rights.	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4 Existing Conditions 9.5.5.1 Negligible Effects of Vessel Transit on Current Use 10.0 Potential Accidents or Malfunctions
PFN-13.8	Concerned that the routine operation of Project container ships may impact the exercise of their Aboriginal and Treaty	28-Oct-2016, Letter to Panel (CEAR Document #639)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 9.5:** As noted in MSA Section 9.5, an assessment of potential effects on the Current Use and potential impacts to the exercise of asserted or established Aboriginal and treaty rights that may result from marine shipping associated with the Project was undertaken. Potential effects on Current Use as a result of Project-associated vessel transit activities are considered negligible before mitigation for access to preferred Current Use locations, due to Project-associated ship wake, the availability and quality of preferred Current Use resources, and the quality of the Current Use experience	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4 Existing Conditions 9.5.5.1 Negligible Effects of Vessel Transit on Current Use

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
	Harvesting Rights, for example by • restricting the times and locations in which those rights can be exercised, • disrupting travel ways utilized by Pauquachin First Nation members to exercise those rights, • and increasing the likelihood of a collision between a container ship and a vessel owned or operated by Pauquachin First Nation or a Pauquachin First Nation member.			(i.e., cultural practices) tied to those aspects of Current Use. Residual effects on access to preferred Current Use locations due to Project-associated container ship pass-bys, and on cultural practices tied to that aspect of Current Use, are considered negligible after the implementation of mitigation. Taking a precautionary approach, the assessment of potential impacts to Indigenous groups' ability to exercise asserted or established Aboriginal and treaty rights as a result of Project-associated shipping was based on the assumption that traditional use presently occurring in the marine shipping area (i.e., Current Use) is an expression of the exercise of Aboriginal or treaty rights. Where traditional use was not identified as occurring at present within the marine shipping area, but similar use was identified as practiced in the past in the marine shipping area, asserted as an Aboriginal right, or protected under treaty, this use was assumed to be potentially exercisable as an Aboriginal or treaty right, and subject to potential impacts as a result of Project-associated shipping in much the same way as potential effects on Current Use. Considering the conclusions of the Current Use assessment, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the marine shipping area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location. These mitigation measures for addressing potential incremental effects on current use are expected to also be effective at addressing the potential incremental impact to the exercise of Aboriginal and treaty rights. No additional mitigation measures have therefore been suggested for the potential incremental impact to the exercise of Aboriginal and treaty rights.	10.0 Potential Accidents or Malfunctions
PFN-13.9	Stated that if approved, the mitigations proposed by the proponent must be implemented, as well the recommendation by the Washington State Department of Ecology and van Dorp and Merrick that the speed for container ships be reduced to enhance situational awareness. In the event the Project proceeds and these measures prove to be inadequate, Pauquachin First Nation reserves the right to demand that additional measures be implemented, for example altering the location of the marine shipping lanes for the Project.	28-Oct-2016, Letter to Panel (CEAR Document #639)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Appendix 5-B (10):** Where relevant, the VFPA has proposed mitigation, which serves to address measurable potential effects of marine shipping associated with the Project, to be considered by those regulators with jurisdiction in the area. **Additional response from the VFPA:** Should the Project be approved, the VFPA will be legally bound to the conditions (including any mitigation measures) set out in the federal Environment Minister's Decision Statement. Although the regulated care and control of vessels calling at the Port of Vancouver is limited to its marine jurisdiction, the VFPA is supportive of initiatives by other agencies and authorities in reducing marine shipping-related risks outside its jurisdiction. EIS Section 35.0 (Table 35-2) presents mitigation measures and commitments proposed as part of RBT2. MSA Section 12.0 summarises potential environmental effects of marine shipping associated with the Project, suggested mitigation to be considered, residual effects, and cumulative effects in relation to the categories of environmental effects.	**EIS** 35.0 Effects Assessment Summaries **MSA** Appendix 5-B Aboriginal Issues and Interests 12.0 Summary of Changes to the Environment and Effects of Change to the Environment: Marine Shipping Associated with RBT2

Table 14: Marine Vegetation – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
PFN-14.1	Asked how non-native eelgrass was introduced to the environment, and where it is located.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations 2	**27-Nov-2015, Workshop:** Explained that it is a non-native species, *Zostera japonica*. There is uncertainty about how it was originally introduced. Native eelgrass is perennial, and found in the lower intertidal area. Non-native eelgrass is an annual (dies back each year), and found in the mid-higher intertidal area. Non-native eelgrass is at Roberts Bank in abundance. Stated that it is believed that the spread of non-native eelgrass is not harming other species. Non-native eelgrass dies off every year, which limits the extent to which it can spread or infringe. The roots of non-native eelgrass are not very deep, so other organisms can still get situated nearby. Stated that native eelgrass is much thicker, and a lot of critters like to hide in native eelgrass. Juvenile Dungeness crabs will hide in both. Non-native eelgrass offers similar ecosystem functions as native eelgrass, but to a lesser extent.	**Addressed in AIEIS Appendix 2-B, Table 16 (#66):** The location of non-native eelgrass at Roberts Bank is included in the Eelgrass Survey technical study, as listed and referenced in EIS Table 11-4. It is also shown on EIS Figure 11-2 (as *Z. japonica*). *Z. japonica* is believed to have been introduced to North America (Washington State specifically) with oyster shipments from Japan during the first half of the 20th century. The oysters were intentionally introduced to dozens of countries for aquaculture purposes and the shipments may have been packed with eelgrass. *Z. japonica* was first documented in the Pacific northwest in 1957 in Willapa Bay, Washington; it was first recorded in B.C. waters in 1969 in Boundary Bay. Since then, it has spread throughout northern Puget Sound and the southern Strait of Georgia, as well as to coastal bays in Oregon.	**EIS** 11.0 Marine Vegetation 11.2.1 Sub-components 11.4.1 Desktop and Field Studies Table 11-4 Desktop and Field Studies Related to Marine Vegetation Figure 11-2 Roberts Bank Marine Vegetation Habitat Map (2012) 11.5.1.1 Eelgrass, Overview 11.6 Future Conditions with the Project **AIEIS** Appendix 2-B Aboriginal Issues and Interests, Table 16 Marine Vegetation
PFN-14.2	Concerned about invasive species being introduced via the hull of ships, and asks whether this effect is accounted for in the predictions presented for local vegetation. Concerned that ships pump their bilges into the water, introducing foreign species such as non-native eelgrass, mussels, and clams to local environments. Question whether this effect is accounted for in the predictions presented for the marine vegetation VC.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	**27-Nov-2015, Workshop:** Stated that this factor was included in the assessment, but the effect was determined be negligible because of invasive species management regulations. Stated that there are international regulations that relate to invasive species and these are detailed in the water quality section of the EIS.	**Addressed in AIEIS Appendix 2-B, Table 16 (#62):** The VFPA was the first port in North America to prohibit in-port ballast water exchange without prior mid-ocean exchange, a practice which became the basis of government requirements now enforced by Transport Canada. To prevent the invasion of foreign species into local waters, international regulations, through the IMO, are managed by Transport Canada. All commercial deep sea vessels are required to carry out a ballast water exchange prior to entering Canadian waters. This is done outside the exclusive economic zone of 200 nautical miles and in water deeper than 2,000 metres. By requiring vessels to complete this ballast 'flush' well outside Canadian waters, the aim is to prevent any foreign organisms from entering into the local ecosystem. The U.S.A. has similar requirements, and vessels arriving to Canada from the Puget Sound area need to forward the completed U.S. forms to Canadian authorities prior to entry into Canadian waters. Within Canadian waters, ballast water is regulated by the Ballast Water Control and Management Regulations. Also, the International Convention for the Control and Management of Ships' Ballast Water and Sediments, to which Canada is a signatory, will come into force on September 8, 2017. The VFPA is a part of the B.C. Spartina Working Group, which maps, tests eradication methods, and supports the removal of invasive English cordgrass from the Fraser River estuary. The potential for introduction of invasive species via effluent discharges and other operational procedures, including discharges from ships (bilge and ballast), was considered in the assessment of marine vegetation. This potential effect was determined to be negligible due to the distant location of discharges into subtidal waters, the incorporation of management and treatment measures outlined in EIS Section 4.2.1 and implementation of regulatory requirements and guidelines described above.	**EIS** 4.0 Project Description 4.2.1 Marine Terminal 4.4.2 Operation-phase Activities 9.7 Marine Water Quality 9.7.8 Future Conditions with the Project 11.0 Marine Vegetation 11.6 Future Conditions with the Project **AIEIS – *W̲SÁNEĆ* Nation** Appendix 2-B Aboriginal Issues and Interests, Table 16 Marine Vegetation

Table 15: Marine Water Quality – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
PFN-15.1	Asked why one slide depicts arsenic and copper levels exceeding sediment quality guidelines and the other indicates they are below guidelines.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Stated that one slide depicts water quality, and the other depicts sediment quality. Explained that out of all the samples taken (900+), only one exceeded copper and two exceeded arsenic; there were some anomalies in the sediment.	**Addressed in EIS Sections 9.6 and 9.7:** More information on water quality can be found in EIS Section 9.7 and information on sediment can be found in EIS Section 9.6. **Addressed in EIS Section 9.6.6.2:** As noted in EIS Section 9.6.6.2, the physical and chemical characteristics of sediments in areas near and relevant to the Project have been studied recently. Results of these studies are summarised in EIS Table 9.6-3, and additional details are provided in EIS Appendix 9.6-B. No appreciable sediment contamination was observed in Project areas. In general, sediment samples met the DAS screening criteria with limited minor exceptions. Only one of 92 samples contained cadmium at a concentration greater than the DAS Lower Level criterion. Similarly, one sample contained arsenic at a concentration greater than its respective CCME ISQG (Canadian marine sediment quality guidelines). Both the average and upper 95th percentile concentrations for cadmium and arsenic were much lower than their respective screening criteria, however, and are more reflective of actual conditions. The single values are likely to be statistical outliers and are not reflective of the actual exposure potential. While most of the sediment samples exhibited a copper concentration greater than the ISQG, this is attributed to the presence of geological-origin, naturally occurring concentrations. Elevated copper levels are consistent with observations for previous studies in areas relevant to the Project, and throughout the Fraser River estuary (EIS Section 9.6.6.2). Copper levels in the Project activity areas are therefore not considered to be contaminated relative to natural conditions.	**EIS** 9.0 Physical Setting 9.6 Surficial Geology and Marine Sediment 9.6.6.2 Characteristics of Surficial Sediments in the Fraser River Estuary and Local Study Area 9.7 Marine Water Quality

Table 16: Mitigation for Marine Biophysical Valued Components (including Onsite Habitat Concepts)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
PFN-16.1	Asked if the new habitat proposed in the EIS will be contaminated in the future due to the terminal.	30-Jan-2017, *W̱SÁNEĆ* All-Chiefs Meeting (Pauquachin, Tsartlip, Tsawout, Tseycum),	**30-Jan-2015, Workshop:** Stated that it is unlikely as the terminal will be shipping containers. Stated that the habitat proposed would co-exist well with the Project.	**Addressed in EIS Section 17.0:** A monitoring program would be implemented to confirm that offsetting measures meet intended objectives and that they function as designed. For on-site offsetting projects, monitoring would be undertaken to ensure compliance with regulatory requirements and evaluate the performance of each on-site habitat concept. **Addressed in AIEIS Appendix 2-B, Table 2 (#6):** Lessons learned from DP3 were considered in the evaluation of alternative means of carrying out the Project and in the selection of onsite habitat offsetting, and will also be considered in the development of the follow-up program: • EIS Section 5.0 provides a summary of alternative design options that were considered, and the rationale for the selected option. As part of the process for identifying and selecting alternatives, the VFPA reviewed and considered Indigenous input provided as part of the environmental assessment processes for prior projects at Roberts Bank, including DP3. • Onsite habitat selection considered lessons learned from previous habitat creation programs (e.g., DP3). The effectiveness monitoring reports for DP3 increased the understanding of the successes and challenges of previous habitat projects. The concepts presented in the EIS were presented to communities, stakeholders, Indigenous groups, the public, and regulators in fall 2014. • An adaptive management approach is proposed for RBT2 as indicated in EIS Section 33.5 and will consider lessons learned from the DP3 Adaptive Management Program. **Addressed in response to IR-7.31.15-12:** In the VFPA's response to IR-7.31.15-12, on 26-Oct-2015, the VFPA provided Appendix IR12-A, which summarises the various mitigation measures proposed in the EIS (including habitat offsetting), and indicates their anticipated effectiveness and risks.	**EIS** 11.0 Marine Vegetation 11.5.1 Existing Conditions, Eelgrass 11.6 Future Conditions with the Project 11.8.1 Residual Effect – Changes in Biofilm Assemblage Composition 17.0 Mitigation for Marine Biophysical Valued Components 17.3.2 Offsetting Potential Effects, Offsetting Framework 17.3.2.2 Onsite Habitat Concepts 33.0 Environmental Management Program **Information Requests** Response to Information Request #12 (IR-7.31.15-12 of CEAR Document #314) Appendix IR12-A – Summary of Proposed Mitigation and Anticipated Effectiveness **AIEIS** Appendix 2-B, Aboriginal Issues and Interests – *W̱SÁNEĆ* Nation, Table 2 Project Planning, Development, and Implementation Appendix 2-B Aboriginal Issues and Interests – *W̱SÁNEĆ* Nation, Table 16 Marine Vegetation
PFN-16.2	Asked what will be done to compensate for the impact of the Project and marine shipping on the ecosystem (i.e., mitigation).	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Stated that for the Project, steps are being taken to mitigate effects and they are described in the EIS. This includes initiatives such as trucks turning off, so they are not idling, and replacing trucks of a certain age. The VFPA can control certain aspects such as how the Project is built and mitigated, and some of the operations activities in and out of the terminal within VFPA jurisdiction. Noted that the VFPA will be discussing effects of this Project in the workshop but the Port has a number of programs aimed at working with partners to minimise the effects of trade. Noted that if the VFPA were to shut down, the effects would be felt across the	**Addressed in EIS Section 17.0:** In keeping with the VFPA's mandate to provide a high level of environmental protection, well-planned mitigation measures based on a thorough understanding of the ecological function of the affected environment are key components to preventing and reducing potential Project effects. For the Project, the VFPA has adopted the use of the following mitigation hierarchy to address Project-related effects to marine biophysical VCs: 1. Avoid potential adverse effects; 2. Reduce or minimise potential adverse effects that cannot be avoided; and 3. Offset potential adverse effects that cannot be avoided, minimised, or reduced. Offsetting measures proposed for the Project focus on the creation and enhancement of on-site habitat that supports Roberts Bank ecosystem species. On-site habitat is intended to soften the perimeter of the Project's shoreline to be more ecologically representative of the existing estuary, to create similar habitat to those that would be affected by the Project, and to create habitat that generally enhances the productivity of the Roberts Bank ecosystem. The VFPA has reviewed and evaluated the compensation habitat developed for DP3, and has included beneficial features for marine vegetation, invertebrate, fish, and bird species in the offsetting framework for the Project.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 8.0 Effects Assessment Methods 11.0 Marine Vegetation 11.7 Mitigation Measures 11.12 Monitoring and Follow-up Programs 17.0 Mitigation for Marine Biophysical Valued Components 17.3.2 Offsetting Potential Effects, Offsetting Framework 33.0 Environmental Management Program 33.3.1 Construction Compliance Monitoring Plan

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
			country and this would not stop the demand for trade. **26-Apr-2016, Email from the VFPA:** Provided 26-Nov-2015 meeting notes, which included a link to the VFPA's website on its environmental initiatives: http://www.portvancouver.com/environment/.	The five habitat types considered for on-site offsetting include: • Intertidal marsh; • Mudflat; • Subtidal rock reefs; • Sandy gravel beach; and • Eelgrass. While not all species require offsetting, most species would experience increases to their productive potential or negligible change as a result of proposed on-site offsetting. As noted in EIS Section 33.0, a Construction Environmental Management Plan and an Operation Environmental Management Plan, each with several sub-plans, would be developed for the Project prior to construction and operation. The purpose of the environmental management plans is to ensure appropriate measures and controls are in place to prevent or reduce adverse environmental effects and to provide clearly defined action plans and emergency response procedures to protect human and environmental health. To ensure their alignment with all required Project permits, any conditions of approvals, final designs, finalised construction or operation approaches, and site-specific considerations, the Project's environmental management plans are necessarily developed and finalised nearer to the start of the construction and operation phases. Feedback on applicable environmental management plan sub-plans will be solicited from Indigenous groups potentially affected by the Project. EIS Table 35-2 presents all mitigation measures and commitments proposed by the VFPA in relation to the project. The VFPA is committed to developing and implementing a Follow-up Program for the Project. The purpose of the Follow-up Program is to verify the accuracy of residual effect predictions made in the EIS, and determine the effectiveness of any measures taken to mitigate the residual environmental effects of the Project. To ensure the Program's elements adequately reflect conditions of Project approvals, final designs, and construction or operation approaches, as well as public, Indigenous group, and regulator feedback received during the review of the EIS, the VFPA will lead the development of the Follow-up Program after the submission of the EIS. **Addressed in AIEIS Appendix 2-B, Table 22 (#96):** The EIS considers clear, enforceable measures that are technically and economically feasible that would mitigate any adverse effects of the Project, as required by the *EIS Guidelines*. The approach to considering mitigation measures for adverse effects is described in EIS Section 8.0. The proposed approach for mitigation to address Project effects to marine biophysical VCs is described in EIS Section 17.0. Proposed mitigation measures are summarised in EIS Section 35.0, Table 35-2. Marine shipping associated with the Project is outside of the care and control of the VFPA; as such, the VFPA does not set requirements, and cannot enforce mitigation measures, associated with container vessel traffic in the marine shipping area. Mitigation measures described in the MSA are measures suggested for the appropriate authorities with jurisdiction within the marine shipping area. During the Review Panel Orientation Session #2, additional information on protective measures for the shipping industry was presented by Transport Canada, the Canadian Coast Guard, and the Pacific Pilotage Authority. This presentation can be found at https://www.ceaa-acee.gc.ca/050/documents/p80054/115538E.pdf.	33.4.1 Operation Compliance Monitoring Plan 33.5 Environmental Management Program, Roberts Bank Terminal 2 Follow-up Program Appendix 33-A Proposed Draft Follow-up Program Elements 35.0 Effects Assessment Summaries Table 35-2 Proposed Mitigation Measures and Commitments **MSA** 1.0 Introduction 1.1 Purpose of the [MSA] **AIEIS** Appendix 2-B Aboriginal Issues and Interests, Table 22 Mitigation for Marine Biophysical VCs

Table 17: Noise and Vibration – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
PFN-17.1	Concerned with inland noise and vibration. Commented that noise does not stop at the shore, and that the vibration from ships extends a mile inland on Galiano.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	**27-Nov-2015, Workshop:** Acknowledged that low frequency sound can be carried quite far. Explained that the noise modelling studies concluded that the movement of noise is blocked by the islands and does not reach the Saanich area.	**Addressed in EIS Appendix 7.2-B (#43):** The potential changes in noise and vibration that may be caused by the Project, and the potential effects of those changes on biophysical VCs and human health are considered in the EIS. Mitigation measures to address noise-related effects are also described in the EIS. The noise and vibration assessment examined potential changes in noise and vibration as a result of the Project. The results of the noise and vibration assessment were used in the assessments of coastal birds, marine commercial use, outdoor recreation, human health, and Current Use. The assessment considered the potential changes in noise and vibration that may result from the Project and the potential cumulative changes in noise and vibration that are likely to result from the Project in combination with other certain and reasonably foreseeable projects and activities, including incremental marine vessel traffic. The assessment considers noise and vibration from trains, as a source contributing to existing conditions, as well as a potential Project-related source of noise and vibration and a potential source of cumulative change in noise and vibration. Mitigation measures related to noise are included in the human health assessment (EIS Section 27.9.2). The assessment considered Project-related sources of noise and vibration, including construction equipment, container ships at berth, container handling activities, and movement of trains and trucks on the terminal and causeway. The assessment focused on continuous noise, low frequency noise, transient and impulsive noise, and ground-borne vibration. The assessment concluded that: • Project-related changes in annual average noise levels in communities near the Project are expected to be minor and, for the most part, not perceptible. • The Project, in combination with other certain and reasonably foreseeable projects and activities, is expected to result in minimal incremental cumulative changes to noise in areas close to road and rail corridors. Some changes in noise conditions that could be perceptible include: • Increased noise during periods of peak construction activity. • The number of intermittent noises during operation would increase, but the noise levels would be the same or lower than from the existing Roberts Bank terminals. • Increased noise in marine areas is expected to be perceptible close to the terminal. • The construction and operation of the marine terminal and causeway is not expected to result in perceptible increases in levels of ground-borne vibration. Suggested mitigations were considered in the development of proposed mitigation for Project-related changes in noise. Noise Management Plans would be developed for construction and operation phases and would integrate with the VFPA's existing noise monitoring programs. Mitigation of construction-related noise would include: • Scheduling of higher-noise generating activities during weekdays, and during the daytime; • Shutdown of equipment and vehicles when not in use; • Utilisation of equipment that produces less noise; and • Awareness and training for construction crews. Mitigation for operation-related noise would include:	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 9.3 Noise and Vibration 9.3.6 Methods 9.3.7 Existing Conditions 9.3.9 Future Conditions with the Project; 9.3.10 Future Conditions with the Project and Other Certain and Reasonably Foreseeable Projects and Activities 9.8 Underwater Noise 9.8.2 Assessment Purpose and Approach 9.8.5.2 Methods, Study Areas Figure 9.8-1 Study Areas for Underwater Noise Appendix 9.8-A Construction and Terminal Activity Underwater Noise Modelling Study Technical Report 13.0 Marine Fish 13.6.3 Future Conditions with the Project, Potential Effect - Changes in Productivity 14.0 Marine Mammals 14.6 Future Conditions with the Project 15.0 Coastal Birds 15.7.2 Future Conditions with the Project, Potential Effect - Changes in Productivity 27.0 Human Health 27.6 Future Conditions With the Project - Potential Project-Related Effects: 27.6.3 Potential Effect #2 – Adverse Health Effects Related to Noise 27.6.4 Potential Effect # 3 – Adverse Health Effects Due to Stress and Annoyance 27.6.5 Potential Effect # 4 – Adverse Health Outcomes due to Changes in Health Inequity

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				• Optimised tonality of equipment alarms to limit audibility on shore while meeting safety requirements; • Operator awareness and training; and • Regular maintenance of equipment (e.g., lubrication of pulleys and other moving parts, replacement of deteriorated exhaust mufflers, maintaining efficiencies of engines through servicing). **Addressed in AIEIS Appendix 2-B, Table 14 (#56):** The scope and methods of the underwater noise study are summarised in EIS Section 9.8, and detailed in the supporting appendix. The LSA was established to encompass the area within which Project-related construction and operation underwater noise may interact with and potentially have an effect on relevant VCs, including marine fish, marine mammals, and coastal birds. The spatial boundary of the LSA includes the Strait of Georgia, incorporating existing natural boundaries that limit the propagation of noise. The LSA includes the area where predicted underwater noise levels from Project construction and operation were greater than both the ambient noise from wind and distant vessels, and the hearing ability of marine fish and marine mammals (EIS Appendix 9.8-A). Although the LSA represents the likely area that underwater noise from the Project will be audible to marine fish, marine mammals, and coastal birds, a regional study area (RSA) as shown in EIS Figure 9.8-1, extends from the Project, south through the Strait of Georgia to the western end of Juan de Fuca Strait, and includes the Canadian and U.S. SRKW critical habitat, excluding Puget Sound. The RSA provides ecological and regulatory context for underwater noise for SRKW and other marine mammals. **Addressed in MSA Sections 7.6 and 8.2:** The assessment of underwater noise considers the level of underwater sound in the marine environment. Underwater noise is not generally transmitted through land at perceptible levels; however, low-frequency atmospheric noise can induce vibration in lightweight building structures. Low frequency noise was assessed in the atmospheric noise and vibration assessment (EIS Section 9.3) within the upland study area. The results of the underwater noise assessment were considered in the assessments of marine fish, marine mammals, and coastal birds. An interaction between Project-related underwater noise and terrestrial wildlife is not anticipated, and was therefore not assessed, but potential effects from atmospheric noise were considered in the effects assessment for coastal birds utilising the upland areas at Roberts Bank.	27.7.2 Mitigation Measures, Mitigation Measure #2 - Measures to Address Noise-related Effects **AIEIS** Appendix 2-B Aboriginal Issues and Interests – *W̱SÁNEĆ* Nation, Table 14 Underwater Noise **MSA** Figure 4-1 Marine Shipping Area, Shipping Lanes, and Locations of Interest 7.6 Underwater Noise 7.6.2 Assessment Boundaries 7.6.2.1 Temporal and Spatial Boundaries 8.1 Marine Fish and Fish Habitat 8.2 Marine Mammals 8.3 Coastal Birds

Table 18: Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
PFN-18.1	Commented that a negligible effect on a fishery is not necessarily a negligible effect on an Aboriginal fishery. Stated that a localized habitat might only be 1% of a regional habitat, but it might account for 100% of a fishery for a First Nations family. One is bounded by territory, and cannot just go elsewhere.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	**27-Nov-2015, Workshop:** Acknowledged this distinction. Stated that the commercial, recreational and Aboriginal fisheries chapter is assessing the productivity of fisheries (i.e. the biological components), and not the end users. The human aspect is assessed in other sections.	**Addressed in AIEIS Appendix 2-B, Table 21 (#92):** Potential effects of the Project on commercial, recreational, and Aboriginal fisheries are assessed in EIS Section 16.0. Potential effects on fishing activities (as opposed to the fisheries themselves) are considered in EIS Sections 21.0, 24.0, and 32.0. **Addressed in AIEIS Sections 3.0, 4.0, and 7.0:** The Current Use and rights assessments in the EIS and AIEIS consider Indigenous fishing in the vicinity of the Project area for traditional purposes. The importance of location to fishing for traditional purposes, for precisely the reasons outlined in the comment, is considered in these sections. The Project is not expected to measurably affect Pauquachin First Nation access to preferred locations for traditional use, including but not limited to traditional fin-fishing locations associated with the Fraser River, which was the predominant use identified in the area by Pauquachin First Nation. With regard to access to crab harvesting locations, Pauquachin First Nation use of the area of the Project for traditional crab harvesting has reportedly occurred infrequently and at low levels. The potential level of Project-related effects on access to preferred locations for traditional use purposes is therefore predicted to be negligible for Pauquachin First Nation, meaning that no noticeable incremental changes to their existing levels or patterns of use in the vicinity of the Project area are expected as a result of Project placement or activities.	**AIEIS** 3.0 Marine Commercial Use 4.0 Outdoor Recreation 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 7.2.6.1 Access to Preferred Current Use Locations Appendix 2-B Issues and Interests, Table 21 Commercial, Recreational, or Aboriginal Fisheries **EIS** 8.0 Effects Assessment Methods 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries 21.0 Marine Commercial Use 24.0 Outdoor Recreation 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes

Table 19: Port Operations

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
PFN-19.1	Asked whether a container ship will adjust their speed if they are running behind schedule.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Responded that there are limitations for maximum speed, and with the high cost of fuel, it is more efficient for container ships to transit more slowly, which burns less fuel.	**Addressed in MSA Section 4.2.1.4:** Container ship speeds through the marine shipping area for ships destined for Canadian ports generally average around 20 knots, with a maximum speed of 25 knots. The Pacific Pilotage Authority has confirmed container ship speeds vary depending on vessel and prevailing conditions, such as concentration of vessels, vessels' schedules, the type of low sulphur fuel being used, wind and tidal conditions, and speed adjustments based on the practice of good seamanship. The Pacific Pilotage Authority also advised that as a general rule, when conditions permit, container ships typically travel at speeds between 18 and 25 knots.	**MSA** 4.2.1.4 Speed
PFN-19.2	Requested clarification regarding: • Which agency has authority over navigable waters in the VFPA's jurisdiction; • The scope of the VFPA's authority within its jurisdiction; • How the VFPA determines which ships can come into port; • Whether there is any quality control; and • Whether the VFPA polices the waterway.	18-Sep-2015, Meeting	**14-Oct-2015, Email from the VFPA:** The VFPA sent an email to Pauquachin after the meeting with links to the VFPA's Letters Patent and some of the relevant provisions from the *Canada Marine Act*, as follows: • http://www.portmetrovancouver.com/wp-content/uploads/2015/05/True-Copy-of-VFPA-Letters-Patent.pdf • http://laws-lois.justice.gc.ca/eng/acts/C-6.7/page-3.html#docCont.	**Addressed in AIEIS Appendix 2-B, Table 1 (#1):** EIS Section 1.0 provides an overview of the VFPA's mandate and jurisdiction. The VFPA is a port authority created pursuant to the *Canada Marine Act*, accountable to the federal Minister of Transport. The *Canada Marine Act* gives port authorities the authority to take, permit, or prevent certain activities within a port, which is defined as "the navigable waters under the jurisdiction of a port authority and the real property and immovables that the port authority manages, holds or occupies as set out in the letters patent". The letters patent issued for the VFPA describe the geographic boundaries of the navigation jurisdiction of the VFPA, the federal real property that it manages, and the lands other than federal real property, namely lands that the VFPA holds in its own name. The VFPA's territorial jurisdiction therefore includes the federal lands and lands other than federal real property that it manages, together with the navigable waters over which it has navigation jurisdiction. The federal real property managed by the VFPA and its navigation jurisdiction are shown in EIS Figure 1-3. In fulfilling the mandate under the *Canada Marine Act*, the port authority carries out a variety of duties, including safety and security of all land and waters, in collaboration with other agencies, using technology and land and water patrols. For core activities related to shipping and navigation, the VFPA acts as agent to the federal Crown. In accordance with this statutory authority, the VFPA has issued a Port Information Guide for marine operations within its jurisdiction (http://www.portvancouver.com/marine-operations/port-information-guide/). The guide's purpose is to promote safe and efficient navigation within the local waters of the port and to protect the marine environment. The practices and procedures apply to all vessels in the port, including pleasure craft and recreational vessels, and to all persons responsible for the planning, operation, conduct, and safe navigation of such vessels, including tenants. Among other things, the Port Information Guide outlines practices and procedures related to arrival and departure checklists, navigation, movement of dangerous goods, waste removal, marine mammal critical habitat, speed, use of pilots, anchorage procedures, environmental requirements, vessel discharges, noise and lights, adverse weather conditions, bunkering, and cargo operations, including loading/discharging and cleaning. Appendices to the Port Information Guide provide data sheets for all terminals within the Port of Vancouver. Every vessel either in or seeking to enter the port is subject to the orders of the port authority with respect to its entry, departure, draught, berth, anchorage, location, speed, direction, and means and method of movement, whether or not such orders are issued through or by the Canadian Coast Guard's Marine Communications and Traffic Services. The VFPA asserts its authority on vessels that intend to enter, or are within the waters controlled by the port authority by monitoring and enforcing the practices and procedures described in the Port Information Guide. **Addressed in response to IR1-01:** Additional information regarding the VFPA's jurisdiction and scope of authority, including how the VFPA asserts its jurisdictional authority on vessels that intend to enter or are within VFPA navigable waters, is provided in the VFPA's response to IR1-01. The Port Information Guide is provided as an appendix to the response to IR1-01.	**EIS** 1.0 Introduction 1.3.2 VFPA Overview 1.3.2.2 Mandate and Jurisdiction Figure 1-3 VFPA Managed Federal Lands and Navigation Jurisdiction 1.3.3 Governance and Corporate Structure 1.3.3.1 Insurance and Liability Management 1.3.3.2 Environmental Policy **AIEIS** Appendix 2-B Issues and Interests, Table 1 Port Operations **Information Requests** Response to Information Request #1 (IR1-01 of CEAR Document #897)

Table 20: Potential Accidents or Malfunctions

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
PFN-20.1	Concerned with potential for an accident or malfunction involving a container ship carrying dangerous goods. Asked what kinds of dangerous cargo would be transported, and what amounts of each. Asked how containers involving dangerous goods are handled. Concerned with the potential for loss of containers overboard in the event of an accident. Interested in the proportion of goods shipped in containers that are potential contaminants.	22-Jul-2015, Meeting 18-Sep-2015, Meeting 26-Nov-2015, EIS Results Workshop #1 – Saanich Nations 30-Jan-2017, *W̱SÁNEĆ* All-Chiefs Meeting (Pauquachin, Tsartlip, Tsawout, Tseycum)	**22-Jul-2015, Meeting:** Explained that EIS Appendix 30-A, Table B-4 indicates the composition and number of hazardous and noxious substances containers at Deltaport in 2012. Stated that of the 1.7 million TEUs handled at the Deltaport Terminal in 2012, less than 1% (0.7062%) involved goods that could be classified as Dangerous Goods under the IMDG Code. Demand for goods is assumed to be the same if the Project goes ahead. Stated that in Canada, the transportation of dangerous goods is strictly regulated under the *Transportation of Dangerous Goods Act, 1992*. Committed to following up on this question, but unlikely to get an exact answer (regarding amounts of hazardous cargo on each ship) as container transport shipments are responsive to demand. **26-Nov-2015, Workshop:** Referred to Canada Border Services Agency procedure for the handling of hazardous goods, and also the process of checking containers randomly. Each container has a number, and containers with hazardous goods are flagged. In the event of an accident, it is not immediately known which containers contain hazardous goods and which do not. However, like a train accident, this information becomes available within hours of the incident. Referred to the fire at the Centerm container terminal, where the contents of the container in question were identified quickly after the start of the incident. **13-Aug-2015, Email from the VFPA:** Concern with the potential for loss of containers overboard in the event of an accident. EIS Appendix 30-A (http://www.ceaa-acee.gc.ca/050/documents/p80054/101341E.pdf) states that the risk of loss from foundering or loss overboard from ship motions in semi-protected water is considered negligible. The potential for an accident involving a loss of containers will be discussed in the MSA (currently in draft form) as it relates to the marine shipping study area. What types of dangerous cargo are transported by container, and in what quantities? Appendix G of EIS Appendix 30-A (pp. 178 at the following link: http://www.ceaa-acee.gc.ca/050/documents/p80054/101341E.pdf)	**Addressed in MSA Appendix 5-B (#109):** The potential for an accident involving a spilled container, and hazardous contents of containers, is addressed in MSA Section 10.0. Details on the types of hazardous materials shipped in containers are provided in EIS Appendix 30-A (Table G-3 in Appendix G). Regulations for securing containers, and for the transport of dangerous goods, are set by the IMO: http://www.imo.org/en/About/Conventions/ListOfConventions/Pages/International-Convention-for-the-Safety-of-Life-at-Sea-(SOLAS),-1974.aspx. The International Maritime Dangerous Goods Code is the international code that establishes where dangerous goods should be loaded on a ship. Some should be loaded below deck, others should be loaded on deck, some dangerous goods need to be separated by certain distances from other types of goods, and some dangerous goods need to be segregated in different holds from other goods. The implementation of the Code is mandatory under the International Convention for the Safety of Life at Sea (SOLAS) and the International Convention for the Prevention of Pollution from Ships (MARPOL 73/78). **Addressed in AIEIS Appendix 2-B, Table 29 (#156):** EIS Section 30.0 considers incidents involving both non-hazardous (e.g., aggregate, non-hazardous container cargo) and hazardous (e.g., hydrocarbons, dangerous goods) materials. It also considers the potential for an accident or malfunction involving a fire (EIS Section 30.2). Details on the types of hazardous materials shipped in containers are provided in EIS Appendix 30-A (Appendix G, Table G-3). Transportation of hazardous materials is regulated by the *Transportation of Dangerous Goods Act, 1992*, which is administered by Transport Canada. Regulations for the transport of dangerous goods, are set by the IMO: http://www.imo.org/en/About/Conventions/ListOfConventions/Pages/International-Convention-for-the-Safety-of-Life-at-Sea-(SOLAS),-1974.aspx. The International Maritime Dangerous Goods Code is the international code that establishes where dangerous goods should be loaded on a ship. Some should be loaded below deck, others should be loaded on deck, some dangerous goods need to be separated by certain distances from other types of goods, and some dangerous goods need to be segregated in different holds from other goods. The implementation of the Code is mandatory under the International Convention for the Safety of Life at Sea (SOLAS) and the International Convention for the Prevention of Pollution from Ships (MARPOL 73/78).	**EIS** 30.0 Potential Accidents or Malfunctions 30.2.1 Potential Project-Related Accidents and Malfunctions, Probabilities and Consequences 30.4 Potential Marine-based Accidents and Malfunctions 30.5 Potential Land-based Accidents and Malfunctions Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment Appendix G - Spill Materials and Properties Table G-3 Dangerous Good TEUs Transported through Deltaport (RBT) in 2012 **AIEIS** Appendix 2-B Issues and Interests, Table 29 Potential Accidents and Malfunctions 8.0 Potential Accidents or Malfunctions **MSA** Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents or Malfunctions 10.3.2.1 Loss Overboard of Containers from Ships In-transit in Semi-protected Waters

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
			provides an overview of Dangerous Good TEUs transported through Deltaport in 2012. **30-Jan-2017, Meeting:** Recorded comment for consideration by the Project team.		
PFN-20.2	Stated that Pauquachin requires more information to better understand those potential impacts and what measures the VFPA is proposing to minimize any potential impacts, to respond to an accident or malfunction should one occur and to remediate any harm stemming from an accident or malfunction.	18-Sep-2015, Letter	**29-Oct-2015, Letter from the VFPA:** Noted that the document provided by the VFPA to Pauquachin First Nation for review included a summary of Pauquachin First Nation's Current Use, and is not the entirety of the MSA. Stated that the MSA will include an assessment of potential impacts associated with marine shipping and proposed mitigation.	**Additional information provided by the VFPA:** Beyond the information provided in EIS Section 30.3 and MSA Section 10.4, which provide information concerning spill response roles, responsibilities, and other mitigation in the event of an accident and malfunction, Transport Canada's response to the Review Panel's April 4, 2018 Information Requests provides additional information with regard to responding to and minimising the risk of marine spills.	**EIS** 30.3 Risk Mitigation Framework **MSA** 10.4 Mitigation Measures **From Transport Canada to the Review Panel re: Response to IRs issued by the Review Panel on April 4, 2018 (CEAR Document #1178)**
PFN-20.3	Concerned with the potential for an accident, and impacts to the environment and risk to lifestyle – the way they live on the water, transit back and forth to Washington state, and there is risk to economic activities (harvesting fish and shellfish). Concerned that an accident could seriously damage Pauquachin's traditional territory. First Nations bear all the risk related to potential Project accidents or malfunctions, yet do not share in the benefit from the Project.	18-Sep-2015, Meeting	**18-Sep-2015, Workshop:** Acknowledged Pauquachin's concern and explained that the VFPA wants to understand better the potential effects in this area. This will lead to a discussion of benefits to offset potential impacts.	**Addressed in AIEIS Section 8.0:** The potential effects on Current Use and potential impacts on the ability to exercise asserted or established Aboriginal and treaty rights resulting from accidents or malfunctions arising from the Project were considered in EIS Section 30.0. Of the one marine-based scenario and two land-based scenarios assessed in EIS Section 30.0, only the marine-based scenario—a hypothetical heavy fuel oil spill as a result of a ship allision at the RBT2 wharf face during Project operation—was assessed for potential effects on Current Use and potential impacts on the exercise of asserted or established rights. A potential interaction between the marine-based scenario and traditional activities was identified, whereas no such interaction was identified for the land-based scenarios. As described in EIS Section 30.6.1.3 (see pp. 30-65 to 30-66), a residual effect on Current Use as a result of the spill scenario was identified and assessed as significant, while a residual impact on the exercise of asserted or established rights was also identified and assessed as serious. Because of the extremely low probability of an allision resulting in a spill occurring at the RBT2 berth, both the residual effect to Current Use and the residual impact to the exercise asserted or established rights were considered unlikely and not assessed further. Based on the above, the analysis and conclusions presented in EIS Section 30.0 relating to potential effects on Current Use and potential impacts on the exercise of asserted or established rights remain unchanged and are viewed as fully applicable to Tsawout First Nation, Pauquachin First Nation, Tsartlip First Nation, Tseycum First Nation, and Malahat Nation in the event their Current Use or the exercise of their asserted or established rights were to be affected by a spill at the RBT2 berth, should such an incident occur once the Project is operational. **Addressed in MSA Section 10.0:** MSA Section 10.0 presents an assessment of potential accidents and malfunctions arising from marine shipping associated with the Project. Two plausible worst-case scenarios were selected for the assessment, based on the analysed probabilities of occurrence, higher risk areas, and possible consequences:	**EIS** 30.6.3.1 Plausible Worst-case Scenario #3 Description **MSA** 10.0 Potential Accidents or Malfunctions 10.5.9 Human Health 10.5.10 Marine Commercial Use 10.5.11 Outdoor Recreation 10.5.13 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights **AIEIS** 7.3.3.3 Other Accommodations 8.0 Potential Accidents or Malfunctions

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				• A powered grounding of a container ship on a hard substrate, resulting in a spill of 7,500 m^3 of heavy fuel oil; and • A collision between a container ship and a small vessel within an existing shipping lane, resulting in damage to the vessel and/or gear as well as serious injury or fatality. The assessment for the plausible worst-case spill scenario concluded that, with the exception of human health, measurable residual adverse effects are predicted for all VCs. In all cases, the identified residual adverse effects of a spill are unlikely to occur, because of the very low probability of an accident or malfunction that could result in a spill. With the exceptions of residual effects on marine mammals (SRKW), marine commercial use (guided sport fishing and marine-based tourism sub-components), outdoor recreation, archaeological and heritage resources, and Current Use, adverse residual effects were considered not significant. A serious residual adverse impact on the ability of Indigenous groups to exercise Aboriginal and treaty rights in areas overlapping or near the hypothetical spill area would be expected in the event of such a spill. The plausible worst-case collision scenario has the potential to result in measurable residual adverse effects on human health, marine commercial use, outdoor recreation, Current Use, and asserted or established Aboriginal and treaty rights. In all cases, the identified residual adverse effects of a collision are unlikely to occur, because of the very low probability of collision. The assessment concluded that residual adverse effects are expected to be not significant for marine commercial use and outdoor recreation, but significant for human health. For Current Use, the residual effect could range from not significant to significant, depending on the capacity of the affected Indigenous group to continue to undertake Current Use. In the event of a collision between a vessel engaged in traditional use activities and a container ship, a minor to serious adverse residual impact on the ability of the affected Indigenous group to exercise Aboriginal and treaty rights associated with those activities would be expected. **Additional information provided by the VFPA:** As noted in AIEIS Section 7.3.3.3, the VFPA is prepared to assist Pauquachin First Nation in accessing potential economic opportunities resulting from the Project, including contracting opportunities as well as construction employment opportunities. To support Pauquachin First Nation in preparing for employment opportunities, the VFPA will provide training funding. The VFPA will continue to engage with Pauquachin First Nation to develop and implement plans to facilitate access to these opportunities.	
PFN-20.4	Asked for a contact at Transport Canada, and questions about Transport Canada's mandate.	18-Sep-2015, Meeting	**18-Sep-2015, Meeting:** Committed to follow up with Transport Canada on this question. **14-Oct-2015, Email from the VFPA:** Provided the contact information for Transport Canada's Indigenous Relations Advisor on the RBT2 file. Stated that Transport Canada will be able to explain their mandate.		

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
PFN-20.5	Asked how long it takes to respond to an incident. Asked about the process for responding to spills along the US-Canada border? Asked about the insurance fund for cleaning up in the event of an accident. Asked if about spills and/incidents: amount of insurance, potential for damage, and who is ultimately responsible.	22-Jul-2015, Meeting 18-Sep-2015, Meeting	**22-Jul-2015, Meeting:** Recorded comment for consideration by the Project team. **18-Sep-2015, Meeting:** Explained the VFPA's jurisdiction and noted the other agencies that would respond in the case of an incident, namely the Canadian Coast Guard, Western Canada Marine Response Corporation (WCMRC), and other agencies that would be involved like Transport Canada. Committed to following up on this question. **13-Aug-2015, Email from the VFPA:** What is the process for responding to spills along the US-Canada border? Please see page 11 of the WCMRC Handbook: (http://wcmrc.com/wp-content/uploads/2013/06/WCMRC-Information-Handbook-2012.pdf) for a discussion of the mutual aid agreement between Canada and the United States, allowing both parties to work together in responding to an incident. Detailed information on the topic can be found in the Canada-United States Joint Marine Pollution Contingency Plan, at the following link: http://www.ec.gc.ca/international/default.asp?lang=En&n=0DEBF8A7-1. How long does it take to respond to an incident? Pages 4 and 5 of the Transport Canada Marine Response Organizations Standards document (http://www.tc.gc.ca/media/documents/marinesafety/tp12401e.pdf) provide information on the minimum requirements for response times, which vary by spill quantity and area. WCMRC, as the responsible party for spill response, could better speak to typical response times. Questions about the insurance fund for cleaning up in the event of an accident. Insurance is held by the individual owners of the ships using the RBT2 terminal, and not by the VFPA. Please see the content under the heading "Liability and compensation" at the following link for more information on funds available for spill clean-up: http://www.tc.gc.ca/eng/marinesafety/menu-4100.htm#m. While the MSA is in progress, it may be useful to look over EIS Section 30.0 (http://www.ceaa-acee.gc.ca/050/documents/p80054/101344E.pdf), as well as EIS Appendix 30-A referenced above for further information. **14-Oct-2015, Email from the VFPA:**	**Addressed in MSA Section 10.4.4.3:** As a 'Response Organisation' pursuant to the *Canada Shipping Act, 2001*, WCMRC is required to demonstrate to Transport Canada that logistical arrangements are in place to meet Response Time Planning Standards within its Geographic Area of Response (GAR). Within the GAR, there are Designated Ports, Primary Areas of Response (PAR), and Enhanced Response Areas (ERA) (see MSA Figure 10-3), categorised according to the need for different planning standards, based on the increased risks associated with greater traffic density: • Designated Port – The Port of Vancouver is defined as a Designated Port due to the volume of oil handled, marine traffic volume, and marine traffic convergence. WCMRC is required to be able to deploy sufficient response equipment on a 150 tonne (Tier 1) spill scene within 6 hours and a 1,000 tonne (Tier 2) spill scene within 12 hours; • Primary Area of Response – The PAR for the Port of Vancouver extends from the VFPA's jurisdictional boundary to a distance of 50 nautical miles in all directions. WCMRC is required to be able to deploy sufficient response equipment on a 2,500 tonne (Tier 3) spill scene within 18 hours and a 10,000 tonne (Tier 4) spill scene within 72 hours; and • Enhanced Response Area – The ERA encompasses all Canadian waters between the western boundary consisting of a line running between Carmanah Point on Vancouver Island to Cape Flattery, Washington State, and the eastern boundary consisting of a line running from Victoria due east to the Canada-U.S.A. border. Although the PAR and ERA are defined separately, the response time standards are effectively the same for both: 2,500 tonne (Tier 3) spill scene within 18 hours and a 10,000 tonne spill (Tier 4) scene within 72 hours. Outside the PAR and the ERAs, but inside the GAR, WCMRC is required to be able to deploy sufficient response equipment on a 2,500 tonne (Tier 3) spill scene within 18 hours (plus travel) and a 10,000 tonne spill (Tier 4) scene within 72 hours (plus travel). According to the Response Organization Standards, TP 12401, on-water recovery operations for oil spills in sheltered waters and unsheltered waters are to be completed within ten operational days after the day on which the equipment is first deployed in the affected operating environments. **Addressed in MSA Appendix 5-B (#1):** The regulatory framework for spill response is described in MSA Section 3.0. The regulatory requirement for maritime insurance is established under the *Marine Liability Act*, S.C. 2001, c. 6 and administered by Transport Canada. Additional information about the roles of various parties in spill response is provided in MSA Section 10.0. Information about the amount available in the insurance fund, and whether the CEA Agency has the authority to raise the amount, is not included in the MSA. By means of this response, the VFPA advises the CEA Agency of this concern. **Addressed in EIS Appendix 7.2-B (#208):** Generally, the owner of the vessel from which the spill originates is responsible, in accordance with the *Marine Liability Act*.	**EIS** 6.0 Environmental Assessment and Permitting Process Appendix 6-A Legislation Relevant to the Project Appendix 7.2-B Aboriginal Groups Issues and Interests Table 10.0 Potential Accidents or Malfunctions 10.4 Mitigation Measures **MSA** 3.0 Regulatory Framework and Role of Government 3.4 Marine Emergency Response 10.0 Potential Accidents or Malfunctions 10.4 Mitigation Measures 10.4.4.3 Geographic Area of Response and Standard Response Times **Transport Canada Response to the Review Panel's April 4, 2018 IRs (CEAR Document #1204)**

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
			Who is liable for a spill once a ship leaves VFPA jurisdiction? Is there liability insurance? Generally, the owner of the vessel from which the spill originates is responsible, in accordance with the *Marine Liability Act*. There is more information on this topic on Transport Canada's website, which explains liability and compensation for oil spill clean-up and damages, including funds available for clean-up: http://www.tc.gc.ca/eng/marinesafety/menu-4100.htm#m. Additional sources of information on funds available for clean-up are available at the following link: https://www.tc.gc.ca/eng/marinesafety/oep-ers-regime-funds-1119.htm. MSA Section 10.5.10.5 provides additional details on this topic. We will make a copy of the report available to you upon submission to the CEA Agency. Questions about the VFPA's relationship with WCMRC and the Coast Guard. The EIS describes the parties who would be notified and assume responsibility as On Scene Commander for spill clean-up in the event of a marine spill within VFPA jurisdiction, including Roberts Bank. These parties include the Canadian Coast Guard and the WCMRC. The VFPA's role following a spill would be to maintain situational awareness and coordinate the incident response. With respect to a marine spill occurring outside the VFPA's jurisdiction, more detail will be provided in MSA Section 10.4.2, including a description of roles and responsibilities. Questions about a major disaster or spill response. The MSA will include a section on potential accidents and malfunctions, including information on spill response outside of VFPA jurisdiction. EIS Section 30.0 (http://www.ceaa-acee.gc.ca/050/documents/p80054/101344E.pdf), as well as EIS Appendix 30-A, provide information regarding disaster and spill response within VFPA jurisdiction.	There is more information on liability on Transport Canada's website, which explains liability and compensation for oil spill clean-up and damages, including funds available for clean-up: http://www.tc.gc.ca/eng/marinesafety/menu-4100.htm#m. Additional sources information on funds available for clean-up are available at the following link: https://www.tc.gc.ca/eng/marinesafety/oep-ers-regime-funds-1119.htm. **Addressed in MSA Appendix 5-B (#102):** Details on spill response, including responsibilities of various parties, response timelines, and equipment requirements, are provided in the mitigation section of the assessment of potential accidents or malfunctions (MSA Section 10.0). Detailed Oil Spill Response Plans are prepared and executed by the WCMRC, and submitted to Transport Canada. Additional information is available here: http://wcmrc.com/ **Addressed in MSA Appendix 5-B (#100):** Responsibilities for transboundary spill response are provided in the mitigation section of the assessment of potential accidents or malfunctions (MSA Section 10.0). **Additional information provided by the VFPA:** Transport Canada's Response to the Review Panel's April 4, 2018 IRs (CEAR Document #1204) provides information regarding programs undertaken by the Government of Canada related to spill management.	
PFN-20.6	Asked why the accidents and malfunctions section of the marine shipping addendum considers a small vessel and not a big vessel. Commented that it is not a worst case scenario if there is some plausibility that a worse scenario might occur (i.e. a container ship colliding with a tanker).	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Stated that as depicted in the Trans Mountain Expansion (TMX) assessment, and based on the timing and movement of vessels, it was improbable for two large ships to meet. A container ship colliding with a tanker is not a plausible worst-case scenario. Kinder Morgan conducted a TERMPOL (Technical Review Process of Marine Terminal Systems and Transshipment Sites) for TMX to assess the impact of this type of incident occurring.	**Addressed in MSA Section 10.3.3:** As noted in MSA Section 10.3.3 the plausible worst-case accident or malfunction scenarios presented in the marine shipping area were determined based on the analysed probabilities of occurrence, likely locations, and possible consequences. A powered grounding was selected as it was the most probable event with the highest environmental consequence. Further rationale for the selection of the worst-case spill scenario is provided in MSA Section 10.3.3.1. Probabilities of collisions between container ships and other vessels is discussed in MSA Section 10.3.2.2, including collisions with crude	**MSA** 10.3.2.2 Collisions In-transit 10.3.3 Identification of Plausible Worst-case Accident or Malfunction Scenarios 10.3.3.1 Plausible Accident or Malfunction #1: Hard

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
			The plausible worst-case scenario that was identified for the assessment involves a container grounding on hard substrate in Boundary Passage and Haro Strait, and tearing the fuel compartment, releasing 7,500 cubic metres of fuel.	tankers, other tankers (product and chemical), bulk carriers, and other container ships. After considering a series of variables, including the outcome that a spill is associated with the collision, the analysis found the following: • Minimum return period (at 95% confidence level) for collisions of RBT2-bound container ships with other traffic in the marine shipping area of 133 years; • Container ship-tanker collision return periods of over 10,000 years and those for laden crude oil tankers even lower, due to the fact that only outbound crude oil tankers are expected to be laden with crude oil; and • Minimum return period for a container ship collision with another container ship is approximately 250 years. A collision does not necessarily lead to a spill. Worldwide data indicate collisions resulting in spills are less likely. The analysis in EIS Appendix 30-A (Tables 3-14 and 3-15, at full RBT2 traffic plus other foreseeable marine facilities) found the following: • Minimum return periods (at 95% confidence level) for a collision between RBT2-bound container ships and other container ships that results in a spill (of fuel oil) are approximately 10,000 years; and • Minimum return periods (at 95% confidence level) for a collision between RBT2-bound container ships and laden crude oil tankers that result in a crude oil spill are over 800,000 years.	Grounding Resulting in a Spill 10.4 Mitigation Measures 10.5 Assessment of Potential Effects of Accidents or Malfunctions Appendix 10-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment
PFN-20.7	Concerned with the potential for an accident or malfunction: • Asked about the number of accidents caused by human error compared to a malfunction. • Commented that if an accident were to occur 1 in 10,000 trips, over the years, the event is likely to happen in the coming years.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Referred to a document that recently came out of Washington State from the Department of Ecology, which says most accidents are caused by issues related to situational awareness and human error. The report includes mitigation measures to deal with human error. Undertook to send the report to the group. Stated that the probabilities of an incident are given in EIS Appendix 30-A and MSA Appendix 10-A. **30-Nov-2015, Email from the VFPA:** *"Below are the links in follow up to your questions about vessel traffic and risk.* *1. 2014 Marine & Rail Oil Transportation Study* *https://fortress.wa.gov/ecy/publications/SummaryPages/1508010.html* *2. Gateway Pacific Terminal Proposal - Vessel Traffic and Risk Assessment Study* *http://www.ecy.wa.gov/geographic/gatewaypacific/vtras.html"*	**Additional information provided by the VFPA:** The estimated probability and potential consequences of a range of accidents or malfunctions, including spills of deleterious materials from ships during Project construction and operation, are described in EIS Section 30.0 and in MSA Section 10.0.	**EIS** Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment **MSA** Appendix 10-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment
PFN-20.8	Asked about the VFPA's relationship with WCMRC and the Coast Guard, and whether the VFPA is a contributor to WCMRC.	18-Sep-2015, Meeting	**18-Sep-2015, Meeting:** Recorded comment for follow-up. **14-Oct-2015, Email from the VFPA:** The EIS describes the parties who would be notified and assume responsibility as On Scene Commander	**Addressed in AIEIS Appendix 2-B, Table 1 (#2):** The roles of the WCMRC and the Coast Guard, and the VFPA's relationship with these organisations is described in EIS Section 30.0 and MSA Sections 3.0 and 10.4. The Canadian Coast Guard provided an overview of their responsibilities to the Panel at the Panel Orientation	**EIS** 30.0 Potential Accidents or Malfunctions

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
			for spill clean-up in the event of a marine spill within VFPA jurisdiction, including Roberts Bank. These parties include the Canadian Coast Guard and the WCMRC. The VFPA's role following a spill would be to maintain situational awareness and coordinate the incident response. With respect to a marine spill occurring outside the VFPA's jurisdiction, stated that more detail will be provided in MSA Section 10.4.2, including a description of roles and responsibilities.	#2 session held on September 16, 2016 (available at https://www.ceaa-acee.gc.ca/050/documents/p80054/115538E.pdf). While the VFPA would be an active participant in the management of an incident within its navigational jurisdiction, it has no direct role in planning for, responding to, or managing shipping-related emergencies outside of VFPA jurisdiction, as described in MSA Section 10.0. Transport Canada is the lead regulatory agency that manages Canada's Marine Oil Spill Preparedness and Response Regime under the authority of the *Canada Shipping Act, 2001*, and sets the guidelines and regulatory structure for the preparedness for and response to marine oil spills. The Canadian Coast Guard manages the National Response Team set up under the Marine Oil Spill Preparedness and Response Regime and monitors the overall response to ensure that it is effective, timely, and appropriate. Transport Canada certifies response organisations to respond to oil spills in Canadian waters. On the west coast, the WCMRC is the certified response organisation. Upon request of a Responsible Party or upon direction of the designated authorities (i.e., Canadian Coast Guard or Transport Canada), WCMRC would execute the spill containment and clean-up.	30.3.3 Risk Mitigation Framework, VFPA Practices and Procedures **MSA** 3.0 Regulatory Framework and Role of Government 3.4 Marine Emergency Response 10.0 Potential Accidents or Malfunctions 10.4 Mitigation Measures 10.4.4 Mitigation Measures, Western Canada Marine Response Corporation **AIEIS** Appendix 2-B Issues and Interests, Table 1 Port Operations 8.0 Potential Accidents or Malfunctions
PFN-20.9	Stated that the MSA is flawed as its assessment of a potential spill involving a Project container ship to: 1. one location (Boundary Passage), 2. one season (Spring), and 3. one type of accident or malfunction (a hard grounding). Stated that these limitations fail to to adequately assess the potential impacts of accidents and malfunctions on the environment and Pauquachin First Nation. Stated that the Panel should require the VFPA to revise the MSA to include: • a hypothetical spill at least one additional location along the marine shipping lane, within or near Pauquachin First Nation's traditional territory, • for each hypothetical spill, an assessment of the potential impacts of that spill in at least two seasons (for example Spring and Summer), • for each hypothetical spill and season, an assessment of the possibility of heavy fuel reaching the western side of the Saanich Peninsula, • a discussion on how the spill response for and potential impacts from an allision, a collision, a soft grounding or an explosion may differ from a spill resulting from a hard grounding, and how the spill response for and potential impacts may differ if the	28-Oct-2016, Letter to Panel (CEAR Document #639)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Appendix 5.2-B (#78):** The assessment is based on a plausible worst-case spill scenario that occurs in Boundary Passage at the south end of South Pender Island. The plausible worst-case spill scenario was selected based on probability of occurrence, likely locations, and potential effects. The effects from a spill on Current Use would not be identical if the spill occurred in a different location; however, the risk reduction and spill response measures would be similar to those applicable to the plausible worst-case scenario assessed, and the likelihood of residual effects from a spill is lower in other areas than the location of the plausible worst-case scenario. **Addressed in MSA Appendix 5.2-B (#92):** The assessment of potential accidents and malfunctions (MSA Section 10.0) considers a plausible worst-case spill scenario, located in Segment B of the marine shipping area, in Boundary Passage at the south end of South Pender Island. This location is near Turn Point. Boundary Passage is considered a higher risk area due to the relatively narrow passage, potential navigational hazards, and prevailing wind directions. The assessment also includes a description of applicable mitigation. **Addressed in responses to IR11-10 and IR11-11:** The VFPA's response to IR11-10 and IR11-11 will consider aspects of seasonality in relation to the effects of a worst-case spill scenario. **Addressed in response to IR11-03:** The VFPA's response to IR11-03, as requested by the Review Panel, will provide additional information related to the volume, rate, and pathways of effects for fuel spills (or releases of hazardous and noxious substances from containers) to the marine environment in the Project area and in the marine shipping area.	**MSA** Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents and Malfunctions 10.3.3 Identification of Plausible Worst-case Accident or Malfunction Scenarios **Information Requests** Response to Sufficiency Information Request #3 (IR11-03) Response to Sufficiency Information Request #10 (IR11-10) Response to Sufficiency Information Request #11 (IR11-11)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
	vessel sinks as a result of the allision, collision, grounding or explosion, as applicable, and • an assessment of potential impacts in the event one or more containers carrying hazardous materials fall off a Project container ship at least two locations along the marine shipping route, and that Pauquachin First Nation should be consulted by the proponent and Canada regarding those revisions.				
PFN-20.10	Stated that the potential impacts an accident or malfunction may have on Pauquachin First Nation include: • may restrict the times and locations in which Pauquachin First Nation can exercise their Aboriginal and Treaty Harvesting Rights due to regulated or voluntary spill-related closures, • may reduce the quantity and quality of Marine Resources Pauquachin First Nation have a right to harvest under their Aboriginal and Treaty Harvesting Rights, and economic benefits to Pauquachin First Nation from those resources, • may damage the habitat and food sources that Marine Resources require to survive and reproduce, • may damage vessels or gear utilized to exercise Pauquachin First Nation's Aboriginal and Treaty Harvesting Rights, • may restrict the times and locations in which Pauquachin First Nation members can engage in traditional ceremonies due to contamination of waters, shorelines or marine resources used in those ceremonies, • may damage burial sites, archaeological remains and other areas of cultural or spiritual significance to Pauquachin First Nation, • may result in negative human health impacts to Pauquachin First Nation members, • may result in a loss in property value, loss in revenues from or loss of an opportunity to develop reserve or other lands Pauquachin First Nation currently has or acquires an interest in, and • may result in a loss of revenues from businesses Pauquachin First Nation currently has or acquires an interest in.	28-Oct-2016, Letter to Panel (CEAR Document #639)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 10.0:** The assessment of potential accidents or malfunctions considers a variety of potential effects related to two plausible worst-case scenarios selected based on the analysed probabilities of occurrence, higher risk areas, and possible consequences: • A collision between a container ship and a small vessel within an existing shipping lane, resulting in damage to the vessel and/or gear as well a serious injury or fatality, and • A powered grounding of a container ship on a hard substrate, resulting in a spill of 7,500 m^3 of heavy fuel oil. In both cases, the identified residual adverse effects are unlikely to occur, because of the very low probability of the accident scenarios. **Addressed in MSA Section 10.5.13:** MSA Section 10.5.13 assesses the potential effects on Current Use and potential impacts on the ability to exercise asserted or established Aboriginal and treaty rights resulting from accidents or malfunctions arising from marine shipping associated with the Project. The assessment for the plausible worst-case spill scenario concluded that, with the exception of human health, measurable residual adverse effects are predicted for all VCs. In all cases, the identified residual adverse effects of a spill are unlikely to occur, because of the very low probability of an accident or malfunction that could result in a spill. With the exceptions of residual effects on marine mammals (SRKW), marine commercial use (guided sport fishing and marine-based tourism sub-components), outdoor recreation, archaeological and heritage resources, and Current Use, adverse residual effects were considered not significant. A serious residual adverse impact on the ability of Indigenous groups to exercise Aboriginal and treaty rights in areas overlapping or near the hypothetical spill area would be expected in the event of such a spill. The plausible worst-case collision scenario has the potential to result in measurable residual adverse effects on human health, marine commercial use, outdoor recreation, Current Use, and asserted or established Aboriginal and treaty rights. In all cases, the identified residual adverse effects of a collision are unlikely to occur, because of the very low probability of collision. The assessment concluded that residual adverse effects are expected to be not significant for marine commercial use and outdoor recreation, but significant for human health. For Current Use, the residual effect could range from not significant to significant, depending on the capacity of the affected Indigenous group to continue to undertake Current Use.	**MSA** 10.0 Potential Accidents or Malfunctions 10.3.3 Identification of Plausible Worst-case Accident or Malfunction Scenarios

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				In the event of a collision between a vessel engaged in traditional use activities and a container ship, a minor to serious adverse residual impact on the ability of the affected Indigenous group to exercise Aboriginal and treaty rights associated with those activities would be expected. The identified residual adverse effects of a collision are unlikely to occur, because of the very low probability of collision.	
PFN-20.11	Stated that regardless of whether or not the Project is approved, Canada should implement the following measures: • a requirement that one or more emergency response towing vessels be stationed at strategic locations along the marine shipping route, • a requirement that a resident salvor and personnel as well as salvage equipment be stationed at strategic locations along the marine shipping route.	28-Oct-2016, Letter to Panel (CEAR Document #639)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** Although the regulated care and control of vessels calling at the Port of Vancouver is limited to its marine jurisdiction, the VFPA is supportive of initiatives by other agencies and authorities in reducing marine shipping-related risks outside of its jurisdiction. The *Canada Shipping Act (2001)* is Transport Canada's regulatory framework surrounding marine pollution and its enforcement. In the case of a report of pollution in the water, including oil or fuel spills, Canada operates under the National Spill Response Protocol, which specifies that the Canadian Coast Guard is responsible for ensuring the clean-up of ship sourced spills of oil and other pollutants. While the VFPA is not the lead agency when it comes to spill response, it provides assistance often in the form of working with first responders and other agencies, providing information on a situation through the 24/7 operations centre, security cameras, patrol boats and drone. As per a 2009 letter of understanding, the VFPA can be called upon by the Coast Guard to conduct an initial inspection in response to a pollution report in our federal jurisdiction. On the west coast, the Canadian Coast Guard contracts spill clean-up to WCMRC. This is also the agency that ships or terminal operators are required to call if they discover they have been the source of a spill. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as the letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans Protection Plan which includes information on emergency response initiatives.	**https://www.portvancouver.com/about-us/topics-of-interest/emergencies-and-spill-response/** **http://wcmrc.com/** **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**
PFN-20.12	In reference to MARPOL, asked whether it is possible to implement it in Canada sooner than 2030, for example if container ship owners divert container ships that do not have double hulled fuel tanks to other countries that do not yet require all container ships to be double hulled.	28-Oct-2016, Letter to Panel (CEAR Document #639)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** The VFPA does not have the ability to direct container ship owners to divert ships in the suggested fashion. As is described in EIS Appendix 30-A, 2.2.2 Temporal Influence of Key Regulations, it is noted that virtually all container ships calling at a fully-operational RBT2 (in 2030) would be in compliance with the IMO 2010 MARPOL convention concerning double hulled container ships.	**EIS** Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment
PFN-20.13	Stated that Canada should conduct a review of existing research regarding the fate and behavior of heavy fuel and, if necessary, either conduct or require the proponent to conduct additional research to fill any gaps in existing research.	28-Oct-2016, Letter to Panel (CEAR Document #639)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** The role of the VFPA is to ensure goods are moved safely, efficiently and sustainably. As such, it is not the lead agency when it comes to spill response. The VFPA supports Canada's leadership in advancing spill preparedness and response in the Salish Sea, including its recently announced ongoing research initiatives as a part of the federal Oceans Protection Plan.	**From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954)**

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				Additional information provided by the VFPA: Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954) provides additional information on the Government of Canada's Oceans Protection Plan, which includes information on spill response initiatives.	
PFN-20.14	Requested that a spill response base be established in Beecher Bay and Pauquachin First Nation should continue to be consulted regarding the establishment of that base. Stated that there may be benefit in training one or more Pauquachin First Nation members in spill response measures, including shoreline cleanup and wildlife response, so that those members may assist in responding to a spill within Pauquachin First Nation's traditional territory. Stated that Canada should assess any deficiencies in the responses to the Esquimalt Harbour and English Bay spills and either implement or recommend improvements to address those deficiencies, and that Canada and/or WCMRC should consult with Pauquachin First Nation regarding the possibility of training one or more Pauquachin First Nation members in spill response measures. Stated that Canada and British Columbia should also consider and, where appropriate, implement the various spill response planning recommendations in the 2001 Report sponsored by the Pacific States/British Columbia Oil Spill Task Force. Concerned that they may have difficulty securing compensation for damages to its culture and Aboriginal and Treaty Harvesting Rights in the event of a spill involving a Project container ship. As such, Pauquachin First Nation seek further information from Canada on how damages to their culture and Aboriginal and Treaty Harvesting Rights would be compensated under the spill compensation regime and, if the compensation process for these matters is inadequate, a commitment from Canada to address that inadequacy.	28-Oct-2016, Letter to Panel (CEAR Document #639)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** The VFPA supports Canada's and Western Canada Marine Response Corporation's (WCMRC) ongoing leadership in advancing spill preparedness and response in the Salish Sea. The *Canada Shipping Act (2001)* is Transport Canada's regulatory framework surrounding marine pollution and its enforcement. In the case of a report of pollution in the water, including oil or fuel spills, Canada operates under the National Spill Response Protocol, which specifies that the Canadian Coast Guard is responsible for ensuring the clean-up of ship sourced spills of oil and other pollutants. While the VFPA is not the lead agency when it comes to spill response, it provides assistance often in the form of working with first responders and other agencies, providing information on a situation through the 24/7 operations centre, security cameras, patrol boats and drone. As per a 2009 letter of understanding, the VFPA can be called upon by the Coast Guard to conduct an initial inspection in response to a pollution report in our federal jurisdiction. On the west coast, the Canadian Coast Guard contracts spill clean-up to WCMRC. This is also the agency that ships or terminal operators are required to call if they discover they have been the source of a spill. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954 provides additional information on the Government of Canada's Oceans Protection Plan which includes information on emergency response initiatives.	**Transport Canada Response to the Review Panel's April 4, 2018 Information Requests (CEAR Document #1204)** **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954)**

Table 21: Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Lands and Resources for Traditional Purposes

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
PFN-21.1	Stated that the Current Use Summary [of the MSA] does not reflect concerns Pauquachin First Nation has regarding potential impacts from the Project on Pauquachin First Nation's rights and interests and the environment, including i. potential impacts from the day-to-day operation of Project-related marine traffic and ii. potential impacts from an accident or malfunction involving Project-related marine traffic, such as the grounding of a vessel, the capsizing of a vessel or a release of bunker fuel from a vessel.	18-Sep-2015, Letter	**29-Oct-2015, Letter from VFPA:** *"The document provided by [the VFPA] to Pauquachin First Nation for review included a summary of Pauquachin First Nation's current use of lands and resources for traditional purposes, and not the entirety of the [MSA]. The [MSA] will include an assessment of potential impacts associated with marine shipping and proposed mitigation. Issues and concerns expressed during meetings or in your letter have been recorded and considered, and [the VFPA] will provide responses to each concern in the [MSA]."*	**Addressed in MSA Section 9.5:** MSA Section 9.5 considers the Current Use by Indigenous peoples, including intangible cultural heritage considerations, and in the marine shipping area. The section also considers potential impacts on the ability to exercise asserted or established Aboriginal or treaty rights in the marine shipping area, including in the context of potential accidents and malfunctions. Potential effects on Current Use as a result of Project-associated vessel transit activities are considered negligible before mitigation for access to preferred Current Use locations, due to Project-associated ship wake, the availability and quality of preferred Current Use resources, and the quality of the Current Use experience (i.e., cultural practices) tied to those aspects of Current Use. Residual effects on access to preferred Current Use locations due to Project-associated container ship pass-bys, and on cultural practices tied to that aspect of Current Use, are considered negligible after the implementation of mitigation. Considering the conclusions of the Current Use assessment, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the marine shipping area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location. These mitigation measures for addressing potential incremental effects on Current Use are expected to also be effective at addressing the potential incremental impact to the exercise of Aboriginal and treaty rights. No additional mitigation measures have therefore been suggested for the potential incremental impact to the exercise of Aboriginal and treaty rights. **Addressed in MSA Section 10.0:** The assessment of potential accidents or malfunctions considers a variety of potential effects related to two plausible worst-case scenarios selected based on the analysed probabilities of occurrence, higher risk areas, and possible consequences: • A collision between a container ship and a small vessel within an existing shipping lane, resulting in damage to the vessel and/or gear as well a serious injury or fatality; and	**MSA** Appendix 5-B Aboriginal Issues and Interests 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 10.5 Assessment of Potential Effects of Accidents or malfunctions

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				• A powered grounding of a container ship on a hard substrate, resulting in a spill of 7,500 m^3 of heavy fuel oil. In both cases, the identified residual adverse effects are unlikely to occur, because of the very low probability of the accident scenarios. The assessment for the plausible worst-case spill scenario concluded that, with the exception of human health, measurable residual adverse effects are predicted for all VCs. In all cases, the identified residual adverse effects of a spill are unlikely to occur, because of the very low probability of an accident or malfunction that could result in a spill. With the exceptions of residual effects on marine mammals (SRKW), marine commercial use (guided sport fishing and marine-based tourism sub-components), outdoor recreation, archaeological and heritage resources, and Current Use, adverse residual effects were considered not significant. A serious residual adverse impact on the ability of Indigenous groups to exercise Aboriginal and treaty rights in areas overlapping or near the hypothetical spill area would be expected in the event of such a spill. The plausible worst-case collision scenario has the potential to result in measurable residual adverse effects on human health, marine commercial use, outdoor recreation, Current Use, and asserted or established Aboriginal and treaty rights. The assessment concluded that residual adverse effects are expected to be not significant for marine commercial use and outdoor recreation, but significant for human health. For Current Use, the residual effect could range from not significant to significant, depending on the capacity of the affected Indigenous group to continue to undertake Current Use. In the event of a collision between a vessel engaged in traditional use activities and a container ship, a minor to serious adverse residual impact on the ability of the affected Indigenous group to exercise Aboriginal and treaty rights associated with those activities would be expected. In all cases, the identified residual adverse effects of a collision are unlikely to occur, because of the very low probability of collision.	
PFN-21.2	Criticized the use of the Trailmark report as a basis for the Current Use Report in the Marine Shipping Addendum. Stated that information pulled from the Trailmark TMUS appears arbitrary. Sited examples: 1. Stated that Section 1.2.1.1 of the Summary minimizes Pauquachin members' use of the Saanich Inlet for gathering seaweed. Stated that the "increase in importance" of seaweed harvesting sites outside of the marine shipping area asserted here is not articulated in the Trailmark TMUS. On the contrary, specific reference is made to	18-Sep-2015, Letter	**29-Oct-2015, Letter from the VFPA:** *"In your letter, you also express concern with the sources of information used by [the VFPA] to compile the draft summary, and the amount of time and budget provided to Pauquachin First Nation to conduct a detailed review of the summary. In recent correspondence with Pauquachin First Nation, [the VFPA] invited Pauquachin First Nation to participate in the RBT2 Project, and in this capacity, [the VFPA] offered additional funding for participation and to support work on a Traditional Use Study."*	**Addressed in MSA Appendix 5-B (#19):** The VFPA has engaged with Indigenous groups with the objective of obtaining the views of Indigenous groups on potential effects of changes to the environment on Indigenous peoples, and potential adverse impacts of the Project on potential or established Aboriginal or treaty rights. The VFPA has also provided the opportunity to review the summary of Current Use existing conditions information specific to each Indigenous group prior to completing the assessment. Feedback received on these summaries has been considered and incorporated, as has additional information provided by Indigenous groups. The CEA	**MSA** Appendix 5-B Aboriginal Issues and Interests 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal or Treaty Rights 9.5.11 Potential Adverse Impacts on Asserted or Established Aboriginal and Treaty Rights ***Updated EIS Guidelines***

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
	current use of seaweed harvesting sites in the Inlet by Pauquachin members. The VFPA asserts a similarly unsubstantiated "increase in importance" of clamming sites outside of Saanich Inlet, which it attributes to "a loss of access" to traditional sites within the Inlet closer to the community. The VFPA appears here to be extrapolating from descriptions of diminished clam harvesting in the Inlet as a whole, while ignoring specific descriptions of current harvesting at sites within the Inlet despite existing barriers. To support this misrepresentation, the VFPA provides a list of "current use locations," that does not include any of the current use sites within the Saanich Inlet recorded in the Trailmark TMUS. 2. Stated that Pauquachin respondents are clear in the Trailmark TMUS that access to bivalve gathering within the Inlet is greatly reduced in comparison to the recent past, and that this is due in large part to pollution. Characterizing this as 'a loss of access to these locations," the VFPA ignores respondents' equally clear reports that despite this and other barriers, gathering of clams in particular continues – in some cases on a daily basis – at traditional sites within the Inlet, and that clams are gathered here in quantities to share with multiple households. There are, therefore, considerable concerns associated with any development, including the Project that could compound existing cumulative effects on gathered marine resources within the Inlet.' 3. Stated that the VFPA correctly captures Pauquachin's impression that local sea urchin harvesting sites have been 'fished out', but excludes information contained in the Trailmark TMUS that explicitly discusses the projected need for Pauquachin harvesters to cross the marine shipping lanes in order to harvest sea urchins at traditional sites on the other side of the international border. Stated that the summary is also similarly silent on the Trailmark TMUS's extensive discussion of the importance of sea urchins to Pauquachin, and their continued presence at funerals in the community, in particular, despite harvesting conditions for them at the sites closest to home. Stated that Pauquachin First Nation wishes to emphasize that this and any other instance of Pauquachin First Nation not harvesting within or otherwise utilizing particular areas within its traditional territory due to one or more barriers does not in any way diminish [Pauquachin First Nation's] protected rights to those areas. 4. Concerned about misrepresentation of material in Trailmark TMUS. For example, whereas the Trailmark TMUS reports that interview data indicates marine resources including bivalves, "are preferred			Agency will provide Indigenous groups an opportunity to review the environmental studies following the submission of the MSA. **Additional information provided by the VFPA:** The VFPA provided the Current Use Summary Report to Pauquachin First Nation in July 2015 and sought input on the Report from August to September 2015. Pauquachin's comments on the Current Use Summary Report (as presented at left) were received by the VFPA on 18-Sep-2015 and resulted in changes being made to the summary prior to submission of the MSA to the CEA Agency in October 2015. **Addressed in section 17 of the *Updated EIS Guidelines*:** As noted in the *Updated EIS Guidelines*: *"To the degree possible, the proponent [the VFPA] should maximise the use of existing material that is relevant to marine shipping activities associated with the Project which is beyond proponent's care and control and within the 12 nautical mile limit of the territorial sea. Existing material may be utilised from academic studies, work of government and non-government working groups, past or ongoing environmental assessments, Aboriginal traditional knowledge reports or any other source the proponent deems appropriate for its presentation of this material"*.	

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
	staples of the Pauquachin diet, both currently and historically" (see page 63 of the Trailmark TMUS), the VFPA summarizes that "bivalves are preferred marine species for traditional purposes" (see page 2 of the Summary). 5. Stated that similarly the VFPA's reduction and in effect replacement of the importance of clam-digging with the phrase "valuable family activity," reflects the pattern of selective inclusion and emphasis that marks the Summary. 6. Stated that the selective use and emphasis of text from the Trailmark TMUS is also used to characterize Pauquachin First Nation's marine use as largely historical, particularly where it intersects the marine shipping area. Curiously, the VFPA makes note of Pauquachin First Nation's description of the "government restrictions and other barriers currently preventing the First Nation from practicing its traditional reef net fishing technique (see page 3) without making any reference to the "efforts underway on the Saanich Peninsula to restore the WSÁNEC reef net fishery," mentioned in the same sentence within the Trailmark TMUS. 7. Stated that VFPA's discussion on sites of importance takes information within the Trailmark TMUS out of context. 8. Noted that an Archaeological Impact Assessment was not completed as part of the Trailmark TMUS, and details on baseline and effects to heritage sites remains unexamined in the context of increases in marine shipping through the Salish Sea. The section on sites of importance should thus be replaced with new, Project-specific research to articulate areas of importance that may be impacted by Project-related marine traffic.				
PFN-21.3	Stated that First Nations historically travelled back and forth from the Island to the Mainland, and have legally protected constitutional rights to do so. Stated that if the VFPA is infringing on these rights, the VFPA needs to 1) minimize the interference, and 2) provide compensation.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	**27-Nov-2015, Workshop:** Recorded comment for consideration by Project team. **16-Jun-2017, Letter from the VFPA:** The VFPA is interested in initiating discussions with Pauquachin First Nation regarding potential legacy benefits from the Project. Legacy benefits are intended to benefit Indigenous groups if the Project proceeds, and would be over and above the economic benefits resulting from the Project. Examples of types of legacy benefits are: restoring fisheries, training, funding cultural initiatives, enhancing environmentally sensitive areas or revitalising aquaculture. It is our intent to develop this concept into a plan that reflect the interests, objectives and priorities of Indigenous groups involved in the Project.	**Addressed in AIEIS Appendix 2-B, Table 28 (#130):** *W̲SÁNEĆ* travel from the island to the mainland is described in AIEIS Section 7.0 and MSA Section 9.5. Potential Project-related effects on *W̲SÁNEĆ* use or the exercise of asserted or established rights and measures to address potential effects, including measures proposed by *W̲SÁNEĆ*, are also described in AIEIS Section 7.0. **Additional information provided by the VFPA:** The consultative measures are as follows: • Develop a communications protocol to inform appropriate Indigenous groups of planned or unplanned events related to Project construction or operation that may affect access for the exercise of asserted or established rights; • Work with appropriate Indigenous groups to develop and implement a communications mechanism that will support dialogue between the VFPA and appropriate	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table **MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4 Existing Conditions 9.5.5 Potential Interactions and Effects 9.5.5.1 Negligible Effects of Vessel Transit on Current Use 9.5.5.2 Potential Effects of Vessel Transit on Current Use

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
			We welcome input regarding potential legacy benefits for Indigenous groups that could be provided as part of the Project. With that in mind, we request a meeting with Pauquachin First Nation to hear about your community's priorities in relation to this funding. In addition to general legacy benefits, the VFPA is interested in entering into direct discussions with Pauquachin First Nation regarding a potential mutual benefits agreement for the Project. **19-Jul-2017, Letter from Pauquachin First Nation to the VFPA:** Expressed an interest in entering into discussions around an mutual benefits agreement. Discussions are ongoing.	Indigenous groups on topics of concern that arise during the construction and initial operation phases (e.g., Project status, safety issues, effectiveness of mitigation programs); • Share with appropriate Indigenous groups information gained through environmental monitoring and follow-up programs to support monitoring, by Indigenous groups, of environmental conditions related to the exercise of asserted or established rights; and • Work with appropriate Indigenous groups to identify opportunities to participate in environmental monitoring and follow-up programs. **Addressed in EIS Appendix 7.2-B (#68):** MSA Section 9.5 considers cultural practices, such as use of travel routes and the use of waterways. MSA Section 9.5 includes an assessment of several aspects related to cultural practices, including potential changes to the following: • Access to preferred Current Use locations; and • Quality of Current Use experience.	**AIEIS** Appendix 2-B Issues and Interests, Table 28 Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Lands and Resources for Traditional Purposes 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes
PFN-21.4	Commented that Saanich traditional territory is not accurately represented on the map provided by the VFPA.	18-Sep-2015, Letter	The VFPA has reviewed this letter and provides the following additional information. **25-Apr-2016, Letter from the VFPA:** The boundary used to represent "Saanich Nation Asserted Traditional Territory" in MSA Figure 9.5-1 is taken from a writ dated September 10, 2003 by the Saanich Nation, which is identified in the writ as including Malahat First Nation, Pauquachin First Nation, Tsartlip First Nation, Tsawout First Nation, and Tseycum First Nation. Pauquachin's concern with this boundary has been identified in MSA Section 9.5.4.2; however, an alternative boundary was not provided by Pauquachin to the VFPA. For all Indigenous groups included in the MSA, use areas that were identified by Indigenous groups but not contained within the boundaries of asserted territories were still reported (i.e., as "otherwise defined areas of use"), if identified to the VFPA and relevant to the assessment.		
PFN-21.5	Requested clarity on how water quality and noise would not affect Aboriginal rights.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Explained how effects to ICs flow to VCs and how there is additional information in the following presentation, and linkages will be presented.	**Addressed in EIS Section 9.7:** Project construction and operation activities are not expected to alter water contaminant or nutrient levels, pH, dissolved oxygen, or temperature. Increases in total suspended solids levels from activities associated with terminal development, causeway widening, and expansion of the tug basin are expected to be temporary and negligible or minimal, relative to existing natural variability. **Addressed in AIEIS Section 7.2.6.3:** The Project has the potential to interact with the quality of resources identified as currently or formerly harvested by *W̲SÁNEĆ* in the vicinity of the Project area. For reasons	**EIS** 9.7 Marine Water Quality 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Lands and Resources for Traditional Purposes 32.2.6.3 Potential Effect 3: Changes in Quality of Preferred Current Use Resources

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				described in EIS Section 32.2.6.3, the Project is not expected to contribute new contaminant input to edible resources. Project-related changes in the quality of marine resources that have been identified as currently or formerly harvested in the vicinity of the Project area by *W̲SÁNEĆ* for traditional purposes are therefore not expected. **Addressed in AIEIS Section 7.2.6.4:** The Project has the potential to incrementally interact with the *W̲SÁNEĆ* quality of experience at locations identified by *W̲SÁNEĆ* as traditionally used in the vicinity of the Project, including through changes in the level of sensory disturbance (e.g., Project-related noise) at those locations. For reasons described in EIS Section 32.2.6.4, measurable incremental changes in levels of sensory disturbance as a result of the Project (including Project-related noise) are not expected after mitigation measures identified in EIS Section 32.2.7.4 are implemented, including but not limited to human health measures intended to decrease potential stress and annoyance resulting from Project-related noise or subsistence food avoidance (related to perceived contamination). Considering EIS conclusions, incremental Project-related changes in the experiential quality of *W̲SÁNEĆ* use in the vicinity of the Project as a result of potential changes in levels of sensory disturbance would not be expected. **Addressed in AIEIS Section 7.3:** AIEIS Section 7.3.2 explains that the assessment of impacts on potential or established rights was informed by the results of the assessment of potential effects on the Current Use, presented in AIEIS Section 7.2.6 (salient aspects of which in relation to Pauquachin's comment have been summarised above). For reasons described in AIEIS Section 7.3.2, the analysis of potential Project-related incremental effects on *W̲SÁNEĆ* use was considered applicable to the analysis of potential Project-related incremental impacts on the present or future exercise of asserted or established rights in the vicinity of the Project by *W̲SÁNEĆ*. Consequently, Project-related incremental impacts on the exercise of these rights would not be expected to be measurable in relation to quality of resources associated with the exercise of those rights in the vicinity of the Project or the quality of experience related to sensory conditions while exercising those rights in the vicinity of the Project area.	32.2.6.4 Potential Effect 4: Changes in Quality of Current Use Experience 32.2.7.4 Mitigation Measure #4: Changes in in the Quality of Current Use Experience **AIEIS** 7.2.6 Future Conditions with the Project - Potential Project-related Effects 7.2.6.3 Quality of Preferred Current Use Resources 7.2.6.4 Quality of Current Use Experience 7.3 Potential Adverse Impacts on Aboriginal and Treaty Rights and Related Interests 7.3.2 Results of the Rights Assessment
PFN-21.6	Criticised the focus on "current use", as use changes are based on a multitude of factors. Stated that current use in the Saanich Peninsula is currently negligible or zero because the areas are closed. Noted that the area is improving, and remediation will result in vastly increased harvest.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Responded that is why setting temporal boundaries are important. Referenced Iona and significant improvements in water and sediment quality with better treatment processes. Stated that "Current Use" is the language in *CEAA, 2012*. The VFPA has no choice in the matter; it is	**Addressed in EIS Appendix 7.2-B (#157):** The methods used to assess the potential effects of the Project, including both residual effects of the Project and cumulative effects, are described in EIS Section 8.0. These methods are consistent with existing federal guidance. The effects of other projects and activities that have been carried out are reflected in the existing (and expected) conditions of the ICs and VCs, and in EIS Section 32.0. By	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
			written in the Act as current use of lands and resources. Added that the author of the Current Use portion is not present today to fully explain the requirements and methodology. There is a historic component incorporated into the section, and this is reflected in EIS Section 32.0. If there is interest, the VFPA can arrange a meeting to provide further detail. Requested participants to advise the VFPA if there is intended use as well.	assessing potential Project-related effects against those conditions, the cumulative effects of the Project and other past projects and activities are inherently considered. The EIS also includes historical data, where available and applicable, to assist interested parties to understand the potential effects, including cumulative effects, of the Project. The EIS does not include an assessment of historical infringements on the ability of Indigenous groups to exercise rights or impacts to traditional use. **Addressed in AIEIS Appendix 2-B, Table 28 (#129):** The terminology "current use of lands and resources for traditional purposes" (Current Use) is the language of subsection 5(1)(c) of *CEAA, 2012*. The assessment of potential effects on Current Use in EIS Section 32.0 and AIEIS Section 7.0 reflects the understanding of Current Use outlined in the CEA Agency's draft Technical Guidance on Current Use of Lands and Resources for Traditional Purposes under the *Canadian Environmental Assessment Act, 2012*, dated December 2015. The EIS was filed in March 2015, prior to that draft guidance being issued; however, EIS Section 32.0 and AIEIS Section 7.0 considered use for traditional purposes that may not be occurring presently or occurring at sufficient levels to meet community needs, but was reported by Indigenous groups to have occurred in the past. As part of that consideration, the EIS and AIEIS included Indigenous groups' perspectives on the effects over time (as a result of other projects and activities) that have contributed to existing conditions of use. The EIS and AIEIS also considered the desire to restore use (based on past use) or increase use (over present or recent limited levels), where this desire was expressed by Indigenous groups to the VFPA.	Resources for Traditional Purposes 32.2 Current Use of Lands and Resources for Traditional Purposes 32.3 Potential Adverse Impacts on Aboriginal and Treaty Rights and Related Interests Analysis **AIEIS** Appendix 2-B Issues and Interests, Table 28 Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Lands and Resources for Traditional Purposes 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 7.2 Current Use of Lands and Resources for Traditional Purposes Assessment 7.3 Potential Adverse Impacts on Aboriginal and Treaty Rights and Related Interests
PFN-21.7	Concerned that the increase of freighters and tankers constitutes an infringement of their traditional territory.	15-Nov-2017, Letter to Panel (CEAR Document #1094)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** The Project is a proposed container terminal therefore only container vessels will call. Tanker ships are used to transport oil and will not call at RBT2. It is assumed in this comment that the term tanker is intended to refer to container vessels. **Addressed in MSA Section 9.5:** Potential impacts to the exercise of asserted or established rights are assessed for each nation in MSA Section 9.5. As described in that section, considering the conclusions of the Current Use assessment, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the defined marine shipping area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes, and Aboriginal and Treaty Rights

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				incremental increase in Project-associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location. These mitigation measures for addressing potential incremental effects on Current Use are expected to also be effective at addressing the potential incremental impact to the exercise of Aboriginal and treaty rights. No additional mitigation measures have therefore been suggested for the potential incremental impact to the exercise of Aboriginal and treaty rights.	
PFN-21.8	Expressed concern that they will lose their right to harvest. Stated that their people's health is declining with decreasing access to seafood.	20-Nov-2017, Meeting	**20-Nov-2017, Meeting:** Recorded comment for consideration by Project team.	**Addressed in AIEIS Section 7.3.2:** Project-related incremental impacts on the exercise of these rights (i.e., asserted Aboriginal rights, including title, and asserted or established Douglas Treaty rights to hunt or fish) would not be expected to be measurable in relation to: • Access to preferred locations for the exercise of asserted or established rights in the vicinity of the Project area (i.e., Roberts Bank, including adjacent upland areas, or the Fraser River); • Availability or quality of preferred resources associated with the exercise of asserted or established rights in the vicinity of the Project area (i.e., identified as principally salmon); • Quality of experience related to sense of place or physical heritage, safety and security, or noise, vibration, light, or air quality conditions while exercising asserted or established rights in the vicinity of the Project area; or • Cultural heritage or economic activities that may be tied to the exercise of asserted or established rights in the vicinity of the Project area. For an explanation of the use of 'measurable' in this context, see the response to AIR-12.04.15-30. Although Project-related incremental impacts are not expected to be measurable on the exercise of asserted or established rights by *W̱SÁNEĆ*, the consultative measures proposed in EIS Section 32.2.7 (and reiterated above in AIEIS Section 7.2.7) to assist with confirming the conclusions of the Current Use assessment are carried forward to the rights assessment, following the same methodology employed in EIS Section 32.3.3. These measures are expected to assist with monitoring circumstances following the onset of Project construction and operation, through ongoing engagement. The consultative measures carried forward are as follows: • Develop a communications protocol to inform appropriate Indigenous groups of planned or unplanned events related to Project construction or	**EIS** 32.2.7 Mitigation Measures 32.3.3 Mitigation Measures **AIEIS** 7.3.2 Results of Rights Assessment **Information Requests** Response to Additional Information Request #30 (AIR-12.04.15-30 of CEAR Document #388)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				operation that may affect access for the exercise of asserted or established rights; • Work with appropriate Indigenous groups to develop and implement a communications mechanism that will support dialogue between the VFPA and appropriate Indigenous groups on topics of concern that arise during the construction and initial operation phases (e.g., Project status, safety issues, effectiveness of mitigation programs); • Share with appropriate Indigenous groups information gained through environmental monitoring and follow-up programs to support monitoring, by Indigenous groups, of environmental conditions related to the exercise of asserted or established rights; and • Work with appropriate Indigenous groups to identify opportunities to participate in environmental monitoring and follow-up programs.	

Table 22: Project Benefits

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
PFN-22.1	Stated that it is a matter of fundamental justice that those impacted by the Project should benefit. Stated that the cost ranges from an inconvenience to the risk of a disaster. Asked whether there are employment opportunities for Pauquachin. Expressed interest in training, employment, and contracting opportunities associated with RBT2. Requested that the VFPA participate in a job fair. Requested clarification regarding who stands to benefit from the proposed Project. Requested a share of revenue from RBT2. Concerned about the lack of commitment from the VFPA, the federal, or provincial governments to share economic benefits with the Nation. Expressed the fundamental connection between the sharing of wealth within their traditional territory and their constitutionally protected rights. Expressed their right and capacity to share in the wealth generated on or facilitated by the use of their traditional territorial sea. Indicated that there is a fundamental legal right to share in the wealth that is generated in, on and by the use of the waters within their territorial sea with regards to the Project. Expressed that without the sharing of wealth generated by the Project, there can be no true reconciliation and, without that, there can be no free, prior, and informed consent to the Project by Pauquachin First Nation.	18-Sep-2015, Meeting 18-Sep-2015, Letter 26-Nov-2015, EIS Results Workshop #1 – Saanich Nations W̱SÁNEĆ Nation EIS Workshop Day 1 27-Nov-2015, EIS Results Workshop #2 – Saanich Nations W̱SÁNEĆ Nation EIS Workshop Day 2 30-Jan-2017, W̱SÁNEĆ All-Chiefs Meeting (Pauquachin, Tsartlip, Tsawout, Tseycum) 15-Nov-2017, Letter to Panel (CEAR Document #1094)	**18-Sep-2015, Meeting:** Shared the consultation plan, which included discussions around benefits. Stated that the VFPA would like to hear from Pauquachin what the impact of the Project is on Pauquachin's rights and uses, and what benefits Pauquachin is interested in receiving. There are opportunities available for employment, training, contracts. **29-Oct-2015, Letter from the VFPA:** *"[In your letter] you express interest regarding potential economic benefits associated with RBT2.* *In [the VFPA's] meeting with Pauquachin First Nation in September, [the VFPA] has proposed that economic benefits, including employment, training and contracting opportunities, be the subject of upcoming discussions between [the VFPA] and Pauquachin First Nation".* **30-Jan-2017, Meeting:** Agreed that discussions regarding benefits should take place. Summarised the work undertaken to date with Pauquachin and noted that more work is needed. Referred to the draft consultation plan and requested feedback. Noted opportunities related to training, employment, and contracting as well as habitat enhancement opportunities. **16-Jun-2017, Letter from the VFPA:** The VFPA is interested in initiating discussions with Pauquachin First Nation regarding potential legacy benefits from the Project. Legacy benefits are intended to benefit Indigenous groups if the Project proceeds, and would be over and above the economic benefits resulting from the Project. Examples of types of legacy benefits are: restoring fisheries, training, funding cultural initiatives, enhancing environmentally sensitive areas or revitalising aquaculture. It is our intent to develop this concept into a plan that reflect the interests, objectives, and priorities of Indigenous groups involved in the Project. We welcome input regarding potential legacy benefits for Indigenous groups that could be provided as part of the Project. With that in mind, we request a meeting with Pauquachin First Nation to hear about your community's priorities in relation to this funding. In addition to general legacy benefits, the VFPA is interested in entering into direct discussions with Pauquachin First Nation regarding a potential mutual benefits agreement for the Project.	**Addressed in EIS Appendix 7.2-B (#215):** During a five-and-a-half-year construction period, the Project would generate significant employment benefits for B.C. Project construction would generate a total of 12,719 person-years of direct, indirect, and induced employment of B.C. workers, and approximately $1 billion in wages: • 4,150 person-years of direct employment, with wages of $494 million; • 6,264 person-years of indirect employment, with wages of $374 million; and • 2,305 person-years of induced employment, with wages of $129 million. Of the Project's direct spending on materials, goods and services for construction, approximately $862 million, or an average of $157 million per year, would be spent on materials, goods, and services in B.C. An additional $482 million would be spent on production inputs to make or provide the direct materials, goods, and services. The total gross revenues for businesses in B.C. supplying materials, goods, and services for Project construction is estimated as $1.3 billion, with $837 million of this revenue accruing to businesses in Metro Vancouver. During the operation phase, Project activities on the marine terminal, widened causeway, and expanded tug basin would generate an annual total of 1,553 person-years of direct, indirect, and induced employment, and total wages of approximately $185 million: • 928 person-years of direct employment connected to terminal operations, with wages of approximately $153 million; • 625 person-years of indirect and induced employment to support terminal operations, with wages of approximately $32 million. During the operation phase, the annual average goods and services revenues for B.C. due to terminal operations spending are estimated at $23.3 million with an additional $10 million in goods and services revenues for upstream supply industries. The total gross revenues for businesses supplying B.C. materials, goods, and services for terminal operations are estimated as $33.3 million annually. Approximately $31 million of this revenue would accrue to businesses in Metro Vancouver. **Addressed in AIEIS Appendix 2-B, Table 3 (#23):** The VFPA proposes to assist the Saanich Nations in accessing potential economic opportunities resulting from the Project, including contracting opportunities as well as construction employment opportunities. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs. To support the development and implementation of plans to facilitate access	**EIS** 20.0 Economic Development Appendix 20-A Economic Impact Roberts Bank Terminal 2 Technical Report 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.3.3 Mitigation Measures 34.0 Benefits to Canadians 34.2 Benefits of the Project 35.0 Effects Assessment Summaries Table 35-2 Proposed Mitigation Measures and Commitments **AIEIS** Appendix 2-B Issues and Interests, Table 3 Engagement and Consultation 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 7.2.7 Mitigation Measures

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
			19-Jul-2017, Letter from Pauquachin to the VFPA: Expressed an interest in entering into discussions around a mutual benefits agreement. **05-Sep-2017, Letter from the VFPA:** Further to your comments regarding potential legacy benefits and a potential mutual benefits agreement for the Project, I can confirm our intent to enter into meaningful, good faith consultations with Pauquachin First Nation with full disclosure of all relevant information. Discussions are ongoing.	to such Project-related benefits, the VFPA will continue engagement, initiated in December 2014. Opportunities for Indigenous training and employment opportunities related to the Project are described in EIS Section 32.3.3. **Addressed in AIEIS Appendix 2-B, Table 3 (#24):** The VFPA is working with Indigenous groups to facilitate access to Project benefits, including training, employment opportunities, and Project contracting opportunities. As stated in EIS Section 32.3.3, the VFPA proposes to assist certain Indigenous groups in accessing potential economic opportunities resulting from the Project, including contracting opportunities as well as construction employment opportunities. The VFPA proposes to extend the same opportunities to Tsawout First Nation, Pauquachin First Nation, Tseycum First Nation, Tsartlip First Nation, and Malahat Nation. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs. Consistent with the major scope of the Project at both construction and operation stages, a broad range of individuals, groups, organisations, workers, and governments are expected to benefit from the Project in the Greater Vancouver area, in the rest of B.C., and in the rest of Canada. The specific benefits in terms of benefits to marine trade capabilities, employment, labour income, business revenues, gross domestic product, government revenues, and scientific advances are documented in EIS Section 34.2. For example, during a five-and-a-half-year construction period, the Project would generate significant employment benefits for B.C. Project construction would generate a total of 12,719 person-years of direct, indirect, and induced employment of B.C. workers, and approximately $1 billion in wages.	

Table 23: Surficial Geology and Marine Sediment – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
PFN-23.1	Asked if elevated levels of arsenic and copper would have any effect on the quality of crabs or sea cucumbers that inhabit the area.	26-Nov-2015, EIS Results Workshop #1 – Saanich Nations	**26-Nov-2015, Workshop:** Responded no because 99% of the samples did not exceed guidelines. There is a supporting appendix in the EIS that provides all the data for the sampling points, which specifically discusses the exceedances (see EIS Appendix 9.6-A).	**Addressed in EIS Appendix 7.2-B (#74):** Potential Project-related effects on Dungeness crabs are described in the EIS. An Edible Shellfish Study was undertaken to quantify bivalve shellfish and Dungeness crab soft tissue contaminant concentrations. The results of this study are provided in the EIS in the marine invertebrates and human health sections. In late 2014, samples of crab were collected by Indigenous crab harvesters concerned about contamination, and the VFPA has submitted these for tissue testing for various substances of concern, including polycyclic aromatic hydrocarbons (PAHs), metals, and fungus. Preliminary observational results indicate that the cause of black colouration of crabs is consistent with shell disease, and not likely related to contamination from coal dust (EIS Appendix 27-C, Section 4.76). The detailed results of laboratory tests will be shared with Indigenous groups when available. **Addressed in responses to IR4-33 and IR4-34:** Further information concerning the VFPA's investigations into 'blackened' crabs is provided in its response to IR4-34. In summary, black lesions were observed on four of the five crabs collected by Indigenous harvesters. The black lesions were concluded to be consistent with chitinolytic shell disease, generically referred to as 'shell disease', a condition common to crab and other crustaceans. This disease is caused by a bacterial or fungal infection of an area where the outer layer of the shell has been previously damaged. Shell disease has not been linked to contamination. The disease is not specific to the Roberts Bank area and is present across the Pacific Northwest, including Alaska and B.C. and in Atlantic Canada. In its response to IR4-33, the VFPA provided results of the study. In summary: A crab hepatopancreas study was conducted at Roberts Bank to determine the concentrations of contaminants of concern in crab hepatopancreas in the LAA. In June 2017, Dungeness crab were collected from five traps placed at each of the three study locations (15 traps total). Twelve adult male crabs were harvested from each of the three sites (36 crab total). Samples were submitted under chain of custody to analytical laboratories accredited by the Canadian Association for Laboratory Accreditation (CALA) for the analysis requested. The analysis was completed in August 2017. Collectively, the results of a statistical comparison across sites indicate that the average concentrations of polychlorinated biphenyls (PCBs), coal indicator elements, arsenic compounds, and PAHs measured in hepatopancreas from crab collected from the RBT2 and (previously proposed) intermediate transfer pit sites are not statistically higher than those measured in crab from the Canoe Passage reference site. This suggests that existing sediment and water quality in and around the existing terminal and proposed RBT2 terminal are not contributing to contaminant concentrations in crab hepatopancreas that are higher than levels found in crab hepatopancreas from the Canoe Passage reference site.	**EIS** 4.0 Project Description Appendix 7.2-B Aboriginal Groups Issues and Interests Table 8.0 Environmental Assessment Methods 9.6 Surficial Geology and Marine Sediment Appendix 9.6-A: Sediment and Water Quality Characterisation Studies 9.7 Marine Water Quality 12.0 Marine Invertebrates 27.0 Human Health (revised June 2016) 27.6 Future Conditions with the Project – Potential Project-Related Effects Table 27-14 Identification of Potential Project Interactions with Human Health **AIEIS** Appendix 2-B Issues and Interests, Table 12 Surficial Geology and Marine Sediment 5.0 Human Health **Information Requests** Response to Additional Information Request #9 (IR-12.04.15-9 CEAR Document #388) Response to Sufficiency Information Request #33 (IR4-33) Response to Sufficiency Information Request #34 (IR4-34) **Memorandum Re: Summary Report – Roberts Bank Dungeness Crab Health Studies**

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				Addressed in AIEIS Appendix 2-B, Table 12 (#52): Current levels of heavy metals and other contaminants and the potential changes in marine sediment and water quality associated with the Project were evaluated as described in EIS Sections 9.6 and 9.7. Potential changes to marine water quality and sediment quality or sediment deposition due to the Project are expected to be minimal, relative to existing natural variability in the ecosystem. The conclusions of the marine sediment and marine water quality assessments are reflected in EIS Sections 12.0 and 27.0, and AIEIS Section 5.0. Both assessments concluded negligible effects in relation to arsenic and copper levels in crab. Both metals commonly occur in sediments throughout the Fraser River estuary and levels appear to reflect natural concentrations attributed to the presence of geological-origin. Arsenic and copper levels in sea cucumbers were not analysed, as sea cucumbers were observed in the assessment area in extremely low abundance, and as such were not selected as representative species. However, California sea cucumbers are represented in the assessment by the sub-component Dungeness crab, as described in the response to AIR-12.04.15-09.	

Table 24: Underwater Noise – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
PFN-24.1	Concerned with impacts of noise to eulachon. There are examples of entire eulachon runs vanishing because of noise (i.e., logging or a church bell ringing) and any additional noise could have a very deleterious effect on eulachon runs. Suggested cessation of activities when eulachon are present, as the eulachon runs last only a couple of weeks.	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	**27-Nov-2015, Workshop:** Stated that acousticians have modelled sound with respect to fish to determine at which point noise would be perceptible. In large part, noise will not occur at a level that would be concerning, but activities like pile driving could be harmful (where the radius for disturbance is several hundred metres), but the team is hoping to use vibratory pile driving to minimise this effect. Louder noise can result in physical effects to fish, and as sound dissipates, behavioural effects can be observed. Forage fish, like herring, are more sensitive to underwater noise, and she can look into eulachon further.	**Addressed in EIS Appendix 7.2-B (#80):** Potential Project-related effects on eulachon are considered in the marine fish assessment within the forage fish sub-component. Eulachon was not assessed directly as a representative species within the forage fish sub-component due to the rarity of eulachon in the Roberts Bank area. The assessment recognises eulachon as a species of high economic, societal, and cultural importance to Indigenous communities. Representative species in the forage fish sub-component include Pacific sand lance, surf smelt, Pacific herring, and shiner perch. Qualitative and empirical evidence indicates that there will be minor decreases in forage fish productive potential driven by loss of subtidal sand habitat and disturbance of Pacific herring from underwater noise. **Addressed in AIEIS Appendix 2-B, Table 14 (#57):** The scope and methods of the underwater noise study are summarised in EIS Section 9.8, and detailed in EIS Appendix 9.8-A. The underwater noise assessment in EIS Section 9.8 considers the level of underwater sound in the marine environment. An assessment was undertaken to determine potential changes in underwater noise as a result of the Project and focused on construction and operation activities that would produce underwater noise. The assessment concludes the following: • Underwater noise levels during construction are predicted to be comparable on average to existing levels measured at Roberts Bank, with the exception of some periods when certain activities, such as dredging, pile driving, vibro-densification, or construction support vessel movement, would occur; • Overall, average underwater noise from Project construction and operation activities is expected to be comparable to average existing levels of underwater noise in the area due to existing high levels, but will at times exceed existing conditions. Underwater noise related to conservative levels of Project commercial vessel movements is predicted to increase over existing underwater noise levels for only approximately 3% of a year for vessel berthing and unberthing, and for approximately 2% of a year for vessel approach and departure; and • Future cumulative increases in commercial vessel traffic in the region are expected to make a relatively small incremental contribution to overall underwater noise levels. This prediction reflects the existing high levels of vessel traffic within the study area and the already-dominant contribution of commercial vessel traffic noise to the acoustic environment.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 9.8 Underwater Noise 9.8.2 Assessment of Purpose and Approach 9.8.5 Methods 9.8.6 Existing Conditions Appendix 9.8-A Construction and Terminal Activity Underwater Noise Modelling Study Technical Report Appendix 9.8-B Regional Commercial Vessel Traffic Underwater Noise Modelling Study Technical Report 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component 13.2.1 Sub-components 13.4.1 Information Sources, Desktop and Field Studies 13.6 Future Conditions with the Project 13.6.3 Potential Effect - Changes in Productivity 13.6.3.3 Changes in Productivity of Forage Fish 14.0 Marine Mammals 14.6 Future Conditions with the Project 15.0 Coastal Birds 15.7 Future Conditions with the Project **AIEIS** Appendix 2-B Aboriginal Issues and Interests, Table 14 Underwater Noise 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes Table 7-2 Mitigation Measures Proposed by Aboriginal Groups for Potential Adverse Impacts to Potential or Established Aboriginal

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				The results of the underwater noise assessment were considered in the assessments of marine fish, marine mammals, and coastal birds. Potential Project-related effects on eulachon are considered in the marine fish assessment within the forage fish sub-component. Representative species in the forage fish sub-component include Pacific sand lance, surf smelt, Pacific herring, and shiner perch. Eulachon was not assessed directly as a representative species within the forage fish sub-component due to the rarity of eulachon in the Roberts Bank area. The suggestion to mitigate the effects of noise to eulachon by ceasing activities during eulachon runs is reflected in AIEIS Section 7.0 in a table of all suggested mitigation measures from *W*SÁNEĆ Nation groups.	and Treaty Rights and Related Interests
PFN-24.2	Asked why the diagram showing future conditions shows sound travelling in a straight line going up the Gulf. Asked for more information about sound measurement thresholds in context (i.e., compared to noise levels in the air).	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	**27-Nov-2015, Workshop:** Responded that the modellers explained that this is how sound moves, that it does not turn a corner. The spread of sound is also influenced by water temperature and the type of surface on the ocean floor. Stated that it is difficult to compare sound underwater to sound in the air. The green colour (in Saanich Nation Workshop Day 2 slides #100, 101) might be comparable to a hum in the distance. 140-150 rms SPL might sound like a hair dryer. 160 rms SPL is quite loud, and one would want to move away from the noise. Provided examples of decibel levels associated with several common noises in the slides for the noise and vibration presentation.	**Addressed in EIS Section 9.8:** The overall assessment is considered to provide a conservative evaluation of potential changes in the acoustic environment resulting from the Project. Underwater noise levels during construction are predicted to be comparable on average to existing levels measured at Roberts Bank, with the exception of some periods when certain activities, such as dredging, pile-driving, or construction support vessel movement, would occur. Overall, average underwater noise from Project construction and operation activities is expected to be comparable to average existing levels of underwater noise, due to existing high levels, but would at times exceed existing conditions. Underwater noise related to conservative levels of Project commercial vessel movements is predicted to increase over existing underwater noise levels for approximately 3% of a year for vessel berthing and unberthing, and for approximately 2% of a year for vessel approach and departure. Future cumulative increases in commercial vessel traffic in the region are expected to make a relatively small incremental contribution to overall underwater noise levels. This prediction reflects the already dominant contribution of vessel traffic noise to the acoustic environment. As noted in EIS Section 9.8.4, although no regulations or policies are currently in place regarding underwater noise criteria and marine fauna in Canada, industry-standard underwater noise effects guidelines are used in environmental assessments to predict potential effects of underwater noise to both marine fish and marine mammals (related to hearing injury and behavioural disturbance).	**EIS** 9.3 Noise and Vibration 9.8 Underwater Noise 9.8.4 Underwater Noise Effects Guidelines
PFN-24.3	Asked for an explanation of the second bullet on slide 123 ("Certain reasonably foreseeable projects and activities considered in the cumulative effects assessment included those projects that generate underwater noise").	27-Nov-2015, EIS Results Workshop #2 – Saanich Nations	**27-Nov-2015, Workshop:** Stated that if there is a project that includes shipping, that project would be included in the cumulative effects assessment. The project list was filtered to only include those projects that would contribute to the same Project-related effects. For example, the George Massey Tunnel replacement project is not included in the	**Addressed in EIS Appendix 7.2-B (#34):** The methods used to assess the potential effects of the Project, including both residual effects of the Project and cumulative effects, are described in EIS Section 8.0. The environmental assessment for the Project was developed to meet the requirements specified in the *EIS Guidelines* and	**EIS** Appendix 7.2-B Aboriginal Issues and Interests **MSA** Appendix 5-B Aboriginal Issues and Interests

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
			cumulative effects assessment for marine mammals. Referred to combined effects or stressors affecting a particular VC, for example, if there is a stressor related to noise, and something else affecting Chinook, both would be considered in the cumulative effects assessment for SRKWs. For SRKWs, contributing projects were all related to underwater noise. EIS Appendix 14-A shows the projects that were considered for the future incremental cumulative effects assessment and the supporting rationale for exclusion or inclusion in the assessment.	consistent with existing guidance documents, including the *Operational Policy Statement Assessing Cumulative Environmental Effects Under the* Canadian Environmental Assessment Act, 2012, *Determining Whether a Project is Likely to Cause Significant Adverse Environmental Effects, the Cumulative Effects Assessment Practitioners' Guide*, and the *Guideline for the Selection of Valued Components and Assessment of Potential Effects*, among others. Where measurable residual effects to a VC have been predicted to result from the Project, a cumulative effects assessment was conducted to determine whether Project-related residual effects are likely to interact cumulatively with the effects of other projects and activities. Similarly, where Project-induced changes to an IC were expected, the potential for those changes to combine cumulatively with changes caused by other projects and activities was assessed. In most cases, the assessment of future cumulative effects was conducted within the boundaries of the regional assessment area identified for the VC. For certain VCs, however, the cumulative effects assessment boundaries differed. In all cases, the rationale supporting the selection of spatial boundaries for the assessment of cumulative effects or changes on a VC or IC is provided in the corresponding section of the EIS. Where the Project was predicted to contribute to incremental cumulative effects, additional mitigation measures were considered. The VFPA then determined the significance and likelihood of any adverse residual cumulative effects following the implementation of mitigation measures. **Addressed in MSA Appendix 5-B (#23):** The approach to the cumulative effects assessment is provided in MSA Section 6.0. Each IC and VC assessment section considers cumulative changes and cumulative effects to which the Project contributes. This entails consideration of residual effects of routine marine shipping associated with the Project, if any such effects are predicted, in combination with effects of other projects and activities that have been or will be carried out.	6.0 Effects Assessment Approach 6.7 Cumulative Effects Assessment

APPENDIX IR10-01-C15

TSARTLIP FIRST NATION: ISSUES, VIEWS, AND CONCERNS RELATED TO THE PROPOSED PROJECT AND MARINE SHIPPING ASSOCIATED WITH THE PROJECT

Table 1: Archaeological and Heritage Resources – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsartlip-1.1	Noted Tsartlip has anthropological and archaeological interests in the RBT2 area.	15-Apr-2016, Meeting	**15-Apr-2016, Meeting:** Recorded comment for consideration by the Project team. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tsartlip First Nation and the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#151):** The purpose of the archaeological and heritage resources assessment was to determine whether there is potential for archaeological and heritage resources to exist in the assessment area, and to determine any Project-related effects on these resources, if they are present. The assessment was supported by an Archaeology Overview Assessment, which included an ethnographic overview of the area and a review of the potential for undocumented heritage sites to exist in the local assessment area (LAA). The results of the archaeological and heritage resources assessment were considered in the assessment of current use of lands and resources for traditional purposes (Current Use, EIS Section 32.2). The LAA included the physical footprint of Roberts Bank Terminal 2 (RBT2 or Project) plus a 100-metre buffer zone, as well as a zone of coastal-geomorphological influence. The regional assessment area (RAA) considered a four kilometre area around the Project area. No archaeological sites were identified in the LAA, either using the B.C. Archaeology Branch's online heritage registry or through the Archaeological Overview Assessment. If archaeological or historical materials remain in the intertidal area, it is likely that they have been preserved in the sediment layers, if not affected by previous construction. The Project may affect archaeological resources, namely, fish trap stakes, if present in the Project area. Direct effects could result from Project-related construction activities, and indirect effects could result from changes to sediment deposition or erosion. Through mitigation, including excavation of test trenches prior to construction activities and the implementation of an Archaeological Monitoring and Management Plan, potential damage to archaeological resources would be avoided and the opportunity for future archaeological study would be protected. The Project is not expected to result in significant residual effects to archaeological and heritage resources. The Project is not expected to result in any incremental cumulative effects to archaeological and heritage resources. A description of the past use of the Roberts Bank area by Indigenous groups is provided in EIS Section 32.0. The presentation of information on past use of the area in the assessment of archaeological and heritage resources is tailored to those Indigenous groups whose past uses is directly linked to the type of physical archaeological resources that have the potential to be present in the study area and have the potential to be affected by the Project. The scope or methods of the archaeological and heritage resources assessment are described in the EIS. **Addressed in AIEIS Appendix 2-B, Table 27 (#127):** Information provided by Tsartlip First Nation has been incorporated into AIEIS Section 6.0. In particular, ethnohistorical information is reflected in the section characterising existing conditions.	**Environmental Impact Statement (EIS, CEAR Document #181)** Appendix 7.2-B Aboriginal Groups Issues and Interests Table **Additional Information to the EIS – *W̲SÁNEĆ* Nation (AIEIS; CEAR Document #930)** Appendix 2-B Aboriginal Issues and Interests – *W̲SÁNEĆ* Nation, Table 27 Archaeological and Heritage Resources 6.0 Archaeological and Heritage Resources 6.1.1 Existing Conditions, Ethnography

Table 2: Coastal Birds – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsartlip-2.1	Concerned with potential impacts to birds and migratory birds. Commented on the importance of these species to Aboriginal groups.	15-Apr-2016, Meeting	**15-Apr-2016, Meeting:** Recorded comment for consideration by the Project team. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tsartlip First Nation and the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#93) and AIEIS Appendix 2-B, Table 20 (#89):** The Fraser River estuary is an important area to many coastal birds because of its abundant food sources. The Roberts Bank area supports an abundance and diversity of bird species. An assessment was undertaken to determine the effects of the Project on coastal birds. The scope and methods of the coastal birds assessment is described in the EIS. The Shorebird Opportunity Model evaluates food availability (biofilm and benthic invertebrates) for foraging shorebirds under different levels of predation risk, and assesses changes in physical factors (e.g., water velocity, wave height) on their ability to forage. The assessment of coastal birds focused on seven sub-components: • Shorebirds, represented by Pacific dunlin and western sandpiper; • Waterfowl, represented by American wigeon and brant; • Herons, represented by great blue heron; • Diving birds, represented by surf scoter and western grebe; • Raptors, represented by bald eagle, barn owl, and peregrine falcon; • Gulls and terns, represented by Caspian tern and glaucous-winged gull; and • Passerines, also known as songbirds, represented by barn swallow. Anticipated Project-related changes to coastal birds were assessed by considering potential changes in productivity, abundance, density, species diversity, distribution, and suitable habitat area for the seven sub-components. For some sub-components, foraging opportunity and contaminant levels were also examined. The use of the Fraser River estuary and the Project area by trumpeter swan and tundra swan is described in the EIS. The assessment concludes that the Project is not expected to result in any significant adverse residual effects or significant residual cumulative effects to coastal birds. Changes in the productive potential of shorebirds, herons, raptors, gulls and terns, and passerines are not anticipated. Decreases to the productive potential of waterfowl and diving birds are expected to be minor. Effects to diving birds can be partially offset through the creation of onsite eelgrass and subtidal rock reef habitats, which would create habitat for their prey, which include mussels and other invertebrates. The importance of bird species to Indigenous groups is addressed in the Current Use assessments in EIS Section 32.2 and AIEIS Section 7.0.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 15.0 Coastal Birds 15.2 Selection of Coastal Birds Valued Component 15.5 Existing Conditions 15.5.4 Waterfowl 15.7 Future Conditions with the Project 15.7.2 Potential Effect – Changes in Productivity Appendix 15-B Shorebird Foraging Opportunity during Migration Appendix 15-C Overwintering Dunlin Foraging Opportunity 17.0 Mitigation for Marine Biophysical Valued Components 17.3.2 Offsetting Framework 17.3.2.1 Summary of Project-related Effects on Marine Biophysical Valued Components 17.3.2.2 Onsite Habitat Concepts 32.2 Potential or Established Aboriginal or Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes **AIEIS** Appendix 2-B Aboriginal Issues and Interests – *W̱SÁNEĆ* Nation, Table 20 Coastal Birds 7.0 Potential or Established Aboriginal or Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes

Table 3: Coastal Geomorphology – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsartlip-3.1	Noted the far-reaching impacts from BC Ferries such as wake, wash, the kicking up of sediment. Asked how container ship wake compares to ferry wake. Concerned with waves associated with container ships and erosion of their territory, the SENĆOŦEN territory.	15-Apr-2016, Meeting	**27-Apr-2016, Email from the Vancouver Fraser Port Authority (VFPA):** The potential changes to the wave environment from ship wake (from Project-associated vessels) are assessed in MSA Section 7.2. The potential effects of vessel wakes from marine shipping associated with the Project on archaeological sites (due to erosion) are addressed in EIS Section 9.4. No measurable effects are anticipated.	**Addressed in MSA Appendix 5-B (#56):** EIS Section 9.4 describes existing conditions as they currently reflect cumulative changes to date from other projects and activities that have been carried out, as well as the impact of natural processes. As no measurable effects are predicted for archaeological and heritage resources related to ship wake and erosion from marine shipping associated with the Project, no mitigation is suggested and an assessment of cumulative effects has not been carried out. **Addressed in MSA Appendix 5-B (#55):** The potential effects of vessel wakes from marine shipping associated with the Project on archaeological sites (due to erosion) are addressed in EIS Section 9.4. The LAA for the archaeological and heritage resources assessment includes the entire marine shipping area, including shorelines within Pacheedaht traditional territory, Semiahmoo Bay, and Crescent Beach. **Addressed in MSA Section 7.2:** Potential changes to the wave environment from ship wake (from Project-associated vessels) was assessed for a representative container vessel with approximately 9,000 to 9,500 twenty-foot equivalent unit (TEU) capacity in MSA Section 7.2. In addition to the study of a representative vessel, a sensitivity analysis of other vessel types with differing hulls was also conducted (see MSA Appendix 7.2-B). The analysis of wake height varied by a little over 10 cm in response to the vessel hull type, compared to the representative vessel. Coastal geomorphic conditions are not expected to change from wake-generated waves as vessel wake is a small component of the existing wave climate, which is influenced by wind-generated waves and ocean swell. **Addressed in response to IR7-21:** Although the probability slightly increases from Project-associated vessels (0.034% during calm conditions), wake-generated waves from Project-associated vessels will not result in a change to the shorelines in the marine shipping area due to the similarity of interaction at the shoreline from wake-generated and wind-generated waves. The VFPA's response to IR7-21 further notes the magnitude of wake height described above is already a feature of the environment for small-craft operators in Segment B (Haro Strait) because of transiting vessels of all sizes, including ferries, which generate larger waves due to their hull characteristics and higher transit speed during calm conditions. **Addressed in response to IR10-21:** The VFPA's response to IR10-21, as requested by the Review Panel, discusses potential Project effects to sites of physical and cultural importance to Indigenous peoples. **Addressed in response to IR10-23:** The VFPA's response to IR10-23, as requested by the Review Panel, discusses potential loss or deterioration of archaeological sites resulting from natural and ship-wake waves greater than 10 cm.	**EIS** 9.4 Archaeological and Heritage Resources 9.4.5 Existing Conditions 9.4.6.1 Negligible Effect #1 – Disturbance from Vessel Wake **Marine Shipping Addendum (MSA, CEAR Document #316)** Appendix 5-B Aboriginal Issues and Interests 7.2 Wave Environment **Information Requests** Response to Sufficiency Information Request #21 (IR7-21 of CEAR Document #1049) Response to Sufficiency Information Request #21 (IR10-21) Response to Sufficiency Information Request #23 (IR10-23)

Table 4: Effects Assessment Methods (including Cumulative Effects)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsartlip-4.1	Asked how many tankers currently go into Roberts Bank on a monthly basis. Concerned with cumulative increases in ship traffic. Expressed concerns with cumulative impacts from this Project and other projects.	15-Apr-2016, Meeting 20-Jul-2017, Site Tour	**15-Apr-2016, Meeting:** Stated that the Project is expected to result in an additional 260 vessel calls per year. Committed to following up with a response to the existing levels of ship traffic. **27-Apr-2016, Email from the VFPA:** Sent information regarding containers shipped through the Port. In 2014, terminals within VFPA jurisdiction handled 2.91 million TEUs. The table below shows the maximum capacity for each of the container terminals within VFPA jurisdiction in TEUs, which represents one standard shipping container. The proposed Project would add a maximum capacity of 2.4 million TEUs. (Centerm - 900,000 TEUs / Deltaport-2.4 million TEUs (by 2017) / Fraser Surrey Docks - 150,000 TEUs / Vanterm - 800,000 TEUs). For more information, please see pages 20-21 in the RBT2 Project Meeting Canada's Trade Demand booklet: http://www.robertsbankterminal2.com/wp-content/uploads/RBT2-Project-Rationale-March-2015.pdf **20-Jul-2017, Site Tour:** Recorded comment for consideration by the Project team. Noted that the Project team could meet with Tsartlip to discuss cumulative impacts further.	**Additional information provided by the VFPA:** Existing Roberts Bank facilities consist of one container and one coal terminal. The Project is a proposed container terminal; therefore, only container vessels will call. Tanker ships are used to transport oil and will not call at RBT2. It is assumed in this comment that the term tanker is intended to refer to container vessels. According to a report developed for the Deltaport Terminal Road and Rail Improvement Project, Westshore Terminals had 246 vessel calls in 2010. As noted in EIS Appendix 30-A, in 2012, there were 269 container ship calls at the existing Deltaport Terminal (approximately 23 per month). The estimated of number of container vessels calling RBT2 is approximately 260 ships per year. **Addressed in response to AIR-12.04.15-13:** The VFPA's response to AIR-12.04.15-13 provides the total cumulative effects assessment for each valued component (VC) for which a residual effect was predicted. Information on how Project-associated marine shipping was considered in the cumulative effects assessments is included in Schedules 1 through 10. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as letter to the Review Panel dated December 20, 2017 (CEAR Document #1133), provides additional information on the Government of Canada's Oceans Protection Plan, which includes information on the cumulative effects of marine shipping.	**EIS** 8.0 Effects Assessment Methods 8.1.9 Cumulative Effects Assessment Table 8-8 Project and Activity Inclusion List Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment **Information Requests** Response to Additional Information Request #13 (AIR-12.04.15-13 of CEAR Document #388) Schedules 1 – 10 Total Cumulative Effects Assessments *Projections of Vessel Calls and Movements at Deltaport and Westshore Terminals.* Available at: http://www.robertsbankterminal2.com/wp-content/uploads/Projections-of-Vessel-Calls-and-Movements-at-Deltaport-and-Westshore-Terminals.pdf **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**
Tsartlip-4.2	Asked whether Project-related marine shipping was included in the assessment.	06-Jun-2016, Meeting	**06-Jun-2016, Meeting:** Explained the distinction between the EIS and the MSA.	**Addressed in *Updated EIS Guidelines*:** On April 17, 2015, the Canadian Environmental Assessment Agency (CEA Agency) issued the *Updated EIS Guidelines* that included the addition of environmental effects of marine shipping associated with the Project, beyond the scope of the Project (VFPA jurisdiction) to the 12 nautical mile limit of Canada's territorial sea. In October 2015, the VFPA submitted to the CEA Agency the MSA. **Addressed in MSA Section 1.0:** The MSA addresses the requirements of section 17 of the *Updated EIS Guidelines* by assessing potential environmental effects of marine shipping associated with the Project outside the VFPA's jurisdiction (beyond the VFPA's care and control) to the 12 nautical mile limit of the Canadian territorial sea.	***Updated Guidelines for the Preparation of an Environmental Impact Statement* (*Updated EIS Guidelines*, CEAR Document #177)** **MSA** 1.1 Purpose of the [MSA]
Tsartlip-4.3	Criticised the methodology for the cumulative effects assessment and	06-Jun-2016, Meeting	**06-Jun-2016, Meeting:** Explained that there is specific methodology around a cumulative effects analysis, and that this is hard to address	**Addressed in AIEIS Appendix 2-B, Table 6 (#42):** The cumulative effects assessment takes into consideration the potential residual effects of the Project in combination with the effects of other projects and activities that have been or will be carried out, including effects on local and Indigenous communities.	**EIS** 8.0 Effects Assessment Methods 8.1.2 Selection of Valued Components 8.1.9 Cumulative Effects Assessment

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	determination of no significant effects. Stated that all cumulative effects assessments say there will be no effects. Commented that some species are not represented in the assessment, leading to a misrepresentation of the effects, and cumulative effects.		in a quick presentation. These sections are presented in the EIS. Committed to follow up with the sections in the EIS where this is addressed. **23-Jun-2016, Email from the VFPA:** • Section 8.1.9 Cumulative Effects; • Section 8.1.9.1 Identification of Other Certain and Reasonably Foreseeable Projects and Activities; and • Section 8.1.9.3 Identification of Cumulative Interactions and Potential Cumulative Effects.	The methodology, and basis for applying such methodology, for the RBT2 cumulative effects assessment is described in the VFPA's response to AIR-12.04.15-13. The rationale for relying on representative species in the assessment is described in EIS Section 8.0, as well as in the VFPA's response to AIR-12.04.15-09. The response to AIR-12.04.15-09 provides rationale for the selection of each representative species, including why each one is an appropriate proxy for other species, both in the characterisation of existing conditions as well as the assessment of effects, including cumulative effects where applicable.	**AIEIS** Appendix 2-B Aboriginal Issues and Interests – *WSÁNEĆ* Nation, Table 6 Cumulative Effects Assessment **Information Requests** Response to Additional Information Request #9 (AIR-12.04.15-9 of CEAR Document #388) Response to Additional Information Request #13 (AIR-12.04.15-13 of CEAR Document #388)

Tsartlip-4.4	Stated that Tsartlip has a lands and resources management plan which states the importance of foods for their people (shellfish, crabs), and Tsartlip is involved in initiatives to improve the environment (clam beds, habitat).
	Stated that it is hard to hear about Projects that will harm the environment and these efforts.
	Asked about the scuba surveys.
		06-Jun-2016, Meeting	**06-Jun-2016, Meeting:**
			Committed to share information on the scuba surveys.
			23-Jun-2016, Email from the VFPA:
			Provided information on the scuba surveys – EIS section references:
			• 12.0 Marine Invertebrates Effects Assessment;
			  ○ 12.5.4.2 Ecological Function;
			• EIS APPENDIX 9.6-A;
			  ○ 3.3 Methods;
			  ○ 3.33 Field Methods;
			  ○ 4.3.1 Seabed sediments;
			  ○ 4.3.2 Suspended sediments; and
			• SCUBA Survey - (Hemmera and Archipelago 2014) A field study to collect sea pen density and associated species information.
				Addressed in EIS Section 27.0:
				Considers potential adverse effects on food security as a result of potential effects on traditional food sources during construction and operation. Effects are considered negligible because a residual effect on harvesting of traditional food resources is not anticipated (EIS Section 32.2). EIS Section 27.0 also considers potential positive effects on food security as a result of increased employment and income during construction and operation. Health effects related to employment and income are considered negligible as any health effects are likely to be unmeasurable or undetectable.
					EIS
					8.0 Effects Assessment Methods
					8.1.8 Determination of Significance of Residual Adverse Effects
					27.0 Human Health
					32.2 Current Use of Land and Resources for Traditional Purposes Assessment

Tsartlip-4.5	Commented that the studies appear to be very favourable for the project (i.e., referring to positive effects to marine vegetation).	06-Jun-2016, Meeting	**06-Jun-2016, Meeting:** Stated that some of the other VCs are different. Marine vegetation is a unique situation because of where the terminal is located, there is little overlap with habitat. The terminal is positioned farther out to avoid effects to vegetation. Stated that the VFPA will be highlighting effects in subsequent presentations.	**Additional information provided by the VFPA:** The desktop reviews, field studies, data analyses, and modelling undertaken by professional scientists on behalf of the VFPA in relation to RBT2 present the findings in an unbiased fashion to support the description of intermediate component (IC) or VC existing conditions. Where possible, the technical volumes associated with the EIS and MSA present the source data, related uncertainty, and the limitations of the studies. The results of these scientific studies are now being reviewed by the independent Review Panel, which includes opportunities for participation and comments from Indigenous groups, government agencies, and members of the public.	
Tsartlip-4.6	Requested the definition of "minor" and	06-Jun-2016, Meeting	**06-Jun-2016, Meeting:** Explained that the definitions are outlined in the EIS for each section, and the	**Addressed in AIEIS Appendix 2-B, Table 5 (#37):** In each VC assessment section, a table titled 'Identification of Potential Project Interactions' provides a potential effect rating for each interaction identified, as well as a description of the	**EIS** 11.0 through 28.0 (all VC sections) 30.0 Potential Accidents or Malfunctions

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	"temporary" in the EIS. Question about how the term "minor" compares to the term "very low" in the assessment.		definition takes into account the natural variability for each species.	nature of the effect. Potential effects (before mitigation) are characterised as 'minor', 'moderate', or 'high' in VC assessments in order to provide context to the descriptions of potential effects. These terms are not based on quantitative thresholds, and the rationale for the ratings is provided in the same table where the rating is provided. **Addressed in response to AIR-12.04.15-30:** The VFPA's response to AIR-12.04.15-30 provides additional information on the assessment of Current Use. Residual effects (after mitigation) are characterised using a set of residual effect criteria ratings. 'Low' is one of the ratings used to characterise the 'magnitude' criteria in the residual effects assessment (i.e., 'Low', 'Moderate', or 'High'). Each rating is defined on VC-specific basis to account for the natural variability for each species. **Addressed in response to AIR-12.04.15-09 and EIS Section 30.0:** The term 'very low' is used in the EIS to characterise levels of habitat use or presence of biophysical species in assessment areas (see response to AIR-12.04.15-09). It is also used to describe the probability (associated with a range of quantitative return periods) of accident and malfunction scenarios (EIS Section 30.0).	Table 30-2 Probability Categories and Return Periods for Potential Project-related Accidents or Malfunctions **AIEIS** Appendix 2-B Aboriginal Issues and Interests – *W̱SÁNEĆ* Nation, Table 5 Effects Assessment Methods **Information Requests** Response to Additional Information Request #9 (AIR-12.04.15-9 of CEAR Document #388) Response to Additional Information Request #30 (AIR-12.04.15-30 of CEAR Document #388)

Table 5: Engagement and Consultation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsartlip-5.1	Requested additional funding to match the offer to other *W*SÁNEĆ Nations.	01-Mar-2016, Email	**01-Mar-2016, Email from the VFPA:** Provided to Tsartlip the same agreements that were offered to other *W*SÁNEĆ bands. Stated that following the VFPA's offer, some groups requested additional funding. The VFPA was able to increase its offer to those groups by offering a third agreement. Stated that the VFPA is prepared to offer Tsartlip First Nation the same amount, if it is requested. **08-Mar-2016, Email:** Tsartlip signed the funding agreement to support detailing Tsartlip's Current Use and for participation funding.	**Addressed in AIEIS Section 2.1.3:** Participation funding agreements have been negotiated between the VFPA and each of the *W*SÁNEĆ bands and were designed to support the consultation process for the Project.	**AIEIS** 2.1.3 Participation Funding
Tsartlip-5.2	Requested information regarding the authority of VFPA (with regard to EA decision making), where the VFPA can exercise its authority, and the agency that determines the VFPA's mandate. Stated that Transport Canada, Environment Canada, Fisheries and Oceans need to be part of the discussion. Requested information on who is doing what.	15-Apr-2016, Meeting 20-Jul-2017, Site Tour	**15-Apr-2016, Meeting:** Stated that the VFPA falls under the umbrella of Transport Canada. In the case of the Project, the VFPA is participating as the proponent in a regulatory framework overseen by the CEA Agency, similar to the role the National Energy Board (NEB) has in other projects, such as Trans Mountain Expansion Project (TMX). Explained that someone else would operate the terminal once it is built and the VFPA would be a landlord. Referred to slide 3 of the presentation (showing VFPA jurisdiction) and explained the VFPA's navigational jurisdiction. Noted that Transport Canada has navigational jurisdiction outside that area. **20-Jul-2017, Site Tour:** Committed to provide Tsartlip with information on what the VFPA does, how they make money, and their jurisdiction. Committed to inquire into Transport Canada's revenue from shipping per a request from Tsartlip. **05-Sep-2017, Email from the VFPA:** In response to the question about the VFPA's business, provided the VFPA 2016 Financial Report: https://www.flipsnack.com/portvancouver/financial-report-2016/full-view.html. In response to the question about Transport Canada's revenues related to shipping, provided Transport Canada's Annual Report Transportation in Canada 2016: https://www.tc.gc.ca/media/documents/policy/comprehensive_report_2016.pdf. Also provided contact information for Aboriginal Relations at Transport Canada.	**Addressed in AIEIS Appendix 2-B, Table 1 (#1):** EIS Section 1.0 provides an overview of the VFPA's mandate and jurisdiction. The VFPA is a port authority created pursuant to the *Canada Marine Act*, accountable to the federal Minister of Transport. The *Canada Marine Act* gives port authorities the authority to take, permit, or prevent certain activities within a port, which is defined as "the navigable waters under the jurisdiction of a port authority and the real property and immovables that the port authority manages, holds or occupies as set out in the letters patent". The letters patent issued for the VFPA describe the geographic boundaries of the navigation jurisdiction of the VFPA, the federal real property that it manages, and the lands other than federal real property, namely lands that the VFPA holds in its own name. The VFPA's territorial jurisdiction therefore includes the federal lands and lands other than federal real property that it manages, together with the navigable waters over which it has navigation jurisdiction. The federal real property managed by the VFPA and its navigation jurisdiction are shown in EIS Figure 1-3. In fulfilling the mandate under the *Canada Marine Act*, the port authority carries out a variety of duties, including safety and security of all land and waters, in collaboration with other agencies, using technology and land and water patrols. For core activities related to shipping and navigation, the VFPA acts as agent to the federal Crown. In accordance with this statutory authority, the VFPA has issued a Port Information Guide for marine operations within its jurisdiction (http://www.portvancouver.com/marine-operations/port-information-guide/). The guide's purpose is to promote safe and efficient navigation within the local waters of the port and to protect the marine environment. The practices and procedures apply to all vessels in the port, including pleasure craft and recreational vessels, and to all persons responsible for the planning, operation, conduct, and safe navigation of such vessels, including tenants. Among other things, the Port Information Guide outlines practices and procedures related to arrival and departure checklists, navigation, movement of dangerous goods, waste removal, marine mammal critical habitat, speed, use of pilots, anchorage procedures, environmental requirements, vessel discharges, noise and lights, adverse weather conditions, bunkering, and cargo operations, including loading or discharging and cleaning. Appendices to the Port Information Guide provide data sheets for all terminals within the Port of Vancouver.	**EIS** 1.0 Introduction 1.3.2 VFPA Overview 1.3.2.2 Mandate and Jurisdiction Figure 1-3 VFPA Managed Federal Lands and Navigation Jurisdiction 1.3.3 Governance and Corporate Structure 1.3.3.1 Insurance and Liability Management 1.3.3.2 Environmental Policy Appendix 6-D Participants in the Environmental Assessment of the Project. **AIEIS** Appendix 2-B Aboriginal Issues and Interests – *W*SÁNEĆ Nation, Table 1 Port Operations Appendix 2-B Aboriginal Issues and Interests – *W*SÁNEĆ Nation, Table 4 Environmental Assessment Process and Regulatory Framework **Information Request** Response to Sufficiency Information Request #01 (IR1-01 of CEAR Document #897) CEAR Document #156 From Port Metro Vancouver to the Canadian Environmental Assessment Agency re: Information requested from Port Metro Vancouver (see Reference Document number 139)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				Every vessel either in or seeking to enter the port is subject to the orders of the port authority with respect to its entry, departure, draught, berth, anchorage, location, speed, direction, and means and method of movement, whether or not such orders are issued through or by the Canadian Coast Guard's Marine Communications and Traffic Services. The VFPA asserts its authority on vessels that intend to enter, or are within the waters controlled by the port authority by monitoring and enforcing the practices and procedures described in the Port Information Guide. **Addressed in AIEIS Appendix 2-B, Table 4 (#27):** The Project is undergoing an environmental assessment led by the CEA Agency, which is also the Crown consultation coordinator. As the proponent for the proposed Project, the VFPA is conducting Indigenous consultation and engagement as directed by the CEA Agency. The B.C. Environmental Assessment Office (EAO) has stated that it will actively participate in the federal panel process and will coordinate its assessment and consultation with the federal process to the extent possible. The federal decision maker for the Project is either the Minister of Environment and Climate Change or Governor in Council, taking into account the report of the three-member Review Panel. The Executive Director of the EAO will rely principally on the Review Panel's report, along with additional information, to make a recommendation to two provincial Ministers, Minister of Environment and Minister of Transportation and Infrastructure. The ministers will then decide whether to issue an environmental assessment certificate. The environmental assessment and permitting process is described in EIS Section 6.0. Indigenous groups potentially affected by the Project are invited to participate in the panel review process by providing written submissions, as well as oral presentations at the Panel's public hearings. In the case of RBT2, the VFPA is considered a private project proponent with respect to environmental assessment decision making. If the Minister of Environment and Climate Change or Governor in Council determines that the Project can proceed, the CEA Agency would ensure that the VFPA fulfils any Project conditions. The *Canada Marine Act* sets out the VFPA's mandate. **Addressed in EIS Appendix 6-D:** Transport Canada and Environment Climate Change Canada are participants in the review process. **Addressed in response to IR1-01:** Additional information regarding the VFPA's jurisdiction and scope of authority, including how the VFPA asserts its jurisdictional authority on vessels that intend to enter or are within VFPA navigable waters, is provided in the VFPA's response to IR1-01. The Port Information Guide is provided as an appendix to the response to IR1-01. **Additional information provided by the VFPA:** The VFPA's mandate and authority is described in a letter to the CEA Agency dated November 18, 2014 (CEAR Document #156).	
Tsartlip-5.3	Commented that this is the first meeting with the VFPA and that Tsartlip First Nation should have been	15-Apr-2016, Meeting	**15-Apr-2016, Meeting:** Acknowledged that Tsartlip has expressed concerns related to Tsartlip's lack of involvement earlier in the process several times. Expressed regret that this meeting with Tsartlip did not occur sooner. The VFPA had been in touch on a notification	**Additional information provided by the VFPA:** The CEA Agency provided additional instructions to the VFPA to consult with Tsartlip First Nation regarding the Project on January 13, 2016. The VFPA has been in touch with Tsartlip First Nation regarding the Project and associated marine shipping since May 26, 2015.	**AIEIS** 1.0 Introduction 1.1 Purpose of the Additional Information to the EIS

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	involved earlier in the process. Concerned that Tsawout First Nation, Tseycum First Nation, Tsartlip First Nation, and Malahat Nation were not involved in the EIS previously.		basis and understood that Tsartlip was not interested in participating in the review of the Project. Now it is clear that Tsartlip is interested and the VFPA plans to involve them fully in the consultation process. Stated that the VFPA wants to fully engage with Tsartlip in this process, refers to having more to talk about such as Project benefits and jobs.	**Addressed in AIEIS Appendix 2-B, Table 3 (#17):** By way of this comment, the VFPA notifies the CEA Agency and the Review Panel of this concern. The details of the CEA Agency's direction to the VFPA with regard to engagement and consultation, including *WSÁNEĆ* Nation groups, in the assessment is provided in the introduction to the AIEIS. **Addressed in AIEIS Appendix 2-A:** **Feb 2014:** Letter and email to Tsartlip First Nation with a package of introductory materials regarding the Project, including an invitation to participate in planned technical working groups. Package included: • Technical Working Group invitation; • Technical Working Group Summary Reports; • Draft Archaeological Overview Assessment; • Project Description; • Field Studies Information Sheet (January 2014); and • Guidelines for the preparation of an EIS for the Project. **Feb – Mar 2014:** Phone call and email to Tsartlip First Nation in follow-up to the introductory package that was sent in February 2014. Request for Tsartlip First Nation to review the package and contact the VFPA if interested in meeting to discuss the Project. The VFPA did not receive a response to the package or invitation to participate in planned technical working groups. **May 2015:** Package to Tsartlip First Nation providing the EIS.	Appendix 2-A Consultation Activities by Aboriginal Group Appendix 2-B Aboriginal Issues and Interests - *WSÁNEĆ* Nation, Table 3 Engagement and Consultation
Tsartlip-5.4	Noted they are in discussions with the Federal government regarding reconciliation and recognition of the Douglas Treaty, which has been recognized in the Supreme Court of Canada. Stated that they see consultation and accommodation as being the old way and that consent is the new way that industry/ government will have to engage under the Douglas Treaty, the Crown and Section 35 regarding Tsartlip's rights.	20-Jul-2017, Site Tour	**20-Jul-2017, Site Tour:** Committed to provide an updated consultation plan to Tsartlip for review based on their input. **28-Sep-2017, Email from the VFPA:** Attached the draft consultation plan asking Tsartlip First Nation to review it and revise it where necessary.		

Table 6: Environmental Assessment and Permitting Process

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsartlip-6.1	Asked what the federal process includes that the provincial does not.	15-Apr-2016, Meeting	**15-Apr-2016, Meeting:** Explained that the provincial requirements include additional requirements related to social, economic, and health aspects. Stated that the VFPA cannot speak to elements in the federal environmental assessment that are not covered by the provincial process, and will have to talk with a regulatory specialist and follow up with an answer. **27-Apr-2016, Email from the VFPA:** In our meeting, you were curious about the differences between the provincial and federal environmental assessment processes. At a high level, the federal environmental assessment process (http://www.ceaa.gc.ca/default.asp?lang=en&n=16254939-1) focuses on environmental effects, and particularly those connected to activities occurring within federal jurisdiction. There are federal requirements to assess socio-economic and health impacts, but only if these are linked to a change in the environment, and only as they apply to Indigenous peoples. For example, the federal requirements would dictate that a proponent assess potential impacts to Indigenous peoples resulting from contamination to traditional foods (an environmental effect), but would not dictate that a proponent assess the changes to the labour market from the creation of jobs (not an environmental effect). The provincial environmental assessment process (http://www.eao.gov.bc.ca/ea_process.html) focuses on 5 pillars: environment, economy, social, heritage, and health. Unlike the federal process, these are considered for all people and not solely for Indigenous groups. Typically, the provincial scope is broader, and information is presented a bit differently. When determining whether or not to approve a Project, the process is also different, and each level of government will make its own decision whether the positive effects (i.e., economic) outweigh any adverse impacts from a Project. For the Project, the B.C. Minister of Environment has instructed the VFPA to address provincial requirements that are not covered by the federal process, and the information presented in the EIS is intended to satisfy both federal and provincial environmental assessment requirements.	**Addressed in AIEIS Appendix 2-B, Table 4 (#29):** The information presented in the EIS is intended to satisfy both federal and provincial environmental assessment requirements. Section 18.0 of the *EIS Guidelines* includes a list of requirements that are specific to the provincial review of the socio-economic assessment. In particular, the province requires assessment of effects to social, economic, heritage, and health components that are not the result of changes to the environment. More information regarding the federal environmental assessment for the Project can be found on the CEA Agency website at www.ceaa-acee.gc.ca, Reference Number: 80054. More information regarding the provincial environmental assessment for the Project can be found on the EAO's Project Information Centre (e-PIC) website at http://a100.gov.bc.ca/appsdata/epic/html/deploy/epic_project_home_410.html.	**EIS** 6.0 Environmental Assessment and Permitting Process 6.1 Federal Involvement and Process 6.2 Provincial Involvement and Process **AIEIS** Appendix 2-B Aboriginal Issues and Interests – *W̱SÁNEĆ* Nation, Table 4 Environmental Assessment Process and Regulatory Framework
Tsartlip-6.2	Expressed frustration with the environmental assessment process.	06-Jun-2016, Meeting	**06-Jun-2016, Meeting:** Acknowledged that there are questions about the conclusions made in the EIS, and explained the sufficiency process specifically looks at the EIS, how these conclusions were made.	**Addressed in AIEIS Appendix 2-B, Table 4 (#31):** By means of this response, the VFPA advises the CEA Agency and the Review Panel of this concern with regard to environmental assessment process. The responsible agencies are listed, and their roles are described, in EIS Section 6.0.	**EIS** 6.0 Environmental Assessment and Permitting Process 6.1 Federal Involvement and Process 6.2 Provincial Involvement and Process **AIEIS**

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	Stated that Tsartlip has submitted so many comments into processes like this, with no outcome. Stated that if findings were true, there would be no problems with the marine environment. Requested clarification of the responsible agencies		Stated that there is a lot more info in the EIS on the topics presented. Stated that the Panel will consider input and ask questions of the VFPA where appropriate.		Appendix 2-B Aboriginal Issues and Interests – *W̱SÁNEĆ* Nation, Table 4 Environmental Assessment Process and Regulatory Framework
Tsartlip-6.3	Expressed frustration at the environmental assessment and review panel process. Criticised how the process assesses impacts to rights. Stated that a regulator should not have the responsibility of engaging with First Nations when the Crown has the fiduciary obligation is expressed.	30-Jan-2017, *W̱SÁNEĆ* All-Chiefs Meeting (Pauquachin, Tsartlip, Tsawout, Tseycum)	**30-Jan-2017, Meeting:** Stated that responsibilities related to consultation remain with the Crown. Noted that the CEA Agency holds that piece. Stated that the Panel will not make a determination on that aspect.	**Addressed in AIEIS Appendix 2-B, Table 3 (#18):** The Project is undergoing an environmental assessment led by the CEA Agency, which is also the Crown consultation coordinator. As the proponent for the proposed Project, the VFPA is conducting Indigenous consultation and engagement as directed by the CEA Agency. The EAO has stated that it will actively participate in the federal panel process and will coordinate its assessment and consultation with the federal process to the extent possible. The federal decision maker for the Project is either the Minister of Environment and Climate Change or Governor in Council, taking into account the report of the three-member Review Panel. The Executive Director of the EAO will rely principally on the Review Panel's report, along with additional information, to make a recommendation to two provincial Ministers, Minister of Environment and Minister of Transportation and Infrastructure. The Ministers will then decide whether to issue an environmental assessment certificate. The environmental assessment and permitting process is described in EIS Section 6.0. Indigenous groups potentially affected by the Project are invited to participate in the panel review process by providing written submissions, as well as oral presentations at the Panel's public hearings. In the case of RBT2, the VFPA is considered a private project proponent with respect to environmental assessment decision making. If the Environment and Climate Change Minister or Governor in Council determines that the Project can proceed, the CEA Agency would ensure that the VFPA fulfils any Project conditions. The *Canada Marine Act* sets out the VFPA's mandate.	**EIS** 6.0 Environmental Assessment and Permitting Process 7.0 Engagement and Consultation **AIEIS** Appendix 2-B Aboriginal Issues and Interests – *W̱SÁNEĆ* Nation, Table 3 Engagement and Consultation

Table 7: Environmental Management Program

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsartlip-7.1	Expressed concerns with the bubble curtain being proposed to mitigation noise impact for mooring piles to be installed at the Project site. Noted the vibration technique being proposed will still have an impact as marine life feel vibrations differently than humans.	20-Jul-2017, Site Tour	**20-Jul-2017, Site Tour:** Explained that the Project is not a piling project and that there are only a few piles and so the length of time to install will be quick. Limited exposure to fish and whales. Stated that there are approximately 20 piles to install. Stated that the VFPA did model the effect of bubble curtains in our effects assessment detailed in a section. Stated that it does show a decrease in the area the noise would penetrate to. Stated that it is site specific so certain parts of the Project in terms of currents and flows it may or may not be feasible to use a bubble curtain. Stated that noise relation to piling will be in short duration. Stated that the VFPA can provide Tsartlip with more information on bubble curtain and vibration methods proposed for installing mooring piles at the Project site. Discussed organising a Follow-up Program meeting with all Chiefs. Discussed setting up a one-on-one meeting to discuss marine fish and mitigation. **05-Sep-2017, Email from the VFPA:** Requested a follow-up meeting regarding marine fish and related mitigation. **28-Sep-2017, Phone call from the VFPA:** Stated that we heard a strong interest from Tsartlip at the site tour in a technical discussion about marine fish and the VFPA can schedule a discussion on this (or any other topic) as desired by Tsartlip. **28-Sep-2017, Email from the VFPA:** Stated that the VFPA is in the process of designing a 'Follow-Up Program' for RBT2, should the Project be approved. Stated that a follow-up program involves monitoring of effects of the Project and mitigation measures and includes corrective actions if anything unexpected occurs. Expressed interest in having a high level of input and involvement from Tsartlip into this program and requested to meet with Tsartlip. Stated that the VFPA heard a strong interest from Tsartlip regarding marine fish and that a separate meeting could be set up to discuss this. **12-Dec-2017:** The VFPA met with Tsartlip First Nation to discuss lessons learned from the Deltaport Third Birth Project (DP3) and the Follow-up Program for RBT2. The VFPA	**Addressed in EIS Sections 13.0, 14.0, and 15.0:** As outlined in EIS Sections 13.0, 14.0, and 15.0, underwater noise reduction and dampening methods and technologies will be implemented during Project construction to avoid or reduce potential adverse effects of pile driving and other construction activities on marine fish and marine mammals. Details pertaining to the management and monitoring of underwater noise will be addressed during the development of the Underwater Noise Management Plan (see EIS Section 33.3.7) and Construction Compliance Monitoring Plan (see EIS Section 33.3.1), respectively, prior to the start of construction activities (should the Project be approved). The VFPA committed to the development of these plans to mitigate and monitor potential Project-related effects on marine species. **Addressed in Project Construction Update:** As requested by the Review Panel, the VFPA submitted the PCU on June 12, 2018, providing: • Detailed revised Project description, including a revised construction schedule; • Revised Project interaction matrix; • Preliminary details pertaining to the management and timing of dredging activities and the discharge of sediment-laden water; and • Revised assessment of environmental effects as required by the Project modifications. PCU Sections 1.0 and 2.0 describe the changes to the EIS, including updates to specific construction activities, the construction schedule, and relevant Project description figures and appendices. In PCU Section 3.0, changes or effects resulting from the construction updates on ICs and VCs are described. Overall, these changes to the environmental assessment resulting from construction updates can generally be summarised as follows: • Reductions in potential adverse changes or effects on ICs, biophysical VCs, social VCs, and Current Use; and • Increases in positive interactions with socio-economic VCs. These beneficial changes to ICs and VCs occur at the level of interactions or potential effects, and in most cases are slight changes, and thus do not affect the overall conclusions made in the EIS, including proposed mitigation, residual effect characterisations, significance determinations, or cumulative effects, as applicable, with one exception. The only component predicted to have a change to residual effects is land and water use, with a reduction of a residual effect on access to Tsawwassen First Nation community lease lands from a measurable non-significant residual effect to a negligible residual effect, due to elimination of the intermediate transfer pit (ITP) and associated activities.	**EIS** 13.0 Marine Fish 14.0 Marine Mammals 15.0 Coastal Birds 33.3.1 Construction Compliance Monitoring Plan 33.3.7 Underwater Noise Management Plan **Project Construction Update (PCU, CEAR Document #1210)** 1.0 Introduction 2.0 Revised Project Description and Schedule 3.0 Summary of Changes to the Environmental Impact Statement

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			sought input from Tsartlip on the Follow-up Program. The VFPA also had its marine expert attend the meeting to respond to questions and concerns Tsartlip had regarding mitigation measures proposed for the Project.		
Tsartlip-7.2	Noted that they want to be involved to protect their area but do not see RBT2 as a threat. Reiterated their interest in receiving funding for a Stewardship position that would relate to monitoring and enhancement.	30-Nov-2017, Meeting	**12-Dec-2017, Meeting:** The VFPA met with Tsartlip First Nation to discuss lessons learned from DP3 and the Follow-up Program for RBT2. The VFPA sought input from Tsartlip on the Follow-up Program. The VFPA explained that the Follow-up Program could have a number of opportunities for Tsartlip's participation.	**Addressed in AIEIS Section 7.3.3.3:** The VFPA proposes to assist the *W̱SÁNEĆ* bands in accessing potential economic opportunities resulting from the Project, including contracting opportunities as well as construction employment opportunities. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs. To support the development and implementation of plans to facilitate access to such Project-related benefits, the VFPA will continue engagement, initiated in December 2014. Opportunities for Indigenous training and employment opportunities related to the Project are described in EIS Section 32.3.3.	**AIEIS** 7.3 Potential Adverse Impacts on Aboriginal and Treaty Rights and Related Interests 7.3.3 Mitigation Measures

Table 8: Marine Fish – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsartlip-8.1	Asked if the decrease in productivity of marine fish relates to changes in salinity, and effects to fish hanging out in the estuary. Asked whether the shift in salinity predicted to result from RBT2 will affect eelgrass beds and crabs.	06-Jun-2016, Meeting	**06-Jun-2016, Meeting:** Responded no, the decrease in productivity relates to loss of habitat availability due to the footprint. Stated that the terminal will reduce some of their prey base. Salinity has more of an effect for biofilm and shorebirds.	**Addressed in AIEIS Appendix 2-B, Table 12 (#52):** Current levels and potential changes in marine sediment and water quality, including changes in salinity, were evaluated as described in the IC assessment sections of EIS Sections 9.6 and 9.7. Potential changes to marine water quality and sediment quality or sediment deposition due to the Project are expected to be minimal, relative to existing natural variability in the ecosystem. With the exception of temporary, reversible changes in the biofilm community assemblage from salinity changes during freshet, the potential effects of Project-related changes in marine water quality and sediment quality on marine vegetation (including eelgrass beds), marine invertebrates (including crabs), marine fish, and marine mammals are considered to be negligible due to the range of conditions that marine species naturally experience.	**EIS** 9.6 Surficial Geology and Marine Sediment 9.6.6 Existing Conditions 9.6.8 Future Conditions with the Project 9.7 Marine Water Quality 9.7.6 Existing Conditions 9.7.8 Future Conditions with the Project 10.0 Biophysical Setting 10.3 Overview of Assessing Ecosystem Productivity 11.0 Marine Vegetation 11.6.3.1 Potential Effect 1 – Changes in Productivity, Eelgrass 12.0 Marine Invertebrates 12.6.3.2 Potential Effect – Changes in Productivity of Bivalve Shellfish 13.0 Marine Fish 13.6 Future Conditions with the Project Table 13-6 Desktop and Field Studies Related to Marine Fish to Support the Assessment Table 13-10 Summary of Roberts Bank Ecosystem Model Productivity Results for Marine Fish 13.6.3 Potential Effect - Changes in Productivity **AIEIS** Appendix 2-B Aboriginal Issues and Interests – *W̱SÁNEĆ* Nation**,** Table 12 Surficial Geology and Marine Sediment
Tsartlip-8.2	Concerned with effects to pacific sand lance, and salmon and smelt prey, and questions whether the prediction that effects will be minor is correct. Concerned that whether sand lance are present or not, impacts to habitat effect the food web.	06-Jun-2016, Meeting	**06-Jun-2016, Meeting:** Responded that burying sand lance have not been directly documented, and that the map discussed only shows the suitability of the area as sand lance habitat. Stated that there is no concrete evidence of sand lance using the area. The ecosystem model is a food web model, and all the interactions that may occur related to a reduced prey base have been accounted for in the model. Confirmed that there is no direct evidence of burying. Sand lance have been caught swimming in eelgrass beds,	**Addressed in AIEIS Appendix 2-B, Table 18 (#81):** Potential Project effects on sand lance are considered in the marine fish assessment within the forage fish sub-component. Several studies were completed for Pacific sand lance. A habitat suitability model was developed for the species, and is presented in EIS Appendix 12-A. Additionally, Pacific sand lance were a target species of the marine benthic subtidal study, which involved remotely operated vehicle (ROV) surveys; however, no sand lance were observed. Additionally, quantification of Pacific sand lance habitat use was an objective of the benthic fish trawl surveys. For sand lance, a prediction that effects to productivity will be minor is based on several considerations, including: i) results of the Habitat Suitability Index, which indicate that approximately 9.4% of suitable habitat in the LAA will be lost to the Project footprint, suggesting ample burying habitat remains to sand lance post-Project, and ii) while individual fish may be affected, the Project is unlikely to result in changes in productivity outside the range of natural variability.	**EIS** 12.0 Marine Invertebrates Appendix 12-A Habitat Suitability Modelling 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component 13.2.1 Sub-components 13.4.1 Information Sources, Desktop and Field Studies 13.6.3 Potential Effect - Changes in Productivity 13.6.3.3 Changes in Productivity of Forage Fish

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	- Request to view sand lance studies.		but not burying in the sand surrounding the terminal. Explained that there is a huge body of work that is behind this. A comprehensive sensitivity analysis was undertaken on the ecosystem model where input parameters were varied. Added that there are always uncertainties. **23-Jun-2016, Email from the VFPA:** • EIS Section 13.6.3 Marine Fish, Table 13-10; • EIS Section 13.3.4 Technical Boundaries; • EIS Appendix 12-A Habitat Suitability Modelling; • EIS Section 13.5.3.1 Pacific Sand Lance; • EIS Table 13-8 Identification of Potential Project Interactions with Marine Fish for Construction Phase; • EIS Table 13-10 Summary of Roberts Bank Ecosystem Model Productivity Results for Marine Fish; and • EIS Table 13-11 Pacific Sand Lance Habitat Suitability (ha) in the Local Assessment Area in Future Scenarios with and without RBT2.	**Addressed in responses to IR5-20 and IR5-21:** Additional information concerning potential effects to sand lance and associated EIS conclusions is presented in the VFPA's responses to IR5-20 and IR5-21. As noted in IR5-21, creation of sandy gravel beaches suitable for Pacific sand lance spawning is expected to mitigate potential losses in Pacific sand lance productivity with no residual effect.	**AIEIS** Appendix 2-B Aboriginal Issues and Interests – *W̲SÁNEĆ* Nation, Table 18 Marine Fish **Information Requests** Response to Sufficiency Information Request #20 (IR5-20 of CEAR Document #1134) Response to Sufficiency Information Request #21 (IR5-21 of CEAR Document #1140)
Tsartlip-8.3	Expressed concern for mitigation when fry stock return and following the same path to access freshwater sources.	20-Jul-2017, Site Tour	**20-Jul-2017, Site Tour:** Explained that during construction, the VFPA will be following the timing windows to minimise effects on fish (March 1-August 15). Stated that outward mitigation principle effects of the Project during construction will be limited to noise and suspended sediment. Explained that during operations, in terms of effects to juvenile salmon – ships will be moving at such speeds it will be a non-issue. Explained that the VFPA is planning to also build habitat that will be of use to juvenile salmon and the VFPA will be monitoring those to ensure they are functioning as predicted.	**Addressed in EIS Section 13.6.3.1:** As noted in EIS Section 13.6.3.1, for adult Chinook and chum salmon (representative of all Pacific salmon), loss in habitat availability resulting from terminal placement and the associated loss of wetted area is expected to have a minor negative influence on productive potential. Predicted biomass losses from terminal placement are unlikely to be realised, however, given that both Chinook and chum adults returning to their freshwater spawning grounds are not likely habitat-limited within with LAA.	**EIS** 13.0 Marine Fish 13.6.3.1 Changes in Productivity of Pacific Salmon

Table 9: Marine Invertebrates – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsartlip-9.1	Concerned with potential impacts to littlenecks and geoducks.	15-Apr-2016, Meeting	**15-Apr-2016, Meeting:** Recorded comment for consideration by the Project team. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tsartlip First Nation and the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#71):** Bivalve shellfish (e.g., clams and cockles) were assessed as a sub-component of the marine invertebrates assessment. Productivity decreases for bivalve shellfish are predicted and can be partially mitigated through the implementation of environmental management plans (including salvaging and transplanting), the creation of onsite intertidal marsh habitat, and other offsetting measures. While the Project is predicted to cause losses of productivity of bivalve shellfish, the scale of change is minor in the context of natural variability and will not compromise population integrity or ecological function. Mitigation to reduce Project-related effects to bivalve shellfish would also mitigate potential changes in the availability of preferred Current Use resources for Indigenous groups. The VFPA is committed to developing and implementing a Follow-up Program for RBT2. The Follow-up Program will be developed after the submission of the EIS, in consultation with federal agencies, including the CEA Agency, Fisheries and Oceans Canada (DFO), and Environment Canada. Consultation with these regulatory agencies will ensure that the program will deliver the type, quantity, and quality of information required to reliably verify predicted effects (or absence of them), and to confirm both the assumptions and the effectiveness of mitigation. The need for shellfish monitoring will be considered in consultation with these agencies. **Addressed in AIEIS Appendix 2-B, Table 17 (#73):** Bivalve shellfish were a sub-component assessed in the marine invertebrates assessment, with littleneck clams as a representative species for other bivalves. Geoducks have not been observed in the Roberts Bank area; however, if geoducks were present, littleneck clams would be an appropriate proxy for any potential effects on geoducks. Additional information on representative species was provided in the VFPA's response to AIR-12.04.15-09. The response to AIR-12.04.15-09 provides rationale for the selection of each representative species, including why each one is an appropriate proxy for other species, both in the characterisation of existing conditions as well as the assessment of effects, including cumulative effects where applicable. A human health risk assessment was conducted on existing shellfish contamination levels at Roberts Bank, and the potential human health risks associated with consumption. The health assessment (EIS Section 27.0) concluded negligible health risks associated with shellfish contamination; however, DFO bivalve harvesting closures are maintained near outfalls as a preventative measure for public safety. These results were considered in the Current Use and rights assessments in EIS Section 32.0 and AIEIS Section 7.0 in relation to potential Project-related effects on traditional harvesting.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 12.0 Marine Invertebrates 12.2 Selection of Marine Invertebrates Valued Component 12.6 Future Conditions with the Project 12.6.3.2 Potential Effect – Changes in Productivity of Bivalve Shellfish 27.0 Human Health (revised June 2016) Appendix 27-C Shellfish Harvesting Potential and Contaminant – Related Consumption Risks at Roberts Bank Technical Report 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 33.0 Environmental Management Program 33.5 Roberts Bank Terminal 2 Follow-up Program **AIEIS** Appendix 2-B Aboriginal Issues and Interests – *W*SÁNEĆ Nation, Table 17 Marine Invertebrates 7.0 Potential or Established Aboriginal or Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes **Information Requests** Response to Additional Information Request #9 (AIR-12.04.15-9 of CEAR Document #388)
Tsartlip-9.2	Concerned with potential impacts from the Project to crabs in the area. Interested in crab relocation mitigation and the effectiveness of this approach.	15-Apr-2016, Meeting 06-Jun-2016, Meeting 20-Jul-2017, Site Tour	**15-Apr-2016, Meeting:** Recorded comment for consideration by the Project team. **06-Jun-2016, Meeting:** Explained that crab relocation is a well-established method. This was done in advance of DP3, and used in other projects in B.C. Stated that there is a fairly strong track record because it involves physically relocating crabs out of footprint and avoids direct mortality or injury.	**Addressed in EIS Section 12.0:** During construction and operation, the Project is expected to result in a net decrease in marine invertebrate productivity, both before and after mitigation is implemented. Increases in productivity of infaunal and epifaunal invertebrate communities and decreases in productivity for bivalve shellfish, Dungeness crab, and orange sea pens are predicted. Short-term productivity losses are due to direct mortality and losses of available habitat within the Project footprint. Productivity decreases can be partially mitigated through the implementation of environmental management plans, including crab salvages and transplanting of orange sea pens, and through the creation of eelgrass, intertidal marsh, mudflat, and sandy gravel beach habitats. While the Project is predicted to cause losses of productivity of bivalve shellfish, Dungeness crabs, and orange sea pens, the scale of change is minor in the context of natural variability and would not compromise the population integrity or ecological function. The assessment concludes there are no	**EIS** 12.0 Marine Invertebrates 12.6 Future Conditions with the Project 12.7.1 Mitigation Measures, Avoidance Measures 12.7.1.2 Timing Windows 12.7.2 Mitigation #1 for Direct Mortality 12.7.2.1 Crab Salvages **AIEIS** Appendix 2-B Aboriginal Issues and Interests – *W*SÁNEĆ Nation, Table 17 Marine Invertebrates

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	Asked whether other types of shellfish will be relocated. Expressed concerns for crab populations due to increased vessel traffic and the Project site. Noted the vulnerability of Dungeness crabs when their shells are soft.		Clarified that crabs will be moved out of construction areas and moved to other parts of Roberts Bank. No intent to remove them from the area. **20-Jul-2017, Site Tour:** Recorded comment for consideration by the Project team. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tsartlip First Nation and the VFPA's response. **12-Apr-2018, Letter from the VFPA:** Stated that since your concerns were raised, the Project team has conducted further work on these topics to respond to information requests from the Review Panel, to better understand potential effects and suggested mitigation, and to gain deeper understanding of the viewpoints of Indigenous groups and stakeholders. Provided the RBT2 Crab Mitigation Summary Overview, which detailed the following: • Mitigation measures to avoid or reduce effects to crab as outlined in the EIS, and • Additional crab harvesting related mitigation measure suggestions under review. Stated that the VFPA is interested in hearing views regarding options to mitigate potential effects to crabs and crabbing in the Project area.	significant adverse residual effects from the Project to marine invertebrates. The Project is not expected to result in any incremental adverse cumulative effects to marine invertebrates. **Addressed in AIEIS Appendix 2-B, Table 17 (#72):** Potential Project-related effects on Dungeness crabs are described in EIS Section 12.0. To minimise direct mortality and physical injury effects of construction activities, dredging guidelines have been established by DFO for the protection of marine resources. To protect gravid Dungeness crab females, the guidelines include a fisheries-sensitive window from October 15 to March 30 below −5 m chart datum (CD). In concordance with this window, dredging is scheduled to occur only from April 1 to October 14 at depths below −5.0 m CD. Where possible, Dungeness crabs will be salvaged prior to dredging and infilling containment dykes (i.e., terminal and causeway), and storing sand at the ITP [which is no longer planned; see below regarding the PCU]. The salvages will use crab traps or SCUBA divers to capture individuals and relocate them to nearby suitable areas undisturbed by the Project. This mitigation was used for DP3, and is considered to be effective at minimising the number of individuals exposed to and affected by construction activities. Other types of shellfish, specifically bivalves such as clams, cockles, mussels, and oysters, will not be relocated prior to constructing the terminal. **Addressed in PCU:** As requested by the Review Panel, the VFPA submitted the PCU on June 12, 2018, providing: • Detailed revised Project description, including a revised construction schedule; • Revised Project interaction matrix; • Preliminary details pertaining to the management and timing of dredging activities and the discharge of sediment-laden water; and • Revised assessment of environmental effects as required by the Project modifications. PCU Sections 1.0 and 2.0 describe the changes to the EIS, including updates to specific construction activities, the construction schedule, and relevant Project description figures and appendices. In PCU Section 3.0, changes or effects resulting from the construction updates on ICs and VCs are described. Overall, these changes to the environmental assessment resulting from construction updates can generally be summarised as follows: • Reductions in potential adverse changes or effects on ICs, biophysical VCs, social VCs, and Current Use; and • Increases in positive interactions with socio-economic VCs. These beneficial changes to ICs and VCs occur at the level of interactions or potential effects, and in most cases are slight changes, and thus do not affect the overall conclusions made in the EIS, including proposed mitigation, residual effect characterisations, significance determinations, or cumulative effects, as applicable, with one exception. The only component predicted to have a change to residual effects is land and water use, with a reduction of a residual effect on access to Tsawwassen First Nation community lease lands from a measurable non-significant residual effect to a negligible residual effect, due to elimination of the ITP and associated activities.	**PCU** 1.0 Introduction 2.0 Revised Project Description and Schedule 3.0 Summary of Changes to the Environmental Impact Statement
Tsartlip-9.3	Expressed confusion regarding the determination that the effects to marine vegetation will be positive, yet a net productivity decrease to marine	06-Jun-2016, Meeting	**06-Jun-2016, Meeting:** Stated that marine vegetation provides habitat for species, so areas with large amounts of marine vegetation (nearer to shore) are considered particularly sensitive. Area around terminal footprint is habitat for invertebrates and fish species. This habitat will be removed, but the value of this habitat is not as high as the shallower areas. A decision was made to locate the footprint in areas that would not affect sensitive, intertidal habitat. Some species will increase. A lot of	**Addressed in AIEIS Appendix 2-B, Table 17 (#74):** Effects to vegetation are avoided by the location of the terminal in deep subtidal waters, minimising direct overlap with sensitive intertidal vegetation habitats. Further, predicted changes in geomorphic conditions post-Project are predicted to benefit vegetation species; for example, the terminal will effectively create a wave shadow, which will benefit species such as eelgrass and intertidal marsh that prefer calmer and more quiescent conditions. On top of this, the creation of onsite offsetting habitat will further contribute to vegetation productivity at Roberts Bank such that, overall, the net effect is expected to be positive. The assessment for marine invertebrates considered and incorporated conclusions from marine vegetation where appropriate; however, not all species of invertebrates utilise vegetation habitats. For example, infaunal and epifaunal invertebrate communities live on or within the sediment, as do orange sea pens and several species of bivalves. The Project's footprint is primarily within subtidal	**EIS** 12.0 Marine Invertebrates 12.6.3 Potential Effect – Changes in Productivity **AIEIS** Appendix 2-B Aboriginal Issues and Interests – *W̲SÁNEĆ* Nation, Table 17 Marine Invertebrates

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	invertebrates. Why would there be a net productivity decrease if the footprint does not overlap habitat?		bivalves do not use marine vegetation, and live in the sand. Species that prefer sand will feel negative effects more than species that use the marsh. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tsartlip First Nation and the VFPA's response.	sand habitat, and it is the productivity of soft-sediment species that are driving the result for marine invertebrates.	
Tsartlip-9.4	Asked whether or not sea pen distribution has a relationship with propeller wash out area. Concerned with the potential impacts to sea pens. Asked whether sea pens will be moved from the area prior to construction. Concerned with the impacts to species that use sea pens as habitat (perch and minnow).	06-Jun-2016, Meeting	**06-Jun-2016, Meeting:** Explained that sea pens populated the area. Responded the VFPA does not believe there is a relationship between the propeller wash out area and sea pens, but it has not specifically been studied. Stated that the VFPA believes the concentration of sea pens has something to do with the acceleration of tidal currents around the structure, which enhances prey delivery. **23-Jun-2016, Email from the VFPA:** Photos of the ocean floor near the terminal: There are additional technical reports (beyond the EIS) available on VFPA website, at the following link: http://www.robertsbankterminal2.com/environmental-assessment/technical-data-reports/. On this page, there are links to the following studies, which provide pictures of the ocean floor for the disposal at sea area and the Project footprint area respectively. • Appendix A ROV Video Stills RBT2 Technical Data Report Subtidal Benthic Infauna and Epifauna Surveys for Disposal at Sea Site Characterization (look under the Disposal-at-Sea Studies drop menu); and • Appendix A Photographs in RBT2 Technical Data Report Marine Invertebrates, Orange Sea Pens (look under the Marine Invertebrates drop menu). Scuba surveys – EIS Section References: • 12.0 Marine Invertebrates; and • 12.5.4.2 Ecological Function. Appendix 9.6-A: • 3.3 Methods;	**Addressed in AIEIS Appendix 2-B, Table 17 (#69):** Orange sea pens are a soft coral species that depend on habitat with strong tidal outflows and oceanic currents for food delivery. Sea pen beds provide habitat for many benthic (bottom dwelling) species and likely play a role in maintaining productive near-shore communities for clams, sea stars, marine worms, Dungeness crabs, and several fish species. Orange sea pens were assessed as a sub-component of the marine invertebrates VC. The assessment concludes that a decrease in the productivity of orange sea pens due to direct mortality and changes in habitat availability is expected as a result of permanent loss of subtidal sand habitat associated within the terminal footprint. This decrease can be partially mitigated through the implementation of environmental management plans, including the collection and pre-construction transplantation of orange sea pens to nearby undisturbed sites identified as suitable through habitat modelling. While the Project is predicted to cause losses of productivity of orange sea pens, the scale of change is minor in the context of natural variability and will not compromise the population integrity or ecological function. The residual effect was determined to be not significant. Potential indirect effects on marine fish resulting from potential effects on orange sea pens are described in EIS Section 13.6. There is no evidence to suggest perch or minnow species use sea pens as habitat. Sea pen distribution is described in EIS Section 12.5, and shown on EIS Figure 12-12. **Addressed in responses to IR5-05 and IR5-06:** The VFPA's response to IR5-05 provides the Orange Sea Pen Transplant Pilot and Monitoring Program report (Appendix IR5-05-A). In summary, the pilot sea pen transplant was successful. Stable densities, and evidence of recruitment, at two of the three transplant sites demonstrate that not only can environmental conditions successfully be used to predict habitat suitability for orange sea pens across a larger study area, but also attests to the ecological viability of transplantation as a potential mitigation method. As noted in EIS Section 12.0, the VFPA stated that the proposed Project would result in a moderate reduction in orange sea pen productivity, and that the level of confidence in this assessment was considered to be moderate. The VFPA's response to IR5-06 discusses the confidence in the rating. In summary, the moderate confidence ranking was rooted in four main points (each of which are described below): • The success of the orange sea pen pilot transplant and monitoring program (see response to IR5-05); • Remaining orange sea pen productivity with the Project (before mitigation) is considerable (45%) such that the population will persist at Roberts Bank; • Reproductive and larval biological characteristics of orange sea pens, which confer a high ability to replenish stocks; and • Coral transplants are common and successful elsewhere.	**EIS** 12.0 Marine Invertebrates 13.0 Marine Fish 13.6.3.4 Potential Effect – Changes in Productivity of Flatfish **AIEIS** Appendix 2-B Aboriginal Issues and Interests – *W̱SÁNEĆ* Nation, Table 17 Marine Invertebrates **Information Requests** Response to Sufficiency Information Request #05 (IR5-05 of CEAR Document #1145) Response to Sufficiency Information Request #06 (IR5-06 of CEAR Document #1145)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			• 3.33 Field Methods; • 4.3.1 Seabed sediments; and • 4.3.2 Suspended sediments. SCUBA Survey - (Hemmera and Archipelago 2014) A field study to collect sea pen density and associated species information. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tsartlip First Nation and the VFPA's response. **07-Feb-2018, Letter from the VFPA:** Starting in 2014, the Project team conducted a pilot study to test a method for transplanting orange sea pens, which involved transplant of 1,200 orange sea pens to three sites within the LAA for the Project. Please find attached a report titled Orange Sea Pen Transplant Pilot and Monitoring Program. The results of the study show that the pilot sea pen transplant was successful, with stable densities and evidence of recruitment at two of the three transplant sites. This report will be submitted to the Review Panel shortly with the VFPA's response to IR5-05.		
Tsartlip-9.5	Commented that it is not enough to conclude that the area is already contaminated so the Project will have no effect. Noted the shellfish closures and Tsartlip's desire to improve the health of the area.	06-Jun-2016, Meeting	**06-Jun-2016, Meeting:** Explained that DFO and Environment Canada control the prohibitions. Believes the reasoning is related to proximity to industrial areas and the shellfish not being fit for consumption. Stated that the VFPA is open to ideas for mitigation.	**Addressed in EIS Appendix 7.2-B (#75):** No bivalve harvesting is currently allowed within the LAA or RAA of marine invertebrates, due to both Sanitary and Biotoxin Shellfish Closures imposed by DFO over concerns regarding discharges from sanitary, stormwater, or industrial sources. DFO is the proper authority to determine the validity of shellfish closures. **Additional information provided by the VFPA:** Beyond the mitigation measures suggested in the EIS and MSA, the VFPA encourages Indigenous groups participating in the RBT2 environmental assessment to suggest specific mitigation measures for consideration.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table

Table 10: Marine Mammals – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsartlip-10.1	Stated that SRKW are more than just a species of animal, they are Tsartlip relatives; killer whale habitat is seen as habitat belonging to their relatives. Concerned about the noise from ships, (i.e., propellers) and the effects of that on killer whales. Concerned that more ships means more noise. Requested clarification regarding whether this was studied in the EIS. Reiterated their concerns about noise pollution and impacts on SRKW. Expressed concern that that impacts on the killer whale population are not being addressed by anyone. Concerned that if the primary ocean predator was gone, there would be an increase in the number of seals, leading to fewer salmon.	15-Apr-2016, Meeting 06-Jun-2016, Meeting 20-Jul-2017, Site Tour 30-Nov-2017, Meeting	**15-Apr-2016, Meeting:** Recorded comment for follow-up. **27-Apr-2016, Email from the VFPA:** During the meeting, we heard several concerns expressed related to potential impacts from the Project on marine mammals. The methods used to study underwater noise and the results of the assessment of potential underwater noise-related effects on marine mammals are described in EIS Section 14.0. As I suggested in the meeting, we could schedule a follow-up meeting with a marine mammal expert to speak to the environmental studies and answer any questions. Please let me know if there is interest in scheduling a meeting, and whether there are any additional topics of interest we could address at the same time. The Enhancing Cetacean Habitat and Observation (ECHO) Program is a VFPA-led initiative (separate from the Project) aimed at better understanding and managing the impact of shipping activities on at-risk whales throughout the southern coast of B.C. There is quite a bit of information available at: http://www.portvancouver.com/environment/water-land-wildlife/marine-mammals/. (Note: Information is now available at https://www.portvancouver.com/environment/water-land-wildlife/echo-program/.) **06-Jun-2016, Meeting:** Responded that yes, a lot of studies and information was used looking at how southern resident killer whale (SRKW) react, vocalise, and make calls when ships are going by. Stated that this information was used in the assessment, and can be found in the technical report. Committed to share the where this is addressed in the EIS. **23-Jun-2016, Email from the VFPA:** EIS Section References: • 14.1.1.1 Southern Resident Killer Whale; • 14.3.3 Technical Boundaries; • 14.4.1 Southern Resident Killer Whale Technical Advisory Group Process; • Table 14-6 Marine Mammal Studies to Support the Assessment; • Table 14-7 Marine Mammal Modelling Studies Contributing to Project-related Predictions; • Figure 14-3 Studies Conducted on SRKW to Inform the Environmental Assessment; • 14.4.3 Habitat Use Studies; • 14.4.4 Critical Habitat Feature – Acoustic Environment; • 14.5 Existing Conditions; and • Appendices 14-B and 14-C (Acoustic modelling and SRKW disturbance). In our meeting, I also mentioned the VFPA's ECHO Program. This initiative is aimed at better understanding and managing	**Addressed in EIS Appendix 7.2-B (#92):** Project-related adverse residual effects to SRKW (and all toothed whales) are expected to be not significant. The Project contribution of effects above existing conditions is very small and is not anticipated to adversely affect individuals or affect critical habitat features (acoustic environment, the availability of prey, and water and sediment quality) when needed by SRKW for their life functions of foraging, mating, resting, or socialising. Destruction of SRKW critical habitat from Project construction and operation is not anticipated, and the Project will not limit the survival or recovery of SRKW. **Addressed in MSA Appendix 5-B (#43):** Potential effects, including effects of underwater noise, from marine shipping associated with the Project on marine fish and marine mammals are assessed in MSA Sections 8.1 and 8.2, respectively. MSA Section 9.5 assesses the cultural aspects of potential effects to marine fish and marine mammals. **Addressed in AIEIS Appendix 2-B, Table 19 (#84):** EIS Section 14.0 includes the location of marine mammals in the assessment area, the methods used to study underwater noise, and the results of the assessment of potential underwater noise-related effects from marine shipping associated with the Project on marine mammals. The assessment also includes the potential cumulative effects on marine mammals of the Project in combination with other projects and activities, including noise from existing and incremental marine vessel traffic. **Addressed in response to IR4-10:** As noted in the VFPA's response to IR4-10, in 2014, the VFPA-led ECHO Program is a collaborative initiative aimed at better understanding and managing the impact of shipping activities on at-risk whales throughout the southern coast of B.C. The VFPA-led ECHO Program engages and involves key regional interested parties to maximise program success and help ensure that mitigation and management measures developed through the program are informed by social, cultural, economic, and environmental sustainability interests. The ECHO Program is guided by the advice and input of an advisory working group, and supported by a federal government advisory committee and associated technical committees. Through engagement and consultation with stakeholders, including Indigenous individuals, the ECHO Program has initiated or supported short-term projects, scientific studies, and educational initiatives to fill knowledge gaps necessary to inform the development of credible, science-based threat reduction solutions and management options to reduce cumulative effects of shipping to at-risk whales in the region. Further information about ECHO Program can be found at: https://www.portvancouver.com/environment/water-land-wildlife/echo-program/. **Additional information provided by the VFPA:** The cultural importance of marine mammals, specifically SRKW, to Indigenous groups was considered in the selection of the marine	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 9.0 Physical Setting 9.8 Underwater Noise 9.8.2 Assessment Purpose and Approach Appendix 9.8-A Construction and Terminal Activity Underwater Noise Modelling Study Appendix 9.8-B Regional Commercial Vessel Traffic Underwater Noise Modelling Study 14.0 Marine Mammals 14.2 Selection of Marine Mammals Valued Component 14.5 Existing Conditions 14.5.1.4 SRKW Life Functions and Critical Habitat Features 14.6 Future Conditions with the Project 14.6.2.3 Summary of Changes to SRKW Critical Habitat and Life Functions from Project-related Effects 14.7 Mitigation Measures 14.9 Determination of Significance of Residual Adverse Effects 14.10 Cumulative Effects Assessment **MSA** Appendix 5-B Aboriginal Issues and Interests 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 8.1 Marine Fish and Fish Habitat 8.2 Marine Mammals 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights **AIEIS** Appendix 2-B Aboriginal Issues and Interests – *WSÁNEĆ* Nation, Table 19 Marine Mammals **Information Requests** Response to Sufficiency Information Request #10 (IR4-10 of CEAR Document #1051)

			the impact of shipping activities on at-risk whales throughout the southern coast of B.C. The ECHO Program has been supporting DFO in its assessment of the risk of a vessel striking a large whale off the west coast of Vancouver Island, as ships make their approach to the mouth of Juan de Fuca Strait. Through aerial surveys to determine whale distribution and tracking of vessel distribution and speed via Automated Identification System (AIS), DFO has modelled the probability of a vessel encountering a whale and will identify areas where encounter probabilities are higher and lower. Results are expected to be published soon and will be used to inform future mitigation and management considerations. More information on the ECHO Program can be found here: http://www.portvancouver.com/environment/water-land-wildlife/marine-mammals/. (Note: Information is now available at https://www.portvancouver.com/environment/water-land-wildlife/echo-program/.) **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tsartlip First Nation and the VFPA's response. **20-Jul-2017, Site Tour:** Committed to organise an ECHO Program presentation with Tsartlip. **28-Sep-2017, Email from the VFPA:** Stated that the VFPA can meet to discuss the ECHO Program. Stated that the VFPA heard a strong interest from Tsartlip regarding marine fish and that a separate meeting could be set-up to discuss this. **30-Nov-2017, Meeting:** Recorded comment for consideration by the Project team. **12-Dec-2017, Meeting with Tsartlip:** The VFPA met with Tsartlip First Nation and presented on the ECHO Program. The VFPA also had its marine expert attend the meeting to respond to questions and concerns Tsartlip had regarding mitigation measures proposed for the Project.	mammals VC, and the SRKW sub-component for the EIS. Critical features of SRKW habitat, and potential Project-related effects to SRKW habitat, are described in EIS Section 14.0. Tsartlip First Nation's comments about SRKW are reflected in the Current Use assessment of AIEIS Section 7.0.	
Tsartlip-10.2	Asked about the potential for a ship to hit a marine mammal, and whether strikes are recorded and regulated.	06-Jun-2016, Meeting	**06-Jun-2016, Meeting:** Responded if a ship strike happened in VFPA jurisdiction, it would be observed and reported. Stated that in deeper water, it might not be noticed; however, ships are required to report if they notice. **23-Jun-2016, Email from the VFPA:** In the meeting, you asked about vessel strike reporting requirements. Vessel strikes are voluntarily reported by mariners to DFO. I have provided some links below. http://www.pac.dfo-mpo.gc.ca/fm-gp/species-especes/mammals-mammiferes/report-signaler-eng.html http://www.dfo-mpo.gc.ca/fm-gp/mammals-mammiferes/prog-eng.htm	**Addressed in AIEIS Appendix 2-B, Table 19 (#87):** The assessment considers the potential effects on marine mammals of marine vessel traffic associated with Project construction and operation, including the potential for physical disturbance due to a Project-related vessel strike. As described in the EIS, occurrences of marine mammal vessel strikes are identified through observed incidents, scarring, or recovery of carcasses. There is no formal regulation by DFO requiring the reporting of marine mammal vessel strikes in Canadian waters. Vessel strike incidents can be reported to the DFO incident reporting line: 1 800 465 4336. **Addressed in EIS Appendix 7.2-B (#89):**	**EIS** 14.0 Marine Mammals 14.6 Future Conditions with the Project 14.6.2 Potential Effects of the Project on Southern Resident Killer Whales 14.6.3 Potential Effects of the Project on North Pacific Humpback Whale 14.6.4 Potential Effects of the Project on Steller Sea Lions 14.10 Cumulative Effects Assessment **MSA** 8.2 Marine Mammals

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			http://www.dfo-mpo.gc.ca/fm-gp/mammals-mammiferes/publications/8-eng.htm. More information related to vessel strikes can be found in MSA Section 8.2. In our meeting, I also mentioned the VFPA's ECHO Program. This initiative is aimed at better understanding and managing the impact of shipping activities on at-risk whales throughout the southern coast of B.C. The ECHO Program has been supporting DFO in its assessment of the risk of a vessel striking a large whale off the west coast of Vancouver Island, as ships make their approach to the mouth of Juan de Fuca Strait. Through aerial surveys to determine whale distribution and tracking of vessel distribution and speed via Automated Identification System (AIS), DFO has modelled the probability of a vessel encountering a whale and will identify areas where encounter probabilities are higher and lower. Results are expected to be published soon and will be used to inform future mitigation and management considerations. More information on the ECHO Program can be found here: http://www.portvancouver.com/environment/water-land-wildlife/marine-mammals/ (Note: Information is now available at https://www.portvancouver.com/environment/water-land-wildlife/echo-program/.)	The appendix considers the potential effects on marine mammals of marine vessel traffic associated with Project construction and operation, including the potential for physical disturbance due to a Project-related vessel strike. As described in the EIS, as a result of mitigation measures during construction and operation, no detectable/measurable residual adverse effects from vessel strikes are predicted for marine mammals. The marine mammal assessment considers the potential for cumulative effects with respect to the potential residual effect (i.e., increased underwater noise produced by container ships and support tugs during Project operation), in combination with other projects and activities within the RAA, including underwater noise from incremental marine vessel traffic outside VFPA jurisdiction. **Addressed in MSA Appendix 5-B (#44):** MSA Section 8.2 includes consideration of potential effects on whales, including vessel strikes by Project-associated vessels. **Addressed in MSA Section 8.2.6.3:** Vessel strikes to humpback whales is considered in MSA Section 8.2.6.3. It notes a Project-associated container ship could potentially strike a humpback whale within the LAA resulting in injury or mortality. The addition of approximately three container ship movements every two days over existing conditions is not predicted to result in population level effects to the population of humpback whales in B.C. as the population is growing at a rate of approximately 5% (according to DFO).	8.2.6.3 Potential Effect #2 – Physical Disturbance from Vessel Strikes 8.2.7.2 Mitigation – Vessel Strikes 8.2.8.2 Residual Effect #2 – Physical Disturbance from Vessel Strikes 8.2.8.4 Summary of Residual Effects and Significance 8.2.9 Cumulative Effects Assessment **AIEIS** Appendix 2-B Aboriginal Issues and Interests – *W̱SÁNEĆ* Nation, Table 19 Marine Mammals
Tsartlip-10.3	Asked what percentage of mortalities (related to the marine mammal assessment) would warrant a red flag, or the determination that the Project should not proceed.	06-Jun-2016, Meeting	**06-Jun-2016, Meeting:** Responded that in terms of the Project (which includes ships within VFPA jurisdiction, a small area) the likelihood of strikes is very low, partly because the speed of ships is slow in these areas.	**Addressed in MSA Section 8.2.6.3:** As noted in MSA Section 8.2.6.3, vessel strikes may be fatal to a SRKW, or an individual may recover. The chance of a Project-associated container ship striking a SRKW within the LAA and resulting in injury or mortality is qualitatively determined to be unlikely. This conclusion is supported by the following: • Vessel strikes are not identified by DFO as a primary threat to killer whales in B.C. in their recovery strategies and recovery strategy progress reports; • Large vessel strikes of SRKW are uncommon and no mortalities from container ships have been reported; and • The probability of a vessel strike of a SRKW individual is low considering the agile behaviour of SRKW and the addition of three movements of container ships associated with RBT2 every two days over existing conditions. To put this into context, under existing conditions there are predicted to be 8,896 vessel movements per year.	**MSA** 8.2 Marine Mammals 8.2.6.3 Potential Effect #2 – Physical Disturbance from Vessel Strikes

Table 11: Marine Shipping Addendum

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsartlip-11.1	Asked if the material presented (marine vegetation) includes consideration of marine traffic or if it is only the port itself. Asked how marine shipping is considered. Requested to see information related to the Saanich Inlet.	06-Jun-2016, Meeting	**06-Jun-2016, Meeting:** Clarified that presentation relates to the terminal itself and shipping up to end of the jurisdiction, not marine shipping. Explained the process distinction between the EIS portion and the MSA. Stated that marine shipping is addressed in a separate report and next steps are different. Explained that the terminal is designed far out from shore to avoid interaction with sensitive intertidal habitat. (A presentation related to marine shipping was provided later that day.) **23-Jun-2016, Email from the VFPA:** The presentation provided at our meeting focused on the EIS. The Saanich Inlet is included in the assessment area for the MSA, so you can find more information on this area in the MSA. We could come back with a presentation focused on this area, if this would be helpful.	**Addressed in *Updated EIS Guidelines*, section 1.0:** On April 17, 2015, the CEA Agency issued *Updated EIS Guidelines* that included the addition of environmental effects of marine shipping associated with the Project, beyond the scope of the Project (VFPA jurisdiction) to the 12 nautical mile limit of Canada's territorial sea. In October 2015, the VFPA submitted to the CEA Agency the MSA. **Addressed in MSA Section 1.0:** The marine shipping area is described in MSA Section 1.0 and illustrated in MSA Figure 1-1. While Saanich Inlet (captured in Segment B) is not the focus of the assessment, the assessment's results are applicable to the area. The MSA considers intertidal habitat as a sub-component in the assessment presented in MSA Section 8.1.	***Updated EIS Guidelines*** 1.0 Marine Shipping **MSA** 1.1 Purpose of the [MSA] Figure 1-1 Marine Shipping Area 8.1 Marine Fish and Fish Habitat
Tsartlip-11.2	Concerned that Tsartlip cannot get a meeting with Transport Canada, who has jurisdiction in the marine shipping area.	06-Jun-2016, Meeting	**06-Jun-2016, Meeting:** Committed to pass concern on to Transport Canada. **28-Jun-2016, Email from the VFPA:** The VFPA shared concern with Transport Canada.		

Table 12: Marine Vegetation – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsartlip -12.1	Requested pictures/video evidence of differences in vegetation around terminal vs other areas.	06-Jun-2016, Meeting	**06-Jun-2016, Meeting:** Stated that there is extensive video coverage of these areas. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tsartlip First Nation and the VFPA's response.	**Addressed in AIEIS Appendix 2-B, Table 16 (#67):** Marine vegetation was mapped for the LAA, and EIS Figure 11-2 shows the differences in vegetation around the existing terminal and other areas, including Canoe Passage, intertidal areas, and the inter-causeway area at Roberts Bank.	**EIS** 11.0 Marine Vegetation **AIEIS** Appendix 2-B Aboriginal Issues and Interests – *W*SÁNEĆ Nation, Table 16 Marine Vegetation

Table 13: Marine Water Quality – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsartlip-13.1	Concern regarding impacts to water quality from the existing terminals at Roberts Bank, and potential changes to water quality resulting from the Project. Interested in marine water quality and how that relates to the health of marine species.	15-Apr-2016, Meeting	**15-Apr-2016, Meeting:** Recorded comment for consideration by the Project team. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tsartlip First Nation and the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#60):** EIS Section 9.7 considers the physical and chemical characteristics of waters that influence the estuarine ecosystem. An assessment was carried out to determine potential changes to marine water quality as a result of the Project. The results of the marine water quality assessment were considered in the assessments of marine vegetation, marine invertebrates, marine fish, marine mammals, coastal birds, and ongoing productivity of commercial, recreational, and Aboriginal fisheries. Studies were undertaken to determine existing conditions for several water quality parameters, including temperature, acidity or basicity (pH), dissolved oxygen, conductivity, salinity, oxidation reduction potential, total dissolved solids, total suspended solids, turbidity, water hardness, nutrients, and metals. The assessment concludes that: The Project is expected to result in changes to marine water quality, but no incremental cumulative changes are anticipated. • Construction activities are not expected to temporarily alter water contaminant or nutrient levels, pH, dissolved oxygen, or temperature. • Increases in total suspended solids levels from construction activities are expected to be temporary and minimal relative to existing natural variability. • As a result of the terminal footprint, localised changes in salinity and turbidity are predicted in the intertidal zone, but within the natural ranges currently experienced. The discharge of treated wastewater and stormwater is not expected to change marine water quality. Sanitary discharge will be collected from serviced buildings and piped to a wastewater treatment plant on the east side of the terminal. Treated effluent will meet B.C. Ministry of Environment effluent standards prior to discharge via ocean outfall. Stormwater will be collected by a stormwater system that includes oil interceptors to trap surface oil and grit that reaches the drainage collection system, and five outfalls located at the wharf face. Further information regarding the Project's treated wastewater and stormwater systems is presented in the EIS. **Addressed in AIEIS Appendix 2-B Table 13 (#54):** The marine water quality assessment in EIS Section 9.7 considers the physical and chemical characteristics of waters that influence the estuarine ecosystem. An assessment was carried out to determine potential changes to marine water quality as a result of the Project. Studies were undertaken to determine existing conditions for several water quality parameters, including temperature, acidity or basicity (pH), dissolved oxygen, conductivity, salinity, oxidation reduction potential, total dissolved solids, total suspended solids, turbidity, water hardness, nutrients, and metals. Existing water quality conditions at Roberts Bank include fine silt and clay sediments carried in the freshwater discharged by the Fraser River, which spread as a plume out into the Strait of Georgia, including Roberts Bank (shown in EIS Figure 9.5-9). The assessment concludes the following: • The Project is expected to result in changes to marine water quality, but no incremental cumulative changes are anticipated; • Construction activities are not expected to temporarily alter water contaminant or nutrient levels, pH, dissolved oxygen, or temperature; and • Increases in total suspended solids levels from construction activities are expected to be temporary and minimal relative to existing natural variability. • With the exception of temporary, reversible changes in the biofilm community assemblage from salinity changes during freshet, the potential effects of Project-related changes in marine water quality and sediment quality on marine vegetation, marine invertebrates, marine fish, and marine mammals are considered to be negligible due to the range of conditions that marine species naturally experience.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 9.5 Coastal Geomorphology 9.6 Surficial Geology and Marine Sediment 9.6.8 Future Conditions with the Project 9.7 Marine Water Quality 11.0 Marine Vegetation 12.0 Marine Invertebrates 13.0 Marine Fish 14.0 Marine Mammals 14.6.2 Potential Effects of the Project on **AIEIS** Appendix 2-B Aboriginal Issues and Interests – *W̱SÁNEĆ* Nation, Table 13 Marine Water Quality

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsartlip-13.2	Emphasised Tsartlip's interest in impacts to eelgrass.	30-Nov-2017, Meeting	**30-Nov-2017, Meeting:** Recorded comment for consideration by the Project team.	**Addressed in EIS Section 11.0:** During Project construction and operation, changes in productivity of eelgrass, biofilm, and biomat are predicted to be negligible (i.e., not measurable or detectable). **Addressed in EIS Appendix 7.2-B (#70):** Following terminal construction, there is an opportunity to transplant up to 3 hectares of native eelgrass within the Roberts Bank study area as a mitigation measure. The proposed transplant site overlaps with an existing stand of sparse eelgrass (i.e., less than 30% cover). The existing presence of eelgrass at this location is an indication of suitable conditions for establishment and growth of eelgrass. **Addressed in EIS Appendix 7.2-B (#67):** Eelgrass and biofilm are both considered in the effects assessment as sub-components of the marine vegetation VC. The existing conditions for eelgrass and biofilm (including ecological function) in the Roberts Bank area and the potential effects of the Project on these marine vegetation sub-components are described in the EIS. Eelgrass and biofilm have specific habitat preferences and occur where these conditions exist. Native eelgrass at Roberts Bank occurs in areas containing finer sediments in the higher intertidal zone. Biofilm is found on mudflats within the upper intertidal zone. **Addressed in EIS Appendix 7.2-B (#201) and EIS Section 17.0:** Onsite eelgrass habitat creation is proposed through transplanting in an area approximating 3 ha. Based on the review of previous habitat creation programs (e.g., DP3), eelgrass transplants are considered to be an effective means of increasing productivity of marine vegetation. The VFPA will implement a Follow-up Program, which will include monitoring to confirm that all offsetting measures meet intended objectives and function as designed. Monitoring will include methods and success measures to confirm that offsetting measures have been effective. The *Fisheries Act* Authorization will require that functional objectives are met.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 11.0 Marine Vegetation 11.6.3 Potential Effect #1 – Changes in Productivity

Table 14: Potential Accidents or Malfunctions

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsartlip-14.1	Concerned with the prediction of the likelihood of an accident, and that however low this number is, one accident is still an accident and very concerning to Tsartlip. Concerned with the CEA Agency guidelines for the accidents and malfunctions section.	06-Jun-2016, Meeting	**06-Jun-2016, Meeting:** Explained that the report contains a series of return periods for certain scenarios. For a container grounding scenario, the area of highest risk is the Boundary Passage area, similar to that in TMX. The report looks at two accident scenarios: a grounding and a container vessel colliding with a smaller craft. The probability of a grounding is a 1/1,000 year event, based on the type of vessel, speed, and historical precedent.	**Addressed in EIS Section 30.0:** EIS Section 30.0 presents an assessment of potential accidents and malfunctions, including a ship impact and spill scenario. The Project does not involve the shipment of fuel and therefore the assessment considered the potential spill of fuel required for container ship operation. The assessment concluded that a spill from the fuel tanks of a container ship in the berth area could result in adverse residual effects to marine vegetation, invertebrates, fish, and marine mammals, as well as marine commercial use, outdoor recreation, and land and water use. With the exceptions of SRKW, coastal birds, and Current Use, these residual effects were considered not significant. However, due to the extremely low probability of such a ship impact and spill scenario, all residual effects were considered unlikely. **Addressed in MSA Appendix 5-B (#104):** The assessment of potential accidents or malfunctions (MSA Section 10.0), considers the effects of a plausible worst-case spill scenario on the environment. The plausible worst-case scenario assessed is a powered grounding of a container ship resulting in a release of heavy fuel oil. The location of the plausible worst-case spill scenario is in Boundary Passage near the south end of South Pender Island. MSA Section 10.0 includes a description of the applicable mitigation for a plausible worst-case spill scenario. **Addressed in MSA Section 10.0:** The assessment for the plausible worst-case spill scenario concluded that, with the exception of human health, measurable residual adverse effects are predicted for all VCs. With the exceptions of residual effects on marine mammals (SRKW), marine commercial use (guided sport fishing and marine-based tourism sub-components), outdoor recreation, archaeological and heritage resources, and Current Use, adverse residual effects were considered not significant. A serious residual adverse impact on the ability of Indigenous groups to exercise Aboriginal and treaty rights in areas overlapping or near the hypothetical spill area would be expected in the event of such a spill. In all cases, the identified residual adverse effects of a spill are unlikely to occur, because of the very low probability of an accident or malfunction that could result in a spill.	**EIS** 30.0 Potential Accident and Malfunctions **MSA** 10.0 Potential Accidents or Malfunctions 10.3.3 Identification of Plausible Worst-case Accident or Malfunction Scenarios 10.4 Mitigation Measures 10.5 Assessment of Potential Effects of Accidents or Malfunctions Appendix 10-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment

Table 15: Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Lands and Resources for Traditional Purposes

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsartlip-15.1	Stated that the Project extinguishes more area for harvesting and fishing, and adds to activity that infringes on Tsartlip Rights. Concerned with impacts to fishing locations. Expressed concerns with salmon and Tsartlip rights/fishing grounds in the Project area. Stated that the Project is taking place right in Tsartlip's area. Stated that Tsartlip has interests on Mayne Island in proximity to the Project. Noted Mayne Island is a sensitive habitat and an important area to Tsartlip. Stated this Project will be right in the middle of where their fishing takes place, and Tsartlip should be compensated for what is being lost. Stated that they used to practice reef fishing as a Douglas Treaty right, but due to changes in the water they no longer can. Stated that Tsartlip is looking for ways to return to traditional ways, which is made difficult with new developments and increased activity in the region. Concerned that pollution is precluding Tsartlip's harvesting.	15-Apr-2016, Meeting 20-Jul-2017, Site Tour 30-Nov-2017, Meeting	**15-Apr-2016, Meeting:** Recorded comment for consideration by the Project team. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Section 7.0 on Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes. **20-Jul-2017, Site Tour:** Recorded comment for consideration by the Project team. **30-Nov-2017, Meeting:** Recorded comment for consideration by the Project team.	**Addressed in EIS Appendix 7.2-B (#157):** The methods used to assess the potential effects of the Project, including both residual effects of the Project and cumulative effects, are described in EIS Section 8.0. These methods are consistent with existing federal guidance. The effects of other projects and activities that have been carried out are reflected in the existing (and expected) conditions of the ICs and VCs, and in EIS Section 32.0. By assessing potential Project-related effects against those conditions, the cumulative effects of the Project and other past projects and activities are inherently considered. The EIS also includes historical data, where available and applicable, to assist interested parties to understand the potential effects, including cumulative effects, of the Project. The EIS does not include an assessment of historical infringements on the ability of Indigenous groups to exercise rights or impacts to traditional use. **Addressed in AIEIS Section 7.0:** Potential Project-related effects on *W̱SÁNEĆ* use or the exercise of asserted or established rights and measures to address potential effects, including measures proposed by *W̱SÁNEĆ*, are described in AIEIS Section 7.0. As noted in AIEIS Section 7.3.2, Project-related incremental impacts on the exercise of these rights (i.e., asserted Aboriginal rights, including title, and asserted or established Douglas Treaty rights to hunt or fish) would not be expected to be measurable in relation to: • Access to preferred locations for the exercise of asserted or established rights in the vicinity of the Project area (i.e., Roberts Bank, including adjacent upland areas, or the Fraser River); • Availability or quality of preferred resources associated with the exercise of asserted or established rights in the vicinity of the Project area (i.e., identified as principally salmon); • Quality of experience related to sense of place or physical heritage, safety and security, or noise, vibration, light, or air quality conditions while exercising asserted or established rights in the vicinity of the Project area; or • Cultural heritage or economic activities that may be tied to the exercise of asserted or established rights in the vicinity of the Project area. For an explanation of the use of 'measurable' in this context, see the VFPA's response to AIR-12.04.15-30.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table 8.0 Effects Assessment Methods 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Lands and Resources for Traditional Purposes 32.3 Potential Adverse Impacts on Aboriginal and Treaty Rights and Related Interests Analysis **AIEIS** 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 7.3.2 Results of the Rights Assessment **Information Requests** Response to Additional Information Request #30 (AIR-12.04.15-30 of CEAR Document #388)
Tsartlip-15.2	Noted that rights extend into the water under the Douglas Treaty. Stated that if the Project will result in any infringement on Douglas Treaty rights, there would need to be consultation and discussion around protection and accommodations.	30-Jan-2017, *W̱SÁNEĆ* All-Chiefs Meeting (Pauquachin, Tsartlip, Tsawout, Tseycum)	**30-Jan-2017, Meeting:** Recorded comment for consideration by the Project team. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Section 7.0 on Potential or Established Aboriginal and Treaty Rights and	**Addressed in AIEIS Section 7.0:** Potential Project-related effects on *W̱SÁNEĆ* use or the exercise of asserted or established rights and measures to address potential effects, including measures proposed by *W̱SÁNEĆ*, are described in AIEIS Section 7.0. As noted in AIEIS Section 7.3.2, Project-related incremental impacts on the exercise of these rights (i.e., asserted Aboriginal rights, including title, and asserted or established Douglas Treaty rights to hunt or fish) would not be expected to be measurable in relation to: • Access to preferred locations for the exercise of asserted or established rights in the vicinity of the Project area (i.e., Roberts Bank, including adjacent upland areas, or the Fraser River); • Availability or quality of preferred resources associated with the exercise of asserted or established rights in the vicinity of the Project area (i.e., identified as principally salmon); • Quality of experience related to sense of place or physical heritage, safety and security, or noise, vibration, light, or air quality conditions while exercising asserted or established rights in the vicinity of the Project area; or • Cultural heritage or economic activities that may be tied to the exercise of asserted or established rights in the vicinity of the Project area.	**AIEIS** 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 7.3.2 Results of the Rights Assessment **Information Requests** Response to Additional Information Request #30 (AIR-12.04.15-30 of CEAR Document #388)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			Related Interests, Including Current Use of Lands and Resources for Traditional Purposes.	For an explanation of the use of 'measurable' in this context, see the VFPA's response to AIR-12.04.15-30.	
Tsartlip-15.3	Noted that Tsartlip are very active on the water but that it has become dangerous, which is a deterrent and has a big impact on their traditional transportation.	20-Jul-2017, Site Tour	**20-Jul-2017, Site Tour:** Recorded comment for consideration by the Project team.	**Addressed in EIS Appendix 7.2-B (#206):** A quantitative risk assessment of potential accidents and malfunctions related to marine vessel traffic, including the risk of a collision between a container ship and small craft (i.e., fishing and recreational vessels), was undertaken and is described in EIS Section 30.0, as well as EIS Appendix 30-A. Data collected by DFO between 2008 and 2012 for vessels in DFO sub-areas encompassing Canadian and U.S. waters transited by ships bound for Roberts Bank was reviewed. These data indicated that daily fishing vessel numbers in the area are low (i.e., no vessels per sub-area on most days; maximum of six vessels on one day in the largest sub-area). On this basis, the quantitative risk assessment estimated the return period for a collision involving a container ship and a fishing vessel as 1 in 50 years, equivalent to a 'very low' probability in this assessment. A Land and Marine Traffic Management Plan is included in the Environmental Management Program (EIS Section 33.0) in order to mitigate potential marine vessel traffic issues. **Addressed in MSA Section 10.0:** Includes a description of applicable collision risk reduction measures. The assessment of Current Use considers the risk of collision, and perceptions of safety and determined that residual effects of the collision scenario on Current Use was considered significant, though unlikely to occur. **Addressed in AIEIS Appendix 2-B, Table 28 (#130):** *W̲SÁNEĆ* travel from the island to the mainland is described in AIEIS Section 7.0 and MSA Section 9.5. Potential Project-related effects on *W̲SÁNEĆ* use or the exercise of asserted or established rights and measures to address potential effects, including measures proposed by *W̲SÁNEĆ*, are also described in AIEIS Section 7.0. The consultative measures are as follows: • Develop a communications protocol to inform appropriate Indigenous groups of planned or unplanned events related to Project construction or operation that may affect access for the exercise of asserted or established rights; • Work with appropriate Indigenous groups to develop and implement a communications mechanism that will support dialogue between the VFPA and appropriate Indigenous groups on topics of concern that arise during the construction and initial operation phases (e.g., Project status, safety issues, effectiveness of mitigation programs); • Share with appropriate Indigenous groups information gained through environmental monitoring and follow-up programs to support monitoring, by Indigenous groups, of environmental conditions related to the exercise of asserted or established rights; and • Work with appropriate Indigenous groups to identify opportunities to participate in environmental monitoring and follow-up programs. **Addressed in response to IR10-15:** The VFPA's response to IR10-15, as requested by the Review Panel, further discusses potential effects to the quality of the Current Use experience resulting from marine shipping associated with the project.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 30.0 Potential Accident and Malfunctions 30.4.4 Vessel Collision Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment **AIEIS** Appendix 2-B Aboriginal Issues and Interests – *W̲SÁNEĆ* Nation, Table 28 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes **Information Requests** Response to Sufficiency Information Request #15 (IR10-15)

Table 16: Project Overview and Description

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsartlip-16.1	Interested in whether/how any change in trade anticipated as a result of the Trans-Pacific Partnership (TPP) trade agreement has been considered in the assessment/Project rationale. Expressed the view that the TPP takes away any opportunity for government to have any powers over any potential international partnerships created; it would be out of Canada's hands; disputes would need to be settled by an arbitrator.	15-Apr-2016, Meeting 30-Jan-2017, *W̱SÁNEĆ* All-Chiefs Meeting (Pauquachin, Tsartlip, Tsawout, Tseycum)	**15-Apr-2016, Meeting:** Stated that container volumes are expected to increase with or without the TPP. The TPP is not assumed in the forecast for container traffic. **30-Jan-2017, Meeting:** Stated that RBT2 is not dependent upon the TPP going ahead. With or without the trade deal additional capacity is needed. Committed to providing a more detailed response. [See additional information column].	**Additional information provided by the VFPA:** The volume of shipping containers that are handled along Canada's west coast has grown substantially in the past decades. To handle this growth, there have been significant investments in new container terminals in Vancouver and Prince Rupert, as well improvements to existing terminals. Even with the additional capacity provided by these improvements, independent expert forecasts show that it will not be enough to manage Canada's future trade demand beyond the mid-2020s. The Comprehensive and Progressive Agreement for Trans-Pacific Partnerships (CPTPP) will provide enhanced access to key Asian markets, including Japan, Malaysia, and Vietnam. Once in force, it will be one of the largest trade agreements in the world. Canadian imports from and exports to the 10 other CPTPP countries accounted for $100 billion in 2016. CPTPP members were responsible for 20.8 million tonnes, or 22%, of Canadian import and export cargo, worth $16.6 billion.	

Table 17: Project Benefits

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsartlip-17.1	Asked if Tsawwassen First Nation has an agreement with the VFPA. Requested to know the value and terms of the VFPA-Tsawwassen First Nation Memorandum of Agreement (MOA). Stated that Tsawwassen First Nation should not be the only Aboriginal group being compensated and that the Project affects more than just Tsawwassen.	15-Apr-2016, Meeting	**15-Apr-2016, Meeting:** Referred to the 2004 Memorandum of Agreement between the VFPA and Tsawwassen First Nation. **16-Jun-2017, Letter from the VFPA:** *"The VFPA is interested in initiating discussions with Tsartlip First Nation regarding potential legacy benefits from the Project. Legacy benefits are intended to benefit Indigenous groups if the Project proceeds, and would be over and above the economic benefits resulting from the Project. Examples of types of legacy benefits are: restoring fisheries, training, funding cultural initiatives, enhancing environmentally sensitive areas or revitalising aquaculture. It is our intent to develop this concept into a plan that reflect the interests, objectives and priorities of Indigenous groups involved in the RBT2 Project.* *We welcome input regarding potential legacy benefits for Indigenous groups that could be provided as part of the Project. With that in mind, we request a meeting with Tsartlip First Nation to hear about your community's priorities in relation to this funding.* *In addition to general legacy benefits, the VFPA is interested in entering into direct discussions with Tsartlip First Nation regarding a potential mutual benefits agreement ("MBA") for the Project."* **18-Dec-2017, Meeting:** The VFPA and Tsartlip began discussions regarding a Mutual Benefits Agreement. Discussions are ongoing.	**Addressed in AIEIS Section 7.3.3.3:** The VFPA proposes to assist *W*SÁNEĆ Nation in accessing potential economic opportunities resulting from the Project, including contracting opportunities as well as construction employment opportunities. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs. To support the development and implementation of plans to facilitate access to such Project-related benefits, the VFPA will continue engagement, initiated in December 2014. Opportunities for Indigenous training and employment opportunities related to the Project are described in EIS Section 32.3.3.	**AIEIS** 7.0 Potential or Established Aboriginal or Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 7.3.3 Mitigation Measures

Table 18: Underwater Noise – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Tsartlip-18.1	Concerned about the determination that the effects to noise will be minimal, on account of existing high levels of noise in the area. Requested to see the VFPA doing more to improve the environment. Requested for more information related to underwater noise. Expressed interest in ECHO program. Interested in being provided with additional and more detailed information about the ECHO program.	06-Jun-2016, Meeting 30-Jan-2017, *W*SÁNEĆ All-Chiefs Meeting (Pauquachin, Tsartlip, Tsawout, Tseycum) 30-Nov-2017, Meeting	**06-Jun-2016, Meeting:** Explained that the VFPA is providing a high-level presentation, which may not reflect the complexity of the work undertaken. For the marine mammal component, there are 7 or 8 stand-alone assessments, involving a comprehensive regional population model and a new approach to defining an effect, designed exclusively for this project. Stated that there will always be uncertainty, but these things help to limit it. Added that the VFPA recognises the impacts of sound and shipping on marine mammals, and has other initiatives looking into this that are separate from the Project. Explained the ECHO Program, looking into reducing noise. **23-Jun-2016, Email from the VFPA:** *"Please find the power point slide including the noise depiction video, attached. Figure 14-6, 14-7, and 14-8 in the EIS show underwater noise dispersion.* *In our meeting, I also mentioned the Vancouver Fraser Port Authority's Enhancing Cetacean Habitat and Observation (ECHO) Program. This initiative is aimed at better understanding and managing the impact of shipping activities on at-risk whales throughout the southern coast of British Columbia. The ECHO program has been supporting Fisheries and Oceans Canada in its assessment of the risk of a vessel striking a large whale off the west coast of Vancouver Island, as ships make their approach to the mouth of the Strait of Juan de Fuca. Through aerial surveys to determine whale distribution and tracking of vessel distribution and speed via Automated Identification System (AIS), Fisheries and Oceans Canada has modelled the probability of a vessel encountering a whale and will identify areas where encounter probabilities are higher and lower. Results are expected to be published soon and will be used to inform future mitigation and management considerations.* *More information on the ECHO program can be found here:* *http://www.portvancouver.com/environment/water-land-wildlife/marine-mammals/"* **30-Jan-2017, Meeting:** Offered to provide an in-depth presentation with ECHO Program representatives who can provide more detailed information at a future date. **26-Sep-2017, Phone Call:** The VFPA contacted Tsartlip to discuss scheduling a meeting on with the *W*SÁNEĆ chiefs (and potentially councils or others) to discuss the Follow-up Program, and the ECHO Program (marine mammals). The VFPA asked Tsartlip to let them know what topics are of priority to Tsartlip and when they may be able to meet. **30-Nov-2017, Meeting:** Committed to arranging a presentation on ECHO for Tsartlip. **12-Dec-2017, Meeting:** The VFPA met with Tsartlip First Nation and provided a presentation on the ECHO Program.	**Addressed in AIEIS Appendix 2-B, Table 14 (#59):** The scope and methods of the underwater noise study are summarised in EIS Section 9.8, and detailed in EIS Appendix 9.8-A. An assessment was undertaken to determine potential changes in underwater noise as a result of the Project and focused on construction and operation activities that would produce underwater noise. Modelling was undertaken to predict future underwater noise as a result of construction activities, such as dredging, pile driving, vibro-densification, and movements of support vessels, and operation activities, such as movements of container ships and tug boats associated with terminal approach and departure, and berthing and unberthing. The assessment concludes that underwater noise levels during construction are predicted to be comparable on average to existing levels measured at Roberts Bank, with the exception of some periods when certain activities, such as dredging, pile driving, vibro-densification, or construction support vessel movement, would occur. Overall, average underwater noise from Project construction and operation activities is expected to be comparable to average existing levels of underwater noise due to existing high levels, but will at times exceed existing conditions. Underwater noise related to Project vessel movements is predicted to increase over existing underwater noise levels for only approximately 3% of a year due to vessel berthing and unberthing, and for approximately 2% of a year due to vessel approach and departure. The ECHO Program has been established by the VFPA, in collaboration with government agencies, Indigenous groups, marine industry users, non-government organisations, and scientific experts, to better understand and manage the potential impacts to cetaceans (whales, porpoises, and dolphins) from commercial vessel activities throughout the southern coast of B.C. Further information about ECHO can be found at http://www.portmetrovancouver.com/en/environment/initiatives/marine-mammals.	**EIS** 9.8 Underwater Noise 9.8.2 Assessment of Purpose and Approach 9.8.5 Methods Appendix 9.8-A Construction and Terminal Activity Underwater Noise Modelling Study Technical Report Appendix 9.8-B Regional Commercial Vessel Traffic Underwater Noise Modelling Study Technical Report **AIEIS** Appendix 2-B Aboriginal Issues and Interests – *W*SÁNEĆ Nation, Table 14 Underwater Noise

APPENDIX IR10-01-C16

TSEYCUM FIRST NATION: ISSUES, VIEWS, AND CONCERNS RELATED TO THE PROPOSED PROJECT AND MARINE SHIPPING ASSOCIATED WITH THE PROJECT

Table 1: Air Quality – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Tseycum -1.1	Concerned with air quality and pollution, and the effects on the environment.	04-Mar-2016, Elders' Workshop	**04-Mar-2016, Workshop:** Recorded comment for consideration by the Project team. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tseycum First Nation and the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#42):** An assessment was carried out to predict potential changes in air quality as a result of the proposed Roberts Bank Terminal 2 (RBT2 or Project). The results of the air quality assessment were used in the assessments of human health and current use of lands and resources for traditional purposes (Current Use). The assessment modelled Project-related emission sources during the construction phase, and fuel combustion during the construction and operation phases, and compared them to modelled existing conditions and future expected conditions. Existing conditions considered emissions from marine vessels, trains, trucks, vehicles, and equipment from the existing Westshore Terminals, Deltaport Terminal, and BC Ferries Terminal, while emissions from industrial, commercial, and residential sources within Delta were represented through measured air quality levels in Tsawwassen. A general trend of decreasing concentrations of contaminants has been observed and is expected in the Lower Fraser Valley for some criteria air contaminants, as well as for some trace organic contaminants. Coal dust is also included in the assessment of air quality in existing conditions, in the future with the Project, and in the cumulative effects assessment. Hypothetical maximum emissions scenarios were used to conservatively estimate existing conditions and potential changes from the Project. Estimated emissions and predicted ambient concentrations did not account for the inclusion of shore power as part of the Project, which is expected to decrease future emissions from ships at berth ultimately improving air quality. The assessment concludes that: • Air quality will improve in the future, with or without the Project, as a result of improvements in engine technologies and the use of cleaner fuels; • Cumulative changes, incorporating the Project and other certain and reasonably foreseeable projects and activities, are predicted to be small relative to expected future ambient air quality levels; • Project construction activities are predicted to cause a small increase in concentrations of some contaminants; • Criteria air contaminant (i.e., carbon monoxide, nitrogen oxides, sulphur dioxide, particulate matter, and ground-level ozone) and trace organic contaminant (i.e., formaldehyde and other contaminants related to fuel combustion) levels are predicted to be below air quality criteria on land, with limited exceptions; • The Project is expected to have a negligible effect on future ozone levels and to increase greenhouse gas emissions (i.e., carbon dioxide, methane, and nitrous oxide); and • Although Project activities would emit black carbon, black carbon is expected to decrease in the future with the Project due to equipment fleet turnover at existing Roberts Bank terminals to newer engines that meet more stringent emission standards for particulate matter. The Project is not expected to result in any significant adverse effect on human health, including from changes in air quality. During operation, it is unlikely that Project-related exposures to air emissions would result in health effects. The only residual effect associated with air quality changes would be experienced by individuals on the water near the terminal during construction due to short-term and infrequent dust generation. The benefits of existing initiatives are realised in the existing emissions monitored at local air quality stations in Metro Vancouver. Future benefits, such as improvements in fuel, are described based on their anticipated level of benefit to future air quality emissions. Through its ongoing Air Action Program, the Vancouver Fraser Port Authority (VFPA) is constantly looking at addressing air quality and climate change, by focusing on the use of technologies and the promotion of operational efficiencies to reduce air emissions from port operations, such as those mitigation measures suggested during consultation. Key components of the Air Action Program include the EcoAction Program, the Northwest Ports Clean Air Strategy, the Landside Air Emissions Inventory, and environmental requirements through the Truck Licensing Program. Information regarding the VFPA's Air Action Program can be found at http://www.portmetrovancouver.com/en/environment/initiatives/Air.aspx. As part of the Deltaport Third Berth Project (DP3), the VFPA funded the establishment of the Tsawwassen Air Quality Monitoring Station. The location of the station, at Pebble Hill Reservoir located at 411 Milsom Wynd in Delta, was chosen by the Delta Air Quality Monitoring Technical Working Group (composed of representatives from Corporation of Delta, Environment Canada, Metro Vancouver, Tsawwassen First Nation, and the VFPA). The station is comprised of state-of-the-art monitoring equipment including ozone and particulate monitoring technologies. Since this station is part of Metro Vancouver's regional air quality monitoring network, results from the station can be viewed in real-time at www.bcairquality.ca/readings.	**Environmental Impact Statement (EIS, CEAR Document #181)** Appendix 7.2-B Aboriginal Issues and Interests 9.0 Physical Setting 9.2 Air Quality Table 9.2-4 Air Quality Criteria for Criteria Air Contaminants Table 9.2-5 Air Quality Criteria for Toxic Organic Contaminants 9.2.5 Methods 9.2.6 Existing Conditions 9.2.7 Expected Conditions 9.2.8 Future Conditions with the Project 9.2.9 Future Conditions with the Project and Other Projects and Activities Appendix 9.2-A Air Quality Study Appendix A – Emissions Inventory Appendix B – Existing Air Quality Appendix C – Air Dispersion Modelling Appendix F – Ships Underway Appendix H – Westshore Coal Dust Assessment **Additional Information to the EIS – *W̲SÁNEĆ* Nation (AIEIS; CEAR Document #930)** Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 8 Air Quality

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				Addressed in AIEIS Appendix 2-B Table 8 (#45): An assessment was carried out to predict potential changes in air quality as a result of the Project. A general trend of decreasing concentrations of contaminants has been observed and is expected in the Lower Fraser Valley for some criteria air contaminants, as well as for some trace organic contaminants. Hypothetical maximum emissions scenarios were used to conservatively estimate existing conditions and potential changes from the Project. Estimated emissions and predicted ambient concentrations did not account for the inclusion of shore power as part of the Project, which is expected to decrease future emissions from ships at berth, ultimately improving air quality. The assessment concludes the following: • Air quality will improve in the future, with or without the Project, as a result of improvements in engine technologies and the use of cleaner fuels; • Cumulative changes incorporating the Project and other certain and reasonably foreseeable projects and activities are predicted to be small relative to expected future ambient air quality levels; • Project construction activities are predicted to cause a small increase in concentrations of some contaminants; • Criteria air contaminant (i.e., carbon monoxide, nitrogen oxides, sulphur dioxide, particulate matter, and ground-level ozone) and trace organic contaminant (i.e., formaldehyde and other contaminants related to fuel combustion) levels are predicted to be below air quality criteria on land, with limited exceptions; • The Project is expected to have a negligible effect on future ozone levels and an increase in greenhouse gas emissions (i.e., carbon dioxide, methane, and nitrous oxide); and • Although the Project activities would emit black carbon, black carbon emissions are expected to decrease in the future with the Project due to equipment fleet turnover at existing Roberts Bank terminals to newer engines that will meet more stringent emission standards for particulate matter.	

Table 2: Alternative Means of Carrying out the Project

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Tseycum-2.1	Asked why the terminal is proposed to be constructed using fill and not cement piles, so as to leave the habitat alive underneath.	08-Sep-2016, Elders Tour Debrief	**08-Sep-2016, Elders Tour Debrief:** Stated that the caisson structure proposed for the Project incorporates habitat components. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tseycum First Nation and the VFPA's response.	**Addressed in AIEIS Appendix 2-B Table 2 (#16):** A pile and deck structure was considered as an alternative means of carrying out the Project (EIS Section 5.0); however, through the assessment of alternative means of carrying out the Project, a pile and deck structure was not identified as a preferred means. In order to construct an entire terminal built on a supported deck structure, the load-bearing capacity requirements for the container storage yard and equipment area would require many large-diameter piles, effectively in-filling the area below the deck with piles. Potential environmental effects include increased underwater noise and above ground noise associated with pile driving, which would affect marine fish, marine mammals, coastal birds, and human health. Therefore, 'fill' is the preferred alternative to pile and deck due to the reduced noise effects, public opinion, improved seismic performance, and costs.	**EIS** 5.0 Alternative Means of Carrying Out the Project 5.5.3 Construction of Supporting Land (Marine Terminal and Causeway) **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̱SÁNEĆ* Nation, Table 2 Project Planning, Development, and Implementation

Table 3: Archaeological and Heritage Resources – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Tseycum-3.1	Interested in Archaeological monitoring, and suggested to have a First Nations observer on-site during construction to avoid disturbance to gravesites and artefacts. Noted proximity to burial cairns at Point Roberts and likelihood of archaeological potential in proximity to the Project. Suggested to scan the beach for artefacts. Requested inclusion in cultural/ archaeological work undertaken in the Project area. Stated that historically the Tsawwassen area was a stop for the *W*SÁNEĆ people, a gathering place. They never stayed for long because the area is wide open.	03-Mar-2016, Elders Workshop 17-Aug-2016, Meeting 30-Jan-2017, *W*SÁNEĆ All-Chiefs Meeting (Pauquachin, Tsartlip, Tsawout, Tseycum) 02-Mar-2017, Elders Meeting 20-Apr-2017, Meeting	**03-Mar-2016, Workshop:** Stated that some archaeological studies have been done in the area, and any archaeological potential relates to fish weirs and stakes. Stated that the VFPA anticipates the involvement of archaeological monitors during construction, and also marine mammal observers. **17-Aug-2016, Meeting:** Stated that the VFPA anticipates the involvement of archaeological monitors during construction. **30-Jan-2017, Meeting:** Explained the involvement of cultural workers as well as Indigenous groups in archaeological works in advance of and during construction. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tseycum First Nation and the VFPA's response. **02-Mar-2017, Meeting:** Responded that there is an archaeology section in the EIS and there was a recommendation for archaeological monitoring during construction. **20-Apr-2017, Meeting:** Responded that archaeology was a topic covered in the EIS, and provided a binder of materials from previous workshop where archaeology was covered for a new staff member. Stated archaeology was considered in the assessment and the section on archaeology in the EIS includes some standard information for mitigation measures such as a chance find protocol. Noted the Project area was not deemed to have a lot of archaeological potential due to its location and depth. Explained that as part of the assessment the locations of known archaeological sites were identified in the context of the Project. The greatest archaeological potential was for fish trap stakes. Offered to schedule a meeting on the topic of archaeology at a later date.	**Addressed in AIEIS Appendix 2-B Table 27 (#126):** The Project has the potential to affect archaeological resources, namely, fish trap stakes, if present in the Project area. Direct effects could result from Project construction activities, and indirect effects could result from changes to sediment deposition or erosion. Mitigation measures, including proposed archaeological monitoring, are described in the EIS. Mitigation for effects on heritage and archaeological resources includes the following measures: • The VFPA will excavate a test trench, or series of trenches, across the eastern end of the causeway expansion area within the area of moderate archaeological potential (the historic drainage channel) to enable concurrent inventory (and preservation where possible) of potential fish trap stakes and mitigate future Project-related effects of crushing or degradation of stakes, or reduced access for future study; and • The VFPA will ensure annual monitoring, for a period of four years, of predicted erosion of the historic tidal channel (northwest of the terminal, formerly draining Canoe Passage) to mitigate potential exposure of potential fish trap stakes. Any stakes found will be inventoried and preserved where possible. In addition, the Construction Environmental Management Plan will include an Archaeological Monitoring and Management Plan, describing the procedures to be followed by the Infrastructure Developer in the event that an archaeological site is discovered during Project construction (also referred to as a 'chance find'). The plan will also describe the role and responsibilities of a professional archaeologist designated by the Infrastructure Developer to conduct archaeological monitoring, as needed. The VFPA acknowledges the request to have an Indigenous observer present during construction, and will consider this suggestion as mitigation measures and monitoring plans are finalised. **Addressed in EIS Appendix 7.2-B (#151):** The purpose of the archaeological and heritage resources assessment was to determine whether there is potential for archaeological and heritage resources to exist in the assessment area, and to determine any Project-related effects on these resources, if they are present. The assessment was supported by an Archaeology Overview Assessment, which included an ethnographic overview of the area and a review of the potential for undocumented heritage sites to exist in the local assessment area (LAA). The results of the archaeological and heritage resources assessment were considered in EIS Section 32.0. The LAA included the physical footprint of the Project plus a 100 m buffer zone, as well as a zone of coastal-geomorphological influence. The regional assessment area (RAA) considered a four kilometre area around the Project area. No archaeological sites were identified in the LAA, either using the B.C. Archaeology Branch's online heritage registry or through the Archaeological Overview Assessment. If archaeological or historical materials remain in the intertidal area, it is likely that they have been preserved in the sediment layers, if not affected by previous construction. The Project may affect archaeological resources, namely, fish trap stakes, if present in the Project area. Direct effects could result from Project-related construction activities, and indirect effects could result from changes to sediment deposition or erosion. Through mitigation, including excavation of test trenches prior to construction activities and the implementation of an Archaeological Monitoring and Management Plan, potential damage to archaeological resources would be avoided and the opportunity for future archaeological study would be protected. The Project is not expected to result in significant residual effects to	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 28.0 Archaeological and Heritage Resources 28.2 Selection of Archaeological and Heritage Resources Valued Component 28.3 Assessment Boundaries 28.4 Information Sources 28.7.2 Mitigation Measure #2 – Mitigation for Exposure of Potential Fish Trap Stakes 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Land and Resources for Traditional Purposes 33.0 Environmental Management Program 33.3.4 Archaeological Monitoring and Management Plan **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W*SÁNEĆ Nation, Table 27 Archaeological and Heritage Resources 6.0 Archaeological and Heritage Resources 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purpose

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
			31-May-2017, Email from the VFPA: Followed up on their interest in scheduling a meeting on the topic of archaeology, as well as on the assessment to Current Use or rights. The VFPA asked Tseycum to suggest potential dates that would be convenient for them.	archaeological and heritage resources. The Project is not expected to result in any incremental cumulative effects to archaeological and heritage resources. A description of the past use of the Roberts Bank area by Indigenous groups is provided in EIS Section 32.0. The presentation of information on past use of the area in the assessment of archaeological and heritage resources is tailored to those Indigenous groups whose past uses is directly linked to the type of physical archaeological resources that have the potential to be present in the study area, and have the potential to be affected by the Project. The scope or methods of the archaeological and heritage resources assessment are described in the EIS.	
Tseycum-3.2	Concerned with traffic and subsequent changes to their shoreline. Concerned with erosion of burial sites due to ship wake. Stated that this issue has been experienced in the past due to BC Ferries activities. Expressed concerns with the effects of marine traffic on Tseycum gravesites as a result of erosion.	27-May-2015, Phone 04-Jun-2015, Meeting 22-Jul-2015, Meeting with Chief	**27-May-2015, Phone:** Recorded comment for consideration by the Project team. **04-Jun-2015, Meeting:** Asked on which islands, specifically, the erosion is occurring. Answer: "all islands" (references map on wall depicting areas with grave sites). **22-Jul-2015, Meeting:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B summarising Indigenous issues and interests and providing the VFPA's responses.	**Addressed in MSA Appendix 5-B (#56):** The LAA for the assessment in MSA Section 9.4 includes the shoreline of the San Juan and Gulf islands. MSA Section 9.4 describes existing conditions as they currently reflect cumulative changes to date from other projects and activities that have been carried out, as well as the impact of natural processes. As no measurable effects are predicted for archaeological and heritage resources related to ship wake and erosion from marine shipping associated with the Project, no mitigation is suggested, and an assessment of cumulative effects has not been carried out. **Addressed in MSA Section 9.4:** All potential incremental effects on archaeological and heritage resources related to Project-associated vessel transit activities, including shoreline erosion from vessel wake, were determined to be negligible, as wake waves predicted from Project-associated marine vessel traffic are predicted to be within the range of natural conditions. **Addressed in responses to IR10-21 and IR10-23:** The VFPA's response to IR10-21, as requested by the Review Panel, provides additional information on the assessment of impacts to shoreline archaeological sites from wake associated with the Project. The VFPA's response to IR10-23, as requested by the Review Panel, presents an assessment of the effects of the potential loss or deterioration of archaeological sites resulting from natural and ship-wake waves greater than 10 cm, and considered important by Indigenous peoples and the Ministry of Forests, Lands and Natural Resource Operations and Rural Development.	**Marine Shipping Addendum (MSA, CEAR Document #316)** Appendix 5-B Aboriginal Issues and Interests 9.4 Archaeological and Heritage Resources 9.4.5 Existing Conditions 9.4.6.1 Negligible Effect #1 – Disturbance from Vessel Wake **Information Requests** Response to Sufficiency Information Request #21 (IR10-21) Response to Sufficiency Information Request #23 (IR10-23)

Table 4: Coastal Birds – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Tseycum-4.1	Concerned about the decline in bird populations. Stressed the importance of (and interest in) birds and ducks. Noted that when the birds are out the table is set; the birds are the guardians of the beach and tell us that everything is okay to eat. Noted the importance of eagles, hawks and blue herons; refers to elders' saying that as long as you see birds, the table is still open for people to eat as well. Expressed a general interest in heron. Concerned with potential impacts to birds and migratory birds. Commented regarding the importance of these species to Aboriginal groups.	22-Jul-2015, Meeting with Chief 24-Feb-2016, Meeting 27-Jul-2016, Meeting 17-Aug-2016, Meeting 01-Nov-2016, Elders Workshop	**24-Feb-2016, Meeting:** Recorded comment for consideration by the Project team. **27-Jul-2015, Meeting:** Recorded comment for consideration by the Project team. **17-Aug-2016, Meeting:** Stated that the VFPA would organise a workshop on topics of Tseycum's interest (birds, marine fish, noise, air quality) likely in September or October. **01-Nov-2016, Workshop:** Committed to organise a meeting on other topics, including coastal birds. **30-Jan-2017, All Chiefs Meeting:** The VFPA met with Tseycum and representatives from Tsawout First Nation, Tsartlip First Nation and Pauquachin First Nation. Coastal birds was not identified as a priority topic for that meeting. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Section 7.0 on Coastal Birds.	**Addressed in EIS Appendix 2-B, Table 20 (#89):** The Fraser River estuary is an important area to many coastal birds because of its abundant food sources. The Roberts Bank area supports an abundance and diversity of bird species. An assessment was undertaken to determine the effects of the Project on coastal birds, including migratory birds. The scope and methods of the coastal birds assessment are described in EIS Section 15.0. Anticipated Project-related changes to coastal birds were assessed by considering potential changes in productivity, abundance, density, species diversity, distribution, and suitable habitat area, for the seven sub-components. For some sub-components, foraging opportunity and contaminant levels were also examined. The assessment concludes that the Project is not expected to result in any significant adverse residual effects or significant residual cumulative effects to coastal birds. Changes in the productive potential of shorebirds, herons, raptors, gulls and terns, and passerines are not anticipated. Decreases to the productive potential of waterfowl and diving birds are expected to be minor. Effects to diving birds can be partially offset through the creation of onsite eelgrass and subtidal rock reef habitats, which would create habitat for their prey, which include mussels and other invertebrates. The importance of bird species to Indigenous groups is addressed in EIS Section 32.2 and AIEIS Section 7.0.	**EIS** 15.0 Coastal Birds 15.2 Selection of Coastal Birds Valued Component 15.5 Existing Conditions 15.5.4 Waterfowl 15.7 Future Conditions with the Project 15.7.2 Potential Effect – Changes in Productivity Appendix 15-B Shorebird Foraging Opportunity during Migration Appendix 15-C Overwintering Dunlin Foraging Opportunity 17.0 Mitigation for Marine Biophysical Valued Components 17.3.2 Offsetting Framework 17.3.2.1 Summary of Project-related Effects on Marine Biophysical Valued Components 17.3.2.2 Onsite Habitat Concepts 32.2 Current Use of Land and Resources for Traditional Purposes **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̱SÁNEĆ* Nation, Table 20 Coastal Birds 7.0 Potential or Established Aboriginal or Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes
Tseycum-4.2	Suggested that the VFPA provide artificial branching or post/structures to encourage heron nesting in proximity to the Project.	01-Nov-2016, Elders Workshop	**01-Nov-2016, Workshop:** Responded that herons like to nest in groups and prefer clusters of trees on the shore. Suggested that perches for raptors are more common. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tseycum First Nation and the VFPA's response.	**Addressed in AIEIS Appendix 2-B, Table 22 (#98):** The VFPA acknowledges Tseycum First Nation's suggestion and will consider the suggestion as mitigation measures are finalised.	**AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̱SÁNEĆ* Nation, Table 22 Mitigation for Marine Biophysical VCs

Table 5: Coastal Geomorphology – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Tseycum-5.1	Concerned with the trend towards larger ships, and that larger ships may mean increased noise, vibration, and bigger waves. Concerned that bigger ships will have a different impact on the current tidal and coastal geomorphological conditions of the area.	04-Jun-2015, Meeting 08-Sep-2016, Elders Tour Debrief	**04-Jun-2015, Meeting:** Explained that underwater noise is being investigated, including resulting effects to fish, marine invertebrates, vegetation, marine mammals. Stated that conservative assumptions were used in the assessment (i.e., assumed the noisiest ships, etc.) **08-Sep-2016:** Recorded comment for consideration by the Project team. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tseycum First Nation and the VFPA's response.	**Addressed in AIEIS Appendix 2-B Table 11 (#51):** Potential changes to the wave environment from ship wake (from Project-associated vessels) was assessed for a representative container vessel with approximately 9,000 to 9,500 twenty-foot equivalent unit (TEU) capacity in MSA Section 7.2. In addition to the study of a representative vessel, a sensitivity analysis of other vessel types with differing hulls was also conducted (see MSA Appendix 7.2-B). The analysis of wake height varied by a little over 10 cm in response to the vessel hull type, compared to the representative vessel. Coastal geomorphic conditions are not expected to change from wake-generated waves as vessel wake is a small component of the existing wave climate, which is influenced by wind-generated waves and ocean swell. **Addressed in MSA Appendix 5-B (#31):** The assessment of effects from marine shipping associated with the Project is based on a representative ship size of 9,000 to 9,500 TEU capacity, which is likely to be the type of ship calling on RBT2 most frequently (MSA Section 4.0). If container ship capacity (ship size) increases faster than predicted, the number of Project-associated vessels in the marine shipping area in 2030 would be fewer. The assessment of potential changes in waves is provided in MSA Section 7.2. The assessment of potential changes in atmospheric noise is provided in MSA Section 7.4. The assessment of potential changes in underwater noise is provided in MSA Section 7.6. **Addressed in response to IR7-18:** The VFPA's response to IR7-18 presents model results showing vessel wake of five types of vessels: • Category A – 215 m length for a 2,500 TEU vessel; • Category B – 290 m length for a 3,400 to 4,500 TEU vessel; • Category C – 300 m length for a 6,000 to 8,000 TEU vessel; • Category D – 366 m length for a 12,500 vessel; and • Category E – 400 m length for a 18,000 TEU vessel. The results of the modelling demonstrate that larger ships minimally change wave height and the conclusions of the EIS and MSA remain the same.	**MSA** 4.0 Activity Description 4.2.1.1 Type of RBT2 Container Vessels Appendix 5-B Aboriginal Issues and Interests 7.2 Wave Environment 7.2.5 Incremental Changes to the Wave Environment from Marine Shipping Associated with the Project Appendix 7.2-B Ship Wake Calculations 7.4 Atmospheric Noise 7.6 Underwater Noise **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W*SÁNEĆ Nation, Table 11 Coastal Geomorphology **Information Requests** Response to Sufficiency Information Request #18 (IR7-18 of CEAR Document #1141)

Table 6: Effects of the Environment on the Project

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Tseycum-6.1	Concerned with the effects of a big earthquake and tsunami event to the Project.	02-Mar-2017, Elders Meeting	**02-Mar-2017, Meeting:** Recorded comment for consideration by the Project team.	**Addressed in EIS Appendix 7.2-B (#214):** Potential effects related to a spill in the marine environment are addressed in EIS Section 30.0. Seismic events are considered in EIS Section 31.0. Effects of the environment on the Project related to extreme weather and weather-related events, and any subsequent effects on the environment, would be avoided or reduced through application of design criteria and implementation of standard management practices, work procedures, and mitigation measures during construction and operation. Effects of the environment on the Project related to low-probability events such as a large earthquake, a submarine landslide in the immediate vicinity of the Project, or a large tsunami, could result in irreparable damage to the Project. Effects of a catastrophic natural event or sea level rise would be widespread in the Fraser River delta and would not be unique to the Project. Measures conducted during Project construction to improve the ability of infrastructure to withstand a submarine landslide resulting from seismic activity include the dredging of soils and silts with poor seismic performance followed by vibro-densification. Due to the unpredictability and uncertainty associated with submarine landslides and tsunamis, and their expected low probability of occurrence at the Project site, measures to protect the Project during such events would be further defined in the detail design phase. **Addressed in EIS Section 30.0 and MSA Section 10.0:** In developing EIS Section 30.0 and MSA Section 10.0, the VFPA identified plausible worst-case scenarios to assess. The scenarios were selected based on the probability of events occurring (using ship incident data collected over several years) and the environmental consequences of those events. An event such as that which is described, while possible, did not warrant assessment.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 30.0 Potential Accidents or Malfunctions 31.0 Effects of the Environment on the Project 31.4 Seismic Activity **MSA** 10.0 Accidents and Malfunctions

Table 7: Engagement and Consultation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Tseycum-7.1	Requested additional funding. Requested additional funding to support elders' involvement. Requested to provide input via consultation rather than completing a Project-specific TUS. Requested an honorarium for elders for their attendance at the workshop.	24-Feb-2016, Meeting 17-Aug-2016, Meeting	**26-May-2015, Letter:** Offered funding for participation regarding marine shipping. **04-June-2015, Letter:** Accepted funding. **03-Dec-2015, Letter:** Offered funding for Project participation. **26-Feb-2016, Letter:** Accepted funding. **24-Feb-2016, Meeting:** Committed to taking the request back to the VFPA and responding shortly. Expected that the request for additional funding can be accommodated. Explained the funding agreed to was meant to cover the gathering of traditional use information (since initially Tseycum was not going to undertake a study), but suggested it might be possible to get creative with funding, for example, providing payment per meeting for related costs (renting the space, equipment, catering, etc.). Agreed that the VFPA would provide the funding as offered to Tseycum, and then it would be for Tseycum to determine how to allocate the funds/pay the elders. **26-Feb-2016, Letter:** Offered funding for Project Traditional Use Information. **26-Feb-2016, Letter:** Accepted funding. **03-Oct-2016:** The VFPA was provided with *W̲SÁNEĆ* Traditional Use Study of the Roberts Bank Terminal 2 Project. Prepared on behalf of Tsawout, Tseycum, Tsartlip, and Pauquachin (*W̲SÁNEĆ* Nation groups). **26-Feb-2016, Letter:** Offered funding for additional Project participation. **26-Feb-2016, Letter:** Accepted funding. **20-Jul-2017, Letter:** Offered funding for Tseycum Science Day. **24-Jul-2017, Letter:** Accepted funding. **05-Sep-2017, Letter:** Offered funding for participation in negotiation discussions of a mutual benefits agreement. **07-Sep-2017, Letter:** Accepted funding.	**Addressed in AIEIS Section 2.1.3:** Participation funding agreements have been negotiated between the VFPA and each of the *W̲SÁNEĆ* bands and were designed to support the consultation process for the Project.	**AIEIS** 2.1.3 Participation Funding

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
			24-Oct-2017, Letter: Offered additional funding for participation in consultation activities for the Project. **25-Oct-2017, Letter:** Accepted additional funding. **15-Nov-2017, Letter:** Offered funding for participation in mutual benefits agreement negotiations. **16-Nov-2017, Letter:** Accepted mutual benefits agreement negotiation funding.		
Tseycum-7.2	Asked whether the VFPA is speaking with Aboriginal groups in the United States. Concerned with potential impacts to people from Anacortes, who cross the border to fish.	03-Mar-2016, Elders Workshop	**03-Mar-2016, Workshop:** Responded that the VFPA is consulting with Indigenous groups as directed by the Canadian Environmental Assessment Agency (CEA Agency).	**Addressed in MSA Appendix 5-B (#11):** The VFPA has engaged and consulted with Indigenous groups as listed in the *Updated Guidelines for the Preparation of an Environmental Impact Statement* (*Updated EIS Guidelines*). Where available, information related to Indigenous groups in the U.S.A. has been considered in the MSA. **Addressed in AIEIS Appendix 2-B, Table 3 (#19):** The VFPA is engaging and consulting with Indigenous groups as identified in the *EIS Guidelines*, and as identified in additional instructions to the VFPA in January 2016. These groups include Indigenous groups that are potentially affected by the Project and are based in Canada. Indigenous groups that were engaged and consulted with are listed in AIEIS Section 2.0 and in EIS Section 7.0.	**EIS** 7.0 Engagement and Consultation 7.2.1.2 Identification of Aboriginal Groups **MSA** Appendix 5-B Aboriginal Issues and Interests **AIEIS** 2.0 Aboriginal Groups Engagement and Consultation 2.1.2 Identification of Aboriginal Groups Appendix 2-B Aboriginal Issues and Interests - *W̱SÁNEĆ* Nation, Table 3 Engagement and Consultation
Tseycum-7.3	Asked how long the project review process will take. Asked what happens with Tseycum's concerns, and noted that they cannot stop the Project. Commented on the importance of meaningful consultation, and the importance of ongoing consultation into the future. Requested information regarding the authority of VFPA (with regard to EA decision making), where VFPA can exercise its authority, and the agency that determines VFPA's mandate. Asked if the VFPA is required to get approval from Tseycum to build the Project.	04-Mar-2016, Elders Workshop 02-Mar-2017, Elders Meeting	**04-Mar-2016, Workshop:** Responded that the VFPA is working on gathering information now, and that the decision regarding whether or not to approve the Project probably will not be for another couple of years. Explained the review process. Stated that there will be a panel review likely later this year or early next year. The panel is an opportunity for experts and scientists to assess the work done in the EIS, and provides an opportunity for the public and Indigenous groups to comment on the Project. This will all be taken into consideration when the Minister of the Environment makes a decision on the Project. Pointed to the EIS Executive Summary that was handed out to the group. Explained the VFPA's mandate and jurisdiction. **02-Mar-2017, Meeting:** Responded that the VFPA is not required to get approval from Tseycum, but noted it would like to work with Tseycum. Explained the review process and noted the Minister of the Environment will make a decision on the Project based on input from Indigenous groups and other stakeholders; the federal government has a responsibility to consult.	**Addressed in AIEIS Appendix 2-B, Table 3 (#20):** The VFPA acknowledges Tseycum First Nation's concerns. AIEIS Section 2.0 describes the approach, methods, and actions that the VFPA has undertaken to work with *W̱SÁNEĆ* Nation to obtain their views on the Project and potential effects and impacts that may result from Project construction and operation activities. The section also describes efforts to collect information on Current Use, rights, and Indigenous traditional knowledge (ITK) pertaining to the Roberts Bank area. The AIEIS also describes future and ongoing engagement and consultation. Following release of the AIEIS, the VFPA will continue to consult with *W̱SÁNEĆ* Nation to clarify information on the Project, EIS, and related documents; provide additional information; and discuss potential environmental effects from the Project, potential impacts on their ability to exercise asserted Aboriginal or treaty rights and related interests, and potential mitigation and accommodation. Information received by the VFPA after submission of the AIEIS will continue to be tracked and addressed outside of the AIEIS and made available to the CEA Agency.	**EIS** 1.0 Introduction 1.3.2 VFPA Overview 1.3.2.2 Mandate and Jurisdiction Figure 1-3 VFPA Managed Federal Lands and Navigation Jurisdiction 1.3.3 Governance and Corporate Structure 1.3.3.1 Insurance and Liability Management 1.3.3.2 Environmental Policy 6.0 Environmental Assessment and Permitting Process **AIEIS** 2.0 Aboriginal Groups Engagement and Consultation 2.2.1 Collection of Current Use Information and ATK 2.3 Engagement and Consultation Process

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
			Stated that the VFPA is meeting with Tseycum to talk about the environmental effects and do its best to avoid effects from the Project. The VFPA also wants to ensure Tseycum has the opportunity to benefit from the Project.	**Addressed in AIEIS Appendix 2-B, Table 4 (#27):** The Project is undergoing an environmental assessment led by the CEA Agency, which is also the Crown consultation coordinator. As the proponent for the proposed Project, the VFPA is conducting Indigenous consultation and engagement as directed by the CEA Agency. The B.C. Environmental Assessment Office (EAO) has stated that it will actively participate in the federal panel process and will coordinate its assessment and consultation with the federal process to the extent possible. The federal decision maker for the Project is either the Minister of Environment and Climate Change or Governor in Council, taking into account the report of the three-member Review Panel. The Executive Director of the B.C. EAO will rely principally on the Review Panel's report, along with additional information, to make a recommendation to two provincial Ministers, Minister of Environment and Minister of Transportation and Infrastructure. The ministers will then decide whether to issue an environmental assessment certificate. The environmental assessment and permitting process is described in EIS Section 6.0. Indigenous groups potentially affected by the Project are invited to participate in the panel review process by providing written submissions, as well as oral presentations at the Panel's public hearings. In the case of RBT2, the VFPA is considered a private project proponent with respect to environmental assessment decision making. If the Environment and Climate Change Minister or Governor in Council determines that the project can proceed, the CEA Agency would ensure that the VFPA fulfils any Project conditions. The *Canada Marine Act* sets out the VFPA's mandate.	2.5 Future Planned Engagement and Consultation Appendix 2-B Aboriginal Issues and Interests - *W̱SÁNEĆ* Nation, Table 3 Engagement and Consultation Appendix 2-B Aboriginal Issues and Interests - *W̱SÁNEĆ* Nation, Table 4 Environmental Assessment Process and Regulatory Framework
Tseycum-7.4	Requested to talk about the VFPA's fiduciary obligation to consult. Concerned that once the VFPA has what it needs it will no longer continue to meet with Tseycum. Asked what meaningful consultation means to the VFPA. Asked how Tseycum will continue to be involved in the future, for example if there's an accident. Concerned with the process for addressing Tseycum's concerns. Commented on the importance of meaningful consultation, and the importance of ongoing consultation into the future.	08-Sep-2016, Elders Tour Debrief	**08-Sep-2016, Elders Tour Debrief:** Responded that the VFPA will continue to meet with Tseycum to talk about the Project and that they were just beginning a very rigorous process. Committed to coming back to discuss other topics of interest. Stated that it is an important thing for the VFPA's consultation to be meaningful. Stated that the VFPA is not here to tick a box. We want to understand your interests and concerns, and have worked with Tseycum to make sure we can do what works for you. We want to continue to hear from you.	**Addressed in AIEIS Appendix 2-B, Table 3 (#20):** The VFPA acknowledges Tseycum First Nation's concerns. AIEIS Section 2.0 describes the approach, methods, and actions that the VFPA has undertaken to work with *W̱SÁNEĆ* Nation to obtain their views on the Project and potential effects and impacts that may result from Project construction and operation activities. The section also describes efforts to collect information on Current Use, rights, and ITK pertaining to the Roberts Bank area. The AIEIS also describes future and ongoing engagement and consultation. Following release of the AIEIS, the VFPA will continue to consult with *W̱SÁNEĆ* Nation to clarify information on the Project, EIS, and related documents; provide additional information; and discuss potential environmental effects from the Project, potential impacts on their ability to exercise asserted Aboriginal or treaty rights and related interests, and potential mitigation and accommodation. Information received by the VFPA after submission of the	**AIEIS – *W̱SÁNEĆ* Nation** 2.0 Aboriginal Groups Engagement and Consultation 2.2.1 Collection of Current Use Information and ATK 2.3 Engagement and Consultation Process 2.5 Future Planned Engagement and Consultation Appendix 2-B Aboriginal Issues and Interests - *W̱SÁNEĆ* Nation, Table 3 Engagement and Consultation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				AIEIS will continue to be tracked and addressed outside of the AIEIS and made available to the CEA Agency.	
Tseycum-7.5	Stated that the process has been going on for a while and RBT2 is a big project, but today is the first she's heard of it. Asked why Tseycum was one of the last nations to be included in the process. Expressed the view that Tseycum should have been involved from the beginning; that building a relationship should have started at the beginning. Concerned that Tsawout First Nation, Tseycum First Nation, Tsartlip First Nation, and Malahat Nation were not involved in the EIS previously. Criticised that Tseycum First Nation was not involved in the EIS previously.	03-Mar-2016, Elders Workshop 02-Mar-2017, Elders Meeting	**03-Mar-2016, Workshop:** Explained that the *WSÁNEĆ* tribes were on the list of groups the VFPA reached out to initially to find out if they were interested in the Project, and the Port did not hear back from *WSÁNEĆ* Nation groups. Noted that the VFPA knows now that they are, which is why they are here today, to talk about the Project with Tseycum like the Port has done with other groups. Noted that the VFPA is still at a point in the process where there is an opportunity to raise and talk about concerns. Stated that the EIS has been submitted but the conclusions have not been reviewed yet. The VFPA wants to submit an additional report to the CEA Agency specific to the *WSÁNEĆ* tribes. Interested in hearing your concerns and about your use in the area either in the past or now. **02-Mar-2017 Meeting:** Explained how the consultation process unfolded and reviewed Project milestones, including the recent the submittal of the AIEIS on Feb 10, 2017.	**Addressed in AIEIS Appendix 2-B Table 3 (#17):** By way of this comment, the VFPA notifies the CEA Agency and the Review Panel of this concern. The details of the CEA Agency's direction to the VFPA with regard to engagement and consultation, including *WSÁNEĆ* Nation groups, in the assessment is provided in the introduction to the AIEIS. **Additional information provided by the VFPA:** The CEA Agency provided additional instructions to the VFPA to consult with Tseycum First Nation regarding the Project on January 13, 2016. The VFPA has been in touch with Tseycum First Nation regarding the Project since February 2014 and associated marine shipping since May 26, 2015. **Addressed in AIEIS Appendix 2-A:** **Feb 2014:** Letter and email to Tseycum First Nation with a package of introductory materials regarding the Project, including an invitation to participate in planned technical working groups. Package included: • Technical Working Group invitation • Technical Working Group Summary Reports • Draft Archaeological Overview Assessment • Project Description • Field Studies Information Sheet (January 2014) • Guidelines for the preparation of an EIS for the Project. **Feb – Mar 2014:** Phone call and email to Tseycum First Nation in follow-up to the introductory package that was sent in Feb 2014. The VFPA did not receive a response to the package or invitation to participate in planned technical working groups. **May 2015:** Package to Tseycum First Nation providing the EIS.	**AIEIS** 1.0 Introduction 1.1 Purpose of the Additional Information to the EIS Appendix 2-A Consultation Activities by Aboriginal Group Appendix 2-B Aboriginal Issues and Interests - *WSÁNEĆ* Nation, Table 3 Engagement and Consultation
Tseycum-7.6	Asked if Tsawwassen First Nation knows that the VFPA is talking to nations on Vancouver Island. Concerned with the potential for Tseycum's involvement in consultation for the Project to cause conflict with other First Nations. Interested in whether or not Tsawwassen First Nation is aware of and/or supporting the Project.	03-Mar-2016, Elders Workshop 04-Mar-2016, Elders Workshop 05-Jul-2016, Roberts Bank Tour #1 15-Jul-2016, Meeting	**03-Mar-2016, Workshop:** Stated that the direction provided by the CEA Agency is public. **04-Mar-2016, Workshop:** Explained that the list in the executive summary is only a short summary. Provided a printed version of EIS Appendix 7.2-B during the break. **05-Jul-2016, Tour #1:** Recorded comment for consideration by the Project team. **15-Jul-2016, Meeting:**	**Addressed in EIS Appendix 7.2-B:** EIS Appendix 7.2-B includes all issues and interests raised by Indigenous groups in regard to the Project. **Addressed in AIEIS Appendix 2-B:** AIEIS Appendix 2-B includes all issues and interests raised by *WSÁNEĆ* Nation in regard to the Project. **Addressed in MSA Appendix 5-B:** MSA Appendix 5-B includes all issues and interests raised by *WSÁNEĆ* Nation in regard to marine shipping.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table **MSA** Appendix 5-B Aboriginal Issues and Interests **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *WSÁNEĆ* Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
	Interested in the views of people living in the area about the Project. Interested in other First Nations' views of the Project and asked if the VFPA has met with other nations. Requested to see the concerns from Aboriginal groups listed in the executive summary.	05-Aug-2016, Roberts Bank Tour #2 08-Sep-2016, Elders Tour Debrief 02-Mar-2017, Elders Meeting	Responded that the port authority has been working with Tsawwassen First Nation on topics related to the Project since 2010/11, and they have been very involved. The port authority has conducted meetings and interviews with elders, hunters, fishers, and other harvesters and members to understand their concerns. The VFPA also notes there is a Memorandum of Agreement (MOA) between the port authority and Tsawwassen First Nation that was ratified in 2004 that references and addresses the Project. **05-Aug-2016, Tour #2:** Explained that the *W̲SÁNEĆ* Nation groups were not originally scoped into the EIS, and previous correspondence from the VFPA to Tseycum regarding the Project was not responded to. Now that the VFPA hears that Tseycum is interested in participating in the Project, the VFPA is consulting with Tseycum at the same level as other groups. The VFPA has met with all the *W̲SÁNEĆ* Nation groups to have similar discussions. Stated that the VFPA and Tsawwassen First Nation are still engaged in consultation and working together to address issues and concerns. **08-Sep-2016, Elders Tour Debrief:** Committed to send the link to the CEA Agency registry for the Project (showing comments received from different people and groups) to the Chief of Tseycum so that she can share with the elders. **01-Nov-2016, Meeting:** The VFPA brought copies of EIS Appendix 7.2-B to the meeting to share with elders the list of concerns and issues raised by Indigenous groups to date. **02-Mar-2017, Meeting:** Responded that Tsawwassen First Nation has been involved in the Project for years and are well-informed. The VFPA confirmed that Tsawwassen First Nation is developing a new facility that will be used to inspect containers.		
Tseycum-7.7	Asked whether or not the VFPA has approached larger organisations such as the BC Union of Indian Chiefs or Aboriginal Friendship Centre.	04-Mar-2016, Elders Workshop	**04-Mar-2014, Workshop:** Recorded comment for consideration by the Project team. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tseycum First Nation and the VFPA's response	**Addressed in AIEIS Appendix 2-B Table 3 (#21):** All of the VFPA's engagement and consultation activities, regarding the Project, with Indigenous groups are as required by the *EIS Guidelines* and as described in additional instructions to the VFPA in January 2016. Specific activities are described in AIEIS Section 2.0 and EIS Section 7.0. The VFPA has engaged and consulted directly with each potentially affected Indigenous group, rather than with larger organisations that may speak on behalf of individual groups.	**EIS** 7.0 Engagement and Consultation **AIEIS** 2.0 Aboriginal Groups Engagement and Consultation Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 3 Engagement and Consultation
Tseycum-7.8	Interested in participating in consultation for the Project not just with the VFPA, but other Salish Sea nations as well.	05-Jul-2016, Roberts Bank Tour #1	**05-Jul-2016, Tour #1:** Recorded comment for consideration by the Project team.		

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
	Indicated a preference for group meetings with the other *W̲SÁNEĆ* Nations only (i.e. not the broader group of Island First Nations).	17-Aug-2016, Meeting	**17-Aug-2016, Meeting:** Committed to contact other *W̲SÁNEĆ* Nation groups regarding this request and gauge interest from them. **26-Nov-2015, EIS Results Workshop #1 – *W̲SÁNEĆ* Nation:** The VFPA held a workshop with *W̲SÁNEĆ* Nation; however, Tseycum was unable to attend. **27-Nov-2015, EIS Results Workshop #2 –*W̲SÁNEĆ* Nation:** The VFPA held a second workshop with *W̲SÁNEĆ* Nation; however, Tseycum was unable to attend. **30-Jan-2017, *W̲SÁNEĆ* All-Chiefs Meeting (Pauquachin, Tsartlip, Tsawout, Tseycum):** The VFPA held a *W̲SÁNEĆ* Nation All Chiefs Meeting. **12-Dec-2017, *W̲SÁNEĆ* All-Chiefs Meeting:** The VFPA held a second *W̲SÁNEĆ* All-Chiefs Meeting. Tseycum First Nation was invited, but unable to attend.		
Tseycum-7.9	Concerned that information shared specific to fishing locations would be made public.	27-Jul-2016, Meeting	**27-Jul-2016, Meeting:** Stated that the VFPA will summarise traditional and commercial use in our addendum but you will get a chance to look it over before it goes public. Stated that there will not be any mapping included in the publicly available documentation. Confirmed that any information Tseycum wants removed, the VFPA will remove. **23-Nov-2017, Letter from the VFPA:** Provided a draft copy of the AIEIS for Tseycum's review and comment. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tseycum First Nation and the VFPA's response	**Addressed in AIEIS Appendix 2-B Table 3 (#22):** The VFPA recognises that information related to Indigenous Current Use may be considered confidential and has followed instructions provided by each Indigenous group with respect to confidential information shared with the VFPA. As an additional measure to ensure the content included in the AIEIS is appropriate to be made public, the VFPA has provided a copy of the complete AIEIS for each *W̲SÁNEĆ* group to review and comment prior to submission of the report to the CEA Agency and the Review Panel.	**AIEIS** 2.0 Aboriginal Groups Engagement and Consultation 2.3.1 Project Information Disclosure Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 3 Engagement and Consultation
Tseycum-7.10	Expressed the view that Project-related activities undertaken to date have been "engagement", not "consultation".	20-Apr-2017, Meeting	**20-Apr-2017, Meeting:** Reviewed the contents of the proposed consultation plan in the meeting package and noted it is intended as a starting point for discussion and can be adapted and changed based on Tseycum's interests.		
Tseycum-7.11	Agreed that there has been adequate consultation and accommodation of its Aboriginal rights, title and interests, and Treaty rights, for the Project and associated marine shipping and further supports the granting of each authorization and permit necessary for the Project and associated marine shipping.	14-Nov-2017, Letter to Panel (CEAR Document #1111)	The VFPA has reviewed this letter and provides the following information.	The VFPA thanks Tseycum First Nation for their support of the Project.	

Table 8: Environmental Assessment and Permitting Process

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Tseycum-8.1	Asked whether there are First Nations involved in the federal Panel. Asked who specifically was on the Panel.	03-Mar-2016, Elders Workshop 05-Aug-2016, Roberts Bank Tour #2 27-Jun-2017, Meeting	**03-Mar-2016, Workshop:** Responded that Indigenous groups can apply to present to the panel. **05-Aug-2016, Tour #2:** Stated that there are three people on panel, and referred to a handout on them. Explained that each of them have different backgrounds. Stated that they are running the panel, but there will be many people presenting to the panel. Stated that anybody can apply to present. **27-Jun-2017, Meeting:** Committed to send Tseycum the names of the Panel representatives. **07-Jul-2017, Email from the VFPA:** Provided more information on members of the Independent Review Panel (Dr. Douw Steyn, Ms. Jocelyne Beaudet, and Dr. David Levy): http://www.robertsbankterminal2.com/news-updates/roberts-bank-terminal-2-project-review-panel-appointed/ http://www.robertsbankterminal2.com/news-updates/new-member-appointed-to-review-panel/.		
Tseycum-8.2	Concerned with the speed at which progress occurs; that there is not enough time given for careful consideration of long-term effects. Noted the challenge of comparing economic benefits to environmental effects.	05-Aug-2016, Roberts Bank Tour #2	**05-Aug-2016, Tour #2:** Stated that Tseycum is involved now, and knowing that Tseycum can see there might be impacts, now is a good opportunity to think about what is being presented, what concerns you have, what the impacts will be, and share that with the VFPA so it can be considered through the review process.		
Tseycum-8.3	Concerned with the potential for port authorities to be privatized by the Canadian Federal Government: • Asked what sort of obligations a private owner would have to Tseycum; • Concerned with private ownership not complying with commitments made by the VFPA related to the Project. • Concerned with ownership changing and the Project being changed.	02-Mar-2017, Elders Meeting	**02-Mar-2017, Meeting:** Responded that it is difficult to speculate on what might happen if the port authority is privatised. Stated that regarding the Project process, the VFPA is going through the environmental assessment and no matter who owns the port there is a requirement to consult with Indigenous groups on the Project. As a port authority that reports to the federal government, the VFPA has a mandate to enable Canadian trade, protect the environment, and consider local communities. The VFPA acts as a landlord for the terminals but they all have different operators. This new terminal would have a different operator and the procurement process will determine who that will be. Even if the port authority is run by a private entity there is still a permitting and approval process. If there were to be any changes they would have to be assessed and approved. For example, you cannot get a permit for a container terminal and decide to ship oil at the last minute.	**Additional information provided by the VFPA:** The VFPA does not support the privatisation of Canada's ports. The port authority is confident that the current arrangement as a financially self-supporting federal agency with a mandate to enable Canada's trade while protecting the environmental and seeking to address impacts on communities is one that works well for our country. The VFPA welcomes the federal government's Ports Modernization Review, which was announced in March 2018, and looks forward to working with and supporting the efforts of government to ensure that the Port of Vancouver remains economically and environmentally sustainable for the benefit of local communities and all Canadians. Regardless of any changes that are made to the *Canada Marine Act* or to the VFPA, the construction and operation of the proposed Project will be subject to approval by the Minister of Environment and Climate Change, as well as any conditions that are issued as part of the project permit. This includes commitments made to Indigenous groups, including Tseycum.	

Table 9: Environmental Management Program

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Tseycum-9.1	Asked about lessons learned from building the first terminal. Asked whether the design of the Project is final.	03-Mar-2016, Elders Workshop	**03-Mar-2016, Workshop:** Explained the VFPA's adaptive management strategy and how lessons learned from DP3 are being considered for RBT2. **12-Dec-2017, Meeting:** The VFPA hosted a *W̲SÁNEĆ* All-Chiefs Meeting, and presented on lessons learned from DP3 as well as the RBT2 Follow-up Program. Tseycum First Nation was invited, but unable to attend. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tseycum First Nation and the VFPA's response	**Addressed in EIS Appendix 7.2-B (#200):** Onsite habitat selection considered lessons learned from previous habitat creation programs (e.g., DP3). The effectiveness monitoring reports for DP3 increased the understanding of the successes and challenges of previous habitat projects. The concepts presented in the EIS have been presented to communities, stakeholders, Indigenous groups, public, and regulators in fall 2014. The expected benefits to species productivity from proposed onsite offsetting concepts have been evaluated in the marine biophysical valued components (VCs), where relevant. **Additional information provided by the VFPA:** In December 2014, the VFPA concluded its eight-year Adaptive Management Strategy, a science-based program to monitor and manage the Roberts Bank inter-causeway ecosystem. The strategy was developed in consultation with Environment Canada, and allowed for the early detection of changes in the inter-causeway ecosystem (between Deltaport Way and Highway 17) so that potentially significant negative ecosystem trends attributable to the project could be prevented or mitigated. After eight years of detailed analysis, it has been concluded that there were no ecosystem-wide trends towards marine eutrophication (nutrient imbalances in the water column leading to ecosystem changes) in the study area and no new dendritic channel formation as a result of the development of DP3. For more information, and for access to the annual reports: https://www.portvancouver.com/development-and-permits/status-of-applications/deltaport-third-berth-project/. **Addressed in AIEIS Appendix 2-B Table 2 (#6):** EIS Section 4.0 describes the components of the Project (i.e., the preferred option) as designed in the Preliminary Engineering phase and as assessed in the EIS. Final designs will be produced, and construction methodology will be determined, by the chosen Terminal Operator and Infrastructure Developer upon Project approval, and as such may vary slightly from those described in EIS Section 4.0. Any design or construction changes will be required to meet any commitments made by the VFPA, or conditions stipulated during the environmental assessment and regulatory review process. Lessons learned from DP3 were considered in the evaluation of alternative means of carrying out the Project and in the selection of onsite habitat offsetting, and will also be considered in the development of the Follow-up Program: • EIS Section 5.0 provides a summary of alternative design options that were considered, and the rationale for the selected option. As part of the process for identifying and selecting alternatives, the VFPA reviewed and considered Indigenous input provided as part of the environmental assessment processes for prior projects at Roberts Bank, including DP3. • Onsite habitat selection considered lessons learned from previous habitat creation programs (e.g., DP3). The effectiveness monitoring reports for DP3 increased the understanding of the successes and challenges of previous habitat projects. The concepts presented in the EIS were presented to communities, stakeholders, Indigenous groups, the public, and regulators in fall 2014. • An adaptive management approach is proposed for RBT2 as indicated in EIS Section 33.5 and will consider lessons learned from the DP3 Adaptive Management Program.	**EIS** 4.0 Project Description 5.0 Alternative Means of Carrying out the Project Appendix 7.2-B Aboriginal Issues and Interests 11.0 Marine Vegetation 11.7.2 Reduction and Offsetting Measures 12.0 Marine Invertebrates 12.7.4 Mitigation #3 for Productivity Losses – Offsetting 13.0 Marine Fish 13.7.6 Mitigation #5 Offsetting Plan 15.0 Coastal Birds 17.0 Mitigation for Marine Biophysical Valued Components 33.0 Environmental Management Program **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 2 Project Planning, Development, and Implementation **Information Request** Response to Sufficiency Information Request #08 (IR1-08 of CEAR Document #897)

Table 10: Marine Fish – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Tseycum-10.1	Concerned with potential effects to sand lance, as they are food for salmon and smelt. Requested sand lance studies. Disagreed with the prediction that effects to sand lance will be minor.	03-Mar-2016, Elders Workshop	**03-Marc-2016, Workshop:** Recorded comment for consideration by the Project team. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tseycum First Nation and the VFPA's response	**Addressed in EIS Appendix 7.2-B (#80):** Representative species in the forage fish sub-component include Pacific sand lance, surf smelt, Pacific herring, and shiner perch. Qualitative and empirical evidence indicates that there will be minor decreases in forage fish productive potential driven by loss of subtidal sand habitat and disturbance of Pacific herring from underwater noise. **Addressed in AIEIS Appendix 2-B Table 18 (#81):** Potential Project effects on sand lance are considered in the marine fish assessment within the forage fish sub-component. Several studies were completed for Pacific sand lance. A habitat suitability model was developed for the species, and is presented in EIS Appendix 12-A. Additionally, Pacific sand lance were a target species of the marine benthic subtidal study, which involved remotely operated vehicle (ROV) surveys; however, no sand lance were observed. Additionally, quantification of Pacific sand lance habitat use was an objective of the benthic fish trawl surveys. For sand lance, a prediction that effects to productivity will be minor is based on several considerations including: i) results of the Habitat Suitability Index, which indicate that approximately 9.4% of suitable habitat in the LAA will be lost to the Project footprint, suggesting ample burying habitat remains to sand lance post-Project, and ii) while individual fish may be affected, the Project is unlikely to result in changes in productivity outside the range of natural variability. **Additional information provided by the VFPA:** As noted in the VFPA's response to IR5-20, proposed offsetting in the form of sand and gravel beach creation along the north side of the causeway will increase Pacific sand lance spawning habitat in the LAA, and is anticipated to enhance Pacific sand lance productivity. Similar compensation habitat (i.e., sand and gravel beaches) was created along the south side of the causeway as part of habitat compensation for DP3. The VFPA's response to IR5-21 further supports effects ratings for forage fish.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 12.0 Marine Invertebrates Appendix 12-A Habitat Suitability Modelling 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component 13.2.1 Sub-components 13.4 Information Sources 13.4.1 Desktop and Field Studies 13.6.3 Potential Effect - Changes in Productivity 13.6.3.3 Changes in Productivity of Forage Fish **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 18 Marine Fish **Information Requests** Response to Sufficiency Information Request #20 (IR5-20 of CEAR Document #1134) Response to Sufficiency Information Request #21 (IR5-21 of CEAR Document #1140)
Tseycum-10.2	Concerned with potential effects to species at risk in the area.	03-Mar-2016, Elders Workshop	**03-Mar-2016, Workshop:** Described species at risk throughout the presentations for each VC. Responded that the EIS looks at potential effects and ways of mitigating the effects to these creatures. Added that if there are suggestions for mitigation to help avoid or help creatures in the area, they should be shared. Stated that the EIS concludes that given the avoidance and habitat enhancement planned, the Project should not have a significant impact on these species. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tseycum First Nation and the VFPA's response	**Addressed in AIEIS Appendix 2-B Table 18 (#82):** Information regarding species at risk in the vicinity of the Project is provided in the response to AIR-12.04.15-11, Table IR11-1 for the marine invertebrates, marine fish, marine mammals, and marine birds VC assessments. The assessments of these VCs include consideration of species at risk, either as a representative species (e.g., southern resident killer whale (SRKW)) or as represented by a representative species (e.g., eulachon, which is represented by both salmon due to its anadromous nature and Pacific herring as a sound sensitive forage fish). **Addressed in responses to AIR-12.04.15-09 and IR5-15:** Rationale as to how species at risk were assessed via use of representative species, as well as similarities between species at risk and representative species as they pertain to existing conditions (e.g., life history and habitat requirements), the mechanisms through which the Project may affect species at risk, and effectiveness of mitigation, are presented in AIR-12.04.15-09, including Appendix AIR9-A Table 2, and IR5-15. **Additional information provided by the VFPA:** As noted in EIS Section 15.0, SRKW are listed as Endangered under the *Species at Risk Act* and their critical habitat is protected. The assessment concludes the Project is not anticipated to have an adverse effect on SRKW critical habitat features when needed for SRKW life functions. The Project would not limit the survival or population recovery of SRKW.	**EIS** 15.0 Marine Mammals **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 18 Marine Fish **Information Requests** Response to Additional Information Request #9 (AIR-12.04.15-09 of CEAR Document #388) Response to Additional Information Request #11 (AIR-12.04.15-11 of CEAR Document #388) Response to Sufficiency Information Request #15 (IR5-15 of CEAR Document #1078)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Tseycum-10.3	Noted the importance of (and interest in) herring. Noted importance of herring and traditional uses for herring eggs.	24-Feb-2016, Meeting 27-Jul-2016, Meeting	**24-Feb-2016, Meeting:** Recorded comment for consideration by the Project team. **27-Jul-2016, Meeting:** Recorded comment for consideration by the Project team. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tseycum First Nation and the VFPA's response **10-Apr-2017, Email from the VFPA:** Please find below a notice of field studies taking place this week related to the presence of herring spawning activity at Roberts Bank. At the time of writing the EIS, no Pacific herring spawning records existed for the Project area, and no herring spawn was observed during RBT2 baseline environmental studies; therefore, spawning in this area was understood to be limited. However, last week a member of the public contacted the VFPA with reports of herring spawn on eelgrass beds north of the existing terminals. In order to document the presence and distribution of herring spawning activity at Roberts Bank in April 2017, the VFPA are quickly mobilising a team of biologists and SCUBA divers to conduct a herring spawn survey on Thursday April 13, 2017. Additional details regarding the proposed study can be found below.	**Addressed in AIEIS Appendix 2-B Table 18 (#76):** Pacific herring is considered as a representative species in the forage fish sub-component of the marine fish assessment, as presented in EIS Section 13.0. The importance of Pacific herring to the ecosystem is acknowledged and described in EIS Section 13.5.3.3. Potential effects to herring, whether localised or migratory, that may be present in the vicinity of the Project are assessed in EIS Section 13.6. **Additional information provided by the VFPA:** As noted in the VFPA's response to IR4-18, in response to anecdotal reports by a member of the public of herring spawn on eelgrass on the north side of the Roberts Bank causeway in early April 2017, the VFPA conducted a survey to document presence and distribution of herring spawning activity at Roberts Bank. Survey results are in agreement with existing conditions described in EIS Section 13.5.3.3, and confirm that while the LAA does support some spawn, it does not appear to be an important herring spawning area. Adherence to environmental management plans (EIS Section 33.3) will reduce the potential that herring will be affected by changes to water quality and sediment, or underwater noise during Project construction activities that will occur outside the fisheries-sensitive window. Notwithstanding the above, a potential for interaction with the Project has been identified and a residual effect has been assessed as not significant (EIS Section 13.8.1).	**EIS** 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component 13.2.1 Sub-components 13.4 Information Sources 13.4.1 Desktop and Field Studies 13.5 Existing Conditions 13.5.3 Forage Fish 13.5.3.3 Pacific Herring 13.6 Future Conditions with the Project 13.6.3 Potential Effect - Changes in Productivity 13.6.3.3 Changes in Productivity of Forage Fish 13.8.1 Residual Effect – Characterisation of Productivity Loss Table 13-6 Desktop and Field Studies Related to Marine Fish to Support the Assessment Table 13-10 Summary of Roberts Bank Ecosystem Model Productivity Results for Marine Fish 33.3 Construction Environmental Management Plans **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 18 Marine Fish **Information Requests** Response to Sufficiency Information Request #18 (IR4-18 of CEAR Document #1051)
Tseycum-10.4	Requested confirmation that the assessment was inclusive of the high tide mark since some fish lay their eggs at the high tide and their eggs settle into the gravel.	01-Nov-2016, Elders Workshop	**01-Nov-2016, Workshop:** Responded that the assessment is inclusive of high tide and stated that the VFPA has spent many hours at low tide counting organisms in the sand. Explained that at high tide, the area has lots of forage fish (such as surf smelt), that will lay eggs in these areas. The VFPA undertook a study looking at spawning beaches for surf smelt. The offsetting plan involves creating pockets of sandy beach along the causeway for their eggs to settle and hatch. Stated that it was factored into the assessments and the offsetting plan.	**Addressed in EIS Section 17.0:** As noted in EIS Section 17.0, sandy gravel beach provides spawning area for forage fish, including surf smelt, Pacific herring, and sand lance. Two sandy gravel beaches, totalling approximately 4.5 hectares (ha), are proposed along the widened causeway. The beaches are intended to provide attachment-type habitat and substrate suitable for marine vegetation and invertebrates, and to benefit some of their predators (e.g., juvenile Chinook salmon, waterfowl, and American wigeon). **Addressed in response to AIR-12.04.15-10:** The Forage Fish Beach Spawn Survey Technical Data Report (TDR MF-4) summarises field surveys looking for surf smelt and sand lance beach spawn. TDR MF-4 is available as part of Appendix AIR10-C.	**EIS** 17.0 Mitigation Framework for Marine Biophysical Valued Components **Information Requests** Response to Additional Information Request #10 (AIR-12.04.15-10 of CEAR Document #388)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Tseycum-10.5	Concerned that ships will disrupt salmon that migrate along the international shipping route line. Noted importance of/interest in salmon. Concerned with potential effects to salmon habitat, and concern that the Project overlaps with a salmon migration route. Concerned with how salmon runs will be affected; how salmon will manoeuver around the new terminal components.	04-Jun-2015, Meeting 24-Feb-2016, Meeting 03-Mar-2016, Elders Workshop 04-Mar-2016, Elders Workshop 08-Sep-2016, Elders Tour Debrief 01-Nov-2016, Elders Workshop	**04-Jun-2015, Meeting:** Recorded comment for consideration by the Project team. **24-Feb-2016, Meeting:** Recorded comment for consideration by the Project team. **03-Mar-2016, Workshop:** Stated that the Project area includes lots of habitat like eelgrass, which salmon like. In particular, there are a lot of Chinook and chum in the area. Noted there have been studies on those fish, and there is habitat proposed to benefit salmon. Stated that lot of studies were done to look at salmon use in the area. In particular, they looked at effects to juvenile salmon who use the eelgrass habitat in the area. **04-Mar-2016, Workshop:** Recorded comment for consideration by the Project team. **08-Sep-2016, Elders Tour Debrief:** Responded that a lot of studies were done to look at salmon use in the area. In particular, they looked at effects to juvenile salmon who use the eelgrass habitat in the area. **01-Nov-2016, Workshop:** Stated that the Project might cause the death of individual salmon, but not on the scale of large effects such as climate change. There is nothing that scales up to a major impact. Salmon runs are staged from spring through fall, and there is a big portion of year that salmon are not in the estuary. To the extent possible, the VFPA looked at timing construction activities so as not to interfere with the salmon runs. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tseycum First Nation and the VFPA's response	**Addressed in EIS Appendix 7.2-B (#78):** Field studies, air photo review, and modelling were undertaken during the coastal geomorphology assessment at Roberts Bank, including Canoe Passage. Changes are anticipated around the terminal and within the intertidal zone shoreward of the terminal. The potential effects of these changes on marine fish are considered in the EIS. An assessment was undertaken to determine the effects of the Project on the productivity of marine fish, including Pacific salmon. The assessment of marine fish, as well as marine vegetation and invertebrates upon which fish depend, consider seasonal influences, and potential Project-related changes on these influences. Terminal footprint-related changes to coastal process such as currents and freshwater-marine water mixing near and shoreward of the terminal are anticipated. Project-related changes in salinity and turbidity are discussed with respect to marine water quality. A discussion of the potential effects of these changes on marine fish, including different fish life stages, is presented in the marine fish assessment. Potential Project-related effects on marine fish, including all five species of Pacific salmon, are considered in the EIS. Chum and Chinook salmon are evaluated as being representative of all Pacific salmon species, as they are the most estuarine-dependent species of salmon, and therefore most likely to be affected by the Project. A field sampling program for salmon was conducted at Roberts Bank in 2012 and 2013. While it is possible that 2012 to 2013 seasonal surveying for the Project did not capture all salmon species present at Roberts Bank, historical survey data add to the weight of evidence, suggesting a realistic representation of species composition and abundance at Roberts Bank. Potential underwater noise-related effects on marine fish during both Project construction and operation phases are considered in the EIS. **Addressed in AIEIS Appendix 2-B Table 18 (#80):** An assessment was undertaken to determine the effects of the Project on the productivity of marine fish, including Pacific salmon. Information regarding effects in relation to changes in habitat availability and migration is available in EIS Section 13.0. As outlined in EIS Section 13.6.3.1, while terminal placement will result in the loss of wetted area, this is unlikely to measurably affect adult salmon returning to their freshwater spawning grounds as they are not considered habitat-limited within the LAA or RAA. For out-migrating juvenile Pacific salmon, terminal placement will increase travel distance and time spent in deeper waters along the terminal length, assuming migration is linear. Effects to vegetated habitats used by juvenile salmon, including eelgrass and intertidal marsh, are predicted to be negligible and positive, respectively. Overall, Project-related changes in juvenile salmon migration and habitats are predicted to have a minor adverse effect on productivity. **Addressed in MSA Appendix 5-B (#38):** The assessment of potential effects of marine shipping associated with the Project on marine fish, including salmon, is included in MSA Section 8.1. Physical disruption or vessel strikes of salmon are not anticipated to be a form of interaction between marine shipping and marine fish, and therefore these aspects are not included in the assessment. **Addressed in responses to IR5-18 and IR5-22:** Potential Project-related effects on juvenile salmon migration due to changes in habitat availability (i.e., terminal placement) are assessed in EIS Section 13.6.3.1 as minor. Additional rationale on the effect characterisation is provided in the VFPA's responses to IR5-18 and IR5-22. With mitigation, including onsite offsetting in the form of eelgrass transplants and tidal marsh creation, effects on juvenile salmon migration are assessed as negligible.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 9.0 Physical Setting 9.5 Coastal Geomorphology 9.5.8 Future Conditions with the Project 9.7 Marine Water Quality 9.7.8 Future Conditions with the Project 11.0 Marine Vegetation 11.6.3 Potential Effect 1 – Changes in Productivity 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component 13.2.1 Sub-components 13.4 Information Sources 13.4.1 Desktop and Field Studies 13.5 Existing Conditions 13.5.1 Pacific Salmon 13.6 Future Conditions with the Project 13.6.3 Potential Effect - Changes in Productivity 13.6.3.1 Potential Effect - Changes in Productivity of Pacific Salmon Table 13-6 Desktop and Field Studies Related to Marine Fish to Support the Assessment Table 13-10 Summary of Roberts Bank Ecosystem Model Productivity Results for Marine Fish **MSA** Appendix 5-B Aboriginal Issues and Interests 8.1 Marine Fish and Fish Habitat 8.1.6 Potential Interactions and Effects **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W*SÁNEĆ Nation, Table 18 Marine Fish **Information Requests** Response to Sufficiency Information Request #18 (IR5-18 of CEAR Document #1153) Response to Sufficiency Information Request #22 (IR5-22 of CEAR Document #1153)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Tseycum-10.6	Concerned with potential impacts to salmon and food fishing. Commented that the Roberts Bank area was once good fishing grounds and has been disturbed by the ferry terminal and Deltaport Third Berth (DP3), and will be further disturbed by RBT2. Tseycum expressed concern with impacts to fish such as sockeye salmon related to food security for their community.	03-Mar-2016, Elders Workshop 04-Mar-2016, Elders Workshop 27-Jun-2017, Meeting	**03-Mar-2016, Workshop:** Recorded comment for consideration by the Project team. **04-Mar-2016, Workshop:** Recorded comment for consideration by the Project team. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Section 5.1.7 on Food Security. **27-Jun-2017, Meeting:** Stated that the VFPA is doing more work to look at Project effects on commercial fishing and Indigenous food, social, and ceremonial (FSC) fishing. Sought input from Tseycum on how the Project may impact their FSC fishing as well as commercial use. Stated that the VFPA is interested in understanding if there will be any potential impacts on fishing and seafood harvesting activity from the Project so if there needs to be mitigation measures, it can be considered. Stated that the VFPA knows that there will be some displacement of crabbing, for example from the proposed Project terminal footprint, but the VFPA is interested in learning if there are any other impacts that should be considered.	**Addressed in EIS Appendix 7.2-B (#171):** Potential Project-related effects on marine fish, including all five species of Pacific salmon, are considered in the EIS. In addition, the potential effects of the Project with respect to the ongoing productivity of commercial, recreational, and Aboriginal fisheries are evaluated in the EIS. **Addressed in EIS Section 13.0:** Overall, marine fish are expected to experience a minor decrease in productivity in the future with the Project. Minor decreases in productivity are anticipated during the construction and operation phases for all marine fish sub-components, with the exceptions of negligible changes in productivity for certain species, including adult Chinook and chum salmon (representative species for sockeye and other Pacific salmon species) and lingcod, and an increase in productivity for shiner perch during the operation phase. Productivity decreases can be partially mitigated through the implementation of environmental management plans and the creation of habitat. Residual effects are anticipated for flatfish and forage fish as a result of permanent loss of subtidal sand habitat associated with the terminal footprint and disturbance from underwater noise. The assessment concludes there are no significant adverse effects from the Project, as marine fish productivity or long-term integrity would not be compromised. The Project is not expected to result in measurable incremental adverse cumulative effects to marine fish. **Addressed in EIS Section 32.2:** EIS Section 32.2 examines potential Project-related and cumulative effects that are relevant to traditional food consumption and nutritional health. These potential effects are related to access to preferred locations for harvesting preferred food resources, availability of preferred food resources, and quality of preferred food resources. Based on information considered in the Current Use assessment (EIS Section 32.2), there are no anticipated residual effects to most traditional food sources, including marine vegetation, marine fish, coastal birds, marine mammals, and most marine invertebrates, including bivalve shellfish and Dungeness crab.	**EIS** 3.0 Geographical Setting 3.4 Projects and Activities Contributing to Existing and Expected Conditions Appendix 7.2-B Aboriginal Issues and Interests Physical Intermediate Components (ICs; Sections 9.2 through 9.8) 18.4 Population Biophysical VCs (Sections 11.0 through 16.0) 13.0 Marine Fish 13.6 Future Conditions with the Project 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries 16.6 Future Conditions with the Project Socio-economic VCs (Sections 19.0 through 28.0) 21.0 Marine Commercial Use 24.0 Outdoor Recreation 27.0 Human Health 27.6.1.5 Negligible Effects Related to Food Security 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes **AIEIS** Appendix 2-B Issues and Interests - *W̲SÁNEĆ* Nation, Table 21 Commercial, Recreational, or Aboriginal Fisheries

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Tseycum-11.1	Concerned with potential impacts to sea pens. Asked whether sea pens will be moved from the area prior to construction. Concerned with impacts to species that use sea pens as habitat (perch and minnow).	03-Mar-2016, Elders Workshop	**03-Mar-2016, Workshop:** Responded yes, there will be some transplanting, and also will time activities to avoid sensitive periods. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tseycum First Nation and the VFPA's response. **07-Feb-2018, Letter from the VFPA:** Starting in 2014, the Project team conducted a pilot study to test a method for transplanting orange sea pens, which involved transplant of 1,200 orange sea pens to three sites within the LAA for the Project. Please find attached a report titled Orange Sea Pen Transplant Pilot and Monitoring Program. The results of the study show that the pilot sea pen transplant was successful, with stable densities and evidence of recruitment at two of the three transplant sites. This report will be submitted to the Review Panel shortly with the VFPA's response to IR5-05.	**Addressed in EIS Appendix 7.2-B (#73):** Orange sea pens are a soft coral species that depend on habitat with strong tidal outflows and oceanic currents for food delivery. Sea pen beds provide habitat for many benthic (bottom dwelling) species and likely play a role in maintaining productive near-shore communities for clams, sea stars, marine worms, Dungeness crabs, and several fish species. Orange sea pens were assessed as a sub-component of the marine invertebrates VC. The assessment concludes that a decrease in the productivity of orange sea pens due to direct mortality and changes in habitat availability is expected as a result of permanent loss of subtidal sand habitat associated within the terminal footprint. This decrease can be partially mitigated through the implementation of environmental management plans, including the collection and transplantation of orange sea pens to nearby undisturbed sites identified as suitable through habitat modelling. While the Project is predicted to cause losses of productivity of orange sea pens, the scale of change is minor in the context of natural variability and will not compromise the population integrity or ecological function. The residual effect was determined to be not significant. **Addressed in AIEIS Appendix 2-B Table 17 (#69):** Orange sea pens are a soft coral species that depend on habitat with strong tidal outflows and oceanic currents for food delivery. Sea pen beds provide habitat for many benthic (bottom dwelling) species and likely play a role in maintaining productive near-shore communities for clams, sea stars, marine worms, Dungeness crabs, and several fish species. Orange sea pens were assessed as a sub-component of the marine invertebrates VC. The assessment concludes that a decrease in the productivity of orange sea pens due to direct mortality and changes in habitat availability is expected as a result of permanent loss of subtidal sand habitat associated within the terminal footprint. This decrease can be partially mitigated through the implementation of environmental management plans, including the collection and pre-construction transplantation of orange sea pens to nearby undisturbed sites identified as suitable through habitat modelling. While the Project is predicted to cause losses of productivity of orange sea pens, the scale of change is minor in the context of natural variability and will not compromise the population integrity or ecological function. The residual effect was determined to be not significant. Potential indirect effects on marine fish resulting from potential effects on orange sea pens are described the in the marine fish assessment (EIS Section 13.6). There is no evidence to suggest perch or minnow species use sea pens as habitat. Sea pen distribution is described in EIS Section 12.5, and shown on EIS Figure 12-12. **Addressed in response to IR5-05:** The VFPA's response to IR5-05 provides the Orange Sea Pen Transplant Pilot and Monitoring Program report (Appendix IR5-05-A). In summary, the pilot sea pen transplant was successful. Stable densities, and evidence of recruitment, at two of the three transplant sites demonstrate that not only can environmental conditions successfully be used to predict habitat suitability for orange sea pens across a larger study area, but also attests to the ecological viability of transplantation as a potential mitigation method.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 12.0 Marine Invertebrates 12.5 Existing Conditions 12.5.4 Orange Sea Pens 12.5.4.3 Population Characteristics Figure 12-12 Orange Sea Pen Distribution at Roberts Bank 12.6.3 Potential Effect – Changes in Productivity Table 12-8 Summary of Roberts Bank Ecosystem Model Productivity Results for Marine Invertebrates Table 12-10 Habitat Suitability (ha) for Orange Sea Pens in the Local Assessment Area in Future Cases with and Without Roberts Bank Terminal 2 12.7.2 Mitigation #1 for Direct Mortality 12.8.1 Residual Effect – Characterisation of Productivity Losses 12.9.2 Significance Determination Table 12-15 Summary of Determination of Significance of Residual Effects for Marine Invertebrates 13.0 Marine Fish 13.6.3.4 Potential Effect – Changes in Productivity of Flatfish **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W*SÁNEĆ Nation, Table 17 Marine Invertebrates **Information Requests** Response to Sufficiency Information Request #05 (IR5-05 of CEAR Document #1145)
Tseycum-11.2	Concerned with potential effects to sea urchins and interest in habitat for sea urchins. Stated that current harvesting levels are restricted. Noted importance of sea urchins for	24-Feb-2016, Meeting 03-Mar-2016, Elders Workshop 04-Mar-2016, Elders Workshop	**24-Feb-2016, Meeting:** Recorded comment for consideration by the Project team. **03-Mar-2016, Workshop:** Responded that sea urchins prefer a harder substrate and the Project area is quite sandy.	**Addressed in EIS Section 12.0:** Sea urchins were not directly assessed within the EIS (i.e., they were not selected as a sub-component or representative species) for several reasons: • They prefer rocky habitat (because they prey on kelp, which attach to hard or rocky substrate); • Roberts Bank and the entire Fraser delta is a soft sediment environment; • Hard substrate is really only there due to development; at Roberts Bank, urchins are pretty much only found associated with the artificial rocky reefs constructed as habitat compensation for DP3; • There are no active urchin fisheries at Roberts Bank; • In initial scoping conversations with regulators and Indigenous groups, as well as the Technical Advisory Groups, sea urchins were not flagged as a species of particular importance or concern for this area; and	**EIS** 8.0 Effects Assessment Methods 12.0 Marine Invertebrates 12.2.1 Sub-components **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W*SÁNEĆ Nation, Table 17 Marine Invertebrates 7.0 Potential or Established Aboriginal or Treaty Rights and Related Interests,

	traditional medicine (helps with low iron).	05-Jul-2016, Roberts Bank Tour #1 27-Jul-2016, Meeting	Stated that there are more sea urchin in the area now than before, as a result of the first terminal having been built. Identified the locations proposed for habitat enhancement; the rock reef type would be beneficial for sea urchin. **04-Mar-2016, Workshop:** Recorded comment for consideration by the Project team. **05-Jul-2016, Tour #1:** Responded that the proposed site for the Project is out in deeper water to avoid impacts to the more sensitive intertidal area. Noted sea urchins aren't that common in the area because it's sandy, but there will be some habitat mitigation being proposed as part of the Project (rocky reefs). **27-Jul-2016, Meeting:** Recorded comment for consideration by the Project team. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Section 7.0 Potential or Established Aboriginal or Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes.	• They are considered to be represented by Dungeness crabs—i.e., the mechanisms or pathways of Project effects on Dungeness crabs are considered to adequately capture any potential effects to urchins. **Addressed in response to IR5-12:** Potential Project-related effects on sea urchin have been assessed in the EIS through the use of Dungeness crab as a representative species. Details are provided below: • Potential effects on Dungeness crab from changes in water quality (EIS Section 12.6.2.1, pp. 12-44 to 12-48) are assessed as negligible. Assessment result is the same for sea urchin as the maximum concentration of total suspended solids (TSS) resulting from dredging is not likely to exceed the existing, naturally occurring, maximum levels associated with estuarine circulation. • Potential effects on Dungeness crab from changes in sedimentation and coastal processes (EIS Section 12.6.2.2, pp. 12-49) are assessed as negligible. Assessment result is the same for sea urchin, as there is less spatial overlap with predicted areas of sediment deposition (i.e., sea urchin are not found in the intertidal zone in the LAA). • Potential effects on Dungeness crab from injury/direct mortality (EIS Section 12.6.3.3, pp. 12-64 to 12-65) are assessed as minor, as some mortality is expected from construction activities. Assessment result is conservative for sea urchin, as their habitat preferences (rock) limit spatial overlap with the terminal footprint (sand). Potential effects on Dungeness crab from changes in habitat availability (EIS Section 12.6.3.3, pp. 12-65 to 12-66) are assessed as minor. Changes in habitat availability for sea urchins are of lesser magnitude due to preferences for rocky habitat and a net gain in hard substrate with the Project. Tseycum First Nation's interest in harvesting sea urchin is considered in AIEIS Section 7.0.	Including Current Use of Lands and Resources for Traditional Purposes 7.2.4 Existing Conditions 7.2.4.4 Tseycum First Nation **Information Requests** Response to Sufficiency Information Request #12 (IR5-12 of CEAR Document #1078)
Tseycum-11.3	Concerned that the Project might impact shellfish and clam digging, noting Tseycum can no longer go digging locally due to sewage, farm waste, and other chemicals going into the ocean. Concerned with potential health effects associated	03-Mar-2016, Elders Workshop 04-Mar-2016, Elders Workshop 27-Jun-2017, Meeting	**03-Mar-2016, Workshop:** Recorded comment for consideration by the Project team. **04-Mar-2016, Workshop:** Describes sandy beach habitat proposed and asked for more information about Tseycum's work with clam beds. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B	**Addressed in EIS Appendix 7.2-B (#75):** No bivalve harvesting is currently allowed within the LAA or RAA of marine invertebrates, due to both Sanitary and Biotoxin Shellfish Closures imposed by Fisheries and Oceans Canada (DFO) over concerns regarding discharges from sanitary, stormwater, or industrial sources. DFO is the proper authority to determine the validity of shellfish closures. **Addressed in AIEIS Appendix 2-B Table 28 (#132):** As described in EIS Section 12.0, bivalve harvesting is currently not permitted within the LAA or RAA of marine invertebrates, due to both Sanitary and Biotoxin Shellfish Closures imposed by DFO over concerns regarding discharges from sanitary, stormwater, or industrial sources. A human health risk assessment was conducted on existing shellfish contamination levels at Roberts Bank, and the potential human health risks associated with consumption. EIS Section 27.0 concluded negligible health risks associated with shellfish contamination.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 12.0 Marine Invertebrates 12.5 Existing Conditions 12.5.2 Bivalve Shellfish 27.0 Human Health (revised June 2016) Appendix 27-C Shellfish Harvesting Potential and Contaminant – Related Consumption Risks at Roberts Bank Technical Report **AIEIS**

	with shellfish contamination. Tseycum expressed concern with contamination from dumping and a need to protect the land for generations.		summarizing the issues raised by Tseycum First Nation and the VFPA's response **27-Jun-2017, Meeting:** Recorded comment for consideration by the Project team.	EIS Section 27.0 and AIEIS Section 5.0 indicate that no new contaminant input to edible resources is expected as a result of the Project. AIEIS Section 7.0 considers these conclusions in relation to potential Project effects on *WSÁNEĆ* use of these resources for traditional purposes. **Addressed in EIS Section 27.0:** EIS Section 27.0 and EIS Appendix 27-C address potential effects of contaminant-related consumption risks of Dungeness crab, where contaminant analysis of crab tissue and the completion of a human health risk assessment was completed to support the development of the RBT2 environmental assessment. The leg muscle tissue did not contain detectable polycyclic aromatic hydrocarbon (PAH) concentrations, despite the use of sensitive laboratory analytical methods. Only arsenic was present in concentrations of potential concern and, consequently, was carried forward in a quantitative human health risk assessment; it was concluded that arsenic-associated health risks from the consumption of Dungeness crab tissue are acceptably low. **Addressed in response to IR4-33:** In its response to IR4-33, the VFPA provided results of the study. In summary: A crab hepatopancreas study was conducted at Roberts Bank to determine the concentrations of contaminants of concern in crab hepatopancreas in the LAA. In June 2017, Dungeness crab were collected from five traps placed at each of the three study locations (15 traps total). Twelve adult male crabs were harvested from each of the three sites (36 crab total). Samples were submitted under chain of custody to analytical laboratories accredited by the Canadian Association for Laboratory Accreditation (CALA) for the analysis requested. The analysis was completed in August 2017. Collectively, the results of a statistical comparison across sites indicate that the average concentrations of polychlorinated biphenyls (PCBs), coal indicator elements, arsenic compounds, and PAHs measured in hepatopancreas from crab collected from the RBT2 and intermediate transfer pit sites are not statistically higher than those measured in crab from the Canoe Passage reference site. This suggests that existing sediment and water quality in and around the existing terminal and proposed RBT2 terminal are not contributing to contaminant concentrations in crab hepatopancreas that are higher than levels found in crab hepatopancreas from the Canoe Passage reference site. **Addressed in response to IR4-34:** Further information concerning the VFPA's investigations into 'blackened' crabs is provided in its response to IR4-34. In summary, black lesions were observed on four of the five crabs collected by Indigenous harvesters. The black lesions were concluded to be consistent with chitinolytic shell disease, generically referred to as 'shell disease', a condition common to crab and other crustaceans. This disease is caused by a bacterial or fungal infection of an area where the outer layer of the shell has been previously damaged. Shell disease has not been linked to contamination. The disease is not specific to the Roberts Bank area and is present across the Pacific Northwest, including Alaska and B.C. and in Atlantic Canada.	Appendix 2-B Aboriginal Issues and Interests - *WSÁNEĆ* Nation, Table 28 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 5.0 Human Health 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes **Information Requests** Response to Sufficiency Information Request #33 (IR4-33 of CEAR Document #1078) Response to Sufficiency Information Request #34 (IR4-34 of CEAR Document #946)
Tseycum-11.4	Concerned with potential impacts from the Project to crabs in the area. Concerned with potential effects to crab. Commented that the Project area is good crab fishing grounds. Interested in crab relocation mitigation and the effectiveness of this approach. Asked whether other types of	24-Feb-2016, Meeting 02-Mar-2017, Elders Meeting 03-Mar-2016, Elders Workshop	**24-Feb-2015, Meeting:** Recorded comment for consideration by the Project team. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Section 3.0 on Marine Commercial Use. **02-Mar-2017, Meeting:** Responded that shellfish are typically in closer to shore and the terminal is located in deep water. **03-Mar-2016, Workshop:** Stated that impacts to crabs was studied for the EIS.	**Addressed in EIS Appendix 7.2-B (#117):** Marine commercial use, or the use of marine waters and resources to generate revenue, has been identified as an important economic factor in local and regional communities, and for Indigenous groups. The marine commercial use assessment included four sub-components: • Seafood harvesting; • Marine fish harvesting; • Guided sport fishing; and • Marine-based tourism. Potential effects on marine commercial use include displacement of commercial crab harvesting during construction and operation, resulting in a potential change of harvesting area, total harvest, and revenue, due to the Project footprint and the proposed expansion of the area closed to commercial crabbing. The VFPA will work with DFO to engage commercial crab harvesters to identify and implement feasible mitigation measures, and will implement construction and operation environmental management plans related to construction phase communication, construction monitoring, and crab salvages effects from displacement of commercial crab harvesting during construction and operation.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 12.0 Marine Invertebrates 12.4 Information Sources 12.4.1 Desktop and Field Studies Table 12-4 Marine Invertebrates Studies to Support the Assessment 12.5 Existing Conditions 12.5.3 Dungeness Crabs 12.6 Future Conditions with the Project 12.6.2 Negligible Effects 12.7 Mitigation Measures 12.7.1 Avoidance Measures 12.7.1.2 Timing Windows 12.7.2 Mitigation #1 for Direct Mortality

	shellfish will be relocated. Asked if shellfish have been found in the area to be dredged for the Project.		Stated that findings show that there will not be a big impact, because the whole broader area is good habitat for crabs. **12-Apr-2018, Letter from the VFPA:** Stated that since your concerns were raised, the Project team has conducted further work on these topics to respond to information requests from the Review Panel, to better understand potential effects and suggested mitigation, and to gain deeper understanding of the viewpoints of Indigenous groups and stakeholders. Provided the RBT2 Crab Mitigation Summary Overview, which detailed the following: • Mitigation measures to avoid or reduce effects to crab as outlined in the EIS; and • Additional crab harvesting related mitigation measure suggestions under review. Stated that the VFPA is interested in hearing views regarding options to mitigate potential effects to crabs and crabbing in the Project area.	The Project is anticipated to result in a negligible effect to marine fish harvesting, guided sport fishing, and marine-based tourism. These negligible effects are related to changes in area, access, resource availability and harvesting revenues. The Project is expected to result in a residual effect of changes to seafood harvesting area, harvest, and revenue. The residual effect is determined to be not significant, as Dungeness crab are known to move substantial distances to baited traps, and harvest activity can be moved to another open area. Other planned or reasonably foreseeable projects and activities would also displace crab harvesting, and this effect would combine with that of the Project to result in an incremental cumulative effect on commercial crab fishing. This adverse incremental cumulative effect is determined to be not significant. **Addressed in EIS Section 21.8 and AIEIS Section 3.0:** As stated in EIS Section 21.8 and AIEIS Section 3.0, the VFPA will work with DFO to ensure that consultation with commercial crab harvesters and Indigenous groups is undertaken to: • Communicate timing and spatial area of proposed navigational closure expansion for commercial crab harvesting; • Communicate access restrictions and procedures for maintenance of safety for commercial crab harvesting activity; and • Provide a process for commercial crab harvesters and Indigenous groups to ask questions and submit concerns about the proposed navigational closure expansion and associated displacement of commercial crab harvesting. Where identified and agreed upon through this consultation process, the VFPA will work with DFO, commercial crab harvesters, and Indigenous groups to implement additional mitigation measures to address effects from displacement of commercial crab harvesting associated with the Project. As well, the VFPA will implement construction and operation environmental management plans related to construction phase communication, construction monitoring, and crab salvages effects from displacement of commercial crab harvesting during construction and operations. Mitigation measures related to crab fishing for traditional (or FSC) purposes in the Project area are described in EIS Section 32.0 and AIEIS Section 7.0. **Addressed in EIS Section 33.3.12:** The Marine Species Salvage Plan will describe the strategy, procedures, and timing associated with required salvage of marine species, including fish, crab, and orange sea pen salvage. Beyond crab, currently no other shellfish salvages are planned. **Addressed in response to IR5-04:** As noted in the VFPA's response to IR5-04, salvages are planned for all Project activities that have the potential to cause direct mortality to legal-sized male and gravid female Dungeness crabs. A list and schedule of proposed Project activities is provided in Table IR5-04-1; the activities for which Dungeness crab mortality or injury may occur are indicated, and for those activities that may cause mortality or injury, plans for salvages are also indicated. Given the nature of direct mortality effects, mitigation options are limited, and crab salvage is the only viable and feasible mitigation. Salvages were conducted to meet the conditions of the *Fisheries Act* Authorization for DP3. Cutter suction dredging was preceded by ongoing crab salvages (where baited traps were set in advance of dredging and crabs relocated approximately 2 km from the project area) and a visual dive survey (where divers provided visual confirmation of no crabs prior to initial dredging) (Hemmera 2009). In the case of clamshell dredging, visual inspections of the collected dredgeate were made by the contractor's crews and the environmental monitor; only one crab was identified within the dredgeate during the entire project, underscoring the effectiveness of this measure. In consultation with Indigenous groups, the VFPA has heard a suggestion to bait outside the Project area to draw crabs away as opposed to baiting within the Project area and relocating them. The VFPA is currently exploring this option and will determine an appropriate approach to this mitigation method through engagement with relevant regulatory agencies, stakeholders, and Indigenous groups.	12.7.2.1 Crab Salvages 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries 21.0 Marine Commercial Use 21.6 Future Conditions with the Project – Potential Project-related Effects 21.8 Mitigation Measures 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Land and Resources for Traditional Purposes 32.2.6 Future Conditions with the Project – Potential Project-Related Effects 33.0 Environmental Management Program 33.3.12 Marine Species Salvage Plan **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W*SÁNEĆ Nation, Table 17 Marine Invertebrates Appendix 2-B Aboriginal Issues and Interests - *W*SÁNEĆ Nation, Table 21 Commercial, Recreational, or Aboriginal Fisheries 3.0 Marine Commercial Use 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes **Information Requests** Response to Sufficiency Information Request #04 (IR5-04 of CEAR Document #1209) **From Tsawwassen First Nation to the Review Panel re: Addendum to the Tsawwassen First Nation Independent Study on Crab and Crab Habitat (CEAR Document #997)**
Tseycum-11.5	Concerned with potential impacts to littlenecks and geoducks.	03-Mar-2016, Elders Workshop	**03-Mar-2016, Workshop:** Recorded comment for consideration by the Project team.	**Addressed in EIS Appendix 7.2-B (#71):** Bivalve shellfish (e.g., clams and cockles) were assessed as a sub-component of the marine invertebrates assessment.	**EIS** 12.0 Marine Invertebrates 12.6.3.2 Potential Effect – Changes in Productivity of Bivalve Shellfish

	Stated that Tseycum can no longer harvest these species because of pollution.		**10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tseycum First Nation and the VFPA's response	Productivity decreases for bivalve shellfish are predicted and can be partially mitigated through the implementation of environmental management plans (including salvaging and transplanting), the creation of onsite intertidal marsh habitat, and other offsetting measures. While the Project is predicted to cause losses of productivity of bivalve shellfish, the scale of change is minor in the context of natural variability and will not compromise population integrity or ecological function. Mitigation to reduce Project-related effects to bivalve shellfish would also mitigate potential changes in the availability of preferred Current Use resources for Indigenous groups. The VFPA is committed to developing and implementing a RBT2 Follow-up Program. The Follow-up Program will be developed after the submission of the EIS, in consultation with federal agencies, including the CEA Agency, DFO, and Environment and Climate Change Canada (ECCC). Consultation with these regulatory agencies will ensure that the program will deliver the type, quantity, and quality of information required to reliably verify predicted effects (or absence of them), and to confirm both the assumptions and the effectiveness of mitigation. The need for shellfish monitoring will be considered in consultation with these agencies. **Addressed in AIEIS Appendix 2-B Table 17 (#73):** Bivalve shellfish were a sub-component assessed in the marine invertebrates' assessment, with littleneck clams as a representative species for other bivalves. Geoducks have not been observed in the Roberts Bank area; however, if geoducks were present, littleneck clams would be an appropriate proxy for any potential effects on geoducks. Additional information on representative species was provided in the response to AIR-12.04.15-09. This response provides rationale for the selection of each representative species, including why each one is an appropriate proxy for other species, both in the characterisation of existing conditions as well as the assessment of effects, including cumulative effects where applicable. A human health risk assessment was conducted on existing shellfish contamination levels at Roberts Bank, and the potential human health risks associated with consumption. The health assessment (EIS Section 27.0) concluded negligible health risks associated with shellfish contamination; however, DFO bivalve harvesting closures are maintained near outfalls as a preventative measure for public safety. These results were considered in EIS Section 32.0 and AIEIS Section 7.0, in relation to potential Project-related effects on traditional harvesting.	27.0 Human Health Appendix 27-C Shellfish Harvesting Potential and Contaminant – Related Consumption Risks at Roberts Bank Technical Report 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes **AIEIS** Appendix 2-B Issues and Interests - *W*SÁNEĆ Nation, Table 17 Marine Invertebrates 7.0 Potential or Established Aboriginal or Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes **Information Requests** Response to Additional Information Request #9 (AIR-12.04.15-09 of CEAR Document #388)
Tseycum-11.6	Noted importance of "stickers" (chiton).	04-Mar-2016, Elders Workshop 27-Jul-2016, Meeting	**04-Mar-2016, Workshop:** Recorded comment for consideration by the Project team. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Table 9-1 Additional Aboriginal Traditional Knowledge Supporting the Additional Information to the EIS – WSÁNEĆ Nation.	**Addressed in EIS Section 12.0:** Chitons are captured by the assessment presented in EIS Section 12.0. Given the suitability of habitat, chitons are expected to have a low abundance within the project area.	**EIS** 12.0 Marine Invertebrates **AIEIS** Table 9-1 Additional Aboriginal Traditional Knowledge Supporting the Additional Information to the EIS –WSÁNEĆ Nation.
Tseycum-11.7	Concerned with the decreased number of oysters as a result of overharvesting and increasing ocean temperature. Concerned with potential Project-related effects to oysters.	27-Jul-2016, Meeting	**27-Jul-2016, Workshop:** Recorded comment consideration by the Project team. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tseycum First	**Addressed in AIEIS Appendix 2-B Table 17 (#75):** Bivalve shellfish (e.g., clams, cockles, mussels, oysters) were assessed as a sub-component of the marine invertebrates' assessment. The characterisation of existing conditions reflects harvesting to date, and current marine water quality conditions. As outlined in EIS Section 12.6.3.2, despite initial short-term losses during construction, the Project will increase the amount of hard substrate available within the LAA by a total of 6 ha, which will benefit both Pacific oysters and bay mussels, among other species that require hard surfaces for attachment. Overall, productivity of epifaunal bivalves is predicted to increase with the Project. Additionally, as described in EIS Section 12.5.2, bivalve harvesting is currently not allowed within the LAA or RAA due to sanitary and biotoxin closures imposed by DFO; therefore, overharvesting of oysters is not of concern for this area.	**EIS** 12.0 Marine Invertebrates 12.5.2 Bivalve Shellfish 12.6.3.2 Changes in Productivity of Bivalve Shellfish 17.0 Mitigation for Marine Biophysical Valued Components 17.3.2 Offsetting Framework

			Nation and the VFPA's response.		17.3.2.1 Summary of Project-related Effects on Marine Biophysical Valued Components 17.3.2.2 Onsite Habitat Concepts 33.0 Environmental Management Program 33.5 Roberts Bank Terminal 2 Follow-up Program **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 17 Marine Invertebrates

Table 12: Marine Mammals – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Tseycum-12.1	Concerned that potential contaminants from the Project could adversely affect killer whales.	01-Nov-2016, Elders Workshop	**01-Nov-2016, Workshop:** Stated that the objective of the environmental assessment is to evaluate the effects of the proposed Project. Stated that the proposed Project does not really involve the moving of contaminant goods, so it will not be introducing such contaminants in the area. Sediment sampling was done to consider existing contaminant levels in the soil that could potentially be disturbed and suspended as a result of construction activities, to the extent that it would be measurable for killer whales.	**Addressed in EIS Section 14.6.1.4:** Modelling was performed to predict changes in SRKW PCB exposure potential due to marine discharge of sediment in the candidate disposal at sea (DAS) site, located in critical habitat (see EIS Appendix 14-D). The RBT2 model is site and project specific, and builds on an earlier modelling assessment that examined the issues of dredging and DAS in the context of killer whale health. Contamination risk for SRKW is considered negligible. Results indicate that, under existing conditions, the uptake from surface sediments and trophic transfer could result in PCB concentrations in SRKW tissues that exceed conservative health effect thresholds for PCBs in marine mammals. However, the model further predicts that incremental changes in SRKW PCB exposure due to Project-related construction activities are extremely low relative to existing conditions. For example, increases in PCB contamination of 0.00003% for males and 0.00002% for females were predicted for the scenario where the affected seabed area accumulates sediment greater than or equal to 0.1 mm in an area of 196.7 km^2. An increase of 0.000003% in PCB contamination for both males and females was predicted for the scenario where the affected seabed area accumulates sediment greater than or equal to 1.0 mm in an area of 21.6 km^2. The Project is not anticipated to have an adverse effect on SRKW critical habitat features when needed for SRKW life functions. The Project would not limit the survival or population recovery of SRKW. Due to their Endangered status and lack of recovery of the SRKW population, the VFPA has assumed past activities and projects, including those described in the recovery strategy issued by DFO, have had a significant adverse effect on SRKW. Therefore, the Project, in combination with past projects and activities that have been carried out, and certain and reasonably foreseeable projects that will be carried out, would result in a continued significant cumulative effect to SRKW.	**EIS** 14.0 Marine Mammals 14.6.1.4 Changes in Water and Sediment Quality Appendix 14-D Changes in Polychlorinated Biphenyl (PCB) Exposures of Southern Resident Killer Whales Associated with RBT2 Disposal at Sea
Tseycum-12.2	Concerned with vibration disruption to southern resident killer whales. Noted importance of/interest in whales.	04-Jun-2015, Meeting	**04-Jun-2015, Meeting:** Described studies on SRKW. Stated that the EIS looked at impacts from Project across all of SRKW critical habitat outside the VFPA's jurisdiction, and determined that there would be no impact from the Project to SRKW. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Section 8.2 on Marine Mammals.	**Addressed in MSA Section 8.2:** Potential effects of underwater noise from marine shipping associated with the Project on marine mammals are assessed in MSA Section 8.2. Potential effects on marine mammals related to Project-associated vessel transit activities include behavioural disturbance and acoustic masking due to changes to the acoustic environment. These effects are expected to be not significant for marine mammals.	**MSA** 8.2 Marine Mammals 8.2.6 Potential Interactions and Effects 8.2.6.1 Negligible Effects 8.2.6.2 Potential Effect #1 – Behavioural Effects Due to Underwater Noise 8.2.7.1. Mitigation Measures – Acoustic Disturbance 8.2.8.1 Residual Effect #1 - Behavioural Effects Due to Underwater Noise

Table 13: Marine Shipping Addendum

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Tseycum-13.1	Stated that a lot of fishermen go through the shipping route area, and they will be affected. Concerned about the approach of ships and potential interactions between fishers in the Haro Strait.	04-Jun-2015, Meeting 24-Feb-2016, Meeting	**04-Jun-2015, Meeting:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Section 10.0 on Potential Accidents and Malfunctions. **24-Feb-2016, Meeting:** Referred to the MSA and explained that the VFPA has submitted it to the CEA Agency. Noted that the VFPA had discussions with the previous Chief at Tseycum who shared Tseycum's concerns around ship movements. Referenced MSA Appendix 5-B, which provides a record of all concerns shared, not just from Tseycum but other Indigenous groups as well.	**Addressed in EIS Appendix 7.2-B (#206):** A quantitative risk assessment (QRA) of potential accidents and malfunctions related to marine vessel traffic, including the risk of a collision between a container ship and small craft (i.e., fishing and recreational vessels), was undertaken and is described in the potential accidents or malfunctions section (EIS Section 30.0), as well as the QRA (EIS Appendix 30-A). Data collected by DFO between 2008 and 2012 for vessels in DFO sub-areas encompassing Canadian and U.S. waters transited by ships bound for Roberts Bank was reviewed. These data indicated that daily fishing vessel numbers in the area are low (i.e., no vessels per sub-area on most days; maximum of six vessels on one day in the largest sub-area). On this basis, the QRA estimated the return period for a collision involving a container ship and a fishing vessel as 1 in 50 years, equivalent to a 'very low' probability in this assessment. A Land and Marine Traffic Management Plan is included in the Environmental Management Program (EIS Section 33.0) in order to mitigate potential marine vessel traffic issues. **Addressed in MSA Section 10.0:** MSA Section 10.0 includes a description of applicable collision risk reduction measures. The assessment of Current Use considers the risk of collision, and perceptions of safety and determined that residual effects of the collision scenario on Current Use was considered significant, though unlikely to occur.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests **MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4 Existing Conditions 9.5.5.1 Negligible Effects of Vessel Transit on Current Use 9.5.5.2 Potential Effects of Vessel Transit on Current Use 10.0 Potential Accidents or Malfunctions 10.5.9 Human Health 10.5.10 Marine Commercial Use 10.5.11 Outdoor Recreation 10.5.13 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights
Tseycum-13.2	Concerned with ships passing through their territory (Saturna, Mayne, "our little island"), causing erosion in these passages. Concerned what things will be like in 2030, and that they will lose more of their land to erosion.	04-Mar-2016, Elders Workshop	**04-Mar-2016, Workshop:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA..	**Addressed in response to IR7-21:** The VFPA's response to IR7-21 notes that although their probability slightly increases from Project-associated vessels (0.034% during calm conditions), wake-generated waves from Project-associated vessels will not result in a change to the shorelines in the marine shipping area due to the similarity of interaction at the shoreline from wake-generated and wind-generated waves.	**Information Requests** Response to Sufficiency Information Request #21 (IR7-21 of CEAR Document #1141)
Tseycum-13.3	Concerned with ships coming through Tseycum territory and destroying marine and terrestrial habitat.	04-Mar-2016, Elders Workshop	**04-Mar-2016, Workshop:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA..	**Additional information provided by the VFPA:** The MSA has been developed in accordance with the *Updated EIS Guidelines*, issued by the CEA Agency on April 17, 2015. The conclusion of the MSA is that marine shipping associated with the Project is not likely to result in any significant adverse residual effects to any of the VCs assessed. In addition, no adverse cumulative effects are anticipated, with the exception of potential effects to SRKW. As with the conclusions in the EIS, submitted in March 2015, the MSA concludes that SRKW have already been significantly adversely affected by past projects and activities; therefore, cumulative effects are expected to remain significant.	**MSA** 1.0 Introduction
Tseycum-13.4	Interested in whether impacts to Active Pass were considered in the assessment.	02-Mar-2017, Elders Meeting	**02-Mar-2017, Meeting:** Confirmed that Active Pass was included in the MSA and noted the area is outside of the boundaries of VFPA jurisdiction, but the boundaries of the marine shipping area were larger and included it.		

Table 14: Marine Vegetation – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Tseycum-14.1	Interested in the distribution of non-native eelgrass in the Project area, the potential for it to overtake the native species, and whether there are plans to rid the Project area of non-native eelgrass.	01-Nov-2016, Elders Workshop	Stated that non-native eelgrass tends to live higher up in the mid-intertidal zone, whereas the native eelgrass tends to prefer and live in deeper water. There is a zone of overlap, but the native species tends to do better. The non-native eelgrass is not out-competing the native eelgrass. Both species have been co-existing for decades. Stated that non-native eelgrass also provides habitat for other species, and many use it; little fish hide in both native and non-native eelgrass. It is considered to have a high habitat value even though it is invasive, and there is no push to eradicate it from the area.	**Addressed in AIEIS Appendix 2-B, Table 16 (#62):** The VFPA was the first port in North America to prohibit in-port ballast water exchange without prior mid-ocean exchange, a practice which became the basis of government requirements now enforced by Transport Canada. To prevent the invasion of foreign species into local waters, international regulations, through the International Maritime Organization (IMO), are managed by Transport Canada. All commercial deep sea vessels are required to carry out a ballast water exchange prior to entering Canadian waters. This is done outside the exclusive economic zone of 200 nautical miles and in water deeper than 2,000 m. By requiring vessels to complete this ballast 'flush' well outside Canadian waters, the aim is to prevent any foreign organisms from entering into the local ecosystem. The U.S.A. has similar requirements, and vessels arriving to Canada from the Puget Sound area need to forward the completed U.S. forms to Canadian authorities prior to entry into Canadian waters. Within Canadian waters, ballast water is regulated by the Ballast Water Control and Management Regulations. Also, the International Convention for the Control and Management of Ships' Ballast Water and Sediments, to which Canada is a signatory, will come into force on September 8, 2017. The VFPA is a part of the B.C. Spartina Working Group, which maps, tests eradication methods, and supports the removal of invasive English cordgrass from the Fraser River estuary. The potential for introduction of invasive species via effluent discharges and other operational procedures, including discharges from ships (bilge and ballast), was considered in the assessment of marine vegetation. This potential effect was determined to be negligible due to the distant location of discharges into subtidal waters, the incorporation of management and treatment measures outlined in EIS Section 4.2.1, and implementation of regulatory requirements and guidelines described above. **Addressed in response to IR-7.31.15-03:** Via support of the B.C. Spartina Working Group and other interested parties, the Province has made progress in English cordgrass management at Roberts Bank. In particular, there is evidence that herbicide treatment at Roberts Bank in 2013 has decreased English cordgrass in 2014. The VFPA also understands that funding and management effort will continue for the foreseeable future.	**AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̱SÁNEĆ* Nation, Table 16 Marine Vegetation **Information Requests** Response to Additional Information Request #3 (IR-7.31.15-03 of CEAR Document #314)
Tseycum-14.2	Concerned with the potential effect of ships on the distribution of marine vegetation in the Project area.	01-Nov-2016, Elders Workshop	**01-Nov-2016, Workshop:** Stated that by locating the terminal in deeper water it avoids overlap and interaction with a lot of the really sensitive habitats.	**Addressed in EIS Section 11.0:** Potential operation-phase changes from discharges from ships (bilge water and ballast water) are not expected to affect marine vegetation due to the distant location of discharges into subtidal waters and the implementation of regulatory requirements and guidelines (see EIS Section 9.7.8).	**EIS** 9.7 Marine Water Quality 9.7.8 Future Conditions with the Project 11.0 Marine Vegetation 11.6.2.1 Changes in Water Quality
Tseycum-14.3	Concerned with regard to potential effects to rockweed in the Project area. Stated that rockweed is part of Tseycum's ceremonial practices.	27-Jul-2016, Meeting	**27-Jul-2016, Workshop:** Recorded comment for consideration by the Project team.	**Addressed in EIS Section 11.0:** Potential effects of the Project related to rockweed are discussed in EIS Section 11.6.3.3. Empirical evidence indicates there will be minor decreases in the productive potential of macroalgae—including *Ulva*, rockweed, and kelp representative species—driven by direct mortality within the causeway and terminal footprints during the construction phase. During the operation phase, and over the longer-term, macroalgae is expected to recolonise quickly due to inherent biological attributes (i.e., spore dispersal) as well as increased availability of hard substrate habitat with development of RBT2, despite initial losses during construction; however, a lag in rockweed recovery is anticipated due to the magnitude of direct mortality (i.e., temporal loss). Food web interactions negatively influence *Ulva* and rockweed and kelp productivity but are not thought to be major drivers of predicted change. Ecosystem model predictions also indicate a negative direction of change; however, the extent of loss predicted for both *Ulva* and brown algae (i.e., rockweed and kelp) does not fully align with professional judgement; *Ulva* productivity loss is considered overestimated while rockweed	**EIS** 11.0 Marine Vegetation 11.6.3.3 Macroalgae **Information Requests** Response to Sufficiency Information Request #03 (IR8-03 of CEAR Document #1199)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				productivity loss is considered underestimated. Differences are attributed to the overestimation of *Ulva* biomass in the upper intertidal zone as well as over-estimations of food-web interactions. Overall, a net minor decrease is predicted for this sub-component, driven by predicted decreases in rockweed productivity during construction, while changes in both *Ulva* and kelp productivity are judged to be negligible. **Addressed in response to IR8-03:** The VFPA's response to IR8-03 further discusses rockweed biomass estimates used in the ecosystem model.	

Table 15: Marine Water Quality – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Tseycum-15.1	Concerned about dump zones, which has come up with other projects, transfer of ballast and bilge water. Concerned that raw and untreated sewage/waste is dumped into the water from ships, and it floats into shore. Asked whether or not waste is treated before it is dumped in the ocean. Concerned that ships pump their bilges into the water, introducing foreign and invasive species such as non-native eelgrass, mussels and clams to local environments. Asked whether ships dump their bilge water at sea, or through a treatment plant of some sort. Asked whether this effect is accounted for in the predictions presented for the marine vegetation VC.	04-Jun-2015, Meeting 24-Feb-2016, Meeting 03-Mar-2016, Elders Workshop 04-Mar-2016, Elders Workshop 08-Sep-2016, Elders Tour Debrief 02-Mar-2017, Elders Meeting	**04-Jun-2015, Meeting:** Recorded comment for consideration by the Project team. **24-Feb-2016, Meeting:** Recorded comment for consideration by the Project team. **03-Mar-2016, Workshop:** Explained that there are rules for the pumping of bilge water and that it is not permitted in Canadian waters. Stated that invasive species were considered in the Project's assessment. Provided the example of non-native eelgrass that is present at Roberts Bank. Stated that there is eelgrass and non-native eelgrass currently at the terminal. Planting would involve the native eelgrass, but the Project may also result in increases in non-native eelgrass. This is factored into the assessment. Non-local eelgrass dies back every year, which gives the local species a chance to stay in the area. **04-Mar-2016, Workshop:** Responded at the workshop the following day that in Canada there are regulations that applies to ships with more than 15 people or over 400 tonnes. Stated that these ships must have a holding tank for sewage, can only release sewage at least 12 miles out, and there are limits to what can be discharged. **08-Sep-2016:** Responded that Transport Canada requires ships to dump their bilge water a certain distance out from port, so it does not affect ecosystems here. Undertook to follow up with the exact distance. **02-Mar-2017, Meeting:** Provided Tseycum a handout from Transport Canada related to	**Addressed in EIS Appendix 7.2-B (#100):** The VFPA was the first port in North America to prohibit in-port ballast water exchange without prior mid-ocean exchange, a practice which became the basis of government requirements now enforced by Transport Canada. To prevent the invasion of foreign species into local waters, international regulations, through the IMO, are managed by Transport Canada. All commercial deep sea vessels are required to carry out a ballast water exchange prior to entering Canadian waters. This is done outside the exclusive economic zone of 200 nautical miles and in water deeper than 2,000 m. By requiring vessels to complete this ballast 'flush' well outside Canadian waters, the aim is to prevent any foreign organisms from entering into the local ecosystem. The U.S.A. has similar requirements, and vessels arriving from the Puget Sound area need to forward the completed U.S. forms to Canadian authorities prior to entry into Canadian waters. Import containers are generally not opened at the terminal. Canada Border Services Agency inspects the contents of a percentage of import containers off-terminal in Richmond, and in the future will be done at the facility on Tsawwassen land currently being developed. All ships use rat guards on their mooring lines to ensure that rats and other rodents do not crawl up or down the mooring lines between the ship and the wharf. The VFPA is a part of the B.C. Spartina Working Group, which maps, tests eradication methods, and supports the removal of invasive English cordgrass from the Fraser River estuary. **Addressed in AIEIS Appendix 2-B, Table 2 (#8):** Discharge of untreated sewage is not permitted within VFPA jurisdiction as per the VFPA Port Information Guide http://www.portvancouver.com/marine-operations/port-information-guide/. Furthermore, the VFPA requires vessels to have an International Sewage Pollution Prevention Certificate to enter VFPA jurisdiction. As per Transport Canada regulations, "With some exceptions, the discharge of untreated sewage into all Canadian inland waters and Canadian coastal waters within 3 nautical miles of land (ships less than 400 tons) and 12 miles of land (ships larger than 400 tons) is now banned. Treated sewage will only be allowed to be discharged into Canadian waters subject to specified limits of faecal coliforms per 100 ml of water." This can be found on the Transport Canada website at https://www.tc.gc.ca/eng/marinesafety/oep-environment-sources-sewage-2247.htm **Addressed in AIEIS Appendix 2-B, Table 16 (#62):** The VFPA was the first port in North America to prohibit in-port ballast water exchange without prior mid-ocean exchange, a practice which became the basis of government requirements now enforced by Transport Canada. To prevent the invasion of foreign species into local waters, international regulations, through the IMO, are managed by Transport Canada. 			information on Ballast Exchange and Anti-fouling. Explained vessels are required to exchange their ballast water further out; the idea is that it is done in water with high salinity that helps to kill parasites.	The potential for introduction of invasive species via effluent discharges and other operational procedures, including discharges from ships (bilge and ballast), was considered in the assessment of marine vegetation. This potential effect was determined to be negligible due to the distant location of discharges into subtidal waters, the incorporation of management and treatment measures outlined in EIS Section 4.2.1 and implementation of regulatory requirements and guidelines described above. **Addressed in MSA Appendix 5-B (#33):** Information on ballasting is provided in MSA Sections 3.0 and 4.0. Transport Canada enforces Canadian regulations and international conventions implemented by Canada governing matters such as ballast water management. Since ballasting is not permitted within the marine shipping area, it is not assessed as an activity of marine shipping associated with the Project. Further rationale is provided in MSA Section 7.3. Other types of releases are also described in MSA Section 4.0, and the assessment of potential effects on marine vegetation and other marine resources as a result of a spill is included in MSA Section 10.0.	
Tseycum-15.2	Concerned about Project impacts to fishing due to contamination. Stated that Tseycum members cannot clam dig anymore, because the water is contaminated. Concerned with impacts to water quality from the existing terminals at Roberts Bank, and potential changes to water quality resulting from the Project. Interested in marine water quality and how that relates to the health of marine species.	27-Jul-2016, Meeting 08-Sep-2016, Elders Tour Debrief	**27-Jul-2016, Meeting:** Recorded comment for consideration by the Project team. **08-Sep-2016, Elders Tour Debrief.** Recorded comment for consideration by the Project team. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tseycum First Nation and the VFPA's response.	**Addressed in AIEIS Appendix 2-B, Table 13 (#54):** EIS Section 9.7 considers the physical and chemical characteristics of waters that influence the estuarine ecosystem. An assessment was carried out to determine potential changes to marine water quality as a result of the Project. Studies were undertaken to determine existing conditions for several water quality parameters, including temperature, acidity or basicity (pH), dissolved oxygen, conductivity, salinity, oxidation reduction potential, total dissolved solids, TSS, turbidity, water hardness, nutrients, and metals. Existing water quality conditions at Roberts Bank include fine silt and clay sediments carried in the freshwater discharged by the Fraser River, which spread as a plume out into the Strait of Georgia, including Roberts Bank (shown in EIS Figure 9.5-9). The assessment concludes the following: • The Project is expected to result in changes to marine water quality, but no incremental cumulative changes are anticipated; • Construction activities are not expected to temporarily alter water contaminant or nutrient levels, pH, dissolved oxygen, or temperature; and • Increases in TSS levels from construction activities are expected to be temporary and minimal relative to existing natural variability. With the exception of temporary, reversible changes in the biofilm community assemblage from salinity changes during freshet, the potential effects of Project-related changes in marine water quality and sediment quality on marine vegetation, marine invertebrates, marine fish, and marine mammals are considered to be negligible due to the range of conditions that marine species naturally experience. **Addressed in EIS Appendix 7.2-B (#60):** Marine water quality considers the physical and chemical characteristics of waters that influence the estuarine ecosystem. An assessment was carried out to determine potential changes to marine water quality as a result of the Project. The results of the marine water quality assessment were considered in the assessments of marine vegetation, marine invertebrates, marine fish, marine mammals, coastal birds, and ongoing productivity of commercial, recreational, and Aboriginal fisheries. Studies were undertaken to determine existing conditions for several water quality parameters, including temperature, acidity or basicity (pH), dissolved oxygen, conductivity, salinity, oxidation reduction potential, total dissolved solids, TSS, turbidity, water hardness, nutrients, and metals. The assessment concludes that: • The Project is expected to result in changes to marine water quality, but no incremental cumulative changes are anticipated.	**EIS** 9.7 Marine Water Quality **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 13 Marine Water Quality

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				• Construction activities are not expected to temporarily alter water contaminant or nutrient levels, pH, dissolved oxygen, or temperature. • Increases in TSS levels from construction activities are expected to be temporary and minimal relative to existing natural variability. • As a result of the terminal footprint, localised changes in salinity and turbidity are predicted in the intertidal zone, but within the natural ranges currently experienced. The discharge of treated wastewater and stormwater is not expected to change marine water quality. Sanitary discharge will be collected from serviced buildings and piped to a wastewater treatment plant on the east side of the terminal. Treated effluent will meet B.C. Ministry of Environment effluent standards prior to discharge via ocean outfall. Stormwater will be collected by a stormwater system that includes oil interceptors to trap surface oil and grit that reaches the drainage collection system, and five outfalls located at the wharf face. Further information regarding the Project's treated wastewater and stormwater systems is presented in the EIS.	

Table 16: Mitigation for Marine Biophysical Valued Components (including Onsite Habitat Concepts)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Tseycum-16.1	Requested more information about intertidal marsh and the plants. Asked how habitat is built.	04-Mar-2016, Elders Workshop	**04-Mar-2016, Workshop:** Explained intertidal marsh and that native plants are brought in and monitored to ensure they are healthy. Presented information on the habitat mitigation options, intertidal marsh and mudflat concepts. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tseycum First Nation and the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#198):** Onsite habitat is intended to soften the perimeter of the Project's shoreline to be more ecologically representative of the existing estuary, to create similar habitat to those that will be affected by the Project, and to create habitat that generally enhances the productivity of the Roberts Bank ecosystem. The five habitat types considered for onsite offsetting include: • Intertidal marsh: Important for shoreline stabilisation, gas and nutrient regulation, contaminant filtering, and nutrient supply, as well as providing structural habitat used for shelter and food by organisms. Some of the species that use intertidal marsh habitat at Roberts Bank include bivalve shellfish, Dungeness crabs, juvenile Chinook salmon, shiner perch, sand lance, and waterfowl. Approximately 15 ha of intertidal marsh is proposed along the widened causeway and in the S-bend of the new terminal. • Sandy gravel beach: Provides spawning area for forage fish including surf smelt, Pacific herring, and sand lance. Two sandy gravel beaches, totalling approximately 4.5 ha, are proposed along the widened causeway. The beaches are intended to provide attachment-type habitat and substrate suitable for marine vegetation and invertebrates, and to benefit some of their predators (e.g., juvenile Chinook salmon, waterfowl, and American wigeon). • Mudflat: Plays a role in dissipating wave energy and supports large numbers of birds and fish. Mudflats also support biofilm, an important component of the food web in estuarine and coastal ecosystems. Approximately 4.5 ha of mudflats is proposed along the widened causeway and in the S-bend of the new terminal. Biofilm, invertebrates, waterfowl, and shorebirds will benefit from this habitat. • Subtidal rock reefs: Support rockfish populations and assist in meeting fisheries management objectives to alleviate historic declines of regional populations. The creation of approximately 2 ha of reef habitat will benefit macroalgae vegetation, and provide refuge, feeding, and spawning habitat for invertebrates, fish, and birds. • Eelgrass: Eelgrass beds are highly productive habitats in the Roberts Bank ecosystem, serving numerous critical functions, such as food, shelter, and rearing habitat for numerous species. Approximately 3 ha of native eelgrass will be established through transplants in the inter-causeway area. The onsite habitat concepts presented in EIS Section 17.0 have been presented to Indigenous groups, the community, stakeholders, and the public in open houses and small group meetings that took place in the fall of 2014. The feedback received from Indigenous groups has been considered in the finalisation of the EIS. **Addressed in AIEIS Appendix 2-B Table 22 (#97):** Information on the intertidal marsh onsite habitat concept is provided in EIS Section 17.3.2. Approximately 15 ha of intertidal marsh is proposed along the widened causeway, within the bend of the northwest section of the existing terminal, and in an elbow of the proposed terminal (shown in EIS Figure 17-1). Details on the intertidal marsh concept are provided in EIS Appendix 17-B. The intertidal marsh concept will include native plantings, and wind and salt resistant shrub species in the backshore of the marsh. The onsite habitat concepts described in EIS Section 17.0 have been presented to Indigenous groups, the community, stakeholders, and the public in open houses and small group meetings that took place in the fall of 2014. The feedback received from Indigenous groups was considered in the finalisation of the EIS.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 17.0 Mitigation for Marine Biophysical Valued Components 17.3.2 Offsetting Potential Effects, Offsetting Framework 17.3.2.2 Onsite Habitat Concepts Figure 17-1 Overview of Proposed Onsite Habitat Concept Locations Appendix 17-B Habitat Concept Drawings **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 22 Mitigation for Marine Biophysical VCs
Tseycum-16.2	Suggested to build a light pole so eagles can land, and see fish.	04-Mar-2016, Elders Workshop	**04-Mar-2016, Workshop:** Recorded comment for consideration by the Project tem. **10-Feb-2017, Letter from the VFPA:**	**Addressed in AIEIS Appendix 2-B Table 22 (#98):** The VFPA acknowledges Tseycum First Nation's suggestion and will consider the suggestion as mitigation measures are finalised.	**AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 22 Mitigation for Marine Biophysical VCs

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
			Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tseycum First Nation and the VFPA's response.		
Tseycum-16.3	Concerned with the likelihood that mitigation measures (including habitat creation) will be successful at restoring marine life. Interested in mitigation and monitoring. Suggested that the Tseycum Shorekeepers program would be a good fit for monitoring activities.	15-Jul-2016, Meeting 02-Mar-2017, Elders Meeting	**15-Jul-2016, Meeting:** Committed to ongoing consultation regarding mitigation and monitoring. Committed to share information about the Shorekeepers program with the Project team once provided. **02-Mar-2017, Meeting:** Noted that the VFPA is working on developing a long-term monitoring program based on adaptive management, whereby the effects of the Project are monitored and if unintended effects occur they can be addressed accordingly. Offered to return to Tseycum and present on the adaptive management strategy used for DP3. Offered to return with the high-level information from the EIS to present on mitigation to help bring Tseycum's new Councillor up to speed. **12-Dec-2017, Meeting:** The VFPA hosted a *WSÁNEĆ* All-Chiefs Meeting, and presented on lessons learned from DP3 as well as the RBT2 Follow-up Program. Tseycum First Nation was invited, but unable to attend.	**Addressed in EIS Section 33.5:** Similar to the Adaptive Management Strategy for DP3, as described in EIS Section 33.5, the VFPA is committed to developing and implementing a Follow-up Program for the Project. The purpose of the Follow-up Program is to verify the accuracy of residual effect predictions made in the EIS, and determine the effectiveness of any measures taken to mitigate the adverse environmental effects of the Project. To ensure the Program's elements adequately reflect conditions of Project approvals, final designs, and construction or operation approaches, as well as public, Indigenous group, and regulator feedback received during the review of the EIS, the VFPA will lead the development of the Follow-up Program after the submission of the EIS. The Follow-up Program will include: • An evaluation of the adequacy of existing data to provide a benchmark against which to test Project-related effects; • A monitoring design drawing on the measurable parameters identified to be field-tested; • A methodological approach for using field-collected data to measure and verify the accuracy of the effects predicted in the EIS; • A reporting framework that defines frequency of reporting, distribution, and feedback mechanisms; and • Details of the VFPA's approach to adaptive management for the Project through construction and operation. The Follow-up Program will be developed in consultation with federal agencies, including the CEA Agency, DFO, and ECCC. Complete drafts of the RBT2 Follow-up Program will be made available prior to the start of field measurements to ensure parties consulted on the program and approving agencies have an opportunity to evaluate and approve the Program. Feedback from Indigenous groups regarding the draft program will be sought through the VFPA's ongoing engagement initiatives.	**EIS** 33.5 Roberts Bank Terminal 2 Follow-up Program

Table 17: Noise and Vibration – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information

Tseycum-17.1	Asked if there are any anticipated complaints about the noise from the terminal.	03-Mar-2016, Elders Workshop	**03-Mar-2016, Workshop:**
			Responded that there may be some noise, but the terminal is fairly far out.
			10-Feb-2017, Letter from the VFPA:
			Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tseycum First Nation and the VFPA's response.
				Addressed in EIS Appendix 7.2-B (#43):
				The potential changes in noise and vibration that may be caused by the Project, and the potential effects of those changes on biophysical VCs and human health are considered in the EIS. Mitigation measures to address noise-related effects are also described in the EIS.
				The noise and vibration assessment examined potential changes in noise and vibration as a result of the Project. The results of the noise and vibration assessment were used in the assessments of coastal birds, marine commercial use, outdoor recreation, human health, and Current Use.
				The assessment considered the potential changes in noise and vibration that may result from the Project and the potential cumulative changes in noise and vibration that are likely to result from the Project in combination with other certain and reasonably foreseeable projects and activities, including incremental marine vessel traffic.
				• The assessment considers noise and vibration from trains, as a source contributing to existing conditions, as well as a potential Project-related source of noise and vibration and a potential source of cumulative change in noise and vibration.
				• Mitigation measures related to noise are included in the human health assessment (EIS Section 27.9.2).
				The assessment considered Project-related sources of noise and vibration, including construction equipment, container ships at berth, container handling activities, and movement of trains and trucks on the terminal and causeway. The assessment focused on continuous noise, low frequency noise, transient and impulsive noise, and ground-borne vibration.
				The assessment concluded that:
				• Project-related changes in annual average noise levels in communities near the Project are expected to be minor and, for the most part, not perceptible.
				• The Project, in combination with other certain and reasonably foreseeable projects and activities, is expected to result in minimal incremental cumulative changes to noise in areas close to road and rail corridors.
				• Some changes in noise conditions that could be perceptible include:
				  ○ Increased noise during periods of peak construction activity.
				  ○ The number of intermittent noises during operation would increase, but the noise levels would be the same or lower than from the existing Roberts Bank terminals.
				  ○ Increased noise in marine areas is expected to be perceptible close to the terminal.
				• The construction and operation of the marine terminal and causeway is not expected to result in perceptible increases in levels of ground-borne vibration.
				Suggested mitigations were considered in the development of proposed mitigation for Project-related changes in noise. Noise Management Plans would be developed for construction and operation phases and would integrate with the VFPA's existing noise monitoring programs.
				Mitigation of construction-related noise would include:
				• Scheduling of higher-noise generating activities during weekdays, and during the daytime;
				• Shutdown of equipment and vehicles when not in use;
				• Utilisation of equipment that produces less noise; and
				• Awareness and training for construction crews.
				Mitigation for operation-related noise would include:
				• Optimised tonality of equipment alarms to limit audibility on shore while meeting safety requirements;
				• Operator awareness and training; and
				• Regular maintenance of equipment (e.g., lubrication of pulleys and other moving parts, replacement of deteriorated exhaust mufflers, maintaining efficiencies of engines through servicing).
				Addressed in AIEIS Appendix 2-B, Table 10 (#50):
				As described in EIS Section 9.3.1, the selection of noise and vibration as an IC in this assessment was based in part on complaints from local residents about noise from the existing port facilities and related activities.
				Addressed in EIS Section 35.0:
				EIS Table 35-2, commitment #5.2 notes that the VFPA will continue to update and make available media information material, as part of its public information commitment. As part of this commitment, the VFPA will implement a mechanism for two-way dialogue and communications about port-related issues in Delta and continue to maintain the VFPA Community Feedback Line (to register and respond to feedback and complaints).

Table 18: Port Operations

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Tseycum-18.1	Concerned with the age of the vessels that would be transiting the area and the potential for materials on the boat flaking off (i.e., the paint on ships hulls). Referred to another location where machines clean the hulls of cargo ships of whatever they pick up in port to prevent the spread of invasive species. Asked whether the same technology would be implemented for this Project.	24-Feb-2016, Meeting 08-Sep-2016, Elders Tour Debrief	**24-Feb-2016, Meeting:** Recorded comment for consideration by the Project team. **08-Sep-2016, Elders Tour Debrief:** Responded that Transport Canada sets rules about invasive species and procedures that have to be followed related to that, and the same practice/ requirements would be required of ships calling at RBT2. Offered to follow up with more information. **01-Nov-2016, Meeting:** The VFPA shared information from Transport Canada website: https://www.tc.gc.ca/eng/marinesafety/debs-arctic-environment-hull-fouling-1159.htm. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tseycum First Nation and the VFPA's response.	**Addressed in AIEIS Appendix 2-B, Table 13 (#55):** The types of ships expected to call at Roberts Bank terminal are described in EIS Section 4.2.1. The marine water quality assessment (EIS Section 9.7) considers the physical and chemical characteristics of waters that influence the estuarine ecosystem, and changes from ships transiting the area are not anticipated as pollution from vessels is regulated. Compliance with pollution prevention provisions of the *Canada Shipping Act, 2001* and International Convention for the Prevention of Pollution from Ships by RBT2-associated marine vessels will prevent harmful changes in marine water quality by vessels during marine transportation operations. This includes compliance with Transport Canada regulations regarding anti-fouling paints, available at https://www.tc.gc.ca/eng/marinesafety/oep-environment-sources-antifouling-1964.htm Therefore, paint from ship hulls was not identified as a potential effect of Project-associated vessels on marine water quality. **Addressed in EIS Appendix 7.2-B (#100):** The VFPA was the first port in North America to prohibit in-port ballast water exchange without prior mid-ocean exchange, a practice which became the basis of government requirements now enforced by Transport Canada. To prevent the invasion of foreign species into local waters, international regulations, through the IMO, are managed by Transport Canada. All commercial deep sea vessels are required to carry out a ballast water exchange prior to entering Canadian waters. This is done outside the exclusive economic zone of 200 nautical miles nm and in water deeper than 2,000 m. By requiring vessels to complete this ballast 'flush' well outside Canadian waters, the aim is to prevent any foreign organisms from entering into the local ecosystem. The U.S.A. has similar requirements, and vessels arriving from the Puget Sound area need to forward the completed U.S. forms to Canadian authorities prior to entry into Canadian waters.	**EIS** 4.0 Project Description 4.2.1.2 Three-berth Wharf structure 4.4.2 Operation-phase Activities Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.7 Marine Water Quality 9.7.8 Future Conditions with the Project **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̱SÁNEĆ* Nation, Table 13 Marine Water Quality
Tseycum-18.2	Concerned with regard to the ability of criminals to access container cargo.	05-Jul-2016, Roberts Bank Tour #1	**05-Jul-2016, Tour #1:** Recorded comment for consideration by the Project team.	**Addressed in EIS Section 4.2.1.5:** Site security systems will be located throughout the terminal to ensure that port operations meet expected municipal, national, and international requirements. Security equipment will include perimeter fencing, closed-circuit television (CCTV) cameras, and vehicle and cargo inspection system (VACIS) facilities. Refer to Area 33 in EIS Appendix 4-B Engineering Drawing 60287593-GE-104.	**EIS** 4.2.1.5 Infrastructure, Ancillary Systems, and Support Facilities Appendix 4-B Preliminary Engineering Drawings (AECOM/KCB)
Tseycum-18.3	Interested in the Fraser River Maintenance Dredging Program, specifically the areas the port authority dredges. Concerned with the effects of dredging related to the Project, such as to substrate stability. Noted that dredging activity has been associated with increased earthquake	08-Sep-2016, Elders Tour Debrief 01-Nov-2016, Elders Workshop 02-Mar-2017, Elders Meeting	**08-Sep-2016, Elders Tour Debrief:** Provided some information on the Fraser River Maintenance Dredging Program. Committed to follow-up with the specifics of the dredging program. **01-Nov-2016, Workshop:** Committed to follow-up with more information about the Fraser River Maintenance Dredging Program. **02-Mar-2017, Meeting:** Responded that there will be dredging of the sediment at the bottom of the ocean to make space for the ships and so the terminal is solid. Stated that one section of the EIS looks at the effects of the	**Addressed in AIEIS Appendix 2-B, Table 1 (#3):** Information on the Fraser River Maintenance Dredging Program is available on VFPA website at http://www.portvancouver.com/marine-operations/fraser-river-maintenance/. The VFPA dredging policy addresses the maintenance dredging of deep sea and domestic shipping channels in the Fraser River that support international and domestic trade, and the management of dredge materials. Dredging is an essential part of the VFPA's long-term strategy to ensure the Fraser River can continue to support trade and meet Transport Canada's safe navigation requirements. It involves the careful removal and disposal of sediment from navigation channels to maintain draught and ensure vessels can safely transit to their destination. **Additional information provided by the VFPA:** EIS Section 9.1.3 provides an overview of the project area's geotechnical characteristics and EIS Section 31.2.2 discusses potential effects of seismic activity.	**EIS** 5.0 Alternative Means of Carrying Out the Project 9.1.3 Geotechnical Considerations 31.0 Effects of the Environment on the Project 31.2.2 Seismic Activity **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̱SÁNEĆ* Nation, Table 1 Port Operations

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
	activity and impacts to tectonic plates in the Straits.		environment on the Project, like an earthquake, and evaluates the ability of the Project to withstand such environmental events. Shared with Tseycum a hand-out on the Fraser River Maintenance Dredging Program and provided the link to the VFPA's website where more information could be found.		
Tseycum-18.4	Concerned that chemicals from ships will lead to contamination of waters and shoreline and affect salmon, people, etc. Asked what chemical is used to clean ship decks.	04-Jun-2015, Meeting	**04-Jun-2015, Meeting:** Acknowledged this concern and added enforcement would be important as well. Stated that the VFPA only has control over ships within VFPA jurisdiction. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B summarising Indigenous issues and interests and providing the VFPA's responses.	**Addressed in MSA Appendix 5-B (#33):** Information on ballasting is provided in MSA Sections 3.0 and 4.0. Transport Canada enforces Canadian regulations and international conventions implemented by Canada governing matters such as ballast water management. Since ballasting is not permitted within the marine shipping area, it is not assessed as an activity of marine shipping associated with the Project. Further rationale is provided in MSA Section 7.3. Other types of releases are also described in MSA Section 4.0, and the assessment of potential effects on marine vegetation and other marine resources as a result of a spill is included in MSA Section 10.0. **Additional information provided by the VFPA:** Relevant to inside VFPA jurisdiction, the Port Information Guide (see Appendix IR1-01-A in the VFPA's response to IR1-10) contains a set of localised practices and procedures designed to promote safe and efficient navigation within the waters of the port and support efforts to protect the marine environment. Port Information Guide sections 13.5 and 14.4 include provisions regarding vessel cleaning and the Harbour Master's authority thereover. **Addressed in MSA Section 7.3:** In Canadian and international waters, marine vessels are governed by the IMO under the MARPOL Convention (see Section 3.2 Regulatory Framework for more information). Compliance with pollution prevention provisions of the *Canada Shipping Act, 2001* and MARPOL by RBT2-associated marine vessels will prevent harmful changes in marine water quality by vessels during marine transportation operations (e.g., from discharges within the marine shipping area of bilge water or ballast water). Therefore, routine marine shipping associated with the Project is not expected to adversely affect marine water quality.	**MSA** 3.0 Regulatory Framework and Role of Government 3.1 Federal Authorities Overview 3.2 Regulatory Framework 4.0 Activity Description 4.2.2.1 Associated Activities – Ballasting 4.4.2 Potential In-Transit Accidents Incidence and Release Amount Predictions Appendix 5-B Aboriginal Issues and Interests 7.3 Marine Water Quality 7.3.5 Incremental Changes to Marine Water Quality from Marine Shipping Associated with the Project 10.0 Potential Accidents or Malfunctions 10.5.6 Marine Fish and Fish Habitat **Information Requests** Response to Sufficiency Information Request #10 (IR1-10 of CEAR Document #897)

Table 19: Potential Accidents or Malfunctions

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Tseycum-19.1	Asked whether there would be a buoy to notify the boats of the shallow waters.	04-Mar-2016, Elders Workshop	**04-Mar-2016, Workshop:** Responded that hazards would be clearly marked.	**Addressed in AIEIS Appendix 2-B Table 2 (#9):** The southern B.C. coast is a mature marine vessel traffic area that is regularly used by deep sea vessels. Vessel operations in the region are supported by several marine risk mitigation approaches, including navigational aids. The Canadian Coast Guard places and maintains visual, aural, and electronic aids to navigation in Canadian coastal waters, including the shipping lanes on Roberts Bank, to assist vessels in determining their position and course, warn of dangers or obstructions, and indicate the best or preferred route. Other existing regional traffic marine risk mitigation measures include: • Vessel traffic management system, including radar surveillance and traffic separation zones; • Mandatory vessel pilotage for all vessel moves within the region; and • Precautionary areas and special operating instructions. Further, the marine operations at and near Roberts Bank include additional measures such as: • Radio communication with BC Ferries; and • Weather restrictions (leading to anchorage).	**EIS** 30.0 Potential Accidents or Malfunctions 30.3.2 Regional Risk Mitigation Related to Marine Traffic **MSA** 10.0 Potential Accidents or Malfunctions 10.4.1 Risk Mitigation Practices in the Marine Shipping Area **AIEIS** 8.0 Potential Accidents or Malfunctions Appendix 2-B Aboriginal Issues and Interests - *W̱SÁNEĆ* Nation, Table 2 Project Planning, Development and Implementation
Tseycum-19.2	Concerned with the potential for an accident or malfunction involving a container ship carrying dangerous goods. Requested information concerning the kinds of dangerous cargo that would be transported, and the amounts of each. Requested information regarding how containers involving dangerous goods are handled. Concerned about the potential for a container fire.	01-Dec-2015, Meeting 03-Mar-2016, Elders Workshop	**01-Dec-2015, Meeting:** Answered that container shipping does not come with the same risks as transporting oil or gas. If an incident were to occur, container contents include goods such as raw materials, consumer goods. A small percentage of container contents include hazardous chemicals, and there is information on this in the EIS. Added that there is a specific process for transporting hazardous goods. **02-Dec-2015, Email from the VFPA:** Provided information on the types of goods shipped via containers, and whether there were any hazardous goods shipped. EIS Appendix 30-A, Table B-4 (http://www.ceaa-acee.gc.ca/050/document-eng.cfm?document=101482) shows the composition and number of HNS (hazardous and noxious substances) containers at Deltaport in 2012. Of the 1.7 million TEUs handled at the Deltaport Terminal in 2012, less than 1% (0.7062%) involved goods that could be classified as Dangerous Goods under the International Maritime Dangerous Goods Code. Demand	**Addressed in AIEIS Appendix 2-B Table 29 (#156):** EIS Section 30.0 considers incidents involving both non-hazardous (e.g., aggregate, non-hazardous container cargo) and hazardous (e.g., hydrocarbons, dangerous goods) materials. It also considers the potential for an accident or malfunction involving a fire (EIS Section 30.2). Details on the types of hazardous materials shipped in containers are provided in EIS Appendix 30-A (Appendix G, Table G-3). Transportation of hazardous materials is regulated by the *Transportation of Dangerous Goods Act, 1992*, which is administered by Transport Canada. Regulations for the transport of dangerous goods, are set by the IMO: http://www.imo.org/en/About/Conventions/ListOfConventions/Pages/International-Convention-for-the-Safety-of-Life-at-Sea-(SOLAS),-1974.aspx. The International Maritime Dangerous Goods Code is the international code that establishes where dangerous goods should be loaded on a ship. Some should be loaded below deck, others should be loaded on deck, some dangerous goods need to be separated by certain distances from other types of goods, and some dangerous goods need to be segregated in different holds from other goods. The implementation of the Code is mandatory under the International Convention for the Safety of Life at Sea (SOLAS) and the International Convention for the Prevention of Pollution from Ships (MARPOL 73/78).	**EIS** 30.0 Potential Accidents or Malfunctions 30.2.1 Potential Project-Related Accidents and Malfunctions, Probabilities and Consequences 30.4 Potential Marine-based Accidents and Malfunctions 30.5 Potential Land-based Accidents and Malfunctions Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment Appendix G - Spill Materials and Properties Table G-3 Dangerous Good TEUs Transported through Deltaport (RBT) in 2012

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
			for goods is assumed to be the same if the Project goes ahead. In Canada, the transportation of dangerous goods is strictly regulated under the *Transportation of Dangerous Goods Act, 1992*. The Act was designed with the sole purpose of maintaining public safety in the transportation of dangerous goods. This includes advance notification requirements, an application process for transporting containerised dangerous goods, clearly marking the shipment, packaging requirements, as well as time and quantity limitations, including not permitting the on-dock storage of containerised dangerous goods—immediate loading onto vessel or removal by inland carrier only is required. **03-Mar-2016, Workshop:** Asked if Tseycum is referring to the container that caught fire at the Centerm Terminal in Burrard Inlet the year before. Stated that that type of incident is very rare, and a lot was learned as a result of the incident, such as how to avoid such incidents in the future, and how to respond. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tseycum First Nation and the VFPA's response.		**MSA** 10.0 Potential Accidents or Malfunctions 10.2 Assessment Methods 10.3 Potential Accidents or Malfunctions 10.4 Mitigation Measures 10.5 Assessment of Potential Effects of Accidents or Malfunctions 11.0 Follow-up Program 12.0 Summary of Changes to the Environment and Effects of Changes to the Environment: Marine Shipping associated with RBT2 **AIEIS** Appendix 2-B Aboriginal Issues and Interests - W̱SÁNEĆ Nation, Table 29 Potential Accidents or Malfunctions 8.0 Potential Accidents or Malfunctions
Tseycum-19.3	Concerned with potential accidents and malfunctions. Requested information regarding previous incidents at Roberts Bank. Concerned with effects to the environment, sea life, birds, eagles, whales, mammals. Asked if there is insurance related to accidents. Asked if the VFPA had a bond in place for risks and if the on-site mitigation was for impacts or risks.	03-Mar-2016, Elders Workshop 04-Mar-2016, Elders Workshop 02-Mar-2017, Elders Meeting 27-Jun-2017, Meeting	**03-Mar-2016, Workshop:** Responded that as part of the environmental assessment, the VFPA looked at worst-case scenarios. In one hypothetical scenario for the assessment, a ship crashed into the terminal. Noted that it is not likely, but a plausible disaster. The assessment considered what the effects on the environment would be if that happened. Referred to the MSA executive summary and the marine shipping scenario that considered the potential of an accident in Boundary Passage. Even though the vessels are not shipping oil for example, it considers the possibility of fuel getting spilled. **04-Mar-2016, Workshop:** Recorded comment for consideration by the Project team.	**Addressed in EIS Appendix 7.2-B (#204):** Potential spills of deleterious materials (e.g., hydrocarbons) and their environmental effects are discussed in the EIS. Plausible worst-case scenarios involving a marine vessel, motor vehicle, and train accident, each assumed to result in a spill of deleterious materials, are assessed. The regulatory management framework, standard practices, and Project-specific measures to reduce the risk of accidents or malfunctions, including spills, as well as the emergency response and mitigation measures to be implemented in the event of a spill are described. Three worst-case scenarios involving hydrocarbon spills were assessed: a container ship impact incident at the terminal, a tanker truck accident on Roberts Bank Way North, and a yard locomotive derailment on the widened causeway. The assessment determined that a ship impact scenario involving a marine spill of heavy fuel oil at the terminal would result in adverse residual effects to all marine biophysical VCs, as well as marine commercial use, outdoor recreation, and land and water use. While the residual effects on SRKW, coastal birds, and Current Use were considered significant, due to the extremely low probability of such a scenario, all residual effects were considered unlikely. Since the diesel spill in each of the land-based scenarios would occur away from the marine environment, no potential interactions with marine biophysical VCs were identified. Further, no residual adverse effects were identified with respect to socio-economic VCs, including services and infrastructure and human health. As with any activity, the potential for unplanned incidents during Project construction and operation exists. The VFPA, its tenants, contractors, operators, and intermodal partners are committed to continue to improve port-wide operational practices	**EIS** Appendix 7.2-B Aboriginal Issues and Interests **MSA** Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents or Malfunctions 10.2 Assessment Methods 10.3 Potential Accidents or Malfunctions 10.4 Mitigation Measures 10.5 Assessment of Potential Effects of Accidents or Malfunctions 11.0 Follow-up Program

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
			02-Mar-2017, Meeting: Responded that an assessment was done to determine what the effects of plausible worst-case scenarios would be. **27-Jun-2017, Meeting:** Stated that the VFPA is preparing for meetings with Indigenous groups to discuss the Follow-up Program and the VFPA would contact Tseycum shortly to organise a meeting. **12-Dec-2017, Meeting:** The VFPA hosted a *W̲SÁNEĆ* All-Chiefs Meeting, and presented on lessons learned from DP3 as well as the RBT2 Follow-up Program. Tseycum First Nation was invited, but unable to attend.	and procedures to ensure the safety of workers and the public, and protection of the environment. The composition and number of hazardous goods containers handled at Deltaport Terminal in 2012 was reviewed during the development of the QRA (EIS Appendix 30-A (Appendix B, Table B-4)). The estimated probability and potential consequences of a range of accidents or malfunctions, including spills of deleterious materials from ships during Project construction and operation, are described in the EIS. **Addressed in MSA Appendix 5-B (#1):** The regulatory framework for spill response is described in MSA Section 3.0. The regulatory requirement for maritime insurance is established under the *Marine Liability Act*, S.C. 2001, c. 6 and administered by Transport Canada. Additional information about the roles of various parties in spill response is provided in MSA Section 10.0. Information about the amount available in the insurance fund, and whether the CEA Agency has the authority to raise the amount, is not included in the MSA. The VFPA advised the CEA Agency of this concern through MSA Appendix 5-B (#1).	12.0 Summary of Changes to the Environment and Effects of Changes to the Environment: Marine Shipping associated with RBT2
Tseycum-19.4	Concerned with the accuracy of predictions of the likelihood of an accident occurring.	04-Mar-2016, Elders Workshop	**04-Mar-2016, Workshop:** Recorded comment for consideration by the Project team. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tseycum First Nation and the VFPA's response.	**Addressed in AIEIS Appendix 2-B, Table 29 (#158):** The probabilities of various accident scenarios are provided in in EIS Appendix 30-A. The QRA also includes information on historical incidents, including at Roberts Bank, in EIS Appendix 30-A, Section 3.1.1. The sensitivity and level of certainty associated with accident rate predictions is described in EIS Appendix 30-A, Section 4.2. The frequency assessment conducted indicates that all shipping-related accidents can be considered improbable, with or without RBT2. The QRA explicitly included uncertainty in analyses and utilised 95% confidence bounds to make that assessment. The regulatory management framework, standard practices, and Project-specific measures to reduce the risk of accidents or malfunctions, including spills, as well as the emergency response and mitigation measures to be implemented in the event of a spill are described in EIS Section 30.0. Three worst-case scenarios involving hydrocarbon spills were assessed: a container ship impact incident at the terminal, a tanker truck accident on Roberts Bank Way North, and a yard locomotive derailment on the widened causeway. The assessment determined that a ship impact scenario involving a marine spill of heavy fuel oil at the terminal would result in adverse residual effects to all marine biophysical VCs, as well as marine commercial use, outdoor recreation, and land and water use. While the residual effects on SRKW, coastal birds, and Current Use were considered significant, due to the extremely low probability of such a scenario, all residual effects were considered unlikely. Since the diesel spill in each of the land-based scenarios would occur away from the marine environment, no potential interactions with marine biophysical VCs were identified. Further, no residual adverse effects were identified with respect to socio-economic VCs, including services and infrastructure and human health. As with any activity, the potential for unplanned incidents during Project construction and operation exists. The VFPA, its tenants, contractors, operators, and intermodal partners are committed to continue to improve port-wide operational practices and procedures to ensure the safety of workers and the public, and protection of the environment. The estimated probability and potential consequences of a range of accidents or malfunctions, including spills of deleterious materials from ships during Project construction and operation, are described in the EIS.	**EIS** 30.0 Potential Accidents or Malfunctions 30.4 Potential Marine-Based Accidents and Malfunctions 30.6 Assessment of Plausible Worst-Case Scenarios 30.6.1 Container Vessel Allision and Fuel Spill at RBT2 Terminal Berth Face 30.6.1.3 Plausible Worst-case Scenario #1 Effects Assessment Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment 3.1.1 Representative Historical Container Ship Accident Scenarios 4.2 Sensitivity to Key Assumptions **MSA** 10.0 Potential Accidents or Malfunctions **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 29 Potential

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
					Accidents or Malfunctions
Tseycum-19.5	Concerned with the potential for an accident to occur in poor weather. Commented that there was one incident where a ferry almost collided with Roberts Bank because of rough winds. Requested clarification regarding whether it is the pilot's decision to anchor if conditions are unsafe.	03-Mar-2016, Elders Workshop	**03-Mar-2016, Workshop:** Responded that was the kind of scenario that was considered. Stated that if the winds are really bad, the vessel would wait at anchor. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tseycum First Nation and the VFPA's response.	**Addressed in EIS Appendix 7.2-B (#213):** A description of how local conditions and natural hazards, such as severe or extreme weather conditions and weather-related events, could adversely affect the Project, and how these in turn, could affect the environment, is presented in EIS Section 31.0. Project design and management measures capable of mitigating the effects of extreme weather conditions on the Project also will effectively address any potential effects associated with ideal or normal weather patterns. As described in EIS Section 9.1, climate is recognised as one of the primary drivers in shaping the Roberts Bank ecosystem. The influence of weather patterns typical for south coast B.C. and Roberts Bank are considered as an aspect of the Project's physical setting in existing conditions, expected conditions, and future conditions in the assessment of Project-related effects on the ICs and VCs. **Addressed in AIEIS Appendix 2-B, Table 29 (#160):** A description of how local conditions and natural hazards, such as severe or extreme weather conditions and weather-related events, could adversely affect the Project, and how these in turn could affect the environment, is presented in EIS Section 31.0. Project design and management measures will mitigate the effects of extreme weather conditions on the Project. Additional information on anchorage practices in extreme weather is provided in MSA Section 4.0. As described in MSA Section 4.2.2.2, the decision to anchor in inclement weather is made by the pilot and the port authority having jurisdiction over the anchorage location.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 9.0 Physical Setting 9.1 Climate, Coastal Conditions, and Geotechnical Considerations Physical ICs (Sections 9.2 through 9.8) 18.4 Population Biophysical VCs (Sections 11.0 through 16.0) Socio-economic VCs (Sections 19.0 through 28.0) 31.0 Effects of the Environment on the Project 31.2.1 Extreme Weather and Weather-related Events **MSA** 4.0 Activity Description 4.2.2.2 Anchorage **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 29 Potential Accidents or Malfunctions 8.0 Potential Accidents or Malfunctions
Tseycum-19.6	Concerned that nothing will be done in event of an oil spill, and that the boat owner will not be held accountable. Concerned with the potential for accidents and spills and who will be responsible for clean-up. Concern related to slow spill response time.	03-Mar-2016, Elders Workshop 05-Jul-2016, Roberts Bank Tour #1 05-Aug-2016, Roberts Bank Tour #2	**03-Mar-2016, Workshop:** Explained that in the event of a spill, violators are given fines, penalties, and have to pay for the clean-up. **05-Jul-2016, Tour #1:** Explained that the port authority is just one player of many, and is involved when the incident is within its jurisdiction. In such cases the port authority plays a coordination role.	**Addressed in EIS Appendix 7.2-B (#190):** The potential effects of accidents or malfunctions on Current Use are addressed in EIS Section 30.0. The EIS describes the parties who would be notified and assume responsibility as On Scene Commander for spill clean-up in the event of a marine spill within VFPA jurisdiction, including Roberts Bank. These parties include the Canadian Coast Guard and WCMRC. The VFPA's role following a spill would be to maintain situational awareness and coordinate the incident response. Generally, the owner of the vessel from which the spill originates is responsible, in accordance with the *Marine Liability Act*. There is more information on this topic on Transport Canada's	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 30.0 Potential Accidents or Malfunctions **MSA** 10.0 Potential Accidents or Malfunctions

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
	Concerned with contamination resulting from an accident or spill.	08-Sep-2016, Elders Tour Debrief 02-Mar-2017, Elders Meeting	Referred to the *MV Marathassa* spill a little over a year ago and explained that the port authority's Operations Centre was used as home base for the coordination and overseeing of the clean-up efforts, and was used by a variety of different entities with various responsibilities, such as the Canadian Coast Guard, Transport Canada, and Western Canada Marine Response Corporation (WCMRC). **05-Aug-2016, Tour #2:** Recorded comment for consideration by the Project team. **08-Sep-2016, Elders Tour Debrief:** Stated that when it comes to a spill, it would be the same process as for any ship. There are a lot of different parties involved, such as Transport Canada, DFO, the Canadian Coast Guard, WCMRC, and the VFPA. The VFPA would get involved if the spill occurred in our jurisdiction. If it occurred further out, it would be more those other groups, and the Pacific Pilotage Authority. Stated that the CEA Agency is hosting a presentation on this topic next week for this Project. Explained that people can connect by teleconference, if Tseycum is interested. **02-Mar-2017, Meeting:** Responded there are a lot of people involved in the event if an accident. If the accident occurred within VFPA jurisdiction the port authority would be involved in coordinating the response. The WCMRC, Canadian Coast Guard Marine Communications and Traffic Services, and other agencies would also be involved in the response. Noted that there is an insurance fund available in the event of an accident.	website, which explains liability and compensation for oil spill clean-up and damages, including funds available for clean-up: http://www.tc.gc.ca/eng/marinesafety/menu-4100.htm#m. Additional sources information on funds available for clean-up are available at the following link: https://www.tc.gc.ca/eng/marinesafety/oep-ers-regime-funds-1119.htm. **Addressed in MSA Section 10.4.4.1:** Spill response procedures, capacities, equipment, response times, and areas of response are described in the MSA. Specifically, MSA Section 10.4.4.1 describes the WCMRC capabilities at the time of writing. WCMRC is the Transport Canada-certified response organisation for the west coast of Canada. To maintain its certification, WCMRC must demonstrate to Transport Canada that it has logistical arrangements in place to meet response time standards in the Geographic Area of Response (see MSA Section 10.4.4.3). **Additional information provided by the VFPA:** Transport Canada is the federal lead in regulating marine shipping in Canada, and other federal departments such as the Canadian Coast Guard, ECCC, DFO, and Natural Resources Canada (NRC) have key roles that enhance marine safety and security, influence marine shipping activities, and help protect the marine environment. Transport Canada's Response to the Review Panel's April 4, 2018 information requests provides an overview of activities undertaken by the Government of Canada related to spill management. TC IR-10 specifically discusses training, resources, and equipment available for community response, including the possibility of establishing spill response bases on reserve lands in the southern portion of the west coast of B.C. It also discusses liability considerations and improvements being made to Canada's domestic Ship-Source Oil Pollution Fund.	10.2 Assessment Methods 10.3 Potential Accidents or Malfunctions 10.4 Mitigation Measures 10.5 Assessment of Potential Effects of Accidents or Malfunctions 11.0 Follow-up Program 12.0 Summary of Changes to the Environment and Effects of Changes to the Environment: Marine Shipping associated with RBT2 **Information Requests** Transport Canada Response to the Review Panel's April 4, 2018 Information Requests (CEAR Document #1204)
Tseycum-19.7	Requested additional information on spill response, and information about what ships have to do such as protocols, regulations, rules, existing practices and any plans for the implementation of stricter regulations, and perhaps explaining any differences for container ships	17-Aug-2016, Meeting 08-Sep-2016, Elders Tour Debrief	**17-Aug-2016, Meeting:** Recorded comment for consideration by the Project team. **08-Sep-2016, Elders Tour Debrief:** Committed to advise Pacific Pilotage Authority and the Canadian Coast Guard of Tseycum's interest in the Voyage of a Vessel presentation. Noted the difficulty for the VFPA to have meaningful conversations about marine	**Addressed in AIEIS Appendix 2-B, Table 29 (#167):** The EIS includes information on spill response framework, roles, and methods in EIS Section 30.3. The EIS describes the parties who would be notified and assume responsibility as On Scene Commander for spill clean-up in the event of a marine spill within the VFPA's jurisdiction, including Roberts Bank. These parties include the Canadian Coast Guard and WCMRC. Conventions on liability and compensation for oil pollution damage are covered under the *Marine Liability Act* (EIS Appendix 6-A). **Additional information provided by the VFPA:**	**EIS** 6.0 Environmental Assessment and Permitting Process Appendix 6-A Legislation Relevant to the Project 30.0 Potential Accidents or Malfunctions 30.3 Risk Mitigation Framework

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
	versus other types of ships (e.g. LNG). Interested in the Pacific Pilotage Authority and Canadian Coast Guard's Voyage of a Vessel and learning more about the regulations around safe shipping. Asked about the potential for a major disaster, and the process for spill response. Requested information concerning how long it takes to respond to an incident.		shipping since other government agencies will be responsible for implementing suggested mitigation measures and enforcement, but the VFPA will pass on any related requests to the relevant agencies. Stated that when it comes to a spill, it would be the same process as for any ship. There are a lot of different parties involved, such as Transport Canada, DFO, the Canadian Coast Guard, WCMRC, and the VFPA. The VFPA would get involved if the spill occurred in our jurisdiction. If it occurred further out, it would be more those other groups, and the Pacific Pilotage Authority. Stated that the CEA Agency is hosting a presentation on this topic next week for this Project. Explained that people can connect by teleconference, if Tseycum is interested.	Transport Canada is the federal lead in regulating marine shipping in Canada, and other federal departments such as the Canadian Coast Guard, ECCC, DFO, and NRC have key roles that enhance marine safety and security, influence marine shipping activities, and help protect the marine environment. Transport Canada's Response to the Review Panel's April 4, 2018 information requests (CEAR Document #1204) provides an overview of activities undertaken by the Government of Canada related to spill management. TC IR-10 specifically discusses training, resources, and equipment available for community response, including the possibility of establishing spill response bases on reserve lands in the southern portion of the west coast of B.C. It also discusses liability considerations and improvements being made to Canada's domestic Ship-Source Oil Pollution Fund.	**AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W*SÁNEĆ Nation, Table 29 Potential Accidents or Malfunctions
Tseycum-19.8	Concerned with an accident in Tseycum Traditional Territory, particularly within the high risk area between Moresby and Stuart Islands, which is heavily used by commercial, recreational groups.	27-May-2015, Phone 04-Jun-2015, Meeting	**27-May-2015, Phone:** Recorded comment for follow-up. **29-May-2015, Meeting:** The VFPA described the accidents and malfunctions assessment. Explained that a worst-case scenario is being assessed that involves a potential ship grounding in the Boundary Passage area.	**Addressed in MSA Appendix 5-B (#98):** The assessment of potential accidents or malfunctions (MSA Section 10.0) considers a plausible worst-case spill scenario located in Boundary Passage at the south end of South Pender Island, within Segment B of the marine shipping area. Moresby and Stuart islands are located within this area. The assessment considers potential effects of a spill on marine commercial use, as well as outdoor recreation. **Addressed in MSA Section 10.0:** The VFPA's navigational jurisdiction (marine shipping associated with the project) are included in MSA Section 10.5. Several independent studies informed the assessment, including a QRA that estimated probabilities for different types of potential marine vessel accidents from a container ship in transit in the marine shipping area. Two plausible worst-case scenarios were selected for the assessment, based on the analysed probabilities of occurrence, higher risk areas, and possible consequences: • A powered grounding of a container ship on a hard substrate, resulting in a spill of 7,500 m^3 of heavy fuel oil; and • A collision between a container ship and a small vessel within an existing shipping lane, resulting in damage to the vessel and/or gear as well as serious injury or fatality. The plausible worst-case collision scenario has the potential to result in measurable residual adverse effects on human health, marine commercial use, outdoor recreation, Current Use, and asserted or established Aboriginal and treaty rights. In all cases, the identified residual adverse effects of a collision are unlikely to occur, because of the very low probability of collision. The assessment concluded that residual adverse effects are expected to be not significant for marine commercial use and outdoor recreation, but significant for human health. For Current Use, the residual effect could range from not significant to significant, depending on the capacity of the affected Indigenous group to continue to undertake Current Use. In the event of a collision between a vessel engaged in traditional use activities and a container ship, a minor to serious adverse residual impact on the ability of the affected Indigenous group to exercise Aboriginal and treaty rights associated with those activities would be expected. The identified residual adverse effects of a collision are unlikely to occur, because of the very low probability of collision.	**MSA** Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents or Malfunctions 10.5.10 Marine Commercial Use 10.5.11 Outdoor Recreation

Table 20: Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Lands and Resources for Traditional Purposes

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Tseycum-20.1	Stated that *WSÁNEĆ* people historically travelled from the island to the mainland. They have the Right to hunt and fish in the Project area. Concerned that the proposed Project takes precedence over their Rights. Stated that traditionally the area was used for reef netting and the harvest of salmon.	03-Mar-2016, Elders Workshop 04-Mar-2016, Elders Workshop 27-Jul-2016, Meeting 05-Aug-2016, Roberts Bank Tour #2	**04-Mar-2016, Workshop:** Recorded comment for consideration by the Project team. **27-Jul-2016, Workshop:** Stated that the VFPA is doing more work to look at project effects on commercial fishing and Aboriginal Food, Social, and Ceremonial ("FSC") fishing. Noted that the VFPA would like to hear more about their use of lands today. **05-Aug-2016, Tour #2:** Recorded comment for consideration by the Project team. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tseycum First Nation and the VFPA's response.	**Addressed in AIEIS Nation, Appendix 2-B Table 28 (#130):** *WSÁNEĆ* travel from the island to the mainland is described in AIEIS Section 7.0 and MSA Section 9.5. Potential Project-related effects on *WSÁNEĆ* use or the exercise of asserted or established rights and measures to address potential effects, including measures proposed by *WSÁNEĆ*, are also described in AIEIS Section 7.0. The consultative measures carried forward are as follows: • Develop a communications protocol to inform appropriate Indigenous groups of planned or unplanned events related to Project construction or operation that may affect access for the exercise of asserted or established rights; • Work with appropriate Indigenous groups to develop and implement a communications mechanism that will support dialogue between the VFPA and appropriate Indigenous groups on topics of concern that arise during the construction and initial operation phases (e.g., Project status, safety issues, effectiveness of mitigation programs); • Share with appropriate Indigenous groups information gained through environmental monitoring and follow-up programs to support monitoring, by Indigenous groups, of environmental conditions related to the exercise of asserted or established rights; and • Work with appropriate Indigenous groups to identify opportunities to participate in environmental monitoring and follow-up programs. **Addressed in MSA Section 9.5:** MSA Section 9.5 considers cultural practices, such as use of travel routes and the use of waterways. This includes an assessment of several aspects related to cultural practices, including potential changes to the following: • Access to preferred Current Use locations; and • Quality of Current Use experience. **Addressed in AIEIS Section 7.0:** Potential Project-related effects on *WSÁNEĆ* use or the exercise of asserted or established rights and measures to address potential effects, including measures proposed by *WSÁNEĆ*, are described in AIEIS Section 7.0. As noted in AIEIS Section 7.3.2, Project-related incremental impacts on the exercise of these rights (i.e., asserted Aboriginal rights, including title, and asserted or established Douglas Treaty rights to hunt or fish) would not be expected to be measurable in relation to: • Access to preferred locations for the exercise of asserted or established rights in the vicinity of the Project area (i.e., Roberts Bank, including adjacent upland areas, or the Fraser River);	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights **AIEIS** 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 7.3.2 Results of the Rights Assessment Appendix 2-B Aboriginal Issues and Interests - *WSÁNEĆ* Nation, Table 28 Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Lands and Resources for Traditional Purposes **Information Requests** Response to Additional Information Request #30 (AIR-12.04.15-30 of CEAR Document #388)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
				• Availability or quality of preferred resources associated with the exercise of asserted or established rights in the vicinity of the Project area (i.e., identified as principally salmon); • Quality of experience related to sense of place or physical heritage, safety and security, or noise, vibration, light, or air quality conditions while exercising asserted or established rights in the vicinity of the Project area; or • Cultural heritage or economic activities that may be tied to the exercise of asserted or established rights in the vicinity of the Project area. For an explanation of the use of 'measurable' in this context, see the response to AIR-12.04.15-30. **Addressed in MSA Section 9.5:** Taking a precautionary approach, the assessment of potential impacts to Indigenous groups' ability to exercise asserted or established Aboriginal and treaty rights as a result of Project-associated shipping was based on the assumption that traditional use presently occurring in the marine shipping area (i.e., Current Use) is an expression of the exercise of Aboriginal or treaty rights. Where traditional use was not identified as occurring at present within the marine shipping area, but similar use was identified as practiced in the past in the marine shipping area, asserted as an Aboriginal right, or protected under treaty, this use was assumed to be potentially exercisable as an Aboriginal or treaty right, and subject to potential impacts as a result of Project-associated shipping in much the same way as potential effects on Current Use. Considering the conclusions of the Current Use assessment, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the marine shipping area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location. These mitigation measures for addressing potential incremental effects on Current Use are expected to also be effective at addressing the potential incremental impact to the exercise of Aboriginal and treaty rights. No additional mitigation measures have therefore been suggested for the potential incremental impact to the exercise of Aboriginal and treaty rights.	
Tseycum-20.2	Concerned with the potential for terminal construction and operation to affect crabbing and fishing activities that have taken place for generations, and form a key part of Tseycum's culture and cultural transmission. Concerned with potential effects to salmon and Tseycum's ability to fish for salmon.	27-Jul-2016, Meeting 05-Aug-2016, Roberts Bank Tour #2	**27-Jul-2016, Meeting:** Explained that the construction and operation of the Project is contained within the EIS and it was found to have no adverse effects to salmon.	**Addressed in AIEIS Appendix 2-B, Table 28 (#136):** Potential effects on *W̲SÁNEĆ* use or the exercise of asserted or established rights in relation to salmon and crab harvesting in the area of the Project are described in AIEIS Section 7.0, along with measures to address potential effects, including measures proposed by *W̲SÁNEĆ*. The consultative measures carried forward are as follows:	**EIS** 11.0 Marine Vegetation 11.6.3 Potential Effect 1 – Changes in Productivity 13.0 Marine Fish 13.5 Existing Conditions 13.5.1 Pacific Salmon

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
	Noted the importance of the Fraser River for all Coast Salish people as the gathering place, because the Fraser River was the main place for the big fish run every year; people used to come here to harvest fish and gather berries along the river.		**05-Aug-2016:** Explained that with respect to salmon fishing, the assessment does not anticipate an impact since salmon fishing occurs a bit further out from the Project footprint. **10-Feb-2017, Letter from the VFPA:** Provided a copy of the AIEIS, which included Appendix 2-B summarizing the issues raised by Tseycum First Nation and the VFPA's response.	• Develop a communications protocol to inform appropriate Indigenous groups of planned or unplanned events related to Project construction or operation that may affect access for the exercise of asserted or established rights; • Work with appropriate Indigenous groups to develop and implement a communications mechanism that will support dialogue between the VFPA and appropriate Indigenous groups on topics of concern that arise during the construction and initial operation phases (e.g., Project status, safety issues, effectiveness of mitigation programs); • Share with appropriate Indigenous groups information gained through environmental monitoring and follow-up programs to support monitoring, by Indigenous groups, of environmental conditions related to the exercise of asserted or established rights; and • Work with appropriate Indigenous groups to identify opportunities to participate in environmental monitoring and follow-up programs. **Addressed in EIS Section 13.0:** An assessment was undertaken to determine the effects of the Project on the productivity of marine fish, including Pacific salmon. Information regarding effects in relation to changes in habitat availability and migration is available in EIS Section 13.0. As outlined in EIS Section 13.6.3.1, while terminal placement will result in the loss of wetted area, this is unlikely to measurably affect adult salmon returning to their freshwater spawning grounds as they are not considered habitat-limited within the LAA or RAA. For out-migrating juvenile Pacific salmon, terminal placement will increase travel distance and time spent in deeper waters along the terminal length, assuming migration is linear. Effects to vegetated habitats used by juvenile salmon, including eelgrass and intertidal marsh, are predicted to be negligible and positive, respectively. Overall, Project-related changes in juvenile salmon migration and habitats are predicted to have a minor adverse effect on productivity. **Additional information provided by the VFPA:** The Project is not located on the Fraser River and no Project-related effects are predicted on the Fraser River.	13.6 Future Conditions with the Project 13.6.3.1 Potential Effect - Changes in Productivity of Pacific Salmon **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̱SÁNEĆ* Nation, Table 28 Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Lands and Resources for Traditional Purposes 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes
Tseycum-20.3	Expressed Tseycum's support and consent towards the Project. Acknowledged that the location of the Project and the container ships travelling to and from the terminal are within their asserted Treaty and asserted traditional territory. Acknowledged and agreed that it is satisfied with the mitigation measures provided by the VFPA in respect of the environmental effects of the Project and associated marine shipping.	14-Nov-2017, Letter to Panel (CEAR Document #1111)	The VFPA has reviewed this letter and provides the following information.	The VFPA thanks Tseycum First Nation for their support of the Project.	

Table 21: Project Overview and Description

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Tseycum-21.1	Concerned with the potential for the Project scope to change (for e.g. to ship oil).	03-Mar-2016, Elders Workshop 05-Jul-2016, Roberts Bank Tour #1	**03-Mar-2016, Workshop:** Responded the Project is a proposed additional container terminal at Roberts Bank. Stated that there is no oil, no liquified natural gas (LNG), and no coal. The ships only carry the fuel to run the ship. **05-Jul-2016, Tour #1:** Responded that the Project is strictly for the shipment of containerized goods. If plans were to change and the port authority wanted the facility to ship oil instead, they would need to redo the entire environmental assessment process.	**Addressed in AIEIS Appendix 2-B, Table 2 (#14):** The proposed Project is a container terminal and does not include any coal or oil-related elements. **Addressed in EIS Appendix 7.2-B (#6):** The proposed Project is a container terminal and does not include any coal-related elements. There are no plans to modify the Project to handle bulk oil or coal. The Project will not contribute to coal dust. Coal dust from Westshore Terminals (the existing coal terminal at Roberts Bank) was included in the examination of air quality existing conditions and air quality cumulative effects assessment. The human health assessment considered the potential for contamination of edible shellfish related to Project activities resulting in re-suspension of historical deposits of coal in sediments. The assessment concluded that there were no risks to human health related to re-suspension of sediments containing coal.	**EIS** 4.0 Project Description Appendix 7.2-B Aboriginal Issues and Interests 9.2 Air Quality 27.0 Human Health **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 2 Project Planning, Development and Implementation
Tseycum-21.2	Concerned that RBT2 will lead to an increase in anchorages. Noted that they often have tankers in the inlet, bay here, and asked if they would find container ships anchored in the area.	04-Jun-2015, Meeting 4-Mar-2016, Elders Workshop	**04-Jun-2015, Meeting:** Explained the difference between bulk ships and container ships, and the rarity of anchorages (1 to 2 times per year). Clarified coal that coal is shipped from Westshore Terminals. **04-Mar-2016, Workshop:** Answered that usually no, because containers are high value cargo and follow a very rigid schedule. Stated that if ships are early, they will typically slow down to use less fuel, and therefore would not need to anchor. Stated that anchorages might be used for extreme weather or other serious disruptions. It does happen, but uncommon. Stated that most of the ships in this area would be bulk ships, like grain, who run on a different schedule. Noted that the Pacific Pilotage Authority oversees the anchorages in this area.	**Addressed in MSA Appendix 5-B (#3):** Anchorage is discussed in MSA Section 4.0. Container ships operate on a scheduled service, and adjust their speeds as required to arrive at the terminal within their assigned arrival window; thus, anchorage is not a normal requirement and there are no plans or requirements for off-terminal anchoring of container ships waiting for a berth at the new RBT2 marine terminal. Exceptions to this could occur in the event of an extreme storm event in the Pacific, resulting in refuge anchorage requirement for safety reasons, or to accommodate unexpected ship-specific maintenance, personnel, or operation issues that may arise. The assessment of marine shipping associated with the Project is based on a routine vessel transit scenario. Because anchorage only occurs in rare circumstances, anchorage is not assessed as an activity related to marine shipping associated with the Project.	**MSA** 4.0 Activity Description 4.2.2.2 Anchorage Appendix 5-B Aboriginal Issues and Interests
Tseycum-21.3	Asked what will happen if planned capacity is no longer enough. Concerned that shipping will continue to increase and affect the environment. Concerned that when capacity is no longer adequate at RBT2, the VFPA will expand the	03-Mar-2016, Elders Workshop 04-Mar-2016, Elders Workshop	**03-Mar-2016, Workshop:** Responded that container terminals get built in response to need, noting it is not like a mine where people dig out a resource and get it to market. Explained that a container terminal moves things back and forth; container shipping responds to market need. It depends on population, and how much people are consuming.	**Addressed in AIEIS Appendix 2-B, Table 2 (#13):** Additional shipping in the future is taken into account in the cumulative effects assessments. Marine vessel traffic projections for certain and reasonably foreseeable projects (EIS Table 8-8) are sourced from EIS Appendix 30-A. Projects on the list were included as of October 1, 2013. The VFPA has no plans for expansion at Roberts Bank beyond the proposed Project. The VFPA will continue to monitor the growth of container traffic through the Pacific Gateway, and will consider all available options to deliver additional capacity as it is required. Any future development at Roberts Bank would be subject to project-specific environmental approvals as appropriate.	**EIS** 2.0 Project Overview 2.2.5 Current Canadian West Coast Container Traffic Forecasts 2.2.5.2 North American Container Port Demand 2.2.5.4 Trends in Container Shipping 2.2.6 The Container Capacity Improvement Program: Meeting

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
	terminal or build a new terminal. Concerned that it will be easier to build an additional terminal at Roberts Bank in the future due to the environmental assessment and permitting completed for RBT2.			**Additional information provided by the VFPA:** By 2025, trade of goods in containers through the west coast of Canada is forecasted to be approximately 5.8 million TEUs per year (under the base case forecast). The current practical capacity of all terminals on Canada's west coast is about 4.6 million TEUs, and projects that are currently planned or underway, will increase capacity to 5.5 million TEUs by 2025, leaving a capacity shortfall of 300,000 TEUs, which would grow to 2.5 million TEUs by 2040. Without the ability to move goods efficiently and reliably through west coast ports, shippers will search for the next best alternative, with consequences to Canada's economic progress. A recent report commissioned by the port authority concluded that when the Port of Vancouver and Port of Prince Rupert reach capacity in the mid-2020s, shippers will likely be forced to use ports on the west coast of the U.S.A. such as Seattle and Tacoma, and eventually Los Angeles and Long Beach. If Canadian importers and exporters are required to move cargo to ports in the U.S.A., they would be forced to pay increased transportation costs. By 2030, the total annual additional transportation costs to re-route container cargo through ports in the U.S.A. could be as much as $80 million per year, rising to between $160 and $230 million per year in 2040 and approximately $280 million per year in 205014. These additional costs would be passed on to Canadian consumers and export markets, and would impact Canada's trade competitiveness. Canada would also lose the jobs and economic benefits that would have otherwise occurred as a result of handling Canadian trade in Canada, which for the Project is estimated at $1.2 billion in gross domestic product every year.	Increasing Demand for Containerised Trade 8.0 Effects Assessment Methods 8.1.9 Cumulative Effects Assessment Table 8-8 Project and Activity Inclusion List 30.0 Potential Accidents or Malfunctions Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment; Tables B-2 and B-3 **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 2 Project Planning, Development, and Implementation

Table 22: Project Benefits

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Tseycum-22.1	Commented that it is difficult and expensive for people to travel to the mainland for work. Requested for a private First Nations ferry system to transport community members to jobs at the terminal. Asked whether there will be accommodation on site for workers. Interested in the number of First Nations people working in port jobs. Interested in sourcing labour for the Project, and whether there is a sufficient labour pool in the Lower Mainland. Commented that it is harder to find work on the Island.	03-Mar-2016, Elders Workshop 04-Mar-2016, Elders Workshop 08-Sep-2016, Elders Tour Debrief 02-Mar-2017, Elders Meeting 30-Jan-2017, *W*SÁNEĆ All-Chiefs Meeting (Pauquachin, Tsartlip, Tsawout, Tseycum)	**03-Mar-2016, Workshop:** Responded the idea of a private ferry system has not come up before. Responded that currently there are no plans for accommodation on site; the labour pool is expected to be local. Asked if they are suggesting a labour camp. **04-Mar-2016, Workshop:** Stated that the Metro Vancouver region has a big labour pool, so the magnitude of concerns that they might have related to a Project in a less populated area do not exist here. **08-Sep-2016:** Explained that once the terminal is built it will be the operator who will be doing their own hiring. Explained that it is the VFPA's job to work with Tseycum to connect those dots to opportunities related to operations and also construction. **02-Mar-2017, Meeting:** Noted the suggestions for transportation methods and worker accommodation have been made before. Noted there are conversations yet to be had about benefits. **30-Jan-2017, Meeting:** Explained that there are many Indigenous people working as longshoremen at the port. Added that more information on employment, training, and jobs will become available later in 2017. At that point we can discuss job fairs, etc. **20-Apr-2017, Meeting:** Explained that the VFPA is not ready to hold/participate in a job fair just yet and explains the procurement process for the terminal operator is in progress. Current plans are to select a terminal operator by the end of 2017. With the terminal operator on board, Project specifications will be refined there will be more definition regarding the types of job opportunities available. Provided a copy of the RBT2 Project Information Sheets – Employment Opportunities and On-Site Mitigation. The handout provided information on construction and operation employment opportunities. **31-Aug-2017, Meeting:** The VFPA and Tseycum began negotiations for a mutual benefits agreement. On 23-Nov-2017, a mutual benefits agreement was reached.	**Addressed in AIEIS Appendix 2-B, Table 23 (#102):** The LAA for labour market and economic development was defined in EIS Sections 19.0 and 20.0 as Metro Vancouver. The LAA was structured to capture the Project's potential labour market and economic development effects that will occur locally and are detectable. While there may be members of Indigenous groups located outside of Metro Vancouver that participate in one or more aspects of Project employment, or other economic effects, the effects on the labour market and economies of these Indigenous groups were not considered to be detectable. It is not known at this time if *W*SÁNEĆ people are working in jobs at the existing terminals at Roberts Bank. The VFPA acknowledges Tseycum First Nation's interest in the potential for workers to commute to the proposed Project area. The VFPA acknowledges Tseycum First Nation's suggestion of a ferry service for Indigenous workers, and will consider this suggestion as mitigation measures are finalised. The Project components and activities, as described in EIS Section 4.0, do not include on-site worker accommodation. **Addressed in AIEIS Appendix 2-B, Table 23:** EIS Section 19.0 states that the level of local labour sourcing required for the Project is feasible in part due to the relatively large size and diversity of the region's labour force of approximately 1.4 million workers (including a construction workforce in 2013 of almost 100,000 workers), and the region's extensive construction services infrastructure. In addition, labour market capacity is anticipated within the LAA (Metro Vancouver) through a combination of worker reallocation, drawing in unemployed and part-time labour resources, and enhanced labour force participation. As stated in the EIS and in the AIEIS, the VFPA proposes to assist certain Indigenous groups in accessing potential economic opportunities resulting from the Project, including contracting opportunities and construction employment opportunities. The VFPA proposes to extend the same opportunities to Tsawout First Nation, Pauquachin First Nation, Tseycum First Nation, Tsartlip First Nation, and Malahat Nation. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs.	**EIS** 4.0 Project Description 19.0 Labour Market 19.3.1 Spatial Boundaries 19.7 Future Conditions with the Project – Potential Project-Related Effects 19.7.1 Rationale for Negligible Effect #1 – Change in Labour Market Balance 19.7.2 Potential Effect #1 – Change in Employment 20.0 Economic Development 20.3.1 Spatial Boundaries **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W*SÁNEĆ Nation, Table 23 Labour Market
Tseycum-22.2	Asked who benefits from the Project, and if First Nations will share the profits of the Project.	03-Mar-2016, Elders Workshop 15-Jul-2016, Meeting	**03-Mar-2016, Workshop:** Referenced slide 14-16 regarding Project benefits. Stated that the VFPA hopes to have discussions with Tseycum about opportunities when more information is available.	**Addressed in AIEIS Appendix 2-B, Table 3 (#24):** Consistent with the major scope of the Project at both construction and operation stages, a broad range of individuals, groups, organisations, workers, and governments are expected to benefit from the Project in the Greater Vancouver area, in the rest of B.C., and in the rest of	**EIS** 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
	Requested a share of revenue from RBT2. Stated that if the Project will result in any infringement on Douglas Treaty rights, there would need to be consultation and discussion around protection and accommodations. Interested in beginning discussions regarding Project Benefits. Specific interests include: • Cultural Workers/ Archaeological Monitors to be involved in the Project and related habitat enhancement efforts • A job fair • Potential habitat restoration sites • Contracting opportunities • Spill and accident response training and opportunities Expressed dissatisfaction with the Nations not sharing in the benefits of past and current port operations; noted the importance for the government and the VFPA to start to recognize that. Concerned about the trade-off between economic benefits and the environment and traditional food sources. Noted that Tseycum has to think about these things from a community perspective. Interested in seeing a sample MBA agreement and what VFPA's agreements are with other First Nations. Discussed MBA agreement, and requested funding to support the negotiations.	05-Aug-2016, Roberts Bank Tour #2 05-Aug-2016, Roberts Bank Tour #2 08-Sep-2016, Elders Tour Debrief 30-Jan-2017, *W̱SÁNEĆ* All-Chiefs Meeting (Pauquachin, Tsartlip, Tsawout, Tseycum) 02-Mar-2017, Meeting with Chief and Council 27-Jun-2017, Meeting 31-Aug-2017, Meeting with Chief 07-Sep-2017, Meeting with Chief and Council	Welcomed comments and suggestions for Project benefits. **15-Jul-2016, Meeting:** Noted opportunity for future discussions about legacy benefits related to the Project. Stated that the VFPA is still determining details, but potential habitat projects might be a possibility. **05-Aug-2016, Tour #2:** Responded that the VFPA have heard lots of concerns about potential environmental effects, and the acknowledgement of benefits. There have been lots of discussions about all the different parts of this, and the VFPA will continue to meet with groups and consider everyone's concerns. **08-Sep-2016, Elders Tour Debrief:** Stated that the VFPA is open to discussions about employment and contracting opportunities as well as legacy benefits. **30-Jan-2017, Meeting:** Agreed that discussions regarding project benefits should take place. **02-Mar-2017, Meeting:** Noted the VFPA's interest in hearing about the benefits Tseycum is looking for, and noted potential opportunities for working together on habitat restoration projects, and contracting for example. **16-Jun-2017, Letter from the VFPA:** *"The VFPA is interested in initiating discussions with Tseycum First Nation regarding potential legacy benefits from the Project. Legacy benefits are intended to benefit Indigenous groups if the Project proceeds, and would be over and above the economic benefits resulting from the Project. Examples of types of legacy benefits are: restoring fisheries, training, funding cultural initiatives, enhancing environmentally sensitive areas or revitalising aquaculture. It is our intent to develop this concept into a plan that reflect the interests, objectives and priorities of Indigenous groups involved in the RBT2 Project.* *We welcome input regarding potential legacy benefits for Indigenous groups that could be provided as part of the Project. With that in mind, we request a meeting with Tseycum First Nation to hear about your community's priorities in relation to this funding.* *In addition to general legacy benefits, the VFPA is interested in entering into direct discussions with Tseycum First Nation regarding a potential mutual benefits agreement ("MBA") for the Project."* **27-Jun-2017, Meeting:** Stated that regarding economic benefits, there will be funds for training and employment opportunities associated with this Project. Stated that once the VFPA has a better idea of the terminal construction plan, there will be a better idea of what types of jobs will be available. There is a slide in this presentation on	Canada. The specific benefits in terms of benefits to marine trade capabilities, employment, labour income, business revenues, gross domestic product, government revenues, and scientific advances are documented in EIS Section 34.2. For example, during a five-and-a-half-year construction period, the Project would generate significant employment benefits for B.C. Project construction would generate a total of 12,719 person-years of direct, indirect, and induced employment of B.C. workers, and approximately $1 billion in wages. In addition, as stated in EIS Section 32.3.3, the VFPA proposes to assist certain Indigenous groups in accessing potential economic opportunities resulting from the Project, including contracting opportunities as well as construction employment opportunities. The VFPA proposes to extend the same opportunities to Tsawout First Nation, Pauquachin First Nation, Tseycum First Nation, Tsartlip First Nation, and Malahat Nation. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs. #	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
	Interested in being involved in Projects that improve and maintain relationships.		the predicted economic benefits for construction and operations. **31-Aug-2017, Meeting:** The VFPA and Tseycum begun negotiations for a mutual benefits agreement. On 23-Nov-2017, a mutual benefits agreement was reached.		
Tseycum-22.3	Noted general interest in jobs and benefits, including a job fair. Asked about the types of jobs available at RBT2, expressing interest in jobs for Tseycum youth. Asked about training requirements, and on-the-job training. Asked if there will be a union at the terminal. Requested to know requirements in advance to allow time to train. Stated that Tseycum members have experience as flaggers (certified), construction workers (non-certified), water testers, harvesters, heavy equipment operators (certified), security, tug operation and admin support. Concerned that training and hiring opportunities will not be guaranteed/that they will not be provided. Suggested equal opportunity hiring, specifically of minorities, people with disabilities, and fixed-income people	01-Dec-2015, Meeting 24-Feb-2016, Meeting 03-Mar-2016, Elders Workshop 04-Mar-2016, Elders Workshop 05-Jul-2016, Roberts Bank Tour #1 08-Sep-2016, Elders Tour Debrief 02-Mar-2017, Elders Meeting 03-Mar-2017, Elders Meeting 20-Apr-2017, Meeting	**01-Dec-2015, Meeting:** Answered that is good feedback for the VFPA. **24-Feb-2016, Meeting:** Noted that the VFPA is hoping to have discussions with Tseycum about opportunities once additional information is available, and welcomes any comments or suggestions. **03-Mar-2016, Workshop:** Stated that the VFPA is currently compiling materials and information related to jobs; the VFPA will be sharing information related to the types of jobs available and what kind of training they will require so that workers can be ready. The VFPA is hoping to identify what Tseycum is interested in, and to enable some opportunities to facilitate that (e.g., job fairs, training budget) over the next few years. **05-Jul-2016, Tour #1:** Described Project benefits noting there will be job opportunities created directly related to the Project itself (its construction and operation) and also jobs indirectly created related to the whole transportation network or supply chain. **08-Sep-2016, Elders Tour Debrief:** Stated that there will be different positions that require different training and the VFPA will try and work with Tseycum to get them information on what kind of training they would need. **02-Mar-2017, Meeting:** Replied it has taken Tseycum's concerns and comments back and is now looking at how more assurance that benefits and jobs and training will go to the affected Indigenous groups. Requested Tseycum's input related to opportunities. **03-Mar-2017, Meeting:** Offered to return with the high-level information from the EIS to present on the labour market to help bring Tseycum's new Councillor up to speed. **20-Apr-2017, Meeting:** Stated that the VFPA would like to attend a job fair at Tseycum, but is not ready to hold/participate in a just yet and explained that the procurement process for the terminal operator is in progress. Stated that current plans are to select a terminal operator by the end of 2017. With the terminal operator on board, Project specifications will be refined there will be more definition regarding the types of job opportunities available.	**Addressed in EIS Appendix 7.2-B (#215):** The VFPA proposes to assist Tseycum First Nation in accessing potential economic opportunities resulting from the Project, including contracting opportunities as well as construction employment opportunities. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs. To support the development and implementation of plans to facilitate access to such Project-related benefits, the VFPA will continue engagement, initiated in December 2014. Opportunities for Indigenous training and employment opportunities related to the Project are described in EIS Section 32.3.3. **Addressed in AIEIS Appendix 2-B, Table 23 (#103):** The types of jobs that will be available at RBT2 are addressed in EIS Appendix 20-A. The VFPA is working with Indigenous groups to facilitate access to Project benefits, including training, employment opportunities, and Project contracting opportunities. As stated in the EIS, and in the AIEIS, the VFPA proposes to assist certain Indigenous groups in accessing potential economic opportunities resulting from the Project, including contracting opportunities as well as construction employment opportunities. The VFPA proposes to extend the same opportunities to Tsawout First Nation, Pauquachin First Nation, Tseycum First Nation, Tsartlip First Nation, and Malahat Nation. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs. As stated in in EIS Section 19.0, the VFPA's influence over the breadth and depth of training during construction would be limited to the Project's direct workforce. In general, the Infrastructure Developer would offer direct training and apprenticeship positions that are consistent with its labour agreements. As stated in EIS Appendix 20-A, a marine Terminal Operator would be responsible for providing and operating container handling equipment and managing utilities and most terminal maintenance. During the operation phase, the VFPA would have the role of landlord and would be responsible for some of the infrastructure maintenance, including for the Roberts Bank causeway. The Terminal Operator would arrange for the longshore workers, including supervisors who operate the ship-to-shore gantry cranes and other handling equipment that move the containers on and off ships, railcars, and drayage truck trailers, and would contract for terminal security and maintenance personnel. Labour arrangements at RBT2, including collective agreements with unions, would be the responsibility of the marine terminal operator.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 19.0 Labour Market 19.7.5 Potential Effect #4 – Change in Training Opportunities 20.0 Economic Development Appendix 20-A Economic Impact Roberts Bank Terminal 2 Technical Report 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.3.3 Mitigation Measures 34.0 Benefits to Canadians 34.2 Benefits of the Project 35.0 Effects Assessment Summaries Table 35-2 Proposed Mitigation Measures and Commitments **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W*SÁNEĆ Nation, Table 23 Labour Market 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 7.3.3 Mitigation Measures

Table 23: Traffic / Transportation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Tseycum-23.1	Asked whether transport trucks will still be used for hauling cargo to other locations up the Fraser River. Concerned with increases in truck traffic in the area as a result of the Project.	03-Mar-2016, Elders Workshop	**03-Mar-2016, Workshop:** Responded yes, trucks and rail are part of the transport network, and referred to the construction of the South Fraser Perimeter Road. Responded that traffic is being looked at by the Ministry of Transportation and Infrastructure, and the VFPA has been involved in traffic projects, such as holding lots for trucks to wait in, so they do not sit idling while they wait.	**Addressed in EIS Appendix 7.2-B (#216):** As defined in the *EIS Guidelines*, the scope of the Project includes marine, road, and rail transportation within the VFPA's jurisdiction. The scope of the assessment is the potential effects of the Project components and activities included within the scope of the Project wherever they occur, including effects that extend beyond the VFPA's jurisdiction. The scope of assessment is different for the various components being assessed, depending on the range of potential effects for each component. The effects of truck and train traffic beyond the Roberts Bank causeway is not within the scope of the environmental assessment as defined by the *EIS Guidelines*. However, incremental truck traffic travelling outside of VFPA jurisdiction, but within the assessment areas of various VCs, is an activity considered in the assessment of cumulative effects. The federal *Railway Safety Act* promotes the safety and security of the public and personnel, and the protection of property and the environment, in railway operations within the legislative authority of the Canadian government. **Addressed in AIEIS Appendix 2-B, Table 2 (#15):** As defined in the *EIS Guidelines*, the scope of the Project includes marine, road, and rail transportation within the VFPA's jurisdiction. However, incremental RBT2-associated truck traffic travelling outside of the VFPA's jurisdiction, but within the assessment areas of various VCs, is an activity considered in the assessment of cumulative effects.	**EIS** 4.0 Project Description 4.4.2.2 Operation-phase Activities, Marine Terminal Operation Appendix 7.2-B Aboriginal Issues and Interests 8.0 Effects Assessment Methods Table 8-8 Project and Activity Inclusion List **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 2 Project Planning, Development, and Implementation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document and Section providing Additional Information
Tseycum-24.1	Interested in being provided with additional and more detailed information about the ECHO program.	30-Jan-2017, *WSÁNEĆ* All-Chiefs Meeting (Pauquachin, Tsartlip, Tsawout, Tseycum)	**30-Jan-2017, Meeting:** Offered to provide an in-depth presentation with ECHO (Enhancing Cetacean Habitat and Observation) Program representatives who can provide more detailed information at a future date. **10-May-2017, Email from the VFPA:** Provided Tseycum First Nation with a copy of the ECHO Program 2016 Annual Report and stated "As discussed in the last *WSÁNEĆ* Chiefs meeting, the port authority is available to provide a presentation about the program at a time convenient for the group" **05-Oct-2017, Email from the VFPA:** We have also heard interest form the group in a presentation from our ECHO Program, which relates to marine mammals. More information on the program can be found at the following link: https://www.portvancouver.com/environment/water-land-wildlife/marine-mammals/echo-program/. The ECHO team is available to book a meeting starting in November, so please suggest a date if there is interest. **12-Dec-2017, Meeting:** The VFPA hosted a *WSÁNEĆ* All-Chiefs Meeting, and presented on the ECHO Program. Tseycum First Nation was invited, but unable to attend.	**Addressed in response to IR4-10:** As noted in IR4-10, in 2014, the VFPA-led ECHO Program is a collaborative initiative aimed at better understanding and managing the impact of shipping activities on at-risk whales throughout the southern coast of B.C. The VFPA-led ECHO Program engages and involves key regional interested parties to maximise program success and help ensure that mitigation and management measures developed through the program are informed by social, cultural, economic, and environmental sustainability interests. The ECHO Program is guided by the advice and input of an advisory working group, and supported by a federal government advisory committee and associated technical committees. Through engagement and consultation with stakeholders, including Indigenous individuals, the ECHO Program has initiated or supported short-term projects, scientific studies, and educational initiatives to fill knowledge gaps necessary to inform the development of credible, science-based threat reduction solutions and management options to reduce cumulative effects of shipping to at-risk whales in the region. Further information about ECHO Program can be found at: https://www.portvancouver.com/environment/water-land-wildlife/echo-program/.	**Information Requests** Response to Sufficiency Information Request #10 (IR4-10 of CEAR Document #1051)

APPENDIX IR10-01-C17

MALAHAT NATION: ISSUES, VIEWS, AND CONCERNS RELATED TO THE PROPOSED PROJECT AND MARINE SHIPPING ASSOCIATED WITH THE PROJECT

Table 1: Air Quality – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-1.1	Asked about the study area for the air quality assessment, and whether the focus east of the RBT2 footprint is due to traffic associated with moving containers. Asked whether wind force was a consideration in the air quality assessment.	26-Nov-2015, EIS Results Workshop #1 - *W̲SÁNEĆ* Nation	**26-Nov-2015, Workshop:** Explained this is because of meteorological conditions in the area, and stated that dispersion was considered. Stated that receptors east of the Roberts Bank Terminal 2 (RBT2 or Project) footprint (i.e., people on boats) were also considered. Responded that Environment Canada asked the Vancouver Fraser Port Authority (VFPA) to do a sensitivity analysis using a data set called aircraft communications addressing and reporting system (ACARS). Explained that aircraft have monitoring data and it was used to run a sensitivity analysis.	**Addressed in EIS Appendix 7.2-B (#42):** An assessment was carried out to predict potential changes in air quality as a result of the Project. The results of the air quality assessment were used in the assessments of human health and current use of land and resources for traditional purposes (Current Use). The assessment modelled Project-related emission sources during the construction phase, and fuel combustion during the construction and operation phases, and compared them to modelled existing conditions and future expected conditions. Existing conditions considered emissions from marine vessels, trains, trucks, vehicles, and equipment from the existing Westshore Terminals, Deltaport Terminal, and BC Ferries Terminal, while emissions from industrial, commercial, and residential sources within Delta were represented through measured air quality levels in Tsawwassen. A general trend of decreasing concentrations of contaminants has been observed and is expected in the Lower Fraser Valley for some criteria air contaminants, as well as for some trace organic contaminants. Coal dust is also included in the assessment of air quality in existing conditions, in the future with the Project, and in the cumulative effects assessment. Hypothetical maximum emissions scenarios were used to conservatively estimate existing conditions and potential changes from the Project. Estimated emissions and predicted ambient concentrations did not account for the inclusion of shore power as part of the Project, which is expected to decrease future emissions from ships at berth ultimately improving air quality. The assessment concludes that: • Air quality will improve in the future, with or without the Project, as a result of improvements in engine technologies and the use of cleaner fuels. • Cumulative changes, incorporating the Project and other certain and reasonably foreseeable projects and activities, are predicted to be small relative to expected future ambient air quality levels. • Project construction activities are predicted to cause a small increase in concentrations of some contaminants. • Criteria air contaminant (i.e., carbon monoxide, nitrogen oxides, sulphur dioxide, particulate matter, and ground-level ozone) and trace organic contaminant (i.e., formaldehyde and other contaminants related to fuel combustion) levels are predicted to be below air quality criteria on land, with limited exceptions. • The Project is expected to have a negligible effect on future ozone levels and to increase greenhouse gas emissions (i.e., carbon dioxide, methane, and nitrous oxide). • Although Project activities would emit black carbon, black carbon is expected to decrease in the future with the Project due to equipment fleet turnover at existing Roberts Bank terminals to newer engines that meet more stringent emission standards for particulate matter. The Project is not expected to result in any significant adverse effect on human health, including from changes in air quality. During operation, it is unlikely that Project-related exposures to air emissions would result in health effects. The only residual effect associated with air quality changes would be experienced by individuals on the water near the terminal during construction due to short-term and infrequent dust generation.	**Environmental Impact Statement (EIS, CEAR Document #181)** Appendix 7.2-B Aboriginal Issues and Interests 9.0 Physical Setting 9.2 Air Quality 9.2.5 Methods 9.2.6 Existing Conditions Table 9.2-4 Air Quality Criteria for Criteria Air Contaminants Table 9.2-5 Air Quality Criteria for Toxic Organic Contaminants 9.2.7 Expected Conditions 9.2.8 Future Conditions with the Project 9.2.9 Future Conditions with the Project and Other Projects and Activities Appendix 9.2-A Air Quality Study Main Report Appendix A - Emissions Inventory Appendix B – Existing Air Quality Appendix C - Air Dispersion Modelling Appendix F - Ships Underway Appendix H – Westshore Coal Dust Assessment **Additional Information to the EIS – *W̲SÁNEĆ* Nation (AIEIS; CEAR Document #930)** Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 8 Air Quality

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				The benefits of existing initiatives are realised in the existing emissions monitored at local air quality stations in Metro Vancouver. Future benefits, such as those associated with improvements in fuel (see EIS Section 9.2) are based on their anticipated level of benefit to future air quality emissions. **Addressed in Appendix 2-B, Table 8 (#44):** The local study area (LSA) for the assessment of air quality included a 19 km by 16 km area, which extended beyond the Project footprint as far east as Boundary Bay, south to the tip of Point Roberts, U.S.A., and north to the southern boundary of Richmond. The LSA captures the extent of emissions originating within the Project footprint. Characterisation of the existing climate and meteorological conditions in the vicinity of the Project is important because these are the main forces driving the transport (dispersion or mixing) of emissions in the atmosphere. To ensure that the meteorological conditions were adequately represented, the area over which the air dispersion model was run included all of North Delta and most of Richmond, a domain of approximately 26 km x 24 km (EIS Figure 9.2-1). The air dispersion model included site-specific meteorological data inputs, as described in Appendix C of EIS Appendix 9.2-A.	
MN-1.2	Concerned with effects to air quality associated with container ships travelling around Vancouver Island.	26-Nov-2015, EIS Results Workshop #1 - *W̲SÁNEĆ* Nation	**26-Nov-2015, Workshop:** Responded that more information is provided in the MSA.	**Addressed in MSA Section 7.1:** The potential changes in air quality due to air emissions from marine shipping associated with the Project are assessed in MSA Section 7.1. Criteria air contaminants due to emissions from large marine vessels will be lower in 2030, with or without Project-associated vessel emissions, compared to existing conditions, due to the implementation of fuel and technology standard improvements through the North American Emission Control Area (under the responsibility of the International Maritime Organization (IMO)). Air quality objectives and standards for nitrogen dioxide, sulphur dioxide, and fine particulate matter will not be exceeded with ship emissions in the marine shipping area under future cumulative conditions, including Project-associated vessel emissions. The emissions of these criteria air contaminants from Project-associated ships are expected to represent less than 8% of the total annual cumulative emissions from large marine vessels along the vessel routes, and approximately 6% of total annual cumulative greenhouse gas emissions. Trace particulate organic matter emissions (the organic fraction of particulate matter emissions) are projected to decrease substantially compared to existing conditions, due to emission reduction requirements set out for ships operating within the North American Emission Control Area. This assessment predicted that emissions of other trace gaseous volatile organic gas compounds will increase by more than 20% with large marine vessel activity in the future, although some trace organics may decrease with the implementation of the North American Emission Control Area. Vessel traffic associated with the Project is expected to represent eight of the 20 percentage points of this increase. While there are no criteria for diesel particulate matter in Canada, concentrations within the marine shipping area are currently above acceptable source impact limits for Washington state and are projected to remain above this limit in the future. The levels of other trace organics are projected to be below air quality objectives and limits in the future.	**Marine Shipping Addendum (MSA, CEAR Document #316)** 7.1 Air Quality
MN-1.3	Interested in Project-related commitments or opportunities that move toward being carbon neutral and greenhouse gas	26-Nov-2015, EIS Results Workshop #1 - *W̲SÁNEĆ* Nation	**26-Nov-2015, Workshop:** Stated that the VFPA has incentives for better environmental performers, and these incentives are described on the VFPA's website.	**Additional information provided by the VFPA:** The VFPA leads a suite of initiatives that reduce air emissions associated with key port activities: ships, trucks, cargo-handling equipment, and terminal activities. The VFPA's approach is to collaboratively work with industry and stakeholders in each sector to develop programs that respond to their unique operating context and meet	

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	remediation, in the context of helping to address impacts to fisheries. Noted that they are exploring carbon sequestration, for which there is interest in exploring and seeking potential support from VFPA.	28-Jul-2016, Issues Workshop - Island Nations 30-May-2017, Meeting with Administrative Staff	Explained that the incentive program is called EcoAction. There are financial incentives for using shore power, which is when vessels plug into the hydro grid for power as opposed to burning diesel. For trucking, the VFPA has no real control over trucking after it leaves VFPA jurisdiction. However, the VFPA restricts the type of engines that are allowed to operate on VFPA property, which provides a method of regulation. Referred to improvements in infrastructure such as truck staging areas, which decrease truck idling. **28-Jul-2016, Workshop:** Undertook to provide information on port-wide initiatives that apply to the Project, such as shore power. **15-Aug-2016, Email from the VFPA:** Under the *Canada Shipping Act, 2001*, the Vessel Pollution and Dangerous Chemicals Regulations establish standards regarding pollution from vessels additional to the standards set out in the International Convention for the Prevention of Pollution from Ships (MARPOL). This applies to air emissions and greenhouse gases from vessels for (a) vessels in waters under Canadian jurisdiction; and (b) Canadian vessels everywhere (http://laws-lois.justice.gc.ca/eng/regulations/sor-2012-69/FullText.html). The VFPA promotes and recognises cleaner ships through our harbour through our EcoAction program. Ships obtain up to 47% off harbour dues for implementing emissions reduction measures and other environmental practices. In 2009, the Canada Place cruise ship terminal became the first in Canada and third in the world to offer shore power for cruise ships, allowing ships to turn off their engines while in port. More information on our initiatives aimed at improving air emissions from shipping can be found on the following webpage: https://www.portvancouver.com/environment/air-energy-climate-action/marine/. **30-May-2017, Meeting:** Recorded comment for consideration by the Project team.	industry leading environmental objectives. Key initiatives include the EcoAction Program, the Northwest Ports Clean Air Strategy, Air Emissions Inventories, Energy Action Initiative, and environmental requirements through the Truck Licensing Program. Information regarding the VFPA's Air, Energy, and Climate Action initiatives can be found at: https://www.portvancouver.com/environment/air-energy-climate-action/.	

Table 2: Archaeological and Heritage Resources – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-2.1	Asked for an explanation why current field studies and/or an Archaeological Impact Assessment were not undertaken for the EIS marine shipping assessment.	16-Dec-2015, Letter to the Canadian Environmental Assessment Agency (CEA Agency; CEAR Document #378)	**12-May-2016, Letter from the CEA Agency (CEAR Document #404):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in *Updated EIS Guidelines*, section 17:** Section 17 of the *Updated EIS Guidelines* notes: *"It is likely that a Tier 1 approach (Qualitative; description based on expert opinion and traditional and local knowledge) will be an appropriate level of detail in most cases. For select environmental effects and locations where there may be a higher risk of environmental effects, a Tier 2 approach (Semiquantitative; measured site-specific data and existing site information) would likely be an appropriate level of detail.* *To the degree possible, the proponent [the VFPA] should maximise the use of existing material that is relevant to marine shipping activities associated with the Project which is beyond proponent's care and control and within the 12 nautical mile limit of the territorial sea. Existing material may be utilized from academic studies, work of government and non-government working groups, past or ongoing environmental assessments, Aboriginal traditional knowledge reports or any other source the proponent deems appropriate for its presentation of this material".*	***Updated Guidelines for the Preparation of an Environmental Impact Statement* (*Updated EIS Guidelines*; CEAR Document #177)**
MN-2.2	Concerned about the potential for ship wake to erode the shoreline resulting in changes to food availability (especially invertebrates) as well as deterioration or destruction of archaeological sites and culturally important areas (especially burial sites).	12-Sep-2016, Malahat Traditional Use Study	Recorded comment for consideration by the Project team.	**Addressed in MSA Section 9.4.6:** The potential effects on archaeological and heritage resources from vessel transit (marine shipping) are viewed as negligible because the only physical mechanism for effect, vessel wakes, are predicted to be within the natural variation in size of wind waves and would reflect only a small percentage of the annual maximum storm wave energy. **Addressed in response to IR10-21:** The VFPA's response to IR10-21, as requested by the Review Panel, discusses potential Project effects to sites of physical and cultural importance to Indigenous peoples. **Addressed in response to IR10-23:** The VFPA's response to IR10-23, as requested by the Review Panel, discusses potential loss or deterioration of archaeological sites resulting from natural and ship-wake waves greater than 10 cm. **Addressed in IR13-19:** The VFPA's forthcoming response to IR13-19 will further discuss potential effects of shoaling on shoreline structures and sites of physical and cultural heritage importance.	**MSA** 9.4 Archaeological and Heritage Resources 9.4.5.1 Existing Conditions – Physical Environment 9.4.6.1 Negligible Effect #1 – Disturbance from Vessel Wake **Information Requests** Response to Sufficiency Information Request #21 (IR10-21) Response to Sufficiency Information Request #23 (IR10-23) Response to Sufficiency Information Request #13 (IR13-19)

Table 3: Coastal Birds – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-3.1	Noted the importance of birds to Malahat. Concerned with potential impacts to birds and migratory birds. Concerned that birds could be adversely affected by the Project as it relates to changes to biofilm. Requested additional information and discussion on the topic of coastal birds.	26-Nov-2015, EIS Results Workshop #1 - *W̲SÁNEĆ* Nation 09-Feb-2016, Meeting 28-Jul-2016, Issues Workshop - Island Nations 30-May-2017, Meeting with Administrative Staff	**26-Nov-2015, Workshop:** Noted that the following day's presentation would include migratory birds. Explained that above-ground noise is identified as a potential effect, which is carried forward to the assessments for migratory birds and humans. **27-Nov-2015, Workshop:** Presented information on migratory birds, including information on potential effects associated with the Project. **09-Feb-2016, Meeting:** Agreed to come back and speak more about potential effects to birds. **28-Jul-2016, Workshop:** Responded that coastal birds will be considered as a topic for the next workshop. **30-May-2017, Meeting:** Committed to provide more information on birds and mitigation measures. **12-Jul-2017, Email from the VFPA:** Provided the section references to the EIS that discusses mitigation for marine biophysical valued components (VCs), including describing the proposed approach for mitigation to address Project-related effects to coastal birds. **04-Aug-2017, Email from the VFPA:** Updated the Consultation Plan to include identifying migratory birds and marine mammals as key topics for further discussion. **14-Sep-2017, Email from the VFPA:** Asked if Malahat would like to meet to discuss birds and marine mammals.	**Addressed in AIEIS Appendix 2-B, Table 20 (#89):** The Fraser River estuary is an important area to many coastal birds because of its abundant food sources. The Roberts Bank area supports an abundance and diversity of bird species. An assessment was undertaken to determine the effects of the Project on coastal birds, including migratory birds. The scope and methods of the coastal birds assessment are described in EIS Section 15.0. Anticipated Project-related changes to coastal birds were assessed by considering potential changes in productivity, abundance, density, species diversity, distribution, and suitable habitat area, for the seven sub-components. For some sub-components, foraging opportunity and contaminant levels were also examined. The assessment concludes that the Project is not expected to result in any significant adverse residual effects or significant residual cumulative effects to coastal birds. Changes in the productive potential of shorebirds, herons, raptors, gulls and terns, and passerines are not anticipated. Decreases to the productive potential of waterfowl and diving birds are expected to be minor. Effects to diving birds can be partially offset through the creation of onsite eelgrass and subtidal rock reef habitats, which would create habitat for their prey, which include mussels and other invertebrates. The importance of bird species to Indigenous groups is addressed in the Current Use assessments in EIS Section 32.2 and AIEIS Section 7.0.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 15.0 Coastal Birds 17.0 Mitigation for Marine Biophysical Valued Components 32.2 Potential or Established Aboriginal or Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes **AIEIS – *W̲SÁNEĆ* Nation** Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 20 Coastal Birds 7.0 Potential or Established Aboriginal or Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes
MN-3.2	Interested in bird surveys. Stated that Malahat Nation has been in discussion with the Ministry of Transportation and Infrastructure regarding linking data to migratory birds.	29-Jun-2017, Site Tour	**29-Jun-2017, Site Tour:** Recorded comment for consideration by the Project team.	**Additional information provided by the VFPA:** In 2012, the VFPA initiated field, desktop (i.e., literature review), and modelling studies to inform the understanding of existing conditions at Roberts Bank. Building on available information, these studies were designed to address known data gaps, as well as issues and interests of Indigenous groups, stakeholders, and the public, as well as to provide baseline information to assess Project-related effects as part of the environmental assessment. Some Technical Data Reports are appendices to EIS sections (see EIS Section 15.4.1 related to bird surveys and migratory birds), while others are available publicly on the RBT2 website: http://www.robertsbankterminal2.com/environmental-assessment/technical-data-reports/.	**RBT2 Project website** http://www.robertsbankterminal2.com/environmental-assessment/technical-data-reports/ **EIS** 15.4.1 Desktop and Field Studies **Information Requests** Response to Sufficiency Information Request #4 (IR8-04 of CEAR Document #1110)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				Technical reports prepared in support of the Panel Review currently underway are posted to the CEA Agency Registry: http://www.ceaa-acee.gc.ca/050/evaluations/document/exploration/80054?culture=en-CA As an example, the VFPA's response to IR8-04 includes technical volumes as appendices: Appendix IR8-04-A Shorebird and Biofilm Dynamics during Northward Migration and Appendix IR8-04-B Investigation of Selective Feeding of Biofilm Communities by Shorebirds during Northern Migration.	
MN-3.3	Stated that there may be interference in Malahat collection of bird eggs during the spring, which occurs primarily along rocky shorelines facing the shipping route. Stated that based on Malahat traditional knowledge ducks are present in deeper waters on windy days and there may be increased interaction between tankers and ducks on windy days.	12-Sep-2016, Malahat Traditional Use Study	Recorded comment for consideration by the Project team.	**Additional information provided by the VFPA:** The Project is a proposed container terminal; therefore, only container vessels will call. Tanker ships are used to transport oil and will not call at RBT2. It is assumed in this comment that the term tanker is intended to refer to container vessels. **Addressed in MSA Section 9.5.5.1:** As noted in MSA Section 9.5.5.1, as ship-related wave heights are expected to be within the spectrum of wind-generated waves (i.e., smaller than 10 cm) for a larger percentage of the time, and since Current Use activities would not be expected to always occur during calm conditions, wake from Project-associated vessel traffic is not expected to result in a measurable change in access to preferred Current Use locations, either in open water or along the shorelines within the marine shipping area. **Further information provided by the VFPA:** Although underwater marine bird strikes were not considered as a potential interaction, as noted in MSA Section 8.3, collisions with ships (above the surface) resulting in bird mortality are anticipated to result in a residual effect of loss of productivity, although there are no known reports of such mortalities from vessels transiting shipping lanes within the marine shipping area. This effect, therefore, is not widespread and collisions with vessels are most likely infrequent and, if they occur, are expected to be limited to a small proportion of the population. When considering cumulative effects of increased vessel activity in the marine shipping area, including marine vessel traffic associated with the Project in combination with other existing and future projects and activities, individual mortalities are likely to increase. However, the loss of productivity would not compromise long-term population integrity, and the residual effect is expected to be not significant and unlikely to occur. Cumulative effects are also unlikely to occur.	**MSA** 8.3 Marine Birds 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.5.1 Negligible Effects of Vessel Transit on Current Use

Table 4: Coastal Geomorphology – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-4.1	Requested additional information about the directional impact of wave travel.	09-Feb-2016, Meeting	**09-Feb-2016, Meeting:** Committed to follow-up to arrange a presentation. **06-Jul-2016, Meeting:** The VFPA met with Malahat to discuss marine shipping. The presentation included a discussion on the wave environment. Below is an excerpt from the presentation: • The existing wind-wave climate varies greatly across the local study area. • Most wind-generated wave heights are in the range of 10 to 50 cm, reaching up to 200 cm. • Vessel wake is a small component of the existing wave climate. • Wake waves larger than 10 cm would reach shorelines only in Segment B of the marine shipping area in three zones. • Container ship wake waves are expected to be indistinguishable from natural waves 54% to 70% of the time, depending on the zone in Segment B. • Vessel wake waves approaching shorelines would be between 10 cm and 12.5 cm high. • Based on the spectrum of wind-generated waves, ship wake would be indistinguishable from wind-generated waves except during calm conditions. • Project-associated traffic is expected to increase total vessel traffic by 6%. • The potential for wake-generated waves to occur during calm conditions is also expected to increase by 6%. • Cumulative vessel traffic (all vessels transiting the marine shipping area) is expected to increase by 36%. • The potential for small wake-related waves (10 to 12.5 cm) is anticipated to cumulatively increase by 36%.	**Addressed in MSA Section 7.2:** As noted in MSA Section 7.2, an assessment of the wave environment was conducted to determine potential changes from vessel transits associated with the Project to wake-generated waves. Ship wake that is less than 10 cm in height is considered to be well within the range of natural conditions and therefore defines the threshold for consideration in the assessment. In Segment A (southern Strait of Georgia), the estimated Project-associated vessel wave heights are predicted to be equal to or less than 0.03 m due to the slow vessel speed observed in this segment. Thus, the vessel wake from Project-associated vessels are not expected to introduce new navigational hazards for small-craft operators in the southern Strait of Georgia during calm conditions. **Addressed in response to IR7-21:** As noted in the VFPA's response to IR7-21, although the probability slightly increases from Project-associated vessels (0.034% during calm conditions), wake-generated waves from Project-associated vessels will not result in a change to the shorelines in the marine shipping area due to the similarity of interaction at the shoreline from wake-generated and wind-generated waves. **Addressed in response to IR7-22:** The VFPA's response to IR7-22, as requested by the Review Panel, discusses the potential effects of waves generated by Project-associated vessels during calm conditions on small craft engaged in activities in open water at various points and various distances from shore throughout the marine shipping area. For all segments discussed in the MSA, vessel wakes from Project-associated vessels are not expected to introduce new navigational hazards for small-craft operators. The vessel wakes from Project-associated vessels are not expected to introduce new navigational hazards for small-craft operators, including operators undertaking fishing activities, because of the existing energetic wave climate.	**MSA** 7.2 Wave Environment **Information Requests** Response to Sufficiency Information Request #21 (IR7-21 of CEAR Document #1049) Response to Sufficiency Information Request #22 (IR7-22 of CEAR Document #1049)
MN-4.2	Concerned that bigger ships (such as Triple E ships) calling on RBT2 will have an impact on the current tidal and coastal geomorphic conditions of the area.	06-Jul-2016, Meeting	**06-Jul-2016, Meeting:** Stated that the MSA covers this topic. Stated that it depends on the speed and draught of the ship. Committed to following-up with more information. Stated that those ships (Triple E ships) are not designed for use in Pacific Northwest water. Stated that all ports that they dock at would have to be able to accommodate that size ship and there is not a demand for that currently; if there were a progression toward those in 2040 or 2050, the number of ships calls would decrease. Stated that wake-generated waves would only interact with 2% of the coastline and the VFPA has not assessed that for a larger ship. **15-Aug-2016, Email from the VFPA:** *"Wave height from a "representative vessel" vs a Triple-E size ship.*	**Addressed in AIEIS Appendix 2-B, Table 11 (#51):** Potential changes to the wave environment from ship wake (from Project-associated vessels) was assessed for a representative container vessel with approximately 9,000 to 9,500 twenty-foot equivalent units (TEUs) capacity in MSA Section 7.2. In addition to the study of a representative vessel, a sensitivity analysis of other vessel types with differing hulls was also conducted (see MSA Appendix 7.2-B). The analysis of wake height varied by a little over 10 cm in response to the vessel hull type, compared to the representative vessel. Coastal geomorphic conditions are not expected to change from wake-generated waves as vessel wake is a small component of the existing wave climate, which is influenced by wind-generated waves and ocean swell.	**MSA** 7.2 Wave Environment 7.2.5 Incremental Changes to the Wave Environment from Marine Shipping Associated with the Project Appendix 7.2-B Ship Wake Calculations **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̱SÁNEĆ* Nation, Table 11 Coastal Geomorphology

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			The wave study in the Marine Shipping Addendum calculated the size of a wave when it arrived at the shoreline. Wave height is determined by characteristics of the hull and vessel speed. A Triple-E vessel is larger than the "representative vessel" used to calculate wake for the purposes of the marine shipping assessment, but a Triple-E vessel typically travels at a slower speed to achieve greater energy efficiency. *The graph [provided in the letter] shows the size of vessel wake generated by different types of vessels, and the size of waves as they travel further from the vessel. At a distance of 1,000 m away from the vessel, wake from a tug boat will be approximately 0.18 m and wake from an empty conventional motor vessel would be about 0.05 m. While a Triple-E vessel was not directly assessed, our coastal geomorphology consultant estimates that a Triple-E hull shape would likely plot just a bit higher than the "vessels" line but lower than the "tugs and patrol boats" line [in the graph referenced].* *If helpful, we could arrange a follow-up discussion (either at a workshop or one-on-one) on this topic."*		

Table 5: Effects Assessment Methods (including Cumulative Effects)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-5.1	Concerned with statements in the EIS that the proposed Project will not result in significant environmental effects. Stated that Malahat is of the view that sizable projects such as RBT2 do create significant environmental impacts. Requested clarification regarding what barometer is used for determining whether a significant environmental effect will occur. Stated that the wording of the EIS and AIEIS fail to encapsulate impacts of the proposed Project on Malahat. Commented that proponents never state that they anticipate significant effects; effects are always characterised as negligible and reversible. Concerned that consultants write reports that their clients want to see. Asked how the difference of opinion regarding significance of effects will be addressed.	26-Nov-2015, EIS Results Workshop #1 - *W̱SÁNEĆ* Nation 09-Feb-2016, Meeting 15-Dec-2016, Letter 30-May-2017, Meeting with Administrative Staff	**26-Nov-2015, Workshop:** Stated that the VFPA was asked to define the threshold for a significant effect for each VC, and then assess whether the residual effect would be significant. Clarified that saying there will be no significant effect does not imply that there is no residual effect. The significance determination is done by experts and the Panel will determine if the definition of significance is correct. **09-Feb-2016, Meeting:** Noted the language is linked to the CEA Agency guidelines the VFPA is responding to. The term 'significant environmental effects' is environmental assessment language and the VFPA is required to use it. **30-May-2017, Meeting:** Responded that the EIS includes the conclusions of the VFPA or its consultants, but the panel process is an independent review of the assessment. Suggested that Malahat could submit concerns to the Review Panel for consideration. Responded it is up to the Review Panel to conclude on the effects of the Project. Outstanding concerns will be addressed through continued communications with Malahat, and discussions regarding the follow-up program and mitigation measures.	**Addressed in AIEIS Appendix 2-B, Table 5 (#32):** As required in the *EIS Guidelines* (part 2, section 13), the EIS presents a detailed analysis of the significance of the residual environmental effects on VCs, which is consistent with the approach described in the CEA Agency's *Reference Guide Determining Whether a Project is Likely to Cause Significant Adverse Environmental Effects*. The threshold of significance is defined for each VC, taking into consideration any relevant applicable quantifiable thresholds that may be established by regulation or policy (e.g., an air or water quality limit), as well as the resilience of the VC and other factors that influence the long-term sustainability of the VC (e.g., factors affecting its population). In this regard, the key 'barometer' of significance determination is usually the long-term integrity or sustainability of the VC. The EIS describes a range of residual effects of the Project, including some that are predicted to be negligible and reversible and some that are predicted to be not reversible, not significant, or (in the case of cumulative effects on marine mammals) significant. **Additional information provided by the VFPA:** The VFPA does not make the final determination of significance of potential environmental effects of the Project. The Minister of Environment and Climate Change will determine whether the Project is likely to cause significant adverse environmental effects, taking into account mitigation measures and, if significant adverse environmental effects are likely, the federal Cabinet decides whether these effects are justified in the circumstances. A decision statement is issued that sets out the decision and, as necessary, associated conditions with which the VFPA must comply should the Project be allowed to proceed.	**EIS** 8.0 Environmental Assessment Methods **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̱SÁNEĆ* Nation, Table 5 Effects Assessment Methods
MN-5.2	Requested the definitions of "minor" and "temporary" in the EIS. Asked how the use of the term "minor" compares to the term "very low" in the assessment.	27-Nov-2015, EIS Results Workshop #2 - *W̱SÁNEĆ* Nation 05-Jan-2017, Letter	**27-Nov-2015, Workshop:** Stated that for birds or other species, the terminology used to describe potential effects is negligible, minor, moderate, or high. Negligible means not measurable (e.g., the predicted effect is within the margin of error for the model). Minor means that the effect is measurable. The term 'very low' refers to a relative proportion of a bird population that are expected to die as a result of vehicle collision-related mortalities. Significance is determined as either 'significant' or 'not significant'; a level is not attributed.	**Addressed in AIEIS Appendix 2-B, Table 5 (#37):** In each VC assessment section, a table titled 'Identification of Potential Project Interactions' provides a potential effect rating for each interaction identified, as well as a description of the nature of the effect. Potential effects (before mitigation) are characterised as 'minor', 'moderate', or 'high' in VC assessments in order to provide context to the descriptions of potential effects. These terms are not based on quantitative thresholds, and the rationale for the ratings is provided in the same table where the rating is provided. **Addressed in response to AIR-12.04.15-30:**	**EIS** Sections 11.0 through 28.0 30.0 Potential Accidents or Malfunctions Table 30-2 Probability Categories and Return Periods for Potential Project-related Accidents or Malfunctions **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̱SÁNEĆ* Nation, Table 5 Effects Assessment Methods

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			05-Jan-2017: Recorded comment for consideration by the Project team.	Residual effects (after mitigation) are characterised using a set of residual effect criteria ratings. 'Low' is one of the ratings used to characterise the 'magnitude' criteria in the residual effects assessment (i.e., 'Low', 'Moderate', or 'High'). Each rating is defined on VC-specific basis to account for the natural variability for each species. The term 'very low' is used in the EIS to characterise levels of habitat use or presence of biophysical species in assessment areas (see AIR-12.04.15-09). It is also used to describe the probability (associated with a range of quantitative return periods) of accident and malfunction scenarios (EIS Section 30.0).	**Information Requests** Response to Additional Information Request #9 (AIR-12.04.15-9 of CEAR Document #388) Response to Additional Information Request #30 (AIR-12.04.15-30 of CEAR Document #388)
MN-5.3	Asked if the study area for marine shipping stops at the Canada-US border. Asked if there are effects that extend beyond the border.	27-Nov-2015, EIS Results Workshop #2 - *W̲SÁNEĆ* Nation	**27-Nov-2015:** Responded that the study area stops at the border. It is possible that effects extend further, but the majority are contained in the Roberts Bank study area. Underwater noise is an exception. Stated that total suspended material extends a bit further as well (as underwater noise). If there was no effect in the local assessment area (LAA), where the effect would be most concentrated, it was assumed that the effect would not extend past the border. The extent of effects also depends on the species.	**Addressed in EIS Section 8.1.3:** EIS Section 8.1.3 discusses how assessment boundaries were established. Spatial assessment boundaries were identified for each VC based on the spatial characteristics of the Project and the VC (e.g., location, distribution, range), and the areas within which Project-VC interactions and effects are expected to occur. When determining the spatial boundary, the Project team also considered, as applicable, available community knowledge and Indigenous Traditional Knowledge (ITK), information on current land and resource use by Indigenous groups, and other pertinent ecological, technical, social, and cultural considerations, as well as input from government, Indigenous groups, and the public. Administrative boundaries may include political, economic, fiscal, or social constraints on data collection or analysis. Where administrative boundaries constrain the identification or assessment of potential effects of the Project on a VC, the nature of those administrative boundaries and their effect(s) on the assessment for that VC are documented. EIS Appendices 29-B and 29-C summarise changes the Project may cause to the environment (for intermediate components (ICs) and VCs, respectively) on federal lands or lands outside of B.C. (including outside of Canada), as well as the mitigation measures, follow-up and related commitments, and the residual environmental effects (including cumulative environmental effects) identified in relation to this category of environmental effects. **Addressed in response to IR-7.31.15-14:** IR-7.31.15-14 summarises the nature and characteristics of transboundary changes to ICs or potential effects to VCs related to the Project.	**EIS** 8.1.3 Establishment of Assessment Boundaries Appendix 29-B Changes to the Environment that would occur on Federal or Transboundary Lands (Intermediate Components) Appendix 29-C Changes to the Environment that would occur on Federal or Transboundary Lands (Valued Components) **Information Requests** Response to Information Request #14 (IR-7.31.15-14 of CEAR Document #314)
MN-5.4	Requested more information on cumulative impacts and shipping.	15-Jul-2015, Meeting 08-Sep-2015, Letter	**15-Jul-2015, Meeting:** Recorded comment for follow-up.	**Additional information provided by the VFPA:** The Project is a proposed container terminal; therefore, only container vessels will call. Tanker	**MSA** Appendix 5-B Aboriginal Issues and Interests

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	Concerned with the cumulative effects of tanker traffic and the number of different companies proposing projects that will increase traffic. Concerned about the cumulative nature of impacts from marine shipping on air quality, vessel strikes to marine mammals, and coastal geomorphology. Concerned with the cumulative impacts to tides and fish. Concerned with the conclusion of negligible wave effects and comparison to a storm event, because shipping occurs every day leaving no calm days for safe travel. Concerned that cumulative effects to the marine environment and species arising from increased shipping will result in reduction in levels of Aboriginal harvesting. Acknowledged that not all this is in the Port's jurisdiction.	09-Feb-2016, Meeting 12-Sep-2016, Malahat Traditional Use Study 30-May-2017, Meeting with Administrative Staff	Shared figures for total vessel movements in 2012 and predicted for 2030. **11-Sep-2015, Letter from the VFPA:** *"Thank you for articulating your preliminary concerns with the Roberts Bank Terminal 2 Project. These concerns will be considered in the Marine Shipping [Addendum] for RBT2, to be submitted by [the VFPA] to the Canadian Environmental Assessment Agency ("CEAA") this fall."* **09-Nov-2015, Letter from the VFPA:** Enclosed a copy of the MSA, which was submitted to the CEA Agency on October 26, 2015. The MSA included MSA Appendix 5-B Aboriginal Issues and Interests. **09-Feb-2016, Meeting:** Committed to arrange a presentation. **06-Jul-2016, Meeting:** The VFPA met with Malahat on marine shipping. Cumulative effects were discussed as part of the presentation. Explained that no adverse cumulative effects are anticipated with the exception of potential effects to southern resident killer whales (SRKW), already significantly affected by past projects and activities. Therefore, cumulative effects expected to remain significant. **30-May-2017, Meeting:** Acknowledged Malahat's broader concerns of cumulative effects in the region.	ships are used to transport oil and will not call at RBT2. It is assumed in this comment that the term tanker is intended to refer to container vessels. **Addressed in MSA Appendix 5-B (#23):** The approach to the cumulative effects assessment is provided in MSA Section 6.0. Each IC and VC assessment section considers cumulative changes and cumulative effects to which the Project contributes. This entails consideration of residual effects of routine marine shipping associated with the Project, if any such effects are predicted, in combination with effects of other projects and activities that have been or will be carried out. MSA Section 9.5 describes how Current Use activities have been affected by other projects and activities that have been carried out. As residual effects to Current Use as a result of marine shipping associated with the Project are not predicted, an assessment of future cumulative effects was not carried out. **Further information provided by the VFPA:** The VFPA understands that marine shipping associated with the Project outside of the VFPA's jurisdiction is not formally considered to be part of the Project for the purposes of the Minister's decision whether the Project is likely to cause significant adverse environmental effects. However, the MSA provides information to the federal government regarding the potential effects of marine shipping associated with the Project, which can be used to inform programs or activities within federal jurisdiction.	6.0 Effects Assessment Approach 6.7 Cumulative Effects Assessment Sections 7.1 through 9.4 (All IC and VC assessments) 9.5 Current Use of Lands and Resources for Traditional Purposes, and Aboriginal and Treaty Rights
MN-5.5	Requested clarification on whether the VFPA has considered conducting a lifecycle approach to an environmental assessment.	26-Nov-2015, EIS Results Workshop #1 - W̲SÁNEĆ Nation	**26-Nov-2015, Workshop:** Stated that the VFPA is unsure how a life cycle analysis of containerised goods would work.	**Addressed in AIEIS Appendix 2-B, Table 2 (#10):** As stated in EIS Section 8.0, the methods for the RBT2 environmental assessment were developed to meet the requirements specified in the *EIS Guidelines* and are consistent with existing guidance documents and the *Canadian Environmental Assessment Act, 2012 (CEAA, 2012)*. A lifecycle approach to environmental assessment is not required. As stated in the EIS, the guidance documents relied upon include the *Operational Policy Statement Assessing Cumulative Environmental Effects Under the Canadian Environmental Assessment Act, 2012* (CEA Agency 2013) and *Determining Whether a Project is Likely to Cause Significant Adverse Environmental Effects* (CEA Agency 1994), the *Cumulative Effects Assessment Practitioners' Guide* (Hegmann et al. 1999), and the *Guideline for the Selection of Valued Components and Assessment of Potential Effects* (EAO 2013), among others.	**EIS** 8.0 Effects Assessment Methods **AIEIS** Appendix 2-B Aboriginal Issues and Interests - W̲SÁNEĆ Nation, Table 2 Project Planning, Development, and Implementation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-5.6	Commented that traditional knowledge inputs are visibly absent from the evidence slide, and should be considered a key information source for the models. Stated that the absence of traditional knowledge from the slide gives the impression that it is not as important as the science. Requested information in relation to how traditional knowledge was used to inform the models.	27-Nov-2015, EIS Results Workshop #2 - *W̱SÁNEĆ* Nation	**27-Nov-2015, Workshop:** Responded that traditional knowledge fed into numerous lines of evidence but acknowledged that traditional knowledge was visibly absent from the slide. Stated that traditional knowledge feeds into the VCs, and this is demonstrated on the slides for each VC. Technical specialists sat with elders, fishers, and other community members to gather information to feed into the VCs. Working groups were held in early 2014 to present the approach for the effects assessment and the individual studies and feedback was received. Added that Tsawwassen First Nation members worked on field crews, boats, etc. in preparation of the EIS.	**Addressed in AIEIS Appendix 2-B, Table 15 (#61):** As described in IR-7.31.15-08, the overall approach taken for collection and integration of ITK is described in EIS Section 7.0. All relevant ITK that was available was incorporated into the EIS. When ITK is used in the assessment of an IC or VC, (most often informing existing conditions), the source of ITK is cited directly. Table IR8-1 lists each IC and VC assessment section and indicates where and how ITK was used in the assessment. The Roberts Bank ecosystem model inputs consisted of quantitative data from literature values, previously conducted ecosystem models in the area, and RBT2-specific field studies. As a qualitative source of information, ITK was not incorporated into the ecosystem model. **Addressed in response to IR10-02:** The VFPA's response to IR10-02, as requested by the Review Panel, provides tables similar to those presented in CEAR Document #572 and CEAR Document #930 to summarise how all available ITK was incorporated into the EIS and MSA.	**EIS** 7.0 Engagement and Consultation 7.2.1.7 Collection of Aboriginal Traditional Knowledge 10.0 Biophysical Setting 10.3 Overview of Assessing Ecosystem Productivity **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̱SÁNEĆ* Nation, Table 15 Roberts Bank Ecosystem **Information Requests** Response to Information Request #8 (IR-7.31.15-08 of CEAR Document #314) Response to Sufficiency Information Request #02 (IR10-02)
MN-5.7	Requested to know why Traditional Use and access and Aboriginal treaty rights were not selected as a valued component (VC).	16-Dec-2015, Letter to the CEA Agency (CEAR Document #378)	**12-May-2016, Letter from the CEA Agency (CEAR Document #404):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Additional information provided by the VFPA:** The VFPA has reviewed this letter and refers to EIS Section 8.0, which describes the environmental assessment methods developed to meet the requirements specified in the *EIS Guidelines* and are consistent with existing guidance documents and *CEAA, 2012*.	
MN-5.8	Requested to know how Aboriginal traditional knowledge (ATK) was used as rationale in the selection of each of the five sub-components and representative species of marine birds.	16-Dec-2015, Letter to the CEA Agency (CEAR Document #378)	**12-May-2016, Letter from the CEA Agency (CEAR Document #404):** *"The Canadian Environmental Assessment Agency (the Agency) requested additional information on how Aboriginal Traditional Knowledge was used in the marine shipping addendum in Additional Information Request (AIR) #4 Aboriginal Traditional Knowledge."*	**Addressed in response to MSA IR-02.24.16-4:** MSA IR-02.24.16-4 provides a further discussion of how and where ITK was utilised in the MSA. Table MSA IR4-1 lists each assessment section (left column) and indicates where and how ITK was used in the assessment (centre column). If ITK was not used for a particular step in the assessment, a rationale is provided (right column).	**Information Requests** Response to Information Request #4 (MSA IR-02.24.16-4 of CEAR Document #386)
MN-5.9	Stated that Sections 9.3 (Outdoor Recreation), 9.4 (Archaeological and Heritage Resources), 9.5 (Current Use) and 10.5 (Accidents and Malfunctions) do not mention how Aboriginal traditional knowledge (ATK) was incorporated into mitigation or avoidance of environmental effects or adverse impacts to Aboriginal and Treaty rights.	16-Dec-2015, Letter to the CEA Agency (CEAR Document #378)	**12-May-2016, Letter from the CEA Agency (CEAR Document #404):** *"The Canadian Environmental Assessment Agency (the Agency) requested additional information on how Aboriginal Traditional Knowledge was used in the marine shipping addendum in Additional Information Request (AIR) #4 Aboriginal Traditional Knowledge."*	**Addressed in response to MSA IR-02.24.16-4:** MSA IR-02.24.16-4 provides a further discussion of how and where ITK was utilised in the MSA. Table MSA IR4-1lists each assessment section (left column) and indicates where and how ITK was used in the assessment (centre column). If ITK was not used for a particular step in the assessment, a rationale is provided (right column).	**Information Requests** Response to Information Request #4 (MSA IR-02.24.16-4 of CEAR Document #386)
MN-5.10	Requested that the VFPA define the threshold employed to determine "negligible" vs. "measurable" impacts to Traditional Use. How did	16-Dec-2015, Letter to the CEA Agency (CEAR Document #378)	**12-May-2016, Letter from the CEA Agency (CEAR Document #404):** *"The Agency has requested additional information on Port Metro Vancouver's assessment methodology and*	**Addressed in Response to MSA IR-02.24.16-4:** MSA IR-02.24.16-4 provides a further discussion of how and where ITK was utilised in the MSA. Table MSA IR4-1 lists each assessment section (left	**Information Requests** Response to Information Request #2 (MSA IR-02.24.16-2 of CEAR Document #386)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	Aboriginal traditional knowledge (ATK) inform the scale of impacts?		*how Aboriginal Traditional Knowledge was used in the marine shipping addendum in AIR #2 Rationale for Effects Characterization and AIR #4 Aboriginal Traditional Knowledge."*	column) and indicates where and how ITK was used in the assessment (centre column). If ITK was not used for a particular step in the assessment, a rationale is provided (right column). **Addressed in response to MSA IR-02.24.16-2:** MSA IR-02.24.16-2 identifies the receptors of potential effects to Current Use and impacts to rights, and provides an explanation of how potential effects and impacts were determined to be negligible or measurable in the MSA.	Response to Information Request #4 (MSA IR-02.24.16-4 of CEAR Document #386)
MN-5.11	Stated that the EIS finds "*Project-associated shipping is not expected to measurably affect the existing quality of Current Use experience within the [marine shipping area] through changes to light, noise, or air emissions, increased statistical risk to safety on water, or further erosion to sites of importance that help to define cultural landscapes."* Asked about the cumulative effects of these factors combined with anticipated increasing vessel traffic due to other planned projects.	16-Dec-2015, Letter to the CEA Agency (CEAR Document #378)	**12-May-2016, Letter from the CEA Agency (CEAR Document #404):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in EIS Section 32.2.9:** In relation to the EIS assessment presented in EIS Section 32.0, as no measurable residual adverse Project-related effects on Current Use are predicted in this assessment, the Project is not expected to contribute to cumulative effects. **Addressed in MSA Section 9.5.8:** An assessment of future cumulative effects on Current Use was not conducted as routine marine shipping associated with the Project is not expected to result in any measurable residual effect on Current Use that is likely to interact cumulatively with changes caused by other projects or activities that will be carried out.	**EIS** 32.2.9 Cumulative Effects Assessment **MSA** 9.5.8 Cumulative Effects Assessment
MN-5.12	Stated that the proponent should provide a cumulative effects assessment of shipping related impacts to Traditional Use and access over the lifetime of the project in conjunction with anticipated impacts of other known projects, regardless of the determined level of RBT2 project-specific impacts.	16-Dec-2015, Letter to the CEA Agency (CEAR Document #378)	**12-May-2016, Letter from the CEA Agency (CEAR Document #404):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in AIEIS Section 7.2.9:** As the Project is not expected to result in measurable residual effects on the Current Use of Tsawout First Nation, Pauquachin First Nation, Tsartlip First Nation, Tseycum First Nation, and Malahat Nation, there are no residual effects that may interact cumulatively with changes caused by other project or activities that have been or will be carried out. An assessment of cumulative effects on the Current Use of Tsawout First Nation, Pauquachin First Nation, Tsartlip First Nation, Tseycum First Nation, and Malahat Nation in the vicinity of the Project area was therefore not conducted. **Addressed in AIEIS Appendix 2-B, Table 2 (#10):** As stated in EIS Section 8.0, the methods for the RBT2 environmental assessment were developed to meet the requirements specified in the *EIS Guidelines* and are consistent with existing guidance documents and *CEAA, 2012*. A lifecycle approach to environmental assessment is not required. As stated in the EIS, the guidance documents relied upon include the *Operational Policy Statement Assessing Cumulative Environmental Effects Under the Canadian Environmental Assessment Act, 2012* (CEA Agency 2013) and *Determining Whether a Project is Likely to Cause Significant Adverse Environmental Effects* (CEA Agency 1994), the *Cumulative Effects Assessment*	**AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̱SÁNEĆ* Nation, Table 2 Project Planning, Development, and Implementation 7.2 Current Use of Lands and Resources for Traditional Purposes 7.2.9 Cumulative Effects Assessment

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				Practitioners' Guide (Hegmann et al. 1999), and the *Guideline for the Selection of Valued Components and Assessment of Potential Effects* (EAO 2013), among others.	
MN-5.13	Stated that the EIS addendum is missing a table outlining the relationship of selected valued components (VCs) to Aboriginal and Treaty rights.	16-Dec-2015, Letter to the CEA Agency (CEAR Document #378)	**12-May-2016, Letter from the CEA Agency (CEAR Document #404):** *"The Agency requested additional information on this topic in AIR #13 Aboriginal and Treaty Rights and Related Interests."*	**Addressed in response to MSA IR-02.24.16-13:** Table MSA IR13-2 identifies the relationship between each VC assessed in the MSA and Indigenous groups' potential or established Aboriginal and Treaty rights and related interests.	**Information Requests** Response to Information Request #13 (MSA IR-02.24.16-13 of CEAR Document #386) Table MSA IR13-2 Relationship of VCs to Aboriginal Groups' Potential or Established Aboriginal and Treaty Rights and Related Interests
MN-5.14	Stated that EIS addendum is missing the section outlining project benefits	16-Dec-2015, Letter to the CEA Agency (CEAR Document #378)	**12-May-2016, Letter from the CEA Agency (CEAR Document #404):** *"The Agency requested additional information on socio-economic conditions AIR #9 Socio- Economic Conditions Assessment."*	**Addressed in response to MSA IR-02.24.16-9:** The effects of any changes to the environment caused by marine shipping associated with the Project on socio-economic conditions were considered in MSA Sections 9.2 and 9.3. Changes to the environment from marine shipping associated with the Project are not predicted to interact with, nor potentially affect, any other social and economic conditions (i.e., such as those assessed within the EIS as relevant to the Project: labour market, economic development, local government finances, and services and infrastructure). Therefore, these other socio-economic conditions were not assessed further within the MSA. As noted in EIS Section 34.0, the VFPA is working with other Indigenous groups to facilitate access to Project benefits, including training, employment opportunities, and Project contracting opportunities.	**EIS** 34.0 Benefits to Canadians **Information Requests** Response to Information Request #9 (MSA IR-02.24.16-9 of CEAR Document #386)
MN-5.15	Asked why seasonality is not included in the list of indicators to inform and evaluate the potential effects on Traditional Use and access as a result of marine shipping activities. Stated that seasonality represents a critical component of Traditional Use as it determines the timing of subsistence activities including fishing, seafood harvesting, marine mammal hunting, marine vegetation harvesting, and other terrestrial resource procurement activities. Requested an explanation as to why seasonality was excluded as an intermediate component.	16-Dec-2015, Letter to the CEA Agency (CEAR Document #378) 27-Oct-2016, Letter to Panel (CEAR Document #621)	**12-May-2016, Letter from the CEA Agency (CEAR Document #404):** *"The Agency requested additional information on [the VFPA's] assessment methodology in AIR #2 Rationale for Effects Characterization. In addition, the Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in response to MSA IR-02.24.16-2:** MSA IR-02.24.16-2 identifies the receptors of potential effects to Current Use and impacts to rights, and provides an explanation of how potential effects and impacts were determined to be negligible or measurable in the MSA. **Addressed in response to IR10-13:** The VFPA's response to IR10-13, as requested by the Review Panel, provides additional information concerning the rationale for the effects assessment conclusions. **Addressed in EIS Section 8.1.3.2:** As noted in EIS Section 8.1.3.2, the Project team also considered temporal characteristics specific to each VC relevant to understanding when and for how long each VC may interact with and potentially be affected by the Project. For example, the assessment took into consideration the cycles of activity for biophysical VCs (e.g., critical or sensitive life cycle stages such as breeding, nesting, rearing, overwintering) and the	**EIS** 8.1.3.2 Temporal Boundaries **Information Requests** Response to Information Request #2 (MSA IR-02.24.16-2 of CEAR Document #386) Response to Sufficiency Information Request #13 (IR10-13)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				temporal aspects of economic and social attributes (e.g., fisheries openings, seasonal recreational activities). Important temporal characteristics are described in the existing conditions section for each VC. Where relevant, community knowledge and ITK factored into the descriptions of these temporal boundaries.	
MN-5.16	Stated that the table showing connections between Intermediate Components (ICs) and Valued Components (VCs) is incomplete. Stated that the ICs (coastal geomorphology, surficial geology and marine sediment, marine water quality and underwater noise) all impact Current Use and Aboriginal Rights and Title by way of the following VCs: marine vegetation, marine invertebrates, marine fish, marine mammals and coastal birds. Population, identified as an IC, is connected to or impacts outdoor recreation and land and water use (identified VCs), which, in turn, impacts Current Use. Population increases resulting from Project-related labour opportunities may adversely impact Aboriginal rights and the integrity of traditional use places by way of increasing competition for land and marine-based resources.	27-Oct-2016, Letter to Panel (CEAR Document #621)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Section 8.0:** The cause-effect linkage between a project and a VC is referred to as an effect pathway, which typically comprises one or more physical media, such as water or air, through which an effect is transmitted to a receptor, such as wildlife or people. An effect pathway may also include different components of natural or socio-economic systems upon which receptors, such as people or a wildlife species of concern, depend. For example, an effect pathway may extend from a project to water quality to fish that depend on water quality, to larger marine mammals that prey on fish, or to humans that harvest fish for commercial, recreational, or Aboriginal purposes. In another example, an effect pathway may extend from a project to a regional population (including the project work force), to the labour market or community services. The components along the pathway through which the effect is transmitted are referred to as ICs for the purposes of this assessment. The components at the end of an effect pathway are referred to as receptor components, as they receive the effect that is transmitted along the pathway. While a project may result in changes to each IC along an effect pathway, the significance of potential project effects is typically assessed in relation to those components that are most valued by society, which are usually the receptor components. Thus, the receptor components are typically selected as VCs for the purposes of assessment. Figure 8-2, presented in EIS Section 8.1.2 provides an example of a pathway of effects. **Addressed in EIS Section 32.0:** The Current Use effects assessment presented in EIS Section 32.0 considered the results of effects assessments of potential Project and cumulative effects on marine vegetation, marine invertebrates, marine fish, marine mammals, coastal birds, marine commercial use, outdoor recreation, visual resources, land and water use, human health, archaeological and heritage resources, ongoing productivity of commercial, recreational, and Aboriginal fisheries, as well the assessment of potential changes to air quality, noise and vibration, light and the assessment of potential accidents or malfunctions.	**EIS** 8.0 Effects Assessment Methods 8.1.2 Selection of Valued Components **Information Requests** Response to Sufficiency Information Request #07 (IR10-07)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				Addressed in response to IR10-07: The VFPA's response to IR10-07, as requested by the Review Panel, further discusses potential economic implications of any permanent or temporary displacement related to the navigational closure.	
MN-5.17	Asked why the VFPA neglected to provide an assessment of cumulative effects for marine invertebrates, marine vegetation, and marine fish. Stated that each of these VCs have been described to have Project-related residual effects; any residual effects should warrant an assessment of cumulative effects.	27-Oct-2016, Letter to Panel (CEAR Document #621)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Appendix 7.2-B (#157):** The methods used to assess the potential effects of the Project, including both residual effects of the Project and cumulative effects, are described in EIS Section 8.0. These methods are consistent with existing federal guidance. **Addressed in responses to IR-7.31.15-13 and AIR-12.04.15-13:** In addition to the cumulative effects summaries presented in the EIS and MSA, IR-7.31.15-13 and AIR-12.04.15-13 provide further consideration of how VCs (that may be affected by residual adverse effects of the Project) have been affected by past, present, and future projects and activities.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 8.0 Effects Assessment Methods **Information Requests** Response to Information Request #13 (IR-7.31.15-13 of CEAR Document #314) Response to Additional Information Request #13 (AIR-12.04.15-13 of CEAR Document #388)
MN-5.18	Added that the biological state of the estuary, prior to industry, should be valued for the baseline data. Suggested a holistic approach rather than a project by project based approach for the future plans of the area and suggested that the onus is on the proponents.	29-Aug-2017, Follow Up Program Workshop with Cowichan Nation Alliance, Lyackson First Nation, Malahat Nation	**29-Aug-2017, Workshop:** Committed to providing information from the EIS and information requests related to cumulative effects studies for RBT2. **19-Feb-2018, Email from the VFPA:** Provided draft notes from the 29-Aug-2017 Follow-up Program Workshop, which included a post meeting note to address this question. *"Section 8.1.9 of the RBT2 EIS describes the cumulative effects assessment methodology for the RBT2 environmental impact assessment. An assessment of future cumulative effects was conducted when an adverse residual effect was predicted to occur to a valued component (VC) due to a Project-related interaction. For intermediate components (IC), an assessment of future cumulative change was conducted to assess when Project-induced changes to an IC may combine cumulatively with changes caused by other projects and activities that will be carried out. Assessment of future cumulative effects for VCs and future cumulative change for ICs can be found in the following sections of the RBT2 EIS:* *Intermediate Components:* • *Air Quality: Section 9.2.9* • *Noise and Vibration: Section 9.3.10* • *Light: Section 9.4.9* • *Coastal Geomorphology: Section 9.5.9* • *Surficial Geology and Marine Sediment: Section 9.6.9* • *Marine Water Quality: Section 9.7.9* • *Underwater Noise: Section 9.8.8*	**Addressed in EIS Appendix 7.2-B (#157):** The methods used to assess the potential effects of the Project, including both residual effects of the Project and cumulative effects, are described in EIS Section 8.0. These methods are consistent with existing federal guidance. **Addressed in responses to IR-7.31.15-13 and AIR-12.04.15-13:** In addition to the cumulative effects summaries presented in the EIS and MSA, IR-7.31.15-13 and AIR-12.04.15-13 provide further consideration of how VCs (that may be affected by residual adverse effects of the Project) have been affected by past, present, and future projects and activities.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 8.0 Effects Assessment Methods **Information Requests** Response to Information Request #13 (IR-7.31.15-13 of CEAR Document #314) Response to Additional Information Request #13 (AIR-12.04.15-13 of CEAR Document #388)

Table 6: Effects of the Environment on the Project

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-6.1	Asked whether the effects of global warming have been considered in the assessment, and what the effect of global warming will be in 50 years. Concerned that shipping may increase the temperature of the sea water, which is already rising from the effects of global warming.	26-Nov-2015, EIS Results Workshop #1 - *W̲SÁNEĆ* Nation 12-Sep-2016, Malahat Traditional Use Study	**26-Nov-2015, Workshop:** Explained that the VFPA engaged a UBC academic to look at sea level rise and that this is the very first port design that accommodated sea level rise in the design. Explained that the consideration of a 1 m increase in sea level rise has been incorporated into the design. **26-Apr-2016, Email from the VFPA:** Post-meeting note - Please refer to EIS Section 31.2.6.	**Addressed in AIEIS Appendix 2-B, Table 7 (#43):** Climate change was considered in EIS Section 9.1 and in EIS Section 9.5. EIS Section 9.1.2.2 provides the estimated extreme high and low water levels for the 50-year and 100-year return periods at the Project area. EIS Section 9.1.2.5 describes anticipated sea level rise. EIS Section 9.5.7 describes the future expected conditions and predicted changes to coastal geomorphology that are expected to occur by the time of Project construction and operation. A more detailed analysis of climate change is provided in EIS Appendix 9.5-A. Project-related changes in greenhouse gases and climate-forcing particulate matter are assessed in the air quality assessment. The carbon footprint for the Project will be reduced through the use of electrically-powered equipment at the terminal and shore power for berthed vessels. The VFPA's overall Air Action Program includes projects that minimise emissions of trucks, cargo handling equipment, and trains, and also includes shore power. Shore power connections enable suitably equipped ships to be plugged into electrical power sources at the wharf so that their diesel engines and associated electrical generators can be turned off, thus reducing air and noise emissions. The VFPA has already provided shore power connections for cruise ships at Canada Place and is actively working on increasing the use of shore power to include container ships. The Project has been designed to include connections for vessel shore power. Electrical services for tug shore power connections will be extended, or added from the existing tug basin services. Mitigation measures related to air quality are included in EIS Sections 27.0 and 35.0. *The Air Action program was renamed to Air, Energy and Climate Action. **Additional information provided by the VFPA:** The VFPA leads a suite of initiatives that reduce air emissions associated with key port activities: ships, trucks, cargo-handling equipment, and terminal activities. The VFPA's approach is to collaboratively work with industry and stakeholders in each sector to develop programs that respond to their unique operating context and meet industry leading environmental objectives. Key initiatives include the EcoAction Program, the Northwest Ports Clean Air Strategy, Air Emissions Inventories, Energy Action Initiative, and environmental requirements through the Truck Licensing Program. Information regarding the VFPA's Air, Energy and Climate Action initiatives can be found at: https://www.portvancouver.com/environment/air-energy-climate-action/.	**EIS** 4.0 Project Description 4.2.1 Project Component Details, Marine Terminal 4.4.2 Project Activities, Operation-phase Activities 9.1 Climate, Coastal Conditions, and Geotechnical Considerations 9.5 Coastal Geomorphology Appendix 9.5-A Main Report Section 27.0 Human Health (revised June 2016) 31.0 Effects of the Environment on the Project 31.2.6 Climate Change 35.0 Effects Assessment Summaries **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 7 Physical Setting 5.0 Human Health

Table 7: Engagement and Consultation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-7.1	Concerned that Malahat was not involved in RBT2 prior to consultation beginning related to marine shipping. Stated that Malahat is of the view that they should have been involved in the scoping of impacts. Requested a detailed explanation for the exclusion of Malahat First Nation in the RBT2 project engagement and consultation process. Stated that Malahat First Nation was excluded from the process of information gathering through additional studies funded by VFPA. Requested the rationale for excluding Malahat First Nation from this opportunity. Requested the criteria used to inform VFPA and CEAA's RBT2 EIS Guidelines in identifying the fourteen Nations included in the RBT2 project engagement and consultation process.	15-Jul-2015, Meeting 09-Feb-2016, Meeting 27-Oct-2016, Letter to Panel (CEAR Document #621)	**15-Jul-2015, Meeting:** Stated that the VFPA will share questions or comments from Malahat about the scope of the study with the CEA Agency and Transport Canada. Listed the Indigenous groups consulted for RBT2, at Malahat's request. **20-Jul-2015, Email to the CEA Agency from the VFPA:** Connected Malahat with the CEA Agency regarding their question as to why Malahat Nation was not included as an Indigenous group to be consulted for the Project. **22-Jul-2015, Email to Malahat from the VFPA:** The CEA Agency will follow up with you regarding the Crown's perspective on consultation with Malahat Nation. The VFPA contacted Malahat by letter, email, and phone in February and March of 2014 to provide information on the Project, invite Malahat to participate in the Technical Working Group, and offer an opportunity to meet and discuss the Project. Since 2014, the VFPA has updated Malahat Nation as to the status of the Project, including sharing an electronic copy of the EIS and a copy of the EIS Executive Summary in April 2015. This information was addressed to Chief and Council, but I would be able to provide a copy of the initial package if this is helpful. **20-Aug-2015, Email from the VFPA:** Provided an outline of what consultation could look like with Malahat going forward, including confirmation of Malahat's participation in the review of the RBT2, kick-off meeting, review of EIS, Project benefits discussion, potential impacts from RBT2 to Malahat, MSA, etc. **09-Feb-2016, Meeting:** Stated that input from Indigenous groups was received on the VCs – for those consulted earlier but unfortunately Malahat was not participating in the Project at that time. **18-Aug-2016, Email from the VFPA:** Provided a draft Consultation Plan for Malahat's review and input. **20-Mar-2017, Email from the VFPA:** Resent the draft Consultation Plan for Malahat's review and input. **04-Aug-2017, Email from the VFPA:** Requested input on draft Consultation Plan in particular areas of the document.	**Addressed in AIEIS Appendix 2-B, Table 3 (#17):** The VFPA advised the CEA Agency of this concern through AIEIS Appendix 2-B (#17). The details of the CEA Agency's direction to the VFPA with regard to engagement and consultation, including *W̲SÁNEĆ* Nation groups, in the assessment is provided in the introduction to the AIEIS. **Additional information provided by the VFPA:** The CEA Agency provided additional instructions to the VFPA to consult with Malahat Nation regarding the Project on January 13, 2016. The VFPA has been in touch with Malahat Nation regarding the Project since February 2014 and associated marine shipping since May 26, 2015. **Addressed in AIEIS Appendix 2-A:** February 2014: Letter and email to Malahat Nation with a package of introductory materials regarding the Project, including an invitation to participate in planned technical working groups. Package included: • Technical Working Group invitation • Technical Working Group Summary Reports • Draft Archaeological Overview Assessment • Project Description • Field Studies Information Sheet (January 2014) • *EIS Guidelines*. February – March 2014: Phone calls to Malahat Nation in follow-up to the introductory package that was sent in February 2014. At the request of Malahat Nation, the package was resent, but the VFPA did not receive a response to the package or invitation to participate in planned technical working groups.	**AIEIS** 1.0 Introduction 1.1 Purpose of the Additional Information to the EIS Appendix 2-A Consultation Activities by Aboriginal Group Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 3 Engagement and Consultation
MN-7.2	Concerned that the amount of funding offered by the VFPA is insufficient to prepare a comprehensive and robust Project-specific Traditional Use Study. Noted willingness to consider less funding if other benefits could be provided. Noted that traditional use studies are project-specific; existing information can only be	26-Oct-2015, Meeting 09-Feb-2016, Meeting 05-Jan-2017, Letter 30-May-2017, Meeting with Administrative Staff 29-Aug-2017, Follow Up Program Workshop	**26-Oct-2015, Meeting:** Stated that the VFPA is able to provide traditional use study (TUS) funding. Explained that the VFPA can discuss the terms of the funding and the scope of the study. **12-Nov-2015, Letter from the VFPA:** Offered funding to support Malahat's engagement with the VFPA and the Project as well as funding for a Project-specific study to support Malahat Nation in gathering information on current use and rights in the Project area. **09-Feb-2016, Meeting:** The VFPA and Malahat met again on 09-Feb-2016 and the VFPA agreed to offer additional funding for participation and a study. Malahat agreed to this offer, and an agreement was signed on 22-Mar-2016.	**Addressed in AIEIS Section 2.1:** In support of Project planning and for information-gathering purposes, the VFPA has provided or offered funding support to ensure the ongoing participation of *W̲SÁNEĆ* Nation in the Project's consultation processes. Additional agreements were also initiated to support the development of studies regarding Current Use and ITK. As a result of these engagement and consultation activities, each of the *W̲SÁNEĆ* bands has provided traditional use information relating to the Project area (see AIEIS Section 7.0). **Addressed in AIEIS Section 2.2.1.1:** In December 2015, the VFPA offered funding to each of the *W̲SÁNEĆ* bands to facilitate the collection of	**AIEIS** 2.1 Engagement and Consultation Overview 2.2.1.1 Sponsorship of Additional Studies Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 28 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	leveraged in a limited way. Expressed a need for a traditional use study to cover the past, present and future, which is necessarily project-linked. Stated that Malahat is of the view that the breadth and depth of potential impacts to the Malahat First Nation are far reaching. Stated that the feedback provided through Malahat's review of the draft AIEIS is of high quality and should be incorporated into the AIEIS final version. Concerned about availability of ongoing funding to support participation in consultation activities. Stated that funding would be needed to participate in the Follow Up Program.	with Cowichan Nation Alliance, Lyackson First Nation, Malahat Nation	**12-Sep-2016:** Malahat Nation provided "Malahat Effects related to and Mitigation for the Roberts Bank Terminal 2 Project." **10-Feb-2017, Letter from the VFPA:** The VFPA outlined changes made to the AIEIS based on feedback received from Malahat in their letter of 05-Jan-2017, including those made to AIEIS Sections 3.1.1.2, 3.1.2, 3.1.3, and 3.2. **30-May-2017, Meeting:** Undertook to make edits to most recent revision of amended TUS funding agreement and send back to Malahat. Noted ongoing participation funding can be explored further. **26-Jul-2017, Letter:** Malahat signed the Amending Agreement that covers participation funding and traditional use study funding. **24-Oct-2017, Letter:** The VFPA provided further funding to support Malahat Nation's ongoing involvement in the consultation activities for the Project. **07-Nov-2017, Letter:** Accepted funding.	information on Current Use and ITK. With this offer and subsequent agreements, the VFPA requested input regarding each band's preferred approach for gathering and providing information to the VFPA regarding Current Use and ITK. Current Use reports sponsored by the VFPA and provided by Indigenous groups for the purpose of further informing the Project include the following: • *W̲SÁNEĆ Traditional Use Study of the Roberts Bank Terminal 2 Project: DRAFT Preliminary Data Summary* (Tsawout, Tseycum, Tsartlip, and Pauquachin), referred to herein as 'the *W̲SÁNEĆ* Study', received October 2016; and • *Malahat Traditional Use Study – Potential Effects and Mitigation*, two sections of the report received September 2016 (see AIEIS Section 7.2.4.5 for details on this study). The VFPA additionally collected Current Use information and ITK through the methods presented below. **Addressed in AIEIS Appendix 2-B, Table 28 (#149):** The AIEIS incorporates all traditional use and ITK information provided to the VFPA by Malahat Nation in relation to the assessment of potential effects of the Project on Malahat Nation. A description of the information provided by Malahat Nation to the date of submission of the AIEIS is included in AIEIS Sections 2.0 and 7.0. As described in the AIEIS, existing information regarding Malahat Nation's use of lands and resources for traditional purposes was not included in MSA Section 9.5.4.5 at the specific request of Malahat Nation, given its origin in material prepared in the context of a different project. Recognising this concern of Malahat Nation, the VFPA supplied funding to Malahat Nation to undertake a Project-specific study to identify Malahat Nation use and knowledge in relation to the Project area (e.g., information described by Malahat Nation in the comment, "cultural significance, quantity and/or quality of Traditional Use sites within the Project LAA, [regional assessment area (RAA)] and greater territory"). The content presented in AIEIS Section 7.2.4.5 relating to Malahat Nation use and knowledge reflects the information received by the VFPA from Malahat Nation during consultation regarding the Project, as explained in AIEIS Section 7.2.4.5.	Lands and Resources for Traditional Purposes 7.2.4.5 Malahat Nation
MN-7.3	Commented on the use of "aboriginal" in Project-related documents given that the newer term is "indigenous".	27-Nov-2015, EIS Results Workshop #2 - *W̲SÁNEĆ* Nation	**27-Nov-2015, Workshop:** Explained that the use of terminology comes from the Fisheries and Oceans Canada (DFO) language in the *Fisheries Act*.		

Table 8: Environmental Assessment and Permitting Process

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-8.1	Requested confirmation that the Panel engages individually with First Nations, and additional information regarding Panel composition and process.	26-Nov-2015, EIS Results Workshop #1 - *W̱SÁNEĆ* Nation	**26-Nov-2015, Workshop:** Noted that the final Terms of Reference for the Panel are posted on the registry, and then the Panel determines the process for carrying out the hearings and making decisions. Explained that the Trans Mountain Expansion review is different as it is undergoing the National Energy Board process. **26-Apr-2016, Email from the VFPA:** Post meeting note: Please refer to the Panel Terms of Reference: http://www.ceaa-acee.gc.ca/050/documents/p80054/101301E.pdf or contact the CEA Agency for more information related to process. Questions regarding the environmental assessment process can be directed to Crown Consultation Coordinator, CEA Agency (contact information provided).		

Table 9: Environmental Management Program

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-9.1	Noted that First Nations want to be involved in mitigation and monitoring and that they find themselves excluded after a project is built. Requested that the VFPA invite First Nations to the table for these discussions. Noted monitoring of the dredging contractor would be a good opportunity for First Nations involvement.	26-Nov-2015, EIS Results Workshop #1 - *W̲SÁNEĆ* Nation 29-Aug-2017, Follow Up Program Workshop with Cowichan Nation Alliance, Lyackson First Nation, Malahat Nation	**26-Nov-2015, Workshop:** Explained how the VFPA will be consulting on the development of mitigation and monitoring programs and it is a commitment made in the EIS. **26-Apr-2016, Email from the VFPA:** Provided a copy of the 26-Nov-2015 draft meeting notes, which included a post-meeting note: The independent monitoring program, called the Adaptive Management Strategy, was developed by the VFPA in consultation with Environment Canada. It included a scientific advisory committee comprised of three scientists appointed to provide independent scientific and technical advice and recommendations to prevent or mitigate any significant negative ecosystem trends attributable to the Deltaport Third Berth Project (DP3). **02-Aug-2017, Email from the VFPA:** Invited Malahat Nation to attend a Follow-up Workshop on 29-Aug-2017. **23-Aug-2017, Email from the VFPA:** Provided the draft agenda and presentation for the Follow-up Workshop scheduled for 29-Aug-2017. **29-Aug-2017, Workshop:** Presented information on RBT2 Follow-up Program and sought feedback from Malahat on what they would like to see included and how they would like to be involved going forward.	**Addressed in AIEIS Appendix 2-B, Table 30 (#162):** The VFPA is committed to developing and implementing a Follow-up Program for the Project. The purpose of the Follow-up Program is to verify the accuracy of residual effect predictions made in the EIS, and determine the effectiveness of any measures taken to mitigate the adverse environmental effects of the Project. To ensure the Program's elements adequately reflect conditions of Project approvals, final designs, and construction or operation approaches, as well as public, Indigenous group, and regulator feedback received during the review of the EIS, the VFPA has committed to undertaking the development of the Follow-up Program following the submission of the EIS. The Follow-up Program will be developed in consultation with federal agencies, including the CEA Agency, DFO, and Environment and Climate Change Canada. Complete drafts of the RBT2 Follow-up Program will be made available prior to the start of field measurements to ensure parties consulted on the program and approving agencies have an opportunity to evaluate and approve the program. Feedback from Indigenous groups regarding the draft program will be sought through the VFPA's ongoing engagement initiatives. Drawing on the elements described in EIS Appendix 33-A and ongoing post-EIS submission regulator consultation, the VFPA will lead the development of the RBT2 Follow-up Program document, which will include details on the duration and frequency of field data collection, based on an evaluation of the length of time needed to detect effects given observed environmental variability, likely magnitude of environmental effect, and desired level of statistical confidence in the results. Participation by Indigenous groups in follow-up monitoring is discussed in EIS Section 32.0, and in AIEIS Section 7.0. The measures related to participation in environmental monitoring and follow-up programs are specifically extended to the *W̲SÁNEĆ* Nation. AIEIS Section 7.3 also includes the suggestion of *W̲SÁNEĆ* participation in monitoring in the list of mitigation measures suggested by Indigenous groups. **Addressed in response to IR10-11:** The VFPA's response to IR10-11 describes how Indigenous groups would be involved in the development, implementation, and management of the follow-up program for the proposed Project.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2.7 Mitigation Measures 32.2.7.1 Mitigation Measure #1: Changes in Access to Preferred Current Use Locations 32.2.7.2 Mitigation Measure #2: Changes in Availability of Preferred Current Use Resources 33.0 Environmental Management Program 33.5 Roberts Bank Terminal 2 Follow-up Program Appendix 33-A Proposed Draft Follow-up Program Elements **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 30 Environmental Management Program 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 7.3.3 Mitigation Measures **Information Requests** Response to Sufficiency Information Request #11 (IR10-11)
MN-9.2	Noted much is unknown about eulachon and suggested an extended period of follow-up monitoring. Suggested that eulachon presents an excellent opportunity for more First Nation involvement.	28-Jul-2016, Issues Workshop – Island Nations	**28-Jul-2016, Workshop:** Responded that is a good point. Noted recent resurgence of Fraser River eulachon, which had crashed in the early 1990s. Stated that in a lot of ways traditional knowledge is ahead of science when it comes to eulachon. Traditional knowledge is a resource the VFPA made use of in the EIS and remains interested in going forward. Asked for names of potential people who could get involved in the design of monitoring programs.	**Addressed in EIS Section 13.0:** Potential Project-related effects on eulachon have been assessed through the use of representative forage fish species (see EIS Sections 13.6.2.1 and 13.6.3.3). **Addressed in response to IR5-15**: In its response to IR5-15, the VFPA specifically discusses biology, migration behaviour, habitat utilisation, the status, and management practices associated with eulachon. As noted in the response, assessment conclusions and mitigation measures for representative species also apply to eulachon and remain unchanged.	**EIS** 13.0 Marine Fish **Information Requests** Response to Sufficiency Information Request #15 (IR5-15 of CEAR Document #1078) Response to Sufficiency Information Request #11 (IR10-11)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			29-Aug-2017, Workshop: Presented information on RBT2 Follow-up Program and sought feedback from Malahat on what they would like to see included and how they would like to be involved going forward.	**Addressed in response to IR10-11:** The VFPA's response to IR10-11 describes how Indigenous groups would be involved in the development, implementation, and management of the follow-up program for the proposed Project.	
MN-9.3	Suggested a salmon follow-up monitoring period of a couple of life cycle lengths beyond Project completion, with Aboriginal input to determine whether the study/monitoring is complete. Stated that the proponent should fund community-based monitoring program with two Malahat environmental and cultural monitors to be stewards of the shorelines of islands with important traditional use values (focused on Canadian side of the border in coordination with US-based Aboriginal groups). Stated that monitoring would entail seasonal observations of marine mammal responses to tanker traffic. Stated that the proponent should establish and fund a Shipping Advisory Committee with representation from all the nations along the shipping route. Requested regular reporting to the Malahat Nation through distribution of ongoing marine study results and annual presentations by proponents to the community about tanker safety practices, policies, and issues. Suggested developing a set of values on which to anchor the Follow-up Program such as improved scientific understanding of the area beyond the life of the Project.	28-Jul-2016, Issues Workshop – Island Nations 12-Sep-2016, Malahat Traditional Use Study 29-Aug-2017, Follow Up Program Workshop with Cowichan Nation Alliance, Lyackson First Nation, Malahat Nation	**28-Jul-2016, Workshop:** Responded that continued Indigenous participation is absolutely part of the VFPA's plan. **29-Aug-2017, Workshop:** Presented information on RBT2 Follow-up Program and sought feedback from Malahat on what they would like to see included and how they would like to be involved going forward.	**Addressed in AIEIS Appendix 2-B, Table 30 (#162):** The VFPA is committed to developing and implementing a Follow-up Program for the Project. The purpose of the Follow-up Program is to verify the accuracy of residual effect predictions made in the EIS, and determine the effectiveness of any measures taken to mitigate the adverse environmental effects of the Project. To ensure the Program's elements adequately reflect conditions of Project approvals, final designs, and construction or operation approaches, as well as public, Indigenous group, and regulator feedback received during the review of the EIS, the VFPA has committed to undertaking the development of the Follow-up Program following the submission of the EIS. The Follow-up Program will be developed in consultation with federal agencies, including the CEA Agency, DFO, and Environment and Climate Change Canada. Complete drafts of the RBT2 Follow-up Program will be made available prior to the start of field measurements to ensure parties consulted on the program and approving agencies have an opportunity to evaluate and approve the program. Feedback from Indigenous groups regarding the draft program will be sought through the VFPA's ongoing engagement initiatives. Drawing on the elements described in EIS Appendix 33-A and ongoing post-EIS submission regulator consultation, the VFPA will lead the development of the RBT2 Follow-up Program document, which will include details on the duration and frequency of field data collection, based on an evaluation of the length of time needed to detect effects given observed environmental variability, likely magnitude of environmental effect, and desired level of statistical confidence in the results. Participation by Indigenous groups in follow-up monitoring is discussed in EIS Section 32.0, and in AIEIS Section 7.0. The measures related to participation in environmental monitoring and follow-up programs are specifically extended to the *W̱SÁNEĆ* Nation. AIEIS Section 7.3 also includes the suggestion of *W̱SÁNEĆ* participation in monitoring in the list of mitigation measures suggested by Indigenous groups. **Additional information provided by the VFPA:** The Project is a proposed container terminal; therefore, only container vessels will call. Tanker ships are used to transport oil and will not call at RBT2. It is assumed in this comment that the term tanker is intended to refer to container vessels.	**EIS** 33.0 Environmental Management Program 33.5 Roberts Bank Terminal 2 Follow-up Program Appendix 33-A Proposed Draft Follow-up Program Elements **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̱SÁNEĆ* Nation, Table 30 Environmental Management Program 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 7.3.3 Mitigation Measures
MN-9.4	Expressed interest in participating in the study and monitoring of crabs related to mitigation. Suggested they could monitor crabs while practicing a small FSC. Interested in reviewing the crab mitigation suggestions raised to date.	08-Nov-2017, Meeting	**08-Nov-2017, Meeting:** Committed to provide summaries of the information request packages to Malahat, specifically the marine commercial use and crab mitigation packages. Committed to provide a summary of crab mitigation suggestions under evaluation.	**Addressed in EIS Appendix 7.2-B (#119):** The EIS describes potential effects on fishing activity (EIS Sections 21.0 and 24.0) and effects in other areas (e.g., Boundary Bay) that are not otherwise directly affected by the Project but that may be affected by displacement are considered in EIS Section 32.2. Mitigation measures to reduce effects on outdoor recreation include: • Working with DFO to engage with recreational crab harvesters to identify and implement feasible mitigation measures; and	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 21.0 Marine Commercial Use Table 21-10 Summary of Determination of Significance of Residual Effects for Marine Commercial Use

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			12-Apr-2018, Letter from the VFPA: Stated that since your concerns were raised, the Project team has conducted further work on these topics to respond to information requests from the Review Panel, to better understand potential effects and suggested mitigation, and to gain deeper understanding of the viewpoints of Indigenous groups and stakeholders. Provided the RBT2 Crab Mitigation Summary Overview, which detailed the following: • Mitigation measures to avoid or reduce effects to crab as outlined in the EIS; and • Additional crab harvesting related mitigation measure suggestions under review. Stated that the VFPA is interested in hearing views regarding options to mitigate potential effects to crabs and crabbing in the Project area.	• Implementation of construction environmental management plans related to construction phase communication and crab salvages. Mitigation measures to reduce effects on marine commercial use include: • Working with DFO to engage with commercial crab harvesters to identify and implement feasible mitigation measures; and • Implementation of construction and operation environmental management plans related to construction phase communication, construction monitoring and crab salvages. **Addressed in AIEIS Appendix 2-B, Table 30 (#162):** The VFPA is committed to developing and implementing a Follow-up Program for the Project. The purpose of the Follow-up Program is to verify the accuracy of residual effect predictions made in the EIS, and determine the effectiveness of any measures taken to mitigate the adverse environmental effects of the Project. To ensure the Program's elements adequately reflect conditions of Project approvals, final designs, and construction or operation approaches, as well as public, Indigenous group, and regulator feedback received during the review of the EIS, the VFPA has committed to undertaking the development of the Follow-up Program following the submission of the EIS. The Follow-up Program will be developed in consultation with federal agencies, including the CEA Agency, DFO, and Environment and Climate Change Canada. Complete drafts of the RBT2 Follow-up Program will be made available prior to the start of field measurements to ensure parties consulted on the program and approving agencies have an opportunity to evaluate and approve the program. Feedback from Indigenous groups regarding the draft program will be sought through the VFPA's ongoing engagement initiatives. Drawing on the elements described in EIS Appendix 33-A and ongoing post-EIS submission regulator consultation, the VFPA will lead the development of the RBT2 Follow-up Program document, which will include details on the duration and frequency of field data collection, based on an evaluation of the length of time needed to detect effects given observed environmental variability, likely magnitude of environmental effect, and desired level of statistical confidence in the results. Participation by Indigenous groups in follow-up monitoring is discussed in EIS Section 32.0, and in AIEIS Section 7.0. The measures related to participation in environmental monitoring and follow-up programs are specifically extended to the *W̲SÁNEĆ* Nation. Table 10: Human Health – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-10.1	Referred to EIS excerpt: "there are no anticipated residual effects to most traditional food sources…" (Section 27.6.1.5). Requested a rationale for concluding that all Project components will have negligible effects on food security for Aboriginal peoples.	27-Oct-2016, Letter to Panel (CEAR Document #621)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Section 27.6.1.5:** EIS Section 32.2, examines potential Project-related and cumulative effects that are relevant to traditional food consumption and nutritional health. These potential effects are related to access to preferred locations for harvesting preferred food resources, availability of preferred food resources, and quality of preferred food resources. Based on information considered in EIS Section 32.2, there are no anticipated residual effects to most traditional food sources, including marine vegetation, marine fish, coastal birds, marine mammals, and most marine invertebrates, including bivalve shellfish and Dungeness crab.	**EIS** 27.0 Human Health 27.6.1.5 Negligible Effects Related to Food Security 32.2 Current Use of Land and Resources for Traditional Purposes
MN-10.2	Asked why access to preferred food sources and traditional use food-harvesting sites is not included in the cumulative effects assessment.	27-Oct-2016, Letter to Panel (CEAR Document #621)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Section 32.2.9:** As noted in EIS Section 32.2.9, no measurable residual adverse Project-related effects on Current Use are predicted in this assessment; the Project is not expected to contribute to cumulative effects. **Addressed in IR13-14:** The VFPA's forthcoming response to IR13-14 will further discuss the assessment of food security.	**EIS** 32.2 Current Use of Land and Resources for Traditional Purposes 32.2.9 Cumulative Effects Assessment **Information Requests** Response to Sufficiency Information Request #14 (IR13-14)
MN-10.3	Asked how the VFPA plans to address concerns raised by Aboriginal groups regarding food security, specifically those marine resources traditionally harvested within the project marine invertebrates local assessment area that are now inedible due to biotoxins and other contaminants.	27-Oct-2016, Letter to Panel (CEAR Document #621)	The VFPA has reviewed this letter and provides the following additional information and correspondence. **12-Apr-2018, Letter from the VFPA:** Stated that since Malahat Nation's concerns were raised, the Project team has conducted further work on these topics to respond to information requests from the Review Panel, to better understand potential effects and suggested mitigation, and to gain deeper understanding of the viewpoints of Indigenous groups and stakeholders. Provided the following documents review: • IR4-33 – Crab Hepatopancreas Additional Study Summary; and • IR4-34 – Black Crab Additional Studies Summary. Stated that the VFPA is interested in hearing views regarding options to mitigate potential effects to crabs and crabbing in the Project area.	**Addressed in EIS Section 27.0 and EIS Appendix 27-C:** Addresses potential effects of contaminant-related consumption risks of Dungeness crab, where contaminant analysis of crab tissue and the completion of a human health risk assessment was completed to support the development of the environmental assessment. The leg muscle tissue did not contain detectable polycyclic aromatic hydrocarbon (PAH) concentrations, in spite of the use of sensitive laboratory analytical methods. Only arsenic was present in concentrations of potential concern and, consequently, was carried forward in a quantitative human health risk assessment; it was concluded that arsenic-associated health risks from the consumption of Dungeness crab tissue are acceptably low. EIS Section 32.2 examines potential Project-related and cumulative effects that are relevant to traditional food consumption and nutritional health. These potential effects are related to access to preferred locations for harvesting preferred food resources, availability of preferred food resources, and quality of preferred food resources. Based on information considered in EIS Section 32.2, there are no anticipated residual effects to most traditional food sources, including marine vegetation, marine fish, coastal birds, marine mammals, and most marine invertebrates, including bivalve shellfish and Dungeness crab. **Addressed in responses to IR4-33 and IR4-34:** Further information concerning the VFPA's investigations into 'blackened' crabs is provided in its response to IR4-34. In summary, black lesions were observed on four of the five crabs collected by Indigenous harvesters. The black lesions were concluded to be consistent with chitinolytic shell disease, generically referred to as 'shell disease', a condition common to crab and other crustaceans. This disease is caused by a bacterial or fungal infection of an area where the outer layer of the shell has been previously damaged. Shell disease has not been linked to contamination. The disease is not specific to the Roberts Bank area and is present across the Pacific Northwest, including Alaska and B.C. and in Atlantic Canada.	**EIS** 27.0 Human Health 27.6 Future Conditions with the Project – Potential Project-Related Effects 27.6.1.5 Negligible Effects Related to Food Security 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Land and Resources for Traditional Purposes 32.2.6 Future Conditions with the Project – Potential Project-related Effects **Information Requests** Response to Additional Information Request #31 (AIR-12.04.15-31 of CEAR Document #388) Response to Sufficiency Information Request #33

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				In its response to IR4-33, the VFPA provided results of the study. In summary: A crab hepatopancreas study was conducted at Roberts Bank to determine the concentrations of contaminants of concern in crab hepatopancreas in the LAA. In June 2017, Dungeness crab were collected from five traps placed at each of the three study locations (15 traps total). Twelve adult male crabs were harvested from each of the three sites (36 crab total). Samples were submitted under chain of custody to analytical laboratories accredited by the Canadian Association for Laboratory Accreditation (CALA) for the analysis requested. The analysis was completed in August 2017. Collectively, the results of a statistical comparison across sites indicate that the average concentrations of polychlorinated biphenyls (PCBs), coal indicator elements, arsenic compounds, and PAHs measured in hepatopancreas from crab collected from the RBT2 and intermediate transfer pit (ITP) sites are not statistically higher than those measured in crab from the Canoe Passage reference site. This suggests that existing sediment and water quality in and around the existing terminal and proposed RBT2 terminal are not contributing to contaminant concentrations in crab hepatopancreas that are higher than levels found in crab hepatopancreas from the Canoe Passage reference site. **Addressed in response to AIR-12.04.15-31:** As noted in the VFPA's response to AIR-12.04.15-31, there is small to no potential for an increase in the concentrations of contaminants in the tissues of country foods in association with Project construction or operation.	(IR4-33 of CEAR Document #1078) Response to Sufficiency Information Request #34 (IR4-34 of CEAR Document #946)

Table 11: Labour Market – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-11.1	Interested in the process for sourcing labour for the Project. Asked whether the VFPA will be competing for workers and whether there is sufficient labour pool in the Lower Mainland. Commented that it is harder to find work on the Island. Asked whether there has been any consideration of the temporary foreign worker issue and how BC will benefit from these jobs.	15-Jul-2015, Meeting	**15-Jul-2015, Meeting:** Recorded comment for follow-up. **22-Jul-2015, Email from the VFPA:** *"If approved, the Roberts Bank Terminal 2 Project would create thousands of jobs during construction and operation. Prior to the beginning of construction, [the VFPA] will develop a labour plan with the land-based developer that is selected to build the project. The intention will be to create opportunities locally, regionally, provincially and nationally and there is no anticipated need for temporary foreign workers as part of the construction or operation of the Project. A summary of the economic benefits is available in Chapter 5 of the Roberts Bank Terminal 2 Project Rationale, and more detailed information can be found in Appendix 20-A of the RBT2 Environmental Impact Statement."*	**Addressed in AIEIS Appendix 2-B, Table 23 (#99):** EIS Section 19.0 states that the level of local labour sourcing required for the Project is feasible in part due to the relatively large size and diversity of the region's labour force of approximately 1.4 million workers (including a construction workforce in 2013 of almost 100,000 workers), and the region's extensive construction services infrastructure. In addition, labour market capacity is anticipated within the LAA (Metro Vancouver) through a combination of worker reallocation, drawing in unemployed and part-time labour resources, and enhanced labour force participation. As stated in the EIS and in the AIEIS, the VFPA proposes to assist certain Indigenous groups in accessing potential economic opportunities resulting from the Project, including contracting opportunities and construction employment opportunities. The VFPA proposes to extend the same opportunities to Tsawout First Nation, Pauquachin First Nation, Tseycum First Nation, Tsartlip First Nation, and Malahat Nation. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs.	**EIS** 19.0 Labour Market 19.7 Future Conditions with the Project – Potential Project-Related Effects 19.7.1 Rationale for Negligible Effect #1 – Change in Labour Market Balance 19.7.2 Potential Effect #1 – Change in Employment Appendix 20-A Economic Impact Roberts Bank Terminal 2 Technical Report **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 23 Labour Market **Meeting Canada's Trade Demand: Project Rationale.** Available at: http://www.robertsbankterminal2.com/wp-content/uploads/RBT2-Project-Rationale-March-20151.pdf
MN-11.2	Requested additional socioeconomic and demographic information. Concerned that the EIS did not account for people coming from Vancouver Island for jobs. Asked whether there are potential benefits that could be captured on Vancouver Island.	09-Feb-2016, Meeting	**09-Feb-2016, Meeting:** Stated that socio-economic information gathering is focused on marine commercial use. **10-Feb-2017, Letter from the VFPA:** Enclosed a copy of the AIEIS and Appendix 2-B, which describes the concerns raised by Malahat and the VFPA's responses.	**Addressed in EIS Appendix 7.2-B (#111):** The LAA for labour market and economic development was defined as Metro Vancouver. The LAA was structured to capture the Project's potential labour market and economic development effects that will occur locally and are measurable or detectable. While there may be members of Indigenous groups located outside of Metro Vancouver that participate in one or more aspects of Project employment, or other economic effects, the effects on the labour market and economies of these Indigenous groups were not considered to be measurable or detectable. **Addressed in AIEIS Appendix 2-B, Table 23 (#104):** Detailed population and demographic information is presented in EIS Section 18.4, and detailed labour market information in EIS Section 19.0. The LAA for labour market and economic development was defined as Metro Vancouver. The LAA was structured to capture the Project's potential labour market and economic development effects that will occur locally and are measurable or detectable. While there may be members of Indigenous groups located outside of Metro Vancouver that participate in one or more aspects of Project employment, or other economic effects, the effects on the labour market and economies of these Indigenous groups were not considered to be measurable or detectable. The VFPA is working with Indigenous groups to facilitate access to Project benefits, including training, employment opportunities, and Project contracting opportunities. As stated in EIS Section 32.3.3, the VFPA proposes to assist certain Indigenous groups in accessing potential economic opportunities resulting from the Project, including contracting opportunities as well as construction employment opportunities. The VFPA proposes to extend the same opportunities to Tsawout First Nation, Pauquachin First Nation, Tseycum First Nation, Tsartlip First Nation, and Malahat Nation. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 18.0 Social and Economic Setting 18.4 Population 19.0 Labour Market 20.0 Economic Development 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.3.3 Mitigation Measures 34.0 Benefits to Canadians 34.2 Benefits of the Project **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 23 Labour Market 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 7.2.7 Mitigation Measures

Table 12: Marine Commercial Use – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-12.1	Requested a rationale for the exclusion of Aboriginal Food, Social & Ceremonial (FSC) or domestic use fishery as a valued component, while commercial fishery was selected as a VC. Asked why Aboriginal FSC fisheries are grouped in with commercial and recreational fisheries. Stated that FSC fisheries should be discussed separately from commercial and recreational fisheries.	27-Oct-2016, Letter to Panel (CEAR Document #621)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Section 21.0:** EIS Section 21.0 does not include an assessment of Project effects on FSC or domestic fisheries. Project effect on Indigenous FSC and domestic fisheries are not addressed with commercial fisheries in EIS Section 21.0, nor are they addressed with recreational fishing in EIS Section 24.0. Project effects on FSC or domestic fisheries are addressed in EIS Section 32.0. Note: Various sections within EIS Section 21.0 reference EIS Section 32.0 where an assessment of Project effects on FSC or domestic fishing is undertaken. EIS Section 16.0 notes that all Project-related effects to the ongoing productivity of commercial, recreational, and Aboriginal fisheries are expected to be unmeasurable compared to natural variability at the population level for species relevant to these fisheries.	**EIS** 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries 21.0 Marine Commercial Use 24.0 Outdoor Recreation
MN-12.2	Requested that Section 3.0 Marine Commercial Use of the AIEIS be updated to reflect Malahat's interest in both Aboriginal guided sport fishing and Aboriginal marine-based tourism services.	05-Jan-2017, Letter	**10-Feb-2017, Letter from the VFPA:** The information provided in regard to guided sport fishing and other marine-based tourism services has been included in AIEIS Sections 3.1.2 and 3.1.3. Additionally, AIEIS Section 3.2 has been revised, based on the information provided.	**Addressed in AIEIS Section 3.1.2:** Malahat reported that they are currently taking steps to become a provider of Indigenous guided sport fishing services, and that they have acquired a commercially licensed sport fishing and passenger carrying boat in conjunction with this objective (VFPA 2017). No other guided sport fishing enterprise connected to the five bands comprising *W̱SÁNEĆ* Nation, operating in the guided sport fishing LAA or RAA (as defined in EIS Section 21.3.1) was identified. **Addressed in AIEIS Section 3.1.3:** Malahat reported that they are currently taking steps to become a provider of Indigenous marine-based tourism services, have acquired a commercially licensed sport fishing and passenger carrying boat in conjunction with this objective, and are in the early stages of planning their tourism operations and considering commercially feasible options (VFPA 2017). No other Indigenous marine-based tourism enterprise connected to the *W̱SÁNEĆ* bands, operating in the marine-based tourism LAA or RAA (as defined in EIS Section 21.3.1), was identified. **Addressed in AIEIS Section 3.2:** Malahat has reported that they are currently taking steps to become a provider of Indigenous guided sports fishing and marine-based tourism services. It is expected that the negligible effects from the Project on guided sports fishing as described in EIS Section 21.7.3 and the negligible effects from the Project on marine-based tourism as described in EIS Section 21.74 would apply to Malahat guided sports fishing and marine-based tourism operators operating within the LAA.	**AIEIS** 3.0 Marine Commercial Use 3.1.2 Existing Conditions Aboriginal Guided Sport Fishing 3.1.3 Existing Conditions Aboriginal Marine-based Tourism 3.2 Future Conditions with the Project Potential Project-related Effects
MN-12.3	Concerned with the assessment that the proposed Project will have a "Negligible effect on marine fish harvesting area, access, resource availability, and harvesting revenues" despite the statement that "…crab harvest levels have decreased by 50% over the past five years due to loss of habitat around the original	05-Jan-2017, Letter	**10-Feb-2017, Letter from the VFPA:** Enclosed an excerpt from the AIEIS Appendix 2-B showing your comments on the final draft AIEIS and the port authority's response to those comments.	**Addressed in AIEIS Appendix 2-B, Table 25 (#112):** EIS Section 21.0 and AIEIS Section 3.0 included four sub-components: • Seafood harvesting (commercial seafood harvested in the LAA is primarily comprised of crab harvesting); • Marine fish harvesting (including salmon); • Guided sport fishing; and • Marine-based tourism. In order to assess the potential effects to the four sub-components for the marine commercial use assessment, six indicators of potential effects were considered (shown in EIS Table 21-2). Four of these indicators related to the seafood harvesting and marine fish harvesting sub-components, as follows: • Harvest volumes and revenues; • Harvesting areas; • Access to harvesting areas; and	**EIS** 16.0 Ongoing Productivity of Commercial, Recreational and Aboriginal Fisheries 16.6.1 Negligible Effects 21.0 Marine Commercial Use 21.5.1.1 Seafood Harvesting 21.7.1 Seafood Harvesting - Rationale for Negligible Effect – Changes in Access and Resource Availability

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	terminal and the resulting impacts from ship movements." Stated that that the two statements are irreconcilable.			• Resource availability. A negligible potential effect was predicted for the sub-component of marine fish harvesting for all relevant indicators. The negligible effects related to changes in harvest volumes and revenue, harvesting areas, access to harvesting areas, and resource availability are described in EIS Section 21.7.2. As indicated in EIS Section 16.6.1, the productivity of salmon is not expected to be measurably affected by the Project. For the seafood harvesting sub-component, focusing on crab harvesting, a negligible potential effect was determined for the two indicators of access to harvesting areas and resource availability, before mitigation (EIS Section 21.7.1), and a potential moderate effect was determined for the two indicators of changes in harvest volumes and revenues, and harvesting areas, before mitigation (EIS Section 21.7.5). After proposed mitigation, described in EIS Section 21.8.1 and AIEIS Section 3.3, the Project is expected to result in a residual effect to the sub-component of commercial seafood harvesting, for the indicators of harvesting areas, and harvest volumes and revenue. The residual effect (after mitigation) is determined to be not significant based on the rationale provided in EIS Section 21.10.1. Other planned or reasonably foreseeable projects and activities would also displace commercial crab harvesting, and this effect would combine with that of the Project to result in an incremental cumulative effect on commercial crab harvesting (seafood harvesting sub-component). This adverse cumulative effect is determined to be not significant. EIS Section 21.0 also presents data from other sources, including annual commercial harvests of Dungeness crabs in the vicinity of the Roberts Bank terminals, and contains observations about the trends in these harvests. As indicated in EIS Sections 16.6.1 and 21.5.1.1 (p. 21-17), Dungeness crab population dynamics naturally fluctuate due to certain environmental conditions that occur over a broad area, and this high variability in population dynamics directly translates into high variability of annual commercial harvests. The conclusions in the assessment, in the EIS and the AIEIS, are based on all sources of information reviewed.	21.7.2 Marine Fish Harvesting – Rationale for Negligible Effect – Changes in Area, Access, Resource Availability and Harvesting Revenues 21.7.3 Guided Sport Fishing – Rationale for Negligible Effect – Changes in Area, Access, Resource Availability and Revenues 21.7.4 Marine-based Tourism – Rationale for Negligible Effect 21.7.5 Seafood Harvesting – Change in Area, Harvest and Revenue 21.8.1 Seafood Harvesting Mitigation Measure – Change in Area, Harvest and Revenue 21.10.1 Significance Determination **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *WSÁNEĆ* Nation, Table 25 Marine Commercial Use 3.0 Marine Commercial Use 3.2 Future Conditions with Project –Potential Project-related Effects 3.3 Mitigation Measures 3.4 Characterisation of Residual Effects and Context
MN-12.4	While the EIS discusses Aboriginal commercial marine use (Section 9.2), it does not include information (where available) related to other commercial harvesting activities occurring in terrestrial and intertidal areas within the MSA. Requested a description of these activities occurring within the MSA.	16-Dec-2015, Letter to the CEA Agency (CEAR Document #378)	**12-May-2016, Letter from the CEA Agency (CEAR Document #404):** *"The Agency requested additional information on socio-economic conditions AIR #9 Socio- Economic Conditions Assessment."*	**Addressed in response to MSA IR-02.24.16-9:** As noted in the VFPA's response to MSA IR-02.24.16-9, changes to the environment from marine shipping associated with the Project are not predicted to interact with nor potentially affect any other social and economic conditions (i.e., such as those assessed within the EIS as relevant to the Project: labour market, economic development, local government finances, and services and infrastructure). Therefore, these other socio-economic conditions were not assessed further within the MSA.	**Information Requests** Response to Information Request #9 (MSA IR-02.24.16-9 of CEAR Document #386)

Table 13: Marine Fish – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-13.1	Stated that herring are very important to the ecosystem and the loss of herring stocks and other species is a concern. Noted the DFO area for the Strait of Georgia is immense and question asking how the impact to localised stocks is assessed. Request for studies that look at localised herring stocks. Disagreed with the assertion that herring are migratory.	27-Nov-2015, EIS Results Workshop #2 - *W̲SÁNEĆ* Nation	**27-Nov-2015, Workshop:** Stated that DFO considers the Strait of Georgia as one stock due to the migratory nature of herring.	**Addressed in AIEIS Appendix 2-B, Table 18 (#76):** Pacific herring is considered as a representative species in the forage fish sub-component of the marine fish assessment, as presented in EIS Section 13.0. The importance of Pacific herring to the ecosystem is acknowledged and described in EIS Section 13.5.3.3. Potential effects to herring, whether localised or migratory, that may be present in the vicinity of the Project are assessed in EIS Section 13.6. The EIS did not assert that herring are migratory; rather, referring to peer-reviewed literature, the EIS presents the current scientific consensus that in the Strait of Georgia, herring populations are either migratory or non-migratory (i.e., localised). Evidence suggests that localised herring populations are mainly located in Puget Sound and inlets on the eastern side of the Strait of Georgia.	**EIS** 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component 13.2.1 Sub-components 13.4.1 Information Sources, Desktop and Field Studies 13.5.3 Existing Conditions, Forage Fish 13.5.3.3 Pacific Herring 13.6 Future Conditions with the Project Table 13-6 Desktop and Field Studies Related to Marine Fish to Support the Assessment Table 13-10 Summary of Roberts Bank Ecosystem Model Productivity Results for Marine Fish 13.6.3 Potential Effect - Changes in Productivity Table 13-12 Marine Fish Productivity Summary (Prior to Mitigation) Based on Weight of Evidence **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 18 Marine Fish
MN-13.2	Requested confirmation that the assumption that rockfish are not harvested is based on the fact that no licenses were issued.	27-Nov-2015, EIS Results Workshop #2 - *W̲SÁNEĆ* Nation	**27-Nov-2015, Workshop:** Clarified that rockfish were not fished in the LAA, but may be fished elsewhere in the Strait of Georgia. Stated that the Fraser River estuary is not prime rockfish or lingcod territory, since the bottom is sandy and flat. Responded there was no record of harvest for this species between 2009 and 2014. Added that multiple data sources were used to inform this conclusion, such as interviews with Tsawwassen First Nation regarding their activities, and elders' workshops.	**Addressed in AIEIS Appendix 2-B, Table 25 (#108):** Available information for the commercial, recreational, and Aboriginal fisheries assessment (EIS Section 16.0) indicates that Indigenous harvest of rockfish is permitted under FSC and communal licences; however, no rockfish FSC catch data for Indigenous groups, besides Tsawwassen First Nation, could be sourced. As indicated in EIS Section 21.5.1.2, seven distinct commercial groundfish fisheries and associated DFO management areas occur in B.C.: groundfish trawl, halibut, sablefish, inside rockfish, outside rockfish, lingcod, and dogfish. As described in EIS Section 32.0, rockfish are harvested for domestic and FSC purposes, caught as by-catch, and used as bait by various Indigenous groups. At the time of writing the AIEIS, Tseycum First Nation holds a Rockfish Area Inside licence which can be fished within the LAA and RAA. In the context of consultation on the Project, commercial rockfish harvesting under this licence was not identified as occurring in the area of the proposed terminal (Tseycum First Nation Representative 2016). Salish Strait Seafoods—an equally owned partnership between Malahat, T'Sou-ke, Scia'new, Tsawout, and Snaw-naw-as First Nations—holds one Halibut and two Rockfish Area Inside licences, which can be fished in the LAA and RAA (DFO 2015).	**EIS** 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries 16.5.3 Existing Conditions, Aboriginal Fisheries 21.0 Marine Commercial Use 21.5.1.2 Existing Conditions, Marine Fish Harvesting 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Land and Resources for Traditional Purposes 32.2.4 Existing Conditions 32.2.4.1 Tsawwassen First Nation 32.2.4.2 Musqueam First Nation 32.2.4.4 Tsleil-Waututh Nation

MN-13.3	Concerned with the exclusion of eulachon as representative species within the EIS and what this means for the assessed or non-assessed impacts to these species.	28-Jul-2016, Issues Workshop - Island Nations	**28-Jul-2016, Workshop:** Explained that aspects of eulachon life history are captured through the assessment of other species. For example, salmon are anadromous, herring are hearing sensitive, and Pacific sand lance have a similar diet to eulachon (they both eat zooplankton)—so the unique features of eulachon have been assessed by proxy. Explained that the assessment methodology captures those effects pathways as robustly as possible. Data is limited of Fraser River eulachon, and thus precludes the ability to do an assessment. Stated that this has prompted some recent studies. For example, the Lower Fraser Fisheries Alliance did a great report on eulachon, Traditional knowledge and the state of science, and these are on our radar and we will consider them going forward, but we do feel any potential Project effects on eulachon have been captured through this proxy approach.	**Addressed in EIS Appendix 7.2-B (#80):** Potential Project-related effects on eulachon are considered in the marine fish assessment within the forage fish sub-component. Eulachon was not assessed directly as a representative species within the forage fish sub-component due to the rarity of eulachon in the Roberts Bank area. The assessment recognises eulachon as a species of high economic, societal, and cultural importance to Indigenous communities. **Addressed in AIEIS Appendix 2-B, Table 18 (#77):** Potential Project-related effects on eulachon are considered in the marine fish assessment within the forage fish sub-component. Eulachon was not assessed directly as a representative species within the forage fish sub-component due to the rarity of eulachon in the Roberts Bank area. The assessment recognises eulachon as a species of high economic, societal, and cultural importance to Indigenous communities. Representative species in the forage fish sub-component include Pacific sand lance, surf smelt, Pacific herring, and shiner perch. Qualitative and empirical evidence indicates that there will be minor decreases in forage fish productive potential driven by loss of subtidal sand habitat and disturbance of Pacific herring from underwater noise. **Addressed in response to IR-7.31.15-08:** As described in the VFPA's response to IR-7.31.15-08, all relevant ITK that was available was considered and incorporated into the EIS.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 13.0 Marine Fish 13.2 Selection of Marine Fish Valued Component 13.2.1 Sub-components 13.4.1 Information Sources, Desktop and Field Studies 13.6.3 Potential Effect - Changes in Productivity 13.6.3.3 Changes in Productivity of Forage Fish **AIEIS** Appendix 2-B Aboriginal Issues and Interests – *WSÁNEĆ* Nation, Table 18 Marine Fish **Information Requests** Response to Information Request #8 (IR-7.31.15-08 of CEAR Document #314)
MN-13.4	Concerned with the exclusion of sockeye as representative species within the EIS and what this means for the assessed or non-assessed impacts to these species.	27-Nov-2015, EIS Results Workshop #2 – *W̲SÁNEĆ* Nation 28-Jul-2016, Issues Workshop – Island Nations	**27-Nov-2015, Workshop:** Responded that chum and Chinook were chosen as representative species because they are the most estuarine dependent, use the area as juveniles, and are thus most likely to interact with the Project. Sockeyes come through the river and head straight out to sea. Stated that this is a conservative approach; it is assumed that the pathway of effects for sockeye will be similar to those for chum and Chinook, but chum and Chinook are more likely to experience potential Project effects based on their estuarine use. Another reason for choosing Chinook is that it is a preferred food source for the SRKW, which have an endangered status. **28-Jul-2016, Workshop:** Explained that sockeye salmon and all salmon species were assessed through the detailed assessment of chum and Chinook salmon. They	**Addressed in EIS Appendix 7.2-B (#78):** Potential Project-related effects on marine fish, including all five species of Pacific salmon, are considered in the EIS. Chum and Chinook salmon are evaluated as being representative of all Pacific salmon species, as they are the most estuarine-dependent species of salmon, and therefore most likely to be affected by the Project. A field sampling program for salmon was conducted at Roberts Bank in 2012 and 2013. While it is possible that 2012 to 2013 seasonal surveying for the Project did not capture all salmon species present at Roberts Bank, historical survey data add to the weight of evidence, suggesting a realistic representation of species composition and abundance at Roberts Bank. **Addressed in EIS Appendix 7.2-B (#107):** Sockeye salmon was not selected as a representative species within the Pacific salmon sub-component, as studies indicate that juvenile sockeye salmon do not use the Roberts Bank area in high abundance, relative to chum and Chinook salmon (which have been selected as representative species in the assessment). Since chum and Chinook are the most estuarine-dependent species of salmon, the potential for Project-related interactions with these species is greatest. Results of the assessment based on these two species represent a more conservative approach, given the life histories and habitat use of chum and Chinook. Therefore, potential Project-related	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 13.0 Marine Fish 13.2.1 Sub-components 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries 16.2.1 Sub-components 21.0 Marine Commercial Use 21.5.2 Existing Conditions, Aboriginal Commercial Fishing and Seafood Harvesting **Information Requests** Response to Sufficiency Information Request #15 (IR5-15 of CEAR Document #1078)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			were also in the Ecopath with Ecosim and Ecospace (EwE) model, but not explicitly. The rationale behind this is that juvenile Chinook and chum are the most estuarine dependent species. Juvenile Chinook and chum spend the most time in the estuary relative to other species of salmon, and therefore are most likely to interact with the Project. Therefore, any predicted Project effects to Chinook or chum will conservatively predict effects to other species, as well as other anadromous species such as steelhead and trout. The use of representative species is a fairly common environmental assessment approach. The rationale is based on habitat use predominately, but taking a deeper dive into sockeye habitat use and history—the information includes past studies from DFO, academia, field data collected as part of the RBT2 base line studies and past environmental assessments indicate that juvenile sockeye do not use Roberts Bank in abundance. They tend to use lakes for rearing and smoltification and migrate out the river immediately. So, the spatial overlap of the Project with sockeye is considered fairly limited. The information that we have on adult sockeye habitat use indicates they do not spend much time in the Roberts Bank area either. They typically enter the Fraser River with little or no delay, so again, there is limited spatial and temporal overlap with the Project. So, to sum that up, the environmental assessment is about capturing Project interactions and pathways of effects and we definitely recognise and understand the importance of sockeye—and took the approach that we believe represents the most conservative assessment by assessing the species that spend the most time in the estuary.	effects on sockeye salmon are considered within the assessment through the assessment on the subcomponent Pacific salmon, as represented by chum and Chinook. Sockeye salmon are considered in the assessment of marine commercial use as the primary species of salmon sought in the assessment area. The economic component of sockeye fishing is addressed in EIS Section 21.0. **Addressed in response to IR5-15:** In its response to IR5-15, the VFPA specifically discusses existing conditions related to sockeye and describes the status and management practices associated with the species. The response also further assesses potential effects of the project on sockeye directly.	
MN-13.5	Stated that Malahat fisheries is a key source of sustenance for community members with a reliance on Malahat waters. Concerned that increased tanker traffic, the noise and wake may disturb or temporarily/permanently displace fish resources out of Malahat waters.	12-Sep-2016, Malahat Traditional Use Study	Recorded comment for consideration by the Project team.	**Additional information provided by the VFPA:** The Project is a proposed container terminal therefore only container vessels will call. Tanker ships are used to transport oil and will not call at RBT2. It is assumed in this comment that the term tanker is intended to refer to container vessels. **Addressed in MSA Section 8.1:** Potential effects of vessel wake-generated waves on marine fish and fish habitat were characterised as negligible, because only 2% of coastline in the LAA is within the wake-related zone of influence, and because wake-generated wave heights at shorelines are predicted to be well within the range of natural wave conditions. Fish and fish habitat are already adapted to the natural conditions; therefore, any wake-related influences would not be distinguishable from existing conditions. Similarly, potential effects of underwater noise were also considered to be negligible because noise associated with Project-associated marine vessel activity and future cumulative shipping activities would not exceed injury thresholds for fish species or the Pacific salmon species behavioural threshold. Further, while noise-induced behavioural changes are possible for Pacific herring, potential effects would be localised to within	**MSA** 8.1 Marine Fish and Fish Habitat

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				20 m of a container ship and of short duration (as the ship passes by) and are therefore not anticipated to affect the integrity of populations within the LAA.	
MN-13.6	Stated that the introduction of invasive species is not indicated as having a potential effect on marine fish. Stated that the EIS does not address impacts to the marine environment due to invasive species transported via vessels. Requested a rationale for the exclusion of invasive species as a Project-related impact to the marine environment. Asked if the VFPA has a strategy for reducing negative impacts to the marine environment due to the introduction of invasive species.	27-Oct-2016, Letter to Panel (CEAR Document #621)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Appendix 7.2-B (#100):** The VFPA was the first port in North America to prohibit in-port ballast water exchange without prior mid-ocean exchange, a practice that became the basis of government requirements now enforced by Transport Canada. To prevent the invasion of foreign species into local waters, international regulations, through the IMO, are managed by Transport Canada. All commercial deep sea vessels are required to carry out a ballast water exchange prior to entering Canadian waters. This is done outside the exclusive economic zone of 200 nautical miles and in water deeper than 2,000 m. By requiring vessels to complete this ballast 'flush' well outside Canadian waters, the aim is to prevent any foreign organisms from entering into the local ecosystem. The U.S.A. has similar requirements, and vessels arriving from the Puget Sound area need to forward the completed U.S. forms to Canadian authorities prior to entry into Canadian waters.	**EIS** 4.0 Project Description 4.4.2 Operation-phase Activities Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.7 Marine Water Quality 9.7.8 Future Conditions with the Project

Table 14: Marine Invertebrates – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-14.1	Concerned with potential effects to Malahat Nation crabbing activities in the Project area. Concerned that the Project will cause a significant effect to their food, social, and ceremonial harvesting. Concerned that the VFPA will try to mitigate effects to the crab fishery by proposing that license holders move to other areas; Malahat views this as inappropriate for their FSC fisheries. Concerned that increase traffic in and around the Project area will lead to more loss of traps (gear damage) and potential for loss of market share. Stated that compensation will be required if habitat is lost and does not believe other mitigation measures (e.g. proposing that license holders move to another Crab Management Area) are appropriate. Stated that other Crab Management Areas do not have the capacity to absorb the Area I license holders. Concerned that the Project will result in further concentration of use within a smaller area, with less habitat, less crab, and the same number of harvesters. Noted that there is extreme pressure on the urban areas of the coast and therefore not a lot of space to migrate the fishery. Concerned with potential effects to Malahat Nation crabbing activities in the Project area. Concerned that the Project will cause a significant effect to their commercial crab harvesting. Predicted that the new terminal will put an end to their Economic Opportunity and commercial use due to the reduction of available space to harvest in their territory. Requested compensation for the full value of the licence if Malahat's ability to harvest is affected. Expressed concern with the Project's impact on their crab license as it is the only active license in the	15-Aug-2016, Interview with Malahat Nation Fisheries Representatives 27-Oct-2016, Letter to Panel (CEAR Document #621) 05-Jan-2017, Letter 30-May-2017, Meeting with Administrative Staff 29-Jun-2017, Site Tour	**15-Aug-2016, Interview:** Recorded comment for follow-up. **10-Feb-2017, Letter from the VFPA:** Malahat Nation previously advised the VFPA that they harvest crab for FSC or community purposes at Roberts Bank, as indicated in AIEIS Section 7.2.4.5. This information has informed the assessment of potential effects on Current Use and potential impacts on the exercise of rights, including potential interactions related to access to locations (AIEIS Sections 7.2.6.1 and 7.3.2) and transmission of cultural heritage tied to this access (AIEIS Sections 7.2.6.4 and 7.3.2). For further details on the approach to the assessment of potential effects on cultural heritage, see the response to AIR-12.04.15-29 (as referenced and summarised in AIEIS Section 7.2.6.4). **30-May-2017, Meeting:** The VFPA met with Malahat to discuss crab consultation. Asked for more information about the full value of Malahat's licence, and whether Malahat has had any discussions with DFO on the topic. Noted crab is a cross-discipline issue. The VFPA is looking at what was proposed in the EIS related to effects, at suggested mitigation measures (e.g., from the registry) to inform the next round of consultation. The VFPA wants to ensure it talks to both Indigenous group and commercial harvesters to determine what mitigation would look like. Noted meetings or conversations are being planned for later in the summer and fall. Noted the VFPA is also doing research into example areas of dual use, such as Houston and the Fraser River. The VFPA committed to continuing to research to bring forward for discussion, analysis on compensation, consultation preparations related to crab. The Consultation Plan was updated to reflect these discussions. **08-Nov-2017, Meeting:** Stated that the VFPA is seeking input and opportunity to discuss crab mitigation with DFO. Summarised some of the mitigation measures the VFPA has heard to date: • Compensation or purchasing licences due to loss of harvest, revenue;	**Addressed in AIEIS Section 7.2.6:** As described in EIS Section 32.2.6.1, and reviewed in AIR-12.04.15-30, Project-related access (i.e., displacement) effects at Roberts Bank would only be expected to be measurable for Indigenous groups that are crab harvesting at levels and frequencies that are relatively high (i.e., Indigenous groups for whom Roberts Bank is a primary and year-round crab harvesting location for domestic or FSC purposes). Project-related access effects are not expected to be measurable for Indigenous groups that are crab harvesting for (non-commercial) traditional purposes at levels and frequencies that are relatively low (based on identified past, present, or desired future use that has continuity with past use), given that crab harvesting will still be able to occur at Roberts Bank throughout all phases of the Project. Project-related effects that may relate to changes in Current Use access other than crab harvesting related to Project footprint displacement effects were assessed in EIS Section 32.2.6.1 as non-measurable (i.e., negligible) for all Indigenous groups. The reasons for this prediction include a lack of anticipated Project interactions with, or anticipated measurable Project-related effects on access to upland locations; key fin-fishing locations (principally salmon) at or off of the Fraser River; or other locations associated with marine resource harvesting or marine-based activities (see the response to AIR-12.04.15-30 for further explanation of 'negligible' and 'measurable' in the AIEIS). Based on the above and information provided to the VFPA by *W̲SÁNEĆ* bands regarding their use of the area of the Project, the Project is not expected to measurably affect *W̲SÁNEĆ* access to preferred locations for traditional use, including but not limited to traditional fin-fishing locations associated with the Fraser River, which was the predominant use identified in the area by *W̲SÁNEĆ* Nation. With regard to access to crab harvesting locations, *W̲SÁNEĆ* use of the area of the Project for traditional crab harvesting has reportedly occurred infrequently and at low levels. The potential level of Project-related effects on access to preferred locations for traditional use purposes is therefore predicted to be negligible for Tsawout First Nation, Pauquachin First Nation, Tsartlip First Nation, Tseycum First Nation, and Malahat Nation, meaning that no noticeable incremental changes to their existing levels or patterns of use in the vicinity of the Project area are expected as a result of Project placement or activities (see response to AIR-12.04.15-30 for further explanation of 'negligible' in this context). For reasons described in EIS Section 32.2.6.2, potential Project-related effects on the productivity of marine resources (i.e., marine vegetation, marine invertebrates, marine fish, marine mammals, coastal birds) are not expected to measurably affect the availability of these resources for Current Use. Incremental changes in the availability of marine resources that have been identified as currently or formerly harvested in the vicinity of the Project area by *W̲SÁNEĆ* for traditional purposes, or that are important for cultural reasons other than harvesting (i.e., orca), are therefore not expected as a result of the Project. The potential level of Project-related effects on Tsawout First Nation, Pauquachin First Nation, Tsartlip First Nation, Tseycum First Nation, and Malahat Nation is therefore predicted to be negligible with regard to the availability of preferred resources traditionally obtained in the vicinity of the Project area. **Addressed in AIEIS Appendix 2-B, Table 25 (#107):** Information on the communal commercial Crab Management Area I Licence held by Malahat Nation is described in the AIEIS, including information obtained	**EIS** 12.0 Marine Invertebrates 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries 21.0 Marine Commercial Use 21.5.2 Aboriginal Commercial Fishing and Seafood Harvesting 21.7 Future Conditions with the Project – Potential Project-related Effects 21.7.5 Seafood Harvesting – Potential Effect #1 – Changes in Area, Harvest and Revenue 21.8 Mitigation Measures 32.2 Current Use of Land and Resources for Traditional Purposes 32.2.6.1 Potential Effect 1: Changes in Access to Preferred Current Use Locations 32.2.6.2 Potential Effect 2: Changes in Availability of Preferred Current Use Resources **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 25 Marine Commercial Use 3.0 Marine Commercial Use 3.1.1.2 Seafood Harvesting 3.2 Future Conditions with the Project – Potential Project-Related Effects 3.3 Mitigation Measures 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 7.2.4.5 Malahat Nation 7.2.6 Future Conditions with the Project - Potential Project-related Effects

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	community to provide food, and noted the crab license cannot be moved as the other areas are overcrowded and selling the license would remove connection to cultural use and a major food impact. Noted three possible resolutions: • Moving the licence to another area (not possible due to existing constraints on other areas); • Continuing to fish in the area through co-management/co-use; noted black market fishing activity in the area. Suggested a website that would advise harvesters of vessel arrivals; and • Buying the licence outright which is undesirable because it removes Malahat's connection to the ocean, cultural use, and only food fishery source. Stated that the VFPA has rated Project-related impacts to access to commercial crab harvesting areas as having negligible effects due to the implementation of an expanded navigational closure area. Requested a rationale and mitigation strategies for the displacement of Aboriginal commercial license holders due to the expanded navigational closure. Stated that mitigation strategies proposed by the VFPA include informing Aboriginal groups of timing and Project-related navigational closure to commercial crab harvesting. What about accommodating Aboriginal groups directly impacted by the Project-related impacts on their fishery? Expressed concern about the commercial crab area and subtracting with the footprint and the central area of the infill noting it would be a serious impact and can't be replaced.		• Reselection of crab management area for commercial harvesters prior to construction and operations; • Adjustment to the size or spatial area of the proposed navigational closure area expansion, both larger and smaller; • Consider dual use where some commercial crab harvesting is allowed inside the proposed navigational closure area when safe to do so around marine shipping schedule; and • Request for monitoring. **12-Apr-2018, Meeting:** Stated that they discussed Malahat Nation's licence and talked about compensation. Stated that DFO explained that Malahat's licence could not be bought or sold under the terms of that licence—licence is provided on an annual basis by DFO. Stated that they were advised by DFO to treat Malahat Nation licence as the VFPA would any other commercial licence holder. **12-Apr-2018, Letter from the VFPA:** Stated that since your concerns were raised, the Project team has conducted further work on these topics to respond to information requests from the Review Panel, to better understand potential effects and suggested mitigation, and to gain deeper understanding of the viewpoints of Indigenous groups and stakeholders. Provided the RBT2 Crab Mitigation Summary Overview, which detailed the following: • Mitigation measures to avoid or reduce effects to crab as outlined in the EIS; and • Additional crab harvesting related mitigation measure suggestions under review. Stated that the VFPA is interested in hearing views regarding options to mitigate potential effects to crabs and crabbing in the Project area.	from Malahat on areas of commercial crab harvesting activity in relation to the Project. The EIS determines that the Project would affect commercial crab harvesters' harvest areas, harvest, and revenues. As indicated in AIEIS Section 3.2, it is expected that the potential effects on commercial crab harvesting from the Project as described in EIS Section 21.7.5 would apply to Malahat Nation commercial seafood harvesters operating within the LAA. To address Project effects on commercial crab harvesting, the VFPA will work with DFO to ensure that consultation with commercial crab harvesters and Indigenous groups is undertaken to: • Communicate timing and spatial area of proposed navigational closure expansion for commercial crab harvesting; • Communicate access restrictions and procedures for maintenance of safety for commercial crab harvesting activity; and • Provide a process for commercial crab harvesters and Indigenous groups to ask questions and submit concerns about the proposed navigational closure expansion and associated displacement of commercial crab harvesting. Where identified and agreed upon through this consultation process, the VFPA will work with DFO and commercial crab harvesters and Indigenous groups to implement additional mitigation measures to address effects from displacement of commercial crab harvesting associated with the proposed navigational closure expansion during construction and operations. It is expected that proposed mitigation measures as described in EIS Section 21.8 would apply to Malahat Nation commercial seafood harvesters operating within the LAA. AIEIS Section 3.0 reflects the comments made by Malahat Nation pertaining to mitigation of displacement effects. **Addressed in response to IR7-34:** As noted in the VFPA's response to IR7-34, mitigation measures currently undergoing consultation and evaluation include: • Crab Management Area re-selection opportunity; • Adjustment of proposed navigational closure area expansion with consideration of commercial harvesting during Project operations; • Adjustment of the proposed navigational closure area expansion with consideration of Indigenous harvesting during operations; • Navigational Limited Access Fishing Area (multi-user system during operations); and • Financial compensation. The evaluation of additional mitigation measures is being informed by consultation with commercial crab harvesters (including the Area I Crab Fisherman Association), Indigenous groups, DFO, and may include other relevant regulatory agencies regarding their specific interests and concerns. Evaluation of technical and economic feasibility of the suggested measures is currently underway to inform this consultation. Technical feasibility considers the following: • Availability, applicability, and effectiveness of the specific technology; • Fit with local site characteristics, Project design, construction schedule; • Applicable regulatory frameworks; and • Whether implementation is within the VFPA's jurisdiction. Economic feasibility considers the following: • Scope of the Project design (Project re-design not required); • Construction schedule (Project construction delay not required); and Total cost of implementation of each measure during construction and/or operation.	**Information Requests** Response to Additional Information Request #30 (AIR-12.04.15-30 of CEAR Document #388) Response to Sufficiency Information Request #34 (IR7-34 of CEAR Document #1172)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-14.2	Stated that there is insufficient information regarding the extent of commercial and recreational Aboriginal crab harvesting that will be impacted by the proposed closure in Crab Management Area I. Requested more information about the extent of impact.	27-Oct-2016, Letter to Panel (CEAR Document #621)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in responses to IR7-33 to IR7-35:** Beyond the assessment provided in EIS Section 21.0, the VFPA's responses to IR7-33 to IR7-35 provides additional information concerning potential reductions in commercial crab harvest levels, mitigation measures, and ongoing engagement activities related to crab harvesting, and other supporting information.	**EIS** 21.0 Marine Commercial Use **Information Requests** Response to Sufficiency Information Request #33 (IR7-33 of CEAR Document #1172) Response to Sufficiency Information Request #34 (IR7-34 of CEAR Document #1172) Response to Sufficiency Information Request #35 (IR7-35 of CEAR Document #1172)
MN-14.3	Stated that the proposed crab fishery closure area, a preferred crabbing area for Tsawwassen and Musqueam nations, will remain open to Aboriginal FSC fisheries only. Asked if the VFPA is suggesting that other nations who do not claim rights to this area will now be permitted to crab for FSC purposes. Requested clarification, along with a plan to mitigate the increase in competition amongst commercial and recreational user groups. Asked what the VFPA's plan is to mitigate the residual effect of increased competition. Asked how the VFPA plans to mitigate the Project-related displacement of existing Aboriginal commercial and recreational crabbing.	27-Oct-2016, Letter to Panel (CEAR Document #621)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in response to IR10-07:** The VFPA's response to IR10-07, as requested by the Review Panel, further discusses potential economic implications of any permanent or temporary displacement related to the navigational closure.	**Information Requests** Response to Sufficiency Information Request #07 (IR10-07)
MN-14.4	Concerned that the Project footprint would create a divide between crab habitat to the north of the footprint (and up to shore) and south of the footprint (in deeper water).	28-Jul-2016, Issues Workshop - Island Nations	**28-Jul-2015, Workshop:** Responded that a lot of the home ranges for crabs extend 2, 3, 4 km so it was determined they are able to move around the structure, and the juvenile crabs get assistance on the ebb tides, which would pull them around the terminal. This was considered but it was concluded that crabs will be able to move around it.		
MN-14.5	Expressed their concern regarding impacts from changing the composition of the habitat, noting it is the most productive commercial crab territory and their crabber's fish in the Project footprint.	29-Aug-2017, Follow Up Program Workshop with Cowichan Nation Alliance,	**29-Aug-2017, Workshop:** Recorded comment for consideration by the Project team.	**Addressed in EIS Appendix 7.2-B (#120):** In the marine commercial use assessment, a residual effect is considered significant when all of the following conditions are met: • The effect occurs to a known area of commercial marine-based activity or potential;	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	Commented that two of their crab boats were in the Project footprint during their recent Deltaport Terminal tour.	Lyackson First Nation, Malahat Nation		• The effect displaces or excludes commercial marine-based activities from a known use area; • There are associated adverse harvest or revenue effects due to the displacement; and • The displaced commercial marine-based activity cannot move to known alternative activity areas due to regulatory reasons. The Project is expected to result in a residual effect of changes to seafood harvesting area, harvest, and revenue. This residual effect is determined to be not significant, however, as Dungeness crab are known to move substantial distances to baited traps, and harvest activity can be moved to another open area.	
MN-14.6	Concerned that the proposed location and use of the Intermediate Transfer Pit (ITP) has the potential to significantly impact crab habitat. Suggested to examine on-land temporary sand storage as a preferred option and alternative. Interested in the outcome of investigations undertaken to consider alternatives to using the ITP.	05-Jan-2017, Letter 30-May-2017, Meeting with Administrative Staff	**10-Feb-2017, Letter from the VFPA:** The potential Project-related effects on crab productivity are described in EIS Section 12.6. This assessment includes activities associated with use of the ITP. As indicated in EIS Section 21.7.1 and AIEIS Section 3.2, potential effects on commercial crab harvesting related to resource availability are determined to be negligible. In response to concerns raised by Indigenous groups, alternatives to minimise the use of the ITP are being explored by the VFPA in discussion with Indigenous groups. **30-May-2017, Meeting:** Responded a lot of work is still underway by the engineering team and it is anticipated there will be something to share soon by way of an update. Noted that for now disposal at sea (DAS) is on hold. **26-Jun-2017, Letter from the VFPA:** Stated that as a result of work undertaken over the past year to address concerns raised by Malahat and other Indigenous groups related to Dungeness crabs and DAS, and to reduce potential environmental effects from the Project, the VFPA has determined that the ITP is no longer required as a temporary storage location to support project construction. The elimination of the ITP, along with other changes will result in a Project that will not require a DAS permit. **12-Jul-2017, Email from the VFPA:** Followed-up with Malahat from the 30-May-2017 meeting and provided the link to the Registry to Information Request Package 3, which contains more information on the ITP: http://www.ceaa-acee.gc.ca/050/documents/p80054/119369E.pdf	**Addressed in Project Construction Update:** As requested by the Review Panel, the VFPA submitted the Project Construction Update (PCU) on June 12, 2018 (CEAR Document #1210), providing: • Detailed revised Project description, including a revised construction schedule; • Revised Project interaction matrix; • Preliminary details pertaining to the management and timing of dredging activities and the discharge of sediment-laden water; and • Revised assessment of environmental effects as required by the Project modifications. PCU Sections 1.0 and 2.0 describe the changes to the EIS, including updates to specific construction activities, the construction schedule, and relevant Project description figures and appendices. In PCU Section 3.0, changes or effects resulting from the construction updates on ICs and VCs are described. Overall, these changes to the environmental assessment resulting from construction updates can generally be summarised as follows: • Reductions in potential adverse changes or effects on ICs, biophysical VCs, social VCs, and Current Use; and • Increases in positive interactions with socio-economic VCs. These beneficial changes to ICs and VCs occur at the level of interactions or potential effects, and in most cases are slight changes, and thus do not affect the overall conclusions made in the EIS, including proposed mitigation, residual effect characterisations, significance determinations, or cumulative effects, as applicable, with one exception. The only component predicted to have a change to residual effects is land and water use, with a reduction of a residual effect on access to Tsawwassen First Nation community lease lands from a measurable non-significant residual effect to a negligible residual effect, due to elimination of the ITP and associated activities.	**EIS** 12.0 Marine Invertebrates 12.6.3.3 Changes in Productivity of Dungeness Crab 21.0 Marine Commercial Use 21.7.1 Seafood Harvesting - Rationale for Negligible Effect – Changes in Access and Resource Availability **AIEIS** 3.0 Marine Commercial Use 3.2 Future Conditions with the Project – Potential Project-related Effects **PCU (CEAR Document #1210)** **Information Requests** Information Request Package 3 Preamble in Support of Responses to IR3-25 to IR3-40 – General and Disposal at Sea-related Project Construction Update (CEAR Document #928)

Table 15: Marine Mammals – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-15.1	Concerned with potential impacts of shipping noise to whales. Asked whether whales are present in the shipping lanes and how they are affected by shipping noise. Interested in mitigation measures for SRKW and requested examples. Concerned with potential impacts from ship noise (i.e. propellers) on whales, including SRKW. Requested for clarification regarding whether this was studied in the EIS.	27-Nov-2015, EIS Results Workshop #2 - *W*SÁNEĆ Nation 06-Jul-2016, Meeting 12-Sep-2016, Malahat Traditional Use Study	**27-Nov-2015, Workshop:** Stated that there are previous studies looking into whale behaviour around shipping traffic, and the level of noise that will result in a behavioural response in orcas (i.e., impacting their ability to feed or communicate with each other) has been determined. Stated that sometimes orcas may respond to noise by increased breathing or by moving away from the lane. Orcas are typically driven by food, and will likely remain in the area if food is present. The behavioural response from orcas to noise resulting from the Project was modelled. There will be an effect, and there are effects every day. There is some uncertainty; no one really knows exactly how marine mammals are affected, and how their ability to breed or survive is impacted. **06-Jul-2016, Meeting:** Committed to provide the information available in the EIS and information about the Enhancing Cetacean Habitat and Observation (ECHO) Program. Referenced the VFPA's response to AIR-12.04.15-12 (mitigation), which summarises the effects of all marine life within the EIS and identifies which mitigation has been applied to which component(s), as well as its anticipated effectiveness. **15-Aug-2016, Email from the VFPA:** The VFPA's response to IR-15.07.31-1-12 provides a high-level summary of mitigation proposed across VCs, and is probably the easiest place to access this information: http://www.ceaa.gc.ca/050/documents/p80054/103668E.pdf You can find mitigation related to marine mammals starting on page 227 of the PDF. More information can be found in EIS Sections 14.7.1.1, 14.7.1.2, and 14.7.2. **10-May-2017, Email from the VFPA:** Provided the ECHO Program annual report for 2016. **12-Jul-2017: Email from the VFPA:** More information on the ECHO Program can be found here, including the most recent annual report: https://www.portvancouver.com/environment/water-land-wildlife/marine-mammals/echo-program/	**Addressed in EIS Appendix 7.2-B (#92):** Project-related adverse residual effects to SRKW (and all toothed whales) are expected to be not significant. The Project contribution of effects above existing conditions is very small and is not anticipated to adversely affect individuals or affect critical habitat features (acoustic environment, the availability of prey, and water and sediment quality) when needed by SRKW for their life functions of foraging, mating, resting, or socialising. Destruction of SRKW critical habitat from Project construction and operation is not anticipated, and the Project will not limit the survival or recovery of SRKW. Cumulative effects to baleen whales and seals and sea lions are expected to be not significant. However, due to their Endangered status and lack of recovery of the population, the VFPA has assumed that past activities and projects, including those described in the recovery strategy issued by DFO, have had a significant adverse effect on SRKW. Therefore, the Project, in combination with past projects and activities that have been carried out, and certain and reasonably foreseeable projects that will be carried out, will result in a continued significant cumulative effect to SRKW. **Addressed in AIEIS Appendix 2-B, Table 19 (#84):** EIS Section 14.0 includes the location of marine mammals in the assessment area, the methods used to study underwater noise, and the results of the assessment of potential underwater noise-related effects from marine shipping associated with the Project on marine mammals. The assessment also includes the potential cumulative effects on marine mammals of the Project in combination with other projects and activities, including noise from existing and incremental marine vessel traffic. SRKW have been studied extensively, both for the purposes of RBT2 and under the ECHO Program. The ECHO Program has been established by the VFPA, in collaboration with government agencies, Indigenous groups, marine industry users, non-government organisations, and scientific experts, to better understand and manage the potential impacts to cetaceans (whales, porpoises, and dolphins) from commercial vessel activities throughout the southern coast of B.C. Further information about ECHO can be found at http://www.portmetrovancouver.com/en/environment/initiatives/marine-mammals	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 14.0 Marine Mammals 14.5 Existing Conditions 14.6 Future Conditions with the Project 14.6.2 Potential Effects of the Project on Southern Resident Killer Whales 14.6.4 Potential Effects of the Project on Steller Sea Lions 14.7 Mitigation Measures 14.7.1.1 Mitigating Underwater Noise during Construction Activities 14.7.1.2 Mitigation of Underwater Noise during Operation Activities 14.7.2 Mitigation of Physical Disturbance from Vessel Strikes during Operation Activities 14.10 Cumulative Effects Assessment 17.0 Mitigation for Marine Biophysical Valued Components 17.3.2 Offsetting Potential Effects, Offsetting Framework **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W*SÁNEĆ Nation, Table 19 Marine Mammals
MN-15.2	Asked how sonar was incorporated into the model.	27-Nov-2015, EIS Results Workshop #2 - *W*SÁNEĆ Nation	**27-Nov-2015, Workshop:** Responded that ships with sonar were incorporated into the study.	**Addressed in AIEIS Appendix 2-B, Table 14 (#58):** The methods for the underwater noise modelling are included in EIS Section 9.8. Echo sounding is a type of sonar used to determine the depth of water by transmitting sound pulses into water. In estimating behavioural response noise thresholds, the noise modelling used broadband radiated vessel noise level data, which in theory includes those pulsed sounds created by vessel echo-sounders, as well as from the propellers and internal	**EIS** 9.8 Underwater Noise 9.8.5.4 Methods to Characterise the Existing Underwater Acoustic Environment

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				machinery. No separate analysis was undertaken specifically for the effects of depth sounders. More information related to high frequency or high energy echo-sounders can be found in Deng et al. 2015; however, these sophisticated systems are not typically used on commercial vessels for depth sounding. http://journals.plos.org/plosone/article?id=10.1371/journal.pone.0095315	9.8.5.5 Methods for Predicting Future Conditions of Underwater Noise with the Project **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *WSÁNEĆ* Nation, Table 14 Underwater Noise
MN-15.3	Asked whether the marine mammal assessment considers the recent success of sea otter population recovery on the coast.	06-Jul-2016, Meeting	**06-Jul-2016, Meeting:** Stated that there is more fulsome information on marine mammals in the EIS, and that seals and sea lions represent sea otters. Committed to follow-up on this matter. **15-Aug-2016, Email from the VFPA:** As stated in the MSA, sea otters (*Enhydra lutris*), mostly from the Washington State population, are observed in small numbers in the western part of Juan de Fuca Strait and the Gulf Islands. They have not established permanently in the marine shipping area for RBT2-associated vessels. Year-round residents occur in central mainland coast region and northwestern Vancouver Island, and Washington sea otters occupy almost exclusively rocky habitat along the Olympic Peninsula coast and western Juan de Fuca Strait. It is not possible to predict whether the population will continue to grow and spread and, if so, at what rate or in which direction. If they do expand their distribution, they could disperse into historically occupied sandy habitat to the south (e.g., Grays Harbor and Willapa Bay), spread eastward along Juan de Fuca Strait and into Puget Sound, or move north across Juan de Fuca Strait to Vancouver Island (Lance et al. 2004). Based on a 2013 range-wide boat survey in B.C., sea otter populations have grown to 6,754 (were on the brink of extinction from commercial harvesting, and were re-introduced in B.C. in 1969 to 1972), and they have expanded their year-round range in central and northwestern Vancouver Island, as shown in the figure below (DFO 2015). As shown in the figure, re-habitation has not been observed within the marine shipping area.		
MN-15.4	Asked about the potential for a ship to hit a marine mammal, and whether vessel strikes are recorded and regulated. Concerned about marine mammal fatalities or injuries as a result of direct contact with ships.	06-Jul-2016, Meeting 12-Sep-2016, Malahat Traditional Use Study 30-May-2017, Meeting with Administrative Staff	**06-Jul-2016, Meeting:** Committed to follow-up. **15-Aug-2016, Email from the VFPA:** In the meeting, you asked about vessel strike reporting requirements. Vessel strikes are voluntarily reported by mariners to DFO. I have provided some links below: • http://www.pac.dfo-mpo.gc.ca/fm-gp/species-especes/mammals-mammiferes/report-signaler-eng.html; • http://www.dfo-mpo.gc.ca/fm-gp/mammals-mammiferes/prog-eng.htm; and	**Addressed in AIEIS Appendix 2-B, Table 19 (#87):** The assessment considers the potential effects on marine mammals of marine vessel traffic associated with Project construction and operation, including the potential for physical disturbance due to a Project-related vessel strike. As described in the EIS, occurrences of marine mammal vessel strikes are identified through observed incidents, scarring, or recovery of carcasses. There is no formal regulation by DFO requiring the reporting of marine mammal vessel strikes in Canadian waters. Vessel strike incidents can be reported to the DFO incident reporting line: 1-800-465-4336.	**EIS** 14.0 Marine Mammals 14.6 Future Conditions with the Project 14.6.2 Potential Effects of the Project on Southern Resident Killer Whales 14.6.3 Potential Effects of the Project on North Pacific Humpback Whale

	Asked whether activities will immediately be stopped.		whales are seen in the area, activities are shut down immediately. Marine mammal observers are trained to estimate distances and have absolute authority to shut down construction operations if a cetacean might be at risk.	operation monitoring. The Construction Compliance Monitoring Plans will include measures for onsite intervention in the case of non-compliance with the environmental management plans. The environmental management plan specific to underwater noise is described in EIS Section 33.3.8. Action protocols will be developed for reducing or ceasing underwater noise producing activities when marine mammals are present in safety and disturbance zones adjacent to the Project area.	33.3.1 Construction Compliance Monitoring Plan 33.3.8 Marine Mammal Observation Plan 33.5 Environmental Management Program, Roberts Bank Terminal 2 Follow-up Program Appendix 33-A Proposed Draft Follow-up Program Elements **AIEIS** Appendix 2-B Aboriginal Issues and Interests - W̱SÁNEĆ Nation, Table 30 Environmental Management Program

Table 16: Marine Shipping Addendum

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-16.1	Asked whether Project-related marine shipping was included in the assessment. Malahat does not view marine shipping and the Project as separate and is critical of the distinction between them in the process/approach to assessment. Stated that Malahat is of the view that the Project assessment should include effects from marine shipping even if they are not within port authority jurisdiction. Stated that the VFPA could exert its influence through other means and factors (not necessarily compliance), but perhaps through management contracts with shipping organizations. Concerned that because marine shipping is not within port authority jurisdiction, there will be a gap and it will not have been sufficiently considered.	09-Feb-2016, Meeting 06-Jul-2016, Meeting 05-Jan-2017, Letter	**09-Feb-2016, Meeting:** Acknowledged Malahat's concern, and noted that it is a comment for the CEA Agency. Stated that the VFPA is completing the EIS based on the guidelines presented. **06-Jul-2016, Meeting:** Stated that the VFPA does not have contracts with any shippers because the port authority does not run the terminals themselves; the port authority is removed from the operators of ships. Explained the VFPA's jurisdiction as well as the Canadian Coast Guard and Transport Canada. Stated that the VFPA is willing to be a partner in any mitigation and supports any recommendations that come forward. The VFPA is collaborative and wants to see warranted and needed changes. **05-Jan-2017:** Recorded comment for follow-up. **10-Feb-2017, Letter from the VFPA:** The definition of the Project is described in the Updated *EIS Guidelines*, issued by the CEA Agency. As stated in the *Updated EIS Guidelines*, *"Marine shipping associated with the Project that is beyond the care and control of the Port is not considered to be part of the Project for the purposes of the environmental assessment."* Malahat Nation has been consulted on RBT2, as described in AIEIS Section 2.0, and on marine shipping associated with the Project, as described in MSA Section 5.0.	**Addressed in EIS Section 1.3.2.2:** The VFPA's regulatory jurisdiction is established by the *Canada Marine Act* and does not extend beyond its navigational jurisdiction. The VFPA has advised the CEA Agency of this concern from Malahat and other Indigenous groups. **Addressed in MSA Appendix 5-B (#13):** The MSA addresses potential effects of marine shipping associated with the Project outside of the VFPA's jurisdiction, to the 12 nautical mile limit of Canada's territorial sea. **Addressed in AIEIS Appendix 2-B, Table 4 (#30):** The environmental effects of marine shipping associated with the Project that is beyond the care and control of the proponent and extending to the 12 nautical mile limit of Canada's territorial sea ("marine shipping associated with the Project"), were assessed in the MSA, in accordance with the requirements of the *EIS Guidelines*. Marine shipping in the vicinity of the Project is considered in the EIS in two ways: 1) The effects of vessel traffic related to the Project, travelling within the VFPA's jurisdiction, were assessed in the EIS as Project-related effects; and 2) The cumulative effects of Project-associated vessel traffic, travelling outside of the VFPA's jurisdiction, were further considered in the cumulative effects assessments in EIS Table 8-8. **Addressed in response to AIR-12.04.15-13:** The VFPA's response to AIR-12.04.15-13 provides the total cumulative effects assessment for each VC for which a residual effect was predicted. Information on how Project-associated marine shipping was considered in the cumulative effects assessments is included in Schedules 1 through 10.	**EIS** 1.3.2.2 Mandate and Jurisdiction 8.0 Effects Assessment Methods Table 8-8 Project and Activity Inclusion List **MSA** 5.0 Aboriginal Groups Engagement and Consultation Appendix 5-B Aboriginal Issues and Interests **AIEIS** 2.0 Aboriginal Groups Engagement and Consultation Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 4 Environmental Assessment Process and Regulatory Framework **Information Requests** Response to Additional Information Request #13 (AIR-12.04.15-13 of CEAR Document #388) Schedules 1 – 10 (AIR-12.04.15 of CEAR Document #388)
MN-16.2	Stated that the use of the channel has changed over the years. Stated that the area is now entirely a shipping lane and is being taken away from other users.	15-Jul-2015, Meeting	**15-Jul-2015, Meeting:** Recorded comment for consideration by the Project team. Asked whether there are specific reports of issues from Malahat users of the channel. Malahat unable to provide specific examples.	**Addressed in MSA Appendix 5-B (#22):** MSA Section 9.5 describes how Current Use activities have been affected by other projects and activities that have been carried out. The assessment addresses potential effects to access to preferred Current Use locations, as well as social and cultural values of Current Use.	**MSA** Appendix 5-B Aboriginal Issues and Interests 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4 Existing Conditions 9.5.5.1 Negligible Effects of Vessel Transit on Current Use 9.5.5.2 Potential Effects of Vessel Transit on Current Use

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-16.3	Stated that Malahat Nation requires more detailed information from the proponent to better understand the effects of shipping activities through Malahat waters. As such, Malahat Nation requests additional research for the following disciplines, including scientific and traditional knowledge sources: • Marine Fish and Fish Habitat • Marine Mammals • Marine Birds • Invertebrates • Human Health • Archaeological and Heritage Resources	12-Sep-2016, Malahat Traditional Use Study	Recorded comment for consideration by the Project team.	**Addressed in the *Updated EIS Guidelines*:** On April 17, 2015, the CEA Agency issued *EIS Guidelines* that included the addition of environmental effects of marine shipping associated with the Project, beyond the scope of the Project (VFPA jurisdiction) to the 12 nautical mile limit of Canada's territorial sea. In October 2015, the VFPA submitted to the CEA Agency the MSA. Section 17 of the *Updated EIS Guidelines* notes: *"It is likely that a Tier 1 approach (Qualitative; description based on expert opinion and traditional and local knowledge) will be an appropriate level of detail in most cases. For select environmental effects and locations where there may be a higher risk of environmental effects, a Tier 2 approach (Semiquantitative; measured site-specific data and existing site information) would likely be an appropriate level of detail.* *To the degree possible, the proponent [the VFPA] should maximise the use of existing material that is relevant to marine shipping activities associated with the Project which is beyond proponent's care and control and within the 12 nautical mile limit of the territorial sea. Existing material may be utilised from academic studies, work of government and non-government working groups, past or ongoing environmental assessments, Aboriginal traditional knowledge reports or any other source the proponent deems appropriate for its presentation of this material".*	***Updated EIS Guidelines***
MN-16.4	Noted adverse effects of shipping activities or accidents near islands with Malahat traditional use values (overlapping or within 1 km of the shipping route), especially shorelines facing the shipping route, including: • Eastern shoreline of Sydney Island (CDN) - Potential erosion of shoreline arising from tanker wake, interference with Malahat shellfish and seal harvesting, and disruption to Malahat cormorant hunting and seagull egg collecting. • Eastern shoreline of D'Arcy Island (CDN) - Potential erosion of shoreline arising from tanker wake, interference with Malahat rock cod fishing, and disruption to Malahat seagull egg collecting. • Southwestern tip of Pender Island (CDN) – Potential erosion of shoreline arising from tanker wake, interference with Malahat salmon fishing, and disruption to or reduction of Malahat murres and cormorant hunting. Extra caution used at the	12-Sep-2016, Malahat Traditional Use Study	Recorded comment for consideration by the Project team.	**Additional information provided by the VFPA:** The Project is a proposed container terminal therefore only container vessels will call. Tanker ships are used to transport oil and will not call at RBT2. It is assumed in this comment that the term tanker is intended to refer to container vessels. **Addressed in MSA Section 7.2:** An assessment of the wave environment was conducted to determine potential changes from vessel transits associated with the Project on wake-generated waves. The existing wind-wave climate varies greatly across the local study area in response to differences in local wind conditions, variations in fetch length, and incoming swell from Juan de Fuca Strait. The majority of wind-generated wave heights are in the range of 10 to 50 cm, but they can reach up to 200 cm. Vessel wake is a small component of the existing wave climate. Wake waves generated by a representative-size container ship travelling at typical speeds through the marine shipping area were calculated. The results showed that wake waves larger than 10 cm (wave heights smaller than this height are considered to reflect calm conditions) would reach shorelines adjacent to the shipping lanes only in Segment B of the marine shipping area in three zones—near Tumbo and Saturna Islands, at the western end of Stuart Island, and in the vicinity of Victoria, including Discovery Island. Based on the spectrum of wind-generated waves, ship wake would be indistinguishable from wind-generated waves except during calm conditions. Calm conditions are experienced 40%, 46%, and 25% of the time within these three identified zones in Segment B. Therefore, container ship wake waves are expected to be exceeded by (and indistinguishable from) natural waves 60%, 54%, and 75% of the time in these Segment B zones. Vessel wake height calculations indicate that the majority of wake-related waves approaching shorelines in the three zones would be between 10 cm and 12.5 cm in height. Project-associated traffic is expected to increase vessel traffic through Segment B by 6% compared to existing conditions; therefore, the potential for wake-generated waves to occur during calm conditions is also expected to increase by 6%. With all future vessels transiting the marine shipping a, including Project-associated traffic (a cumulative vessel traffic increase of 36%), the potential for these small wake-related waves (10 to 12.5 cm) is anticipated to cumulatively increase by 36%.	**MSA** 7.2 Wave Environment **Information Requests** Response to Sufficiency Information Request #21 (IR7-21 of CEAR Document #1049)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	southwest tip of the island where strong westward currents exist. • Southwestern tip of Saturna Island (CDN) – Potential erosion of shoreline arising from tanker wake, interference with Malahat snapper fishing, and disruption to or reduction of Malahat murres and deer hunting. • Western shoreline of San Juan Island (USA) – Potential erosion of shoreline arising from tanker wake and interference with Malahat rock cod fishing. • Northwestern part of Stuart Island (USA) – Potential erosion of shoreline with important cultural and settlement values arising from tanker wake, disruption to or reduction of Malahat cormorant and seal hunting. • Northern part of Waldron Island (USA) – Potential erosion of shoreline arising from tanker wake and interference with Malahat rock cod fishing. • Northern part of Orcas Island (USA) – Potential erosion of shoreline with important Malahat cultural and settlement values arising from tanker wake.			The length of shoreline that falls within the zone of influence of existing vessel wake is not anticipated to change with future increases in the number of vessel movements. **Addressed in response to IR7-21:** As requested by the Review Panel, the VFPA's response to IR7-21 discusses the potential effects of waves generated by Project-associated vessels during calm conditions on small craft engaged in activities in open water at various points and various distances from shore throughout the marine shipping area. For all segments discussed in the MSA, vessel wakes from Project-associated vessels are not expected to introduce new navigational hazards for small-craft operators.	
MN-16.5	Noted the majority of concerns related to the Project are also concerns related to marine shipping. Asked about the involvement of other agencies in consultation.	30-May-2017, Meeting with Administrative Staff	**30-May-2017, Meeting:** Stated that if Malahat has specific requests of other agencies, the VFPA will pass them on.	**Additional information provided by the VFPA:** Marine shipping associated with the Project beyond the care and control of the proponent is within the jurisdiction of the federal government. The environmental assessment will act as a means for the federal government to collect information on the effects of increased marine shipping associated with the Project for use by programs or activities within federal jurisdiction.	
MN-16.6	Concerned with the development of super marine highways and the loss of the ability to use the waterways for social and cultural and traditional fishing purposes. Stated that boats are viewed as an important asset to reviving Malahat traditions and bringing Malahat history back to life.	08-Sep-2015, Letter 12-Sep-2016, Malahat Traditional Use Study	**11-Sep-2015, Letter from the VFPA:** Thank you for articulating your preliminary concerns with the Project. These concerns will be considered in the MSA, to be submitted by the VFPA to the CEA Agency this fall. MSA Section 9.5 describes how Current Use activities have been affected by other projects and activities that have been	**Addressed in AIEIS Appendix 2-B, Table 28 (#130):** *W̲SÁNEĆ* travel from the island to the mainland is described in AIEIS Section 7.0 and MSA Section 9.5. Potential Project-related effects on *W̲SÁNEĆ* use or the exercise of asserted or established rights and measures to address potential effects, including measures proposed by *W̲SÁNEĆ*, are also described in AIEIS Section 7.0. Although Project-related incremental impacts are not expected to be measurable on the exercise of asserted or established rights by *W̲SÁNEĆ*, the consultative measures proposed in EIS Section 32.2.7 (and reiterated above in AIEIS Section 7.2.7) to assist with confirming the conclusions of the Current Use assessment are carried forward to	**EIS** 32.2.7 Mitigation Measures 32.3.3 Mitigation Measures **MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4 Existing Conditions

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			carried out. The assessment addresses potential effects to access to preferred Current Use locations, as well as social and cultural values of Current Use.	the rights assessment, following the same methodology employed in EIS Section 32.3.3. These measures are expected to assist with monitoring circumstances following the onset of Project construction and operation, through ongoing engagement. The consultative measures carried forward are as follows: • Develop a communications protocol to inform appropriate Indigenous groups of planned or unplanned events related to Project construction or operation that may affect access for the exercise of asserted or established rights; • Work with appropriate Indigenous groups to develop and implement a communications mechanism that will support dialogue between the VFPA and appropriate Indigenous groups on topics of concern that arise during the construction and initial operation phases (e.g., Project status, safety issues, effectiveness of mitigation programs); • Share with appropriate Indigenous groups information gained through environmental monitoring and follow-up programs to support monitoring, by Indigenous groups, of environmental conditions related to the exercise of asserted or established rights; and • Work with appropriate Indigenous groups to identify opportunities to participate in environmental monitoring and follow-up programs.	9.5.5.1 Negligible Effects of Vessel Transit on Current Use 9.5.5.2 Potential Effects of Vessel Transit on Current Use **AIEIS** 7.2.7 Mitigation Measures Appendix 2-B Aboriginal Issues and Interests - *WSÁNEĆ* Nation, Table 28 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes
MN-16.7	Stated that while there is currently little overlap between Malahat boat movements and tanker traffic, this may change. Noted that this current state of travel should not limit Malahat's future choices and abilities to travel in open waters during the same time that tankers are traveling, requiring increased communications and coordination with the VFPA.	12-Sep-2016, Malahat Traditional Use Study	Recorded comment for consideration by the Project team.	**Additional information provided by the VFPA:** The Project is a proposed container terminal therefore only container vessels will call. Tanker ships are used to transport oil and will not call at RBT2. It is assumed in this comment that the term tanker is intended to refer to container vessels. **Addressed in MSA Section 9.5.5.1:** Interactions between existing shipping vessel traffic and the ability to access Current Use locations have been identified by Indigenous groups, including use of marine harvesting areas and travel ways within the marine shipping area. These interactions are reportedly affecting the objectives of or means by which Current Use is exercised (e.g., interfering with the acquisition of traditional foods and transmission of knowledge). As described in MSA Section 9.5.4, Indigenous groups have also said that the ability to access traditional use locations has been affected over time by, among other factors, the creation of the international border, land alienation, reserve creation, resource development, government policies and regulations (e.g., harvesting closures, restrictions on harvesting methods and gear), and increased competition from non-Indigenous harvesters. Based on the above, there are pre-existing effects on the ability to access traditional use locations in the marine shipping area as a result of other projects and activities that have already been carried out. Existing shipping traffic in established shipping lanes has been identified as a contributing factor to these effects by some groups, and in some cases, vessel transit has reportedly resulted in substantial adjustments to the way a particularly important Current Use location is accessed (i.e., Ditidaht First Nation and Pacheedaht First Nation's access to Swiftsure Bank). Project-associated vessel movements have the potential to interact with access to Current Use locations through temporary displacement and ship wake. An incremental increase of approximately 1.5 ship movements per day (or three movements every two days) to the existing shipping volume along established shipping lanes is not expected to contribute measurably to existing effects on the ability to access locations currently used by Indigenous groups for traditional purposes as a result of ship-generated wake. The effect of Project-associated vessel wake on the ability to access Current Use locations is therefore considered negligible.	**MSA** 9.5.5.1 Negligible Effects of Vessel Transit on Current Use

Table 17: Marine Vegetation – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-17.1	Stated that no cumulative effects are predicted on marine vegetation, and impacts to traditional use harvesting dependent upon the health of marine vegetation. Asked how the VFPA arrived at this conclusion.	27-Oct-2016, Letter to Panel (CEAR Document #621)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 9.5.5.1:** While there may be an existing cumulative effect from other projects and activities that have been carried out, including existing shipping activity, on the availability of marine vegetation, marine invertebrate, and marine fish resources currently used by Indigenous groups for traditional purposes, MSA Section 8.1 does not predict measurable incremental effects on marine fish and fish habitat or productivity (understood to include marine vegetation, marine invertebrates, and marine fish) as a result of routine Project-associated vessel transit activities (ship wake and underwater noise were specifically examined for potential effects). RBT2-associated vessel transit is therefore not expected to have a measurable effect on the availability of marine vegetation, marine invertebrates, or marine fish for Current Use, and is therefore not expected to contribute incrementally to the existing cumulative effects on availability of these marine resources for Current Use.	**MSA** 9.5.5.1 Negligible Effects of Vessel Transit on Current Use

Table 18: Marine Water Quality – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-18.1	Asked whether the shift in salinity predicted to result from RBT2 will affect eelgrass beds and crabs. Asked if the predicted decrease in productivity of marine fish in the EIS relates to changes in salinity.	26-Nov-2015, EIS Results Workshop #1 - *W̲SÁNEĆ* Nation	**26-Nov-2015, Workshop:** Responded that presentations on marine vegetation, fish, and invertebrates will be provided the following day. Stated that all information presented today feeds into the biophysical assessments. **27-Nov-2015, EIS Results Workshop #2 - *W̲SÁNEĆ* Nation:** Addressed potential impacts of the Project to marine vegetation and invertebrates, including those related to salinity.	**Addressed in EIS Appendix 7.2-B (#56):** Current levels and potential changes in marine sediment and water quality, including changes in salinity and contaminants, were evaluated as described in the IC assessment sections of the EIS (EIS Sections 9.6 and 9.7). Potential changes to marine water quality and sediment quality or sediment deposition due to the Project are expected to be minimal, relative to existing natural variability in the ecosystem. Sediments that will be re-suspended or disposed of during construction activities are not contaminated. With the exception of temporary, reversible changes in the biofilm community assemblage from salinity changes during freshet, the potential effects of Project-related changes in marine water quality and sediment quality on marine vegetation, marine invertebrates, marine fish and marine mammals are considered to be negligible due to the range of conditions that marine species naturally experience. The VFPA used an ecosystem model to predict changes to marine species productivity at Roberts Bank. The model takes into account potential future changes in the environmental factors (i.e., salinity, depth, bottom current, wave height, and hard or soft substrate). The model findings informed the assessment of Project-related effects on marine species productivity. Eelgrass beds are highly productive habitats in the Roberts Bank ecosystem, serving numerous critical functions, such as food, shelter, and rearing habitat for numerous species. Eelgrass was a sub-component of the marine vegetation assessment. The assessment concludes that changes in productivity of eelgrass are predicted to be negligible (i.e., not measurable or detectable). Increases in productivity of eelgrass are anticipated with the implementation of standard management practices and environmental management plans, and the creation of onsite habitat. Approximately three hectares of native eelgrass will be established through transplants in the inter-causeway area. **Addressed in AIEIS Appendix 2-B, Table 12 (#53):** Current levels and potential changes in marine sediment and water quality, including changes in salinity, were evaluated as described in the IC assessment sections of the EIS (EIS Sections 9.6 and 9.7). Potential changes to marine water quality and sediment quality or sediment deposition due to the Project are expected to be minimal, relative to existing natural variability in the ecosystem. With the exception of temporary, reversible changes in the biofilm community assemblage from salinity changes during freshet, the potential effects of Project-related changes in marine water quality and sediment quality on marine vegetation (including eelgrass beds), marine invertebrates (including crabs), marine fish, and marine mammals are considered to be negligible due to the range of conditions that marine species naturally experience.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 9.6 Surficial Geology and Marine Sediment 9.6.6 Existing Conditions 9.6.8 Future Conditions with the Project 9.7 Marine Water Quality 9.7.6 Existing Conditions 9.7.8 Future Conditions with the Project 10.0 Biophysical Setting 10.3 Overview of Assessing Ecosystem Productivity 11.0 Marine Vegetation 11.6.3.1 Potential Effect 1 – Changes in Productivity, Eelgrass 12.0 Marine Invertebrates 12.6.3.2 Potential Effect – Changes in Productivity of Bivalve Shellfish 13.0 Marine Fish 13.6 Future Conditions with the Project Table 13-6 Desktop and Field Studies Related to Marine Fish to Support the Assessment Table 13-10 Summary of Roberts Bank Ecosystem Model Productivity Results for Marine Fish 13.6.3 Potential Effect - Changes in Productivity **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 12 Surficial Geology and Marine Sediment
MN-18.2	Asked whether the shift in salinity results in changes in the level of productivity of biofilm.	27-Nov-2015, EIS Results Workshop #2 - *W̲SÁNEĆ* Nation	**27-Nov-2015, Workshop:** Responded that predicted changes in the community composition of biofilm would occur temporarily during freshet, and are fully reversible. Sandpipers typically arrive in late April to early May, just before peak freshet which typically occurs in May to June, so there is limited temporal overlap between predicted changes in biofilm community	**Addressed in EIS Appendix 7.2-B (#56):** Current levels and potential changes in marine sediment and water quality, including changes in salinity and contaminants, were evaluated as described in the IC assessment sections of the EIS (EIS Sections 9.6 and 9.7). Potential changes to marine water quality and sediment quality or sediment deposition due to the Project are expected to be minimal, relative to existing natural variability in the ecosystem. With the exception of temporary, reversible changes in the biofilm community assemblage from salinity changes during freshet, the potential effects of Project-related changes in marine water quality and sediment quality on marine vegetation, marine invertebrates, marine fish, and marine mammals are considered to be negligible due to the range of conditions that marine species naturally experience.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 9.6 Surficial Geology and Marine Sediment 9.6.6 Existing Conditions 9.6.8 Future Conditions with the Project 9.7 Marine Water Quality

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			composition and sandpiper migration. The effect of levels of salinity on biofilm would dissipate as freshet subsides. The species will not change, but the proportion of species during freshet would change. Responded that the overall water patterns are not predicted to change (i.e., the area will continue to experience the same salinity range), but rather the amount of time it takes to drain. Freshwater will take longer to drain off tidal flats, but will still drain. The organisms living in the area are already dealing with tides, freshwater, and saltwater, so they are already highly adapted to fluctuations in salinity levels. Referred to several meetings with Canadian Wildlife Service related to the community composition of biofilm. It is unknown whether the change in proportion will have an effect. Studies have not found birds grouping around one 'type' (same species present in each group, but in different proportion) of biofilm at the exclusion of the other, which may indicate that they like both. There is an extensive amount of biofilm present in the area. The existing knowledge will be supplemented through monitoring. Stated that birds eat both types of biofilm. There would be a temporary shift in the composition, but birds are known to eat both. Bird dropping study determined preferred areas, and birds appear to enjoy freshwater biofilm.	The VFPA used an ecosystem model to predict changes to marine species productivity at Roberts Bank. The model takes into account potential future changes in the environmental factors (i.e., salinity, depth, bottom current, wave height, and hard or soft substrate). The model findings informed the assessment of Project-related effects on marine species productivity. **Addressed in AIEIS Appendix 2-B, Table 16 (#65):** Current levels and potential changes in marine sediment and water quality, including changes in salinity, were evaluated as described in the IC assessment sections of the EIS (EIS Sections 9.6 and 9.7). Potential changes to marine water quality and sediment quality or sediment deposition due to the Project are expected to be minimal, relative to existing natural variability in the ecosystem. The shift in salinity is expected to cause temporary shifts in biofilm community composition during the freshet, but expected to return to existing conditions outside the annual freshet period. These results are spatially variable, such that biofilm in some areas is predicted to show decreased productivity (temporarily) while biofilm in other areas is expected to show increased productivity (temporarily). Overall, increases are estimated to be higher than the decreases; therefore, effects are anticipated to be negligible to positive. **Additional information provided by the VFPA:** The VFPA's response to IR8-04 presents the results of studies undertaken in 2017 related to biofilm dynamics. The studies' results complement the findings of the EIS and add to the overall understanding of biofilm science. In summary, the results align with the following conclusions in the EIS, specifically that: • Ongoing salinity monitoring continues to show that under existing conditions there is large variation in salinity across Roberts Bank due to variable Fraser River flow and tidal mixing; • Biofilm is abundant across the existing salinity gradient, found in both freshwater- and marine-influenced locations; and • The Project will not affect the availability or quality of food available to migrating western sandpiper.	9.7.6 Existing Conditions 9.7.8 Future Conditions with the Project 10.0 Biophysical Setting 10.3 Overview of Assessing Ecosystem Productivity 11.0 Marine Vegetation 11.6.3.5 Potential Effect – Changes in Productivity, Biofilm 12.0 Marine Invertebrates 12.6.3 Potential Effect – Changes in Productivity 13.0 Marine Fish 13.6.2 Negligible Effects 14.0 Marine Mammals 14.6.2 Potential Effects of the Project on Southern Resident Killer Whales 14.6.4 Potential Effects of the Project on Steller Sea Lions 17.0 Mitigation for Marine Biophysical Valued Components 17.3.2 Offsetting Potential Effects, Offsetting Framework **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̱SÁNEĆ* Nation, Table 16 Marine Vegetation **Information Requests** Response to Sufficiency Information Request #4 (IR8-04 of CEAR Document #1110)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-19.1	Asked why subtidal rock reef is only proposed for one area and whether this is related to vessel traffic.	27-Nov-2015, EIS Results Workshop #2 - *W̲SÁNEĆ* Nation	**27-Nov-2015, Workshop:** Stated that subtidal rock reef requires a hard surface, and areas that might need to be dredged at a later date have been avoided.	**Addressed in AIEIS Appendix 2-B, Table 22 (#95):** Onsite habitat is intended to soften the perimeter of the Project's shoreline to be more ecologically representative of the existing estuary, to create similar habitat to those that will be affected by the Project, and to create habitat that generally enhances the productivity of the Roberts Bank ecosystem. The five habitat types considered for onsite offsetting include the following: • Intertidal marsh; • Sandy gravel beach; • Mudflat; • Subtidal rock reefs; and • Eelgrass. Subtidal rock reefs support rockfish populations and assist in meeting fisheries management objectives to alleviate historic declines of regional populations. The creation of approximately two hectares of reef habitat will benefit macroalgae vegetation, and provide refuge, feeding, and spawning habitat for invertebrates, fish, and birds. Subtidal rock reef has been proposed in the location identified in the EIS because this location is within the VFPA's jurisdiction, and is feasible as an extension of existing rock reefs, avoiding the destruction of natural habitat.	**EIS** 17.0 Mitigation for Marine Biophysical Valued Components 17.3.2 Offsetting Potential Effects, Offsetting Framework **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 22 Mitigation for Marine Biophysical Valued Components
MN-19.2	Asked which mitigation measures are proposed for species that spend time in the estuary, for example salmon.	28-Jul-2015, Issues Workshop – Island Nations	**28-Jul-2015, Workshop:** Responded that the VFPA follows the mitigation hierarchy laid out in best practice: avoidance, reduction, and offsetting. Stated that avoidance is considered first, which is present in several features of the RBT2 design, the most important of which (pertaining to salmon) is situating the terminal in subtidal water to avoid interaction with sensitive intertidal habitats such as eelgrass and marsh that many species rely on as nursery habitats. Efforts were also made to minimise the causeway footprint to overlap as little as possible with marsh and sandflat habitat. The Project design also incorporates refugia into the caisson structure of the terminal face. Stated that in terms of reduction, there are numerous best practice management plans intended to minimise Project effects, for example monitoring total suspended solids and underwater noise. Those are in the EIS. Sensitive timing windows have been built into the Project construction schedule where appropriate, and will be implemented according to consultation with DFO. One mitigation measure specific to juvenile salmon on their outward migration phase and that is prohibiting construction activities from occurring above 5 m chart datum. EIS Section 17.0 details plans related to onsite	**Addressed in EIS Sections 12.7, 13.7, 14.7, and 15.7:** EIS Sections 12.7, 13.7, 14.7, and 15.7 present mitigation measures proposed for invertebrates, fish, marine mammals, and coastal birds, respectively. For example, EIS Section 13.7 notes the following mitigation related to fish: Avoidance Measures: • Optimised Project design, including terminal placement in subtidal waters, reduced footprint for causeway widening, terminal rounded corner, and incorporation of rocky shoreline in portions of the terminal and causeway perimeters. • Alignment of construction activities to avoid fisheries-sensitive windows for juvenile salmon. • Incorporation of fish refuge habitat within caisson face. Reduction Measures: • Implementation of Construction Environmental Management Plan and supporting plans: Construction Compliance Monitoring Plan; Environmental Training Plan; Dredging and Sediment Discharge Plan; Light Management Plan; Underwater Noise Management Plan; Sediment and Erosion Control Plan; Marine Species Salvage Plan (i.e., fish salvages); Hazardous Materials and Waste Management Plan; Spill Preparedness and Response Plan. • Implementation of Operation Environmental Management Plan and supporting plans: Operation Compliance Monitoring Plan; Light Management Plan; Environmental Training Plan; Hazardous Materials and Waste Management Plan; Spill Preparedness and Response Plan. Offsetting Measures: • Implementation of Offsetting Plan	**EIS** 12.0 Marine Invertebrates 12.7 Mitigation Measures 13.0 Marine Fish 13.7 Mitigation Measures 14.0 Marine Mammals 14.7 Mitigation Measures 15.0 Coastal Birds 15.7 Mitigation Measures 17.0 Mitigation for Marine Biophysical Valued Components 33.0 Environmental Management Program

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			offsetting, such as the creation and enhancement of habitat, including eelgrass and intertidal marsh.		
MN-19.3	Asked whether there are any commitments towards the Project being carbon-neutral, or of implementing greenhouse gas (GHG) remediation. Noted impact of global warming on salmon. Suggested that the VFPA consider remediation of GHG impacts as a stand-in for specific remediation of a species for which it is difficult to assess impacts.	28-Jul-2016, Issues Workshop – Island Nations	**28-Jul-2016, Workshop:** Responded that the effects of climate change are addressed at a high level in terms of the effect of the environment on the Project. There is not an assessment of indirect effects, such as air quality translating to global warming leading to fish impacts. That pathway is not assessed. In the air quality sections, the existing conditions were monitored, so air quality in the Project area was measured, and predicted future levels of air quality emissions, across the board, are going to be lower than they are today, because of changes in requirements for fuel and type used, as well as changes in the cargo handling equipment and the ships themselves. There will be a decrease in air pollution before the Project, if it is approved, would be constructed. The air quality after the Project will not be harmful to humans. For more information, greenhouse gases are addressed in EIS Section 9.2. The link between air quality, climate change, and fish will not be found in the EIS. Noted Port-led initiatives that could apply to the Project, one of which is shore power and would be implemented in the planned terminal if it is built. Offered to send more information if it is of interest. As part of their offsetting, DFO has a hierarchy within what they accept, for example in kind, i.e. eelgrass for eelgrass. Another is complimentary measures, such as investment in research that could tie into a relevant aspect of a Project effect is something the VFPA would be willing to consider. **15-Aug-2016, Email from the VFPA:** Under the *Canada Shipping Act, 2001*, the Vessel Pollution and Dangerous Chemicals Regulations establish standards regarding pollution from vessels additional to the standards set out in the International Convention for the Prevention of Pollution from Ships (MARPOL). This applies to air emissions and greenhouse gases from vessels for (a) vessels in waters under Canadian jurisdiction; and (b) Canadian vessels everywhere (http://laws-lois.justice.gc.ca/eng/regulations/sor-2012-69/FullText.html).	**Addressed in EIS Appendix 7.2-B (#4):** Project-related changes in greenhouse gases and climate-forcing particulate matter are assessed in the air quality assessment. The carbon footprint for the Project will be reduced through the use of electrically-powered equipment at the terminal and shore power for berthed vessels. **Additional information provided by the VFPA:** The port authority leads a suite of initiatives aimed at tracking and reducing air emissions associated with key port activities: shipping, trucking, cargo-handling, and tenant operations. PORT-WIDE Port-wide Emissions inventory: Our activity-based emissions inventory enables us to estimate port-related air emissions from a variety of sources. The inventory informs our policies and programs by helping us identify trends and priority areas for action. Learn more about our emissions inventory: https://www.portvancouver.com/environment/air-energy-climate-action/port-wide/. Northwest Ports Clean Air Strategy: The strategy was developed in partnership with the ports of Seattle and Tacoma and the Northwest Seaport Alliance to reduce port-related air emissions in the Georgia Basin-Puget Sound air shed. Learn more about the Northwest Ports Clean Air Strategy: https://www.portvancouver.com/environment/air-energy-climate-action/port-wide/. Air quality monitoring: We collaborate with Metro Vancouver and other partners to monitor air quality around the port. Learn more about air quality monitoring: https://www.portvancouver.com/environment/air-energy-climate-action/port-wide/. SHIPS EcoAction Program: Ships can receive harbour dues discounts by meeting voluntary best practices that reduce emissions and other environmental impacts. Learn more about our EcoAction program for ships: https://www.portvancouver.com/environment/air-energy-climate-action/marine/. Shore power: Specialised equipment allows ships at berth to shut off their diesel-powered engines and connect to the electricity grid, significantly reducing emissions that contribute to both air pollution and climate change. Learn more about our shore power installations: https://www.portvancouver.com/environment/air-energy-climate-action/marine/. TENANT OPERATIONS Non-Road Diesel Emissions Program: We work with port tenants to accelerate upgrading of older, higher-emission diesel equipment through a combination of fees and rebates. Learn more about our Non-Road Diesel Emissions Program: https://www.portvancouver.com/environment/air-energy-climate-action/terminal-energy-efficiency/nrde/. Energy Action: In partnership with BC Hydro, this program helps port tenants advance energy conservation measures and access financial incentives. Learn more about Energy Action: https://www.portvancouver.com/environment/air-energy-climate-action/terminal-energy-efficiency/energy-action-initiative/.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests **Information Requests** Response to Sufficiency Information Request #31 (IR6-31 of CEAR Document #1188) Response to Sufficiency Information Request #32 (IR6-32 of CEAR Document #1188)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			The VFPA promotes and recognises cleaner ships through our harbour through our EcoAction program. Ships obtain up to 47% off harbour dues for implementing emissions reduction measures and other environmental practices. In 2009, the Canada Place cruise ship terminal became the first in Canada and third in the world to offer shore power for cruise ships, allowing ships to turn off their engines while in port. More information on our initiatives aimed at improving air emissions from shipping can be found on the following webpage: https://www.portvancouver.com/environment/air-energy-climate-action/marine/.	Climate Smart: We offer training to help port tenants measure and reduce greenhouse gas emissions. Learn more about Climate Smart: https://www.portvancouver.com/environment/air-energy-climate-action/terminal-energy-efficiency/. CONTAINER TRUCKS Truck Licensing System: Container trucks that access the port meet minimum environmental requirements for engine age, emission controls and idle reduction. Learn more about our Truck Licensing System: https://www.portvancouver.com/environment/air-energy-climate-action/container-trucking/ **Addressed in responses to IR6-31 and IR6-32:** The VFPA's responses to IR6-31 and IR6-32 further discuss predicted construction and operation phased greenhouse gas emissions associated with the Project, as well as Project-specific and port and industry-wide reduction initiatives.	
MN-19.4	Requested more information on mitigation measures and follow-up program proposed for: • Coastal birds • Marine fish (herring and herring spawning habitat, impacts from light on eulachon, salmon) • Marine water quality Concerned that the VFPA will not act responsibly if things go wrong. Requested having plans in writing with regard to mitigation measures and offsets. Interested in offsetting strategies and thresholds for measuring habitat and mitigation success.	30-May-2017, Meeting with Administrative Staff	**30-May-2017, Meeting:** Committed to sending more information regarding potential mitigation. Referred to upcoming presentation on the follow-up program that will demonstrate the VFPA's track record of dealing with and adapting to issues and unforeseen circumstances. Noted the differences between a newly formed private proponent and the VFPA; the VFPA has a long history and is not going anywhere. Provided a hand-out on "On-site Mitigation." **12-Jul-2017, Email from the VFPA:** • Request for more information on mitigation for marine biophysical VCs. Please see EIS Section 17.0: https://www.ceaa-acee.gc.ca/050/document-eng.cfm?document=101482. We are always willing to meet and discuss with a technical person if that would be helpful, and would value any input from Malahat on this topic. • More information on offsetting: We previously provided our on-site offsetting framework (handout provided in the meeting and previously via letter or email). With respect to the effectiveness of offsetting, EIS Table 17-5 (attached) identifies the onsite habitat types proposed for offsetting, effects to representative species or groups, summarises whether residual effects are anticipated after the implementation of reduction measures and onsite offsetting, and whether further offsetting measures are proposed. The expected effectiveness of mitigation is based on the assessments provided in the	**Addressed in EIS Section 33.5:** The VFPA is committed to developing and implementing a Follow-up Program for the Project. The purpose of the Follow-up Program is to verify the accuracy of residual effect predictions made in the EIS, and determine the effectiveness of any measures taken to mitigate the adverse environmental effects of the Project. To ensure the program's elements adequately reflect conditions of Project approvals, final designs, and construction or operation approaches, as well as public, Indigenous group, and regulator feedback received during the review of the EIS, the VFPA will lead the development of the Follow-up Program after the submission of the EIS. The Follow-up Program will include: • An evaluation of the adequacy of existing data to provide a benchmark against which to test Project-related effects; • A monitoring design drawing on the measurable parameters identified to be field-tested; • A methodological approach for using field-collected data to measure and verify the accuracy of the effects predicted in the EIS; • A reporting framework that defines frequency of reporting, distribution, and feedback mechanisms; and • Details of the VFPA's approach to adaptive management for the Project through construction and operation. The Follow-up Program will be developed in consultation with federal agencies, including the CEA Agency, DFO, and Environment Canada. Complete drafts of the RBT2 Follow-up Program will be made available prior to the start of field measurements to ensure parties consulted on the program and approving agencies have an opportunity to evaluate and approve the program. Feedback from Indigenous groups regarding the draft program will be sought through the VFPA's ongoing engagement initiatives. Drawing on the elements described in EIS Appendix 33-A and ongoing post-EIS submission regulator consultation, the VFPA will lead the development of the RBT2 Follow-up Program document, which will include details on the duration and frequency of field data collection, based on an evaluation of the length of time needed to detect effects given observed environmental variability, likely magnitude of environmental effect, and desired level of statistical confidence in the results.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 33.5 Roberts Bank Terminal 2 Follow-up Program

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			VC sections, including professional judgement and ecosystem model results presented in EIS Appendix 17-C (also attached). We will continue to keep you in the loop as definition is added to our offsetting plans, and there will be many more opportunities for discussion or feedback on this topic. **04-Aug-2017, Email from the VFPA:** Provided Malahat Nation with an updated Consultation Plan that included "on-site mitigation, including habitat off-setting" and the "follow-up program." Below is an excerpt from the Consultation Plan. 1. The port authority to provide preliminary information related to proposed On-Site Mitigation. (Completed May 2017) 2. The port authority to provide further detail (quantitative and qualitative) regarding proposed off-setting plan for Malahat Nation review and comment. (Ongoing) 3. Meetings to review On-Site Mitigation proposal and receive feedback from Malahat Nation. (As required/requested by Malahat) 4. The port authority to consider Malahat Nation input into On-Site Mitigation design, identify and address concerns. (Ongoing) **29-Aug-2017, Workshop:** Presented information on RBT2 Follow-up Program and sought feedback from Malahat on what they would like to see included and how they would like to be involved going forward.	**Addressed in EIS Appendix 7.2-B (#201):** The VFPA will implement a Follow-up Program, which will include monitoring to confirm that all offsetting measures meet intended objectives and function as designed. Monitoring will include methods and success measures to confirm that offsetting measures have been effective. The *Fisheries Act* Authorization will require that functional objectives are met.	
MN-19.5	Concerned about low success rate and challenging nature of eelgrass remediation. Requested short summary describing VFPA success in undertaking eelgrass transplants, and expert input. Interested in potential eelgrass remediation on eastern side of Vancouver Island.	30-May-2017, Meeting with Administrative Staff	**30-May-2017, Meeting:** Committed to send information about eelgrass transplants. Asked if Malahat had any site suggestions for potential remediation beyond the Project area. **12-Jul-2017, Email from the VFPA:** Tsawwassen Eelgrass Project: You asked about the anticipated success rates for eelgrass transplants proposed for the Tsawwassen Eelgrass Project. An eelgrass transplant method was developed in the mid-1990s in B.C. for local sites that has proven highly successful. The methodology was developed by eelgrass transplant expert Cynthia Durance. Cynthia Durance is currently working with the VFPA's Habitat Enhancement Program to design the proposed transplant work at the proposed Tsawwassen Eelgrass Project. Transplants are considered successful once	**Addressed in EIS Appendix 7.2-B (#201) and EIS Section 17.0:** Onsite eelgrass habitat creation is proposed through transplanting in an area approximating 3 ha. Based on the review of previous habitat creation programs (e.g., DP3), eelgrass transplants are considered to be an effective means of increasing productivity of marine vegetation. The VFPA will implement a Follow-up Program, which will include monitoring to confirm that all offsetting measures meet intended objectives and function as designed. Monitoring will include methods and success measures to confirm that offsetting measures have been effective. The *Fisheries Act* Authorization will require that functional objectives are met.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 17.0 Mitigation for Marine Biophysical Valued Components 17.3.2 Offsetting Potential Effects, Offsetting Framework 17.6 Mitigation for Marine Biophysical Valued Components, Monitoring and Reporting

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			their density meets or exceeds that of the donor bed, and the target area reaches ~100% coverage. This is typically achieved between two and three years following transplant. Cynthia Durance's transplant method has been employed at over 100 sites since 1994. Once the proposed transplant work is complete, post-construction monitoring will occur to assess the establishment and survival of transplanted eelgrass, in accordance with the Post-Construction Monitoring Plan for the VFPA's Habitat Enhancement Program. I have attached some general information on eelgrass transplants for your review.		
MN-19.6	Requested a more detailed plan highlighting mitigation measures and the process for addressing impacts to Traditional Use, access, and associated Aboriginal and Treaty rights. Stated that the mitigation plans provided by the proponent in sections 9.5.6 and 9.5.11.3 are vague, and do not include an outline of the process. Stated that accommodation, avoidance and compensation measures have been omitted and should be addressed in the mitigation plan. Asked about employment opportunities for Malahat First Nation to monitor environmental impacts and implement safety protocols in the MSA. Stated that consultation with affected Nations should be prioritized as the first step in the process.	16-Dec-2015, Letter to the CEA Agency (CEAR Document #378)	**12-May-2016, Letter from the CEA Agency (CEAR Document #404):** *"The Agency requested additional information on Port Metro Vancouver's assessment methodology in AIR #2 Rationale for Effects Characterization. In addition, the Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in response to MSA IR-02.24.16-2:** The VFPA's response to MSA IR-02.24.16-2 identifies the receptors of potential effects to Current Use and impacts to rights, and provides an explanation of how potential effects and impacts were determined to be negligible or measurable in the MSA.	**Information Requests** Response to Information Request #2 (MSA IR-02.24.16-2 of CEAR Document #386)
MN-19.7	Asked how the proponent can assess whether or not the suggested mitigation measures will be effective at addressing impacts associated with the project. Asked what is the proponent's long-term proposal (spanning several generations) for ensuring project-related	16-Dec-2015, Letter to the CEA Agency (CEAR Document #378)	**12-May-2016, Letter from the CEA Agency (CEAR Document #404):** "The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review. The Crown will be using the Review Panel process to the extent possible to collect information about potential impacts to the exercise of Malahat Nation's rights from the	**Addressed in response to IR-15.07.31-12:** The VFPA's response to IR-15.07.31-12 presents a description of how each of the mitigation measures proposed in the EIS is intended to reduce the significance of the potential effect. Also, the response presents the anticipated effectiveness of each mitigation measure, as well as the risks (if any) to the environment should the mitigation not be effective.	**Information Requests** Response to Information Request #12 (IR-15.07.31-12 of CEAR Document #314)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	impacts remain minimal and are effectively mitigated. Stated that the proponent is making an enormous assumption prior to consultation with impacted Nations [referring to Section 9.5.11.3 of the EIS].		Project and marine shipping associated with the Project and we encourage you to provide your perspective on this topic to the Review Panel."		
MN-19.8	Stated that the follow-up program requires more detail related to the implementation of mitigation measures resulting from Aboriginal engagement	16-Dec-2015, Letter to the CEA Agency (CEAR Document #378)	**12-May-2016, Letter from the CEA Agency (CEAR Document #404):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in response to IR10-11:** The VFPA's response to IR10-11, as requested by the Review Panel, describes how Indigenous groups will be involved in the development, implementation, and management of the RBT2 follow-up program.	**Information Requests** Response to Sufficiency Information Request #11 (IR10-11)
MN-19.9	Mitigation Measure # 3 — Perceived contamination states that the VFPA is in the process of addressing perceived food source contamination at Roberts Bank. Asked what the VFPA's plan is to mitigate should the results show that contamination is a result of port-related activities.	27-Oct-2016, Letter to Panel (CEAR Document #621)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Appendix 7.2-B (#74):** Potential Project-related effects on Dungeness crabs are described in the EIS. An Edible Shellfish Study was undertaken to quantify bivalve shellfish and Dungeness crab soft tissue contaminant concentrations. The results of this study are provided in the EIS in the marine invertebrates and human health sections. In late 2014, samples of crab were collected by Indigenous crab harvesters concerned about contamination, and the VFPA has submitted these for tissue testing for various substances of concern, including PAHs, metals, and fungus. Preliminary observational results indicate that the cause of black colouration of crabs is consistent with shell disease, and not likely related to contamination from coal dust (EIS Appendix 27-C, Section 4.76). The detailed results of laboratory tests will be shared with Indigenous groups when available. **Addressed in responses to IR4-33 and IR4-34:** Further information concerning the VFPA's investigations into 'blackened' crabs is provided in the VFPA's response to IR4-34. In summary, black lesions were observed on four of the five crabs collected by Indigenous harvesters. The black lesions were concluded to be consistent with chitinolytic shell disease, generically referred to as 'shell disease', a condition common to crab and other crustaceans. This disease is caused by a bacterial or fungal infection of an area where the outer layer of the shell has been previously damaged. Shell disease has not been linked to contamination. The disease is not specific to the Roberts Bank area and is present across the Pacific Northwest, including Alaska and B.C. and in Atlantic Canada. In its response to IR4-33, the VFPA provided results of the study. In summary: A crab hepatopancreas study was conducted at Roberts Bank to determine the concentrations of contaminants of concern in crab hepatopancreas in the LAA. In June 2017, Dungeness crab were collected from five traps placed at each of the three study locations (15 traps total). Twelve adult male crabs were harvested from each of the three sites (36 crabs total). Samples were submitted under chain of custody to analytical laboratories accredited by the Canadian Association for Laboratory Accreditation (CALA) for the analysis requested. The analysis was completed in August 2017. Collectively, the results of a statistical comparison across sites indicate that the average concentrations of PCBs, coal indicator elements, arsenic compounds, and PAHs measured in hepatopancreas from crab collected from the RBT2 and ITP sites are not statistically higher than those measured in crab from the	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table **Information Requests** Response to Additional Information Request #31 (AIR-12.04.15-31 of CEAR Document #388) Response to Sufficiency Information Request #33 (IR4-33 of CEAR Document #1078) Response to Sufficiency Information Request #34 (IR4-34 of CEAR Document #946)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				Canoe Passage reference site. This suggests that existing sediment and water quality in and around the existing terminal and proposed RBT2 terminal are not contributing to contaminant concentrations in crab hepatopancreas that are higher than levels found in crab hepatopancreas from the Canoe Passage reference site. **Addressed in response to AIR-12.04.15-31:** As noted in the VFPA's response to AIR-12.04.15-31, there is small to no potential for an increase in the concentrations of contaminants in the tissues of country foods in association with Project construction or operation.	

MN-19.10	Stated that the VFPA has determined its proposed mitigation measures to be effective at reducing Project-related impacts to access to traditional use sites.
	Requested a rationale for drawing these conclusions.
	Asked how the VFPA determines the effectiveness of its mitigation strategies to reducing impacts to access.
	Asked if the measures outlined have been reviewed by all Aboriginal groups.
		27-Oct-2016, Letter to Panel (CEAR Document #621)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 9.5.6:**
				To address the potentially minor incremental effect on Current Use access and associated Current Use experience as a result of a potential increases in overlap between Current Use activities and ship pass-bys due to Project-associated increases in shipping traffic, the following mitigation measures are suggested for consideration by the appropriate regulatory authorities:
				• Consultation on the development of a potential marine shipping activities communication plan that would provide affected Indigenous groups with real-time information regarding the movement of Project-associated shipping traffic through the marine shipping area, including:
				  ○ the estimated time of arrival of Project-associated container ships and their expected duration of use of the shipping lanes for inbound and outbound movements; and
				  ○ circumstances outside normal operations that might affect the expected frequency or concentration of Project-associated vessel traffic along the shipping routes (e.g., clearing backlogs in shipping traffic due to storms requiring ships to temporarily anchor before proceeding).
				• Consultation with the affected Indigenous groups to identify measures that would reduce the impact of the international shipping lanes to fishing by Indigenous groups.
				If implemented, the above measures are expected to be effective at addressing the incremental effect of Project-associated vessel transit activities on Current Use identified in MSA Section 9.5.5.2. Confidence in the effectiveness of the mitigation for the identified effect is high based on the nature of the concerns expressed by Indigenous groups to the VFPA regarding existing and Project-associated shipping traffic.
				Addressed in response to IR7-31:
				The VFPA's forthcoming response to IR7-31, as requested by the Review Panel, provides a summary of the views of Indigenous groups in relation to the proposed mitigation measures that were considered in the preparation of the EIS for each biophysical VC, including views about offsetting.
				Addressed in Response to IR10-09:
				The VFPA's response to IR10-09, as requested by the Review Panel, provides further discussion of proposed mitigation measures to reduce the potential effects of the proposed Project on the access, availability, and quality of preferred Current Use resources and the quality of the Current Use experience.

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-19.11	Stated that the proposed mitigation measures outlined throughout the EIS are all proponent-led, and are therefore insufficient. Stated that the mitigation measures as outlined throughout various sections of the EIS do not include Aboriginal group-led measures, nor do they consider seasonality for TU activities. Asked what Aboriginal group-led mitigation measures were proposed.	27-Oct-2016, Letter to Panel (CEAR Document #621)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in response to IR10-11:** The VFPA's response to IR10-11, as requested by the Review Panel, describes how Indigenous groups will be involved in the development, implementation, and management of the RBT2 follow-up program.	**Information Requests** Response to Sufficiency Information Request #11 (IR10-11)
MN-19.12	Stated that the VFPA has not outlined any plans to mitigate the loss of named places associated with Project construction, operation and shipping. Requested information about plans to mitigate the loss of named places.	27-Oct-2016, Letter to Panel (CEAR Document #621)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in response to IR-7.31.15-29:** As summarised in the VFPA's response to IR-7.31.15-29, the description of potential Project-related effects on cultural heritage and other cultural considerations, described for each Indigenous group in EIS Section 32.2.4, is contained in EIS Section 32.2.6.4. This section discusses potential changes to sense of place and other changes to Current Use (i.e., risks to safety and security, sensory disturbance from light, noise, and vibration) that could lead to reduced opportunities to practice or transmit cultural values of ways of knowing (i.e., cultural attributes, such as Indigenous traditional knowledge, including but not limited to language embedded in traditional place names, beliefs relating to transformers) associated with cultural places or landscapes. EIS Section 32.2.6.4 concludes that, overall, the effect on the quality of Current Use experience with regard to cultural heritage would be expected to be negligible for Indigenous groups with no measurable effect identified for the other Current Use indicators (i.e., access to preferred Current Use locations and availability and quality of Current Use resources). However, this section also indicates that the VFPA sought guidance from Indigenous groups regarding appropriate methods to evaluate intangible cultural heritage. One Indigenous group provided feedback on this inquiry (i.e., relating to a Stl'áleqem site identified near the Project area), and acknowledged the challenges associated with such an assessment. The VFPA, in turn, acknowledged these challenges in the document, where it states: "effect pathways on intangible cultural factors are complex and layered" (p. 32-114), and would be expected to be "community-specific" (p. 32-115). **Addressed in response to IR10-08:** The VFPA's response to IR10-08, as requested by the Review Panel, further discusses potential changes in quality of the Current Use experience resulting from the proposed Project.	**EIS** 32.2 Current Use of Land and Resources for Traditional Purposes 32.2.4 Existing Conditions 32.2.6.4 Potential Effect 4: Changes in Quality of Current Use Experience **Information Requests** Response to Information Request #29 (IR-7.31.15-29 of CEAR Document #314) Response to Sufficiency Information Request #8 (IR10-08)
MN-19.13	Stated that the VFPA has noted there will be some potential changes in productivity of marine fish due to Project-related activities, and has provided several mitigative measures to reduce any residual effects. Post-	27-Oct-2016, Letter to Panel (CEAR Document #621)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in response to IR10-10:** The VFPA's response to IR10-10, as requested by the Review Panel, discusses the potential effects of the proposed Project on availability of preferred traditional resources taking into account the time lag required for the establishment of functioning habitat offsets.	**Information Requests** Response to Sufficiency Information Request #10 (IR10-10)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	mitigation residual effects are predicted to be negligible, and the VFPA has therefore determined associated impacts to Current Use and access to be negligible. What is the VFPA's plan to compensate impacted Aboriginal groups during the mitigation period? For example, marine fishing and crabbing will be impacted as noted in the EIS. The VFPA has suggested implementing habitat creation as a mitigative measure for Project-related impacts to ground fish. This mitigative measure, even if effective, will require many years to establish new habitat and recover productivity of impacted species. In the meantime, access to fishing and crabbing will be limited.				
MN-19.14	Requested a rationale for excluding Aboriginal input as a mitigation measure for Project-related impacts to marine fish.	27-Oct-2016, Letter to Panel (CEAR Document #621)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Section 7.2:** EIS Section 7.2 describes the engagement and consultation process undertaken with Indigenous groups. As noted in that section, the VFPA has extensively engaged with Indigenous groups on EIS topics, including proposed mitigation measures. **Addressed in AIEIS Section 2.0:** As noted in AIEIS Section 2.0, the VFPA has also consulted with WSÁNEĆ Nation regarding Project components and activities, the potential effects of the Project, proposed mitigation measures, potential changes to the environment related to the Project, and potential impacts of the Project on the individual bands' ability to exercise asserted or established Aboriginal or treaty rights and related interests. **Addressed in EIS Section 13.7:** As noted in EIS Section 13.7, selection of mitigation measures were informed by a review of previous mitigation measures and follow-up programs undertaken for past developments at Roberts Bank; regulator, public, and Indigenous group input; and internal evaluation of technical and economic feasibility and efficacy.	**EIS** 7.2 Aboriginal Groups Engagement and Consultation 13.0 Marine Fish 13.7 Mitigation Measures **AIEIS** 2.0 Aboriginal Groups Engagement and Consultation

Table 20: Noise and Vibration – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-20.1	Requested additional information about the directional impact of sound travel. Asked why the Saanich area and areas around the Gulf Islands are not included in the sound assessment. Concerned with the impact of noise and vibration ("deep earth hum") from ships experienced inland on the islands. Asked whether there has been any consideration of the effects from waterborne noise on land animals.	26-Nov-2015, EIS Results Workshop #1 - *W̲SÁNEĆ* Nation 27-Nov-2015, EIS Results Workshop #2 - *W̲SÁNEĆ* Nation	**27-Nov-2015, Workshop:** Stated that based on noise modelling studies, it was concluded that the movement of noise is blocked by the islands, and does not reach the Saanich area. Clarified that the noise modelling for the EIS only included Project-related ships once they enter the VFPA's jurisdiction. Committed to follow up to arrange a presentation. Responded that the focus of the presentation is marine mammals, and the VFPA cannot speak to the noise modelling conducted for marine shipping at this time. **06-Jul-2016, Meeting:** Presented information on atmospheric noise, noting that the cumulative average daytime and nighttime noise levels, due to all future marine vessel traffic in the marine shipping area, are expected to increase by 1 dBA. Stated that this small change would not be perceptible. Presented information on underwater noise, noting cumulative changes to the mean underwater noise levels are predicted to increase, but by a relatively small contribution compared to overall underwater noise levels. This is due to the existing high levels of vessel traffic and the already dominant contribution of commercial vessel traffic noise to the acoustic environment.	**Addressed in AIEIS Appendix 2-B, Table 14 (#56):** The scope and methods of the underwater noise study are summarised in EIS Section 9.8, and detailed in the supporting appendix. The local study area (LSA) was established to encompass the area within which Project-related construction and operation underwater noise may interact with and potentially have an effect on relevant VCs, including marine fish, marine mammals, and coastal birds. The spatial boundary of the LSA includes the Strait of Georgia, incorporating existing natural boundaries that limit the propagation of noise. The LSA includes the area where predicted underwater noise levels from Project construction and operation were greater than both the ambient noise from wind and distant vessels, and the hearing ability of marine fish and marine mammals (EIS Appendix 9.8-A). Although the LSA represents the likely area that underwater noise from the Project will be audible to marine fish, marine mammals, and coastal birds, a regional study area (RSA) as shown in EIS Figure 9.8-1, extends from the Project, south through the Strait of Georgia to the western end of Juan de Fuca Strait, and includes the Canadian and U.S. SRKW critical habitat, excluding Puget Sound. The RSA provides ecological and regulatory context for underwater noise for SRKW and other marine mammals. Additionally, underwater noise from Project-associated vessel traffic was assessed in MSA Sections 7.6 and 8.2. The assessment of underwater noise considers the level of underwater sound in the marine environment. Underwater noise is not generally transmitted through land at perceptible levels; however low-frequency atmospheric noise can induce vibration in lightweight building structures. Low frequency noise was assessed in the atmospheric noise and vibration assessment (EIS Section 9.3) within the upland study area. The results of the underwater noise assessment were considered in the assessments of marine fish, marine mammals, and coastal birds. An interaction between Project-related underwater noise and terrestrial wildlife is not anticipated, and was therefore not assessed, but potential effects from atmospheric noise were considered in the effects assessment for coastal birds utilising the upland areas at Roberts Bank. **Additional information provided by the VFPA:** MSA Section 7.6 expanded on the assessment in the EIS to characterise potential changes to underwater noise levels associated with Project-associated vessel transit activities in the marine shipping area. Existing underwater noise levels at all locations in the marine shipping area are dominated by human-generated sounds, primarily from vessel traffic, including large commercial vessels, small private boats, whale-watching vessels, and depth sounders. Underwater noise levels from marine shipping associated with the Project and future cumulative marine traffic will generally be comparable, although they may at times exceed current levels, based on conservative assumptions. During future conditions with Project-associated vessel transits, and other existing and future vessel transits in the marine shipping area, cumulative changes to the mean underwater noise levels are predicted to increase, but by a relatively small contribution compared to overall underwater noise levels in the marine shipping area. This is due to the existing high levels of vessel traffic and the already dominant contribution of commercial vessel traffic noise to the acoustic environment.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 9.3 Noise and Vibration 9.8 Underwater Noise 9.8.2 Assessment Purpose and Approach 9.8.5.2 Methods, Study Areas Figure 9.8-1 Study Areas for Underwater Noise Appendix 9.8-A Construction and Terminal Activity Underwater Noise Modelling Study Technical Report 15.0 Coastal Birds 15.7.2 Future Conditions with the Project, Potential Effect – Changes in Productivity **MSA** Figure 4-1 Marine Shipping Area, Shipping Lanes, and Locations of Interest 7.6 Underwater Noise 7.6.2 Assessment Boundaries 7.6.2.1 Temporal and Spatial Boundaries 8.1 Marine Fish and Fish Habitat 8.2 Marine Mammals 8.3 Coastal Birds **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 14 Underwater Noise **Information Requests** Response to Sufficiency Information Request #6 (IR7-06 of CEAR Document #1049)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information

MN-20.2	Asked if noise levels associated with the Project are perceptible for humans or animals.	26-Nov-2015, EIS Results Workshop #1 - *W̲SÁNEĆ* Nation	**26-Nov-2015, Workshop:**
			Responded that noise thresholds stated in the assessment are established and fine-tuned in a laboratory setting. Explained that an increase of 2-3 dB is not perceptible outside a laboratory setting.
			Stated that it is difficult to compare sound underwater to sound in the air. The green colour (in *W̲SÁNEĆ* Nation Workshop Day 2 slides #100 and 101) might be comparable to a hum in the distance. 140-150 rms SPL might sound like a hair dryer. 160 rms SPL is quite loud, and one would want to move away from the noise.
			Examples of dB levels associated with several common noises were presented in the slides.
				Addressed in AIEIS Appendix 2-B, Table 10 (#48):
				The noise and vibration assessment examined potential changes in noise and vibration as a result of the Project. The results of the noise and vibration assessment were used in the assessments of coastal birds, marine commercial use, outdoor recreation, human health, and Current Use.
				The assessment considered Project-related sources of noise and vibration, including construction equipment, container ships at berth, container handling activities, and movement of trains and trucks on the terminal and causeway. The assessment focused on continuous noise, low frequency noise, transient and impulsive noise, and ground-borne vibration.
				The assessment concluded the following:
				• Project-related changes in annual average noise levels in communities near the Project are expected to be minor and, for the most part, not perceptible to human receptors;
				• Some changes in noise conditions that could be perceptible include:
				  ○ Increased noise during periods of peak construction activity;
				  ○ The number of intermittent noises during operation would increase, but the noise levels would be the same or lower than from the existing Roberts Bank terminals; and
				  ○ Increased noise in marine areas is expected to be perceptible close to the terminal; and
				  ○ The construction and operation of the marine terminal and causeway is not expected to result in perceptible increases in levels of ground-borne vibration.
				The assessment of coastal birds considers potential Project effects on birds related to noise. Minor to moderate potential effects of disturbance to birds related to noise are predicted. Measures to address potential effects of atmospheric noise on birds are described in EIS Section 15.8.

MN-20.3	Concerned that the baseline used in the assessment is already impacted by existing development such that effects to eulachon appear less significant.	28-Jul-2016, Issues Workshop – Island Nations	**28-Jul-2016, Workshop:** Stated that the way that the noise was modelled was not from that perspective. The modelling took into account ambient noise and accounted for the Project on top of that. From a noise perspective, the approach was not that 'it's just one more;' we looked at it in combination with the other noise.	**Addressed in EIS Section 13.0:** The EIS considered eulachon in EIS Section 13.0, where the species was assessed via the use of forage fish as representative species. **Addressed in response to AIR-12.04.15-13:** In the EIS, the existing conditions (baseline) reflect the conditions of the environment as modified by past development. Further discussion of how the VFPA considered the effects of past, present, and future projects is provided in completeness-phase AIR-12.04.15-13, including in that response's Schedules focused on applicable VCs. Specifically, Part 2 of each Schedule describes how past projects and activities affected the environment upon which the VC depends. Notably, in Appendix AIR13-A, coastal marine environment (i.e., coastal geomorphology, marine sediment, marine water quality, tidal flat morphology, biosedimentological zones) is discussed. **Addressed in response to IR5-15:** In its response to IR5-15, the VFPA specifically discusses existing conditions related to eulachon and describes the status and management practices associated with the species. The response also further assesses potential effects of the project on eulachon, including consideration of underwater noise. Potential effects on eulachon resulting from changes in the acoustic environment are assessed as minor, based on the low potential of eulachon to interact with the Project during terminal construction (adult eulachon presence in the LAA has not been confirmed, and eulachon larvae rear in the Strait of Georgia outside LAA boundaries). With implementation of mitigation measures (specifically underwater noise management plan), no residual effect on eulachon productivity is anticipated.	**EIS** 13.0 Marine Fish **Information Requests** Response to Additional Information Request #13 (AIR-12.04.15-13 of CEAR Document #388) Response to Sufficiency Information Request #15 (IR5-15 of CEAR Document #1078)

Table 21: Port Operations

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-21.1	Asked if the VFPA has a sustainability plan, and request for clarification concerning the VFPA's responsibility for a sustainable economy and sustainable Canada. Concerned that the proposed Project is enabling a consumer market, with environmental consequences.	26-Nov-2015, EIS Results Workshop #1 - *W̲SÁNEĆ* Nation	**26-Nov-2015, Workshop:** Referenced the VFPA's website for additional information, including energy and employment action plans. The Port 2050 long-term strategic visioning process considers how the economy may change between now and 2050, how the VFPA can be flexible to that, and considers the kind of future the VFPA would like. Responded that the VFPA cannot change Canadian demand and exists to respond to demand. The VFPA has staff focused on supporting trade, and there are a number of initiatives the Port is taking a leadership role on. Acknowledged the concern that RBT2 will enable consumption, but the VFPA's mandate is to facilitate trade. **26-Apr-2016, Email from the VFPA:** Provided the meeting notes, which included the post-meeting note: The VFPA's sustainability report for 2014 can be accessed at the following link: http://www.portvancouver.com/wp-content/uploads/2015/06/Port-Metro-Vancouver-2014-Sustainability-Report.pdf. Information related to Port 2050 can be found at the following link: http://www.portvancouver.com/about-us/sustainability/.	**Addressed in AIEIS Appendix 2-B, Table 2 (#11):** In 2014, the VFPA led the development of a definition of sustainability for the Vancouver gateway with the input of many stakeholders, including Indigenous groups. The discussion concluded that for the VFPA, a sustainable port means to "deliver economic prosperity through trade, maintain a healthy environment, and enable thriving communities through collective accountability, meaningful dialogue and shared aspirations". This sustainability definition further includes ten focus areas and 22 success statements, which together describes the attributes of a sustainable port. The vision of the VFPA is to be the most sustainable port in the world. As a corporate citizen undertaking a variety of sustainability initiatives and programs, the VFPA is a recognised industry leader in corporate social responsibility: in 2014, the VFPA received recognition for strong sustainability performance by placing fourth in Corporate Knights' first Future 40 Responsible Corporate Leaders in Canada ranking, and the VFPA's EcoAction program was recognised by Canada's Clean50 for Sustainability Achievement. The proposed Project is an important component of the VFPA's mandate to facilitate trade, and its plan to meet growing demand for container capacity in support of Canada's import and export markets. Leading the growth of Canada's largest port requires a careful balancing of national, regional, and local interests, with economic, social, and environmental performance. Through the extensive study programs undertaken during preparation of this EIS, the VFPA has advanced understanding of environmental and socio-economic aspects in the vicinity of the Project.	**EIS** 1.0 Introduction 1.3.2.1 Port Metro Vancouver Overview, Port 2050 34.0 Benefits to Canadians 34.2 Benefits of the Project **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 2 Project Planning, Development, and Implementation
MN-21.2	Asked if the VFPA has policies in place that are supportive of its vision.	26-Nov-2015, EIS Results Workshop #1 - *W̲SÁNEĆ* Nation	**26-Nov-2015, Workshop:** Explained that the VFPA's Board of Directors fully supports the vision. Noted that the VFPA is recognised worldwide for its environmental initiatives. Pointed to the list of activities on the VFPA website that speak to these initiatives. **26-Apr-2016, Email from the VFPA:** Post-meeting note: Links to various initiatives are provided at the following link: http://www.portvancouver.com/environment/.	**Additional information provided by the VFPA:** To learn more about the VFPA's approach to sustainability, please see the most recent sustainability report (2016), which can be found at: https://www.flipsnack.com/portvancouver/sustainability-report-2016/full-view.html.	
MN-21.3	Requested more information on how the VFPA makes money on the transportation of goods.	15-July-2015, Meeting 26-Oct-2015, Meeting	**15-Jul-2015, Meeting:** Responded that there are different business arrangements with terminals, including leases and amounts varying based on the volume shipped. Offered to send the online financial summary report for 2014 to Malahat for additional information on the financial aspect of the VFPA's operations. The VFPA to provide link. **22-Jul-2015, Email from the VFPA:** Please see a copy of VFPA 2014 Financial Report: http://issuu.com/portmetrovancouver/docs/pmv_2014financialreport?e=3721702/13278565. **12-Nov-2015, Letter from the VFPA:** The most recent financial information is contained in VFPA Financial Report for 2015, which can be accessed at the following link: http://www.portmetrovancouver.com/about-us/statistics/.	**Additional information provided by the VFPA:** The VFPA earns its revenues through port fees charged to port users and rents charged to tenants who occupy the federal lands that it manages within its jurisdiction. Although the actual rents we charge are confidential, we look to the local real estate market to guide the amount of rent we charge for the use of our lands. Rent for industrial and commercial tenures is generally reviewed every three years. Canada Port Authorities pay an annual stipend to the federal government based on their gross revenue. A payment in lieu of property taxes for vacant lands and waters is also made to bordering municipalities within its jurisdiction. Canada Port Authorities do not have authority to collect taxes. As part of Project development, the VFPA is undertaking two separate procurements for the terminal operator and for the infrastructure developer. The terminal operator will provide the port authority with regular payment of rent, as well as ongoing fees and charges, the form and amount of which will be one of the key selection criteria in the procurement process. The infrastructure developer will likely be responsible for the designing, building, financing, and maintaining the terminal land and related	

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				infrastructure. Once the Project is constructed, and subject to ongoing availability and function of the terminal, the port authority will make regular payments to the infrastructure developer over the upcoming decades, to compensate them for designing, building, financing, and maintaining the terminal. The terms of this type of long-term agreement with a terminal operator or an infrastructure developer are commercially confidential and therefore are not available to the public.	
MN-21.4	Asked who has authority over navigable waters in the VFPA's jurisdiction.	26-Oct-2015, Meeting	**26-Oct-2015, Meeting:** Recorded comment for follow-up. **12-Nov-2015, Letter from the VFPA:** Please see EIS Section 1.3.2.2 for a description of the VFPA's mandate and jurisdiction. For more information, please refer to the following links to VFPA's Letters Patent and the *Canada Marine Act*: http://www.portmetrovancouver.com/wp-content/uploads/2015/05/True-Copy-of-VFPA-Letters-Patent.pdf http://laws-lois.justice.gc.ca/PDF/C-6.7.pdf.	**Addressed in AIEIS Appendix 2-B, Table 1 (#1):** EIS Section 1.0 provides an overview of the VFPA's mandate and jurisdiction. The VFPA is a port authority created pursuant to the *Canada Marine Act*, accountable to the federal Minister of Transport. The *Canada Marine Act* gives port authorities the authority to take, permit, or prevent certain activities within a port, which is defined as "the navigable waters under the jurisdiction of a port authority and the real property and immovables that the port authority manages, holds or occupies as set out in the letters patent". The letters patent issued for the VFPA describe the geographic boundaries of the navigation jurisdiction of the VFPA, the federal real property that it manages, and the lands other than federal real property, namely lands that the VFPA holds in its own name. The VFPA's territorial jurisdiction therefore includes the federal lands and lands other than federal real property that it manages, together with the navigable waters over which it has navigation jurisdiction. The federal real property managed by the VFPA and its navigation jurisdiction are shown in EIS Figure 1-3. In fulfilling the mandate under the *Canada Marine Act*, the port authority carries out a variety of duties, including safety and security of all land and waters, in collaboration with other agencies, using technology and land and water patrols. For core activities related to shipping and navigation, the VFPA acts as agent to the federal Crown. In accordance with this statutory authority, the VFPA has issued a Port Information Guide for marine operations within its jurisdiction (http://www.portvancouver.com/marine-operations/port-information-guide/). The guide's purpose is to promote safe and efficient navigation within the local waters of the port and to protect the marine environment. The practices and procedures apply to all vessels in the port, including pleasure craft and recreational vessels, and to all persons responsible for the planning, operation, conduct, and safe navigation of such vessels, including tenants. Among other things, the Port Information Guide outlines practices and procedures related to arrival and departure checklists, navigation, movement of dangerous goods, waste removal, marine mammal critical habitat, speed, use of pilots, anchorage procedures, environmental requirements, vessel discharges, noise and lights, adverse weather conditions, bunkering, and cargo operations, including loading/discharging and cleaning. Appendices to the Port Information Guide provide data sheets for all terminals within the Port of Vancouver. Every vessel either in or seeking to enter the port is subject to the orders of the port authority with respect to its entry, departure, draught, berth, anchorage, location, speed, direction, and means and method of movement, whether or not such orders are issued through or by the Canadian Coast Guard's Marine Communications and Traffic Services. The VFPA asserts its authority on vessels that intend to enter, or are within the waters controlled by the port authority by monitoring and enforcing the practices and procedures described in the Port Information Guide. Additional information regarding the VFPA's jurisdiction and scope of authority, including how the VFPA asserts its jurisdictional authority on vessels that intend to enter or are within VFPA navigable waters, is provided in the VFPA's response to IR1-01. The Port Information Guide is provided as an appendix to the response to IR1-01.	**EIS** 1.0 Introduction 1.3.2 VFPA Overview 1.3.2.2 Mandate and Jurisdiction Figure 1-3 VFPA Managed Federal Lands and Navigation Jurisdiction 1.3.3 Governance and Corporate Structure 1.3.3.1 Insurance and Liability Management 1.3.3.2 Environmental Policy **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̱SÁNEĆ* Nation, Table 1 Port Operations **Information Requests** Response to Sufficiency Information Request #1 (IR1-01 of CEAR Document #897)

MN-21.5	Asked what the requirements are for the terminal operator.	26-Oct-2015, Meeting	**26-Oct-2015, Meeting:** Recorded comment for follow-up. **12-Nov-2015, Letter from the VFPA:** The terminal operator will be selected through a competitive process from a short-list of entities that currently operate a marine container terminal with a minimum aggregate of one million TEUs throughput per year. The VFPA has shortlisted five qualified teams to participate in the competitive process to select a terminal operator for the proposed Project, and these entities are listed at the following link: http://www.robertsbankterminal2.com/business-opportunities/current-opportunities/. For more information on this see pages 40-41 on the enclosed RBT2 Project Rationale booklet.	**Additional information provided by the VFPA:** In January 2016, the VFPA issued a Request for Proposals to five shortlisted teams, with submissions due in the fall of 2016. This process, which was monitored by a fairness advisor, is ongoing and commercially confidential negotiations with the preferred proponent have begun. An announcement will be made following the conclusion of an agreement. The terminal operator will be responsible for building terminal facilities, equipment, and ongoing container handling operations.	**EIS** 2.0 Project Overview 2.3 Project Planning, Development, and Implementation 2.3.5 Market and Concession Phase **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation
MN-21.6	Asked about VFPA jurisdiction in the waterway, and how the Coast Guard is involved. Asked whether the VFPA polices its jurisdiction.	26-Nov-2015, EIS Results Workshop #1 - *W̲SÁNEĆ* Nation	**26-Nov-2015, Workshop:** Identified the area over which the VFPA has jurisdiction. Responded that the VFPA enforces the flow of traffic within its jurisdiction. **26-Apr-2016, Email from the VFPA:** *"Post-meeting note: Please find more information related to the responsibilities of VFPA at the following link http://www.portvancouver.com/about-us/; information on VFPA's jurisdiction at the following link http://www.ceaa-acee.gc.ca/050/documents/p80054/100532E.pdf; further information on the relationship between VFPA and the Coast Guard at the following link http://www.portvancouver.com/about-us/topics-of-interest/emergencies-and-spill-response/; and further details related to VFPA's roles related to security and emergency management at the following link http://www.portvancouver.com/about-us/security-emergency/."*		
MN-21.7	Asked who currently owns the land and substrate for the proposed terminal location, and what approvals the VFPA will require. Asked if the land created for the terminal will become land under VFPA jurisdiction.	26-Nov-2015, EIS Results Workshop #1 - *W̲SÁNEĆ* Nation	**26-Nov-2015, Workshop:** Referred to Project area and explained that there is a map that shows land ownership and land ownership underwater. There are parcels of land that are not associated with the federal Crown that the Province owns. Confirmed that in some places in B.C. the substrate is federally owned. Noted that in some areas the federal Crown has the seabed, but in most areas the province owns the seabed. EIS Section 26.0 describes land ownership. Added that it is entirely federal land ownership at Deltaport.	**Addressed in EIS Section 26.0:** EIS Figure 26-2 depicts land ownership and jurisdiction for the project, and accompanying text is included in EIS Section 26.0. **Addressed in AIEIS Appendix 2-B, Table 2 (#4):** EIS Section 26.5.2 describes land ownership and jurisdiction in the LAA for the proposed Project, shown in EIS Figure 26-2 and summarised in EIS Table 26-3. A portion of the Project area is located on submerged provincial Crown land, outside the current boundary of federal lands managed by the VFPA. EIS Section 26.6.1 provides a description of changes to land use designation in the event of a transfer of the submerged land to the VFPA. A list of federal permits and approvals required for the Project is included in EIS Section 6.0. **Additional information provided by the VFPA:** In 2018, the VFPA concluded a land transaction with the Province of B.C. and BC Rail, which includes the VFPA's purchase of land and water needed to construct RBT2 should the project receive federal approval.	**EIS** 6.0 Environmental Assessment and Permitting Process 26.0 Land and Water Use 26.5 Existing Conditions 26.5.2 Local Assessment Area Land Ownership and Jurisdiction **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̲SÁNEĆ* Nation, Table 2 Project Planning, Development, and Implementation

Table 22: Potential Accidents or Malfunctions

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-22.1	Concerned with the eventual occurrence of a tanker accident. Concerned with traffic management around Saturna and Pender Islands (off East Point on Saturna, following the Canada-US boundary). Concerned about incidents where trucks and ships have spilled fuel and cargo onto Malahat lands and waters. Stated that Malahat members would like to be involved and informed about how the proponent plans to prevent spills and accidents along the shipping route in Malahat territory. Identified refuge areas for tankers during inclement weather, including Cowichan and Sampson Narrows. Asked the VFPA to provide Malahat Nation with a reporting of how many times these refuge areas are used annually, noting increase or decreases and emerging trend. Stated that each community should have their own oil spill response kit and team. Stated that the coast guard and the proponent should communicate and coordinate response to emergencies with Aboriginal groups along the shipping route.	15-Jul-2015, Meeting 12-Sep-2016, Malahat Traditional Use Study	**15-Jul-2015, Meeting:** Recorded comment for consideration by the Project team.	**Additional information provided by the VFPA:** The Project is a proposed container terminal therefore only container vessels will call. Tanker ships are used to transport oil and will not call at RBT2. It is assumed in this comment that the term tanker is intended to refer to container vessels. **Addressed in MSA Section 10.3.2.2:** MSA Section 10.3.2.2 considers container ship collisions with tankers. As noted in the section, container ship-tanker collisions are calculated to have return periods of over 10,000 years and those for laden crude oil tankers even lower, due to the fact that only outbound crude oil tankers are expected to be laden with crude oil. A collision does not necessarily lead to a spill. Minimum return periods (at 95% confidence level) for a collision between RBT2-bound container ships and laden crude oil tankers that result in a crude oil spill are over 800,000 years. **Addressed in MSA Appendix 5-B (#97):** The MSA includes an assessment of potential accidents or malfunctions (MSA Section 10.0), and the effects of a plausible worst-case spill scenario on the environment as well as applicable mitigation. The location of the spill scenario is in Boundary Passage at the south end of South Pender Island, in Segment B of the marine shipping area, which includes Saturna and Pender islands. The probability of an accident involving a tanker is considered in MSA Section 10.0 and MSA Appendix 10-A. **Addressed in MSA Section 10.4:** The southern B.C. coast is a mature marine vessel traffic area that is regularly used by deep-sea vessels. Risk mitigation measures currently being implemented in the marine shipping area include a vessel traffic management system (using radar surveillance and traffic separation zones), mandatory pilotage for large vessels, navigational aids, and precautionary areas. Around Roberts Bank, large ships underway have radio communication with BC Ferries and have the option to use anchorages if inclement weather makes berthing unsafe. **Addressed in response to IR5-01:** The VFPA's response to IR5-01 generally discusses aspects of anchorage outside of the VFPA's jurisdiction. Notably, it references very detailed information regarding anchorages in Transport Canada's response to Panel information request TC IR-07 (CEAR Document #982). Transport Canada's response to information request TC IR-07 tabulates detailed information regarding anchorages and minimum, mean, and maximum number of days in Appendix D (Pacific Pilotage Authority Anchorage Usage Data 2012 – 2016 for the Pacific Pilotage Authority Marine Shipping Area). As shown in these tables, a total of 124 anchorages occurred between 2012 and 2016 for container vessels destined for VFPA jurisdiction, and the mean number of anchorage days was 2.69, with a minimum of 0.05 days and a maximum of 83.64 days. **Additional information provided by the VFPA:** The role of the VFPA is to ensure goods are moved safely, efficiently, and sustainably. As such, it is not the lead agency when it comes to spill response. The VFPA supports Canada's leadership in advancing spill preparedness and response in the Salish Sea, including its recently announced ongoing research initiatives as a part of the federal Oceans Protection Plan. Other organisations such as Clear Seas are also contributing to research considering risks, mitigation measures, and best practices for marine shipping on Canada's west coast. The Canadian Coast Guard is responsible for spill response. In the Lower Mainland, the Canadian Coast Guard relies on Western Canada Marine Response Corporation for clean-up.	**MSA** Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents or Malfunctions 10.3.3 Identification of Plausible Worst-case Accident or Malfunction Scenarios 10.4 Mitigation Measures Appendix 10-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment Appendix 10-B Marine Fate of Shipping Spill-type Accidents **Information Requests** Response to Sufficiency Information Request #1 (IR5-01 of CEAR Document #1078)
MN-22.2	Concerned with the increased likelihood of an accident that would disperse dangerous, toxic liquids, plastics and	08-Sep-2015, Letter	**11-Sep-2015, Letter from the VFPA:** Thank you for articulating your preliminary concerns	**Addressed in MSA Section 10.3.2.2:** MSA Section 10.3.2.2 considers container ship collisions with tankers. As noted in the section, container ship-tanker collisions are calculated to have return periods of over 10,000 years and those for laden crude oil tankers even lower, due to the fact that only outbound crude oil tankers	**MSA** Appendix 5-B Aboriginal Issues and Interests

	metals into some sensitive and known high risk areas in the Gulf Islands		with the Project. These concerns will be considered in the MSA for RBT2, to be submitted by the VFPA to the CEA Agency this fall.	are expected to be laden with crude oil. A collision does not necessarily lead to a spill. Minimum return periods (at 95% confidence level) for a collision between RBT2-bound container ships and laden crude oil tankers that result in a crude oil spill are over 800,000 years. **Addressed in MSA Section 10.3.2.1:** Containers may be lost overboard in the event of a collision or grounding and could conceivably release hazardous and noxious substances (HNS) to the environment. While removal of containers lost overboard would involve a salvage operation, the combination of low collision or grounding accident frequencies with the low percentage of HNS containers at risk of being lost overboard (approximately 0.7% for Deltaport in 2012; see EIS Appendix 30-A), and the requirement for the container being compromised to release its contents, led to the assessment that the frequency of spills of HNS substances from containers lost overboard is low enough to not require further consideration as a plausible accident or malfunction arising from marine shipping associated with the Project. **Addressed in MSA Appendix 5-B (#97):** The MSA includes an assessment of potential accidents or malfunctions (MSA Section 10.0), and the effects of a plausible worst-case spill scenario on the environment as well as applicable mitigation. The location of the spill scenario is in Boundary Passage at the south end of South Pender Island, in Segment B of the marine shipping area, which includes Saturna and Pender islands. The reversibility of residual effects resulting from a worst-case spill scenario is considered in MSA Section 10.0.	10.0 Potential Accidents or Malfunctions 10.3.2.1 Loss Overboard of Containers from Ships In-transit in Semi-protected Waters 10.3.3 Identification of Plausible Worst-case Accident or Malfunction Scenarios Appendix 10-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment Appendix 10-B Marine Fate of Shipping Spill-type Accidents
MN-22.3	Concerned about the reduced safety of and extra caution needed for Malahat boat travel.	12-Sep-2016, Malahat Traditional Use Study	Recorded comment for consideration by the Project team.	**Addressed in MSA Section 9.5.5.1:** Section 3.5 of MSA Appendix 10-A recommends that the frequency of collision with small craft, whether fishing or recreational, be considered proportional to the increase in traffic due to RBT2 container ships. The relative contribution of RBT2-associated traffic to overall deep-sea vessel traffic within the marine shipping area is smaller than for the region near the proposed terminal itself. Incident data indicate this increase in traffic due to RBT2-associated container ships will lead to a negligible effect on collision safety risk with fishing vessels or small craft. The return rate of a collision between an RBT2-associated vessel and a fishing vessel or small craft (i.e., once every 50 years within the marine shipping area) is therefore characterised as indistinguishable from the historical rate. A detectable or measurable change in safety risk during Current Use activities as a result of Project-associated shipping, based on statistical data, is therefore not expected.	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.5.1 Negligible Effects of Vessel Transit on Current Use Appendix 10-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment
MN-22.4	Stated that the EIS quantitative risk assessment for vessel collisions is insufficient as it is based upon current use only, and does not consider the entirety of Aboriginal groups travelling across the Strait of Georgia to access traditional use sites at the Fraser River, Roberts Bank and other areas on the Lower Mainland. Requested a rationale for failing to include past and future use.	27-Oct-2016, Letter to Panel (CEAR Document #621)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Appendix 10.3.2.2:** Using information from DFO, EIS Appendix 30-A also provided calculations for collisions involving RBT2-associated ships with fishing and recreational vessels. For the portion of the marine shipping area that incorporates the waters between the proposed RBT2 terminal and the eastern shore of Saturna Island, the probability of a collision occurring between a commercial fishing vessel and a container ship or other large vessel, which reflects 2012 conditions, has a return period of 57 years, i.e., the potential to occur once in 57 years (EIS Appendix 30-A). In 2030 without the Project, due to the increased vessel traffic expected at that time even without the Project, the probability of a collision in this portion of the marine shipping area increases compared to the 2012 circumstance, and is estimated as having a return period of 51 years. The estimated probability of a collision would increase only slightly in 2030 when Project-associated shipping is taken into account; the estimated return period for this scenario is 50 years (EIS Appendix 30-A). Taking into consideration the conservative nature of that estimate, and the Transportation Safety Board of Canada data, the return rate for a collision in the marine shipping area is estimated to be approximately 50 years (MSA Appendix 10-A). **Addressed in MSA Section 9.5.5.1:** As noted in MSA Section 9.5.5.1, interactions between existing shipping vessel traffic and the ability to access Current Use locations have been identified by Indigenous groups, including use	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.5.1 Negligible Effects of Vessel Transit on Current Use 10.0 Potential Accidents or Malfunctions 10.3.2.2 Collisions In-transit Appendix 10-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *WSÁNEĆ*

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				of marine harvesting areas and travel ways within the marine shipping area. These interactions are reportedly affecting the objectives of or means by which Current Use is exercised (e.g., interfering with the acquisition of traditional foods and transmission of knowledge). As described in MSA Section 9.5.4, Indigenous groups have also said that the ability to access traditional use locations has been affected over time by, among other factors, the creation of the international border, land alienation, reserve creation, resource development, government policies and regulations (e.g., harvesting closures, restrictions on harvesting methods and gear), and increased competition from non-Indigenous harvesters. Based on the above, there are pre-existing effects on the ability to access traditional use locations in the marine shipping area as a result of other projects and activities that have already been carried out. Existing shipping traffic in established shipping lanes has been identified as a contributing factor to these effects by some groups, and in some cases vessel transit has reportedly resulted in substantial adjustments to the way a particularly important Current Use location is accessed (i.e., Ditidaht First Nation and Pacheedaht First Nation's access to Swiftsure Bank). Project-associated vessel movements have the potential to interact with access to Current Use locations through temporary displacement and ship wake. An incremental increase of approximately 1.5 ship movements per day (or three movements every two days) to the existing shipping volume along established shipping lanes is not expected to contribute measurably to existing effects on the ability to access locations currently used by Indigenous groups for traditional purposes as a result of ship-generated wake. The effect of Project-associated vessel wake on the ability to access Current Use locations is therefore considered negligible. **Addressed in AIEIS Appendix 2-B, Table 28 (#129):** The terminology "current use of lands and resources for traditional purposes" (Current Use) is the language of subsection 5(1)(c) of *CEAA, 2012*. The assessment of potential effects on Current Use in EIS Section 32.0 and AIEIS Section 7.0 reflects the understanding of Current Use outlined in the CEA Agency's draft Technical Guidance on Current Use of Lands and Resources for Traditional Purposes under the *Canadian Environmental Assessment Act, 2012*, dated December 2015. The EIS was filed in March 2015, prior to that draft guidance being issued; however, EIS Section 32.0 and AIEIS Section 7.0 considered use for traditional purposes that may not be occurring presently or occurring at sufficient levels to meet community needs, but was reported by Indigenous groups to have occurred in the past. As part of that consideration, the EIS and AIEIS included Indigenous groups' perspectives on the effects over time (as a result of other projects and activities) that have contributed to existing conditions of use. The EIS and AIEIS also considered the desire to restore use (based on past use) or increase use (over present or recent limited levels), where this desire was expressed by Indigenous groups to the VFPA. **Addressed in IR13-20:** The VFPA's forthcoming response to IR13-20 will further discuss Project-related changes to the wave environment and their potential effects on current use activities, access, and navigation.	Nation, Table 28 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes **Information Requests** Response to Sufficiency Information Request#20 (IR13-20)
MN-22.5	Referred to EIS excerpt: "…while container ship traffic at Roberts Bank is expected to increase, the risk of an incident is very low or negligible. Consequently, the Project is not expected to impact the ability of the Lyackson First Nation to exercise their right to the use of travelways to preferred harvesting areas". What are the increases of ship traffic in combination with other planned projects? Lyackson First Nation and CNA raise the concern of large wakes and risk to safety due to an increase in	27-Oct-2016, Letter to Panel (CEAR Document #621)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 9.5.5.1:** As noted in MSA Section 9.5.5.1, as ship-related wave heights are expected to be within the spectrum of wind-generated waves (i.e., smaller than 10 cm) for a larger percentage of the time, and since Current Use activities would not be expected to always occur during calm conditions, wake from Project-associated vessel traffic is not expected to result in a measurable change in access to preferred Current Use locations, either in open water or along the shorelines within the marine shipping area. **Addressed in response to IR4-04:** The VFPA's response to IR4-04 provides updated vessel movements for all marine shipping area segments in 2012 and projected movements in 2030.	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.5.1 Negligible Effects of Vessel Transit on Current Use 10.0 Potential Accidents or Malfunctions 10.3.2.2 Collisions In-transit

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	large vessel traffic. How does the VFPA plan to mitigate? The EIS based its risk assessment only on vessel collisions.			**Addressed in response to IR7-21:** As requested by the Review Panel, the VFPA's response to IR7-21 discusses the potential effects of waves generated by Project-associated vessels during calm conditions on small craft engaged in activities in open water at various points and various distances from shore throughout the marine shipping area. For all segments discussed in the MSA, vessel wakes from Project-associated vessels are not expected to introduce new navigational hazards for small-craft operators. **Addressed in MSA Appendix 10.3.2.2:** Using information from DFO, EIS Appendix 30-A also provided calculations for collisions involving RBT2-associated ships with fishing and recreational vessels. For the portion of the marine shipping area that incorporates the waters between the proposed RBT2 terminal and the eastern shore of Saturna Island, the probability of a collision occurring between a commercial fishing vessel and a container ship or other large vessel, which reflects 2012 conditions, has a return period of 57 years, i.e., the potential to occur once in 57 years (EIS Appendix 30-A). In 2030 without the Project, due to the increased vessel traffic expected at that time even without the Project, the probability of a collision in this portion of the marine shipping area increases compared to the 2012 circumstance, and is estimated as having a return period of 51 years. The estimated probability of a collision would increase only slightly in 2030 when Project-associated shipping is taken into account; the estimated return period for this scenario is 50 years (EIS Appendix 30-A). Taking into consideration the conservative nature of that estimate, and the Transportation Safety Board of Canada data, the return rate for a collision in the marine shipping area is estimated to be approximately 50 years (MSA Appendix 10-A).	Appendix 10-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment **Information Requests** Response to Sufficiency Information Request #04 (IR4-04 of CEAR Document #1051) Response to Sufficiency Information Request #21 (IR7-21 of CEAR Document #1049)
MN-22.6	Stated that Malahat would like a First Nations' marine emergency response station and asked the VFPA to send representatives to Malahat to discuss the request.	09-Feb-2016, Meeting	**09-Feb-2016, Meeting:** Recorded comment for consideration by the Project team.	**Additional information provided by the VFPA:** Transport Canada is the federal lead in regulating marine shipping in Canada, and other federal departments such as the Canadian Coast Guard, Environment and Climate Change Canada, DFO, and Natural Resources Canada have key roles that enhance marine safety and security, influence marine shipping activities, and help protect the marine environment. Transport Canada's response to the Review Panel's April 4, 2018 Information Requests (CEAR Document #1204) provides a whole-of-government overview of activities undertaken by the Government of Canada related to spill management. TC IR-10 specifically discusses training, resources, and equipment available for community response, including the possibility of establishing spill response bases on reserve lands in the southern portion of the west coast region of B.C.	**Transport Canada Response to the Review Panel's April 4, 2018 Information Requests (CEAR Document #1204)**
MN-22.7	Stated that the proponent should fund an annual boat safety course at the beginning of each summer to support interested Malahat boaters on how to safely navigate with and around tankers in Malahat waters. Stated that the proponent should fund training of interested Malahat members to access employment on or related to tankers, including ship pilots through Malahat waters.	12-Sep-2016, Malahat Traditional Use Study	Recorded comment for consideration by the Project team.	**Additional information provided by the VFPA:** The Project is a proposed container terminal therefore only container vessels will call. Tanker ships are used to transport oil and will not call at RBT2. It is assumed in this comment that the term tanker is intended to refer to container vessels. **Further information provided by the VFPA:** Transport Canada is the federal lead in regulating marine shipping in Canada, and other federal departments such as the Canadian Coast Guard, Environment and Climate Change Canada, DFO, and Natural Resources Canada have key roles that enhance marine safety and security, influence marine shipping activities, and help protect the marine environment. Transport Canada's Response to the Review Panel's April 4, 2018 Information Requests (CEAR Document #1204) provides a whole-of-government overview of activities undertaken by the Government of Canada related to spill management. #	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-23.1	Commented that there was not enough emphasis on impacts to First Nation trading routes at the EIS Orientation Workshop.	09-Feb-2016, Meeting	**09-Feb-2016, Meeting:** Responded that the trading route component was not discussed because the EIS only includes that analysis for other groups, who had submitted a TUS prior to EIS submission. Stated that the VFPA plans to have a one-on-one workshop with Malahat once the study (produced by Malahat) is received. **22-Feb-2016, Letter from the VFPA:** Committed to provide Malahat Nation with a draft summary of the VFPA's understanding of existing conditions pertaining to Malahat Nation's Current Use within the Project area for your review and comment. **26-Apr-2016, Email from the VFPA:** Post-meeting note: Each nation will have an opportunity to review and comment on the VFPA's draft summary of Current Use before finalisation of the AIEIS. **04-Nov-2016, Letter from the VFPA:** The VFPA has worked with Malahat Nation to share information regarding RBT2 and the EIS, and in turn, has received input from Malahat Nation, including through Malahat Nation's submittal of the Malahat TUS to the VFPA. Information provided to the VFPA by Malahat Nation has been summarised and incorporated into the draft AIEIS. In our February 22, 2016 letter, we indicated that in the preparation and finalisation of the AIEIS, the VFPA intended to provide Malahat Nation with an opportunity to review and comment on the AIEIS before finalisation and submittal of the document to the Review Panel. Further to this commitment, please find enclosed the draft AIEIS for the RBT2 Project.	**Addressed in AIEIS:** The following is noted as contributing documents in the development of the AIEIS: Malahat Nation, Malahat Effects related to and Mitigation for the Project, and Part 2 of Malahat Internal Traditional Use and Knowledge Report, September 12, 2016.	**AIEIS** 7.2.3 Information Sources
MN-23.2	Stated that places of Traditional Use cannot be defined in a linear temporal context as places and/or practices of "current" or "past" use. Stated that utilizing the terms "current" and "past" to describe Traditional Use sites imposes a Western value system upon Aboriginal ways of knowing. Stated that Malahat First Nation views Traditional Use in the context of time immemorial, and places equal value upon past, present and future use sites and practices. Stated that Malahat is of the view that all Traditional Use sites and practices regardless of temporal context must be considered when measuring Project-related impacts. Stated that the term "current use" is utilized throughout Section 7.2 of the EIS to define areas and resources used for traditional purposes.	26-Nov-2015, EIS Results Workshop #1 - *W̱SÁNEĆ* Nation 09-Feb-2016, Meeting 27-Oct-2016, Letter to Panel (CEAR Document #621) 05-Jan-2017, Letter 30-May-2017, Meeting with Administrative Staff	**26-Nov-2015, Workshop:** Stated that current use is the language in *CEAA, 2012* and the VFPA is guided by the Act. Added the author of the Current Use portion is not present today to fully explain the requirements and methodology. There is an historic component incorporated into the section, and this is reflected in EIS Section 32.0. Committed to arrange a meeting to provide further detail if it is of interest. Requested that Malahat advise the VFPA if there is intended use as well. **09-Feb-2016, Meeting:** Responded the language reflects the CEA Agency requirements, the minimum requirements for study. **10-Feb-2017, Letter from the VFPA:** Information provided to the VFPA by Malahat Nation regarding "Traditional Use sites and practices" in the vicinity of the Project was considered in AIEIS Section 7.0 regardless of temporal context. The assessment of potential effects on the "current use of lands and resources for traditional purposes" (Current Use) is a statutory requirement under subsection 5(1)(c) of *CEAA, 2012*, which uses this language to denote traditional use. The assessment of potential impacts	**Addressed in EIS Appendix 7.2-B (#157):** The methods used to assess the potential effects of the Project, including both residual effects of the Project and cumulative effects, are described in EIS Section 8.0. These methods are consistent with existing federal guidance. The effects of other projects and activities that have been carried out are reflected in the existing (and expected) conditions of the ICs and VCs, and in EIS Section 32.0. By assessing potential Project-related effects against those conditions, the cumulative effects of the Project and other past projects and activities are inherently considered. The EIS also includes historical data, where available and applicable, to assist interested parties to understand the potential effects, including cumulative effects, of the Project. The EIS does not include an assessment of historical infringements on the ability of Indigenous groups to exercise rights or impacts to traditional use.	**EIS** Appendix 7.2-B Aboriginal Issues and Interests 8.0 Effects Assessment Methods 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.2 Current Use of Lands and Resources for Traditional Purposes 32.3 Potential Adverse Impacts on Aboriginal and Treaty Rights and Related Interests Analysis **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̱SÁNEĆ* Nation, Table 28 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	Requested an explanation as to why there is no discussion of 'past' and 'future' use as it relates to Traditional Use, access, and ATK. Asked how the project will impact past and future use of places, along with associated practices and resources, for traditional purposes. Requested a rationale for the exclusion of 'Current Use for Traditional Purposes' as a Valued Component (VC). "The information provided within the studies, as well as information obtained through readily available public sources or consultation, does not necessarily delimit current or existing use from past use". Why is future use not considered?		on the exercise of rights is a common law requirement of the Crown pursuant to the duty to consult and accommodate, rooted in Section 35 of the *Constitution Act*, 1982. Given these differing requirements, the *Updated EIS Guidelines* draws a distinction between the assessment of Current Use and the assessment of rights. This distinction is described in EIS Section 32.1 and has been applied to the assessments in EIS Section 32.0, MSA Section 9.5, and AIEIS Section 7.0. That distinction aside, the VFPA recognises the equal value that Malahat Nation and other Indigenous groups place on "past, present, and future use sites and practices." As described in the introduction to AIEIS Section 7.2.4 regarding existing conditions, the descriptions of existing conditions of use of lands and resources for traditional purposes for each W̱SÁNEĆ group focus on current activities and cultural heritage associated with those activities (to reflect *Updated EIS Guidelines* requirements for Current Use), "but include information on past use and changes in use over time, including W̱SÁNEĆ perspectives on historical or ongoing factors that have influenced their existing conditions of use." As AIEIS Section 7.2.4 continues: *"This information on past use helps to support an understanding of the context in which any incremental effects to Current Use may occur [as presented in AIEIS Section 7.2.6]; it also serves to provide an understanding of use that grounds, or has the potential to ground, the exercise of Aboriginal rights, including title, and treaty rights. The descriptions of existing conditions also include information regarding desired future use, where such information was provided to the VFPA by Tsawout First Nation, Pauquachin First Nation, Tsartlip First Nation, Tseycum First Nation, or Malahat Nation."* This approach is reiterated in the rights analysis. AIEIS Section 7.3.2 states: *"Information presented…in [AIEIS] Section 7.2.4 indicates largely past or recent use in the vicinity of the Project area by Tsawout First Nation, Pauquachin First Nation, Tsartlip First Nation, Tseycum First Nation, and Malahat Nation…. [AIEIS] Section 7.2.4 also describes, from the perspective of* W̱SÁNEĆ*, cumulative effects on* W̱SÁNEĆ *use to date…due to other projects and activities…. To the extent that* W̱SÁNEĆ *use of the area of the Project could be restored (based on past use) or increased over present or recent limited levels, and that such use is an expression of asserted or established rights, the analysis of potential Project-related incremental effects on use, as presented…in [AIEIS] Section 7.2.6…is considered applicable to the analysis of potential Project-related incremental impacts on the present or future exercise of asserted or established rights* [i.e., asserted Aboriginal rights, including title, and asserted or established Douglas Treaty rights to hunt or fish] *in the vicinity of the Project area by Tsawout First Nation, Pauquachin First Nation, Tsartlip First Nation, Tseycum First Nation, and Malahat Nation."*	**Addressed in AIEIS Appendix 2-B, Table 28 (#129):** The terminology "current use of lands and resources for traditional purposes" (Current Use) is the language of subsection 5(1)(c) of *CEAA, 2012*. The assessment of potential effects on Current Use in EIS Section 32.0 and AIEIS Section 7.0 reflects the understanding of Current Use outlined in the CEA Agency's draft Technical Guidance on Current Use of Lands and Resources for Traditional Purposes under the *Canadian Environmental Assessment Act, 2012*, dated December 2015. The EIS was filed in March 2015, prior to that draft guidance being issued; however, EIS Section 32.0 and AIEIS Section 7.0 considered use for traditional purposes that may not be occurring presently or occurring at sufficient levels to meet community needs, but was reported by Indigenous groups to have occurred in the past. As part of that consideration, the EIS and AIEIS included Indigenous groups' perspectives on the effects over time (as a result of other projects and activities) that have contributed to existing conditions of use. The EIS and AIEIS also considered the desire to restore use (based on past use) or increase use (over present or recent limited levels), where this desire was expressed by Indigenous groups to the VFPA.	Lands and Resources for Traditional Purposes 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 7.2 Current Use of Lands and Resources for Traditional Purposes Assessment 7.2.4 Existing Conditions 7.2.6 Future Conditions with the Project – Potential Project-related Effects 7.3 Potential Adverse Impacts on Aboriginal and Treaty Rights and Related Interests
MN-23.3	Stated that Malahat has Aboriginal and Douglas Treaty rights, and interests in the BC Modern Treaty Process, that may be adversely affected by the Project.	05-Jan-2017, Letter	**10-Feb-2017, Letter from the VFPA:** A description of Malahat Nation's asserted or established rights and interests in the British Columbia Treaty Commission process is provided in MSA Section 9.5, and reiterated in AIEIS Section 7.2. The spatial		**AIEIS** 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current

MN-23.4	Concerned with the CEA Agency's direction to use existing data to compile current use summaries and the VFPA approach. Stated that the Current Use Summary sent to Malahat was a misappropriation of their work. Stated that the absence of Traditional Use and Aboriginal Traditional Knowledge (ATK) information contained in the RBT2 EIS, AIEIS and MSA is not indicative of the cultural significance, quantity and/or quality of Traditional Use sites within the Project local assessment area, regional assessment area and greater territory. Stated that all Traditional Use studies and information that have been undertaken by the Nation are project-specific and proprietary for the exclusive use of Malahat First Nation. Asked why Malahat First Nation information on TUS/ATK was not sought through a Project-specific study. Stated that the EIS contains no TUS/ATK information provided by Malahat First Nation.	15-Jul-2015, Meeting 08-Sep-2015, Letter 16-Dec-2015, Letter to the CEA Agency (CEAR Document #378) 27-Oct-2016, Letter to Panel (CEAR Document #621) 05-Jan-2017, Letter	**15-Jul-2015, Meeting:** Responded that this is good feedback for the CEA Agency, which the VFPA will pass on. Stated that the VFPA is prepared to make additions and deletions to the profile as specified by Malahat Nation. The VFPA request for confirmation that Malahat Nation wants the information from Kinder Morgan removed from the profile. **11-Sep-2015, Letter from the VFPA:** *"Thank-you for articulating your point of view with respect to the draft summary of [Malahat Nation's (MN's)] current use in the marine shipping area and for sharing your concerns regarding the use of the Trans Mountain Expansion Project Application to the National Energy Board as a source of information on MN. It has been [the VFPA's] intent from the outset to ensure that we present MN's information in an accurate manner and there have been several communications to this effect.* *These efforts include the following:* • *In [the VFPA's] letter of May 25, 2015, [the VFPA] outlines the direction received from [the CEA Agency] to collect information on MN's current use of lands and resources for traditional purposes, as well as the intention to use information from the Trans Mountain Expansion Project Application to the National Energy Board specific to MN. [The] May 25 letter explains the intention to provide the draft current use profile for MN to Malahat for review and comment prior to submission of the Report to [the CEA Agency], and also asks for MN's feedback regarding sources of information for this document.* • *In [the] letter of June 19, 2015, MN was provided with a draft summary of [the VFPA's] understanding of MN's current use in the marine shipping study area based on the sources identified in our previous letter. In the letter provided with this document, [the VFPA] specifies that the profile is being provided to MN in advance of submittal to [the CEA Agency] in order to confirm with MN that the information is accurately presented and whether any revisions, additions or deletions are required.* • *In our meeting on July 15, 2015, MN expressed concern with the approach taken by [the VFPA] to produce a summary of MN's current use of lands and resources within the marine shipping area based on publicly available sources associated with the Trans Mountain Expansion Project Application to the National Energy Board. In this meeting, [the VFPA] explained the intention to make any changes to the profile requested by MN, including deletion of all information associated with MN that was obtained from the Trans Mountain Expansion Project Application to the National Energy Board, if requested by MN. MN committed to confirming whether it did want all such information deleted. Since this meeting, [the VFPA] contacted MN on several occasions to obtain confirmation of MN's direction on this matter, and have not yet been advised of MN's response.*	**Addressed in MSA Appendix 5-B (#67):** The VFPA has engaged with each of the Indigenous groups listed in the *Updated EIS Guidelines* and provided drafts of Current Use existing conditions sections, and requested any additional Current Use information that the Indigenous group may wish to provide. The revised Current Use summary, following incorporation of any additional input from Indigenous groups is provided in MSA Section 9.5. The VFPA has acknowledged the challenges of participating in consultation during summer months, and has extended timelines to accommodate the provision of additional information from Indigenous groups. The VFPA has provided funding to Indigenous groups participating in consultation, and considers the amount of funding offered to be adequate and proportionate to the level of effort required by each Indigenous group to participate, given the scope of work. The VFPA increased the funding provided in some circumstances in response to specific requests. **Addressed in AIEIS Section 7.2.4.5:** At the request of Malahat Nation, existing information regarding Malahat Nation's use of lands and resources for traditional purposes was not included in MSA Section 9.5.4.5. Malahat Nation is currently completing a traditional use study in relation to the Project. Portions of the study pertaining to potential effects and proposed mitigation measures were provided to the VFPA in September 2016 (see AIEIS Section 7.2.3). Identified effects and mitigation measures appear to relate largely to marine shipping associated with the Project (in the marine shipping area) and not the Project itself. The portion of the study that would be expected to describe existing conditions of use of lands and resources of Malahat Nation in relation to the Project had not been received by the VFPA at the time this AIEIS was being finalised for submission to the CEA Agency and the Review Panel. The content of the following sections on existing conditions of Malahat use of resources	**AIEIS** 2.0 Aboriginal Groups Engagement and Consultation 2.2.1.1. Sponsorship of Additional Studies Appendix 2-B Aboriginal Issues and Interests - <u>W</u>SÁNEĆ Nation, Table 15 Roberts Bank Ecosystem 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 7.2.4.5 Malahat Nation **Information Requests** Response to Information Request #8 (IR-7.31.15-08 of CEAR Document #314) Response to Information Request #4 (MSA IR-02.24.16-4 of CEAR Document #388)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			[The VFPA] reiterates our intention to make additions, changes and deletions to the draft current use profile as requested by MN before submission of the Report to [the CEA Agency]. Please advise whether MN requests that [the VFPA] delete all information on MN current use that was obtained from the Trans Mountain Expansion Project Application to the National Energy Board from the Report before submission to [the CEA Agency], or whether we can use the information and, if so, any changes required." **17-Sep-2015, Email from the VFPA:** Summarised that Malahat has requested that the VFPA remove all information contained in the draft Current Use summary for Malahat Nation (and in turn, the MSA) that was obtained from materials related to the Trans Mountain Pipeline Project. Stated that the VFPA looks forward to working with Malahat to collect traditional use information for Malahat related to the Project. **26-Oct-2015, Meeting:** Stated that the VFPA is able to provide TUS funding. Explained that the VFPA can discuss the terms of the funding and the scope of the study. **12-Nov-2015, Letter from the VFPA:** Offered funding to support Malahat's engagement with the VFPA and the Project as well as funding for a Project-specific study to support Malahat Nation in gathering information on Current Use and rights in the Project area. **09-Feb-2016, Meeting:** The VFPA and Malahat met again on 09-Feb-2016 and the VFPA agreed to offer additional funding for participation and a study. Malahat agreed to this offer, and an agreement was signed on 22-Mar-2016. **12-May-2016, Letter from the CEA Agency (CEAR Document #404):** *"The Agency requested additional information on how Aboriginal Traditional Knowledge was used in the marine shipping addendum in AIR #4 Aboriginal Traditional Knowledge."* **12-Sep-2016:** Malahat Nation provided "Malahat Effects related to and Mitigation for the Roberts Bank Terminal 2 Project." **10-Feb-2017, Letter from the VFPA:** The AIEIS incorporates all traditional use and ITK information provided to the VFPA by Malahat Nation in relation to the assessment of potential effects of the Project on Malahat Nation. A description of the information provided by Malahat Nation to the date of submission of the AIEIS is included in AIEIS Sections 2.0 and 7.0. As described in the AIEIS, existing information regarding Malahat Nation's use of lands and resources for traditional purposes was not included in MSA Section 9.5.4.5 at the specific request of Malahat Nation, given its origin in material prepared in the context of a different project. Recognising this concern of Malahat Nation, the VFPA supplied funding to Malahat Nation to undertake a Project-specific study to identify Malahat Nation use and knowledge in relation to the Project area (e.g., information described by Malahat Nation in the comment, "cultural significance, quantity and/or quality of Traditional Use sites within the Project LAA, RAA and greater territory"). The content presented in AIEIS	or locations in the vicinity of the Project area is therefore based on information otherwise received by the VFPA from Malahat Nation during consultation regarding the Project. **Addressed in response to MSA IR-02.24.16-4:** The VFPA's response to MSA IR-02.24.16-4 provides a further discussion of how and where ITK was utilised in the MSA. Table MSA IR4-1 lists each assessment section (left column) and indicates where and how ITK was used in the assessment (centre column). If ITK was not used for a particular step in the assessment, a rationale is provided (right column). **Addressed in AIEIS Appendix 2-B, Table 15 (#61):** As described in the response to IR-7.31.15-08, the overall approach taken for collection and integration of ITK is described in EIS Section 7.0. All relevant ITK that was available was incorporated into the EIS. When ITK is used in the assessment of an IC or VC, (most often informing existing conditions), the source of ITK is cited directly. Table IR8-1 lists each IC and VC assessment section and indicates where and how ITK was used in the assessment. The ecosystem model inputs consisted of quantitative data from literature values, previously conducted ecosystem models in the area, and RBT2-specific field studies. As a qualitative source of information, ITK was not incorporated into the ecosystem model.	

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			Section 7.2.4.5 relating to Malahat Nation use and knowledge reflects the information received by the VFPA from Malahat Nation during consultation regarding the Project, as explained in AIEIS Section 7.2.4.5.		
MN-23.5	Stated that changes in access to Traditional Use sites resulting from project-related impacts will result in an associated change in cultural practices, in addition to any connections to additional sites and areas of use, resulting in a fragmentation of the cultural landscape and associated social networks. Took issue with language "minor change". Asked how the proponent determines the severity of an impact to Traditional Use. Stated that the language of "negligible" and "minor" minimizes the severity of cultural loss associated with Project-related impacts to Traditional Use. Stated that impacts to Traditional Use and access attributed to Project-related activities will result in interruptions to the transfer of knowledge to younger generations, connections to other Traditional Use sites and places of cultural importance, kinship ties, and social and trade networks, in turn leading to the fragmentation of the cultural landscape of Malahat First Nation. Stated that interruptions to its members' ability to access sites or practice Traditional Use activities due to any measurable increase in vessel traffic, or Project-related impacts during construction or operation phases directly infringes upon their Aboriginal and Treaty rights.	16-Dec-2015, Letter to the CEA Agency (CEAR Document #378) 05-Jan-2017, Letter	**12-May-2016, Letter from the CEA Agency (CEAR Document #404):** *"The Agency requested additional information on Port Metro Vancouver's assessment methodology in AIR #2 Rationale for Effects Characterization.* *In addition, the Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."* **10-Feb-2017, Letter from the VFPA:** Malahat Nation's views of the potential level of impact of the Project and marine shipping associated with the Project on their "Traditional Use, access and Aboriginal and Treaty rights," are recorded here for the Panel's consideration. As indicated throughout AIEIS Section 7.2.6 describing potential Project-related effects on Current Use and AIEIS Section 7.3.3 describing potential Project-related impacts on the exercise of asserted or established rights, the reader is referred to the VFPA's response to AIR-12.04.15-30, which explains the distinction between 'negligible' and 'measurable' effect ratings. The distinction between 'negligible' and 'minor' effect ratings, as employed in the MSA, is explained in the VFPA's response to MSA IR-02.24.16-2. As explained in the response, these ratings relate to potential effects on cultural heritage. As described in AIEIS Section 7.3.3.4 regarding outstanding Indigenous issues, while measurable Project-related effects or impacts are not expected by the VFPA in relation to Current Use or exercise of rights by Malahat Nation, the VFPA is of the view that the consultative measures proposed in EIS Section 32.2.7 (and reiterated in AIEIS Section 7.3.3.1), which are designed to assist with confirming the conclusions of the Current Use assessment, will also provide reasonable mechanisms to confirm the conclusions of the rights assessment.	**Addressed in EIS Section 32.2.7 and AIEIS Section 7.3.3.1:** Consultative measures proposed in EIS Section 32.2.7 (and reiterated in AIEIS Section 7.3.3.1) include the following: • Develop a communications protocol to inform appropriate Indigenous groups of planned or unplanned events related to Project construction or operation that may affect access for the exercise of asserted or established rights; • Work with appropriate Indigenous groups to develop and implement a communications mechanism that will support dialogue between the VFPA and appropriate Indigenous groups on topics of concern that arise during the construction and initial operation phases (e.g., Project status, safety issues, effectiveness of mitigation programs); • Share with appropriate Indigenous groups information gained through environmental monitoring and follow-up programs to support monitoring, by Indigenous groups, of environmental conditions related to the exercise of asserted or established rights; and • Work with appropriate Indigenous groups to identify opportunities to participate in environmental monitoring and follow-up programs. **Addressed in response to MSA IR-02.24.16-2:** The VFPA's response to MSA IR-02.24.16-2 identifies the receptors of potential effects to Current Use and impacts to rights, and provides an explanation of how potential effects and impacts were determined to be negligible or measurable in the MSA. **Addressed in response to IR10-22:** The VFPA's response to IR10-22, as requested by the Review Panel, further discusses the assessment of cultural heritage, potential disruptions or loss of ceremonial and cultural practices, as well as a potential disruption to sense of belonging, identity and spirituality**.**	**EIS** 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes **AIEIS** 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 7.2.6 Future Conditions with the Project – Potential Project-related Effects 7.3.3.1 Summary of Mitigation Measures for the Rights Assessment 7.3.3.4 Outstanding Aboriginal Issues **Information Requests** Response to Additional Information Request #30 (AIR-12.04.15-30 of CEAR Document #388) Response to Information Request #2 (MSA IR-02.24.16-2 of CEAR Document #386) **Response to Sufficiency Information Request #22 (IR10-22)**
MN-23.6	Stated that the EIS does not characterize Project-related impacts to Traditional Use	27-Oct-2016, Letter to Panel	The VFPA has reviewed this letter and refers to EIS Section 8.0 which describes the environmental assessment methods developed to meet		**EIS** 8.0 Effects Assessment Methods

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	site access as a change in quality of use experience. Requested that these impacts be characterized as a change in quality of use experience or provide a rationale for the failure to properly characterize impacts to Traditional Use site access.	(CEAR Document #621)	the requirements specified in the *EIS Guidelines* and are consistent with existing guidance documents and *CEAA, 2012*.		***Updated EIS Guidelines***
MN-23.7	Stated that the VFPA has indicated that Project-related effects on Current Use by several nations are expected to be negligible. How did they determine the severity of effects? Please provide a rationale for determining the effectiveness of the proposed mitigation measures.	27-Oct-2016, Letter to Panel (CEAR Document #621)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in response to IR7-31:** The VFPA's forthcoming response to IR7-31, as requested by the Review Panel, provides a summary of the views of Indigenous groups in relation to the proposed mitigation measures that were considered in the preparation of the EIS for each biophysical VC, including views about offsetting. **Addressed in response to IR10-09:** The VFPA's response to IR10-09, as requested by the Review Panel, provides further discussion of proposed mitigation measures to reduce the potential effects of the proposed Project on the access, availability, and quality of preferred Current Use resources and the quality of the Current Use experience.	**Information Requests** Response to Sufficiency Information Request #31 (IR7-31) Response to Sufficiency Information Request #09 (IR10-09)
MN-23.8	The mitigation measures presented for potential Project-related impacts to Traditional Use, access, commercial use, and Aboriginal and Treaty rights outlined in the EIS, AIEIS and MSW addendum [MSA] are incomplete, and do not indicate where and how ATK and input from impacted nations was incorporated into the process. The EIS, AIEIS and MSW addendum [MSA] fail to present a comprehensive mitigation process incorporating measures to accommodate or compensate Aboriginal groups in the event of Project-related impacts to Aboriginal and Treaty rights. Malahat First Nation considers the RBT2 project EIS and MSW addendum [MSA] to be incomplete, as it contains insufficient TUS/ATK information to properly inform the CEA Agency panel's decision-making process.	05-Jan-2017, Letter 30-May-2017, Meeting with Administrative Staff	**10-Feb-2017, Letter from the VFPA:** Mitigation measures suggested by Malahat Nation and other *W̱SÁNEĆ* groups to avoid, reduce, or otherwise manage potential adverse impacts of the Project on the exercise of their asserted or established rights in the vicinity of the Project area are contained in AIEIS Table 7-2 (see AIEIS Section 7.3.3.2). A list of measures suggested by other Indigenous groups in relation to the Project are contained in EIS Section 32.3.3.2. In addition to the mitigation measures identified in AIEIS Sections 7.3.3.2 and 7.3.3.3 describes other accommodations identified by *W̱SÁNEĆ* groups in relation to the Project, including an expressed interest in realising Project benefits. As stated in AIEIS Section 7.3.3.3, *"The VFPA is prepared to assist Tsawout First Nation, Pauquachin First Nation, Tsartlip First Nation, Tseycum First Nation, and Malahat Nation in accessing potential economic opportunities resulting from the Project, including contracting opportunities as well as construction employment opportunities. To support these [Indigenous] groups in preparing for employment opportunities, the VFPA will provide training funding."* Mitigation measures suggested by Malahat Nation and other Indigenous groups in relation to marine shipping associated with the Project were contained in the VFPA's response to MSA IR-02.24.16-13 (see Table MSA IR13-1). AIEIS Section 9.0 explains how ITK provided by Malahat Nation and other *W̱SÁNEĆ* groups was specifically incorporated into the AIEIS. For a description of how ITK was incorporated into the EIS and MSA, see the VFPA's response to IR-7.31.15-08 and MSA IR-02.24.16-4, respectively.	**Addressed in response to IR-7.31.15-08:** As described in the VFPA's response to IR-7.31.15-08, the overall approach taken for collection and integration of ITK is described in EIS Section 7.0. All relevant ITK that was available was incorporated into the EIS. When ITK is used in the assessment of an IC or VC, (most often informing existing conditions), the source of ITK is cited directly. Table IR8-1 lists each IC and VC assessment section and indicates where and how ITK was used in the assessment. **Addressed in response to MSA IR-02.24.16-4:** The VFPA's response to MSA IR-02.24.16-4 provides further discussion of how and where ITK was utilised in the marine shipping area. Table MSA IR4-1 lists each assessment section (left column) and indicates where and how ITK was used in the assessment (centre column). If ITK was not used for a particular step in the assessment, a rationale is provided (right column). **Addressed in response to MSA IR-02.24.16-13:** Table MSA IR13-1 includes a summary of mitigation measures raised by Indigenous groups related to potential adverse impacts of	**EIS** Section 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.3.3.2 Summary of Mitigation Measures Suggested by Aboriginal Groups **AIEIS** 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 7.3.3.2 Summary of Mitigation Measures Suggested by Aboriginal Groups 7.3.3.3 Other Accommodations 9.0 Aboriginal Traditional Knowledge **Information Requests** Response to Information Request #8 (IR-7.31.15-08 of CEAR Document #314) Response to Information Request #4 (MSA IR-02.24.16-4 of CEAR Document #386)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				the Project, including marine shipping associated with the Project, on potential or established Aboriginal and treaty rights and related interests. The specific measures noted in the Table MSA IR13-1 were those raised during consultation on marine shipping associated with the Project, but may relate to the Project or marine shipping.	Response to Information Request #13 (MSA IR-02.24.16-13 of CEAR Document #386)
MN-23.9	Stated that sections 9.5 and 10.5 in the EIS do not outline or summarize any mitigative measures for project related impacts to Traditional Use, access and Aboriginal and treaty rights as recommended by affected First Nations.	16-Dec-2015, Letter to the CEA Agency (CEAR Document #378)	**12-May-2016, Letter from the CEA Agency (CEAR Document #404):** *"The Agency requested additional information on this topic in AIR #13 Aboriginal and Treaty Rights and Related Interests."*	**Addressed in response to MSA IR-02.24.16-13:** Table MSA IR13-1 includes a summary of mitigation measures raised by Indigenous groups related to potential adverse impacts of the Project, including marine shipping associated with the Project, on potential or established Aboriginal and treaty rights and related interests.	**Information Requests** Response to Information Request #13 (MSA IR-02.24.16-13 of CEAR Document #386)
MN-23.10	Concerned with language utilized throughout document defining Traditional Use activities and sites as "current" and/or "past".	16-Dec-2015, Letter to the CEA Agency (CEAR Document #378)	**12-May-2016, Letter from the CEA Agency (CEAR Document #404):** *"Thank you for your comment, I encourage Malahat to comment on the Agency's draft guidance on "Technical Guidance on Current Use of Lands and Resources for Traditional Purposes under the Canadian Environmental Assessment Act, 2012 (CEAA 2012) by sending comments to: CEAA.guidance-orientation.ACEE@ceaa-acee.gc.ca by June 16, 2016.* *The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*		
MN-23.11	Stated that the EIS does not address or measure project-related impacts to all Traditional Use sites or practices, only those defined as "Current Use".	16-Dec-2015, Letter to the CEA Agency (CEAR Document #378)	**12-May-2016, Letter from the CEA Agency (CEAR Document #404):** *"Thank you for your comment, I encourage Malahat to comment on the Agency's draft guidance on "Technical Guidance on Current Use of Lands and Resources for Traditional Purposes under the Canadian Environmental Assessment Act, 2012 (CEAA 2012) by sending comments to: CEAA.guidance-orientation.ACEE@ceaa-acee.gc.ca by June 16, 2016.* *The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*		
MN-23.12	Stated that ship pass-by overlaps with specific terrestrial-based activities (i.e. hunting) will result in negative effects and/or interruptions to the Traditional Use activity, where species hunted are sensitive to noise. The EIS addendum does not take this into account in its analysis of noise effects to intertidal or terrestrial-based Traditional Use activities.	16-Dec-2015, Letter to the CEA Agency (CEAR Document #378)	**12-May-2016, Letter from the CEA Agency (CEAR Document #404):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in MSA Section 9.5:** Terrestrial resource use in marine areas is considered in the assessment presented in MSA Section 9.5. The noise assessment presented in MSA Section 7.3 notes that as a result of future marine vessel activity in the marine shipping area, in combination with vessel activity associated with the Project, cumulative average daytime and nighttime atmospheric noise levels	**MSA** 7.3 Atmospheric Noise 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.5 Potential Interactions and Effects on Current Use

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				due to vessel transit are expected to increase imperceptibly by approximately 1 dBA.	
MN-23.13	Stated that any overlap associated with Project-related shipping activities resulting in the interruption or displacement of a Traditional Use site or activity is considered a measurable effect and must be acknowledged and mitigated appropriately.	16-Dec-2015, Letter to the CEA Agency (CEAR Document #378)	**12-May-2016, Letter from the CEA Agency (CEAR Document #404):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in response to MSA IR-02.24.16-2:** The VFPA's response to MSA IR-02.24.16-2 identifies the receptors of potential effects to Current Use and impacts to rights, and provides an explanation of how potential effects and impacts were determined to be negligible or measurable in the MSA.	**Information Requests** Response to Information Request #2 (MSA IR-02.24.16-2 of CEAR Document #386)
MN-23.14	Stated that any overlap associated with Project-related shipping activities resulting in a First Nation's ability to access any Traditional Use site, regardless of whether or not it is a place of "current" or "past" use, is an infringement upon that Nations' Aboriginal and/or Treaty rights. Asked how the proponent determines whether or not an effect on access to Traditional Use sites is minor. What is the threshold used to measure impacts to access? How was ATK and input from Aboriginal groups used to determine thresholds?	16-Dec-2015, Letter to the CEA Agency (CEAR Document #378) 27-Oct-2016, Letter to Panel (CEAR Document #621)	**12-May-2016, Letter from the CEA Agency (CEAR Document #404):** *"The Agency has requested additional information on [the VFPA's] assessment methodology and how Aboriginal Traditional Knowledge was used in the marine shipping addendum in AIR #2 Rationale for Effects Characterization and AIR #4 Aboriginal Traditional Knowledge."* In addition, the Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review. The Crown will be using the Review Panel process to the extent possible to collect information about potential impacts to the exercise of Malahat Nation's rights from the Project and marine shipping associated with the Project and we encourage you to provide your perspective on this topic to the Review Panel."	**Addressed in response to MSA IR-02.24.16-4:** The VFPA's response to MSA IR-02.24.16-4 provides a further discussion of how and where ITK was utilised in the MSA. Table MSA IR4-1 lists each assessment section (left column) and indicates where and how ITK was used in the assessment (centre column). If ITK was not used for a particular step in the assessment, a rationale is provided (right column). **Addressed in response to MSA IR-02.24.16-2:** The VFPA's response to MSA IR-02.24.16-2 identifies the receptors of potential effects to Current Use and impacts to rights, and provides an explanation of how potential effects and impacts were determined to be negligible or measurable in the MSA. **Addressed in AIEIS Appendix 2-B, Table 28 (#129):** The terminology "current use of lands and resources for traditional purposes" (Current Use) is the language of subsection 5(1)(c) of *CEAA, 2012*. The assessment of potential effects on Current Use in EIS Section 32.0 and AIEIS Section 7.0 reflects the understanding of Current Use outlined in the CEA Agency's draft Technical Guidance on Current Use of Lands and Resources for Traditional Purposes under the *Canadian Environmental Assessment Act, 2012*, dated December 2015. The EIS was filed in March 2015, prior to that draft guidance being issued; however, EIS Section 32.0 and AIEIS Section 7.0 considered use for traditional purposes that may not be occurring presently or occurring at sufficient levels to meet community needs, but was reported by Indigenous groups to have occurred in the past. As part of that consideration, the EIS and AIEIS included Indigenous groups' perspectives on the effects over time (as a result of other projects and	**AIEIS** Appendix 2-B Aboriginal Issues and Interests - W̱SÁNEĆ Nation, Table 28 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes **Information Requests** Response to Information Request #2 (MSA IR-02.24.16-2 of CEAR Document #386) Response to Information Request #4 (MSA IR-02.24.16-4 of CEAR Document #386)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				activities) that have contributed to existing conditions of use. The EIS and AIEIS also considered the desire to restore use (based on past use) or increase use (over present or recent limited levels), where this desire was expressed by Indigenous groups to the VFPA.	
MN-23.15	**Referred to 3 statements in the EIS:** 1. "The residual effect on access to preferred Current Use locations as a result of the Project is therefore predicted to be negligible". 2. "The residual effect on the quality of preferred Current Use resources as a result of the Project is therefore predicted to be negligible". 3. "The residual effect on the quality of Current Use experience as a result of the Project is therefore predicted to be negligible". Stated that VFPA is making a grievous assumption with these statements. Requested the rationale for these statements.	27-Oct-2016, Letter to Panel (CEAR Document #621)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Section 32.0:** Rationale is provided for each of the statements noted in EIS Sections 32.2.7.1, 32.2.7.3, and 32.2.7.4, respectively. **Addressed in EIS Section 32.2.7.1:** The combination of the existing accommodation agreement with Tsawwassen First Nation, the planned accommodation agreement with Musqueam First Nation, the measures to limit potential displacement-related effects to crab harvesting (including those set out in EIS Section 21.0 and EIS Section 24.0), and the VFPA's support of Indigenous domestic and FSC crab harvesting within the planned extension navigational closure area are expected to be effective at addressing Project-related effects to Current Use access related to crab harvesting. For Project-related effects on marine access for other Current Use purposes, the measures set out in EIS Section 26.0 and the communications protocol and mechanism identified above are expected to be effective at addressing planned and unforeseen events that may interfere with that access. The residual effect on access to preferred Current Use locations as a result of the Project is therefore predicted to be negligible. **Addressed in EIS Section 32.2.7.3:** In combination with the measures to address or reduce Project-related effects on Current Use access and availability of preferred Current Use resources, the measures outlined in EIS Section 27.0 to address traditional food avoidance due to perceived contamination concerns are also expected to be effective in mitigating adverse effects on Current Use that may stem from Project-related contamination concerns. The residual effect on the quality of preferred Current Use resources as a result of the Project is therefore predicted to be negligible. **Addressed in EIS Section 32.2.7.4:** In combination with the measures to reduce Project-related effects on Current Use access and Current Use resources, the measures	**EIS** 32.2 Current Use of Land and Resources for Traditional Purposes 32.2.7.1 Mitigation Measure #1: Changes in Access to Preferred Current Use Locations 32.2.7.3 Mitigation Measure #3: Changes in Quality of Preferred Current Use Resources 32.2.7.4 Mitigation Measure #4: Changes in the Quality of the Current Use Experience **Information Requests** Response to Sufficiency Information Request #25 (IR13-25)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				identified in EIS Sections 25.0, 27.0, and 28.0 are also expected to be effective at addressing adverse effects on the quality of the Current Use experience that may relate to Project-related changes in sense of place, light, noise, vibration, and air emissions, and cultural heritage and transmission. The VFPA recognises that the quality of Current Use experience is community-specific, and expects the communications mechanism identified in EIS Section 32.2.7.1 to support dialogue between the VFPA and appropriate Indigenous groups on topics of concern, including safety issues, will augment the effectiveness of the other measures identified to address community-specific concerns related to the quality of the Current Use experience. The residual effect on the quality of Current Use experience as a result of the Project is therefore predicted to be negligible. **Addressed in IR13-25:** The VFPA's forthcoming response to IR13-25 will further discuss aspects of the current use experience.	
MN-23.16	Noted that the EIS Section 32.3.2.2 states that there is an information gap with regards to Tsleil-Waututh use of travelways within the Project area, and has therefore determined there will be no Project-related impacts to their ability to access travelways. This is an enormous assumption. Please revise so that information gaps are not used to justify a conclusion of no impacts.	27-Oct-2016, Letter to Panel (CEAR Document #621)	The VFPA has reviewed this letter, and will continue to consult with appropriate Indigenous groups to address information gaps, where possible.		
MN-23.17	Asked how the VFPA determines the level of significance of a residual effect of Project-related impacts on Aboriginal rights and interests? What are the thresholds for Current Use and access?	27-Oct-2016, Letter to Panel (CEAR Document #621)	The VFPA has reviewed this letter and provides the following additional information. **10-Feb-2017, Letter from the VFPA:** Malahat Nation's views of the potential level of impact of the Project and marine shipping associated with the Project on their "Traditional Use, access and Aboriginal and Treaty rights," are recorded here for the Panel's consideration. As indicated throughout AIEIS Section 7.2.6 describing potential Project-related effects on Current Use and AIEIS Section 7.3.3 describing potential Project-related impacts on the exercise of asserted or established rights, the reader is referred to the VFPA's response to AIR-12.04.15-30, which explains the distinction between 'negligible' and 'measurable' effect ratings. The distinction between 'negligible' and 'minor' effect ratings, as employed in the MSA, is explained in the VFPA's response to MSA IR-02.24.16-2. As explained in the response, these ratings relate to potential effects on cultural heritage. As described in AIEIS Section 7.3.3.4 regarding outstanding Indigenous issues, while measurable Project-related effects or impacts are not	**Addressed in EIS Section 32.2.7 and AIEIS Section 7.3.3.1:** Consultative measures proposed in EIS Section 32.2.7 (and reiterated in AIEIS Section 7.3.3.1) include the following: • Develop a communications protocol to inform appropriate Indigenous groups of planned or unplanned events related to Project construction or operation that may affect access for the exercise of asserted or established rights; • Work with appropriate Indigenous groups to develop and implement a communications mechanism that will support dialogue between the VFPA and appropriate Indigenous groups on topics of concern that arise during the construction and initial operation phases (e.g., Project status,	**EIS** 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes **AIEIS** 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 7.2.6 Future Conditions with the Project – Potential Project-related Effects 7.3.3.1 Summary of Mitigation Measures for the Rights Assessment

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			expected by the VFPA in relation to Current Use or exercise of rights by Malahat Nation, the VFPA is of the view that the consultative measures proposed in EIS Section 32.2.7 (and reiterated in AIEIS Section 7.3.3.1), which are designed to assist with confirming the conclusions of the Current Use assessment, will also provide reasonable mechanisms to confirm the conclusions of the rights assessment.	safety issues, effectiveness of mitigation programs); • Share with appropriate Indigenous groups information gained through environmental monitoring and follow-up programs to support monitoring, by Indigenous groups, of environmental conditions related to the exercise of asserted or established rights; and • Work with appropriate Indigenous groups to identify opportunities to participate in environmental monitoring and follow-up programs.	7.3.3.4 Outstanding Aboriginal Issues **Information Requests** Response to Additional Information Request #30 (AIR-12.04.15-30 of CEAR Document #388) Response to Information Request #2 (MSA IR-02.24.16-2 of CEAR Document #386)
MN-23.18	Asked how the VFPA incorporates ATK and other Aboriginal views into the consideration of environmental effects on potential or established Aboriginal and Treaty rights and related interests.	27-Oct-2016, Letter to Panel (CEAR Document #621)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in response to MSA IR-02.24.16-4:** The VFPA's response to MSA IR-02.24.16-4 provides further discussion of how and where ITK was utilised in the MSA. Table MSA IR4-1 lists each assessment section (left column) and indicates where and how ITK was used in the assessment (centre column). If ITK was not used for a particular step in the assessment, a rationale is provided (right column). The overall approach taken for integration of ITK is described in MSA Section 5.1.4. All relevant ITK that was available was incorporated into the MSA. When ITK is used in the assessment of an IC or VC (most often informing existing conditions), the source of ITK is cited directly. When Current Use information is included in an assessment of an IC or VC for context purposes, a cross reference to MSA Section 9.5 is provided. When information is included in an assessment of an IC or VC about the importance of a resource to Indigenous groups, or about concerns raised by Indigenous groups about effects to the IC or VC (often as rationale for selection of the IC, VC, or sub-components), a cross reference to the consultation and engagement section (MSA Section 5.0) is provided. **Addressed in AIEIS Appendix 2-B, Table 15 (#61):** As described in the response to IR-7.31.15-08, the overall approach taken for collection and integration of ITK is described in EIS Section 7.0. All relevant ITK that was available was incorporated into the EIS. When ITK is used in the assessment of an IC or VC, (most often informing existing conditions), the source of ITK is cited directly. Table IR8-1 lists each IC and VC assessment section and indicates where and how ITK was used in the assessment.	**MSA** 5.0 Aboriginal Groups Engagement and Consultation 5.1.4 Aboriginal Groups Engagement and Consultation Methods of the Addendum **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̱SÁNEĆ* Nation, Table 15 Roberts Bank Ecosystem **Information Requests** Response to Information Request #4 (MSA IR-02.24.16-4 of CEAR Document #386)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-23.19	Asked what is the framework for mitigating impacts to established and Aboriginal and Treaty rights. Traditional Use sites, associated practices and resources, and access to sites (in relation to EIS, Section 33.0). Stated that there are no management plans outlined for the mitigation of Project-related impacts to Aboriginal and Treaty rights, title, Traditional Use and access.	27-Oct-2016, Letter to Panel (CEAR Document #621)	The VFPA has reviewed this letter and provides the following additional information.	Further to the information presented in EIS Section 32.3, AIEIS Section 7.3 considers potential adverse impacts of the Project, including marine traffic associated with the Project within the VFPA's jurisdiction, on the exercise of asserted or established Aboriginal and treaty rights by Tsawout First Nation, Pauquachin First Nation, Tsartlip First Nation, Tseycum First Nation, and Malahat Nation. Although Project-related incremental impacts are not expected to be measurable on the exercise of asserted or established rights by *W̱SÁNEĆ*, the consultative measures proposed in EIS Section 32.2.7 (and reiterated in AIEIS Section 7.2.7) to assist with confirming the conclusions of the Current Use assessment are carried forward to the rights assessment, following the same methodology employed in EIS Section 32.3.3. These measures are expected to assist with monitoring circumstances following the onset of Project construction and operation, through ongoing engagement. The consultative measures carried forward are as follows: • Develop a communications protocol to inform appropriate Indigenous groups of planned or unplanned events related to Project construction or operation that may affect access for the exercise of asserted or established rights; • Work with appropriate Indigenous groups to develop and implement a communications mechanism that will support dialogue between the VFPA and appropriate Indigenous groups on topics of concern that arise during the construction and initial operation phases (e.g., Project status, safety issues, effectiveness of mitigation programs); • Share with appropriate Indigenous groups information gained through environmental monitoring and follow-up programs to support monitoring, by Indigenous groups, of environmental conditions related to the exercise of asserted or established rights; and • Work with appropriate Indigenous groups to identify opportunities to participate in environmental monitoring and follow-up programs.	**EIS** 32.2 Current Use of Land and Resources for Traditional Purposes 32.2.7 Mitigation Measures 32.3.3 Mitigation Measures **AIEIS** 7.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 7.2.7 Mitigation Measures 7.3 Potential Adverse Impacts on Aboriginal and Treaty Rights and Related Interests

Table 24: Project Overview and Description

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-24.1	Asked what the square footage of the proposed terminal is.	15-Jul-2015, Meeting	**15-Jul-2015, Meeting:** Recorded comment for follow-up. **22-Jul-2015, Email from the VFPA:** Page 54 of the document linked here http://www.ceaa-acee.gc.ca/050/documents/p80054/101388E.pdf breaks out the area associated with the terminal footprint and widened causeway, and I've posted the associated table below (email included table with measurements in hectares).	**Addressed in AIEIS Appendix 2-B, Table 2 (#5):** Terminal dimensions, measured in hectares (ha), are described in EIS Section 4.0: • 1,500 m average length and 700 m width; • 1,346 m berth length (includes the wharf and mooring dolphin); and • 1,300 m wharf length. The terminal's total useable area will be approximately 108 ha. To accommodate this space requirement, the marine footprint of the terminal with the three-berth wharf on the south side, including the rip-rap protected marine slopes and seabed toes on its west, north, and east sides, will be approximately 116.1 ha. The dredged berth pocket and marine approach areas, located in front of, and adjacent to the three-berth wharf, will have a marine footprint of approximately 17.4 ha. The combined total marine footprint of the terminal and dredged berth pocket and marine approach areas will be approximately 133.5 ha. Final dimensions will be determined during the detailed design phase. **Addressed in the PCU:** As requested by the Review Panel, the VFPA submitted the PCU on June 12, 2018 (CEAR Document #1210). The report updates EIS Table 4-1, presenting minor changes to the areas presented above.	**EIS** 4.0 Project Description 4.2.1 Marine Terminal Figure 4-4 Conceptual Plan View of Marine Terminal Layout Figure 4-24 Plan View of Dredge Basin and Marine Terminal Areas **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̱SÁNEĆ* Nation, Table 2 Project Planning, Development, and Implementation **PCU** Table 2-1 Project Component and Sub-component Areas (Updated EIS Table 4-1)
MN-24.2	Concerned with downstream effects, such as from the sourcing of concrete/fill.	26-Nov-2015, EIS Results Workshop #1 - *W̱SÁNEĆ* Nation	**26-Nov-2015, Workshop:** Responded that fill for the Project will come from the Port's annual maintenance dredging activities on the Fraser River. An ITP will be used during construction and excess dredge material from the containment walls of the proposed terminal will be disposed of at sea. Bathymetry will be spoken to later on, as well as the approach identified to minimise environmental effects. **26-Jun-2017, Letter from the VFPA:** Stated that as a result of work undertaken over the past year to address concerns raised by Malahat and other Indigenous groups related to Dungeness crabs and DAS, and to reduce potential environmental effects from the Project, the VFPA has determined that the ITP is no longer required as a temporary storage location to support project construction. The elimination of the ITP, along with other changes will result in a Project that will not require a DAS permit. **12-Jul-2017, Email from the VFPA:** Followed-up with Malahat from the May 30 meeting and provided the link to the Registry to Information Request Package 3 (CEAR Document #984), which contains more information on the ITP: http://www.ceaa-acee.gc.ca/050/documents/p80054/119369E.pdf	**Addressed in AIEIS Appendix 2-B, Table 24 (#105):** The economic development assessment (EIS Section 20.0) considers effects to direct supplier industries and upstream supply industries such as cement manufacturers. EIS Section 20.6.1 specifically addresses change in construction aggregate availability and price and concludes that the Project would have a negligible effect on sand availability and price as the local sand supply capacity and capabilities is sufficient to address Project demand. **Addressed in PCU:** As requested by the Review Panel, the VFPA submitted the PCU on June 12, 2018 (CEAR Document #1210), providing • Detailed revised Project description, including a revised construction schedule; • Revised Project interaction matrix; • Preliminary details pertaining to the management and timing of dredging activities and the discharge of sediment-laden water; and • Revised assessment of environmental effects as required by the Project modifications. PCU Sections 1.0 and 2.0 describe the changes to the EIS, including updates to specific construction activities, the construction schedule, and relevant Project description figures and appendices. In PCU Section 3.0, changes or effects resulting from the construction updates on ICs and VCs are described. Overall, these changes to the environmental assessment resulting from construction updates can generally be summarised as follows: • Reductions in potential adverse changes or effects on ICs, biophysical VCs, social VCs, and Current Use; and • Increases in positive interactions with socio-economic VCs. These beneficial changes to ICs and VCs occur at the level of interactions or potential effects, and in most cases are slight changes, and thus do not affect the overall conclusions made in the EIS, including proposed mitigation, residual effect characterisations, significance determinations or cumulative effects, as applicable, with one exception. The only component predicted to have a change to residual effects is land and water use, with a reduction of a residual effect on access to Tsawwassen First Nation community lease lands from a measurable non-significant residual effect to a negligible residual effect, due to elimination of the ITP and associated activities.	**EIS** 20.0 Economic Development 20.6.2.1 Potential Effect #1 – Change in Materials, Goods, and Services Contracting Revenues – Construction Phase **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *W̱SÁNEĆ* Nation, Table 24 Economic Development **PCU** 1.0 Introduction 2.0 Revised Project Description and Schedule 3.0 Summary of Changes to the Environmental Impact Statement

Table 25: Project Benefits

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-25.1	Interested in training, employment, and contracting opportunities associated with RBT2. Requested that the VFPA participate in a job fair. Noted that there should be a direct link to current opportunities. Noted they are looking for broad support such as sharing all job postings, potential preferential hiring for Malahat and support through the job application process.	15-Jul-2015, Letter 08-Sep-2015, Meeting 09-Feb-2016, Meeting 08-Nov-2017, Meeting	**08-Sep-2015, Meeting:** Stated that the VFPA can look into potentially involving current VFPA operations jobs in the job fair. Requested that Malahat provide the VFPA with information regarding upcoming Malahat job fairs. **11-Sep-2015, Letter from the VFPA:** *"Proposed Path Forward and Training and Contract Opportunities* *[The VFPA] appreciates MN's input into the marine shipping assessment for the Roberts Bank Terminal 2 Project, and looks forward to your ongoing participation in the RBT2 Environmental Assessment. I will contact you shortly to schedule meetings for the fall, which will include a discussion of training and contracting opportunities associated with the Project. "* **12-Nov-2015, Letter from the VFPA:** *"Please see Section 19.0 Labour Market and Section 20.0 Economic Development of the Environmental Impact Statement ("EIS") for more information on the employment and economic effects figures shared in the meeting. The EIS can be accessed on the Canadian Environmental Assessment Agency website at the following link: http://www.ceaa-acee.gc.ca/050/document-eng.cfm?document=101482. A specialist will be available to provide further information and answer any questions on these sections and topics at the upcoming RBT2 EIS workshop on November 26-27."* **09-Feb-2016, Meeting:** Committed to working with Malahat to arrange involvement in upcoming job fair. **08-Aug-2016, Email from the VFPA:** Shared a draft consultation plan with Malahat that included the following: "If desired by Malahat Nation, the VFPA to host job fair for Malahat Nation community members." **08-Nov-2017, Meeting:** Stated that the VFPA would put together a draft mutual benefits agreement for Malahat's review. Discussions are ongoing.	**Addressed in AIEIS Appendix 2-B, Table 3 (#23):** The VFPA is working with Indigenous groups to facilitate access to Project benefits, including training, employment opportunities, and Project contracting opportunities. As stated in EIS Section 32.3.3, the VFPA proposes to assist certain Indigenous groups in accessing potential economic opportunities resulting from the Project, including contracting opportunities as well as construction employment opportunities. The VFPA proposes to extend the same opportunities to Tsawout First Nation, Pauquachin First Nation, Tseycum First Nation, Tsartlip First Nation, and Malahat Nation. To support these Indigenous groups in preparing for employment opportunities, the VFPA will provide training funding and undertake specific job-related information sharing activities, such as job fairs.	**EIS** 20.0 Economic Development Appendix 20-A Economic Impact Roberts Bank Terminal 2 Technical Report 32.0 Potential or Established Aboriginal and Treaty Rights and Related Interests, Including Current Use of Lands and Resources for Traditional Purposes 32.3.3 Mitigation Measures Table 35-2 Proposed Mitigation Measures and Commitments **AIEIS** Appendix 2-B Aboriginal Issues and Interests - *WSÁNEĆ* Nation, Table 3 Engagement and Consultation
MN-25.2	Asked how Malahat can invest in the Project.	26-Oct-2015, Meeting	**12-Nov-2015, Letter from the VFPA:** The Project will be funded primarily through the VFPA and private funding. For more information on this process, please see pages 40-41 of the RBT2 Project Rationale booklet enclosed. After the terminal operator has been selected, an infrastructure developer will be selected through a competitive process and will be responsible for designing, building, financing, and maintaining the terminal land and related	.	

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			infrastructure. As an infrastructure developer has not yet been selected, we are unable to currently comment on opportunities for investment.		
MN-25.3	Suggested potential allocation of benefit funding: • Research and studies about Goldstream. • Camosun's environmental technical certification • Means to enable taking on opportunities requiring boat work (boat operator's licence, SCUBA licence, etc.) • Malahat program to respond to marine incidents and spills • Carbon sequestration • Aquaculture: crayfish (existing) and geoduck (interest) • Marine and guide fishing tourism • Workshops on the processing of seafood (smoke house, food safe, freezing, etc.)	30-May-2017, Meeting with Administrative Staff	**16-Jun-2017, Letter from the VFPA:** *"Further to discussions at our meeting on May 30, 2017, VFPA is interested in initiating discussions with Malahat Nation regarding potential legacy benefits from the Project. Legacy benefits are intended to benefit [Indigenous] groups if the Project proceeds, and would be over and above the economic benefits resulting from the Project. Examples of types of legacy benefits are: restoring fisheries, training, funding cultural initiatives, enhancing environmentally sensitive areas or revitalizing aquaculture. As we discussed with your staff, it is our intent to develop this concept into a plan that reflect the interests, objectives and priorities of [Indigenous] groups involved in the RBT2 Project.* *We welcome any further input from Malahat Nation regarding your community's priorities in relation to this funding, and will continue to provide updates to Malahat Nation as the proposal for legacy benefits is further refined. Recorded comment for follow-up.* *In addition to general legacy benefits, the VFPA is interested in entering into direct discussions with Malahat First Nation regarding a potential mutual benefits agreement ("MBA") for the Project."* **08-Nov-2017, Meeting:** The VFPA and Malahat Nation began negotiations of a mutual benefits agreement. Discussions are going.	**Additional information provided by the VFPA:** The VFPA is working on a consideration report related to RBT2 Legacy Benefits and will continue to seek input. The VFPA is also in discussions with Malahat regarding a mutual benefits agreement, which could include employment, contracting, and training opportunities for Malahat Nation members.	

Table 26: Underwater Noise – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
MN-26.1	Raised concerns regarding impacts of construction from underwater noise and mitigation plans for T2.	29-Aug-2017, Follow Up Program Workshop with Cowichan Nation Alliance, Lyackson First Nation, Malahat Nation	**29-Aug-2017, Workshop:** Recorded comment for consideration by the Project team.	**Addressed in EIS Appendix 7.2-B (#61):** The scope and methods of the underwater noise study are summarised in the EIS section, and detailed in the supporting appendix. Underwater noise considers the level of underwater sound in the marine environment. An assessment was undertaken to determine potential changes in underwater noise as a result of the Project and focused on construction and operation activities that would produce underwater noise. Modelling was undertaken to predict future underwater noise as a result of construction activities, such as dredging, pile driving, vibro-densification, and operation activities, such as movements of container ships and tug boats associated with terminal approach and departure, and berthing and unberthing. The assessment concludes that: • Underwater noise levels during construction are predicted to be comparable on average to existing levels measured at Roberts Bank, with the exception of some periods when certain activities, such as dredging, pile-driving, vibro-densification, or construction support vessel movement, would occur. • Overall, average underwater noise from Project construction and operation activities is expected to be comparable to average existing levels of underwater noise due to existing high levels, but will at times exceed existing conditions. Underwater noise related to conservative levels of Project commercial vessel movements is predicted to increase over existing underwater noise levels for only approximately 3% of a year for vessel berthing and unberthing, and for approximately 2% of a year for vessel approach and departure. • Future cumulative increases in commercial vessel traffic in the region are expected to make a relatively small incremental contribution to overall underwater noise levels. This prediction reflects the existing high levels of vessel traffic within the study area and the already-dominant contribution of commercial vessel traffic noise to the acoustic environment. The results of the underwater noise assessment were considered in the assessments of marine fish, marine mammals, and coastal birds. An interaction between Project-related underwater noise and marine invertebrates is not anticipated, and therefore was not assessed. **Addressed in EIS Section 33.3.7:** The Underwater Noise Management Plan will describe measures to manage underwater noise and over-pressure waves generated during pile driving and other construction activities as necessary to avoid or reduce potential effects on marine mammals, diving coastal birds, and aquatic life. Key components of the plan will include use of underwater noise reduction and dampening methods and technologies. The plan will incorporate measures described in Best Management Practices for Pile Driving and Related Operations, prepared by the B.C. Marine and Pile Driving Contractors Association and DFO (2003). Compliance monitoring parameters for underwater noise will be addressed as part of the Construction Compliance Monitoring Plan.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table 9.8 Underwater Noise 9.8.2 Assessment of Purpose and Approach 9.8.6 Methods Appendix 9.8-A Construction and Terminal Activity Underwater Noise Modelling Study Technical Report Appendix 9.8-B Regional Commercial Vessel Traffic Underwater Noise Modelling Study Technical Report 13.0 Marine Fish 13.6 Future Conditions with the Project 14.0 Marine Mammals 14.6 Future Conditions with the Project 15.0 Coastal Birds 15.7 Future Conditions with the Project 33.3.7 Underwater Noise Management Plan

APPENDIX IR10-01-C18

BEECHER BAY FIRST NATION: ISSUES, VIEWS, AND CONCERNS RELATED TO THE PROPOSED PROJECT AND MARINE SHIPPING ASSOCIATED WITH THE PROJECT

Table 1: Alternative Means of Carrying out the Project

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
BBFN-1.1	Concerned that the proponent's market projections may be unrealistic, and thus that there may be no need for the Project. Requested that Canada conduct a rigorous assessment of the proponent's market projections. Stated that if Canada concludes that the proponent's market projections are reasonable and that there is indeed a need for the Project, Scia'new First Nation seeks written rationale for that conclusion. Requested that Canada conduct a rigorous assessment of all potentially viable alternatives to this Project, including the PATH Project, and should consult with Scia'new First Nation both during and regarding the outcome of that assessment. Stated that they do not support the Project proceeding. Stated that the submissions in the Canadian Environmental Assessment Agency (CEA Agency) process to date suggest there is no need for the Project.	28-Oct-2016, Letter to Panel (CEAR Document #637)	The Vancouver Fraser Port Authority (VFPA) has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** All levels of government have plans to capitalize on a growing global economy, which requires Canada to be prepared for the trade that will come to Canadian ports. At the Port of Vancouver, we handled a record 3.25 million 20-foot-equivalent unit containers (also called TEUs) in 2017. Historical trade figures and third-party forecasts have long signaled that the ability of West Coast ports to serve this growth is becoming constrained, and by the mid-2020s we won't have the capacity to handle anticipated future growth of trade in containers at the Port of Vancouver The role of the Vancouver Fraser Port Authority is to ensure the port is ready for Canada's trading future. As we plan, we must consider how to provide needed port facilities within a growing metropolitan area. To date, we have partnered with industry, governments and communities to improve road and rail networks, investing to help goods flow smoothly throughout our region. We have also consulted with local governments, Aboriginal groups and residents on the ways we can grow responsibly. Investments in increased size and improved efficiency are being, or have been, made to West Coast container terminals, including recent improvements at the Port of Vancouver's Deltaport, Canada's largest container terminal, and Fairview in Prince Rupert. However, even with these investments, we won't have enough space to accommodate the shortfall in needed capacity. The Roberts Bank Terminal 2 Project represents the best option to accommodate growth and is needed to deliver the capacity we need as demand for goods shipped in containers continue to grow. **Additional information provided by the VFPA in regards to independent container capacity forecasts:** Since 2011, the port authority has commissioned independent forecasts which consider many factors that influence container traffic demand, including: • Gross Domestic Product growth; • World demand for Canadian resources; • Increased consumer demand for trade with Asia; • Opening of the expanded Panama Canal; • Planned container terminal expansion at the Port of Prince Rupert; • Macroeconomic trends in North America; • North American container port demand and competitive developments; • Trends in container shipping; and • Vancouver's competitive position compared to other North American ports. The 2016 Ocean Shipping Consultants forecast shows continued growth in container trade through the west coast of Canada at a compound annual growth rate of about 4%, and reinforces the need for planned increases of capacity to ship goods in containers through the existing container terminals in Vancouver and the Fairview Terminal in Prince Rupert. The 2016 Ocean Shipping Consultants forecast also confirms that the proposed Project will be needed by the mid-2020s. **Addressed in response to IR1-06:** For each marine terminal alternative location considered in EIS Section 5.3, Table IR1-06-1 in Appendix IR1-06-A summarises the criteria used to assess technical feasibility and provides the conclusion of the feasibility assessment along with supporting rationale. To be considered technically feasible, potential alternatives to	**EIS** 4.0 Project Description 5.0 Alternative Means of Carrying out the Project Description 5.7 Identification of the Preferred Means Table 5-10 Summary of Preferred Alternative Means **Information Requests** Response to Sufficiency Information Request #06 (IR1-06 of CEAR Document #897) **Ocean Shipping Consultants 2016 Container Traffic Forecast Report** http://www.robertsbankterminal2.com/wp-content/uploads/2016-Ocean-Shipping-Consultants-Container-Forecast.pdf

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				the location of the marine terminal within B.C. needed to first meet all technical criteria (as stated in EIS Section 5.2), which included the following: • Meeting the long-term container capacity growth by the mid-2020s, through operating efficiencies and a sufficient land base to accommodate growth; • Meeting the requirement for the necessary road and rail connections to efficiently transport containers to and from the market; and • Providing the ability for larger container ships to safely navigate the waterways. Safe navigation includes a minimum berth depth requirement of approximately 18.4 m and the ability to safely turn the vessel around, even in situations of sufficient draught. In addition, consideration was given to terminals with other uses (e.g., serving bulk or break-bulk markets) and if they could retain these capabilities if conversion to container handling was undertaken. The marine terminal location alternatives evaluated (including a combination of these alternatives) were determined not to be technically feasible, and therefore, an evaluation of economic feasibility was not conducted, and an assessment of environmental effects was not required. Based on the analyses of the location alternatives (see Table IR1-06-1), RBT2 was deemed to be the only viable option to meet the anticipated long-term growth and demand of containerised trade on the west coast of Canada, and a full assessment of environmental effects on this preferred alternative was conducted and is described in the EIS. **Further information provided by the VFPA in response to alternative supply chain concepts:** Several options for how containers move through the supply chain beyond the main container terminals, such as inland ports, have been proposed as a way to increase container capacity and/or improve efficiency. Shippers will ultimately decide how best to contract supply chain options for moving cargo, and the VFPA supports any opportunity for greater efficiency. However, these options could only ever be complementary to a new container terminal, rather than replacing it, because capacity is needed to manage ship-to-shore container movements.	

Table 2: Economic Development – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
BBFN-2.1	Asked about the financial structure of the VFPA. Stated that Beecher Bay needs to understand the project economics in order to participate in the conversation.	08-Jul-2015, Meeting	**08-Jul-2015, Meeting:** Stated that the VFPA is unable to provide profit figures to Beecher Bay First Nation today. Committed to sharing the VFPA financial report that provides greater detail. Stated that the container terminal will be operated by another company, from which the VFPA would receive lease payments. **14-Jul-2015, E-mail from the VFPA:** Request for more information on VFPA finances: Please see a copy of the VFPA's 2014 Financial Report http://issuu.com/portmetrovancouver/docs/theVFPA_2014financialreport?e=3721702/13278565.	**Addressed in MSA Appendix 5-B (#5):** The economics of the RBT2 Project are included in Section 2.0 of the RBT2 EIS. Information about the VFPA's financials, updated annually, is provided on the VFPA's website.	**EIS** 2.0 Project Overview **Marine Shipping Addendum (MSA, CEAR Document #316)** Appendix 5-B Aboriginal Issues and Interests
BBFN-2.2	Concerned that the Project may impact its economic interests, including the development potential of Beecher Bay lands and revenues that flow to Beecher Bay from its business arm.	17-Sep-2015, Letter	**17-Sep-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in MSA Section 9.2:** As potential adverse effects due to vessel transit from Project-associated shipping on marine area displacement, access, presence of southern resident killer whales and marine birds, and environmental conditions are considered to be negligible, potential effects on activities and revenue from marine-based tourism are also considered to be negligible. When all lines of evidence are considered, a negligible effect is expected for the marine-based tourism sub-component. **Addressed in MSA Appendix 5-B (#5):** The assessment of potential effects on marine commercial use (MSA Section 9.2) considers potential effects on relevant economic interests of Indigenous groups that have been identified through a review of existing information as well as information provided directly to the VFPA by Indigenous groups engaged in consultation. **Addressed in Response to IR10-27:** The VFPA's response to IR10-27, as requested by the Review Panel, discusses potential effects of the proposed Project on existing business ventures that have been identified by Indigenous groups.	**EIS** 2.0 Project Overview **MSA** Appendix 5-B Aboriginal Issues and Interests 9.2 Marine Commercial Use **Information Requests** Response to Sufficiency Information Request #27 (IR10-27)

Table 3: Effects Assessment Methods (including Cumulative Effects)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
BBFN-3.1	Concerned about the cumulative effect of marine shipping in general, and the various projects proposed that would utilise the international shipping lanes.	17-Sep-2015, Letter	**29-Oct-2015, Letter from the VFPA:** *"Beecher Bay expressed concerns that cumulative environmental effects associated with the Project are not considered in the MSA. The EIS Guidelines issued by the CEA Agency require that a cumulative effects assessment be conducted where it is determined that marine shipping associated with RBT2 will result in a residual effect. The MSA will be completed according to the specifications in the updated EIS Guidelines."*	**Addressed in MSA Section 6.0:** Each intermediate component and valued component assessment section considers cumulative changes and cumulative effects to which the Project contributes. This entails consideration of residual effects of routine marine shipping associated with the Project, if any such effects are predicted, in combination with effects of other projects and activities that have been or will be carried out. **Addressed in EIS Section 9.5:** The assessment of current use of lands and resources for traditional purposes (Current Use, Section 9.5) describes how Current Use activities have been affected by other projects and activities that have been carried out. As residual effects to Current Use as a result of marine shipping associated with the Project are not predicted, an assessment of future cumulative effects was not carried out. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans Protection Plan which includes information on the *Cumulative Effects of Marine Shipping initiative*.	**MSA** 6.0 Effects Assessment Approach 6.7 Cumulative Effects Assessment 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**
BBFN-3.2	Stated that they share concerns raised by other parties that the proponent's cumulative impacts assessment fails to include several projects that should have been assessed. Stated that the Panel should require the proponent to expand the projects included in its cumulative effects assessment to include projects that are reasonably foreseeable, and are either not mentioned in or are mentioned in the proponent's EIS but excluded from the cumulative effects assessment, including the following projects: • the Wespac Tilbury Marine Jetty Project (a proposed LNG marine jetty), • the Woodfibre LNG Project, and • the BURNCO Aggregate Project.	28-Oct-2016, Letter to Panel (CEAR Document #637)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in Response to IR4-09:** In the VFPA's response to IR4-09, updated project status and vessel movement information is provided as available for the projects listed in the EIS and MSA (north of Segment B), plus other new projects considered to be certain or reasonably foreseeable (as of July 1, 2017). As part of this update, Woodfibre LNG Project and Wespac Tilbury Marine Jetty Project vessel projections are updated. However, because the Burnco Aggregate project's activities fall outside the marine shipping area, it is not updated as part of the response.	**Information Requests** Response to Sufficiency Information Request #09 (IR4-09 of CEAR Document #1051)
BBFN-3.3	Concerned with cumulative impacts of development on the Salish Sea, including the proposed Project, and the long-term health of the Salish Sea as a result of that development. Recommended establishing a Salish Sea Environmental Foundation to better understand the cumulative impacts of development on the	28-Oct-2016, Letter to Panel (CEAR Document #637)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** The VFPA acknowledges concerns about cumulative effects of development on the Salish Sea. Although the regulated care and control of vessels calling at the Port of Vancouver is limited to its marine jurisdiction, the VFPA is leading and encouraging several regional environmental initiatives that enhance the cumulative	**From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR**

Beecher Bay (Scia'new) First Nation

	Salish Sea and take steps to monitor its health and recommend policy changes aimed at ensuring its long-term health.			environmental performance of the shipping industry and port operations in and around the Salish Sea. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans Protection Plan which includes information on the cumulative effects of marine shipping.	**Documents #954 and #1133)**

Table 4: Environmental Assessment and Permitting Process

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
BBFN-4.1	Stated concern with the exclusion of the marine shipping work from the Project as a whole. Expressed concern that it is the VFPA's only mandate to hear Indigenous concerns "and that's it". Stated concern with the exclusion of marine shipping from the Project and that it is not consistent with *Canadian Environmental Assessment Act* (*CEAA), 2012*. Requested that the Minister amend the 'designated project' to include marine shipping.	08-Jul-2015, Meeting 17-Sep-2015, Letter 28-Oct-2016, Letter to Panel (CEAR Document #637)	**08-Jul-2015, Meeting:** Stated that the letter from the CEA Agency to Beecher Bay articulates the process, and the VFPA will connect Beecher Bay with the CEA Agency to further explain and answer questions. **14-Jul-2015, Email from the VFPA:** Provided the contact information for the CEA Agency and Transport Canada, and passed on the concerns and Beecher Bay's contact information to both agencies.	**Addressed in MSA Appendix 5-B (#17):** The VFPA advised the CEA Agency of this concern through MSA Appendix 5-B (#17). **Addressed in *Updated EIS Guidelines*:** On April 17, 2015, the CEA Agency issued *Updated Guidelines for the Preparation of an Environmental Impact Statement* (*Updated EIS Guidelines*) that included the addition of environmental effects of marine shipping associated with the Project, beyond the scope of the Project (the VFPA jurisdiction) to the 12 nautical mile limit of Canada's territorial sea. In October 2015, the VFPA submitted to the CEA Agency the MSA. **Additional information provided by the VFPA:** The VFPA understands that marine shipping associated with the Project outside of the VFPA's jurisdiction is not formally considered to be part of the Project for the purposes of the Minister's decision whether the Project is likely to cause significant adverse environmental effects. However, the MSA provides information to the federal government regarding the potential effects of marine shipping associated with the Project, which can be used to inform programs or activities within federal jurisdiction.	**MSA** 1.0 Introduction Appendix 5-B Aboriginal Issues and Interests ***Updated Guidelines for the Preparation of an Environmental Impact Statement* (CEAR Document #177)**
BBFN-4.2	Concerned with allegations made by the Corporation of Delta and Roger Emsley, the Executive Director of the Against Port Expansion Community Group that federal and provincial agencies are engaging in private meetings with the proponent while the environmental assessment is underway. Stated that they seek an explanation from British Columbia and Canada regarding these allegations, and a commitment to make public any discussions with the proponent outside the CEA Agency process.	28-Oct-2016, Letter to Panel (CEAR Document #637)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in CEAR Document #489:** The VFPA requested guidance from the Review Panel Manager with respect to continuing vital inter-departmental engagement and coordination with other federal and provincial agencies and departments concerning RBT2. The VFPA asked for confirmation from the Panel regarding the appropriateness of the proposed approach to ongoing engagement and requested the Panel to (a) advise the VFPA regarding its potential needs or preferences for documentation of such engagement and (b) advise other federal and provincial agencies and departments that they may continue to engage with the VFPA on these matters while the panel process is underway. **Addressed in CEAR Document #498:** The Review Panel indicated that interaction between participants—especially between the VFPA and bodies that may have legislative authority regarding the Project—can take place during the sufficiency review period of the environmental assessment. The Review Panel Manager stated that transparency must be maintained and emphasised that the Panel and the participants in the environmental assessment must be informed of the substance of any interactions that are relevant to the environmental assessment as the process proceeds.	**CEAR Document #489 From the Vancouver Fraser Port Authority to the Review Panel re: Inter-departmental engagement and coordination** **CEAR Document #498 From the Review Panel to the Vancouver Fraser Port Authority re: Inter-departmental engagement and coordination**

Table 5: Environmental Management Program

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
BBFN-5.1	Requested to talk about environmental protection, and the establishment of a base in their territory.	25-Oct-2017, Meeting	**25-Oct-2017, Meeting:** Committed to coming back with Project experts to discuss Beecher Bay concerns. **18-Jan-2018, Letter from the VFPA:** Provided an explanation of the VFPA's mandate and mitigation measures related to marine shipping associated with the Project. Explained that regarding potential impacts of marine shipping associated with the Project, which is beyond the VFPA's jurisdiction, the VFPA's approach has been to work with government departments and agencies that do have jurisdiction over marine shipping to determine feasible measures to reduce or avoid the impacts that marine shipping may have on Aboriginal and treaty rights.	**Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans Protection Plan which includes information on spill response and environmental protection.	**From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**
BBFN-5.2	Stated that certain additional measures should be implemented to better mitigate potential impacts on the environment and Scia'new First Nation.	28-Oct-2016, Letter to Panel (CEAR Document #637)	The VFPA has reviewed this letter and provides the following correspondence and additional information. **18-Sep-2017, Letter from the VFPA:** *"VFPA would like to further our understanding of the concerns raised by Beecher Bay First Nation on Marine Shipping and work together to identify mitigations to potential impacts, where possible. We are interested in meeting with Beecher Bay First Nation this fall…* *The goal for this meeting is twofold:* *1. To develop a more fulsome understanding of the specific concerns raised by Beecher Bay First Nation related to Marine Shipping.* *2. To identify, where possible, solutions to the concerns raised. The VFPA is specifically interested in discussing what measures could be taken to address Beecher Bay First Nation's concerns."* **25-Oct-2017, Meeting:** The VFPA and Beecher Bay First Nation met to discuss the Project and associated marine shipping. Beecher Bay expressed concerns around the potential accidents and malfunctions. The VFPA committed to share a list of mitigation measures regarding spill response. **18-Jan-2018, Letter from the VFPA:** Under the environmental assessment process with which the VFPA must comply (*CEAA, 2012*), mitigation that is technically and economically feasible and that would mitigate any significant adverse environmental effects of the Project must be considered by the proponent. As the proponent of the Project, the VFPA's EIS sets out specific actions, works, minimal disturbance footprint techniques, corrective measures, and construction and operation plans to eliminate or reduce the significance of adverse environmental effects. EIS Section 35.0, specifically EIS Table 35-2 (Proposed Mitigation	**Addressed in EIS Section 35.0 and MSA Section 12.0:** EIS Section 35.0 (EIS Table 35-2) presents mitigation measures and commitments proposed as part of RBT2. MSA Section 12.0 summarises potential environmental effects of marine shipping associated with the Project, suggested mitigation to be considered, residual effects, and cumulative effects in relation to the categories of environmental effects. **Addressed in Response to IR-15.07.31-12:** Response to IR-15.07.31-12 further discusses proposed mitigation related to the EIS; specifically, Appendix IR12-A presents a summary of proposed mitigation and anticipated effectiveness and Appendix IR12-B presents summary of other mitigation considered and rationale for rejection. **Additional information provided by the VFPA:** Beyond the mitigation measures suggested in the EIS and MSA, the VFPA encourages Indigenous groups participating in the RBT2 environmental assessment to suggest specific mitigation measures for consideration.	**EIS** 35.0 Effects Assessment Summaries **MSA** 12.0 Summary of Changes to the Environment and Effects of Change to the Environment: Marine Shipping Associated with RBT2 **Information Requests** Response to Information Request #12 (IR-15.07.31-12 of CEAR Document #314)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			Measures and Commitments), sets out the mitigation measures that the VFPA will undertake. MSA Section 9.5.5 sets out possible effects of marine shipping associated with the Project outside of the VFPA's jurisdiction on Indigenous groups' Current Use. MSA Section 9.5.11 reviews the results of the Current Use analysis and places it in the context of the VFPA's understanding of asserted or established Aboriginal and treaty rights potentially impacted by marine shipping associated with the Project. The MSA assessment concludes that, taking into account proposed mitigation, marine shipping associated with the Project is not likely to impact Beecher Bay First Nation's asserted or established Aboriginal or treaty rights. **01-Feb-2018, Email from the VFPA:** Suggested mitigation measures regarding marine shipping associated with the Project are outlined in the MSA. Each assessment section, where applicable, describes suggested measures intended to mitigate potential adverse effects. A link to the MSA on the CEA Agency's registry was provided. Mitigation measures for potential accidents or malfunctions can be found in MSA Section 10.4. The email enclosed MSA Section 10.0 for convenience. Asked if Beecher Bay First Nation would like to meet to discuss further their concerns.		
BBFN-5.3	Stated that, if approved, the mitigation measures proposed by the proponent must be implemented, as well as the recommendation by the Washington State Department of Ecology and van Drop and Merrick that the speed for container ships be reduced to enhance situational awareness. In the event the Project proceeds and these measures prove to be inadequate, Scia'new First Nation reserves the right to demand that additional measures be implemented, for example altering the location of the marine shipping lanes for the Project.	28-Oct-2016, Letter to Panel (CEAR Document #637)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Appendix 5-B (#10):** Where relevant, the VFPA has proposed mitigation, which serves to address measurable potential effects of marine shipping associated with the Project, to be considered by those regulators with jurisdiction in the area. **Addressed in EIS Section 35.0 and MSA Section 12.0:** EIS Section 35.0 (EIS Table 35-2) presents mitigation measures and commitments proposed as part of RBT2. MSA Section 12.0 summarises potential environmental effects of marine shipping associated with the Project, suggested mitigation to be considered, residual effects, and cumulative effects in relation to the categories of environmental effects. **Additional information provided by the VFPA:** Should the Project be approved, the VFPA will be legally bound to the conditions (including any mitigation measures) set out in the federal Environment Minister's Decision Statement. Although the regulated care and control of vessels calling at the Port of Vancouver is limited to its marine jurisdiction, the VFPA is supportive of initiatives by other agencies and authorities in reducing marine shipping-related risks outside its jurisdiction.	**EIS** 35.0 Effects Assessment Summaries **MSA** 12.0 Summary of Changes to the Environment and Effects of Change to the Environment: Marine Shipping Associated with RBT2 Appendix 5-B Aboriginal Issues and Interests

Table 6: Marine Fish – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
BBFN-6.1	Expressed a general concern that the Project would impact fish in the Fraser River that would migrate to their fishing area. Concerned with Project effects on fish in the Fraser River that migrate into Beecher Bay First Nation's fishing area.	17-Sep-2015, Letter	**29-Oct-2015, Letter from the VFPA:** The MSA will include an assessment of potential impacts associated with marine shipping associated with the Project and proposed mitigation. Issues and concerns expressed during meetings or in the letter have been recorded and considered, and the VFPA will provide responses to each concern in the MSA.	**Addressed in EIS Section 13.0:** Potential Project-related effects on marine fish, including all five species of Pacific salmon, are considered in the EIS. The assessment concludes there are no significant adverse effects from the Project, as marine fish productivity or long-term integrity would not be compromised. The Project is not expected to result in measurable incremental adverse cumulative effects to marine fish. In addition, the potential effects of the Project with respect to the ongoing productivity of commercial, recreational, and Aboriginal (CRA) fisheries are evaluated in the EIS. All Project construction and operation activities are expected to interact at an undetectable level with the ongoing productivity of CRA fisheries. Project-related effects, therefore, are not anticipated to compromise the ongoing productivity of CRA fisheries and are expected to be negligible. Therefore, the Project is not expected to contribute to cumulative effects on these fisheries. **Addressed in MSA Sections 8.1 and 9.2:** The assessment of potential effects of marine shipping associated with the Project on salmon, including potential effects to spawning and migration, is included in MSA Section 8.1. Potential effects of vessel wake-generated waves on marine fish and fish habitat were characterised as negligible, because only 2% of coastline in the local assessment area is within the wake-related zone of influence, and because wake-generated wave heights at shorelines are predicted to be well within the range of natural wave conditions. Similarly, potential effects of underwater noise were also considered to be negligible because noise associated with Project-associated marine vessel activity and future cumulative shipping activities would not exceed injury thresholds for fish species or the Pacific salmon species behavioural threshold. MSA Section 9.2 further evaluates the potential effects of Project-associated marine shipping on commercial fish and seafood harvesting (including Indigenous marine fish and seafood harvesting), guided sport fishing, marine-based tourism, and marine transportation. Potential effects on all types of marine commercial use assessed were determined to be negligible. These negligible effects include changes in each of: area use and access; biophysical conditions for marine fish, invertebrates, and mammals; availability of fish and seafood; marine mammal presence; and environmental setting due to marine shipping associated with the Project. **Addressed in MSA Appendix 5-B (#39):** The assessment of potential effects of marine shipping associated with the Project on salmon, including potential effects to spawning and migration, is included in MSA Section 8.1. EIS Section 13.0 includes an assessment of effects from the Project on Fraser River salmon.	**EIS** 13.0 Marine Fish 16.0 Ongoing Productivity of Commercial, Recreational, and Aboriginal Fisheries **MSA** Appendix 5-B Aboriginal Issues and Interests 8.1 Marine Fish and Fish Habitat 9.2 Marine Commercial Use

Table 7: Potential Accidents or Malfunctions

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
BBFN-7.1	Raised a concern about the MSA's assessment of a potential spill involving a Project container ship being limited to: 1. One location (Boundary Passage), 2. One season (spring), and 3. One type of accident or malfunction (a hard grounding). Concerned that these limitations do not adequately assess the potential impacts of accidents and malfunctions on the environment and Scia'new First Nation. Stated that the Panel should require the VFPA to revise the MSA to include the following: • A hypothetical spill at least one additional location along the marine shipping lane, 10 within or near Scia'new First Nation's traditional territory; • For each hypothetical spill, an assessment of the potential impacts of that spill in at least two seasons (for example spring and summer); • For each hypothetical spill and season, an assessment of the possibility of heavy fuel reaching Beecher Bay; • A discussion on how the spill response for and potential impacts from an allision, a collision, a soft grounding, or an explosion may differ from a spill resulting from a hard grounding, and how the spill response for and potential impacts may differ if the vessel sinks as a result of the allision, collision, grounding, or explosion, as applicable; and • An assessment of potential impacts in the event one or more containers carrying hazardous materials fall off a Project container ship at least two locations along the marine shipping route, and that Scia'new First Nation should be consulted by the proponent and Canada regarding those revisions.	28-Oct-2016, Letter to Panel (CEAR Document #637)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Appendix 5-B (#78):** The assessment is based on a plausible worst-case spill scenario that occurs in Boundary Passage at the south end of South Pender Island. The plausible worst-case spill scenario was selected based on probability of occurrence, likely locations, and potential effects. The effects from a spill on Current Use would not be identical if the spill occurred in a different location; however, the risk reduction and spill response measures would be similar to those applicable to the plausible worst-case scenario assessed, and the likelihood of residual effects from a spill is lower in other areas than the location of the plausible worst-case scenario. **Addressed in MSA Appendix 5-B (#92):** The assessment of potential accidents and malfunctions (MSA Section 10.0) considers a plausible worst-case spill scenario, located in Segment B of the marine shipping area, in Boundary Passage at the south end of South Pender Island. This location is near Turn Point. Boundary Passage is considered a higher risk area due to the relatively narrow passage, potential navigational hazards, and prevailing wind directions. The assessment also includes a description of applicable mitigation.	**MSA** Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents and Malfunctions 10.3.3 Identification of Plausible Worst-case Accident or Malfunction Scenarios ***Updated EIS Guidelines***
BBFN-7.2	Concerned that the routine operation of Project container ships may impact the exercise of their Aboriginal and Treaty Harvesting Rights, for example by • Restricting the times and locations in which those rights can be exercised; • Disrupting travelways utilised by Scia'new First Nation members to exercise those rights; and • Increasing the likelihood of a collision between a container ship and a vessel owned or operated by Scia'new First Nation or a Scia'new First Nation member.	28-Oct-2016, Letter to Panel (CEAR Document #637)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Appendix 5-B (#4):** The MSA addresses potential effects from routine (day-to-day) marine shipping associated with the Project outside of VFPA jurisdiction, as well as potential accidents or malfunctions on components of the physical, biophysical, and social environment. Potential effects on Indigenous groups are described in the assessments of human health (MSA Section 9.1), marine commercial use (MSA Section 9.2), outdoor recreation (MSA Section 9.3), archaeological and heritage resources (MSA Section 9.4), and Current Use and Aboriginal and treaty rights (MSA Section 9.5). Where relevant, the VFPA has proposed mitigation to be considered by those regulators with jurisdiction in the area. **Addressed in MSA Section 9.5:** As noted in MSA Section 9.5, taking a precautionary approach, the assessment of potential impacts to Indigenous groups' ability to exercise asserted or established Aboriginal and treaty rights as a result of Project-associated shipping was based on the assumption that traditional use presently occurring in the MSA (i.e.,	**MSA** Appendix 5-B Aboriginal Issues and Interests 9.1 Human Health 9.2 Marine Commercial Use 9.3 Outdoor Recreation 9.4 Archaeological and Heritage Resources 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights **Information Requests** Transport Canada Information Request #08 (TC IR-08 of CEAR Document #1147) **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				Current Use) is an expression of the exercise of Aboriginal or treaty rights. Where traditional use was not identified as occurring at present within the MSA, but similar use was identified as practiced in the past in the MSA, asserted as an Aboriginal right, or protected under treaty, this use was assumed to be potentially exercisable as an Aboriginal or treaty right, and subject to potential impacts as a result of Project-associated shipping in much the same way as potential effects on Current Use. Considering the conclusions of the Current Use assessment presented in MSA Section 9.5, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the marine shipping area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups to identify measures that would reduce the impact of the international shipping lanes to fishing by Indigenous groups. These mitigation measures for addressing potential incremental effects on Current Use are expected to also be effective at addressing the potential incremental impact to the exercise of Aboriginal and treaty rights. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans Protection Plan which includes information on the *Enhanced Maritime Situational Awareness and Proactive Vessel Management* initiative.	
BBFN-7.3	Stated that potential impacts an accident or malfunction may have on Scia'new First Nation include the following: • May restrict the times and locations in which Scia'new First Nation can exercise their Aboriginal and Treaty Harvesting Rights due to regulated or voluntary spill-related closures; • May reduce the quantity and quality of Marine Resources Scia'new First Nation have a right to harvest under their Aboriginal and Treaty Harvesting Rights, and economic benefits to Scia'new First Nation from those resources; • May damage the habitat and food sources that Marine Resources require to survive and reproduce; • May damage vessels or gear utilised to exercise Scia'new First Nation's Aboriginal and Treaty Harvesting Rights;	28-Oct-2016, Letter to Panel (CEAR Document #637)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 10.0:** MSA Section 10.5.13 assesses the potential effects on Current Use and potential impacts on the ability to exercise asserted or established Aboriginal and treaty rights resulting from accidents or malfunctions arising from marine shipping associated with the Project. The assessment for the plausible worst-case spill scenario concluded that, with the exception of human health, measurable residual adverse effects are predicted for all valued components. In all cases, the identified residual adverse effects of a spill are unlikely to occur, because of the very low probability of an accident or malfunction that could result in a spill. With the exceptions of residual effects on marine mammals (southern resident killer whale), marine commercial use (guided sport fishing and	**MSA** 10.0 Potential Accidents or Malfunctions 10.3.3 Identification of Plausible Worst-case Accident or Malfunction Scenarios 10.5.13 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	• May restrict the times and locations in which Scia'new First Nation members can engage in traditional ceremonies due to contamination of waters, shorelines, or marine resources used in those ceremonies; • May damage burial sites, archaeological remains, and other areas of cultural or spiritual significance to Scia'new First Nation; • May result in negative human health impacts to Scia'new First Nation members; • May result in a loss in property value, loss in revenues from, or loss of an opportunity to develop reserve or other lands Scia'new First Nation currently has or acquires an interest in; and • May result in a loss of revenues from businesses Scia'new First Nation currently has or acquires an interest in.			marine-based tourism sub-components), outdoor recreation, archaeological and heritage resources, and Current Use, adverse residual effects were considered not significant. A serious residual adverse impact on the ability of Indigenous groups to exercise Aboriginal and treaty rights in areas overlapping or near the hypothetical spill area would be expected in the event of such a spill. The plausible worst-case collision scenario has the potential to result in measurable residual adverse effects on human health, marine commercial use, outdoor recreation, Current Use, and asserted or established Aboriginal and treaty rights. In all cases, the identified residual adverse effects of a collision are unlikely to occur, because of the very low probability of collision. The assessment concluded that residual adverse effects are expected to be not significant for marine commercial use and outdoor recreation, but significant for human health. For Current Use, the residual effect could range from not significant to significant, depending on the capacity of the affected Indigenous group to continue to undertake Current Use. In the event of a collision between a vessel engaged in traditional use activities and a container ship, a minor to serious adverse residual impact on the ability of the affected Indigenous group to exercise Aboriginal and treaty rights associated with those activities would be expected. The identified residual adverse effects of a collision are unlikely to occur, because of the very low probability of collision.	
BBFN-7.4	Stated that regardless of whether or not the Project is approved, Canada should implement the following measures: • A requirement that one or more emergency response towing vessels be stationed at strategic locations along the marine shipping route; • A requirement that a resident salvor and personnel as well as salvage equipment be stationed at strategic locations along the marine shipping route; and • A requirement that, at least by 2030 and sooner if possible, only container ships with double hulled fuel tanks be allowed in Canadian waters.	28-Oct-2016, Letter to Panel (CEAR Document #637)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** Although the regulated care and control of vessels calling at the Port of Vancouver is limited to its marine jurisdiction, the VFPA is supportive of initiatives by other agencies and authorities in reducing marine shipping-related risks outside of its jurisdiction.	
BBFN-7.5	In reference to MARPOL, asked whether it is possible to implement it in Canada sooner than 2030, for example if container ship owners divert container ships that do not have double hulled fuel tanks to other countries that do not yet require all container ships to be double hulled.	28-Oct-2016, Letter to Panel	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** The VFPA does not have the ability to direct container ship owners to divert ships in the suggested fashion. As is described in EIS Appendix 30-A, Section 2.2.2, it is noted that virtually all container ships calling at a fully-operational RBT2 (in 2030) would be in compliance with the IMO 2010 MARPOL convention concerning double hulled container ships.	**EIS** Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment
BBFN-7.6	Requested that a spill response base should be established in Beecher Bay and Scia'new First Nation should continue to be consulted regarding the establishment of that base.	28-Oct-2016, Letter to Panel (CEAR Document #637)	The VFPA has reviewed this letter and provides the	**Additional information provided by the VFPA:** The VFPA supports Canada's leadership in advancing spill preparedness and response in the Salish Sea, including its recently announced ongoing research initiatives as a part	**From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	Stated that there may be benefit in training one or more Scia'new First Nation members in spill response measures, including shoreline clean-up and wildlife response, so that those members may assist in responding to a spill within Scia'new First Nation's traditional territory. Stated that Canada should assess any deficiencies in the responses to the Esquimalt Harbour and English Bay spills and either implement or recommend improvements to address those deficiencies, and that Canada and/or Western Canada Marine Response Corporation (WCMRC) should consult with Scia'new First Nation regarding the possibility of training one or more Scia'new First Nation members in spill response measures. Stated that Canada and British Columbia should also consider and, where appropriate, implement the various spill response planning recommendations in the 2001 Report sponsored by the Pacific States / British Columbia Oil Spill Task Force. Concerned that they may have difficulty securing compensation for damages to its culture and Aboriginal and Treaty Harvesting Rights in the event of a spill involving a Project container ship. As such, Scia'new First Nation seeks further information from Canada on how damages to their culture and Aboriginal and Treaty Harvesting Rights would be compensated under the spill compensation regime and, if the compensation process for these matters is inadequate, a commitment from Canada to address that inadequacy.		following additional information.	of the federal OPP. Other organisations such as Clear Seas are also contributing to research considering risks, mitigation measures, and best practices for marine shipping on Canada's west coast. The *Canada Shipping Act, 2001* is Transport Canada's regulatory framework surrounding marine pollution and its enforcement. In the case of a report of pollution in the water, including oil or fuel spills, Canada operates under the National Spill Response Protocol, which specifies that the Canadian Coast Guard is responsible for ensuring the clean-up of ship sourced spills of oil and other pollutants. While the VFPA is not the lead agency when it comes to spill response, it provides assistance often in the form of working with first responders and other agencies, providing information on a situation through the 24/7 operations centre, security cameras, patrol boats, and drone. As per a 2009 letter of understanding, the VFPA can be called upon by the Canadian Coast Guard to conduct an initial inspection in response to a pollution report in our federal jurisdiction. On the west coast, the Canadian Coast Guard contracts spill clean-up to WCMRC. This is also the agency that ships or terminal operators are required to call if they discover they have been the source of a spill. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans Protection Plan which includes information on spill response and environmental protection.	
BBFN-7.7	Stated that they seek further information from the proponent and/or Canada regarding the compensation regime in the event a contaminant other than oil is released from a Project container ship, for example if a container carrying hazardous materials falls overboard.	28-Oct-2016, Letter to Panel (CEAR Document #637)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 10.3.2.1:** Loss Overboard of Containers from Ships In-transit in Semi-protected Waters discusses the likelihood of containers carrying hazardous materials falling overboard. The 2010 Hazardous and Noxious Substances (HNS) Convention sets out a shared liability regime to compensate claimants for damages arising from the international or domestic carriage of HNS by seagoing vessels. The HNS Convention follows the two-tier model of compensation of the international oil pollution liability and compensation regime (Civil Liability Convention (CLC) and the International Oil Pollution Compensation (IOPC) Fund), which Canada adopted in 1989. The Convention differs from the oil pollution regime mainly in that it covers many more substances and combines the shipowner liability regime and the HNS Fund into one instrument. Further information is available on Transport Canada's website.	**MSA** 10.3.2.1 Loss Overboard of Containers from Ships In-transit in Semi-protected Waters **Transport Canada** Overview of the 2010 Hazardous and Noxious Substances Convention: https://www.tc.gc.ca/eng/policy/acf-acfi-hns-overview-2609.htm
BBFN-7.8	Stated that Canada should conduct a review of existing research regarding the fate and behavior of heavy fuel and, if	28-Oct-2016, Letter to Panel	The VFPA has reviewed this letter and provides the	**Additional information provided by the VFPA:**	

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	necessary, either conduct or require the proponent to conduct additional research to fill any gaps in existing research.	(CEAR Document #637)	following additional information.	The role of the VFPA is to ensure goods are moved safely, efficiently and sustainably. As such, it is not the lead agency when it comes to spill response. The VFPA supports Canada's leadership in advancing spill preparedness and response in the Salish Sea, including its recently announced ongoing research initiatives as a part of the federal Oceans Protection Plan. Other organisations such as Clear Seas are also contributing to research considering risks, mitigation measures, and best practices for marine shipping on Canada's west coast.	

Table 8: Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Lands and Resources for Traditional Purposes

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
BBFN-8.1	Expressed concern that the VFPA collected Current Use information without Beecher Bay's input. Stated that the draft Current Use Summary does not reflect their concerns regarding potential impacts from the Project related to day-to-day operations and accidents and malfunctions, their economic interest, or their concerns around cumulative effects. Stated that there were some mischaracterisations in the summary of their community profile and provided some changes. Stated that the Trailmark Traditional Marine Use Study (TMUS) was developed for Trans Mountain Expansion Project and should not be relied upon. Stated that their Statement of Intent (SOI) is not their complete marine use area. Requested further funding to conduct a TMUS specific to this study. Requested a traditional use study specific to RBT2 like the Trailmark Study was for the Trans Mountain Expansion Project.	08-Jul-2015, Meeting 17-Sep-2015, Letter	**26-May-2015, Letter from the VFPA:** The CEA Agency has requested that the VFPA consider effects from marine shipping associated with the Project on the Current Use by Beecher Bay First Nation, including fishing, cultural practices, and sites of importance. It is expected that information required for the assessment can be gathered from existing materials, and the VFPA is compiling information from the Trans Mountain Expansion Project Application to the National Energy Board specific to Beecher Bay First Nation. Requested Beecher Bay provide any additional Current Use and fisheries information that Beecher Bay would like the VFPA to consider in the assessment. The VFPA plans to provide a draft summary of Beecher Bay First Nation's Current Use in the marine shipping area, based on existing information, to Beecher Bay First Nation for review and comment in one to two months. The VFPA offered participation funding for engagement regarding marine shipping associated with the Project. **08-Jul-2015, Meeting:** Stated that the VFPA is committed to changing anything in the Current Use study that Beecher Bay First Nation believes is inaccurate. Stated that this is consistent with its directions from the CEA Agency and the *Updated EIS Guidelines*. **16-Jul-2015, Letter from the VFPA:** *"[The VFPA] is providing Beecher Bay (Scia'new) First Nation with an advance draft of [the VFPA]'s understanding, based on the sources reviewed, of existing conditions pertaining to your Nation's current use of lands and resources for traditional purposes, and exercise of asserted or established Aboriginal rights within the Marine Shipping Area (see accompanying map), for review and comment.* *In sharing this advanced draft with you at this time, it is [the VFPA]'s intention to confirm with Beecher Bay (Scia'new) First Nation that the information is accurately presented and whether any revisions, additions or deletions are required. We kindly request your comments on the enclosed section by August 17, 2015."* **August to September 2015:** The VFPA and legal counsel from Beecher Bay corresponded about the provision of comments on the Current Use Summary. **17-Sep-2015, Letter from Beecher Bay First Nation:** Beecher Bay First Nation provided comments on the draft Current Use Summary.	**Addressed in MSA Appendix 5-B (#12):** The VFPA has engaged with Indigenous groups with the objective of obtaining the views of Indigenous groups on potential effects of changes to the environment on Indigenous peoples, and potential adverse impacts of the Project on potential or established Aboriginal or treaty rights. The VFPA has also provided the opportunity to review the summary of Current Use existing conditions information specific to each Indigenous group prior to completing the assessment. Feedback received on these summaries has been considered and incorporated, as has additional information provided by Indigenous groups. The CEA Agency will provide Indigenous groups an opportunity to review the environmental studies following the submission of the MSA. **Addressed in MSA Appendix 5-B (#67):** The VFPA has engaged with each of the Indigenous groups listed in the *Updated EIS Guidelines* and provide drafts of Current Use existing conditions sections, and to request any additional Current Use information that the Indigenous group may wish to provide. The revised Current Use summary, following incorporation of any additional input from Indigenous groups is provided in the assessment of current use of lands and resources for traditional purposes (MSA Section 9.5). The VFPA has acknowledged the challenges of participating in consultation during summer months, and has extended timelines to accommodate the provision of additional information from Indigenous groups. The VFPA has provided funding to Indigenous groups participating in consultation, and considers the amount of funding offered to be adequate and proportionate to the level of effort required by each Indigenous group to participate, given the scope of work. The VFPA increased the funding provided in some circumstances in response to specific requests. **Additional information provided by the VFPA:** The VFPA understands that Beecher Bay has reiterated its request that a TMUS be conducted related to marine shipping associated with the Project. It is the VFPA's view that the MSA is complete. The VFPA submitted the MSA to the CEA Agency on October 26, 2015, which included a summary of Beecher Bay First Nation's Current Use. Efforts were made to compile information regarding Current Use from existing publicly available materials where possible. Feedback from Indigenous groups was sought throughout the spring/summer of 2015. The VFPA offered participation funding to Beecher Bay First Nation to review the draft Current Use Report	**MSA** Appendix 5-B Aboriginal Issues and Interests 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights ***Updated EIS Guidelines***

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			29-Oct-2015, Letter from the VFPA: *"In your letter, you also express concern with the sources of information used by [the VFPA] to compile the draft summary, and the amount of time and budget provided to Beecher Bay to conduct a detailed review of the summary. Where specific requests were made to [the VFPA] for additional funding, these requests have been considered and responses were provided. Based on the guidance provided in the Updated EIS Guidelines, the [MSA] is to rely on information from publicly available sources where possible.* *Comments on the contents of the draft summary of Beecher Bay's Current Use of Lands and Resources for Traditional Purposes will be considered and incorporated into the [MSA]."* **25-Apr-2016, Letter from VFPA:** The VFPA provided Beecher Bay First Nation with a table including all Beecher Bay First Nation's comments on the draft sections, responses to each comment from the VFPA, and a description of subsequent changes made to the sections. **25-Oct-2017, Meeting:** Stated that they could share the Current Use Report with Beecher Bay again. Committed to take back Beecher Bay's request. **18-Jan-2018, Letter from the VFPA:** Thanked Beecher Bay for meeting with the VFPA on 25-Oct-2017. Provided an explanation of the VFPA's mandate and mitigation measures relating to marine shipping associated with the Project as well as provide clarification regarding economic benefits. Stated that it is the VFPA's view that the Project is not likely to impact Beecher Bay First Nation's asserted or established Aboriginal or treaty rights.	produced by the VFPA and to provide feedback. The input provided by Beecher Bay in its September 17, 2015 letter was incorporated into the draft Summary.	
BBFN-8.2	Concerned about the impacts that increased volume would have on its rights and interest: damage to Beecher Bay lands and sacred sites from vessel wake and increasing the risk of an accident or malfunction.	17-Sep-2015, Letter	**29-Oct-2015, Letter from the VFPA:** *"The [MSA] will include an assessment of potential impacts associated with marine shipping and proposed mitigation. Issues and concerns expressed during meetings or in your letter have been recorded and considered, and the VFPA will provide responses to each concern in the [MSA]."*	**Addressed in MSA Section 9.4:** As noted in MSA Section 9.4, all potential incremental effects on archaeological and heritage resources related to Project-associated vessel transit activities, including shoreline erosion from vessel wake, were determined to be negligible, as wake waves predicted from Project-associated marine vessel traffic are predicted to be within the range of natural conditions. **Addressed in MSA Section 10.5.13:** MSA section 10.5.13 assesses the potential effects on Current Use and potential impacts on the ability to exercise asserted or established Aboriginal and treaty rights resulting from accidents or malfunctions arising from marine shipping associated with the Project. The assessment for the plausible worst-case spill scenario concluded that, with the exception of human health, measurable residual adverse effects are predicted	**MSA** 9.4 Archaeological and Heritage Resources 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 10.5.13 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				for all valued components. In all cases, the identified residual adverse effects of a spill are unlikely to occur, because of the very low probability of an accident or malfunction that could result in a spill. With the exceptions of residual effects on marine mammals (southern resident killer whale), marine commercial use (guided sport fishing and marine-based tourism sub-components), outdoor recreation, archaeological and heritage resources, and Current Use, adverse residual effects were considered not significant. A serious residual adverse impact on the ability of Indigenous groups to exercise Aboriginal and treaty rights in areas overlapping or near the hypothetical spill area would be expected in the event of such a spill. The plausible worst-case collision scenario has the potential to result in measurable residual adverse effects on human health, marine commercial use, outdoor recreation, Current Use, and asserted or established Aboriginal and treaty rights. In all cases, the identified residual adverse effects of a collision are unlikely to occur, because of the very low probability of collision. The assessment concluded that residual adverse effects are expected to be not significant for marine commercial use and outdoor recreation, but significant for human health. For Current Use, the residual effect could range from not significant to significant, depending on the capacity of the affected Indigenous group to continue to undertake Current Use. In the event of a collision between a vessel engaged in traditional use activities and a container ship, a minor to serious adverse residual impact on the ability of the affected Indigenous group to exercise Aboriginal and treaty rights associated with those activities would be expected. The identified residual adverse effects of a collision are unlikely to occur, because of the very low probability of collision.	
BBFN-8.3	Stated that crossing the international shipping lanes will soon become too dangerous for marine harvesting and Tribal Journeys and will place pressure on salmon fishing grounds and other harvesting activities.	17-Sep-2015, Letter	**29-Oct-2015, Letter from the VFPA:** Thanked Beecher Bay for their 17-Sep-2015 letter and stated that the MSA will include an assessment of potential impacts associated with marine shipping and proposed mitigation. Stated that issues and concerns expressed during meetings or Beecher Bay's letter have been recorded and considered, and the VFPA will provide responses to each concern in the MSA. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in MSA Section 9.5:** As noted in MSA Section 9.5.11, taking a precautionary approach, the assessment of potential impacts to Indigenous groups' ability to exercise asserted or established Aboriginal and treaty rights as a result of Project-associated shipping was based on the assumption that traditional use presently occurring in the MSA (i.e., Current Use) is an expression of the exercise of Aboriginal or treaty rights. Where traditional use was not identified as occurring at present within the MSA, but similar use was identified as practised in the past in the MSA, asserted as an Aboriginal right, or protected under treaty, this use was assumed to be potentially exercisable as an Aboriginal or treaty right, and subject to potential impacts as a result of Project-associated shipping in much the same way as potential effects on Current Use.	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.11 Potential Impacts on Asserted or Established Aboriginal and Treaty Rights **Information Requests** Transport Canada Information Request #08 (TC IR-08 of CEAR Document #1147) **From Transport Canada to the Review Panel re: Overview of**

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				Considering the conclusions of the Current Use assessment, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the marine shipping area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. These mitigation measures for addressing potential incremental effects on Current Use are expected to also be effective at addressing the potential incremental impact to the exercise of Aboriginal and treaty rights. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans Protection Plan which includes information on the *Enhanced Maritime Situational Awareness and Proactive Vessel Management* initiative as well as information on the sharing of information of marine traffic with coastal communities.	**the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**
BBFN-8.4	Concerned that the increase of freighters and tankers constitutes an infringement of their traditional territory.	15-Nov-2017, Letter to Panel (CEAR Document #1095)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 9.5:** Potential impacts to the exercise of asserted or established rights are assessed for each Indigenous group identified by the *Updated EIS Guidelines* in MSA Section 9.5. As described in that section, considering the conclusions of the Current Use assessment, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the defined marine shipping area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups to identify measures that would reduce the impact of the international shipping lanes to fishing by Indigenous groups. These mitigation measures for addressing potential incremental effects on Current Use are expected to also be effective at addressing the potential incremental impact to the exercise of Aboriginal and treaty rights. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights **Information Requests** Transport Canada Information Request #08 (TC IR-08 of CEAR Document #1147) ***Updated EIS Guidelines*** **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**

				Government of Canada's Oceans Protection Plan which includes information on the *Enhanced Maritime Situational Awareness and Proactive Vessel Management* intiative as well as information on the sharing of information of marine traffic with coastal communities.	

Table 9: Project Benefits

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
BBFN-9.1	Expressed an interest in discussing financial benefits to their community from this Project. Stated that there needs to be an economic portion of the discussion. Stated that Beecher Bay First Nation has the right to participate in increased wealth from projects in their traditional territory. Stated that they should be granted an equitable share of the economic benefits from the Project. Stated that they have not secured a commitment from the proponent or the federal or provincial governments to share in any economic benefits of the Project in the event it proceeds. Stated that Canada must not approve the Project unless and until an economic benefits package satisfactory to the Scia'new First Nation has been secured. Requested that the Port broaden its mandate and negotiate a Mutual Benefits Agreement with Beecher Bay. Concerned about the lack of commitment from the VFPA, the federal, or provincial governments to share economic benefits with Beecher Bay. Expressed their right and capacity to share in the wealth generated on or facilitated by the use of their traditional territorial sea. Expressed the fundamental connection between the sharing of wealth within their traditional territory and their constitutionally protected rights. Indicated that there is a fundamental legal right to share in the wealth that is generated in, on, and by the use of the waters within their territorial sea with regards to the Project. Expressed that without the sharing of wealth generated by the Project, there can be no true reconciliation and, without that, there can be no free, prior, and informed consent to the Project by the Scia'new First Nation.	08-Jul-2015, Meeting 17-Sep-2015, Letter 28-Oct-2016, Letter to Panel (CEAR Document #637) 15-Aug-2017, Letter 25-Oct-2017, Meeting 15-Nov-2017, Letter to Panel (CEAR Document #1095)	**08-Jul-2015, Meeting:** Stated that Transport Canada is the responsible regulator for this area. Stated that the VFPA's legal counsel, will respond to this question at a later date. **29-Oct-2015, Letter from the VFPA:** *"In your letter, you express concern that Beecher Bay's issues and concerns with proposed marine shipping activities will not be included in the [MSA], including concerns related to economic interests. The document provided by [the VFPA] to Beecher Bay for review included a summary of Beecher Bay's current use of lands and resources for traditional purposes, and not the entirety of the [MSA]. The [MSA] will include an assessment of potential impacts associated with marine shipping and proposed mitigation. Issues and concerns expressed during meetings or in your letter have been recorded and considered, and [the VFPA] will provide responses to each concern in the [MSA]."* **25-Apr-2016, Letter from the VFPA:** The comment tracking table enclosed included comments provided by Scia'new First Nation, the VFPA's response to those comments, and a description of any subsequent changes made to the MSA in response. #3: There will be an opportunity for all Indigenous groups, including Beecher Bay, to benefit from employment and contracting opportunities from the Project. Potential opportunities associated with the Project are outlined in the EIS (Section 19.0 Labour Market and 20.0 Economic Development). The VFPA will be releasing further information regarding these opportunities on the Project website (http://www.robertsbankterminal2.com/) when the information becomes available. As indicated in the VFPA's letter of October 29, 2015, information on Beecher Bay's economic interests, as set out in the Beecher Bay's evidence in the National Energy Board Hearing for the proposed Trans Mountain Expansion Project, were reviewed and incorporated into the MSA where they were identified to overlap with the study area. Specific economic interests of Indigenous groups that could be affected by marine shipping associated with RBT2 (both commercial and non-commercial) were identified in MSA Section 9.5.4 existing conditions summaries, where this information was provided by Indigenous groups, including Beecher Bay. MSA Section 9.5.4.6 has been updated to include the economic interests related to the marine environment identified by Beecher Bay in the East Sooke area of the marine shipping area (Segment D), namely a marina, an aquaculture project, and a real estate development project on Beecher Bay 1 (see "Marine Resource Use" subsection). MSA Section 9.2 specifically considers potential impacts to commercial interests, including Indigenous commercial interests identified by Indigenous groups such as the Salish Strait Seafoods Association, in which Beecher Bay has an expressed interest. **15-Aug-2017:** Recorded comment for consideration by Project team. **25-Oct-2017:** Committed to take back Beecher Bay's requests for an economic benefits agreement and a consultation framework, and respond. **18-Jan-2018, Letter from the VFPA:** Provided an explanation of the VFPA's mandate and mitigation measures related to marine shipping associated with the Project.	**Addressed in MSA Appendix 5-B (#6):** This topic is not within the scope of assessment for the MSA, as defined by the *Updated EIS Guidelines*. The EIS (EIS Sections 19.0 and 20.0) includes an assessment of potential economic effects of the Project, including employment effects.	**MSA** Appendix 5-B Aboriginal Issues and Interests

Beecher Bay (Scia'new) First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			Explained that regarding potential impacts of marine shipping associated with the Project, which is beyond the VFPA's jurisdiction, the VFPA's approach has been to work with government departments and agencies that do have jurisdiction over marine shipping to determine feasible measures to reduce or avoid the impacts that marine shipping associated with the Project may have on Aboriginal and treaty rights. Stated that taking into account proposed mitigation, the Project is not likely to impact Beecher Bay First Nation's asserted or established Aboriginal or treaty rights. For this reason, as well as the fact that marine shipping associated with the Project is outside of the VFPA's care and control, the VFPA is not prepared at this time to negotiate a mutual benefits agreement. That being said, the VFPA recognises that there are many potential economic benefits arising from the Project—both direct and indirect—and the VFPA is always open to further discussions with Beecher Bay First Nation in this regard.		

Table 10: Project Overview and Description

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
BBFN-10.1	Asked whether the VFPA will ship chemicals through RBT2. Concerned about what materials would be shipped through RBT2. Concerned with the goods shipped and the environmental impact should they spill into the ocean. Expressed concern regarding the unknown contents of containers and how not all goods will have had an environmental effects assessment.	08-Jul-2015, Meeting 17-Sep-2015, Letter 25-Oct-2017, Meeting	**08-Jul-2015, Meeting:** Committed to respond to Beecher Bay about the chemicals shipped through Deltaport. **14-Jul-2015, E-mail from the VFPA:** *"Question whether chemicals will be shipped through RBT2: In the EIS, Appendix 30-A, Table B-4 indicates the composition and number of HNS (Hazardous and Noxious Substances) containers at Deltaport in 2012. Of the 1.7 million TEUs handled at the Deltaport Terminal in 2012, less than 1% (0.7062%) involved goods that could be classified as Dangerous Goods under the International Maritime Dangerous Goods Code (IMDG Code). Demand for goods is assumed to be the same if the project goes ahead.* *In Canada, the transportation of dangerous goods is strictly regulated under the Transportation of Dangerous Goods Act, 1992. The Act was designed with the sole purpose of maintaining public safety in the transportation of dangerous goods. This includes advance notification requirements, an application process for transporting containerised dangerous goods, clearly marking the shipment, packaging requirements, as well as time and quantity limitations, including not permitting the on-dock storage of containerised dangerous goods– immediate loading onto vessel or removal by inland carrier only is required."* **17-Sep-2015:** Recorded comment for consideration by the Project team. **29-Oct-2015, Letter from the VFPA:** The VFPA will additionally respond to each of these concerns directly in a letter at a later date. (Response provided in MSA Appendix 5-B.) **25-Oct-2017, Meeting:** Offered to provide information on types of goods shipped in containers, but Beecher Bay explained that the concern was not what was shipped in the containers but if there was an incident, the VFPA would not have completed an effects assessment on each commodity.	**Addressed in MSA Appendix 5-B (#109):** The potential for an accident involving a spilled container, and hazardous contents of containers, is addressed in MSA Section 10.0. Details on the types of hazardous materials shipped in containers are provided in EIS Appendix 30-A (Table G-3 in Appendix G). Regulations for securing containers, and for the transport of dangerous goods, are set by the International Maritime Organization (http://www.imo.org/en/About/Conventions/ListOfConventions/Pages/International-Convention-for-the-Safety-of-Life-at-Sea-(SOLAS),-1974.aspx). The International Maritime Dangerous Goods Code is the international code that establishes where dangerous goods should be loaded on a ship. Some should be loaded below deck, others should be loaded on deck, some dangerous goods need to be separated by certain distances from other types of goods, and some dangerous goods need to be segregated in different holds from other goods. The implementation of the Code is mandatory under the International Convention for the Safety of Life at Sea (SOLAS) and the International Convention for the Prevention of Pollution from Ships (MARPOL 73/78). **Addressed in MSA Section 10.3.2.1:** Containers may be lost overboard in the event of a collision or grounding and could conceivably release HNS to the environment. While removal of containers lost overboard would involve a salvage operation, the combination of low collision or grounding accident frequencies with the low percentage of HNS containers at risk of being lost overboard (approximately 0.7% for Deltaport in 2012; see EIS Appendix 30-A), and the requirement for the container being compromised to release its contents, led to the assessment that the frequency of spills of HNS substances from containers lost overboard is low enough to not require further consideration as a plausible accident or malfunction arising from marine shipping associated with the Project. **Additional information provided by the VFPA:** In 2017, the top ten container cargos accounting for approximately 73% of total inbound and outbound container cargo were household goods; lumber; wood pulp; specialty crops; construction and materials; industrial, auto, and vehicle parts; basic metals; meat, fish, and poultry; and waste paper.	**MSA** Appendix 5-B Aboriginal Issues and Interests 10.3.2.1 Loss Overboard of Containers from Ships In-transit in Semi-protected Waters **EIS** Appendix 30-A, Table B-4 Composition and Number of HNS Containers at Deltaport in 2012 (TSI 2013)

Table 11: Surficial Geology and Marine Sediment – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
BBFN-11.1	Asked how much of the shaded area (the VFPA's jurisdiction) is already contaminated. Concerned that if areas are already contaminated, the Panel will determine that the Project has no impact.	08-Jul-2015, Meeting	**08-Jul-2015, Meeting:** Explained that studies supporting the EIS looked at a variety of topics, including studies into sediment chemistry. Stated that the VFPA can provide information on sediment chemistry to Beecher Bay. Shared a copy of the EIS Executive Summary, which includes high level information on the studies that were undertaken and results. **14-Jul-2015, E-mail from the VFPA:** Provided a link to the EIS, which contains information on contamination in the Roberts Bank area.	**Addressed in EIS Section 9.6:** EIS Section 9.6 describes the existing conditions as well as the predicted changes in surficial geology and marine sediment resulting from the proposed Project. Existing physical and chemical characteristics of surficial marine sediment were determined for sediment deposition rate, grain size distribution, total organic carbon, metals and anions, nutrients, contaminants, and coal particulates. Current seabed sediment characteristics reflect the combined influences of sediment contribution from the Fraser River, sediment transport associated with tidal currents, waves, and seabed slope. Overall, sediment quality within the study area is within the range of levels expected in an estuarine environment and without local contamination sources. Changes to surficial geology and marine sediment during Project construction activities are expected to be minimal or undetectable relative to natural variability. Changes in sediment contaminant levels are not expected.	**EIS** 9.6 Surficial Geology and Marine Sediment

APPENDIX IR10-01-C19

ESQUIMALT NATION: ISSUES, VIEWS, AND CONCERNS RELATED TO THE PROPOSED PROJECT AND MARINE SHIPPING ASSOCIATED WITH THE PROJECT

Table 1: Alternative Means of Carrying out the Project

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
EFN-1.1	Concerned that the proponent's market projections may be unrealistic, and thus that there may be no need for the Project. Requested that Canada conduct a rigorous assessment of the proponent's market projections. Stated that if Canada concludes that the proponent's market projections are reasonable and that there is indeed a need for the Project, Esquimalt Nation seeks written rationale for that conclusion. Requested that Canada conduct a rigorous assessment of all potentially viable alternatives to this Project, including the PATH Project, and should consult with Esquimalt Nation both during and regarding the outcome of that assessment.	28-Oct-2016, Letter to Panel (CEAR Document #638)	The Vancouver Fraser Port Authority (VFPA) has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** All levels of government have plans to capitalize on a growing global economy, which requires Canada to be prepared for the trade that will come to Canadian ports. At the Port of Vancouver, we handled a record 3.25 million 20-foot-equivalent unit containers (also called TEUs) in 2017. Historical trade figures and third-party forecasts have long signaled that the ability of West Coast ports to serve this growth is becoming constrained, and by the mid-2020s we won't have the capacity to handle anticipated future growth of trade in containers at the Port of Vancouver The role of the Vancouver Fraser Port Authority is to ensure the port is ready for Canada's trading future. As we plan, we must consider how to provide needed port facilities within a growing metropolitan area. To date, we have partnered with industry, governments and communities to improve road and rail networks, investing to help goods flow smoothly throughout our region. We have also consulted with local governments, Aboriginal groups and residents on the ways we can grow responsibly. Investments in increased size and improved efficiency are being, or have been, made to West Coast container terminals, including recent improvements at the Port of Vancouver's Deltaport, Canada's largest container terminal, and Fairview in Prince Rupert. However, even with these investments, we won't have enough space to accommodate the shortfall in needed capacity. The Roberts Bank Terminal 2 Project represents the best option to accommodate growth and is needed to deliver the capacity we need as demand for goods shipped in containers continue to grow. **Additional information provided by the VFPA in regards to independent container capacity forecasts:** Since 2011, the port authority has commissioned independent forecasts which consider many factors that influence container traffic demand, including: • Gross Domestic Product growth; • World demand for Canadian resources; • Increased consumer demand for trade with Asia; • Opening of the expanded Panama Canal; • Planned container terminal expansion at the Port of Prince Rupert; • Macroeconomic trends in North America; • North American container port demand and competitive developments; • Trends in container shipping; and • Vancouver's competitive position compared to other North American ports. The 2016 Ocean Shipping Consultants forecast shows continued growth in container trade through the west coast of Canada at a compound annual growth rate of about 4%, and reinforces the need for planned increases of capacity to ship goods in containers through the existing container terminals in Vancouver and the Fairview Terminal in Prince Rupert. The 2016 Ocean Shipping Consultants forecast also confirms that the proposed Project will be needed by the mid-2020s. **Addressed in response to IR1-06:** For each marine terminal alternative location considered in EIS Section 5.3, Table IR1-06-1 in Appendix IR1-06-A summarises the criteria used to assess technical feasibility and provides the conclusion of the feasibility assessment along with supporting rationale. To be considered technically feasible, potential alternatives to the location of the marine terminal within B.C. needed to first meet all technical criteria (as stated in EIS Section 5.2), which included the following:	**EIS** 4.0 Project Description 5.0 Alternative Means of Carrying out the Project Description 5.7 Identification of the Preferred Means Table 5-10 Summary of Preferred Alternative Means **Information Requests** Response to Sufficiency Information Request #06 (IR1-06 of CEAR Document #897) **Ocean Shipping Consultants 2016 Container Traffic Forecast Report** http://www.robertsbankterminal2.com/wp-content/uploads/2016-Ocean-Shipping-Consultants-Container-Forecast.pdf

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				• Meeting the long-term container capacity growth by the mid-2020s, through operating efficiencies and a sufficient land base to accommodate growth; • Meeting the requirement for the necessary road and rail connections to efficiently transport containers to and from the market; and • Providing the ability for larger container ships to safely navigate the waterways. Safe navigation includes a minimum berth depth requirement of approximately 18.4 m and the ability to safely turn the vessel around, even in situations of sufficient draught. In addition, consideration was given to terminals with other uses (e.g., serving bulk or break-bulk markets) and if they could retain these capabilities if conversion to container handling was undertaken. The marine terminal location alternatives evaluated (including a combination of these alternatives) were determined not to be technically feasible, and therefore, an evaluation of economic feasibility was not conducted, and an assessment of environmental effects was not required. Based on the analyses of the location alternatives (see Table IR1-06-1), RBT2 was deemed to be the only viable option to meet the anticipated long-term growth and demand of containerised trade on the west coast of Canada, and a full assessment of environmental effects on this preferred alternative was conducted and is described in the EIS. **Further information provided by the VFPA in response to alternative supply chain concepts:** Several options for how containers move through the supply chain beyond the main container terminals, such as inland ports, have been proposed as a way to increase container capacity and/or improve efficiency. Shippers will ultimately decide how best to contract supply chain options for moving cargo, and the VFPA supports any opportunity for greater efficiency. However, these options could only ever be complementary to a new container terminal, rather than replacing it, because capacity is needed to manage ship-to-shore container movements.	

Table 2: Economic Development – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
EFN-2.1	Concerned about the various off-reserve economic development interests that have the potential to be impacted by the Project, including interests in: 1. A recreational vehicle park, marina, and float-home village; and 2. A property in Rock Bay with commercial/industrial development potential.	28-Oct-2016, Letter to Panel (CEAR Document #638)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 9.2:** As potential adverse effects due to vessel transit from Project-associated shipping on marine area displacement, access, presence of southern resident killer whales and marine birds, and environmental conditions are considered to be negligible, potential effects on activities and revenue from marine-based tourism are also considered to be negligible. When all lines of evidence are considered, a negligible effect is expected for the marine-based tourism sub-component. **Addressed in MSA Appendix 5-B (#5):** The assessment of potential effects on marine commercial use (MSA Section 9.2) considers potential effects on relevant economic interests of Indigenous groups that have been identified through a review of existing information as well as information provided directly to the VFPA by Indigenous groups engaged in consultation. **Addressed in Response to IR10-27:** The VFPA's response to IR10-27, as requested by the Review Panel, discusses potential effects of the proposed Project on existing business ventures that have been identified by Indigenous groups.	**Marine Shipping Addendum (MSA, CEAR Document #316)** Appendix 5-B Aboriginal Issues and Interests 9.2 Marine Commercial Use 9.2.4 Existing Conditions 9.2.4.1 Overview of Marine Commercial Use in the Regional Assessment Area 9.2.4.2 Strait of Georgia (Segment A of the Marine Shipping Area) 9.2.4.3 Haro Strait and Southern Gulf Islands (Segment B of the Marine Shipping Area) 9.2.4.4 Juan de Fuca Strait (Segments C and D of the Marine Shipping Area) 9.2.5 Potential Interactions and Effects **Information Requests** Response to Sufficiency Information Request #27 (IR10-27)

Table 3: Effects Assessment Methods (including Cumulative Effects)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
EFN-3.1	Stated that they share concerns raised by other parties that the proponent's cumulative impacts assessment fails to include several projects that should have been assessed. Stated that the Panel should require the proponent to expand the projects included in its cumulative effects assessment to include projects that are reasonably foreseeable, and are either not mentioned in or are mentioned in the proponent's EIS but excluded from the cumulative effects assessment, including the following projects: • the Wespac Tilbury Marine Jetty Project (a proposed LNG marine jetty), • the Woodfibre LNG Project, and • the BURNCO Aggregate Project.	28-Oct-2016, Letter to Panel (CEAR Document #638)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in Response to IR4-09:** In responding to the Canadian Environmental Assessment Agency's (CEA Agency's) IR4-09, updated project status and vessel movement information is provided as available for the projects listed in the EIS and MSA (north of Segment B), plus other new projects considered to be certain or reasonably foreseeable (as of July 1, 2017). As part of this update, Woodfibre LNG Project and Wespac Tilbury Marine Jetty Project vessel projections are updated. However, because the Burnco Aggregate project's activities fall outside the marine shipping area, it was not updated as part of the response.	**Information Requests** Response to Sufficiency Information Request #09 (IR4-09 of CEAR Document #1051)
EFN-3.2	Concerned with cumulative impacts of development on the Salish Sea, including the proposed Project, and the long-term health of the Salish Sea as a result of that development. Recommended establishing a Salish Sea Environmental Foundation. To better understand the cumulative impacts of development on the Salish Sea and take steps to monitor its health and recommend policy changes aimed at ensuring its long-term health.	28-Oct-2016, Letter to Panel (CEAR Document #638)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** The VFPA acknowledges concerns about cumulative effects of development on the Salish Sea. Although the regulated care and control of vessels calling at the Port of Vancouver is limited to its marine jurisdiction, the VFPA is leading and encouraging several regional environmental initiatives that enhance the cumulative environmental performance of the shipping industry and port operations in and around the Salish Sea. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans Protection Plan which includes information on the *Cumulative Effects of Marine Shipping* initiative.	**From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**

Table 4: Engagement and Consultation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
EFN-4.1	Stated that Esquimalt Nation signed the funding agreement but is dismayed at the amount of funding available. Stated that additional funding is required to participate in consultation with the VFPA. Stated that Esquimalt was not provided with enough time and resources.	18-Jun-2015, Phone Call 23-Jul-2015, Meeting 14-Sep-2015, Letter	**26-May-2015:** Offered funding for engagement regarding marine shipping associated with the Project. **18-Jun-2015:** Esquimalt Nation accepted funding. **23-Jul-2015:** Stated that the VFPA considers the amount of funding offered to be proportionate to the level of effort required by Esquimalt Nation, given the scope of work. Stated if this is not the case, the VFPA can re-evaluate. Requested that Esquimalt Nation draft an email with a requested amount and activities covered by the funding in order for request to be elevated within the VFPA. **29-Oct-2015, Response from the VFPA:** The VFPA offered funding to Esquimalt Nation in May 2015 and this funding was accepted by Esquimalt Nation. Where specific requests were made to the VFPA for additional funding, these requests have been considered and responses were provided.	**Addressed in MSA Appendix 5-B (#66):** Concern is noted. The VFPA considers the amount of funding offered to be adequate and proportionate to the level of effort required by each Indigenous group to participate, given the scope of work. The VFPA increased the funding provided in some circumstances in response to specific requests.	**MSA** Appendix 5-B Aboriginal Issues and Interests
EFN-4.2	Asked whether the VFPA has spoken with United States First Nations.	23-Jul-2015, Meeting	**23-Jul-2015, Meeting:** Stated that the VFPA has not spoken to United States First Nations.	**Addressed in MSA Appendix 5-B (#10):** The VFPA has engaged and consulted with Indigenous groups as listed in the *Updated EIS Guidelines*. Where available, information related to Indigenous groups in the U.S.A. has been considered in the MSA.	**MSA** Appendix 5-B Aboriginal Issues and Interests ***Updated Guidelines for the Preparation of an Environmental Impact Statement* (*Updated EIS Guidelines*, CEAR Document #177)**
EFN-4.3	Asked about the process for Provincial approval of the Project, and whether the Province has jurisdiction to deny approval of the Project.	23-Jul-2015, Meeting	**23-Jul-2015, Meeting:** Stated that the Province has issued an order indicating that a British Columbia permit is required. The B.C. Environmental Assessment Office (EAO) will read the panel report and make a decision within 6 months. The EAO will also issue permits.	**Addressed in MSA Appendix 5-B (#18):** On November 5, 2014, the EAO confirmed the Project is reviewable under Part 8 of the *Reviewable Projects Regulation*, B.C. *Environmental Assessment Act*. This was confirmed by means of an order under s. 10 of the Act. On December 19, 2014, the B.C. Minister of Environment issued an order under s.14 of the Act establishing the Province's procedures and methods for conducting the environmental assessment for the Project. The Minister ordered that the scope of the Project is as defined by the CEA Agency in the *EIS Guidelines*; the scope of the assessment must include factors established by the federal Minister and potential adverse environmental, economic, social, heritage, and health effects, including cumulative effects, and practicable means to mitigate such potential adverse environmental effects, and potential adverse effects on Indigenous groups; the EAO will principally rely on the environmental assessment to be conducted by the federal review panel and on consultation conducted by the CEA Agency with Indigenous groups, whose interests are potentially affected by the Project; and, the EAO must make a recommendation to the Minister within 30 days of receiving notice of the decision from the federal Minister.	**MSA** Appendix 5-B Aboriginal Issues and Interests 6.2 Establishment of Assessment Boundaries

Esquimalt Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				The information presented in the EIS is intended to satisfy both federal and provincial environmental assessment requirements (Section 6.2). More information regarding the provincial environmental assessment for the Project can be found on the EAO's Project Information Centre (e-PIC) website at https://a100.gov.bc.ca/appsdata/epic/html/deploy/epic_project_home_410.html.	

Table 5: Environmental Assessment and Permitting Process

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
EFN-5.1	Stated concern with the exclusion of marine shipping from the Project and that it is not consistent with the *Canadian Environmental Assessment Act (CEAA), 2012*. Requested that the Minister amend the 'designated project' to include marine shipping.	28-Oct-2016, Letter to Panel (CEAR Document #638)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Appendix 5-B (#17):** The VFPA advised the CEA Agency of this concern through MSA Appendix 5-B (#17). **Addressed in the *Updated EIS Guidelines*:** On April 17, 2015, the CEA Agency issued *Updated EIS Guidelines* that included the addition of environmental effects of marine shipping associated with the Project, beyond the scope of the Project (VFPA jurisdiction) to the 12 nautical mile limit of Canada's territorial sea. In October 2015, the VFPA submitted to the CEA Agency the MSA. **Additional information provided by the VFPA:** The VFPA understands that marine shipping associated with the Project outside of Port of Vancouver's jurisdiction is not formally considered to be part of the Project for the purposes of the Minister's decision whether the Project is likely to cause significant adverse environmental effects. However, the MSA provides information to the federal government regarding the potential effects of marine shipping associated with the Project, which can be used to inform programs or activities within federal jurisdiction.	**MSA** 1.0 Introduction Appendix 5-B Aboriginal Issues and Interests ***Updated EIS Guidelines***
EFN-5.2	Concerned with allegations made by the Corporation of Delta and Roger Emsley, the Executive Director of the Against Port Expansion Community Group, that federal and provincial agencies are engaging in private meetings with the proponent while the environmental assessment is underway. Stated that they seek an explanation from British Columbia and Canada regarding these allegations, and a commitment to make public any discussions with the proponent outside the CEA Agency process.	28-Oct-2016, Letter to Panel (CEAR Document #638)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in CEAR Document #489:** The VFPA requested guidance from the Review Panel Manager with respect to continuing vital inter-departmental engagement and coordination with other federal and provincial agencies and departments concerning the proposed Project. The VFPA asked for confirmation from the Panel regarding the appropriateness of the proposed approach to ongoing engagement and requested the Panel to (a) advise the VFPA regarding its potential needs or preferences for documentation of such engagement and (b) advise other federal and provincial agencies and departments that they may continue to engage with the VFPA on these matters while the panel process is underway. **Addressed in CEAR Document #498:** The Review Panel indicated that interaction between participants—especially between the VFPA and bodies that may have legislative authority regarding the project—can take place during the sufficiency review period of the environmental assessment. The Review Panel Manager stated that transparency must be maintained and emphasised that the Panel and the participants in the environmental assessment must be informed of the substance of any interactions that are relevant to the environmental assessment as the process proceeds.	**CEAR Document #489 From the Vancouver Fraser Port Authority to the Review Panel re: Inter-departmental engagement and coordination** **CEAR Document #498 From the Review Panel to the Vancouver Fraser Port Authority re: Inter-departmental engagement and coordination**
EFN-5.3	Stated that Esquimalt Nation do not support the Project proceeding. Stated that the submissions into the CEA Agency process to date suggest there is no need for the Project.	28-Oct-2016, Letter to Panel (CEAR Document #638)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Section 4.0:** Since 2011, the port authority has commissioned independent forecasts which consider many factors that influence container traffic demand, including: • Gross Domestic Product growth; • World demand for Canadian resources; • Increased consumer demand for trade with Asia; • Opening of the expanded Panama Canal; • Planned container terminal expansion at the Port of Prince Rupert; • Macroeconomic trends in North America; • North American container port demand and competitive developments; • Trends in container shipping; and • Vancouver's competitive position compared to other North American ports. The 2016 Ocean Shipping Consultants forecast shows continued growth in container trade through the west coast of Canada at a compound annual growth rate of about 4%, and reinforces the need for planned increases of capacity to ship goods in containers through the existing container terminals in Vancouver and the Fairview Terminal in Prince Rupert. The 2016 Ocean Shipping Consultants forecast also confirms that the proposed Project will be needed by the mid-2020s. Should the proposed Project receive environmental approval, the port authority will make a final investment decision prior to proceeding.	**EIS** 4.0 Project Description

Table 6: Environmental Management Program

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
EFN-6.1	Stated the importance of the VFPA committing to protection and regeneration of the environment, and being part of the Salish Sea environmental foundation like Kinder Morgan. Stated that this was important for the VFPA's credibility and future negotiations between Esquimalt and the VFPA.	09-Jul-2015, Meeting	**09-Jul-2015, Meeting:** Recorded comment for consideration by the Project team.	**Additional information provided by the VFPA:** The VFPA acknowledges concerns about cumulative effects of development on the Salish Sea. Although the regulated care and control of vessels calling at the Port of Vancouver is limited to its marine jurisdiction, the VFPA is leading and encouraging several regional environmental initiatives that enhance the cumulative environmental performance of the shipping industry and port operations in and around the Salish Sea.	
EFN-6.2	Stated that certain additional measures should be implemented to better mitigate potential impacts on the environment and Esquimalt Nation.	28-Oct-2016, Letter to Panel (CEAR Document #638)	The VFPA has reviewed this letter and provides the following additional information. **18-Sep-2017, Letter from the VFPA:** *"The VFPA would like to further our understanding of the concerns raised by [Esquimalt Nation] on Marine Shipping and work together to identify mitigations to potential impacts, where possible. We are interested in meeting with [Esquimalt Nation] this fall…* *The goal for this meeting is twofold:* *1. To develop a more fulsome understanding of the specific concerns raised by [Esquimalt Nation] related to Marine Shipping.* *2. To identify, where possible, solutions to the concerns raised. The VFPA is specifically interested in discussing what measures could be taken to address [Esquimalt Nation's] concerns."* **18-Jan-2018, Letter from the VFPA:** Under the environmental assessment process with which the VFPA must comply (*CEAA*, *2012*), mitigation that is technically and economically feasible and that would mitigate any significant adverse environmental effects of the Project must be considered by the proponent. As the proponent of the Project, the VFPA's EIS sets out specific actions, works, minimal disturbance footprint techniques, corrective measures and construction and operation plans to eliminate or reduce the significance of adverse environmental effects. EIS Section 35.0, specifically EIS Table 35-2 (Proposed Mitigation Measures and Commitments), sets out the mitigation measures which the VFPA will undertake. MSA Section 9.5.5 of the MSA sets out possible effects of marine shipping associated with the Project outside of the VFPA's jurisdiction on Indigenous groups' current use of lands and resources for traditional purposes (Current Use). MSA Section 9.5.11 reviews the results of the Current Use analysis and places it in the context of the VFPA's understanding of asserted or established Aboriginal and treaty rights potentially impacted by marine shipping associated with the Project. The MSA assessment concludes that, taking into account proposed mitigation, marine shipping associated with	**Addressed in EIS Section 35.0 and MSA Section 12.0:** EIS Section 35.0 (EIS Table 35-2) presents mitigation measures and commitments proposed as part of RBT2. MSA Section 12.0 summarises potential environmental effects of marine shipping associated with the Project, suggested mitigation to be considered, residual effects, and cumulative effects in relation to the categories of environmental effects. **Addressed in Response to IR-15.07.31-12:** Response to IR-15.07.31-12 further discusses proposed mitigation related to the EIS; specifically, Appendix IR12-A presents a summary of proposed mitigation and anticipated effectiveness; and Appendix IR12-B presents summary of other mitigation considered and rationale for rejection. **Additional information provided by the VFPA:** Beyond the mitigation measures suggested in the EIS and MSA, the VFPA encourages Indigenous groups participating in the RBT2 environmental assessment to suggest specific mitigation measures for consideration.	**EIS** 35.0 Effects Assessment Summaries **MSA** 12.0 Summary of Changes to the Environment and Effects of Change to the Environment: Marine Shipping Associated with RBT2 **Information Requests** Response to Information Request #12 (IR-15.07.31-12 of CEAR Document #314)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			the Project is not likely to impact Esquimalt Nation's asserted or established Aboriginal or treaty rights.		
EFN-6.3	Stated that, if approved, the mitigation measures proposed by the proponent must be implemented, as well the recommendation by the Washington State Department of Ecology and van Dorp and Merrick that the speed for container ships be reduced to enhance situational awareness. In the event the Project proceeds and these measures prove to be inadequate, Esquimalt Nation reserves the right to demand that additional measures be implemented, for example altering the location of the marine shipping lanes for the Project.	28-Oct-2016, Letter to Panel (CEAR Document #638)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Appendix 5-B (#10):** Where relevant, the VFPA has proposed mitigation, which serves to address measurable potential effects of marine shipping associated with the Project, to be considered by those regulators with jurisdiction in the area. **Addressed in EIS Section 35.0 and MSA Section 12.0:** EIS Section 35.0 (EIS Table 35-2) presents mitigation measures and commitments proposed as part of RBT2. MSA Section 12.0 summarises potential environmental effects of marine shipping associated with the Project, suggested mitigation to be considered, residual effects, and cumulative effects in relation to the categories of environmental effects. **Additional information provided by the VFPA:** Should the Project be approved, the VFPA will be legally bound to the conditions (including any mitigation measures) set out in the federal Environment Minister's Decision Statement. Although the regulated care and control of vessels calling at the Port of Vancouver is limited to its marine jurisdiction, the VFPA is supportive of initiatives by other agencies and authorities in reducing marine shipping-related risks outside its jurisdiction. **Further information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans Protection Plan which includes information on the *Enhanced Maritime Situational Awareness and Proactive Vessel Management* initiative.	**EIS** 35.0 Effects Assessment Summaries **MSA** Appendix 5-B Aboriginal Issues and Interests 12.0 Summary of Changes to the Environment and Effects of Change to the Environment: Marine Shipping Associated with RBT2 **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**

Table 7: Human Health – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
EFN-7.1	Stated that ocean resources are currently polluted, which is resulting in increased prevalence of diseases among Esquimalt members, due to consumption of store bought foods.	23-Jul-2015, Meeting	**23-Jul-2015, Meeting:** Recorded comment for consideration by the Project team. **09-Nov-2015, letter from the VFPA:** Provided Esquimalt Nation with a copy of the MSA.	**Addressed in MSA Sections 8.1, 9.2, 9.1, and 9.5:** MSA Section 9.2 presents an assessment of potential effects of marine shipping associated with the Project on marine commercial use, and draws on conclusions of the marine fish and fish habitat effects assessment presented in MSA Section 8.1. An assessment of marine commercial use was conducted to evaluate the potential effects of Project-associated marine shipping on commercial fish and seafood harvesting (including Indigenous marine fish and seafood harvesting), guided sport fishing, marine based tourism, and marine transportation. Existing marine commercial use within the marine shipping area includes fishing and seafood harvesting of crab, shrimp, salmon, rockfish, red sea urchin, and a variety of other marine resources. Guided sport fishing activities focus on various salmon species, and whale-watching activities focus on southern resident killer whales, humpback whales, and Steller sea lions. Potential effects on all types of marine commercial use assessed were determined to be negligible. These negligible effects include changes in each of: area use and access; biophysical conditions for marine fish, invertebrates, and mammals; availability of fish and seafood; marine mammal presence; and environmental setting due to marine shipping associated with the Project The assessment of human health (MSA Section 9.1) includes consideration of consumption of marine resources. All potential incremental health effects related to routine Project-associated vessel transit activities that increase air and noise emissions were determined to be negligible because predicted changes are below thresholds for human health effects. Cumulative changes in air quality and noise due to Project-associated marine shipping, in combination with other existing and future marine shipping, are also not expected to result in any measurable human health effects. This finding applies to both Indigenous and non-Indigenous groups. The assessment of Current Use (MSA Section 9.5) also addresses the potential effects on availability of, and ability to harvest, marine resources. Potential effects on Current Use as a result of Project-associated vessel transit activities are considered negligible before mitigation for access to preferred Current Use locations, due to Project-associated ship wake, the availability and quality of preferred Current Use resources, and the quality of the Current Use experience (i.e., cultural practices) tied to those aspects of Current Use. Residual effects on access to preferred Current Use locations due to Project-associated container ship pass-bys, and on cultural practices tied to that aspect of Current Use, are considered negligible after the implementation of mitigation. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups to identify measures that would reduce the impact of the international shipping lanes to fishing by Indigenous groups.	**MSA** 8.1 Marine Fish and Fish Habitat 9.1 Human Health 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights

Table 8: Potential Accidents or Malfunctions

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
EFN-8.1	Asked what the VFPA's connection is to Western Canada Marine Response Corporation (WCMRC).	09-Jul-2015, Meeting	**09-Jul-2015, Meeting:** Recorded comment for consideration by the Project team. **09-Nov-2015, letter from the VFPA:** Provided Esquimalt Nation with a copy of the MSA, which included Appendix 5-B summarizing the issues and interests raised by Indigenous groups and the VFPA's responses.	**Addressed in MSA Appendix 5-B (#102):** Details on spill response, including responsibilities of various parties, response timelines, and equipment requirements, are provided in the mitigation section of the assessment of potential accidents or malfunctions (MSA Section 10.0). Detailed Oil Spill Response Plans are prepared and executed by the WCMRC and submitted to Transport Canada. Additional information is available here: http://wcmrc.com/ **Additional information provided by the VFPA:** The role of the VFPA is to ensure goods are moved safely, efficiently, and sustainably. As such, it is not the lead agency when it comes to spill response. The VFPA supports Canada's leadership in advancing spill preparedness and response in the Salish Sea, including its recently announced ongoing research initiatives as a part of the federal Oceans Protection Plan. Other organisations such as Clear Seas are also contributing to research considering risks, mitigation measures, and best practices for marine shipping on Canada's west coast. The Canadian Coast Guard is responsible for spill response. In the Lower Mainland, the Canadian Coast Guard relies on WCMRC for clean-up. **Further information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), letter to the Review Panel dated December 20, 2017 (CEAR Document #1133), and Transport Canada's response to TC IRs 10-15 and supporting documents, provide additional information on the Government of Canada's Oceans Protection Plan which includes information on emergency response coordination.	**MSA** Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents or Malfunctions 10.4 Mitigation Measures https://www.portvancouver.com/about-us/topics-of-interest/emergencies-and-spill-response/ **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**
EFN-8.2	Asked whether the existing insurance fund to cover disasters is adequate for the projects currently proposed, or whether the CEA Agency has the authority to raise the amount of the fund.	09-Jul-2015, Meeting	**09-Jul-2015, Meeting:** Stated that the VFPA is unable to speak to the insurance fund at this time, but can provide more information on this topic. **09-Nov-2015, letter from the VFPA:** Provided Esquimalt Nation with a copy of the MSA, which included Appendix 5-B summarizing the issues and interests raised by Indigenous groups and the VFPA's responses.	**Addressed in MSA Appendix 5-B (#1):** The regulatory framework for spill response is described in MSA Section 3.0. The regulatory requirement for maritime insurance is established under the *Marine Liability Act*, S.C. 2001, c. 6 and administered by Transport Canada. Additional information about the roles of various parties in spill response is provided in MSA Section 10.0. Information about the amount available in the insurance fund, and whether the CEA Agency has the authority to raise the amount, is not included in the MSA. The VFPA advised the CEA Agency of this concern through MSA Appendix 5-B (#1).	**MSA** 3.0 Regulatory Framework and Role of Government 3.4 Marine Emergency Response Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents
EFN-8.3	Concerned that in the event of an oil spill, the tides in Haro Strait will spread the spill all over the Salish Sea.	09-Jul-2015, Meeting	**09-Jul-2015, Meeting:** Clarified that no oil or coal will be shipped through RBT2, but that fuel would be used to power the ship.	**Addressed in MSA Appendix 5-B (#99):** The effects of tides and currents in the dispersion of spilled material are considered within the assessment of potential accidents and malfunctions (MSA Section 10.0), and in particular within the technical analysis of the marine fate of shipping spill-type accidents (MSA Appendix 10-B).	**MSA** Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents or Malfunctions 10.3.3 Identification of Plausible Worst-case Accident or Malfunction Scenarios

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				A description of spill response protocols is included in MSA Section 10.0.	10.4 Mitigation Measures Appendix 10-B Marine Shipping Supplemental Report: Marine Fate of Shipping Spill-type Accidents
EFN-8.4	Concerned with the potential for an accident, as the ocean is their table, culture, and what makes them who they are. Stated that the risk of an incident is ultimately borne by First Nations. Stated that even if the VFPA is not transporting oil, there is potential risk.	23-Jul-2015, Meeting	**23-Jul-2015, Meeting:** Recorded comment for consideration by the Project team. **09-Nov-2015, letter from the VFPA:** Provided Esquimalt Nation with a copy of the MSA, which included Appendix 5-B summarizing the issues and interests raised by Indigenous groups and the VFPA's responses.	**Addressed in MSA Appendix 5-B (#104):** The assessment of potential accidents or malfunctions (MSA Section 10.0), considers the effects of a plausible worst-case spill scenario on the environment. The plausible worst-case scenario assessed is a powered grounding of a container ship resulting in a release of heavy fuel oil. The location of the plausible worst-case spill scenario is in Boundary Passage near the south end of South Pender Island. MSA Section 10.0 includes a description of the applicable mitigation for a plausible worst-case spill scenario. **Addressed in MSA Section 10.0:** The assessment of potential accidents or malfunctions considers a variety of potential effects related to two plausible worst-case scenarios selected based on the analysed probabilities of occurrence, higher risk areas, and possible consequences: • A collision between a container ship and a small vessel within an existing shipping lane, resulting in damage to the vessel and/or gear as well a serious injury or fatality; and • A powered grounding of a container ship on a hard substrate, resulting in a spill of 7,500 m^3 of heavy fuel oil. In both cases, the identified residual adverse effects are unlikely to occur, because of the very low probability of the accident scenarios. A description of spill response protocols is also included in MSA Section 10.0. The assessment of potential accidents or malfunctions (MSA Section 10.0) includes consideration of potential effects of accidents or malfunctions arising from marine shipping associated with the Project on human health. As discussed in MSA Section 10.5.9, coastal Indigenous peoples generally have a greater reliance on the harvesting and consumption of seafoods than the general population in the marine shipping area. This could result in a greater potential for contaminant exposures among communities and greater magnitude of exposures for some individuals, to the extent that harvesting and consumption continues following a spill event, and in absence of specific testing and risk management measures to directly assess the safety of the marine resource(s) affected. Thus, a greater proportion of Indigenous community members might be affected, with greater contaminant exposure potential initially. However, the effects are still expected to be short-term, reversible, and geographically localised. **Addressed in EIS Appendix 30-A:** As reported in the EIS, 0.7% of containers moving through Deltaport currently contain hazardous and noxious substances (2012 data; see EIS Appendix 30-A). As containers are either stuffed or destuffed away from the terminal in the Lower Mainland, or simply loaded onto inland-bound trains, the probability of containers carrying hazardous and noxious substances affecting vegetation on shore is exceedingly low. **Additional information provided by the VFPA:**	**MSA** Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents or Malfunctions 10.3.3 Identification of Plausible Worst-case Accident or Malfunction Scenarios 10.4 Mitigation **EIS** Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment **VFPA Statistics Overview 2017** (https://www.portvancouver.com/wp-content/uploads/2018/03/2017-Stats-Overview-1.pdf) **Information Requests** Responses to Sufficiency Information Requests #01 to 12 (IR11-01 to IR11-12)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				In 2017, the top ten container cargos accounting for approximately 73% of total inbound and outbound container cargo were household goods; lumber; woodpulp; specialty crops, construction and materials; industrial, auto and vehicle parts; basic metals; meat, fish and poultry; and waste paper. MSA Section 10.5.13 assesses the potential effects on Current Use and potential impacts on the ability to exercise asserted or established Aboriginal and treaty rights resulting from accidents or malfunctions arising from marine shipping associated with the Project. The assessment for the plausible worst-case spill scenario concluded that, with the exception of human health, measurable residual adverse effects are predicted for all valued components. In all cases, the identified residual adverse effects of a spill are unlikely to occur, because of the very low probability of an accident or malfunction that could result in a spill. With the exceptions of residual effects on marine mammals (southern resident killer whale), marine commercial use (guided sport fishing and marine-based tourism sub-components), outdoor recreation, archaeological and heritage resources, and Current Use, adverse residual effects were considered not significant. A serious residual adverse impact on the ability of Indigenous groups to exercise Aboriginal and treaty rights in areas overlapping or near the hypothetical spill area would be expected in the event of such a spill. The plausible worst-case collision scenario has the potential to result in measurable residual adverse effects on human health, marine commercial use, outdoor recreation, Current Use, and asserted or established Aboriginal and treaty rights. In all cases, the identified residual adverse effects of a collision are unlikely to occur, because of the very low probability of collision. The assessment concluded that residual adverse effects are expected to be not significant for marine commercial use and outdoor recreation, but significant for human health. For Current Use, the residual effect could range from not significant to significant, depending on the capacity of the affected Indigenous group to continue to undertake Current Use. In the event of a collision between a vessel engaged in traditional use activities and a container ship, a minor to serious adverse residual impact on the ability of the affected Indigenous group to exercise Aboriginal and treaty rights associated with those activities would be expected. The identified residual adverse effects of a collision are unlikely to occur, because of the very low probability of collision. **Addressed in Responses to IR11-01 to IR11-12:** The VFPA's responses to IR11-01 to IR11-12, as requested by the Review Panel, will further discuss aspects of potential accidents and malfunctions related to the project and marine shipping associated with the project.	
EFN-8.5	Concerned with Canada's ability to respond to an incident, which was highlighted by the recent *Marathassa* spill in the Burrard Inlet.	23-Jul-2015, Meeting	**23-Jul-2015, Meeting:** Recorded comment for consideration by the Project team. **09-Nov-2015, letter from the VFPA:**	**Addressed in MSA Appendix 5-B (#102):** Details on spill response, including responsibilities of various parties, response timelines, and equipment requirements, are provided in the mitigation section of the assessment of potential accidents or malfunctions (MSA Section 10.0).	**MSA** Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents or Malfunctions 10.4 Mitigation Measures

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			Provided Esquimalt Nation with a copy of the MSA, which included Appendix 5-B summarizing the issues and interests raised by Indigenous groups and the VFPA's responses.	Detailed Oil Spill Response Plans are prepared and executed by the WCMRC and submitted to Transport Canada. Additional information is available here: http://wcmrc.com/. **Additional information provided by the VFPA:** The *Canada Shipping Act, 2001* is Transport Canada's regulatory framework surrounding marine pollution and its enforcement. In the case of a report of pollution in the water, including oil or fuel spills, Canada operates under the National Spill Response Protocol, which specifies that the Canadian Coast Guard is responsible for ensuring the clean-up of ship sourced spills of oil and other pollutants. While the VFPA is not the lead agency when it comes to spill response, it provides assistance often in the form of working with first responders and other agencies, providing information on a situation through the 24/7 operations centre, security cameras, patrol boats, and drone. As per a 2009 letter of understanding, the VFPA can be called upon by the Coast Guard to conduct an initial inspection in response to a pollution report in our federal jurisdiction. On the west coast, the Canadian Coast Guard contracts spill clean-up to WCMRC. This is also the agency that ships or terminal operators are required to call if they discover they have been the source of a spill. **Further information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), letter to the Review Panel dated December 20, 2017 (CEAR Document #1133), and Transport Canada's response to TC IRs 10-15 and supporting documents, provide additional information on the Government of Canada's Oceans Protection Plan which includes information on emergency response coordination.	https://www.portvancouver.com/about-us/topics-of-interest/emergencies-and-spill-response/ http://wcmrc.com/ **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**
EFN-8.6	Concerned with the toxicity of bunker fuel.	23-Jul-2015, Meeting	**23-Jul-2015, Meeting:** Stated that bunker fuel is used as fuel to propel the vessel. The assessment provides information on the toxicity of a fuel spill, [inclusive of a description of bunker fuel (heavy fuel oil).] **09-Nov-2015, letter from the VFPA:** Provided Esquimalt Nation with a copy of the MSA, which included Appendix 5-B summarizing the issues and interests raised by Indigenous groups and the VFPA's responses.	**Addressed in MSA Appendix 5-B (#104):** The assessment of potential accidents or malfunctions (MSA Section 10.0), considers the effects of a plausible worst-case spill scenario on the environment. The plausible worst-case scenario assessed is a powered grounding of a container ship resulting in a release of heavy fuel oil. The location of the plausible worst-case spill scenario is in Boundary Passage near the south end of South Pender Island. MSA Section 10.0 includes a description of the applicable mitigation for a plausible worst-case spill scenario.	**MSA** Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents or Malfunctions 10.3.3 Identification of Plausible Worst-case Accident or Malfunction Scenarios 10.4 Mitigation Measures
EFN-8.7	Raised a concern about the MSA's assessment of a potential spill involving a project container ship being limited to: 1. One location (Boundary Passage), 2. One season (Spring), and	28-Oct-2016, Letter to Panel (CEAR Document #638)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Appendix 5-B (#78):** The assessment is based on a plausible worst-case spill scenario that occurs in Boundary Passage at the south end of South Pender Island. The plausible worst-case spill scenario was selected based on probability of occurrence, likely locations, and potential effects. The	**MSA** Appendix 5-B Aboriginal Issues and Interests 10.0 Potential Accidents and Malfunctions

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	3. One type of accident or malfunction (a hard grounding). Stated that these limitations fail to adequately assess the potential impacts of accidents and malfunctions on the environment and Esquimalt Nation. Stated that the Panel should require the VFPA to revise the MSA to include: • A hypothetical spill at least one additional location along the marine shipping lane, within or near Esquimalt Nation's traditional territory; • For each hypothetical spill, an assessment of the potential impacts of that spill in at least two seasons (for example Spring and Summer); • For each hypothetical spill and season, an assessment of the possibility of heavy fuel reaching Esquimalt Harbour; • A discussion on how the spill response for and potential impacts from an allision, a collision, a soft grounding or an explosion may differ from a spill resulting from a hard grounding, and how the spill response for and potential impacts may differ if the vessel sinks as a result of the allision, collision, grounding or explosion, as applicable; and • An assessment of potential impacts in the event one or more containers carrying hazardous materials fall off a Project container ship at least two locations along the marine shipping route, and that Esquimalt Nation should be consulted by the proponent and Canada regarding those revisions.			effects from a spill on Current Use would not be identical if the spill occurred in a different location; however, the risk reduction and spill response measures would be similar to those applicable to the plausible worst-case scenario assessed, and the likelihood of residual effects from a spill is lower in other areas than the location of the plausible worst-case scenario. **Addressed in MSA Appendix 5-B (#92):** The assessment of potential accidents and malfunctions (MSA Section 10.0) considers a plausible worst-case spill scenario, located in Segment B of the marine shipping area, in Boundary Passage at the south end of South Pender Island. This location is near Turn Point. Boundary Passage is considered a higher risk area due to the relatively narrow passage, potential navigational hazards, and prevailing wind directions. The assessment also includes a description of applicable mitigation. **Addressed in Responses to IR11-01 to IR11-12:** The VFPA's responses to IR11-01 to IR11-12, as requested by the Review Panel, will further discuss aspects of potential accidents and malfunctions related to the project and marine shipping associated with the project.	10.3.3 Identification of Plausible Worst-case Accident or Malfunction Scenarios ***Updated EIS Guidelines*** **Information Requests** Response to Sufficiency Information Requests #01 to 12 (IR11-01 to IR11-12)
EFN-8.8	Stated that potential impacts an accident or malfunction may have on Esquimalt Nation include: • May restrict the times and locations in which Esquimalt Nation can exercise their Aboriginal and Treaty Harvesting Rights due to regulated or voluntary spill-related closures; • May reduce the quantity and quality of Marine Resources Esquimalt Nation have a right to harvest under their Aboriginal and Treaty Harvesting Rights, and economic benefits to Esquimalt Nation from those resources; • May damage the habitat and food sources that Marine Resources require to survive and reproduce; • May damage vessels or gear utilised to exercise Esquimalt Nation's Aboriginal and Treaty Harvesting Rights; • May restrict the times and locations in which Esquimalt Nation members can engage in traditional ceremonies due to contamination of waters, shorelines, or marine resources used in those ceremonies; • May damage burial sites, archaeological remains, and other areas of cultural or spiritual significance to Esquimalt Nation;	28-Oct-2016, Letter to Panel (CEAR Document #638)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 10.0:** The assessment of potential accidents or malfunctions considers a variety of potential effects related to two plausible worst-case scenarios selected based on the analysed probabilities of occurrence, higher risk areas, and possible consequences: • A collision between a container ship and a small vessel within an existing shipping lane, resulting in damage to the vessel and/or gear as well a serious injury or fatality; and • A powered grounding of a container ship on a hard substrate, resulting in a spill of 7,500 m^3 of heavy fuel oil. In both cases, the identified residual adverse effects are unlikely to occur, because of the very low probability of the accident scenarios.	**MSA** 10.0 Potential Accidents or Malfunctions 10.3.3 Identification of Plausible Worst-case Accident or Malfunction Scenarios

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	• May result in negative human health impacts to Esquimalt Nation members; • May result in a loss in property value, loss in revenues from, or loss of an opportunity to develop reserve or other lands Esquimalt Nation currently has or acquires an interest in; and • May result in a loss of revenues from businesses Esquimalt Nation currently has or acquires an interest in.				
EFN-8.9	Stated that regardless of whether or not the Project is approved, Canada should implement the following measures: • A requirement that one or more emergency response towing vessels be stationed at strategic locations along the marine shipping route; • A requirement that a resident salvor and personnel as well as salvage equipment be stationed at strategic locations along the marine shipping route; and • A requirement that, at least by 2030 and sooner if possible, only container ships with double hulled fuel tanks be allowed in Canadian waters.	28-Oct-2016, Letter to Panel (CEAR Document #638)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** Although the regulated care and control of vessels calling at the Port of Vancouver is limited to its marine jurisdiction, the VFPA is supportive of initiatives by other agencies and authorities in reducing marine shipping-related risks outside of its jurisdiction. The *Canada Shipping Act, 2001* is Transport Canada's regulatory framework surrounding marine pollution and its enforcement. In the case of a report of pollution in the water, including oil or fuel spills, Canada operates under the National Spill Response Protocol, which specifies that the Canadian Coast Guard is responsible for ensuring the clean-up of ship sourced spills of oil and other pollutants. While the VFPA is not the lead agency when it comes to spill response, it provides assistance often in the form of working with first responders and other agencies, providing information on a situation through the 24/7 operations centre, security cameras, patrol boats, and drone. As per a 2009 letter of understanding, the VFPA can be called upon by the Coast Guard to conduct an initial inspection in response to a pollution report in our federal jurisdiction. On the west coast, the Canadian Coast Guard contracts spill clean-up to WCMRC. This is also the agency that ships or terminal operators are required to call if they discover they have been the source of a spill. **Further information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), letter to the Review Panel dated December 20, 2017 (CEAR Document #1133), and Transport Canada's response to TC IRs 10-15 and supporting documents, provide additional information on the Government of Canada's Oceans Protection Plan which includes information on emergency response coordination.	https://www.portvancouver.com/about-us/topics-of-interest/emergencies-and-spill-response/ http://wcmrc.com/ **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**
EFN-8.10	In reference to MARPOL, asked whether it is possible to implement it in Canada sooner than 2030, for example if container ship owners divert container ships that do not have double hulled fuel tanks to other countries that do not yet require all container ships to be double hulled.	28-Oct-2016, Letter to Panel (CEAR Document #638)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** The VFPA does not have the ability to direct container ship owners to divert ships in the suggested fashion. As is described in EIS Appendix 30-A, Section 2.2.2, it is noted that virtually all container ships calling at a fully-operational RBT2 (in 2030) would be in compliance with the IMO 2010 MARPOL convention concerning double hulled container ships.	**EIS** Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment
EFN-8.11	Stated that Canada should conduct a review of existing research regarding the fate and behavior of heavy fuel and, if necessary, either conduct or require the proponent	28-Oct-2016, Letter to Panel (CEAR	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** The VFPA supports Canada's leadership in advancing spill preparedness and response in the Salish Sea, including its recently announced ongoing research initiatives as a part of the federal Oceans	

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	to conduct additional research to fill any gaps in existing research.	Document #638)		Protection Plan. Other organisations such as Clear Seas are also contributing to research considering risks, mitigation measures, and best practices for marine shipping on Canada's west coast.	
EFN-8.12	Stated that regardless of whether or not the Project proceeds, WCMRC should be required to maintain its equipment cache in Esquimalt Harbour. Stated that Canada should assess any deficiencies in the responses to the Esquimalt Harbour and English Bay spills and either implement or recommend improvements to address those deficiencies, and that Canada and/or WCMRC should consult with Esquimalt Nation regarding the possibility of training one or more Esquimalt Nation members in spill response measures. Stated that Canada and British Columbia should also consider and, where appropriate, implement the various spill response planning recommendations in the 2001 Report sponsored by the Pacific States / British Columbia Oil Spill Task Force. Concerned that they may have difficulty securing compensation for damages to its culture and Aboriginal and Treaty Harvesting Rights in the event of a spill involving a Project container ship. As such, Esquimalt Nation seeks further information from Canada on how damages to their culture and Aboriginal and Treaty Harvesting Rights would be compensated under the spill compensation regime and, if the compensation process for these matters is inadequate, a commitment from Canada to address that inadequacy.	28-Oct-2016, Letter to Panel (CEAR Document #638)l	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** The *Canada Shipping Act, 2001* is Transport Canada's regulatory framework surrounding marine pollution and its enforcement. In the case of a report of pollution in the water, including oil or fuel spills, Canada operates under the National Spill Response Protocol, which specifies that the Canadian Coast Guard is responsible for ensuring the clean-up of ship sourced spills of oil and other pollutants. While the VFPA is not the lead agency when it comes to spill response, it provides assistance often in the form of working with first responders and other agencies, providing information on a situation through the 24/7 operations centre, security cameras, patrol boats, and drone. As per a 2009 letter of understanding, the VFPA can be called upon by the Coast Guard to conduct an initial inspection in response to a pollution report in our federal jurisdiction. On the west coast, the Canadian Coast Guard contracts spill clean-up to WCMRC. This is also the agency that ships or terminal operators are required to call if they discover they have been the source of a spill. **Further information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), letter to the Review Panel dated December 20, 2017 (CEAR Document #1133), and Transport Canada's response to TC IRs 10-15 and supporting documents, provide additional information on the Government of Canada's Oceans Protection Plan which includes information on emergency response coordination.	**From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**
EFN-8.13	Stated that they seek further information from the proponent and/or Canada regarding the compensation regime in the event a contaminant other than oil is released from a Project container ship, for example if a container carrying hazardous materials falls overboard.	28-Oct-2016, Letter to Panel (CEAR Document #638)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 10.3.2.1:** MSA Section 10.3.2.1 discusses the likelihood of containers carrying hazardous materials falling overboard. The 2010 Hazardous and Noxious Substances (HNS) Convention sets out a shared liability regime to compensate claimants for damages arising from the international or domestic carriage of HNS by seagoing vessels. The HNS Convention follows the two-tier model of compensation of the international oil pollution liability and compensation regime (Civil Liability Convention (CLC) and the International Oil Pollution Compensation (IOPC) Fund), which Canada adopted in 1989. The Convention differs from the oil pollution regime mainly in that it covers many more substances and combines the shipowner liability regime and the HNS Fund into one instrument. Further information is available on Transport Canada's website. **Additional information provided by the VFPA:** Transport Canada's response to TC IRs 10-15 and supporting documents, provide additional information on the Government of Canada's Oceans Protection Plan which includes information on the *International Convention on Limitation of Liability for Maritime Claims* as well as information on Canada's Ship-Source Oil Pollution Fund.	**MSA** 10.3.2.1 Loss Overboard of Containers from Ships In-transit in Semi-protected Waters **Transport Canada: Overview of the 2010 Hazardous and Noxious Substances Convention** https://www.tc.gc.ca/eng/policy/acf-acfi-hns-overview-2609.htm

Table 9: Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Lands and Resources for Traditional Purposes

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
EFN-9.1	Concerned with VFPA's reliance on traditional use study data commissioned by Kinder Morgan, as the report was prepared by a consultant contracted to the proponent. Concerned that the Current Use Summary is based on Traditional Marine Use Study Reports prepared by TERA. Stated that these are not comprehensive. Stated various edits to the Current Use Summary. Stated that the draft Current Use Summary does not reflect their concerns regarding potential impacts from the Project related to day-to-day operations and accidents and malfunctions, their economic interest, or their concerns around cumulative effects.	09-Jul-2015, Meeting 14-Sep-2015, Letter	**09-Jul-2015, Meeting:** Stated that the VFPA will incorporate feedback from Esquimalt Nation into the Current Use summary to ensure that it properly reflects the community. **14-Sep-2015:** Recorded comment for consideration by the Project team. **29-Oct-2015, letter from the VFPA:** Based on the guidance provided in the *Updated EIS Guidelines*, the MSA is to rely on information from publicly available sources where possible. Stated that comments on the contents of the draft summary of Esquimalt Nation's Current Use of Lands and Resources for Traditional Purposes will be considered and incorporated into the MSA. The VFPA will additionally respond to each of these concerns directly in a letter at a later date. **09-Nov-2015, letter from the VFPA:** Provided Esquimalt Nation with a copy of the MSA, which included Appendix 5-B summarizing the issues and interests raised by Indigenous groups and the VFPA's responses.	**Addressed in MSA Appendix 5-B (#12):** The VFPA has engaged with Indigenous groups with the objective of obtaining the views of Indigenous groups on potential effects of changes to the environment on Indigenous peoples, and potential adverse impacts of the Project on potential or established Aboriginal or treaty rights. The VFPA has also provided the opportunity to review the summary of Current Use existing conditions information specific to each Indigenous group prior to completing the assessment. Feedback received on these summaries has been considered and incorporated, as has additional information provided by Indigenous groups. The CEA Agency will provide Indigenous groups an opportunity to review the environmental studies following the submission of the Marine Shipping Supplemental Report. **Addressed in MSA Appendix 5-B (#67):** The VFPA has engaged with each of the Indigenous groups listed in the *Updated EIS Guidelines* and provide drafts of Current Use existing conditions sections, and to request any additional Current Use information that the Indigenous group may wish to provide. The revised Current Use summary, following incorporation of any additional input from Indigenous groups is provided in the assessment of Current Use (MSA Section 9.5). The VFPA has acknowledged the challenges of participating in consultation during summer months, and has extended timelines to accommodate the provision of additional information from Indigenous groups. The VFPA has provided funding to Indigenous groups participating in consultation, and considers the amount of funding offered to be adequate and proportionate to the level of effort required by each Indigenous group to participate, given the scope of work. The VFPA increased the funding provided in some circumstances in response to specific requests.	**MSA** 5.0 Aboriginal Groups Engagement and Consultation 5.1.2 Consultation Objectives 5.1.4 Aboriginal Groups Engagement and Consultation Methods Appendix 5-B Aboriginal Issues and Interests 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4.7 Existing Conditions, Esquimalt Nation 9.5.11 Potential Adverse Impacts on Asserted or Established Aboriginal and Treaty Rights
EFN-9.2	Stated that Esquimalt is expecting future use to be higher than it is today and is concerned that the Current Use profile will not reflect this. Emphasised that just because they do not harvest a particular marine resource or make use of a particular marine area does not diminish their rights.	09-Jul-2015, Meeting 14-Sep-2015, Letter	**09-Jul-2015, Meeting:** Stated that this information has been recorded and can be incorporated into the study. **14-Sep-2015:** Recorded comment for consideration by the Project team. **29-Oct-2015, letter from the VFPA:** Stated that comments on the contents of the draft summary of Esquimalt Nation's Current Use of Lands and Resources for Traditional Purposes will be considered and incorporated into the MSA. The	**Addressed in MSA Appendix 5-B (#81):** Concern is noted. The VFPA acknowledges that reported Current Use in a given area does not necessarily reflect past levels of use or desired future use by Indigenous groups, and this is reflected in the assessment wherever relevant as indicated by an Indigenous group. The assessment of potential adverse effects on Aboriginal and treaty rights is primarily based on the results of the Current Use analysis and effects assessment, as well as the results of the Indigenous group consultation undertaken for the Project. The assessment of Current Use does not limit the assessment of Aboriginal and treaty rights. The assessment of rights includes all Aboriginal and treaty rights, regardless of whether they are being currently exercised.	**MSA** Appendix 5-B Aboriginal Issues and Interests 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4 Existing Conditions 9.5.11 Potential Adverse Impacts on Asserted or Established Aboriginal and Treaty Rights

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			VFPA will additionally respond to each of these concerns directly in a letter at a later date. **09-Nov-2015, letter from the VFPA:** Provided Esquimalt Nation with a copy of the MSA, which included Appendix 5-B summarizing the issues and interests raised by Indigenous groups and the VFPA's responses.		
EFN-9.3	Concerned that the increase of freighters and tankers constitutes an infringement of their traditional territory.	15-Nov-2017, Letter to Panel (CEAR Document #1095)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 9.5:** Potential impacts to the exercise of asserted or established rights are assessed for each Indigenous group in MSA Section 9.5. As described in that section, considering the conclusions of the Current Use assessment, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the defined marine shipping area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups to identify measures that would reduce the impact of the international shipping lanes to fishing by Indigenous groups. These mitigation measures for addressing potential incremental effects on Current Use are expected to also be effective at addressing the potential incremental impact to the exercise of Aboriginal and treaty rights.	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights
EFN-9.4	Concerned that the routine operation of Project container ships may impact the exercise of their Aboriginal and Treaty Harvesting Rights, for example by • Restricting the times and locations in which those rights can be exercised; • Disrupting travelways utilised by Esquimalt Nation members to exercise those rights; and • Increasing the likelihood of a collision between a container ship and a vessel owned or operated by Esquimalt Nation or an Esquimalt Nation member.	28-Oct-2016, Letter to Panel (CEAR Document #638)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Appendix 5-B (#4):** The MSA addresses potential effects from routine (day-to-day) marine shipping associated with the Project outside of VFPA jurisdiction, as well as potential accidents or malfunctions on components of the physical, biophysical, and social environment. Potential effects on Indigenous groups are described in the assessments of human health (MSA Section 9.1), marine commercial use (MSA Section 9.2), outdoor recreation (MSA Section 9.3), archaeological and heritage resources (MSA Section 9.4), and Current Use (MSA Section 9.5). Where relevant, the VFPA has proposed mitigation to be considered by those regulators with jurisdiction in the area. **Addressed in MSA Section 9.5:** As noted in MSA Section 9.5, taking a precautionary approach, the assessment of potential impacts to Indigenous groups' ability to exercise asserted or established Aboriginal and treaty rights as a result of Project-associated shipping was based on the assumption that traditional use presently occurring in the marine shipping area (i.e., Current Use) is an expression of the exercise of Aboriginal or treaty rights. Where traditional use was not identified as occurring at present within the marine shipping area, but similar use was identified as practiced in the past in the marine shipping area, asserted as an Aboriginal right, or protected under treaty, this use was assumed to be potentially exercisable as an Aboriginal or treaty right, and	**MSA** Appendix 5-B Aboriginal Issues and Interests 9.2 Marine Commercial Use 9.2.4 Existing Conditions 9.2.5 Potential Interactions and Effects 9.3 Outdoor Recreation 9.3.5 Potential Interactions and Effects 9.4.6.1 Negligible Effect #1 – Disturbance from Vessel Wake 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.5.1 Negligible Effects of Vessel Transit on Current Use 9.5.5.2 Potential Effects of Vessel Transit on Current Use

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				subject to potential impacts as a result of Project-associated shipping in much the same way as potential effects on Current Use. Considering the conclusions of the Current Use assessment presented in MSA Section 9.5, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the marine shipping area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups to identify measures that would reduce the impact of the international shipping lanes to fishing by Indigenous groups. These mitigation measures for addressing potential incremental effects on Current Use are expected to also be effective at addressing the potential incremental impact to the exercise of Aboriginal and treaty rights.	9.5.6 Suggested Mitigation Measures 9.5.7 Residual Effects Assessment and Significance Determination

Table 10: Project Benefits

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
EFN-10.1	Concerned that the CEA Agency or review process will not address concerns related to economic impacts or larger economic considerations. Concerned that the VFPA does not have the capacity to discuss Project-related benefits with Esquimalt and as such, only two of the three key areas covered in consultation can be discussed (i.e., cultural and environmental concerns). Requested to discuss employment, contracting, benefits, and environmental/cultural protections with the VFPA. Stated that Esquimalt Nation has a right to benefit from economic activities in their territory. Stated that there have been no discussion of shared benefits and no discussion of possible impacts to Esquimalt's economic interest. Reiterated interest in economic benefits and requested that the VFPA broaden their mandate. Stated that they should be granted an equitable share of the economic benefits from the Project. Stated that they have not secured a commitment from the proponent or the federal or provincial governments to share in any economic benefits of the Project in the event it proceeds. Concerned about the lack of commitment from the VFPA, the federal, or provincial governments to share economic benefits with Esquimalt Nation. Expressed their right and capacity to share in the wealth generated on or facilitated by the use of their traditional territorial sea. Expressed the fundamental connection between the sharing of wealth within their traditional territory and their constitutionally protected rights. Indicated that there is a fundamental legal right to share in the wealth that is generated in, on, and by the use of the waters within their territorial sea with regards to the Project. Expressed that without the sharing of wealth generated by the Project, there can be no true reconciliation and, without that, there can be no free, prior, and informed consent to the Project by Esquimalt Nation.	09-Jul-2015, Meeting 23-Jul-2015, Meeting 14-Sep-2015, Letter 28-Oct-2016, Letter to Panel (CEAR Document #638) 15-Aug-2017, Letter 18-Oct-2017, Letter 15-Nov-2017, Letter to Panel (CEAR Document #1095)	**29-Oct-2015, Letter from the VFPA:** A response to your question regarding economic benefits associated with the Project will be provided at a later date. **25-Apr-2016, Letter from the VFPA:** Stated that there will be an opportunity for all Indigenous groups, including Esquimalt Nation, to benefit from employment and contracting opportunities from the Project. Noted that potential opportunities associated with the Project are outlined in the EIS (Section 19.0 Labour Market and 20.0 Economic Development). The VFPA will be releasing further information regarding these opportunities on the Project website (http://www.robertsbankterminal2.com/) when the information becomes available. Specific economic interests of Indigenous groups that could be affected by marine shipping associated with RBT2 (both commercial and non-commercial) were identified in MSA Section 9.5.4 existing conditions summaries, where this information was provided by Indigenous groups, including Esquimalt Nation. Noted that MSA Section 9.5.4.7 has been updated to include the economic interests identified by Esquimalt Nation, to the following effect: "Esquimalt Nation has identified economic interests in the Marine Shipping Area, including but not limited to a 50% interest in a parcel of land and a 50% leasehold interest in a water lot in West Bay (leased to a third party for the operation of an RV Park, marina, and floathome village), and a 50% interest in a parcel of land adjacent to Rock Bay (Esquimalt Nation 2015). Both of these locations are in Victoria Harbour, but Esquimalt Nation reports exploring other economic development opportunities in the Greater Victoria region, including on the Esquimalt reserve in Esquimalt Harbour (Esquimalt Nation 2015)" (see "Marine Resource Use" subsection). **18-Jan-2018, Letter from the VFPA:** Provided an explanation of the VFPA's mandate and mitigation measures related to marine shipping associated with the Project. Explained that regarding potential impacts of marine shipping associated with the Project, which is beyond the VFPA's jurisdiction, the VFPA's approach has been to work with government departments and agencies that do have jurisdiction over marine shipping to determine feasible measures to reduce or avoid the impacts that marine shipping associated with the Project may have on Aboriginal and treaty rights. Stated that taking into account proposed mitigation, the Project is not likely to impact Esquimalt Nation's asserted or established Aboriginal or treaty rights. For this reason, as well as the fact that marine shipping associated with the Project is outside of the VFPA's care and control, the VFPA is not prepared at this time to negotiate a mutual benefits agreement. That being said, the VFPA recognises that there are many potential economic benefits arising from the Project—both direct and indirect—and the VFPA is always open to further discussions with Esquimalt Nation in this regard.	**Addressed in MSA Appendix 5-B (#6):** This topic is not within the scope of assessment for the MSA, as defined by the *Updated EIS Guidelines*. An assessment of potential economic effects of the Project is included in EIS Section 20.0.	**MSA** Appendix 5-B Aboriginal Issues and Interests

APPENDIX IR10-01-C20

SONGHEES FIRST NATION: ISSUES, VIEWS, AND CONCERNS RELATED TO THE PROPOSED PROJECT AND MARINE SHIPPING ASSOCIATED WITH THE PROJECT

Table 1: Economic Development – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Song-1.1	Concerned with potential impacts from marine shipping to Songhees First Nation economic interests on Chatham Island, including planned cultural tours, and to marine resources in this area.	24-Aug-2015, Meeting	**24-Aug-2015, Meeting:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the Vancouver Fraser Port Authority (VFPA):** Provided a copy of the Marine Shipping Addendum (MSA), which included MSA Appendix 5-B that summarised Indigenous issues and interests and the VFPA's responses.	**Addressed in MSA Section 9.2:** MSA Section 9.2 presents an assessment of potential effects of marine shipping associated with the Project on marine commercial use. An assessment of marine commercial use was conducted to evaluate the potential effects of Project-associated marine shipping on commercial fish and seafood harvesting (including Indigenous marine fish and seafood harvesting), guided sport fishing, marine based tourism, and marine transportation. Existing marine commercial use within the marine shipping area includes fishing and seafood harvesting of crab, shrimp, salmon, rockfish, red sea urchin, and a variety of other marine resources. Guided sport fishing activities focus on various salmon species, and whale-watching activities focus on southern resident killer whales, humpback whales, and Steller sea lions. Commercial marine transportation activities in the marine shipping area include cargo and container ships, tankers, tugs and barges, and ferries. Potential effects on all types of marine commercial use assessed were determined to be negligible. These negligible effects include changes in each of: area use and access; biophysical conditions for marine fish, invertebrates, and mammals; availability of fish and seafood; marine mammal presence; and environmental setting due to marine shipping associated with the Project. **Addressed in Response to IR10-27:** The VFPA's response to IR10-27, as requested by the Review Panel, discusses potential effects of the proposed Project on existing business ventures that have been identified by Indigenous groups.	**MSA (CEAR Document #316)** 9.2 Marine Commercial Use 9.2.4 Existing Conditions, Aboriginal Marine Fish and Seafood Commercial Harvesting 9.2.5 Potential Interactions and Effects 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4 Existing Conditions 9.5.5.1 Negligible Effects of Vessel Transit on Current Use **Information Requests** Response to Sufficiency Information Request #27 (IR10-27)

Table 2: Engagement and Consultation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Song-2.1	Expressed interest in funding from both the Canadian Environmental Assessment Agency (CEA Agency) and the VFPA.	24-Aug-2015, Meeting	**24-Aug-2015, Meeting:** Explained the two streams of funding. Noted the VFPA's offer of funding for engagement on marine shipping. **25-Aug-2015, Email from the VFPA:** Provided contact information for the CEA Agency and Panel Manager. **18-Sep-2017, Letter from the VFPA:** Offered further funding for engagement on marine shipping and requested to meet to discuss the concerns raised to date.	**Additional information provided by the VFPA:** The VFPA notes that the funding offered was not accepted by Songhees First Nation. Songheess First Nation advised the VFPA on 11-Sep-2015 that they would not be particpating in the review of this Project.	

Table 3: Marine Fish – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Song-3.1	Concerned with impacts to traditional activities and marine resources such as kelp beds at Chatham Island. Concerned about potential impacts to fish and fish habitat.	24-Aug-2015, Meeting	**24-Aug-2015, Meeting:** Explained that the existing shipping lanes would be used. Stated where more information could be found on fish and fish habitat in the Environmental Impact Statement (EIS, CEAR Document #181). **25-Aug-2015, Email from the VFPA:** Stated that existing conditions for fish and fish habitat will be described in the MSA, which will be completed in the fall. Potential effects to fish and fish habitat that may be associated with marine shipping include those associated with ship wake, underwater noise, and a potential accident or malfunction causing a spill of bunker fuel or other hazardous materials. These effects will be evaluated in the report. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Section 8.1 Marine Fish and Fish Habitat.	**Addressed in MSA Section 8.1:** An assessment was undertaken to evaluate the potential effects of Project-associated marine shipping on marine fish and fish habitat (including marine vegetation and marine invertebrates) within the marine shipping area and located within the Salish Sea. Potential effects of vessel wake-generated waves on marine fish and fish habitat were characterised as negligible, because only 2% of coastline in the local assessment area is within the wake-related zone of influence, and because wake-generated wave heights at shorelines are predicted to be well within the range of natural wave conditions. Fish and fish habitat are already adapted to the natural conditions; therefore, any wake-related influences would not be distinguishable from existing conditions. Similarly, potential effects of underwater noise were also considered to be negligible because noise associated with Project-associated marine vessel activity and future cumulative shipping activities would not exceed injury thresholds for fish species or the Pacific salmon species behavioural threshold. Further, while noise-induced behavioural changes are possible for Pacific herring, potential effects would be localised to within 20 metres of a container ship and of short duration (as the ship passes by) and are therefore not anticipated to affect the integrity of populations within the local assessment area.	**MSA** 8.1 Marine Fish and Fish Habitat 8.1.5.5 Marine Fish 8.1.6 Potential Interactions and Effects 8.1.6.1 Negligible Effects

Table 4: Project Overview and Description

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Song-4.1	Asked if oil would be shipped in the containers.	24-Aug-2015, Meeting	**24-Aug-2015, Meeting:** Explained that it would not but that consumer goods and natural resources, like lumber, are the main cargo.		

APPENDIX IR10-01-C21

T'SOU-KE FIRST NATION: ISSUES, VIEWS, AND CONCERNS RELATED TO THE PROPOSED PROJECT AND MARINE SHIPPING ASSOCIATED WITH THE PROJECT

Table 1: Environmental Assessment and Permitting Process

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
T'SFN-1.1	Concerned that the Vancouver Fraser Port Authority's (VFPA's) proposed approach to assessing the potential effects of marine traffic on T'Sou-ke First Nation is limited. Concerned about the Canadian Environmental Assessment Agency's (CEA Agency) decision that marine shipping activities are not going to be assessed under the designated project as part of the *Canadian Environmental Assessment Act* (*CEAA*) *2012*. Concerned that marine shipping activities have been unlawfully excluded from the "designated project" that must be assessed under the CEA Agency. Requested that: 1. The Minister must amend the "designated project" being assessed under *CEAA 2012* to include marine shipping activities, and revise the Terms of Reference (TOR); 2. The CEA Agency must revise the *EIS Guidelines* accordingly; 3. Prior to revising the TOR and *EIS Guidelines*, Canada must consult with T'Sou-ke about those decisions; 4. Canada must take steps to initiate consultation with T'Sou-ke in relation to the environmental assessment and how the Project may adversely impact T'Sou-ke's rights; and 5. The CEA Agency must exercise its power under s. 39 of *CEAA 2012* to require the VFPA to commission (and pay for) a Marine Traditional Use Study (MTUS) to be carried out by T'Sou-ke to assess how the Project may impact T'Sou-ke's rights, and submit a revised Addendum containing this information. Reiterated their concerns in 27-Oct-2016 letter.	17-Jun-2015, Letter 18-Aug-2015, Meeting 18-Dec-2015, Letter to the CEA Agency (CEAR Document #380) 27-Oct-2016, Letter to Panel (CEAR Document #665) 20-Nov-2017, Letter to Panel (CEAR Document #1107)	**26-Jun-2015, Letter from the VFPA:** Responded requesting to meet to discuss concerns. **18-Aug-2015, Meeting:** Stated that T'Sou-ke First Nation's concern is recorded and the VFPA will connect T'Sou-ke with the VFPA's legal counsel. Stated that this concern can also be directed towards the CEA Agency. **24-Aug-2015, Email from the VFPA:** The VFPA's legal counsel was in contact with legal counsel for T'Sou-ke First Nation. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the Marine Shipping Addendum (MSA), which included MSA Appendix 5-B that summarised Indigenous issues and interests and the VFPA's responses. **15-Jul-2016, Letter from the CEA Agency (CEAR Document #488):** *"The Agency appreciates the details you provided in your December 18, 2015 letter about the T'Sou-ke's concerns on marine shipping associated with the Project, including impacts to T'Sou-ke's rights. We encourage T'Sou-ke to expand on and present these concerns to the Panel… In your letter, you also requested that marine shipping associated with the Project become part of the designed Project, rather than being included in the process by means of subsection 19(1)(j) of CEAA 2012. The factors listed in subsection 19(1) of CEAA 2012 must be considered by the Panel. One of these factors is marine shipping associated with the Project which is beyond the care and control of the proponent and within the 12 nautical mile limit of Canada's territorial sea. The Panel is required to report on its consideration of this factor in the Panel Report."*	**Addressed in MSA Appendix 5-B (#17):** The VFPA advised the CEA Agency of this concern through MSA Appendix 5-B (#17). **Addressed in *Updated EIS Guidelines*:** On April 17, 2015, the CEA Agency issued *Updated Guidelines for the Preparation of an Environmental Impact Statement* (*Updated EIS Guidelines)* that included the addition of environmental effects of marine shipping associated with the Project, beyond the scope of the Project (VFPA jurisdiction) to the 12 nautical mile limit of Canada's territorial sea. In October 2015, the VFPA submitted to the CEA Agency the MSA. **Additional information provided by the VFPA:** The VFPA understands that marine shipping associated with the Project outside of Port of Vancouver's jurisdiction is not formally considered to be part of the Project for the purposes of the Minister's decision whether the Project is likely to cause significant adverse environmental effects. However, the MSA provides information to the federal government regarding the potential effects of marine shipping associated with the Project, which can be used to inform programs or activities within federal jurisdiction.	**Marine Shipping Addendum (MSA, CEAR Document #316)** 1.0 Introduction Appendix 5-B Aboriginal Issues and Interests ***Updated EIS Guidelines Statement*** (**CEAR Document #177)**
T'SFN-1.2	Concerned that T'Sou-ke First Nation was not consulted on key environmental assessment decisions.	18-Dec-2015, Letter to the CEA Agency (CEAR Document #380)	**15-Jul-2016, Letter from the CEA Agency (CEAR Document #488):** *"The Agency appreciates the details you provided in your December 18, 2015 letter about the T'Sou-ke's concerns on marine shipping associated with the Project, including impacts to T'Sou-ke's rights. We encourage T'Sou-ke to expand on and present these concerns to the Panel."*		

Table 2: Engagement and Consultation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
T'SFN-2.1	Requested funding to complete a MTUS. Stated that T'Sou-ke First Nation submitted a budget for a MTUS to the VFPA but they would only cover a fraction of the cost. Stated that a Project-specific MTUS is required in order to address the requirements related to effects of the Project on lands and resources. Requested funding from the VFPA for a MTUS. Reiterated its request for funding for a MTUS. Stated that the VFPA's offer of funding would not cover the costs of T'Sou-ke First Nation engaging in this Project. Requested that the Review Panel exercise its power under s. 44(2) of *CEAA 2012* to require the Port to (i) commission and pay for a MTUS to be carried out by T'Sou-ke First Nation to assess how the Project may impact T'Sou-ke First Nation's rights and its current use of lands and resources for traditional purposes (Current Use), and (ii) submit a revised report containing this information.	17-Jun-2015, Letter 18-Aug-2015, Meeting 03-Nov-2015, Letter 18-Dec-2015, Letter to the CEA Agency (CEAR Document #380) 30-Oct-2017, Phone call with Chief of T'Sou-ke First Nation 20-Nov-2017, Letter to Panel (CEAR Document #1107)	**26-Jun-2015, Letter from the VFPA:** Responded summarising concerns heard and requesting a meeting to discuss. **18-Aug-2015, Meeting:** Explained the scope of the marine shipping study and the use of available existing information per the direction from the CEA Agency that went into the summary provided to them. Requested that T'Sou-ke First Nation write a letter outlining the budget and timeline of the MTUS. **25-Sep-2015, Letter from the VFPA:** Offered funding for the preparation of a MTUS. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and the VFPA's responses. **12-Nov-2015, Letter from the VFPA:** Stated that the MSA had been submitted to the CEA Agency and that the VFPA had offered funding for an MTUS in its September 25, letter. Stated that consultation outside of the VFPA's jurisdiction could be directed to Transport Canada. Stated that T'Sou-ke First Nation may also choose to submit comments or evidence regarding T'Sou-ke First Nation's rights and Current Use directly to the Panel Secretariat at [contact information provided]. **15-Jul-2016, Letter from the CEA Agency (CEAR Document #488):** *"With respect to your request to require VFPA to commission and fund a MTUS to be carried out by T'Sou-ke, the Review Panel is currently conducting the review of the sufficiency of the information provided to date by VFPA. If you feel this information is missing and necessary for the analysis of the potential environmental effects of marine shipping associated with the Project on T'Sou-ke's current use of lands and resources for traditional purposes, physical and cultural heritage or health and socio-economic conditions, please use the process established by the Panel to request that this information be collected by VFPA."* **30-Oct-2017, Phone call with Chief of T'Sou-ke First Nation:** Committed to take back requests to the VFPA. **20-Feb-2018, Letter from the VFPA:** Stated that in terms of the funding requested to conduct a MTUS for the Project and its related marine shipping, the VFPA indicated that it understood that the request was first put forth in 2015 and in response the VFPA offered some funding for a study at that time. Stated that T'Sou-ke First Nation declined the funding and the VFPA proceeded with compiling information regarding Current Use from publicly available materials. The VFPA submitted that information to the CEA Agency in the MSA on October 26, 2015, and the CEA Agency concluded its completeness review of the MSA on May 10, 2016. The Summary of T'Sou-ke First Nation's Current Use and Aboriginal and Treaty Rights in MSA Section 9.5.4.9. Stated that if T'Sou-ke First Nation has any additional information to share with us or with the Panel, the VFPA would be happy to consider it.	**Addressed in MSA Appendix 5-B (#67):** The VFPA has engaged with each of the Indigenous groups listed in the *Updated EIS Guidelines* and provide drafts of Current Use existing conditions sections, and to request any additional Current Use information that the Indigenous group may wish to provide. The revised Current Use summary, following incorporation of any additional input from Indigenous groups is provided in the assessment of Current Use (MSA Section 9.5). The VFPA has acknowledged the challenges of participating in consultation during summer months and has extended timelines to accommodate the provision of additional information from Indigenous groups. The VFPA has provided funding to Indigenous groups participating in consultation and considers the amount of funding offered to be adequate and proportionate to the level of effort required by each Indigenous group to participate, given the scope of work. The VFPA increased the funding provided in some circumstances in response to specific requests. **Addressed in MSA Appendix 5-B (#17):** The VFPA advised the CEA Agency of this concern by way of MSA Appendix 5-B (#17).	**MSA** 5.0 Aboriginal Groups Engagement and Consultation 5.1.2 Consultation Objectives 5.1.4 Aboriginal Groups Engagement and Consultation Methods 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4.9 Existing Conditions, T'Sou-ke First Nation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
T'SFN-2.2	Stated that capacity funding is required so T'Sou-ke First Nation can better understand the proposed project and its effects on T'Sou-ke First Nation use of resources in the territory. Stated that the participation funding offered by the VFPA was inadequate. Requested funding for consultation. Reiterated request for funding from the VFPA for consultation.	17-Jun-2015, Letter 18-Aug-2015, Meeting 14-Sep-2015, Letter 03-Nov-2015, Letter 30-Oct-2017, Phone call with Chief of T'Sou-ke First Nation	**26-Jun-2015, Letter from the VFPA:** Responded summarising concerns heard and requesting a meeting to discuss. **18-Aug-2015, Meeting:** Explained the scope of the MSA. **25-Sep-2015, Letter from the VFPA:** Responded stating that the VFPA would increase its participation funding. **12-Nov-2015, Letter from the VFPA:** Reiterated the VFPA's offer of funding for participation funding. **30-Oct-2017, Phone call:** Committed to relay T'Sou-ke First Nation's requests back to the VFPA. **20-Feb-2018, Letter from the VFPA:** Stated that in response to T'Sou-ke First Nation's request for funding for consultation, the VFPA is willing to offer funding to cover the costs of a meeting on the Project and its related marine shipping. The goal of the meeting would be two-fold: 1. To develop a more fulsome understanding of the specific concerns T'Sou-ke First Nation raised related to marine shipping. 2. To identify, where possible, solutions to the concerns you identified. The VFPA is specifically interested in discussing what measures could be taken to address T'Sou-ke First Nation's concerns. Stated that if T'Sou-ke First Nation is interested, the VFPA can provide a funding agreement.	**Addressed in MSA Appendix 5-B (#8):** Concern is noted. The VFPA considers the amount of funding offered to be adequate and proportionate to the level of effort required by each Indigenous group to participate, given the scope of work. The VFPA increased the funding provided in some circumstances in response to specific requests.	**MSA** Appendix 5-B Aboriginal Issues and Interests

Table 3: Marine Fish – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
T'SFN-3.1	Concerned that the increase in vessel traffic associated with the Project would adversely impact salmon and other marine species by further congesting migration paths and reducing available habitat.	20-Nov-2017, Letter to Panel (CEAR Document #1107)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in the Environmental Impact Statement (EIS #181) Section 13.0:** Potential Project-related effects on marine fish, including all five species of Pacific salmon, are considered in the EIS. The assessment concludes there are no significant adverse effects from the Project, as marine fish productivity or long-term integrity would not be compromised. The Project is not expected to result in measurable incremental adverse cumulative effects to marine fish. In addition, the potential effects of the Project with respect to the ongoing productivity of commercial, recreational, and Aboriginal fisheries are evaluated in the EIS. **Addressed in MSA Sections 8.1 and 9.2:** The assessment of potential effects of marine shipping associated with the Project on salmon, including potential effects to spawning and migration, is included in MSA Section 8.1. Potential effects of vessel wake-generated waves on marine fish and fish habitat were characterised as negligible, because only 2% of coastline in the local assessment area is within the wake-related zone of influence, and because wake-generated wave heights at shorelines are predicted to be well within the range of natural wave conditions. Similarly, potential effects of underwater noise were also considered to be negligible because noise associated with Project-associated marine vessel activity and future cumulative shipping activities would not exceed injury thresholds for fish species or the Pacific salmon species behavioural threshold. MSA Section 9.2 further evaluates the potential effects of Project-associated marine shipping on commercial fish and seafood harvesting (including Indigenous marine fish and seafood harvesting), guided sport fishing, marine-based tourism, and marine transportation. Potential effects on all types of marine commercial use assessed were determined to be negligible. These negligible effects include changes in each of: area use and access; biophysical conditions for marine fish, invertebrates, and mammals; availability of fish and seafood; marine mammal presence; and environmental setting due to marine shipping associated with the Project.	**EIS (CEAR Document #181)** 13.0 Marine Fish **MSA** 8.1 Marine Fish and Fish Habitat 9.2 Marine Commercial Use
T'SFN-3.2	Concerned about the introduction of invasive species into waters within their territory by way of transport in ballast water, and their outcompeting or preying upon native species or otherwise disrupting the marine and coastal ecosystem.	20-Nov-2017, Letter to Panel (CEAR Document #1107)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in EIS Appendix 7.2-B (#100):** The VFPA was the first port in North America to prohibit in-port ballast water exchange without prior mid-ocean exchange, a practice which became the basis of government requirements now enforced by Transport Canada. To prevent the invasion of foreign species into local waters, international regulations, through the International Maritime Organization (IMO), are managed by Transport Canada. All commercial deep sea vessels are required to carry out a ballast water exchange prior to entering Canadian waters. This is done outside the exclusive economic zone of 200 nautical miles (nm) and in water deeper than 2,000 metres. By requiring vessels to complete this ballast 'flush' well outside Canadian waters, the aim is to prevent any foreign organisms from entering into the local ecosystem. The U.S.A. has similar requirements, and vessels arriving from the Puget Sound area need to forward the completed U.S. forms to Canadian authorities prior to entry into Canadian waters. **Addressed in TC IR-02 to TC IR-06:** In its response to the Review Panel's Information Requests of May 10, 2017, Transport Canada has indicated that with respect to chronic oiling, the use of anti-fouling agents, and discharges of ballast water, bilge water, and sewage, that marine water quality in the marine shipping area is not expected to change because these potential contributors are regulated by the *Canada Shipping Act, 2001*, and in particular the Vessel Pollution and Dangerous Chemicals Regulations (VPDCR) under this act. Furthermore, Transport Canada states that "In relation to the Project, the technical requirements of the VPDCR apply to all vessels over 400 gross tonnage. As such, all container ships and most tugs serving container ships that would call at the proposed RBT2 would be subject to these requirements".	**EIS** 4.0 Project Description 4.4.2 Operation-phase Activities 9.7 Marine Water Quality 9.7.8 Future Conditions with the Project Appendix 7.2-B Aboriginal Issues and Interests **Transport Canada Information Requests #02 to #06 (TC IR-02 to TC IR-06 of CEAR Document #962)**

Table 4: Marine Mammals – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
T'SFN-4.1	Expressed concerns about the waterway and southern resident killer whales. Emphasised that southern resident killer whales are a priority for them. Concerned about the Project's threat to the southern resident killer whales within their territory and infringements of their Aboriginal title, rights, and treaty rights that are linked to, and depend upon, those whales.	30-Oct-2017, Phone call with Chief of T'Sou-ke First Nation 20-Nov-2017, Letter to Panel (CEAR Document #1107)	**30-Oct-2017, Phone call:** Offered to bring technical experts to speak to concerns around marine mammals, marine shipping, etc. (Offer was declined by Chief Planes stating that he does not want technical people and does not need more western science.)	**Addressed in EIS Appendix 7.2-B (#92):** Project-related adverse residual effects to southern resident killer whales (and all toothed whales) are expected to be not significant. The Project contribution of effects above existing conditions is very small and is not anticipated to adversely affect individuals or affect critical habitat features (acoustic environment, the availability of prey, and water and sediment quality) when needed by southern resident killer whales for their life functions of foraging, mating, resting, or socialising. Destruction of southern resident killer whale critical habitat from Project construction and operation is not anticipated, and the Project will not limit the survival or recovery of southern resident killer whales. **Additional information provided by the VFPA:** In 2014, the VFPA-led Enhancing Cetacean Habitat and Observation (ECHO) Program was developed as a collaborative initiative aimed at better understanding and managing the impact of shipping activities on at-risk whales throughout the southern coast of B.C. The VFPA-led ECHO Program engages and involves key regional interested parties to maximise program success and help ensure that mitigation and management measures developed through the program are informed by social, cultural, economic, and environmental sustainability interests. The ECHO Program is guided by the advice and input of an advisory working group, and supported by a federal government advisory committee and associated technical committees. Through engagement and consultation with stakeholders, the ECHO Program has initiated or supported short-term projects, scientific studies, and educational initiatives to fill knowledge gaps necessary to inform the development of credible, science-based threat reduction solutions and management options to reduce cumulative effects of shipping to at-risk whales in the region. MSA Section 9.5 includes assessment of the effects of the Project on T'Sou-ke First Nation's Current Use and rights.	**EIS** 14.0 Marine Mammals **MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights **Information Request Package 10 – December 19, 2017 (CEAR Document #1130)**

Table 5: Marine Shipping Addendum

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
T'SFN-5.1	Concerned about the damage to intertidal and shoreline habitats from increased frequency in wakes created by the large vessels due to the Project.	20-Nov-2017, Letter to Panel (CEAR Document #1107)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in Response to IR-7.31.15-21:** As noted in the VFPA's response to IR-7.31.15-21, as requested by the Review Panel, although the probability slightly increases from Project-associated vessels (0.034% during calm conditions), wake-generated waves from Project-associated vessels will not result in a change to the shorelines in the marine shipping area due to the similarity of interaction at the shoreline from wake-generated and wind-generated waves.	**MSA** 7.2 Wave Environment 7.2.5 Incremental Changes to the Wave Environment from Marine Shipping Associated with the Project Appendix 5-B Aboriginal Issues and Interests Appendix 7.2-B Ship Wake Calculations **Information Requests** Response to Information Request #21 (IR-7.31.15-21 of CEAR Document #388)

Table 6: Marine Water Quality – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
T'SFN-6.1	Concerned about the contamination from increased industrial pollution associated with vessel garbage, fuel leaks, and ballast waters.	20-Nov-2017, Letter to Panel (CEAR Document #1107)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in TC IR-02 to TC IR-06:** In its response to the Review Panel's Information Requests of May 10, 2017, Transport Canada has indicated that with respect to chronic oiling, the use of anti-fouling agents, and discharges of ballast water, bilge water, and sewage, that marine water quality in the marine shipping area is not expected to change because these potential contributors are regulated by the *Canada Shipping Act, 2001*, and in particular the VPDCR under this act. Furthermore, Transport Canada states that "In relation to the Project, the technical requirements of the VPDCR apply to all vessels over 400 gross tonnage. As such, all container ships and most tugs serving container ships that would call at the proposed RBT2 would be subject to these requirements".	**Transport Canada Information Requests #02 to #06 (TC IR-02 to TC IR-06 of CEAR Document #962)**

Table 7: Potential Accidents or Malfunctions

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
T'SFN-7.1	Concerned with potential accidents and malfunctions of container ships and subsequent impacts to rights. Concerned that increased volume of vessel traffic, as well as accidents and malfunctions from those ships, has the potential to adversely affect and infringe T'Sou-ke First Nation's rights.	17-Jun-2015, Letter 18-Dec-2015, Letter to the CEA Agency (CEAR Document #380)	**21-Jun-2015, Email from the VFPA:** Responded requesting to meet to discuss concerns. (A meeting on 18-Aug-2015 was scheduled. Discussion focused on T'Sou-ke First Nation's request for Traditional Use Study.) **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and the VFPA's responses. **15-Jul-2016, Letter from the CEA Agency (CEAR Document #488):** *"The Agency appreciates the details you provided in your December 18, 2015 letter about the T'Sou-ke's concerns on marine shipping associated with the Project, including impacts to T'Sou-ke's rights. We encourage T'Sou-ke to expand on and present these concerns to the Panel."*	**Addressed in MSA Appendix 5-B (#103):** The potential effects of an oil spill on marine resources, including marine birds, marine mammals, and marine fish and fish habitat are considered within the assessment of potential accidents or malfunctions (MSA Section 10.0). This section also considers the potential effects on Current Use, and related impacts on rights, resulting from effects on marine resources. **Addressed in MSA Section 10.0:** The assessment of potential accidents or malfunctions considers a variety of potential effects related to two plausible worst-case scenarios selected based on the analysed probabilities of occurrence, higher risk areas, and possible consequences: • A collision between a container ship and a small vessel within an existing shipping lane, resulting in damage to the vessel and/or gear as well a serious injury or fatality; and • A powered grounding of a container ship on a hard substrate, resulting in a spill of 7,500 m^3 of heavy fuel oil. In both cases, the identified residual adverse effects are unlikely to occur, because of the very low probability of the accident scenarios. MSA Section 10.5.13 assesses the potential effects on Current Use and potential impacts on the ability to exercise asserted or established Aboriginal and treaty rights resulting from accidents or malfunctions arising from marine shipping associated with the Project. The assessment for the plausible worst-case spill scenario concluded that, with the exception of human health, measurable residual adverse effects are predicted for all valued components. In all cases, the identified residual adverse effects of a spill are unlikely to occur, because of the very low probability of an accident or malfunction that could result in a spill. With the exceptions of residual effects on marine mammals (southern resident killer whale), marine commercial use (guided sport fishing and marine-based tourism sub-components), outdoor recreation, archaeological and heritage resources, and Current Use, adverse residual effects were considered not significant. A serious residual adverse impact on the ability of Indigenous groups to exercise Aboriginal and treaty rights in areas overlapping or near the hypothetical spill area would be expected in the event of such a spill. The plausible worst-case collision scenario has the potential to result in measurable residual adverse effects on human health, marine commercial use, outdoor recreation, Current Use, and asserted or established Aboriginal and treaty rights. In all cases, the identified residual adverse effects of a collision are unlikely to occur, because of the very low probability of collision. The assessment concluded that residual adverse effects are expected to be not significant for marine commercial use and outdoor recreation, but significant for human health. For Current Use, the residual effect could range from not significant to significant,	**MSA** 10.0 Potential Accidents or Malfunctions 10.3.3 Identification of Plausible Worst-case Accident or Malfunction Scenarios 10.5.6 Marine Fish and Fish Habitat 10.5.7 Marine Mammals 10.5.13 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights Appendix 5-B Aboriginal Issues and Interests **Information Requests** Response to Sufficiency Information Request #15 (IR10-15) **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				depending on the capacity of the affected Indigenous group to continue to undertake Current Use. In the event of a collision between a vessel engaged in traditional use activities and a container ship, a minor to serious adverse residual impact on the ability of the affected Indigenous group to exercise Aboriginal and treaty rights associated with those activities would be expected. The identified residual adverse effects of a collision are unlikely to occur, because of the very low probability of collision. **Addressed in Response to IR10-15:** The VFPA's response to IR10-15, as requested by the Review Panel, further discusses potential effects to the quality of the Current Use experience resulting from marine shipping associated with the project. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954) and letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provide additional information on the Government of Canada's Oceans Protection Plan which includes information on emergency response.	

Table 8: Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Lands and Resources for Traditional Purposes

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
T'SFN-8.1	Concerned with the VFPA's proposed approach to use existing sources to gather information on T'Sou-ke First Nation Current Use within the marine shipping area. Stated that T'Sou-ke First Nation does not authorise the use of other project MTUS for the purposes of this Project.	17-Jun-2015, Letter 03-Nov-2015, Letter	**25-Jun-2015, Letter from the VFPA:** Acknowledged receipt of letter and T'Sou-ke First Nation's concern regarding the proposed approach to use existing sources to gather information on T'Sou-ke First Nation Current Use within the marine shipping area. Requested a meeting with T'Sou-ke First Nation to discuss this concern along with the other matters raised. **20-Jul-2015, Letter from the VFPA:** Provided T'Sou-ke First Nation with a draft summary of T'Sou-ke First Nation's Current Use for review and comment. Stated that the VFPA is sharing this advanced draft and the VFPA's intention to confirm with T'Sou-ke First Nation that the information is accurately presented and whether any revisions, additions, or deletions are required. **25-Sep-2015, Letter from the VFPA:** Stated that in regard to the concern of the use of the MTUS submitted to the National Energy Board for the Trans Mountain Pipeline Expansion project as a source of information on T'Sou-ke First Nation's Current Use in the marine shipping area, the VFPA will remove any reference to that report. Stated that the VFPA will follow-up by phone to determine whether any changes are requested. **05-Oct-2015, Email:** Requested confirmation on whether it is T'Sou-ke First Nation's preference to keep the information contained in the VFPA's Current Use summary (which was shared with T'Sou-ke First Nation in July for review) as it is, or remove all information obtained from the Kinder Morgan source materials. **12-Nov-2015, Letter from the VFPA:** Summarised the VFPA's efforts to obtain input from T'Sou-ke First Nation on the MSA and its offer to fund a MTUS in relation to the Project. Stated that the MSA has now been submitted to the CEA Agency, which	**Addressed in *Updated Guidelines*:** On April 17, 2015, the CEA Agency issued *Updated EIS Guidelines* that included the addition of environmental effects of marine shipping associated with the Project, beyond the scope of the Project (the VFPA jurisdiction) to the 12 nautical mile limit of Canada's territorial sea. In October 2015, the VFPA submitted to the CEA Agency the MSA. The VFPA understands that marine shipping associated with the Project outside of Port of Vancouver's jurisdiction is not formally considered to be part of the Project for the purposes of the Minister's decision whether the Project is likely to cause significant adverse environmental effects. However, the MSA provides information to the federal government regarding the potential effects of marine shipping associated with the Project, which can be used to inform programs or activities within federal jurisdiction. Section 17 of *Updated EIS Guidelines* notes: "To the degree possible, the proponent should maximise the use of existing material that is relevant to marine shipping activities associated with the Project which is beyond proponent's care and control and within the 12 nautical mile limit of the territorial sea. Existing material may be utilized from academic studies, work of government and non-government working groups, past or ongoing environmental assessments, Aboriginal traditional knowledge reports or any other source the proponent deems appropriate for its presentation of this material." The use of information from the National Energy Board Review of the Trans Mountain Expansion Project therefore is consistent with the CEA Agency direction.	***Updated EIS Guidelines***

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			referenced T'Sou-ke First Nation's submissions to the National Energy Board regarding the Trans Mountain Pipeline Expansion project, including the T'Sou-ke First Nation Traditional Marine Resource Knowledge and Use Study Report, and prior to receiving T'Sou-ke First Nation's response on November 3, 2015.		
T'SFN-8.2	Concerned about the Project's impact on T'Sou-ke First Nation's already reduced ability to exercise their Indigenous subsistence and commercial harvesting of clams within their territory.	20-Nov-2017, Letter to Panel (CEAR Document #1107)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 9.2:** An assessment of marine commercial use was conducted to evaluate the potential effects of Project associated marine shipping on commercial fish and seafood harvesting (including Indigenous marine fish and seafood harvesting), guided sport fishing, marine based tourism, and marine transportation. Existing marine commercial use within the marine shipping area includes fishing and seafood harvesting of crab, shrimp, salmon, rockfish, red sea urchin, and a variety of other marine resources. Guided sport fishing activities focus on various salmon species, and whale-watching activities focus on southern resident killer whales, humpback whales, and Steller sea lions. Commercial marine transportation activities in the marine shipping area include cargo and container ships, tankers, tugs and barges, and ferries. Potential effects on all types of marine commercial use assessed were determined to be negligible. These negligible effects include changes in each of: area use and access; biophysical conditions for marine fish, invertebrates, and mammals; availability of fish and seafood; marine mammal presence; and environmental setting due to marine shipping associated with the Project.	**MSA** 9.2 Marine Commercial Use
T'SFN-8.3	Concerned about the impact to T'Sou-ke First Nation members' valuable fishing gear (including fishing nets and lines).	20-Nov-2017, Letter to Panel (CEAR Document #1107)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 9.2.5.1:** As is noted in MSA section 9.2.5.1, while no statistics on fishing gear loss or damage are available, gear interactions with large vessels within the local assessment area have been anecdotally characterised as infrequent (TMX 2013d, Volume 8A, Section 4.0). Based on this information, vessel transit due to Project-associated shipping is not anticipated to result in a measurable change in the level of damage or loss of commercial fishing gear, and therefore this potential effect is determined to be negligible.	**MSA** 9.2 Marine Commercial Use 9.2.5.1 Negligible Effects
T'SFN-8.4	Concerned with increased marine traffic and subsequent impacts to T'Sou-ke First Nation Aboriginal rights. Concerned with cumulative effects of marine traffic on rights, spiritual connection to territory, physical well-being, and identity. Concerned that the increase in vessel traffic associated with the Project has the potential to cause significant adverse environmental effects to their use of marine resources for traditional	17-Jun-2015, Letter 20-Nov-2017, Letter to Panel (CEAR Document #1107)	**26-Jun-2015, Letter from the VFPA:** Requested to set up a time to meet to discuss concerns. (A meeting on 18-Aug-2015 was scheduled. Discussion focused on T'Sou-ke First Nation's request for Traditional Use study.) **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and the VFPA's responses.	**Addressed in MSA Appendix 5-B (#83):** The assessment of Current Use (MSA Section 9.5) includes cultural considerations, such as cultural practices and sites of importance, as well as intangible cultural heritage considerations, such as the expression of cultural values or ways of knowing, and the formation and maintenance of cultural identity, in the assessment of quality of Current Use experience. The assessment describes how Current Use activities have been affected cumulatively by other projects and activities that have been carried out. As residual effects to Current Use as a result of marine shipping associated with the Project are not predicted, an assessment of future cumulative effects was not carried out. The assessment of potential adverse impacts on asserted or established Aboriginal and treaty rights is included in MSA Section 9.5. **Addressed in Response to IR10-22:** The VFPA's response to IR10-22, as requested by the Review Panel, further discusses the assessment of cultural heritage, potential disruptions or loss of ceremonial and cultural practices, as well as a potential disruption to sense of belonging, identity and spirituality.	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4 Existing Conditions 9.5.5.1 Negligible Effects of Vessel Transit on Current Use 9.5.5.2 Potential Effects of Vessel Transit on Current Use 9.5.11 Potential Adverse Impacts on Asserted or Established Aboriginal and Treaty Rights Appendix 5-B Aboriginal Issues and Interests **Information Requests** Response to Sufficiency Information Request #22 (IR10-22)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	purposes and seriously impact/infringe on their Aboriginal title, rights, and treaty rights. Concerned that marine shipping associated with the Project, on its own and in combination with other existing and proposed marine shipping activities (including from the recently approved Trans Mountain Pipeline Expansion project), will impact their territory, the exercise of their rights, their members' spiritual connection to their territory, their physical wellbeing, and their identity as a Coast Salish people. Concerned about the disruption of spiritual connections associated with T'Sou-ke First Nation members' exercise of their rights.				
T'SFN-8.5	Concerned that the increase in shipping traffic would limit T'Sou-ke First Nation's Aboriginal rights to marine navigation and travel, possibly permanently hindering T'Sou-ke First Nation members from travelling by boat in their territorial waters to reach preferred harvesting areas and culturally significant sites.	20-Nov-2017, Letter to Panel (CEAR Document #1107)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 9.5:** MSA Section 9.5 considers Current Use by Indigenous peoples, including intangible cultural heritage considerations, and in the marine shipping area. The section also considers potential impacts on the ability to exercise asserted or established Aboriginal or treaty rights in the marine shipping area, including in the context of potential accidents and malfunctions. Potential effects on Current Use as a result of Project-associated vessel transit activities are considered negligible before mitigation for access to preferred Current Use locations (specifically for ship wake), availability and quality of preferred Current Use resources, and the quality of the Current Use experience (i.e., cultural practices) tied to those aspects of Current Use. Potential effects on access to preferred Current Use locations due to Project-associated container ship pass-bys that may result in temporary displacement, and on cultural practices tied to that aspect of Current Use, are considered negligible after the implementation of mitigation.	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights
T'SFN-8.6	Concerned about possible Project impacts to their stewardship efforts, economic development initiatives, and ecosystem restoration activities, ultimately threatening their right to self-governance.	20-Nov-2017, Letter to Panel (CEAR Document #1107)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** T'Sou-ke First Nation's asserted traditional territory does not overlap the VFPA's jurisdiction nor the Project area as defined by the CEA Agency. The Project is not expected to have any impacts on any of T'Sou-ke First Nation's potential or established Aboriginal or treaty rights and related interests.	

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
T'SFN-8.7	Concerned that the Project, on its own and in combination with other existing and proposed activities, will contaminate its territory, interfere with the exercise of its rights, and will impact its members' spiritual connection to their territory, their physical wellbeing, and their identity as a Coast Salish peoples.	18-Dec-2015, Letter to the CEA Agency (CEAR Document #380)	**15-Jul-2016, Letter from the CEA Agency (CEAR Document #488):** *"The Agency appreciates the details you provided in your December 18, 2015 letter about the T'Sou-ke's concerns on marine shipping associated with the Project, including impacts to T'Sou-ke's rights. We encourage T'Sou-ke to expand on and present these concerns to the Panel."*	**Addressed in Response to IR10-22:** The VFPA's response to IR10-22, as requested by the Review Panel, further discusses the assessment of cultural heritage, potential disruptions or loss of ceremonial and cultural practices, as well as a potential disruption to sense of belonging, identity and spirituality**.** **Addressed in IR13-22:** The VFPA's forthcoming response to IR13-22 will further discuss potential Project effects on the quality and availability of preferred resources.	**Information Requests** Response to Sufficiency Information Request #22 (IR10-22) Response to Sufficiency Information Request #22 (IR13-22)
T'SFN-8.8	Concerned that Project impacts on T'Sou-ke First Nation and its Aboriginal title, rights, treaty rights, and interests are not being properly assessed. Concerned that the MSA and EIS fail to assess the impacts of the Project on T'Sou-ke First Nation's Current Use and, more generally, its rights.	18-Dec-2015, Letter to the CEA Agency (CEAR Document #380) 20-Nov-2017, Letter to Panel (CEAR Document #1107)	**15-Jul-2016, Letter from the CEA Agency (CEAR Document #488):** *"The Agency appreciates the details you provided in your December 18, 2015 letter about the T'Sou-ke's concerns on marine shipping associated with the Project, including impacts to T'Sou-ke's rights. We encourage T'Sou-ke to expand on and present these concerns to the Panel."* **18-Sep-2017, Letter from the VFPA:** *"VFPA would like to further our understanding of the concerns raised by T'Sou-ke First Nation and work together to identify mitigations to potential impacts, where possible. We are interested in meeting with T'Sou-ke First Nation this fall.* *The goal for this meeting is twofold:* *1. To develop a more fulsome understanding of the specific concerns T'Sou-ke First Nation raised related to Marine Shipping.* *2. To identify, where possible, solutions to the concerns you identified. VFPA is specifically interested in discussing what measures could be taken to address T'Sou-ke First Nation's concerns."*	**Addressed in MSA Section 9.5:** The Current Use assessment presented in MSA Section 9.5 considered potential effects occurring in Canada on: • Access to preferred Current Use locations; • Availability of preferred Current Use resources; • Quality of preferred Current Use resources; and • Quality of Current Use experience. Current Use activities examined include marine resource use, terrestrial resource use in marine areas, and other cultural practices and considerations relative to Current Use activities in or adjacent to the marine shipping area. Potential effects on Current Use as a result of Project-associated vessel transit activities are considered negligible before mitigation for access to preferred Current Use locations, due to Project-associated ship wake, the availability and quality of preferred Current Use resources, and the quality of the Current Use experience (i.e., cultural practices) tied to those aspects of Current Use. Residual effects on access to preferred Current Use locations due to Project-associated container ship pass-bys, and on cultural practices tied to that aspect of Current Use, are considered negligible after the implementation of mitigation (described below). As noted in MSA Section 9.5.11, taking a precautionary approach, the assessment of potential impacts to Indigenous groups' ability to exercise asserted or established Aboriginal and treaty rights as a result of Project-associated shipping was based on the assumption that traditional use presently occurring in the marine shipping area (i.e., Current Use) is an expression of the exercise of Aboriginal or treaty rights. Where traditional use was not identified as occurring at present within the marine shipping area, but similar use was identified as practiced in the past in the marine shipping area, asserted as an Aboriginal right, or protected under treaty, this use was assumed to be potentially exercisable as an Aboriginal or treaty right, and subject to potential impacts as a result of Project-associated shipping in much the same way as potential effects on Current Use. Considering the conclusions of the Current Use assessment presented in MSA Section 9.5, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the marine shipping area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal or Treaty Rights 9.5.11 Potential Impacts on Asserted or Established Aboriginal and Treaty Rights **Information Requests** Response to Sufficiency Information Request #02 (IR10-02) Response to Sufficiency Information Request #06 (IR10-06) Response to Sufficiency Information Request #08 (IR10-08) Response to Sufficiency Information Request #13 (IR10-13) Response to Sufficiency Information Request #15 (IR10-15)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location. These mitigation measures for addressing potential incremental effects on Current Use are expected to also be effective at addressing the potential incremental impact to the exercise of Aboriginal and treaty rights. No additional mitigation measures have therefore been suggested for the potential incremental impact to the exercise of Aboriginal and treaty rights. **Addressed in Responses to IR10-02, IR10-06, IR10-08, IR10-13, and IR10-15:** The VFPA's responses to IR10-02, IR10-06, IR10-08, IR10-13, and IR10-15, as requested by the Review Panel, further discuss aspects of the current use effects assessment.	

APPENDIX IR10-01-C22

PACHEEDAHT FIRST NATION: ISSUES, VIEWS, AND CONCERNS RELATED TO THE PROPOSED PROJECT AND MARINE SHIPPING ASSOCIATED WITH THE PROJECT

Table 1: Air Quality – Intermediate Component

#	Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Pach-1.1	Stated that the Marine Shipping Addendum (MSA) states that the estimated annual emissions from large marine vessels are predicted to be greatest within Juan de Fuca Strait (Segment D) due to the longer transit time and greater average speed of ships in that segment. Stated that if the Project goes ahead, ongoing monitoring will be required to assess the extent to which emissions are affecting air quality in Pacheedaht's territory. The exact locations for monitoring activities should be determined in consultation with Pacheedaht.	31-Oct-2016, Letter to Panel (CEAR Document #672)	The Vancouver Fraser Port Authority (VFPA) has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 11.0:** Consideration has been given to the need for and scope of follow-up to verify predicted effects related to marine shipping associated with the Project in the marine shipping area, including the need for air quality monitoring in the marine shipping area. With respect to follow-up programs to verify predicted effects, these are generally proposed to address uncertainty, such as any gaps in knowledge or understanding related to key conclusions (as noted in Environmental Impact Statement (EIS) Section 8.1.10 of CEAR Document #181). This assessment has assigned moderate or high levels of confidence ratings to the residual effect predictions based on the following: • Robust comprehension of marine shipping in the marine shipping area, including vessel activities associated with RBT2; • Considerable scientific information concerning existing intermediate components (ICs; including the air quality IC) and valued components (VCs); • A strong understanding of how Project-associated activities interact with VCs; • Appreciable knowledge of how the VC would respond to Project-associated marine shipping activities; and • Proven and established assessment methods. Because confidence in the residual effect predictions is moderate to high, no follow-up programs are suggested specifically related to the predicted effects of marine shipping associated with the Project in the marine shipping area. No other mitigation measures are being suggested for any other IC or VC that warrant ongoing assessment of their effectiveness. As such, no formal follow-up program is proposed for marine shipping associated with the Project in the marine shipping area.	**MSA (CEAR Document #316)** 11.0 Follow-Up Program

Table 2: Archaeological and Heritage Resources – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Pach-2.1	Requested a complete assessment of impacts to Pacheedaht's cultural heritage from the Project, including proposed mitigation and a determination of significance. Stated that the MSA does not include a complete assessment of impacts to Pacheedaht's cultural heritage from the Project, including intangible cultural heritage. Such an assessment is required under *CEAA, 2012*, particularly in relation to Swiftsure Bank. Stated that consultation with Pacheedaht is required in collecting this information, which will then need to be incorporated into the environmental assessment. Stated that the VFPA did not undertake any field assessments to identify archaeological sites, but rather relied on currently available information about archaeological sites. As the Port acknowledges, this information is limited, leaving the vast majority of archaeological sites undocumented. Stated concern that vulnerable shoreline archaeological sites have not been adequately identified in the MSA. A clear understanding of potential impacts to physical and cultural resources in the Project area is critical to determining the significance of effects and appropriateness of mitigation.	31-Oct-2016, Letter to Panel (CEAR Document #672)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 9.5:** MSA Section 9.5 considers the current use of lands and resources for traditional purposes (Current Use) by Indigenous peoples, including intangible cultural heritage considerations, in the marine shipping area. The VFPA has provided detailed follow-up discussions of how the assessment of impacts to cultural heritage was undertaken in: IR7.31.15-29, AIR-12.04.15-29, and MSA IR-02.24.16-10. **Addressed in MSA Section 9.4:** MSA Section 9.4 considers archaeological and heritage resources along the shores of the marine shipping area. The focus of the archaeological and heritage resources assessment is on Segment B of the marine shipping area, given the potential interaction with marine shipping associated with the Project in this area, related to vessel wake waves. **Addressed in MSA Appendix 5-B (#55):** The potential effects of vessel wakes from marine shipping associated with the Project on archaeological sites (due to erosion) are addressed in MSA Section 9.4. The local assessment area (LAA) for the archaeological and heritage resources assessment includes the entire marine shipping area, including shorelines within Pacheedaht traditional territory, Semiahmoo Bay, and Crescent Beach. **Addressed in Section 17 of the *Updated EIS Guidelines*:** Section 17 of the *Updated EIS Guidelines* notes: "It is likely that a Tier 1 approach (Qualitative; description based on expert opinion and traditional and local knowledge) will be an appropriate level of detail in most cases. For select environmental effects and locations where there may be a higher risk of environmental effects, a Tier 2 approach (Semiquantitative; measured site-specific data and existing site information) would likely be an appropriate level of detail. To the degree possible, the proponent [the VFPA] should maximise the use of existing material that is relevant to marine shipping activities associated with the Project which is beyond proponent's care and control and within the 12 nautical mile limit of the territorial sea. Existing material may be utilised from academic studies, work of government and non-government working groups, past or ongoing environmental assessments, Aboriginal traditional knowledge reports or any other source the proponent deems appropriate for its presentation of this material" The MSA's conclusions are supported by the *Pacheedaht First Nation Traditional Use and Occupancy Study* [TUOS] *Report for the Port Metro Vancouver Roberts Bank Terminal 2 Project,* dated September 2015, which included as appendices: • Pacheedaht's comments on a draft summary of existing conditions of Pacheedaht use (i.e., an earlier version of the summary presented below), prepared by the VFPA in July 2015 for Pacheedaht review and comment; • Pacheedaht First Nation Traditional Marine Use and Occupancy Study (TMUOS) 2014 Final Report, dated June 2014, prepared by the Pacheedaht in the context of Transmountain Pipeline ULC Trans Mountain Pipeline Project; and • Pacheedaht First Nation TUOS Maps for the RBT2 Project (PFN RBT2 Maps), which the Pacheedaht do not wish to be distributed or made public and have marked as confidential. **Addressed in Response to IR10-21:** The VFPA's response to IR10-21, as requested by the Review Panel, discusses potential project effects to sites of physical and cultural importance to Indigenous peoples.	**MSA** 9.4 Archaeological and Heritage Resources 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights Appendix 5-B Aboriginal Issues and Interests **Information Requests** Response to Information Request #29 (IR-7.31.15-29 of CEAR Document #388) Response to Additional Information Request #29 (AIR-12.04.15-29 of CEAR Document #345) Response to Additional Information Request #10 (MSA IR-02.24.16-10 of CEAR Document #386) Response to Sufficiency Information Request #21 (IR10-21) Response to Sufficiency Information Request #23 (IR10-23) ***Updated Guidelines for the Preparation of an Environmental Impact Statement* (*Updated EIS Guidelines*; CEAR Document #177)**

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				Addressed in Response to IR10-23: The VFPA's response to IR10-23, as requested by the Review Panel, discusses potential loss or deterioration of archaeological sites resulting from natural and ship-wake waves greater than 10 cm.	
Pach-2.2	Requested an assessment of impacts to shoreline archaeological sites from vessel wakes associated with the Project.	31-Oct-2016, Letter to Panel (CEAR Document #672)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 9.4.6:** The potential effects on archaeological and heritage resources from vessel transit (marine shipping) are viewed as negligible because the only physical mechanism for effect, vessel wakes, are predicted to be within the natural variation in size of wind waves and would reflect only a small percentage of the annual maximum storm wave energy. **Addressed in Response to IR10-21:** The VFPA's response to IR10-21, as requested by the Review Panel, discusses potential project effects to sites of physical and cultural importance to Indigenous peoples. **Addressed in IR13-19:** The VFPA's forthcoming response to IR13-19 will further discuss potential effects of shoaling on shoreline structures and sites of physical and cultural heritage importance.	**MSA** 9.4 Archaeological and Heritage Resources 9.4.5.1 Existing Conditions – Physical Environment 9.4.6.1 Negligible Effect #1 – Disturbance from Vessel Wake **Information Requests** Response to Sufficiency Information Request #21 (IR10-21) Response to Sufficiency Information Request #19 (IR13-19)

Table 3: Marine Birds – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Pach-3.1	Concerned that no mitigation measures were proposed in the MSA to reduce the risk of vessel strikes and disturbance to marine birds from marine shipping associated with the Project. Stated that Pacheedaht's TUOS contains information about numerous species of marine birds of significance to Pacheedaht. Stated that marine birds can be inadvertently harmed or disturbed as a result of marine shipping-related activities, including collision with vessels, attraction to vessel lights, and disturbance to birds feeding, roosting, or nesting on the water or in the intertidal area. Requested an assessment, including proposed mitigation, for avoiding or minimising marine bird collision and disturbance risk.	31-Oct-2016, Letter to Panel (CEAR Document #672)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 8.3:** As noted in MSA Section 8.3, potential effects of vessel wake-generated waves on marine birds were characterised as negligible, because wake-generated wave heights are predicted to be well within the range of natural wave conditions. Birds and bird habitat are already adapted to the natural wave conditions; therefore, any wake-related influences would not be distinguishable from existing conditions. Potential effects from vessel-related auditory and visual disturbance, which would be localised and of short duration (as the ship passes by), are considered to be negligible, as birds have habituated to existing conditions. Project-associated vessel activity is not expected to have a measurable effect on bird populations. Collisions with ships resulting in bird mortality are anticipated to result in a residual effect of loss of productivity, although there are no known reports of such mortalities from vessels transiting shipping lanes within the marine shipping area. This effect, therefore, is not widespread and collisions with vessels are most likely infrequent and, if they occur, are expected to be limited to a small proportion of the population. When considering cumulative effects of increased vessel activity in the marine shipping area, including marine vessel traffic associated with the Project in combination with other existing and future projects and activities, individual mortalities are likely to increase. However, the loss of productivity would not compromise long-term population integrity, and the residual effect is expected to be not significant and unlikely to occur. Cumulative effects are also unlikely to occur. **Addressed in Response to IR9-02:** The VFPA's forthcoming response to IR9-02, as requested by the Review Panel, will further discuss mitigation measures related to artificial light for migratory and non-migratory birds and avian species.	**MSA** 8.3 Marine Birds **Information Requests** Response to Sufficiency Information Request #02 (IR9-02)

Table 4: Coastal Geomorphology – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Pach-4.1	Requested a complete assessment of potential impacts to Pacheedaht from ship wake. Concerned about the potential impacts of ship wake from Project-associated vessels, including: • Damage to intertidal and shoreline habitat, which is where Pacheedaht members harvest many preferred species; and • Creating an unsafe environment for Pacheedaht members to harvest on the shorelines in their traditional territory.	31-Oct-2016, Letter to Panel (CEAR Document #672)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 7.2:** Potential changes to the wave environment from ship wake (from Project-associated vessels) was assessed for a representative container vessel with approximately 9,000 to 9,500 twenty-foot equivalent unit (TEU) capacity in MSA Section 7.2. In addition to the study of a representative vessel, a sensitivity analysis of other vessel types with differing hulls was also conducted (see MSA Appendix 7.2-B). The analysis of wake height varied by a little over 10 cm in response to the vessel hull type, compared to the representative vessel. Coastal geomorphic conditions are not expected to change from wake-generated waves as vessel wake is a small component of the existing wave climate, which is influenced by wind-generated waves and ocean swell. **Addressed in MSA Appendix 5-B (#79):** The potential changes to the wave environment from ship wake (from Project-associated vessels) are assessed in MSA Section 7.2. This assessment informs the assessment of potential effects on fish and fish habitat, including marine vegetation and marine invertebrates (MSA Section 8.1), as well as the assessment of potential effects on marine mammals (MSA Section 8.2) and on marine birds (MSA Section 8.3). The wave assessment also informs the assessment of potential effects on archaeological and heritage resources (MSA Section 9.4). The assessment of Current Use (MSA Section 9.5) includes an assessment of potential changes to the availability of preferred Current Use resources such as marine fish and fish habitat, marine mammals, and marine birds. It also considers potential effects to spiritual and cultural sites. **Addressed in MSA Section 9.5:** As noted in MSA Section 9.5.11, taking a precautionary approach, the assessment of potential impacts to Indigenous groups' ability to exercise asserted or established Aboriginal and treaty rights as a result of Project-associated shipping was based on the assumption that traditional use presently occurring in the marine shipping area (i.e., Current Use) is an expression of the exercise of Aboriginal or treaty rights. Where traditional use was not identified as occurring at present within the marine shipping area, but similar use was identified as practiced in the past in the marine shipping area, asserted as an Aboriginal right, or protected under treaty, this use was assumed to be potentially exercisable as an Aboriginal or treaty right, and subject to potential impacts as a result of Project-associated shipping in much the same way as potential effects on Current Use. Considering the conclusions of the Current Use assessment, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the marine shipping area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location. These mitigation measures for addressing potential incremental effects on Current Use are expected to also be effective at addressing the potential incremental impact to the exercise of Aboriginal and treaty rights. **Addressed in Response to IR7-21:** The VFPA's response to IR7-21, as requested by the Review Panel, although the probability slightly increases from Project-associated vessels (0.034% during calm conditions), wake-generated waves from Project-associated vessels will not result in a change to the shorelines in [the marine shipping area] due to the similarity of interaction at the shoreline from wake-generated and wind-generated waves. **Addressed in Response to IR7-22:** The VFPA's response to IR7-22, as requested by the Review Panel, discusses the potential effects of waves generated by Project-associated vessels during calm conditions on small craft engaged in activities in open water at various points and various distances from shore throughout the marine shipping area, including fishing activities in the vicinity of Swiftsure Bank. For all segments discussed in the marine shipping area, vessel wakes from Project-associated vessels are not expected to introduce new navigational hazards for small-craft operators. The vessel wakes from Project-associated vessels are not expected to introduce new navigational hazards for small-craft operators, including operators undertaking fishing activities, because of the existing energetic wave climate. **Addressed in IR13-20:** The VFPA's forthcoming response to IR13-20 will further discuss Project-related changes to the wave environment and their potential effects on current use activities, access, and navigation.	**MSA** 7.2 Wave Environment 7.2.5 Incremental Changes to the Wave Environment 8.1 Marine Fish and Fish Habitat 8.1.6.1 Negligible Effects – Vessel Wake 8.2 Marine Mammals 8.2.6.1 Negligible Effects – Habitat Degradation - Vessel Wake 8.3 Coastal Birds 8.3.6.1 Negligible Effects - Vessel Wake 9.4 Archaeological and Heritage Resources 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4 Existing Conditions 9.5.5.1 Negligible Effects of Vessel Transit on Current Use Appendix 5-B Aboriginal Issues and Interests **Information Requests** Response to Sufficiency Information Request #21 (IR7-21 of CEAR Document #1141) Response to Sufficiency Information Request #22 (IR7-22 of CEAR Document #1141) Response to Sufficiency Information Request #22 (IR13-20)

Table 5: Economic Development – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Pach-5.1	Stated that many of Pacheedaht's treaty initiatives are resource and location based, and increased shipping traffic will have adverse impacts on the post treaty rights and related interests. Stated that Pachena IR#1 and Gordon River IR#2 envelop the main beach in the heart of the territory, which Pacheedaht successfully operate as a recreational campground. Stated that with the escalated risk of accident and malfunction posed by the RBT2 Project, and the detriment to the view scape and sound scape, there will be direct consequences on Pacheedaht's major revenue generator. Stated that the increased traffic and associated risk are of great concern to Pacheedaht cultural practices and for future eco-tourism based business.	23-Sep-2015, Pacheedaht Traditional Use and Occupancy Study	**23-Sep-2015:** Recorded comment for consideration by Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Section 9.5 detailing the assessment of potential impacts to Indigenous groups' ability to exercise asserted or established Aboriginal and treaty rights as a result of Project-associated shipping.	**Addressed in MSA Section 9.5:** As noted in MSA Section 9.5.11, taking a precautionary approach, the assessment of potential impacts to Indigenous groups' ability to exercise asserted or established Aboriginal and treaty rights as a result of Project-associated shipping was based on the assumption that traditional use presently occurring in the marine shipping area (i.e., Current Use) is an expression of the exercise of Aboriginal or treaty rights. Where traditional use was not identified as occurring at present within the marine shipping area, but similar use was identified as practiced in the past in the marine shipping area, asserted as an Aboriginal right, or protected under treaty, this use was assumed to be potentially exercisable as an Aboriginal or treaty right, and subject to potential impacts as a result of Project-associated shipping in much the same way as potential effects on Current Use. Considering the conclusions of the Current Use assessment, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the marine shipping area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location. These mitigation measures for addressing potential incremental effects on Current Use are expected to also be effective at addressing the potential incremental impact to the exercise of Aboriginal and treaty rights. **Addressed in MSA Section 10.0:** The assessment of potential accidents or malfunctions considers a variety of potential effects related to two plausible worst-case scenarios selected based on the analysed probabilities of occurrence, higher risk areas, and possible consequences: • A collision between a container ship and a small vessel within an existing shipping lane, resulting in damage to the vessel and/or gear as well a serious injury or fatality; and • A powered grounding of a container ship on a hard substrate, resulting in a spill of 7,500 m^3 of heavy fuel oil. In both cases, the identified residual adverse effects are unlikely to occur, because of the very low probability of the accident scenarios. Addressed in IR10-27: The VFPA's response to IR10-27, as requested by the Review Panel, discusses potential effects of the proposed Project on existing business ventures that have been identified by Indigenous groups.	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 10.0 Potential Accidents or Malfunctions **Information Requests** Response to Sufficiency Information Request #27 (IR10-27)

Table 6: Effects Assessment Methods (including Cumulative Effects)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Pach-6.1	Concerned about the limited scope of the Terms of Reference (TOR) and that it only incudes construction and operation of the terminal and not impacts arising from container shipping activities. Requested that the TOR: • Require the Review Panel to consider and assess impacts to potentially impacted First Nations' Aboriginal and treaty rights; and • Require the Review Panel to consider impacts from marine shipping activities associated with the Project, including to s. 35 Rights. Requested that the Canadian Environmental Assessment Agency (CEA Agency) amend the TOR by requiring assessment of direct, indirect, and cumulative impacts relating to the container shipping activities associated with the Project, in the context of both operations and accidents and malfunctions.	22-Sep-2014, Letter to the CEA Agency (CEAR Document #124)	**17-Apr-2015, Letter from the CEA Agency (CEAR Document #280):** *"The Minister announced today that the Terms of Reference for the Review Panel assessing the proposed Roberts Bank Terminal 2 have been finalized. Based on feedback received during the comment period on the draft Terms of Reference, the Minister has identified two additional matters to be taken into account in the environmental assessment."* These two additional factors were: 1) The potential effects on the environment of container ships coming and going from the proposed terminal through Juan de Fuca Strait and the Strait of Georgia; and 2) The potential economic, social, heritage, and health effects of the Project.		
Pach-6.2	Stated that the environmental assessment carried out by the VFPA remains incomplete, and the information requested in the table below is necessary before the review can proceed to a public hearing. Specifically, Pacheedaht's concerns include: • Lack of group-specific information provided by the VFPA in their assessment of impacts to Current Use and Aboriginal rights; • Incomplete assessment of potential impacts to Current Use and Aboriginal rights from marine shipping, including impacts from fuel spills, damage and loss of fishing gear, risk of collisions, and ship wakes; and • Incomplete assessment of potential impacts to ecological components from marine shipping, including impacts to birds, fish, and marine mammals.	31-Oct-2016, Letter to Panel (CEAR Document #672)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Sections 8.1, 8.2, and 8.3:** MSA Sections 8.1, 8.2, and 8.3 describe potential marine biophysical effects resulting from marine shipping associated with the Project within the marine shipping area. **Addressed in MSA Section 9.5:** MSA Section 9.5 considers Current Use by Indigenous peoples, including intangible cultural heritage considerations, and in the marine shipping area. The section also considers potential impacts on the ability to exercise asserted or established Aboriginal or treaty rights in the marine shipping area, including in the context of potential accidents and malfunctions. Potential effects on Current Use as a result of Project-associated vessel transit activities are considered negligible before the application of mitigation measures for access to preferred Current Use locations, due to Project-associated ship wake, the availability and quality of preferred Current Use resources, and the quality of the Current Use experience (i.e., cultural practices) tied to those aspects of Current Use. Residual effects on access to preferred Current Use locations due to Project-associated container ship pass-bys, and on cultural practices tied to that aspect of Current Use, are considered negligible after the implementation of mitigation. Considering the conclusions of the Current Use assessment, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the marine shipping area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys.	**MSA** 8.1 Marine Fish and Fish Habitat 8.2 Marine Mammals 8.3 Marine Birds 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal or Treaty Rights 10.5 Assessment of Potential Effects of Accidents or Malfunctions **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location. These mitigation measures for addressing potential incremental effects on Current Use are expected to also be effective at addressing the potential incremental impact to the exercise of Aboriginal and treaty rights. No additional mitigation measures have therefore been suggested for the potential incremental impact to the exercise of Aboriginal and treaty rights. **Addressed in MSA Section 10.5:** The assessment of potential accidents or malfunctions considers a variety of potential effects related to two plausible worst-case scenarios selected based on the analysed probabilities of occurrence, higher risk areas, and possible consequences: • A collision between a container ship and a small vessel within an existing shipping lane, resulting in damage to the vessel and/or gear as well a serious injury or fatality; and • A powered grounding of a container ship on a hard substrate, resulting in a spill of 7,500 m^3 of heavy fuel oil. In both cases, the identified residual adverse effects are unlikely to occur, because of the very low probability of the accident scenarios. The assessment for the plausible worst-case spill scenario concluded that, with the exception of human health, measurable residual adverse effects are predicted for all VCs. In all cases, the identified residual adverse effects of a spill are unlikely to occur, because of the very low probability of an accident or malfunction that could result in a spill. With the exceptions of residual effects on marine mammals (southern resident killer whale), marine commercial use (guided sport fishing and marine-based tourism sub-components), outdoor recreation, archaeological and heritage resources, and Current Use, adverse residual effects were considered not significant. A serious residual adverse impact on the ability of Indigenous groups to exercise Aboriginal and treaty rights in areas overlapping or near the hypothetical spill area would be expected in the event of such a spill. The plausible worst-case collision scenario has the potential to result in measurable residual adverse effects on human health, marine commercial use, outdoor recreation, Current Use, and asserted or established Aboriginal and treaty rights. In all cases, the identified residual adverse effects of a collision are unlikely to occur, because of the very low probability of collision. The assessment concluded that residual adverse effects are expected to be not significant for marine commercial use and outdoor recreation, but significant for human health. For Current Use, the residual effect could range from not significant to significant, depending on the capacity of the affected Indigenous group to continue to undertake Current Use. In the event of a collision between a vessel engaged in traditional use activities and a container ship, a minor to serious adverse residual impact on the ability of the affected Indigenous group to exercise Aboriginal and treaty rights associated with those activities would be expected. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954) and letter to the Review Panel dated December 20, 2017 (CEAR Document #1133), provide additional information on the Government of Canada's Oceans Protection Plan which includes information on the development of comprehensive response systems for spills on water, proactive monitoring and response capacity on water, tougher requirements for industry response to incidents and better information sharing of marine traffic with coastal communities.	

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Pach-6.3	Stated that they do not believe the MSA is sufficiently detailed for the Review Panel to proceed to hearings. Concerned about the lack of information provided in relation to the Port's proposed mitigation measures for addressing the impacts from marine shipping. Stated that these measures are not described at a sufficient level of detail for the Review Panel to determine the degree to which they will offset the predicted environmental effects.	31-Oct-2016, Letter to Panel (CEAR Document #672)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in Response to IR10-17:** The VFPA's response to IR10-17, as requested by the Review Panel, provides further information concerning mitigation measures related to the Marine Shipping Area.	**Information Requests** Response to Sufficiency Information Request #17 (IR10-17)
Pach-6.4	Stated that the potential effects of the proposed project should be evaluated considering the context of developments and historic events. Requested a complete assessment of cumulative effects to Pacheedaht's Current Use and Aboriginal rights. Stated that Pacheedaht considers these assessments as flawed and incomplete, judging that cumulative effects from existing developments and projects to their Current Use and interests are already at an unacceptable level, so that any additional effects would further degrade already unacceptable conditions.	23-Sep-2015, Pacheedaht Traditional Use and Occupancy Study 31-Oct-2016, Letter to Panel (CEAR Document #672)	**23-Sep-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Section 9.5 detailing the assessment of potential impacts to Indigenous groups' ability to exercise asserted or established Aboriginal and treaty rights as a result of Project-associated shipping.	**Addressed in EIS Section 9.5.8:** An assessment of future cumulative effects on Current Use was not conducted as routine marine shipping associated with the Project is not expected to result in any measurable residual effect on Current Use that is likely to interact cumulatively with changes caused by other projects or activities that will be carried out. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954) and letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provide additional information on the Government of Canada's Oceans Protection Plan which includes information developing a coastal environmental baseline and cumulative effects program.	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal or Treaty Rights 9.5.8 Cumulative Effects Assessment **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**
Pach-6.5	Requested a complete assessment of cumulative effects that includes increased shipping traffic associated with potential expansions of the Ports of Seattle and Tacoma. As noted by Fisheries and Oceans Canada (DFO) in DFO IR-58, the Port's assessment of future ship transits through Juan de Fuca Strait and approaches does not take into account increases in shipping traffic associated with potential expansions of the Ports of Seattle and Tacoma.	31-Oct-2016, Letter to Panel (CEAR Document #672)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in Response to IR4-09:** In the VFPA's response to IR4-09, updated project status and vessel movement information is provided as available for the projects listed in the EIS and MSA (north of Segment B), plus other new projects considered to be certain or reasonably foreseeable (as of July 1, 2017). Specifically, Appendix IR4-09-A addresses the Ports of Seattle and Tacoma: The ports of Seattle and Tacoma have formed the Northwest Seaport Alliance (NWSA) to manage the two ports' marine cargo terminal investments, operations, planning, and marketing to strengthen the Puget Sound gateway and attract more marine cargo for the region. Two projects are currently under review: • Pier 4 Reconfiguration Project – Upon project completion cargo capacity will increase from 767,000 TEUs annually to an estimated 1.3 million TEUs. Fewer vessel calls are needed under the 'with project' condition because more containers are expected to be moved per vessel call (i.e., for 2030, 94 calls are projected without the project, and 52 calls are projected with project completion), or 188 to 104 movements per annum (reduction of 84 movements per year). • Terminal 5 Cargo Wharf Rehabilitation, Berth Deepening, Improvements Project – With project completion vessel calls are projected to decrease from six per week (existing traffic) to four per week, or 312 to 208 movements per annum (reduction of 104 movements per year).	**Information Requests** Response to Sufficiency Information Request #09 (IR4-09 of CEAR Document #1051) **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				The total decrease in vessel movements with these two projects is 188 per year. As vessel size has been held constant for projections for VFPA container terminals, this decrease has not been incorporated in the project-based approach total (i.e., calls to VFPA terminals would also decrease due to scheduled service to both regions). **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954) and letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provide additional information on the Government of Canada's Oceans Protection Plan which includes information developing a coastal environmental baseline and cumulative effects program.	
Pach-6.6	Requested a rationale for the conclusions of the effects assessment for Current Use by Indigenous peoples where the conclusions are reported as 'no effect' or 'negligible'. Stated that the VFPA provides a short summary of analysis findings but no explanation of how the facts were assessed to arrive at this conclusion (see pages 9.5-143 to 9.5-146). This differs from information found in Pacheedaht's TUOS, which expresses serious concerns about effects of marine shipping and cumulative effects of marine shipping. Expressed concerns that if residual effects are assessed as negligible, a cumulative effects assessment will not be required, and cumulative effects remain one of Pacheedaht's key concerns.	31-Oct-2016, Letter to Panel (CEAR Document #672)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in Response to IR10-13:** The VFPA's response to IR10-13, as requested by the Review Panel, provides additional information concerning the rationale for the effects assessment conclusions. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954) and letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provide additional information on the Government of Canada's Oceans Protection Plan which includes information developing a coastal environmental baseline and cumulative effects program.	**Information Requests** Response to Sufficiency Information Request #13 (IR10-13) **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**
Pach-6.7	Expressed concern that cumulative effects are not being properly considered. Requested information on how increased vessel traffic is going to be addressed.	23-Oct-2017, Meeting with the VFPA and regulatory bodies (the CEA Agency, B.C. Environmental Assessment Office (EAO)), and Canadian Coast Guard	**23-Oct-2017, Meeting:** Recorded comment for consideration by Project team.	**Addressed in Response to IR4-09:** In the MSA, cumulative effects were considered for each VC. In the VFPA's response to IR4-09, updated project status and vessel movement information is provided as available for the projects listed in the EIS and MSA (north of Segment B), plus other new projects considered to be certain or reasonably foreseeable (as of July 1, 2017). **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954) and letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provide additional information on the Government of Canada's Oceans Protection Plan which includes information developing a coastal environmental baseline and cumulative effects program.	**MSA** 8.0 Marine Biophysical Environment 9.0 Human Health **Information Requests** Response to Sufficiency Information Request #09 (IR4-09 of CEAR Document #1051) **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**

Table 7: Engagement and Consultation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Pach-7.1	Expressed concern with the MSA timelines, and the Current Use report. Requested that the VFPA extend the timeline for this work.	14-Aug-2015, Meeting	**14-Aug-2015:** Acknowledged that timelines are tight. **20-Aug-2015, Letter from the VFPA:** Acknowledged that Pacheedaht First Nation has indicated interest in participating in the review of the marine shipping associated with the Project and in conducting an associated Traditional Use Study. Agreed to provide Pacheedaht First Nation with funding on the terms and conditions set out in this letter. Requested that the final report be submitted by 21-Sep-2015. **24-Sept-2015:** Pacheedaht First Nation provided the VFPA with the report: *Pacheedaht First Nation Traditional Use and Occupancy Study Report for Port Metro Vancouver RBT2 Project*.	**Addressed in MSA Appendix 5-B (#7):** The VFPA acknowledges the challenges associated with participating in consultation during summer months, and as such has been in contact with each Indigenous group about their desire to provide comments or additional information, and has extended timelines for participation into the fall in order to accommodate these expressed interests to participate.	**MSA** 5.0 Aboriginal Groups Engagement and Consultation 5.1.2 Consultation Objectives 5.1.4 Aboriginal Groups Engagement and Consultation Methods Appendix 5-B Aboriginal Issues and Interests
Pach-7.2	Requested additional funding for continued participation.	10-Nov-2015, Meeting	**10-Nov-2015:** Committed to conveying Pacheedaht First Nation's request to the CEA Agency for funding. **10-Nov-2015, Email from the VFPA:** Provided the contact information for the Crown Consultation Coordinator and a link to information about the CEA Agency's participation funding program.	**Summary of funding provided by the VFPA:** 26-May-2015: Offered participation funding for engagement regarding marine shipping. 30-Jun-2015: Accepted funding. 20-Aug-2015: Offered funding for Marine Shipping Traditional Use Study. 26-Aug-2015: Accepted funding. 18-Sep-2017: Offered funding to facilitate participation in a meeting on marine shipping focused on mitigation. 30-Nov-2015: Accepted funding.	
Pach-7.3	Requested clarification on what information Pacheedaht is being asked to provide before the November 15 deadline.	10-Nov-2017, Letter to Panel (CEAR Document #1090)	**20-Nov-2017, Letter from Panel:** *"First, in its July 24, 2017 letter to Chief Jones, the Panel stated that:* (it) would appreciate receiving any additional information not currently available on the Registry that Pacheedaht First Nation may wish to provide on the potential environmental effects of the proposed Project or marine shipping associated with the Project, proposed mitigation measures, follow-up programs, or any other aspect of the environmental assessment. The Panel would also welcome input from Pacheedaht First Nation regarding the information that has been submitted by the Vancouver Fraser Port Authority or any other participant in the process. *[…]* *Second, the letter asks about additional opportunities for Pacheedaht First Nation to make written submissions to the Panel. In addition to the Panel's July 24, 2017 invitation, each update from the Review Panel Secretariat to the distribution list for the Roberts Bank Terminal 2 environmental assessment reminds participants that the Panel will determine and announce the timing and procedure for any future opportunities to comment during the sufficiency review stage at a later date. In addition, once the Panel determines that it has sufficient information to proceed to a public hearing, it will announce the hearing and issue hearing procedures. Review panels normally allow participants to provide written submissions during the hearing stage – the particulars of this for the Roberts Bank Terminal 2 hearing would be detailed in the hearing procedures."*		

Table 8: Environmental Management Program

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Pach-8.1	Requested greater clarity regarding the proposed mitigation measures in the MSA. Requested more detail on the intended effect of the proposed mitigation measures, specifically how the mitigation measures will mitigate the potential adverse impacts of the Project on Aboriginal rights and related interests. Stated that two mitigation measures identified on page 9.5-152 relating to impacts on Current Use activities as well as impacts to Aboriginal rights from shipping traffic are insufficient. The measures the Port is proposing are: (1) providing real time info related to ship movements, and (2) further consultation.	31-Oct-2016, Letter to Panel (CEAR Document #672)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in Response to IR10-09:** The VFPA's response to IR10-09, as requested by the Review Panel, provides further discussion of proposed mitigation measures to reduce the potential effects of the proposed Project on the access, availability, and quality of preferred Current Use resources and the quality of the Current Use experience.	**Information Requests** Response to Sufficiency Information Request #09 (IR10-09)

Table 9: Human Health – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Pach-9.1	Concerned about the potential for sewage or other contaminants to be discharged from the container ships associated with the Project and affect the shoreline and intertidal seafoods relied on by Pacheedaht members. Requested an assessment of any sewage or other contaminants that could be discharged from the proposed container ships, including consideration of whether any or a combination of these contaminants could increase the potential for contaminating species harvested by Pacheedaht.	31-Oct-2016, Letter to Panel (CEAR Document #672)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in TC IR-02 to TC IR-06:** In its response to the Review Panel's Information Requests of May 10, 2017, Transport Canada has indicated that with respect to chronic oiling, the use of anti-fouling agents, and discharges of ballast water, bilge water, and sewage, that marine water quality in the marine shipping area is not expected to change because these potential contributors are regulated by the *Canada Shipping Act, 2001*, and in particular the Vessel Pollution and Dangerous Chemicals Regulations (VPDCR) under this act. Furthermore, Transport Canada states that "In relation to the Project, the technical requirements of the VPDCR apply to all vessels over 400 gross tonnage. As such, all container ships and most tugs serving container ships that would call at the proposed RBT2 would be subject to these requirements".	**Information Requests** Transport Canada Information Requests #02 to #06 (TC IR-02 to TC IR-06 of CEAR Document #962)

Table 10: Marine Commercial Use

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Pach-10.1	Stated that RBT2 would also be interfering with Pacheedaht's fishing rights currently and in the future. Stated that the future impacts are related to both the future expansion of commercial fisheries licences, held by Pacheedaht, for profitable species, and potentially viable alternatives.	23-Sep-2015, Pacheedaht Traditional Use and Occupancy Study	**23-Sep-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Section 9.5 detailing the assessment of potential impacts to Indigenous groups' ability to exercise asserted or established Aboriginal and treaty rights as a result of Project-associated shipping.	**Addressed in Response to IR10-26:** The VFPA's response to IR10-26, as requested by the Review Panel, discusses potential effects of the proposed Project on the reasonably foreseeable future Current Use activities that have been identified by Indigenous groups.	**Information Requests** Response to Sufficiency Information Request #26 (IR10-26)

Table 11: Marine Fish – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Pach-11.1	Indicated that Swiftsure is their main fishing area for halibut.	23-Sep-2015, Pacheedaht Traditional Use and Occupancy Study 23-Oct-2017, Meeting with the VFPA and regulatory bodies (the CEA Agency, B.C. EAO) and Canadian Coast Guard	**23-Sep-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Section 9.5 detailing the assessment of potential impacts to Indigenous groups' ability to exercise asserted or established Aboriginal and treaty rights as a result of Project-associated shipping. **23-Oct-2017, Meeting:** The VFPA met with Pacheedaht along with representatives from the CEA Agency, B.C. EAO, and the Canadian Coast Guard to discuss the Project and its associated marine shipping. Pacheedaht raised their concerns regarding the location of the shipping lanes. The CEA Agency responded that the discussion regarding the shipping lane will continue through the Oceans Protection Plan.	**Addressed in MSA Sections 9.2 and 9.5:** In Sections 9.2 and 9.5 of the MSA, the VFPA acknowledges that Swiftsure is the Pacheedaht's preferred areas to harvest marine resources. **Addressed in MSA Appendix 5-B (#71):** Potential effects of marine shipping associated with the Project on marine fish and fish habitat are assessed in MSA Section 8.1. Potential effects on marine commercial use, including Indigenous fishing, are considered in MSA Section 9.2. The assessment of Current Use (MSA Section 9.5) describes how Current Use activities have been affected by other projects and activities that have been carried out and considers the effects of marine shipping associated with the Project in combination with the effects of other projects and activities (including marine shipping) that have been or will be carried out.	**MSA** 8.1 Marine Fish and Fish Habitat 8.1.6 Potential Interactions and Effects 9.2 Marine Commercial Use 9.2.4 Existing Conditions 9.2.5 Potential Interactions and Effects 9.2.4.4 Juan de Fuca Strait (Segments C and D of the [Marine Shipping Area]) 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal or Treaty Rights 9.5.5.1 Negligible Effects of Vessel Transit on Current Use 9.5.5.2 Potential Effects of Vessel Transit on Current Use Appendix 5-B Aboriginal Issues and Interests

Table 12: Marine Mammals – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Pach-12.1	Stated the importance of humpback and killer whales to Pacheedaht. Requested detailed information about the spatial and seasonal occurrence and densities of marine mammals in Juan de Fuca Strait. Stated that consultation with Pacheedaht is required in collecting this information and more baseline information is needed about the presence of marine mammals in Juan de Fuca Strait, and in particular at Swiftsure Bank.	14-Aug-2015, Meeting 31-Oct-2016, Letter to Panel (CEAR Document #672)	**14-Aug-2015, Meeting:** Recorded comment for consideration by the Project team. **20-Aug-2015:** The VFPA provided Pacheedaht with funding to produce a Traditional Use Study that describes Pacheedaht's Current Use of the area in relation to marine mammals as well as other resources. **24-Sep-2015:** Pacheedaht provided the VFPA with the report: *Pacheedaht First Nation Traditional Use and Occupancy Study Report for Port Metro Vancouver RBT2 Project*. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Section 8.2 the assessment of marine mammals and Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in MSA Section 8.2:** MSA Section 8.2 includes consideration of potential effects on marine mammals in the marine shipping area, which encompasses Juan de Fuca Strait. Spatial and seasonal occurrence of marine mammals in Juan de Fuca Strait are discussed, (particularly using extensive sightings data,) but density information is provided for southern resident killer whale only. **Addressed in MSA Appendix 5-B (#44):** The assessment of marine mammals (MSA Section 8.2) includes consideration of potential effects on whales. Potential effects on marine mammals related to Project-associated vessel transit activities include behavioural disturbance and acoustic masking due to changes to the acoustic environment and physical disturbance from vessel strikes. These effects are expected to be not significant for marine mammals. Incremental marine shipping associated with the Project is not anticipated to have an adverse effect on either southern resident killer whales or North Pacific humpback whale critical habitat features when needed for life functions, or on the survival or recovery of southern resident killer whales, North Pacific humpback whales, or Steller sea lions. Cumulative effects are expected to be not significant for seals, sea lions, baleen whales, and toothed whales, other than southern resident killer whales. The VFPA has assumed that past activities and projects, including those described in the recovery strategy issued by DFO, have had a significant adverse effect on southern resident killer whales. As such, Project-associated vessel activity, in combination with existing and future vessel activity, is expected to continue to result in a significant cumulative effect to southern resident killer whales. Regional efforts are underway through the VFPA-led Enhancing Cetacean Habitat and Observation (ECHO) Program to better understand and manage the potential effects of marine shipping on marine mammals throughout the southern coast of B.C. **Addressed in MSA Appendix 5-B (#67):** The VFPA has engaged with each of the Indigenous groups listed in the *Updated EIS Guidelines* and provide drafts of Current Use existing conditions sections, and to request any additional Current Use information that the Indigenous group may wish to provide. The revised Current Use summary, following incorporation of any additional input from Indigenous groups is provided in the assessment of Current Use (MSA Section 9.5). The VFPA has acknowledged the challenges of participating in consultation during summer months, and has extended timelines to accommodate the provision of additional information from Indigenous groups. The VFPA has provided funding to Indigenous groups participating in consultation, and considers the amount of funding offered to be adequate and proportionate to the level of effort required by each Indigenous group to participate, given the scope of work. The VFPA increased the funding provided in some circumstances in response to specific requests. **Additional information provided by the VFPA:** A summary of consultation activities can be found in MSA Appendix 5-A.	**MSA** Appendix 5-A Consultation Activities by Aboriginal Group Appendix 5-B Aboriginal Issues and Interests 8.2 Marine Mammals 8.2.6.3 Potential Effect #2 – Physical Disturbance from Vessel Strikes 8.2.7.2 Mitigation – Vessel Strikes 8.2.8.2 Residual Effect #2 – Physical Disturbance from Vessel Strikes 8.2.8.4 Summary of Residual Effects and Significance 8.2.9 Cumulative Effects Assessment
Pach-12.2	Requested that the EIS include potential expansions at the Ports of Seattle and Tacoma in the cumulative effects assessment for marine mammals. Agreed with the concerns raised in DFO IR-58 relating to the need to account for the potential expansions of the Ports of Seattle and Tacoma in the	31-Oct-2016, Letter to Panel (CEAR Document #672)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in Response to IR4-09:** Updated project status and vessel movement information is provided as available for the projects listed in the EIS and MSA (north of Segment B), plus other new projects considered to be certain or reasonably foreseeable (as of July 1, 2017). Specifically, Appendix IR4-09-A addresses the Ports of Seattle and Tacoma: The ports of Seattle and Tacoma have formed the NWSA to manage the two ports' marine cargo terminal investments, operations, planning, and marketing to strengthen the Puget Sound gateway and attract more marine cargo for the region. Two projects are currently under review: • Pier 4 Reconfiguration Project – Upon project completion cargo capacity will increase from 767,000 TEUs annually to an estimated 1.3 million TEUs. Fewer vessels calls are needed	**Information Requests** Response to Sufficiency Information Request #09 (IR4-09 of CEAR Document #1051) **DFO Response to Additional Information Requests: DFO IR-02 (CEAR Document #959)**

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	cumulative effects assessment for marine mammals.			under the 'with project' condition because more containers are expected to be moved per vessel call (i.e., for 2030, 94 calls are projected without the project, and 52 calls are projected with project completion), or 188 to 104 movements per annum (reduction of 84 movements per year). • Terminal 5 Cargo Wharf Rehabilitation, Berth Deepening, Improvements Project – With project completion vessel calls are projected to decrease from six per week (existing traffic) to four per week, or 312 to 208 movements per annum (reduction of 104 movements per year). The total decrease in vessel movements with these two projects is 188 per year. As vessel size has been held constant for projections for VFPA container terminals, this decrease has not been incorporated in the project-based approach total (i.e., calls to VFPA terminals would also decrease due to schedule service to both regions). **Addressed in DFO IR-02:** In its response to the Review Panel's Information Requests of April 5, 2017, DFO states "the general trend is that designers and builders of newer ships now are actively working on making their ships quieter". Therefore, it is possible that future containers ships may be designed to reduce underwater noise levels. Consequently, the potential effects of underwater sound to marine species, as presented in the EIS, could be less in the future. As such, no change to the marine mammal cumulative effects assessment was deemed warranted.	
Pach-12.3	Requested that the EIS describe the nature and extent of potential cumulative effects on humpback whales and Steller sea lions. Agreed with the concerns raised in DFO IR-60 relating to potential cumulative effects to humpback whales and Steller sea lions within the regional assessment area (RAA). The MSA concludes that for both species, cumulative effects could occur within the RAA; however, the nature and extent of these cumulative effects are not described. As set out in Pacheedaht's TUOS, both species are of great cultural and spiritual importance to Pacheedaht.	23-Sep-2015, Pacheedaht Traditional Use and Occupancy Study 31-Oct-2016, Letter to Panel (CEAR Document #672)	**23-Sep-2015:** Recorded comment for consideration by the Project team.	**Addressed in Response to IR5-53:** IR5-53 further discusses rationale for the criteria ratings presented in the EIS related to potential Project cumulative effects to humpback whales and Steller sea lion. Additional rationale for the criteria ratings describing potential cumulative effects to humpback whales from changes in the acoustic environment includes the following: • Uncommon occurrence of humpback whales in the LAA: Humpback whales (and other baleen whales) are uncommon in the LAA (EIS Figure 14-5); this suggests that there will be minimal spatial overlap with Project-related underwater noise (i.e., approach, berthing, unberthing, departure), thereby minimising the potential for cumulative interactions. • Current annual increased growth rate of population of approximately 5%, despite existing levels of marine shipping and underwater noise levels in B.C.: Past projects and activities that have been carried out (i.e., historical commercial whaling, see EIS Section 14.5.2) resulted in reductions of the humpback whale population. However, this trend has reversed, with current population trends in B.C. showing approximately 5% growth annually. This indicates that potential effects from existing marine shipping are not affecting overall population viability despite existing levels of underwater noise. • Recategorisation of the humpback whale population in B.C. as Special Concern, rather than Threatened: As a result of substantial increases in the population since being listed as 'Threatened' under the *Species at Risk Act* (*SARA*) in 2005, the Committee on the Status of Endangered Wildlife in Canada (COSEWIC) reassessed the North Pacific population of humpback whales in 2011 and downgraded its status to 'Special Concern' (COSEWIC 2011, 2014). In 2017, the humpback whale was officially reclassified from Threatened to Special Concern under the *SARA* (GOC 2017, appended to the response as Appendix IR5-53-A). • Small incremental contribution of Project operation and future marine shipping to existing underwater noise levels and subsequent potential behavioural effects: Under existing conditions in marine waters adjacent to the Roberts Bank terminals, underwater noise levels are high due to existing marine vessel traffic (see EIS Appendix 9.8-A). Noise modelling has demonstrated that future underwater noise levels in the RAA will be comparable to levels occurring during existing conditions; by extension, this implies that any potential incremental behavioural effects experienced from the Project will likely be within the range of those already occurring under existing conditions. Given that humpback whale populations are healthy and growing under existing conditions, the cumulative effect of underwater noise is not anticipated to adversely affect population recovery or viability.	**Information Requests** Response to Sufficiency Information Request #53 (IR5-53 of CEAR Document #1159)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				Additional rationale for the criteria ratings describing potential cumulative effects to Steller sea lion from changes in the acoustic environment includes the following: • Current annual increased growth rate of population of approximately 3%, despite existing levels of marine shipping and underwater noise levels in B.C.: Past projects and activities that have been carried out resulted in reductions of the Steller sea lion population. Between 1912 and 1968, thousands of Steller sea lions were killed in B.C. in a campaign to reduce competition for fish stocks with commercial fishers (see EIS Section 14.5.3.4). Since that time, the Steller sea lion population in B.C. has been increasing at a rate of approximately 3.2% per year, despite existing levels of marine shipping traffic and its associated underwater noise (DFO 2010). • Small incremental contribution of Project operation and future marine shipping to existing underwater noise levels and subsequent potential behavioural effects: Under existing conditions in marine waters adjacent to the Roberts Bank terminals, underwater noise levels are generally relatively high due to existing marine vessel traffic (see EIS Appendix 9.8-A). Noise modelling has demonstrated that future underwater noise levels in the RAA will be comparable to levels occurring during existing conditions; by extension, this implies that any potential incremental behavioural effects experienced from the Project will likely be within the range of those already occurring under existing conditions. Given that Steller sea lion populations are healthy and growing under existing conditions, the cumulative effect of underwater noise is not anticipated to adversely affect population recovery or viability. • Evidence of habituation to regularly occurring, predictable underwater noise sources. As described in EIS Section 14.6.4, Steller sea lions are expected to habituate to some extent to existing, Project, and future cumulative underwater noise levels due to marine shipping; this is based on observations of continued use of areas that experience regular disturbance (e.g., air or vessel traffic) by seals and sea lions.	
Pach-12.4	Requested that the EIS provide an assessment of the likelihood of injury or mortality to humpback whales during their migration through Juan de Fuca Strait. Concerned about potential impacts to humpback whales from the Project, given their common presence in shipping lanes and in particular at the J-buoy stationed on Swiftsure Bank, susceptibility to acoustic disturbance, vulnerability to vessels strikes and the close proximity between the proposed shipping routes and their critical habitat and migratory routes.	31-Oct-2016, Letter to Panel (CEAR Document #672)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Sections 8.2.6.2 and 8.2.6.3:** Vessel strikes to humpback whales are considered in MSA Section 8.2.6.3. It notes a Project-associated container ship could potentially strike a humpback whale within the LAA resulting in injury or mortality. The addition of approximately three container ship movements every two days over existing conditions is not predicted to result in population level effects to the population of humpback whales in B.C. as the population is growing at a rate of approximately 5% (according to DFO). As noted in MSA Section 8.2.6.2, Expected underwater noise levels and zones of potential behavioural disturbance to humpback whales were predicted at four representative locations along the international outbound shipping lanes in the LAA for container ship transit associated with RBT2 (MSA Figure 8.2-4) (see MSA Section 7.6 and MSA Appendix 7.6-A for more information on methods and assumptions). Underwater noise from marine shipping associated with RBT2 represents a small increase over existing conditions (see MSA Section 7.6). Furthermore, while behavioural effects are possible, it should be noted that the scale of overlap between predicted behavioural disturbance radii (see MSA Table 8.2-8) from transiting vessels and humpback whales is considered small, as is the frequency of exposure, based on a projected increase of approximately three ship movements every two days. **Addressed in Response to IR5-41:** The VFPA's response to IR5-41, as requested by the Review Panel, discusses the combination of lines of evidence used to support conclusions regarding the frequency and effects of vessel strikes on marine mammals in the marine shipping area. In summary, it was concluded that incremental effects of vessel strikes from RBT2-associated vessel traffic would be moderate in magnitude and occur infrequently above and beyond strikes occurring during existing conditions, and were determined to be not significant. These predictions were based on the multiple lines of evidence as described in the response.	**MSA** 7.6 Underwater Noise 8.2 Marine Mammals 8.2.6.2 Potential Effect #1 – Behavioural and Acoustic Masking Effects Due to Underwater Noise from Marine Shipping Associated with the Project 8.2.6.3 Potential Effect #2 – Physical Disturbance from Vessel Strikes Appendix 7.6-A Container Ship Underwater Noise Modelling **Information Requests** Response to Sufficiency Information Request #41 (IR5-41 of CEAR Document #1159)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Pach-12.5	Concerned about impacts to sea lions and sea lion habitat from the Project, especially in the event of an oil spill or marine accident. Requested information about sea lion haul-out sites and rookeries in Juan de Fuca Strait.	31-Oct-2016, Letter to Panel (CEAR Document #672)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 10.5.7:** Considers the effects of potential accidents and malfunctions on marine mammals. Effects to marine mammals from an accidental oil spill were determined to be unlikely due to low probability of a spill occurring. Confidence was rated as moderate in the determination of not significant effects to Steller sea lions because monitoring of this species after past oil spill events has not observed population-level effects. However, due to potential limitations in monitoring data and the conservation status of this representative species, confidence was rated as moderate, rather than high. **Addressed in Response to IR5-36:** Sea lion haul-out sites and rookeries are provided as part of IR5-36 as requested by the Review Panel.	**MSA** 10.5 Assessment of Potential Effects of Accidents or Malfunctions 10.5.7 Marine Mammals **Information Requests** Response to Sufficiency Information Request #36 (IR5-36)
Pach-12.6	Requested an update to the killer whale behavioural response analysis in western Juan de Fuca Strait in MSA Appendix 8.2-A, using new information on southern resident killer whales use around Swiftsure Bank (Ford et al. 2016). Given the potential threats from the Project to this population, explain why Project-specific existing baseline conditions for the southern resident population of killer whales, including the incorporation of Pacheedaht's traditional knowledge, was not determined to be necessary for the MSA. Agrees with the concern raised by DFO in DFO IR-61 regarding the potential underestimate of the presence of southern resident killer whales at Swiftsure Bank. The significance of this species to Pacheedaht, including spirituality, is described in the TUOS. This species faces numerous potential impacts from the Project, including environmental contaminants, acoustic disturbance, loss of food sources, physical disturbance, and fuel spills.	31-Oct-2016, Letter to Panel (CEAR Document #672)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in Response to IR5-47:** In the VFPA's response to IR5-47, the southern resident killer whale behavioural response analysis for western Juan de Fuca Strait region (described in MSA Section 8.2 and MSA Appendix 8.2-A) was revised to incorporate the second year of passive acoustic monitoring data at Swiftsure Bank, as well new information regarding the mean monthly sightings of southern resident killer whale between 2001 and 2011. This new data was provided to the VFPA by DFO in response to the information request. Low and moderate-severity behavioural responses per southern resident killer whale per year in the Extended Region were re-calculated by applying the all pod average of 10.1% in the occurrence of southern resident killer whale in this area, based on the conservative annual southern resident killer whale occurrence estimated for the region (179 days) recalculated using the second year of DFO's passive acoustic monitoring data at Swiftsure Bank. As a consequence, under existing conditions, the total number of behavioural responses within the Extended Region increased by 79 low-severity and 22 moderate-severity behavioural responses, respectively. The inclusion of marine shipping associated with Project resulted in an increase of 80 low-severity and 23 moderate-severity behavioural responses. Thus, the resulting incremental contribution of marine shipping associated with the Project to southern resident killer whale behavioural effects in the marine shipping LAA increased by one low-severity behavioural response and one moderate-severity behavioural response per whale per year. The southern resident killer whale behavioural response model is a multistage probabilistic approach that incorporates uncertainty in acoustic dose-response thresholds, pod monthly occurrence, and pod location to define 95% confidence intervals in estimated behavioural responses. The incremental effects described in this response are very small and considered not discernible when viewed within the context of previous model results and associated wide 95% confidence intervals described in MSA Table 8.2-7. Criteria ratings in MSA Table 8.2-11 would not change as a result of the inclusion of this information. This is because, as stated above, the calculated increase in the number of low and moderate-severity behavioral responses in the LAA is not discernible from those already described in the MSA and the incremental contribution of marine shipping to existing conditions associated with the Project does not change. **Addressed in MSA Section 5.0, Appendix 5-A, and Section 9.5.4.10:** Describes consultation activities undertaken with Pacheedaht First Nation to collect traditional knowledge and its incorporation into the MSA.	**MSA** 5.0 Aboriginal Groups Engagement and Consultation 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4.10 Existing Conditions Appendix 5-A Consultation Activities by Aboriginal Group **Information Requests** Response to Sufficiency Information Request #47 (IR5-47 of CEAR Document #1145)

Table 13: Marine Shipping Addendum

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Pach-13.1	Concerned about impacts from the increase in container ship traffic associated with the Project, contamination and disturbance to the marine environment of the Project on its own and in combination with other industrial and other existing and proposed activities.	22-Sep-2014, Letter to the CEA Agency (CEAR Document #124)	**17-Apr-2015, Letter from the CEA Agency:** *"Based on feedback received during the comment period on the draft Terms of Reference, the Minister has identified two additional matters to be taken into account in the environmental assessment. This includes the potential effects on the environment of container ships coming and going from the proposed terminal through Juan de Fuca Strait and the Strait of Georgia…we have asked the Port to talk to your Nation and describe any concerns or suggestions that you might have with respect to the proposed increase in shipping container traffic."*	**Addressed in the *Updated EIS Guidelines*:** On April 17, 2015, the CEA Agency issued *Updated EIS Guidelines* that included the addition of environmental effects of marine shipping associated with the Project, beyond the scope of the Project (VFPA jurisdiction) to the 12 nautical mile limit of Canada's territorial sea. In October 2015, the VFPA submitted to the CEA Agency the MSA. **Additional information provided by the VFPA:** The VFPA understands that marine shipping associated with the Project outside of Port of Vancouver's jurisdiction is not formally considered to be part of the Project for the purposes of the Minister's decision whether the Project is likely to cause significant adverse environmental effects. However, the MSA provides information to the federal government regarding the potential effects of marine shipping associated with the Project, which can be used to inform programs or activities within federal jurisdiction. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954) and letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provide additional information on the Government of Canada's Oceans Protection Plan which includes information on environmental protection.	**MSA** Appendix 5-B Aboriginal Issues and Interests ***Updated EIS Guidelines*** **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**
Pach-13.2	Stated that the container ship traffic associated with the Project has the potential to cause 'environmental effects' as defined in this section, including to fish and fish habitat; aquatic species listed under *SARA*, including killer whales; migratory birds; health and socio-economic conditions of Pacheedaht members; Pacheedaht's physical and cultural heritage; Pacheedaht's Current Use; and historical and archaeological sites. Concerned with: • The increase in the number of large vessels within Pacheedaht's traditional territory would create safety concerns for Pacheedaht members travelling by boat to reach harvesting areas, including when they are harvesting by boat in areas of open water and along shore lines. • Vessel noise is likely to have negative effects on marine resources that are culturally important to Pacheedaht, including fish and marine mammals.	22-Sep-2014, Letter to the CEA Agency (CEAR Document #124)	**17-Apr-2015, Letter from the CEA Agency:** *"Based on feedback received during the comment period on the draft Terms of Reference, the Minister has identified two additional matters to be taken into account in the environmental assessment. This includes the potential effects on the environment of container ships coming and going from the proposed terminal through Juan de Fuca Strait and the Strait of Georgia…we have asked the Port to talk to your Nation and describe any concerns or suggestions that you might have with respect to the proposed increase in shipping container traffic."*	**Additional information provided by the VFPA:** In October 2015, the VFPA submitted to the CEA Agency the MSA. The assessment considers potential effects to marine commercial use, vessel noise and wake, potential accidents and malfunctions, as well as Current Use and Aboriginal and treaty rights. The conclusion of the MSA is that marine shipping associated with the Project is not likely to result in any significant adverse residual effects to any of the VCs assessed. In addition, no adverse cumulative effects are anticipated, with the exception of potential effects to southern resident killer whales. As with the conclusions in the EIS, submitted in March 2015, the MSA concludes that southern resident killer whales have already been significantly adversely affected by past projects and activities; therefore, cumulative effects are expected to remain significant.	**MSA** 7.0 Physical Environment 8.0 Marine Biophysical Environment 9.0 Human Health 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal or Treaty Rights

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	• The risk of vessel strikes with marine mammals, including killer whales, will increase. • Wakes from the increased ship traffic could damage intertidal and shoreline habitat, which is where Pacheedaht members harvest many preferred species. • Vessel wakes have the potential to make it unsafe for Pacheedaht members to harvest on the shorelines in their traditional territory. • Vessel wakes have the potential to damage shoreline archaeological sites in Pacheedaht's traditional territory. • Container traffic may destroy fishing gear, such as the nets and lines that Pacheedaht members set. • Container traffic has the potential to disturb Pacheedaht's connection to the lands and waters. • Container traffic has the potential to contaminate or damage resources and habitat relied upon for the exercise of Pacheedaht's harvesting rights in the event of an accident or malfunction resulting in the release of bunker fuel or other contaminants. • Container traffic has the potential to affect Pacheedaht members' ability to transfer traditional knowledge to younger generations.				
Pach-13.3	Concerned that the Project would increase the strain on the bearing load of what Juan de Fuca Strait is able to successfully absorb in terms of pollution, wave action, and volume of large vessels.	23-Sep-2015, Pacheedaht Traditional Use and Occupancy Study 30-Nov-2017, Letter to Panel – Pacheedaht First Nation Traditional Marine Use and Occupancy Study 2014 (CEAR Document #1118)	**23-Sep-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Section 7.2 on Wave Environment and 7.3 on Marine Water Quality.	**Addressed in MSA Section 7.3:** Due to federal and international pollution prevention provisions and regulations, discharges of bilge water or ballast water are not expected to alter marine water quality within the marine shipping area. Routine Project-associated shipping activities are therefore not expected to affect marine water quality. **Addressed in MSA Section 7.2:** An assessment of the wave environment was conducted to determine potential changes from vessel transits associated with the Project on wake-generated waves. The existing wind-wave climate varies greatly across the local study area in response to differences in local wind conditions, variations in fetch length, and incoming swell from Juan de Fuca Strait. The majority of wind-generated wave heights are in the range of 10 to 50 cm, but they can reach up to 200 cm.	**MSA** 7.2 Wave Environment 7.3 Marine Water Quality 8.0 Marine Biophysical Environment 9.0 Human Health

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				Vessel wake is a small component of the existing wave climate. Wake waves generated by a representative-size container ship travelling at typical speeds through the marine shipping area were calculated. The results showed that wake waves larger than 10 cm (wave heights smaller than this height are considered to reflect calm conditions) would reach shorelines adjacent to the shipping lanes only in Segment B of the marine shipping area in three zones—near Tumbo and Saturna islands, at the western end of Stuart Island, and in the vicinity of Victoria, including Discovery Island. Based on the spectrum of wind-generated waves, ship wake would be indistinguishable from wind-generated waves except during calm conditions. Calm conditions are experienced 40%, 46%, and 25% of the time within these three identified zones in Segment B. Therefore, container ship wake waves are expected to be exceeded by (and indistinguishable from) natural waves 60%, 54%, and 75% of the time in these Segment B zones. Vessel wake height calculations indicate that the majority of wake-related waves approaching shorelines in the three zones would be between 10 cm and 12.5 cm in height. Project-associated traffic is expected to increase vessel traffic through Segment B by 6% compared to existing conditions; therefore, the potential for wake-generated waves to occur during calm conditions is also expected to increase by 6%. With all future vessels transiting the marine shipping area, including Project-associated traffic (a cumulative vessel traffic increase of 36%), the potential for these small wake-related waves (10 to 12.5 cm) is anticipated to cumulatively increase by 36%. The length of shoreline that falls within the zone of influence of existing vessel wake is not anticipated to change with future increases in the number of vessel movements	
Pach-13.4	Concerned that the increase in tanker volume will have an impact on the greenhouse gas emissions and uptake by the oceanic plankton colonies, resulting in lower air quality above and below the surface. Concerned that the water column will be impacted by increased turbulence that could result in lower visibility and higher dispersal rate of sediments. Stated that these factors could influence Pacheedaht's marine resource base, particularly in respect to purity from contaminants, as expressed by Pacheedaht members.	23-Sep-2015, Pacheedaht Traditional Use and Occupancy Study 30-Nov-2017, Letter to Panel – Pacheedaht First Nation Traditional Marine Use and Occupancy Study 2014 (CEAR Document #1118)	**23-Sep-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA.	**Additional information provided by VFPA:** The Project is a proposed container terminal; therefore, only container vessels will call. Tanker ships are used to transport oil and will not call at RBT2. It is assumed in this comment that the term tanker is intended to refer to container vessels. **Addressed in MSA Section 7.0:** MSA Section 7.0 considers potential effects of air quality (MSA Section 7.1), wave environment (MSA Section 7.2), and marine water quality (MSA Section 7.3). The conclusion of the MSA is that marine shipping associated with the Project is not likely to result in any significant adverse residual effects to any of the VCs assessed.	**MSA** 7.0 Physical Environment 7.1 Air Quality 7.2 Wave Environmental 7.3 Marine Water Quality
Pach-13.5	Concerned with ballast or bilge water and invasive species and enforcement challenges. Concerned about the threat imposed by the contents of ballast water, which potentially include sewage, waste water, and contaminated holding tank water. Concerned that water from other ports visited in the past may increase the risk of introducing	23-Sep-2015, Pacheedaht Traditional Use and Occupancy Study 10-Nov-2015, Meeting 30-Nov-2017, Letter to Panel – Pacheedaht First Nation Traditional Marine Use and Occupancy Study	**23-Sep-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses. **10-Nov-2015:**	**Addressed in MSA Appendix 5-B (#33):** Information on ballasting is provided in MSA Sections 3.0 and 4.0. Transport Canada enforces Canadian regulations and international conventions implemented by Canada governing matters such as ballast water management. Since ballasting is not permitted within the marine shipping area, it is not assessed as an activity of marine shipping associated with the Project. Further rationale is provided in MSA Section 7.3. Other types of releases are also described in MSA Section 4.0, and the assessment of potential effects on marine vegetation and other marine resources as a result of a spill is included in MSA Section 10.0. **Addressed in TC IR-02 to TC IR-06:** In its response to the Review Panel's information requests of May 10, 2017,	**MSA** 3.0 Regulatory Framework and Role of Government 3.1 Federal Authorities Overview 3.2 Regulatory Framework 4.0 Activity Description 4.2.2.1 Associated Activities – Ballasting 4.4.2 Potential In-Transit Accidents Incidence and Release Amount Predictions

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	invasive species to Pacheedaht's territory.	2014 (CEAR Document #1118)	Recorded comment for consideration by the Project team.	Transport Canada has indicated that with respect to chronic oiling, the use of anti-fouling agents, and discharges of ballast water, bilge water, and sewage, that marine water quality in the marine shipping area is not expected to change because these potential contributors are regulated by the *Canada Shipping Act, 2001*, and in particular the VPDCR under this act. Furthermore, Transport Canada states that "In relation to the Project, the technical requirements of the VPDCR apply to all vessels over 400 gross tonnage. As such, all container ships and most tugs serving container ships that would call at the proposed RBT2 would be subject to these requirements". **Additional information provided by the VFPA:** The VFPA was the first port in North America to prohibit in-port ballast water exchange without prior mid-ocean exchange, a practice that became the basis of government requirements now enforced by Transport Canada. To prevent the invasion of foreign species into local waters, international regulations, through the International Maritime Organization (IMO), are managed by Transport Canada. All commercial deep sea vessels are required to carry out a ballast water exchange prior to entering Canadian waters. This is done outside the exclusive economic zone of 200 nautical miles and in water deeper than 2,000 m. By requiring vessels to complete this ballast 'flush' well outside Canadian waters, the aim is to prevent any foreign organisms from entering into the local ecosystem. The U.S.A. has similar requirements, and vessels arriving from the Puget Sound area need to forward the completed U.S. forms to Canadian authorities prior to entry into Canadian waters.	7.3 Marine Water Quality 7.3.5 Incremental Changes to Marine Water Quality from Marine Shipping Associated with the Project 10.0 Potential Accidents or Malfunctions 10.5.6 Marine Fish and Fish Habitat Appendix 5-B Aboriginal Issues and Interests **Information Requests** Transport Canada Information Requests #02 to #06 (TC IR-02 to TC IR-06 of CEAR Document #962)
Pach-13.6	Concerned about the effects of tanker noise on the subsurface marine environment and its detriments to marine mammals, and specifically the resident killer whale population.	30-Nov-2017, Letter to Panel – Pacheedaht First Nation Traditional Marine Use and Occupancy Study 2014 (CEAR Document #1118)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by VFPA:** The Project is a proposed container terminal; therefore, only container vessels will call. Tanker ships are used to transport oil and will not call at RBT2. It is assumed in this comment that the term tanker is intended to refer to container vessels. **Addressed in MSA Section 8.2:** Potential effects on marine mammals related to incremental Project-associated vessel transit activities include behavioural disturbance and acoustic masking due to changes to the acoustic environment, and physical disturbance from vessel strikes. These effects are expected to not be significant for marine mammals. Incremental marine shipping associated with the Project is not anticipated to have an adverse effect on either southern resident killer whales or North Pacific humpback whale critical habitat features when needed for life functions, or on the survival or recovery of southern resident killer whales, North Pacific humpback whales, or Steller sea lions. Cumulative effects are expected to be not significant for seals, sea lions, baleen whales, and toothed whales, other than southern resident killer whales. The VFPA has assumed that past activities and projects, including those described in the recovery strategy issued by DFO, have had a significant adverse effect on southern resident killer whales. As such, Project-associated vessel activity, in combination with existing and future vessel activity, is expected to continue to result in a significant cumulative effect to southern resident killer whales. **Addressed in Responses to IR5-41 and IR5-47:** The VFPA's responses to IR5-41 and IR5-47 further discuss marine mammal strike risk and potential underwater noise effects to southern resident killer whales at Swiftsure Bank specifically. The overall effects assessment conclusions presented in the MSA remain the same. **Additional information provided by the VFPA:**	**MSA** 7.0 Underwater Noise 8.2 Marine Mammals **Information Requests** Response to Sufficiency Information Request #41 (IR5-41 of CEAR Document #1159) Response to Sufficiency Information Request #47 (IR5-47 of CEAR Document #1145)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				In 2014, the VFPA-led ECHO Program was developed as a collaborative initiative aimed at better understanding and managing the impact of shipping activities on at-risk whales throughout the southern coast of B.C. The VFPA-led ECHO Program engages and involves key regional interested parties to maximise program success and help ensure that mitigation and management measures developed through the program are informed by social, cultural, economic, and environmental sustainability interests. The ECHO Program is guided by the advice and input of an advisory working group, and supported by a federal government advisory committee and associated technical committees. Through engagement and consultation with stakeholders, the ECHO Program has initiated or supported short-term projects, scientific studies, and educational initiatives to fill knowledge gaps necessary to inform the development of credible, science-based threat reduction solutions and management options to reduce cumulative effects of shipping to at-risk whales in the region.	
Pach-13.7	Concerned about the increased disturbance to the swell patterns in Juan de Fuca Strait from tanker traffic and create safety concerns for Pacheedaht members out on the water and on the shore.	23-Sep-2015, Pacheedaht Traditional Use and Occupancy Study 30-Nov-2017, Letter to Panel – Pacheedaht First Nation Traditional Marine Use and Occupancy Study 2014 (CEAR Document #1118)	**23-Sep-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA.	**Addressed in Responses to IR7-21 and IR7-22:** As noted in the VFPA's response to IR7-21, as requested by the Review Panel, although the probability slightly increases from Project-associated vessels (0.034% during calm conditions), wake-generated waves from Project-associated vessels will not result in a change to the shorelines in the marine shipping area due to the similarity of interaction at the shoreline from wake-generated and wind-generated waves. The VFPA's response to IR7-22, as requested by the Review Panel, discusses the potential effects of waves generated by Project-associated vessels during calm conditions on small craft engaged in activities in open water at various points and various distances from shore throughout the marine shipping area, including fishing activities in the vicinity of Swiftsure Bank. For all segments discussed in the MSA, vessel wakes from Project-associated vessels are not expected to introduce new navigational hazards for small-craft operators. The vessel wakes from Project-associated vessels are not expected to introduce new navigational hazards for small-craft operators at Swiftsure Bank, including operators undertaking fishing activities, because of the existing energetic wave climate.	**Information Requests** Response to Sufficiency Information Request #21 (IR7-21 of CEAR Document #1141) Response to Sufficiency Information Request #22 (IR7-22 of CEAR Document #1141)
Pach-13.8	Expressed concerns around threat of tanker traffic to fishermen's lives, losing gear, and relocating from traditional harvesting locations while exercising their Indigenous fishing rights within hereditary fishing areas.	23-Sep-2015, Pacheedaht Traditional Use and Occupancy Study 30-Nov-2017, Letter to Panel – Pacheedaht First Nation Traditional Marine Use and Occupancy Study 2014 (CEAR Document #1118)	**23-Sep-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Section 9.5 detailing the assessment of potential impacts to Indigenous groups' ability to exercise asserted or established Aboriginal and treaty rights as a result of Project-associated shipping.	**Additional information provided by VFPA:** The Project is a proposed container terminal; therefore, only container vessels will call. Tanker ships are used to transport oil and will not call at RBT2. It is assumed in this comment that the term tanker is intended to refer to container vessels. **Addressed in MSA Section 9.5:** MSA Section 9.5 considers Current Use by Indigenous peoples, including intangible cultural heritage considerations, and in the marine shipping area. The section also considers potential impacts on the ability to exercise asserted or established Aboriginal or treaty rights in the marine shipping area, including in the context of potential accidents and malfunctions. Potential effects on Current Use as a result of Project associated vessel transit activities are considered negligible before mitigation for access to preferred Current Use locations, due to Project-associated ship wake, the availability and quality of preferred Current Use resources, and the quality of the Current Use experience (i.e., cultural practices) tied to those aspects of Current Use. Residual effects on access to preferred Current Use locations due to Project associated container ship pass-bys, and on cultural practices tied to that aspect of Current Use, are considered negligible after the implementation of mitigation. Considering the conclusions of the Current Use assessment, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal or Treaty Rights **Information Requests** Response to Sufficiency Information Request #21 (IR7-21 of CEAR Document #1141) Response to Sufficiency Information Request #22 (IR7-22 of CEAR Document #1141) Response to Sufficiency Information Request #2 (IR10-02) Response to Sufficiency Information Request #06 (IR10-06) Response to Sufficiency Information Request #08 (IR10-08) Response to Sufficiency Information Request #13 (IR10-13)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				within the marine shipping area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location. These mitigation measures for addressing potential incremental effects on Current Use are expected to also be effective at addressing the potential incremental impact to the exercise of Aboriginal and treaty rights. No additional mitigation measures have therefore been suggested for the potential incremental impact to the exercise of Aboriginal and treaty rights. **Addressed in Responses to IR10-02, IR10-06, IR10-08, IR10-13, and IR10-15:** The VFPA's responses to IR10-02, IR10-06, IR10-08, IR10-13, and IR10-15, as requested by the Review Panel, further discuss aspects of the current use effects assessment.	Response to Sufficiency Information Request #15 (IR10-15)
Pach-13.9	Concerned with impacts from marine shipping to Swiftsure Bank, a hereditary fishing ground. Stated that an immediate concern for the Pacheedaht First Nation and its members is the commercial marine traffic route direct crossing over their hereditary fishing grounds at Swiftsure Bank. Stated that shipping lanes were moved closer to Canada and now directly overlap the fishing grounds. Stated that one of their main concerns is shipping lanes intersection with Swiftsure Bank. Requested clarity about what steps will and can be taken by the Port and Transport Canada respectively in relation to Pacheedaht's concerns regarding the location of the outbound international shipping lane. Expressed frustration with the Crown's letter sent by the CEA Agency regarding the shipping lane issue. Stated they want to get a firm commitment under the Oceans Protection Plan regarding the shipping lane and they do not want any more projects approved until the government solves this issue.	13-Jul-2015, Phone 23-Sep-2015, Pacheedaht Traditional Use and Occupancy Study 10-Nov-2015, Meeting 31-Oct-2016, Letter to Panel (CEAR Document #672) 23-Oct-2017, Meeting with the VFPA and regulatory bodies (the CEA Agency, B.C. EAO) and Canadian Coast Guard	**13-Jul-2015:** Recorded comment for consideration by the Project team. **23-Sep-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Section 9.5 detailing the assessment of potential impacts to Indigenous groups' ability to exercise asserted or established Aboriginal and treaty rights as a result of Project-associated shipping. **10-Nov-2015, Meeting:** Recorded comment for consideration by the Project team. **23-Oct-2017, Meeting:** The VFPA met with Pacheedaht along with representatives from the CEA Agency, B.C. EAO, and the Canadian Coast Guard to discuss the Project and its associated marine shipping. Pacheedaht raised their concerns regarding the location of the shipping lanes. The CEA Agency responded that the discussion regarding the shipping lane will continue through the Oceans Protection Plan.	**Addressed in MSA Section 9.5:** The assessment of Current Use (MSA Section 9.5) describes how Current Use activities have been affected by other projects and activities that have been carried out and considers the effects of marine shipping associated with the Project in combination with the effects of other projects and activities (including marine shipping) that have been or will be carried out. Potential effects on Current Use as a result of Project-associated vessel transit activities are considered negligible before mitigation for access to preferred Current Use locations, due to Project-associated ship wake, the availability and quality of preferred Current Use resources, and the quality of the Current Use experience (i.e., cultural practices) tied to those aspects of Current Use. Residual effects on access to preferred Current Use locations due to Project-associated container ship pass-bys, and on cultural practices tied to that aspect of Current Use, are considered negligible after the implementation of mitigation, including development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location. **Addressed in Responses to IR10-13 to IR10-20:** The VFPA's responses to IR10-13 through IR10-20, as requested by the Review Panel, provide additional information concerning the rationale for the effects assessment conclusions in the MSA with regard to Current Use, in alignment with the mandate of the Review Panel (refer to CEAR Document #1137). As relayed to the VFPA by the CEA Agency (refer to CEAR Document #1137), the assessment of the seriousness of potential impacts on the exercise of Aboriginal rights and title from marine shipping associated with the Project is the responsibility of the Crown.	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal or Treaty Rights 9.5.5.1 Negligible Effects of Vessel Transit on Current Use 9.5.5.2 Potential Effects of Vessel Transit on Current Use Appendix 5-B Aboriginal Issues and Interests **Information Requests** Responses to Sufficiency Information Requests #13 to #20 (IR10-13 to IR10-20)

Table 14: Marine Water Quality – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Pach-14.1	Stated that this project could also impact drinking water sources, as the river estuaries of the San Juan and Gordon are extremely tidal. Both Pacheedaht's core community and Port Renfrew residents rely on drinking water sources from the river estuaries, which are surface wells. Stated that in the event of an accident or malfunction, the drinking water sources for the Pacheedaht Nation will be jeopardised.	23-Sep-2015, Pacheedaht Traditional Use and Occupancy Study	**23-Sep-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Section 10.5.2 Marine Water Quality assessing the potential changes to marine water quality resulting from potential accidents or malfunctions arising from marine shipping associated with the Project.	**Additional information provided by the VFPA:** Project-related changes to groundwater in upland areas are not anticipated. **Addressed in MSA Section 10.5.2:** MSA Section 10.5.2 assesses the potential changes to *marine* water quality resulting from potential accidents or malfunctions arising from marine shipping associated with the Project.	**MSA** 10.5.2 Marine Water Quality

Table 15: Noise

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Pach-15.1	Stated that the soundscape, associated to the visual and cultural quality of the coastline, will also be impacted in a similar fashion; the noise of cargo ship engines will provide a constant background, diminishing both the quality of harvesting and the harvest itself. Stated that one of the more important impacts of the Project would be its detriment on Pacheedaht members' ability safely exercise their Aboriginal rights and to properly express the requisite respect and honour for appropriate resource extraction.	23-Sep-2015, Pacheedaht Traditional Use and Occupancy Study	**23-Sep-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Section 9.5 detailing the assessment of potential impacts to Indigenous groups' ability to exercise asserted or established Aboriginal and treaty rights as a result of Project-associated shipping.	**Addressed in MSA Section 9.5.5.1:** Above-water noise generated from Project-associated vessel transit has the potential to affect the quality of experience of Current Use in areas affected by noise from passing ships. EIS Section 9.3 Outdoor Recreation (as informed by Section 7.4 Atmospheric Noise) reports that within 50 m, a container ship passing by a given location would be expected to create maximum noise levels of approximately 65 to 68 dBA depending on the engine load (60 dBA is equivalent to noise levels in a busy office and 70 dBA is equivalent to the noise level on the sidewalk by a passing car). At a setback of 800 m, container ship pass-by noise levels are predicted to be lower than the ambient daytime noise level of 45 dBA (i.e., between the noise level of a library and a typical suburban area background). At a setback of about 2.3 km, container ship noise levels are predicted to be lower than the ambient nighttime noise level of 35 dBA (i.e., less than the noise level of a library). Beyond 4 km, ship pass-bys are not expected to be audible. EIS Section 9.1 Human Health indicates that ship-generated noise could lead to cognitive or communications disturbance within 175 m of a transiting container ship; however, because the duration of exposure would be for only a very short period of time (approximately 10 to 25 seconds), the overall effects on health and well-being as a result of that exposure would be expected to be negligible. Adverse health effects related to noise are therefore not expected as a result of an increase in marine shipping associated with the Project. Current Use activities are not expected to overlap with every transiting ship associated with the Project. For Current Use activities taking place on the water that co-occur with a ship pass by, it is expected that these activities would largely involve motorised craft (e.g., fishing vessels) that are also generating noise, and at levels that likely mask the noise generated by a passing ship. Current Use activities involving the use of non-motorised vessels within proximity to a passing ship could occur (e.g., canoes used in Tribal Journeys), but the frequency of overlap with Project-associated shipping activities is expected to be low compared to Current Use activities in motorised vessels (e.g., for fishing), and the noise experienced on the water, whether in motorised or non-motorised craft, would be very brief. With respect to Current Use activities taking place on land within or adjacent to the MSA, only Current Use activities occurring at a setback of 800 m of ship pass bys, and occurring at the same time as those pass bys, would be within the expected range of ship-generated noise that exceeds ambient daytime noise levels of 45 dBA (at night, ship-generated noise would not be expected to exceed ambient nighttime noise levels of 35 dBA beyond a 2.3 km setback). Only a very small percentage of land within or adjacent to the MSA comes within these distances of the shipping lanes (i.e., only 3.7% comes within 1.5 km). Current Use activities that may be occurring at these locations could be exposed to ship-generated noise, if they were to overlap with a ship pass by; however, as with Current Use activities on the water, this exposure, were it to occur, would be experienced at very low volumes and would be of an extremely short duration. For the reasons reviewed above, Project-associated shipping noise is expected to have a negligible effect on the quality of Current Use experience for both land-based and marine-based Current Use activities.	**MSA** 7.4 Atmospheric Noise 9.1 Human Health 9.3 Outdoor Recreation 9.5.5.1 Negligible Effects of Vessel Transit on Current Use

Table 16: Potential Accidents or Malfunctions

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Pach-16.1	Stated that container traffic has the potential to contaminate or damage resources and habitat relied upon for the exercise of Pacheedaht's harvesting rights in the event of an accident or malfunction resulting in the release of bunker fuel or other contaminants. The proposed RBT2 Project's increase in marine vessel movements, and the effects of a potential accident or malfunction, have the potential to impact Pacheedaht members' current and future harvesting and other rights in many ways.	22-Sep-2014, Letter to the CEA Agency (CEAR Document #124) 23-Sep-2015, Pacheedaht Traditional Use and Occupancy Study	**23-Sep-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Section 10.0 that considers the effects of a plausible worst-case spill scenario on the environment and Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in MSA Appendix 5-B (#104):** The assessment of potential accidents or malfunctions (MSA Section 10.0), considers the effects of a plausible worst-case spill scenario on the environment. The plausible worst-case scenario assessed is a powered grounding of a container ship resulting in a release of heavy fuel oil. The location of the plausible worst-case spill scenario is in Boundary passage near the south end of South Pender Island. MSA Section 10.0 includes a description of the applicable mitigation for a plausible worst-case spill scenario. **Addressed in MSA Section 10.0:** The assessment of potential accidents or malfunctions considers a variety of potential effects related to two plausible worst-case scenarios selected based on the analysed probabilities of occurrence, higher risk areas, and possible consequences: • A collision between a container ship and a small vessel within an existing shipping lane, resulting in damage to the vessel and/or gear as well a serious injury or fatality; and • A powered grounding of a container ship on a hard substrate, resulting in a spill of 7,500 m^3 of heavy fuel oil. In both cases, the identified residual adverse effects are unlikely to occur, because of the very low probability of the accident scenarios. A description of spill response protocols is also included in MSA Section 10.0. The assessment of potential accidents or malfunctions (MSA Section 10.0) includes consideration of potential effects of accidents or malfunctions arising from marine shipping associated with the Project on human health. As discussed in MSA Section 10.5.9, Coastal Indigenous peoples generally have a greater reliance on the harvesting and consumption of seafoods than the general population in the marine shipping area. This could result in a greater potential for contaminant exposures among communities and greater magnitude of exposures for some individuals, to the extent that harvesting, and consumption continues following a spill event, and in absence of specific testing and risk management measures to directly assess the safety of the marine resource(s) affected. Thus, a greater proportion of Indigenous community members might be affected, with greater contaminant exposure potential initially. However, the effects are still expected to be short-term, reversible, and geographically localised. **Addressed in EIS Appendix 30-A:** As reported in the EIS, 0.7% of containers moving through Deltaport currently contain hazardous and noxious substances (2012 data; see EIS Appendix 30-A). As containers are either stuffed or destuffed away from the terminal in the Lower Mainland, or simply loaded onto inland-bound trains, the probability of containers carrying hazardous and noxious substances affecting vegetation on shore is exceedingly low. **Additional response provided by the VFPA:** In 2017, the top ten container cargos accounting for approximately 73% of total inbound and outbound container cargo were household goods; lumber; woodpulp; specialty crops, construction and materials; industrial, auto, and vehicle parts; basic metals; meat, fish, and poultry; and waste paper.	**EIS (CEAR Document #181)** Appendix 30-A Marine Vessel Incidence Prediction Inputs to the Quantitative Risk Assessment **MSA** 10.0 Potential Accidents or Malfunctions 10.3.3 Identification of Plausible Worst-case Accident or Malfunction Scenarios 10.4 Mitigation Appendix 5-B Aboriginal Issues and Interests **VFPA Statistics Overview 2017** https://www.portvancouver.com/wp-content/uploads/2018/03/2017-Stats-Overview-1.pdf
Pach-16.2	Concerned with the potential for an accident to occur at Turn Point, East Point, and Boundary Passage.	15-Aug-2015, Meeting	**15-Aug-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and	**Addressed in MSA Appendix 5-B (#92):** The assessment of potential accidents and malfunctions (MSA Section 10.0) considers a plausible worst-case spill scenario, located in Segment B of the marine shipping area, in Boundary Passage at the south end of South Pender Island. This location is near Turn Point. Boundary Passage is considered a higher risk area due to the relatively narrow passage, potential navigational hazards, and prevailing wind directions. The assessment also includes a description of applicable mitigation.	**MSA** 10.0 Potential Accidents or Malfunctions 10.3.3 Identification of Plausible Worst-case Accident or Malfunction Scenarios 10.4 Mitigation Measures

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
			interests and provided the VFPA's responses.		Appendix 5-B Aboriginal Issues and Interests
Pach-16.3	Concerned with the content of containers, and specifically the potential for an accident involving containers containing hazardous materials. Stated that shipping vessels empty hazardous materials currently within Pacheedaht Traditional Territory. Stated that this affects our foods in every way.	15-Aug-2015, Meeting	**15-Aug-2015:** Stated that the potential for an accident involving dangerous goods will be discussed in the MSA. There is a specific process for handling dangerous goods. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in MSA Appendix 5-B (#109):** The potential for an accident involving a spilled container, and hazardous contents of containers, is addressed in MSA Section 10.0. Details on the types of hazardous materials shipped in containers are provided in EIS Appendix 30-A (Table G-3 in Appendix G). Regulations for securing containers, and for the transport of dangerous goods, are set by the IMO (http://www.imo.org/en/About/Conventions/ListOfConventions/Pages/International-Convention-for-the-Safety-of-Life-at-Sea-(SOLAS),-1974.aspx). The International Maritime Dangerous Goods Code is the international code that establishes where dangerous goods should be loaded on a ship. Some should be loaded below deck, others should be loaded on deck, some dangerous goods need to be separated by certain distances from other types of goods, and some dangerous goods need to be segregated in different holds from other goods. The implementation of the Code is mandatory under the International Convention for the Safety of Life at Sea (SOLAS) and the International Convention for the Prevention of Pollution from Ships (MARPOL 73/78).	**MSA** 10.0 Potential Accidents or Malfunctions 10.3.2.1 Loss Overboard of Containers from Ships In-transit in Semi-protected Waters Appendix 5-B Aboriginal Issues and Interests
Pach-16.4	Expressed interest being trained in emergency response.	10-Nov-2015, Meeting	**09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses. **10-Nov-2015, Meeting:** Recorded comment for consideration by the Project team.	**Addressed in MSA Appendix 5-B (#107):** The role for Indigenous groups in marine spill response framework is addressed in MSA Section 10.0. During a response to an environmental emergency requiring multi-agency cooperation, the Environmental Emergencies Science Table (Science Table) can be convened to provide advice to the lead agency (as well as the Incident Commander). The Science Table brings together relevant experts in the field of environmental protection such as response agencies, all levels of government, Indigenous representatives, local communities, industries, environmental non-government organisations, and academic institutions. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954) and letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provide additional information on the Government of Canada's Oceans Protection Plan which includes information on Indigenous capacity in design and delivery of marine safety and indigenous community response teams.	**MSA** 10.0 Potential Accidents or Malfunctions 10.4 Mitigation Appendix 5-B Aboriginal Issues and Interests **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**
Pach-16.5	Expressed interest in the contents of containers (including shipping of hazardous materials) and tug escorts for vessels.	10-Nov-2015, Meeting	**09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses. **10-Nov-2015, Meeting:** Recorded comment for consideration by the Project team.	**Addressed in MSA Appendix 5-B (#107):** The potential for an accident involving a spilled container, and hazardous contents of containers, is addressed in MSA Section 10.0. Details on the types of hazardous materials shipped in containers are provided in EIS Appendix 30-A (Table G-3 in Appendix G). Regulations for securing containers, and for the transport of dangerous goods, are set by the IMO (http://www.imo.org/en/About/Conventions/ListOfConventions/Pages/International-Convention-for-the-Safety-of-Life-at-Sea-(SOLAS),-1974.aspx). The International Maritime Dangerous Goods Code is the international code that establishes where dangerous goods should be loaded on a ship. #	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				Addressed in MSA Appendix 5-B (#95): The regulatory framework related to safe navigation is described in MSA Section 3.0. Activities associated with marine shipping are described in MSA Section 4.0. Escort tugs, associated with berthing activities, are not used within the marine shipping area. Additional information on risk reduction and accident response measures are provided in the assessment of potential accidents or malfunctions (MSA Section 10.0). The use of rescue tugs in a spill response effort would depend on the type of incident. **Addressed in EIS Appendix 30-A:** As reported in the EIS, 0.7% of containers moving through Deltaport currently contain hazardous and noxious substances (2012 data; see EIS Appendix 30-A). As containers are either stuffed or destuffed away from the terminal in the Lower Mainland, or simply loaded onto inland-bound trains, the probability of containers carrying hazardous and noxious substances affecting vegetation on shore is exceedingly low. **Additional response provided by the VFPA:** In 2017, the top ten container cargos accounting for approximately 73% of total inbound and outbound container cargo were household goods; lumber; woodpulp; specialty crops, construction and materials; industrial, auto, and vehicle parts; basic metals; meat, fish, and poultry; and waste paper.	10.4 Mitigation Measures Appendix 5-B Aboriginal Issues and Interests
Pach-16.6	Stated that one of their main concerns is emergency response. In the event of a major oil spill or other accident, where large portions of the territory are impacted, it could take up to 258 days, using the current planning standards to clean the entire shoreline in Pacheedaht territory. Stated that Pacheedaht continues to have concerns as to whether this is an adequate or effective response timeline, especially within the context of RBT2's proposed increase in shipping traffic.	23-Sep-2015, Pacheedaht Traditional Use and Occupancy Study 10-Nov-2015, Meeting	**23-Sep-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses. **10-Nov-2015:** Recorded comment for consideration by the Project team.	**Addressed in MSA Appendix 5-B (#107):** Details on spill response, including responsibilities of various parties, response timelines, and equipment requirements, are provided in the mitigation section of the assessment of potential accidents or malfunctions (MSA Section 10.0). Detailed Oil Spill Response Plans are prepared and executed by the Western Canada Marine Response Corporation, and submitted to Transport Canada. Additional information is available here: http://wcmrc.com/. **Additional response provided by the VFPA:** The *Canada Shipping Act, 2001* is Transport Canada's regulatory framework surrounding marine pollution and its enforcement. In the case of a report of pollution in the water, including oil or fuel spills, Canada operates under the National Spill Response Protocol, which specifies that the Canadian Coast Guard is responsible for ensuring the clean-up of ship sourced spills of oil and other pollutants. While the VFPA is not the lead agency when it comes to spill response, it provides assistance often in the form of working with first responders and other agencies, providing information on a situation through the 24/7 operations centre, security cameras, patrol boats, and drone. As per a 2009 letter of understanding, the VFPA can be called upon by the Coast Guard to conduct an initial inspection in response to a pollution report in our federal jurisdiction. On the west coast, the Canadian Coast Guard contracts spill clean up to Western Canada Marine Response Corporation. This is also the agency that ships or terminal operators are required to call if they discover they have been the source of a spill. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954) and letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provide additional information on the Government of Canada's Oceans Protection Plan which includes information on emergency response.	**MSA** 10.0 Potential Accidents or Malfunctions 10.4 Mitigation Measures Appendix 5-B Aboriginal Issues and Interests **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**
Pach-16.7	Concerned that worst-case scenario risk assessment omits recent data such as terrorist attacks and other military events.	10-Nov-2015, Meeting 13-Jan-2016, Letter to the CEA Agency (CEAR	**09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Section 10.0 assessing plausible worst-case scenarios.	**Addressed in MSA Section 10.0:** In developing MSA Section 10.0, the VFPA identified plausible worst-case scenarios to assess. The scenarios were selected based on the probability of events occurring (using ship incident data collected over several years) and the environmental consequences of those events. Terror attacks or military events were considered extraordinary circumstances that, while possible, did not	**MSA** 10.0 Accidents and Malfunctions

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	Stated that the Vessel Incident Overview is based on the period of 1995 – 2010, and only accounts for the range of vessel incidents occurring within that time frame. Stated that the Vessel Incident Overview does not include calculations of risks not occurring during that period, such as, for example, from terrorist attacks or military incidents. The assessment appears to be incomplete on these bases.	Document #384)	**10-Nov-2015, Meeting:** Committed to conveying Pacheedaht's concern about terrorist attacks/military activities to the CEA Agency. **12-May-2016, Letter from the CEA Agency (CEAR Document #407):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	warrant assessment.	
Pach-16.8	Requested an assessment of how Pacheedaht would be impacted by an accident or malfunction associated with the Project. The assessment should include how Pacheedaht would be impacted by a release of fuel into Juan de Fuca Strait or the collision of a container ship associated with the Project with a tanker transporting diluted bitumen.	31-Oct-2016, Letter to Panel (CEAR Document #672)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 10.3.2.2:** MSA Section 10.3.2.2 considers container ship collisions with tankers. As noted in the section, container ship-tanker collisions are calculated to have return periods of over 10,000 years and those for laden crude oil tankers even lower, due to the fact that only outbound crude oil tankers are expected to be laden with crude oil. A collision does not necessarily lead to a spill. Minimum return periods (at 95% confidence level) for a collision between RBT2-bound container ships and laden crude oil tankers that result in a crude oil spill are over 800,000 years. In MSA Section 10.0, the VFPA identified plausible worst-case scenarios to assess. The scenarios were selected based on the probability of events occurring (using ship incident data collected over several years) and the environmental consequences of those events. For the marine shipping area, collisions and associated spills in the marine shipping area will have the highest probability of occurrence where the probability of an encounter between ships is highest, based on the relative risk of overtaking, head-on, and crossing encounters. The most likely encounter locations in the marine shipping area are near East Point on Saturna Island at the eastern entrance to Boundary Passage, and near Turn Point on Stuart Island at the entrance to Haro Strait at the southwest end of Boundary Passage. This area was selected as Plausible Accident or Malfunction #1.	**MSA** 10.0 Accidents and Malfunctions 10.3.2.2 Collisions In-transit 10.3.3.1 Plausible Accident or Malfunction #1: Hard Grounding Resulting in a Spill
Pach-16.9	Requested a detailed simulation to determine the best solution for assisting a disabled container ship in Juan de Fuca Strait.	31-Oct-2016, Letter to Panel (CEAR Document #672)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** Although the regulated care and control of vessels calling at the Port of Vancouver is limited to its marine jurisdiction, the VFPA is supportive of initiatives by other agencies and authorities in reducing marine shipping-related risks outside of its jurisdiction. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954) and letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provide additional information on the Government of Canada's Oceans Protection Plan which includes information on emergency response.	**From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**
Pach-16.10	Requested that the VFPA undertake stochastic modelling to assess the fate and behaviour of a hypothetical spill under a range of environmental conditions, as requested by Environment Canada.	31-Oct-2016, Letter to Panel (CEAR Document #672)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in Section 17 of the *Updated EIS Guidelines*:** Section 17 of the *Updated EIS Guidelines* notes: *"It is likely that a Tier 1 approach (Qualitative; description based on expert opinion and traditional and local knowledge) will be an appropriate level of detail in most cases. For select environmental effects and locations where there may be a higher risk of environmental effects, a Tier 2 approach (Semiquantitative; measured site-specific data and existing site information) would likely be an appropriate level of detail."* **Addressed in MSA Appendix 10-B:** Consistent with the CEA Agency's direction, MSA Appendix 10-B qualitatively evaluates the general transport and behaviour of hypothetical spill events in the higher incident risk area (where accidents and accident-related spills have the highest probability of occurrence due to increased encounter probability) while considering site-specific environmental conditions, seasonality,	**MSA** Appendix 10-B RBT2 Marine Fate of Shipping Spill-type Accidents ***Updated EIS Guidelines*** Stantec. 2013. Ecological risk assessment of marine transportation spills. Technical report for the Trans Mountain Pipeline ULC Trans Mountain Expansion Project. Document #REP-NEB-TERA-00031.

This is also the agency that ships, or terminal operators are required to call if they discover they have been the source of a spill. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954) and letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provide additional information on the Government of Canada's Oceans Protection Plan which includes information on emergency response protocols.	**From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Pach-16.13	Concerned about the significant risk associated with the potential of an oil spill, its immediate effects, the long-term environmental damage, and the subsequent ecosystem disturbance related to clean-up operations. Concerned about the potential for a leak or spill of oil, in particular diluted bitumen, into Pacheedaht's waterways due to a tanker collision, tanker malfunction, earthquake/tsunami, or military or terrorist attack on a tanker. Such an event would impact Pacheedaht's ability to partake in their ceremonial practices, harvest resources for their community, earn income from tourism and cause many other major problems.	23-Sep-2015, Pacheedaht Traditional Use and Occupancy Study 30-Nov-2017, Letter to Panel – Pacheedaht First Nation Traditional Marine Use and Occupancy Study 2014 (CEAR Document #1118)	**23-Sep-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Section 10.0 - the assessment of potential accidents or malfunctions.	**Additional information provided by the VFPA:** The proposed Project is a container terminal and does not include any oil-related elements. **Addressed in MSA Section 10.0:** The assessment of potential accidents or malfunctions considers a variety of potential effects related to two plausible worst-case scenarios selected based on the analysed probabilities of occurrence, higher risk areas, and possible consequences: • A collision between a container ship and a small vessel within an existing shipping lane, resulting in damage to the vessel and/or gear as well a serious injury or fatality; and • A powered grounding of a container ship on a hard substrate, resulting in a spill of 7,500 m^3 of heavy fuel oil. In both cases, the identified residual adverse effects are unlikely to occur, because of the very low probability of the accident scenarios. A description of spill response protocols is also included in MSA Section 10.0. **Additional information provided by the VFPA:** The *Canada Shipping Act, 2001* is Transport Canada's regulatory framework surrounding marine pollution and its enforcement. In the case of a report of pollution in the water, including oil or fuel spills, Canada operates under the National Spill Response Protocol, which specifies that the Canadian Coast Guard is responsible for ensuring the clean-up of ship sourced spills of oil and other pollutants. This is also the agency that ships, or terminal operators are required to call if they discover they have been the source of a spill.	**EIS** Appendix 7.2-B Aboriginal Groups Interests and Issues Table **MSA** 10.0 Potential Accidents or Malfunctions 10.4 Mitigation Measures Appendix 5-B Aboriginal Issues and Interests https://www.portvancouver.com/about-us/topics-of-interest/emergencies-and-spill-response/
Pach-16.14	Concerned with a potential accident, and that it may impact Pacheedaht's ability to teach traditional knowledge to their young. Stated that the intergenerational transfer of knowledge will be lost if the harvesting and cultural sites are no longer intact. Stated that Pacheedaht members must take extraordinary measures (radar, extreme vigilance, avoid fishing in fog), and accept heightened risk in order to engage in traditional fishing activities at Swiftsure Bank. Stated that the Current Use experience has been eroded in ways that are not 'negligible,' and that the addition of Project-associated vessel traffic would	14-Aug-2015, Meeting 23-Sep-2015, Pacheedaht Traditional Use and Occupancy Study 13-Jan-2016, Letter to the CEA Agency (CEAR Document #384) 31-Oct-2016, Letter to Panel (CEAR Document #672) 23-Oct-2017, Meeting with the VFPA and regulatory	**14-Aug-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Section 9.5 detailing the assessment of potential impacts to Indigenous groups' ability to exercise asserted or established Aboriginal and treaty rights as a result of Project-associated shipping. **12-May-2016, Letter from the CEA Agency (CEAR Document #407):** *"The Agency requested additional information on [the VFPA's] assessment methodology in AIR #2 Rationale for Effects Characterization."* **23-Oct-2017, Meeting:**	**Addressed in MSA Appendix 5-B (#73):** The assessment of Current Use (MSA Section 9.5) considers the risk of collision and perceptions of safety in the assessments of access to preferred Current Use locations, and quality of Current Use experience. The assessment of potential accidents or malfunctions (MSA Section 10.0) includes consideration of a plausible worst-case collision scenario between a container ship and a smaller vessel such as a fishing vessel. Potential effects of such an event are assessed for the following VCs: marine commercial use, outdoor recreation, and human health, as well as Current Use. The assessment of Current Use (MSA Section 9.5) considers cultural practices, such as the acquisition of traditional foods and the transmission of traditional knowledge. Perceptions of safety, as well as access to preferred harvesting locations and visual or auditory disturbances, are covered in the assessment of potential changes to the following: access to preferred Current Use locations and quality of Current Use experience. **Addressed in MSA Section 9.5:** MSA Section 9.5 considers Current Use by Indigenous peoples, including intangible cultural heritage considerations, and in the marine shipping area. The section also considers potential impacts on the ability to exercise asserted or established Aboriginal or treaty rights in the marine shipping area, including in the context of potential accidents and malfunctions. Potential effects on Current Use as a result of Project associated vessel transit activities are considered negligible before mitigation for access to preferred Current Use locations, due to Project-associated ship wake, the availability and quality of preferred Current Use resources, and the quality of the Current Use experience (i.e., cultural practices) tied to those aspects of Current Use. Residual effects on access to preferred Current Use locations due to Project associated	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4 Existing Conditions 9.5.5.1 Negligible Effects of Vessel Transit on Current Use 9.5.5.2 Potential Effects of Vessel Transit on Current Use 9.5.6 Suggested Mitigation Measures 10.0 Potential Accidents or Malfunctions 10.5.9 Human Health 10.5.10 Marine Commercial Use 10.5.11 Outdoor Recreation 10.5.13 Current Use of Lands and Resources for Traditional

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	increase already unacceptable risks. Stated that another result of the heightened risk is that Pacheedaht fishers now seldom bring elders or youth with them to Swiftsure Bank, therefore deteriorating the traditional intergenerational transfer of knowledge concerning fishing at the Bank. Stated that the EIS Addendum assessment of Change in Current Use experience is incomplete and flawed. Requested a complete assessment of potential impacts to Pacheedaht's ability to access Current Use locations, including cumulative effects. The assessment must include consideration of the availability of marine resources in sufficient quality and quantity to support Pacheedaht's marine harvesting, fishing, and hunting. Expressed concerns regarding vessel traffic near Swiftsure Bank and the safety risks these vessels pose to their fishing community.	bodies (the CEA Agency, B.C. EAO) and Canadian Coast Guard	The VFPA met with Pacheedaht along with representatives from the CEA Agency, B.C. EAO, and the Canadian Coast Guard to discuss the Project and its associated marine shipping. The Coast Guard representative and Pacheedaht discussed the need for greater communication, noting the importance of radios, communication with the band office, and mariners in general. The Coast Guard representative committed to take these questions back (What are the situations (planned, unplanned) in which ships can deviate? How early does the Coast Guard know when ships may need to deviate? Does the Coast Guard have expectations about how every mariner should know how to get this information? What is considered an "official" incident?). The Coast Guard representative indicated that there are plans for real-time marine traffic information, but timing of this initiative is not yet set	container ship pass-bys, and on cultural practices tied to that aspect of Current Use, are considered negligible after the implementation of mitigation. Considering the conclusions of the Current Use assessment, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the marine shipping area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location. These mitigation measures for addressing potential incremental effects on Current Use are expected to also be effective at addressing the potential incremental impact to the exercise of Aboriginal and treaty rights. No additional mitigation measures have therefore been suggested for the potential incremental impact to the exercise of Aboriginal and treaty rights.	Purposes and Aboriginal and Treaty Rights Appendix 5-B Aboriginal Issues and Interests

Table 17: Potential or Established Aboriginal and Treaty Rights and Related Interests, including Current Use of Lands and Resources for Traditional Purposes

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Pach-17.1	Expressed concern regarding the VFPA's use of the National Energy Board Trans Mountain Pipeline Expansion materials as a basis for compiling the Current Use study. Stated that this information inaccurately and incompletely portrays Pacheedaht's Current Use, and also fails to convey the vital importance of these activities and areas. Requested for Pacheedaht participation in the VFPA's study. Sent a proposal for a Pacheedaht First Nation Report for Current Use Study in the marine shipping area. Requested funding to produce the report. Agreed to the Participation Funding agreement and terms of the study.	14-Aug-2015, Meeting 17-Aug-2015, Letter 26-Aug-2015, Letter	**14-Aug-2015, Meeting:** Acknowledged the limits of the study, compiled with secondary sources. The Current Use summary will not be submitted to the CEA Agency without Pacheedaht's agreement. Requested that Pacheedaht submit a proposal and budget to the VFPA for a Current Use Study. **20-Aug-2015, Letter from the VFPA to Pacheedaht:** Approved the funding request and requested the deliverable (undertake a Traditional Use Study) by September 21, 2015. **24-Sep-2015:** Pacheedaht provided the VFPA with the report: Pacheedaht First Nation Traditional Use and Occupancy Study Report for Port Metro Vancouver RBT2 Project. **10-Nov-2015, Meeting:** The VFPA met with Pacheedaht to discuss their Traditional Use and Occupancy Study, provide an update on the assessment process, and discuss opportunities for input moving forward. **25-Apr-2016, Letter from the VFPA:** Provided Pacheedaht First Nation with a table including all Pacheedaht First Nation's comments on the draft sections, responses to each comment from the VFPA, and a description of subsequent changes made to the sections.	**Addressed in MSA Appendix 5-B (#67):** The VFPA has engaged with each of the Indigenous groups listed in the *Updated EIS Guidelines*, provided drafts of Current Use existing conditions sections, and requested any additional Current Use information that the Indigenous group may wish to provide. The revised Current Use summary, following incorporation of any additional input from Indigenous groups is provided in the assessment of Current Use (MSA Section 9.5). The VFPA has acknowledged the challenges of participating in consultation during summer months and has extended timelines to accommodate the provision of additional information from Indigenous groups. The VFPA has provided funding to Indigenous groups participating in consultation and considers the amount of funding offered to be adequate and proportionate to the level of effort required by each Indigenous group to participate, given the scope of work. The VFPA increased the funding provided in some circumstances in response to specific requests.	**MSA** 5.0 Aboriginal Groups Engagement and Consultation 5.1.2 Consultation Objectives 5.1.4 Aboriginal Groups Engagement and Consultation Methods 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4.10 Existing Conditions, Pacheedaht First Nation Appendix 5-B Aboriginal Issues and Interests
Pach-17.2	Stated that Pacheedaht is working to protect their ways, economically, spiritually, and it is very difficult with increasing numbers of vessels, increasing the possibility of devastation to our market out there – our waterways, the foreshores, where we get our food from.	14-Aug-2015, Meeting	**14-Aug-2015, Meeting:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which includes Appendix 5-B that summarizes the issues and interests raised by Aboriginal groups regarding marine shipping and VFPA's responses.	**Addressed in MSA Appendix 5-B (#74):** The assessment of Current Use (MSA Section 9.5) considers several potential effects, including changes to the following: access to preferred Current Use locations; availability of preferred Current Use resources; quality of preferred Current Use resources; and quality of Current Use experience. **Addressed in MSA Section 9.5:** As noted in MSA Section 9.5.11, taking a precautionary approach, the assessment of potential impacts to Indigenous groups' ability to exercise asserted or established Aboriginal and treaty rights as a result of Project-associated shipping was based on the assumption that traditional use presently occurring in the marine shipping area (i.e., Current Use) is an expression of the exercise of Aboriginal or treaty rights. Where traditional use was not identified as occurring at present within the marine shipping area, but similar use was identified as practiced in the past in the marine shipping area, asserted as an Aboriginal right, or protected under treaty, this use was assumed to be potentially exercisable as an Aboriginal or treaty right, and subject to potential impacts as a result of Project-associated shipping in much the same way as potential effects on Current Use.	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4 Existing Conditions 9.5.5.1 Negligible Effects of Vessel Transit on Current Use 9.5.5.2 Potential Effects of Vessel Transit on Current Use 10.0 Potential Accidents or Malfunctions 10.5.13 Current Use of Lands and Resources for Traditional

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				Considering the conclusions of the Current Use assessment, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the marine shipping area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location. These mitigation measures for addressing potential incremental effects on Current Use are expected to also be effective at addressing the potential incremental impact to the exercise of Aboriginal and treaty rights. **Addressed in Response to IR10-22:** The VFPA's response to IR10-22, as requested by the Review Panel, further discusses the assessment of cultural heritage, potential disruptions or loss of ceremonial and cultural practices, as well as a potential disruption to sense of belonging, identity and spirituality**.** **Addressed in Response to IR10-26:** The VFPA's response to IR10-26, as requested by the Review Panel, discusses potential effects of the proposed Project on the reasonably foreseeable future Current Use activities that have been identified by Indigenous groups.	Purposes and Aboriginal and Treaty Rights Appendix 5-B Aboriginal Issues and Interests **Information Requests** Response to Sufficiency Information Request #22 (IR10-22) Response to Sufficiency Information Request #26 (IR10-26)
Pach-17.3	Stated that Pacheedaht First Nation's participation in the CEA Agency process for RBT2 marine shipping should not be taken as a sign of support for the Project. Stated that participation is out of the intent to protect Indigenous rights, and Pacheedaht traditional territory.	14-Aug-2015, Meeting	**14-Aug-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which includes Appendix 5-B that summarizes the issues and interests raised by Aboriginal groups regarding marine shipping and VFPA's responses.	**Addressed in MSA Appendix 5-B (#75):** Concern is noted. The VFPA acknowledges the intent of Pacheedaht First Nation to protect their Aboriginal rights and their traditional territory. The assessment of potential adverse impacts on asserted or established Aboriginal and treaty rights is discussed in MSA Section 9.5.	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.11 Potential Adverse Impacts on Asserted or Established Aboriginal and Treaty Rights Appendix 5-B Aboriginal Issues and Interests
Pach-17.4	Stated that Pacheedaht's access to resources extends beyond their traditional territory, and that groups outside of their territory use resources within Pacheedaht traditional territory (i.e., agreements with Nuu-chah-nulth people and Coast Salish people).	14-Aug-2015, Meeting	**14-Aug-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which includes Appendix 5-B that summarizes the issues and interests raised by Aboriginal groups regarding marine shipping and VFPA's responses.	**Addressed in MSA Appendix 5-B (#76):** The anticipated extent of the potential effects of marine shipping within the marine shipping area is limited to the boundaries of the LAAs for each IC and VC. The assessment of Current Use (MSA Section 9.5) includes consideration of Current Use activities occurring outside of Indigenous groups' specific territory. MSA Figure 9.5-7 presents the Pacheedaht First Nation's asserted traditional territory.	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4 Existing Conditions 9.5.5.1 Negligible Effects of Vessel Transit on Current Use 9.5.5.2 Potential Effects of Vessel Transit on Current Use Appendix 5-B Aboriginal Issues and Interests
Pach-17.5	Stated that Pacheedaht chose their location to avoid impacts of industry elsewhere, and is concerned that increases in shipping vessels will result in impacts to Pacheedaht's resources like those that have	14-Aug-2015, Meeting	**14-Aug-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which includes Appendix 5-B that summarizes the issues	**Addressed in MSA Section 9.5:** Potential effects on Current Use as a result of Project-associated vessel transit activities are considered negligible before mitigation for access to preferred Current Use locations, due to Project-associated ship wake, the availability and quality of preferred Current Use resources, and the quality of the Current Use experience (i.e., cultural practices) tied to those aspects of Current Use. Residual effects on access to	

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	occurred in other areas. Stated that crabs taste better on outside of Vancouver Island than the inside.		and interests raised by Aboriginal groups regarding marine shipping and VFPA's responses.	preferred Current Use locations due to Project-associated container ship pass-bys, and on cultural practices tied to that aspect of Current Use, are considered negligible after the implementation of mitigation. Considering the conclusions of the Current Use assessment, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the marine shipping area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location. These mitigation measures for addressing potential incremental effects on Current Use are expected to also be effective at addressing the potential incremental impact to the exercise of Aboriginal and treaty rights. No additional mitigation measures have therefore been suggested for the potential incremental impact to the exercise of Aboriginal and treaty rights.	
Pach-17.6	Stated that the absence of comprehensive, group-specific information is a significant flaw in the Port's environmental assessment. Stated that the assessment of potential impacts to Pacheedaht should include: • Economic considerations; • Employment; • Community services and infrastructure; • Individual family and community well-being; • Health; • Culture; • Cultural sites; • Aboriginal title; • Aboriginal rights to fish, hunt, and gather; • Governance; • Visual and aesthetic resources; • Species and habitat required for the exercise of Pacheedaht's rights, including marine vegetation, marine invertebrates, fish, marine mammals, and marine birds; and • Navigational use of waterways. The assessment should include the Port's conclusions on the exercise of Pacheedaht's rights and how they will experience the impact of the Project. It should also include specific mitigation measures for addressing these impacts.	31-Oct-2016, Letter to Panel (CEAR Document #672)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in Responses to IR10-02, IR10-06, IR10-08, IR10-13, and IR10-15:** The VFPA's responses to IR10-02, IR10-06, IR10-08, IR10-13, and IR10-15, as requested by the Review Panel, further discuss aspects of the current use effects assessment.	**Information Requests** Response to Sufficiency Information Request #02 (IR10-02) Response to Sufficiency Information Request #06 (IR10-06) Response to Sufficiency Information Request #08 (IR10-08) Response to Sufficiency Information Request #13 (IR10-13) Response to Sufficiency Information Request #15 (IR10-15)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	The assessment should also include potential impacts to Pacheedaht from accidents or malfunctions. Along with the assessment, the Port should be required to provide a list of the issues and concerns raised by Pacheedaht during consultation, and how these issues and concerns have been addressed.				
Pach-17.7	Stated that for the assessment described above, provide a significance determination for each Indigenous group, including a description of the methodology used in making the determination.	31-Oct-2016, Letter to Panel (CEAR Document #672)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in Responses to IR10-02, IR10-06, IR10-08, IR10-13, and IR10-15:** The VFPA's responses to IR10-02, IR10-06, IR10-08, IR10-13, and IR10-15, as requested by the Review Panel, further discuss aspects of the current use effects assessment.	**Information Requests** Response to Sufficiency Information Request #02 (IR10-02) Response to Sufficiency Information Request #06 (IR10-06) Response to Sufficiency Information Request #08 (IR10-08) Response to Sufficiency Information Request #13 (IR10-13) Response to Sufficiency Information Request #15 (IR10-15)
Pach-17.8	Requested an assessment of the impacts to Pacheedaht's governance rights from the Project. Requested an assessment of the impacts to Pacheedaht's title rights from the Project.	31-Oct-2016, Letter to Panel (CEAR Document #672)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 9.5:** MSA Section 9.5 considers Current Use by Indigenous peoples, including intangible cultural heritage considerations, and in the marine shipping area. The section also considers potential impacts on the ability to exercise asserted or established Aboriginal or treaty rights in the marine shipping area. **Addressed in Responses to IR10-02, IR10-06, IR10-08, IR10-13, and IR10-15:** The VFPA's responses to IR10-02, IR10-06, IR10-08, IR10-13, and IR10-15, as requested by the Review Panel, further discuss aspects of the current use effects assessment.	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights **Information Requests** Response to Sufficiency Information Request #02 (IR10-02) Response to Sufficiency Information Request #06 (IR10-06) Response to Sufficiency Information Request #08 (IR10-08) Response to Sufficiency Information Request #13 (IR10-13) Response to Sufficiency Information Request #15 (IR10-15)
Pach-17.9	Requested that the VFPA address inconsistency in assessment for impacts on Aboriginal rights. Requested clarity on the Port's	31-Oct-2016, Letter to Panel (CEAR	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in Response to IR10-03:** As noted in the VFPA's response to IR 10-03, the conclusion of the assessment of the potential environmental effects on Current Use and the assessment of potential	**Information Requests** Response to Sufficiency Information Request #03

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	conclusions on rights assessment and whether impacts to rights as a result of marine shipping associated with the project are negligible, or adverse.	Document #672)		impacts to asserted or established Aboriginal and treaty rights is consistent when the same end points of the assessment (i.e., pre-mitigation, post-mitigation) are compared.	(IR10-03)
Pach-17.10	Stated that the commercial shipping lane was moved 6 km into Canadian waters, and the lane now crosses the Indigenous fisheries area at Swiftsure Bank, which is vitally important to Pacheedaht and a home to rockfish, halibut, lingcod, and salmon, humpback, and killer whales. Stated that Pacheedaht members must hire charters at great expense ($1,500 for 3 hours) to safely fish in this area, as most do not own boats with radar. Stated that because of the current in this area, Pacheedaht members have to drop anchor in order to fish, and in foggy weather, their boats then have to cut anchor and move quickly to avoid collision with an approaching tanker.	14-Aug-2015, Meeting	**14-Aug-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Section 9.5 detailing the assessment of potential impacts to Indigenous groups' ability to exercise asserted or established Aboriginal and treaty rights as a result of Project-associated shipping. **23-Oct-2017, Meeting:** The VFPA met with Pacheedaht along with representatives from the CEA Agency, B.C. EAO, and the Canadian Coast Guard to discuss the Project and its associated marine shipping. Pacheedaht raised their concerns regarding the location of the shipping lanes. The CEA Agency responded that the discussion regarding the shipping lane will continue through the Oceans Protection Plan.	**Addressed in MSA Section 9.5:** Potential effects on Current Use as a result of Project-associated vessel transit activities are considered negligible before mitigation for access to preferred Current Use locations, due to Project-associated ship wake, the availability and quality of preferred Current Use resources, and the quality of the Current Use experience (i.e., cultural practices) tied to those aspects of Current Use. Residual effects on access to preferred Current Use locations due to Project-associated container ship pass-bys, and on cultural practices tied to that aspect of Current Use, are considered negligible after the implementation of mitigation. Considering the conclusions of the Current Use assessment, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the marine shipping area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location. These mitigation measures for addressing potential incremental effects on Current Use are expected to also be effective at addressing the potential incremental impact to the exercise of Aboriginal and treaty rights. No additional mitigation measures have therefore been suggested for the potential incremental impact to the exercise of Aboriginal and treaty rights. **Addressed in IR13-25:** The VFPA's forthcoming response to IR13-25 will further discuss aspects of the current use experience.	**MSA** 8.1 Marine Fish and Fish Habitat 8.1.6 Potential Interactions and Effects 9.2 Marine Commercial Use 9.2.4 Existing Conditions 9.2.5 Potential Interactions and Effects 9.2.4.4 Juan de Fuca Strait (Segments C and D of the [Marine Shipping Area]) 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal or Treaty Rights 9.5.5.1 Negligible Effects of Vessel Transit on Current Use 9.5.5.2 Potential Effects of Vessel Transit on Current Use Appendix 5-B Aboriginal Issues and Interests **Information Requests** Response to Sufficiency Information Request #25 (IR13-25)
Pach-17.11	Concerned that impacts from marine traffic will threaten Pacheedaht's ability to harvest resources, and in turn, Pacheedaht members' health. Stated that Pacheedaht rates of diabetes were 30% prior to an increased effort to increase consumption of traditional foods.	14-Aug-2015, Meeting	**14-Aug-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Section 9.5 detailing the assessment of potential impacts to Indigenous groups' ability to exercise asserted or established Aboriginal and treaty rights as a result of Project-associated shipping.	**Addressed in MSA Appendix 5-B (#52):** The assessment of potential effects of marine shipping associated with the Project on marine fish and fish habitat (MSA Section 8.1) addresses potential effects on the availability of marine resources. The assessment of human health (MSA Section 9.1) includes consideration of consumption of marine resources. The assessment of Current Use (MSA Section 9.5) also addresses the potential effects on availability of, and ability to harvest, marine resources. **Addressed in MSA Section 9.5:** MSA Section 9.5 considers Current Use by Indigenous peoples, including intangible cultural heritage considerations, and in the marine shipping area. The section also considers potential impacts on the ability to exercise asserted or established Aboriginal or treaty rights in the marine shipping area, including in the context of potential accidents and malfunctions. Potential effects on Current Use as a result of Project associated vessel transit activities are considered negligible before mitigation for access to preferred Current Use locations, due to Project-associated ship wake, the availability and quality of preferred Current Use resources, and the quality of the Current Use experience (i.e., cultural practices) tied to those aspects of Current Use. Residual effects on access to preferred Current Use locations due to Project-associated container ship pass-bys, and	**MSA** 8.1 Marine Fish and Fish Habitat 9.1 Human Health 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights Appendix 5-B Aboriginal Issues and Interests

				on cultural practices tied to that aspect of Current Use, are considered negligible after the implementation of mitigation. Considering the conclusions of the Current Use assessment, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the marine shipping area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location. These mitigation measures for addressing potential incremental effects on Current Use are expected to also be effective at addressing the potential incremental impact to the exercise of Aboriginal and treaty rights. No additional mitigation measures have therefore been suggested for the potential incremental impact to the exercise of Aboriginal and treaty rights.	
Pach-17.12	Concerned with the cumulative effects of global warming and industry to Pacheedaht's fish.	14-Aug-2015, Meeting	**14-Aug-2015:** Recorded comment for consideration by the Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included information regarding the cumulative effects assessment.	**Addressed in MSA Section 8.1.9:** An assessment of cumulative effects on marine fish and fish habitat was not conducted as routine marine shipping associated with the Project is not expected to result in any measurable change in marine fish or fish habitat that is likely to interact cumulatively with changes caused by other projects or activities that have been or will be carried out. While the effects of environmental variability and climatic changes on the existing conditions to marine fish in the marine shipping area are discussed in the fish and fish habitat assessment (MSA Section 8.1), the cumulative effects of climate change on VCs (such as fish) is outside the scope of the environmental assessment.	**MSA** 8.1 Marine Fish and Fish Habitat 8.1.5.5 Marine Fish 8.1.9 Cumulative Effects Assessment
Pach-17.13	Stated that container traffic may destroy fishing gear, such as the nets and lines that Pacheedaht members set.	31-Oct-2016, Letter to Panel (CEAR Document #672)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Section 9.5:** MSA Section 9.5 considers Current Use by Indigenous peoples, including intangible cultural heritage considerations, and in the marine shipping area. The section also considers potential impacts on the ability to exercise asserted or established Aboriginal or treaty rights in the marine shipping area, including in the context of potential accidents and malfunctions. Potential effects on Current Use as a result of Project-associated vessel transit activities are considered negligible before mitigation for access to preferred Current Use locations, due to Project-associated ship wake, the availability and quality of preferred Current Use resources, and the quality of the Current Use experience (i.e., cultural practices) tied to those aspects of Current Use. Residual effects on access to preferred Current Use locations due to Project-associated container ship pass-bys, and on cultural practices tied to that aspect of Current Use, are considered negligible after the implementation of mitigation. Considering the conclusions of the Current Use assessment, marine shipping associated with the Project is expected to result in a minor incremental adverse impact on the ability of Indigenous groups to exercise Aboriginal or treaty rights within the marine shipping area without mitigation. This minor impact is expected because of the potential overlap of asserted or established rights-based activities with the incremental increase in Project-associated container ship pass-bys. Suggested mitigation includes development of a marine shipping activities communication plan and consultation with affected Indigenous groups concerning the outbound international shipping lane location. These mitigation measures for addressing potential incremental effects on Current Use are expected to also be effective at addressing the potential incremental impact to the exercise of Aboriginal and treaty rights. No additional mitigation measures have therefore been suggested	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4 Existing Conditions 9.5.5.1 Negligible Effects of Vessel Transit on Current Use 9.5.5.2 Potential Effects of Vessel Transit on Current Use 9.5.11 Potential Adverse Impacts on Asserted or Established Aboriginal and Treaty Rights Appendix 5-B Aboriginal Issues and Interests

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
				for the potential incremental impact to the exercise of Aboriginal and treaty rights.	
Pach-17.14	Noted the importance of culture and spiritual connectedness, the degradation of marine resources, and importance of protecting it. Stated that the MSA is incomplete in its assessment of environmental effects of the Project on the cultural heritage of the Pacheedaht.	10-Nov-2015, Meeting 13-Jan-2016, Letter to the CEA Agency (CEAR Document #384)	**09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Section 9.5 detailing the assessment of potential impacts to Indigenous groups' ability to exercise asserted or established Aboriginal and treaty rights as a result of Project-associated shipping. **10-Nov-2015, Meeting:** Recorded comment for consideration by the Project team.	**Addressed in MSA Appendix 5-B (#80):** The assessment of Current Use (MSA Section 9.5) includes cultural considerations, such as cultural practices and sites of importance, as well as intangible cultural heritage considerations, such as the expression of cultural values or ways of knowing, and the formation and maintenance of cultural identity, in the assessment of quality of Current Use experience. The assessment describes how Current Use activities have been affected cumulatively by other projects and activities that have been carried out. As residual effects to Current Use as a result of marine shipping associated with the Project are not predicted, an assessment of future cumulative effects was not carried out. The assessment of potential adverse impacts on asserted or established Aboriginal and treaty rights is included in MSA Section 9.5. **Addressed in Response to IR10-22:** The VFPA's response to IR10-22, as requested by the Review Panel, further discusses the assessment of cultural heritage, potential disruptions or loss of ceremonial and cultural practices, as well as a potential disruption to sense of belonging, identity and spirituality**.**	**MSA** 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.4 Existing Conditions 9.5.5.1 Negligible Effects of Vessel Transit on Current Use 9.5.5.2 Potential Effects of Vessel Transit on Current Use 9.5.11 Potential Adverse Impacts on Asserted or Established Aboriginal and Treaty Rights Appendix 5-B Aboriginal Issues and Interests **Information Requests** Response to Sufficiency Information Request #22 (IR10-22)
Pach-17.15	Stated that the rationale for 'negligible effects' are that there have already been significant impacts on Pacheedaht's Current Use and other interests, so that a marginal increase from the proposed project will result in 'negligible' or 'minor' potential effects. Expressed concern that these assessments are inadequate, noting that cumulative effects from existing developments and projects to their Current Use and interests are already at an unacceptable level, so that any additional effects would further degrade already unacceptable conditions. In particular, the existing amount of vessels travelling along shipping routes over Pacheedaht's traditional fishing ground at Swiftsure Bank have created significant risks and threats to Pacheedaht's Current Use and interests; any additional traffic brings significant additional risks.	13-Jan-2016, Letter to the CEA Agency (CEAR Document #384)	**12-May-2016, Letter from the CEA Agency (CEAR Document #407):** *"The Agency requested additional information on [the VFPA's] assessment methodology in AIR #2 Rationale for Effects Characterization and additional information on cultural heritage in AIR #10 Cultural Heritage Assessment.* *In addition, the Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."* The VFPA has reviewed this letter and provides the following additional information.	**Addressed in Responses to IR10-02, IR10-06, IR10-08, IR10-13, and IR10-15:** The VFPA's responses to IR10-02, IR10-06, IR10-08, IR10-13, and IR10-15, as requested by the Review Panel, further discuss aspects of the current use effects assessment. **Addressed in IR13-20:** The VFPA's forthcoming response to IR13-20 will further discuss Project-related changes to the wave environment and their potential effects on current use activities, access, and navigation.	**Information Requests** Response to Additional Information Request #2 (MSA IR-02.24.16-2 of CEAR Document #386) Response to Additional Information Request #10 (MSA IR-02.24.16-10 of CEAR Document #386) Response to Sufficiency Information Request #02 (IR10-02) Response to Sufficiency Information Request #06 (IR10-06) Response to Sufficiency Information Request #08 (IR10-08) Response to Sufficiency Information Request #13 (IR10-13) Response to Sufficiency Information Request #15 (IR10-15) Response to Sufficiency Information Request #20 (IR13-20)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Pach-17.16	Stated that there is no other area that is as productive and of cultural significant to the Pacheedaht First Nation as Swiftsure Bank, and therefore is not preferred; it is essential to maintain access and use for the Nation. Stated that the mitigation measure identified on page 152 are incomplete. Stated that Pacheedaht will require deep consultation on the Aboriginal and treaty rights impacted by this project, as well further assessment of the impacts to Aboriginal title at Swiftsure Bank. The mitigation proposed is incomplete.	13-Jan-2016, Letter to the CEA Agency (CEAR Document #384)	**12-May-2016, Letter from the CEA Agency (CEAR Document #407):** *"The Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review.* *The Crown will be using the Review Panel process to the extent possible to collect information about potential impacts to the exercise of Pacheedaht's rights from marine shipping associated with the Project and we encourage you to provide your perspective on this topic to the Review Panel."* The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Sections 9.2 and 9.5:** The VFPA acknowledges that Swiftsure Bank is the Pacheedaht's preferred areas to harvest marine resources, as noted in MSA Sections 9.2 and 9.5. **Addressed in Responses to IR10-13 to IR10-20:** The VFPA's responses to IR10-13 through IR10-20, as requested by the Review Panel, provide additional information concerning the rationale for the effects assessment conclusions in the MSA with regard to Current Use, in alignment with the mandate of the Review Panel (refer to CEAR Document #1137). As relayed to the VFPA by the CEA Agency (refer to CEAR Document #1137), the assessment of the seriousness of potential impacts on the exercise of Aboriginal rights and title from marine shipping associated with the Project is the responsibility of the Crown.	**MSA** 9.2 Marine Commercial Use 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights Assessment **Information Requests** Responses to Sufficiency Information Requests #13 to #20 (IR10-13 to IR10-20)
Pach-17.17	Indicated that the Project would significantly impact Swiftsure Bank, which has been, and continues to be, extensively used by Pacheedaht members for harvesting fish and marine mammals since time immemorial.	30-Nov-2017, Letter to Panel (CEAR Document #1118)	The VFPA has reviewed this letter and provides the following additional information.	**Additional response provided by the VFPA:** With the application of the proposed mitigation measures, all residual environmental effects in relation to marine shipping associated with the proposed Project on Current Use are assessed to be negligible. The VFPA acknowledges the importance of Swiftsure Bank to the Pacheedaht.	**Information Requests** Response to Sufficiency Information Request #15 (IR10-15)
Pach-17.18	Concerned that any further reduction, of any magnitude, in Pacheedaht members' access to fisheries and intertidal resources, or further degradation of these resources, will comprise significant losses to Pacheedaht traditional marine harvesting activities and rights. Similarly, any further damage to or degradation of Pacheedaht cultural, archaeological, or other resource harvesting sites, or access to these sites, will also comprise significant losses.	30-Nov-2017, Letter to Panel (CEAR Document #1118)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in Responses to IR10-13 to IR10-20:** The VFPA's responses to IR10-13 through IR10-20, as requested by the Review Panel, provide additional information concerning the rationale for the effects assessment conclusions in the MSA with regard to Current Use, in alignment with the mandate of the Review Panel (refer to CEAR Document #1137). As relayed to the VFPA by the CEA Agency (refer to CEAR Document #1137), the assessment of the seriousness of potential impacts on the exercise of Aboriginal rights and title from marine shipping associated with the Project is the responsibility of the Crown.	**Information Requests** Responses to Sufficiency Information Requests #13 to #20 (IR10-13 to IR10-20)

Table 18: Traffic / Transportation

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Pach-18.1	Stated that they are working to partner with neighbouring and American Indigenous communities and trying to talk to Transport Canada regarding the location of shipping lanes.	10-Nov-2015, Meeting	**10-Nov-2015, Meeting:** Committed to providing a map showing the shipping lane location before and after they were moved. **24-Nov-2015, Email from the VFPA:** Provided the GIS files showing the shipping lanes before and after they were moved. **23-Oct-2017, Meeting:** The VFPA met with Pacheedaht along with representatives from the CEA Agency, B.C. EAO, and the Canadian Coast Guard to discuss the Project and its associated marine shipping. Pacheedaht raised their concerns regarding the location of the shipping lanes. The CEA Agency responded that the discussion regarding the shipping lane will continue through the Oceans Protection Plan.		
Pach-18.2	Concerned with the effects assessment of the MSA, specifically an inconsistency in Section 9.5, p. 9.5-128 "As reported in […] RBT2 Project ship movements […]". Concerned with MSA conclusion that since there has already been a large effect from previous projects that RBT2 shipping will have minor additional impact.	10-Nov-2015, Meeting	**10-Nov-2015:** Recorded comment for consideration by the Project team.	**Addressed in MSA Appendix 5-B (#32):** The effects of past projects and activities are considered within the description of existing conditions in each IC and VC assessment section. The potential for routine marine shipping associated with the Project to add to those effects (as reflected in existing conditions) is evaluated in each IC and VC section.	**MSA** Sections 7.1 to 9.4 (all IC and VC assessments) Appendix 5-B Aboriginal Issues and Interests
Pach-18.3	Stated that Pacheedaht already feels significant threats from marine traffic in the shipping lane, any addition to the amount of traffic, no matter in what increment, adds significantly to threats and increases barriers to use of Swiftsure Bank. Stated that the effects of Project-associated vessel transit with respect to change in availability of preferred resources for Pacheedaht members are not negligible. Stated that the acceptable threshold for the amount of traffic in the shipping lanes has already been exceeded. Stated that the environmental assessment neglects to discuss the very real threat of collisions between Pacheedaht fishing craft and marine commercial traffic in the shipping lanes. Stated that "temporary displacement" actually means that, in order to avoid commercial shipping vessels on the Swiftsure Banks, Pacheedaht fishers have to quickly haul up fishing gear and anchors, then move out of the	23-Sep-2015, Pacheedaht Traditional Use and Occupancy Study 13-Jan-2016, Letter to the CEA Agency (CEAR Document #384) 31-Oct-2016, Letter to Panel (CEAR Document #672)	**23-Sep-2015:** Recorded comment for consideration by the Project team. **12-May-2016, Letter from the CEA Agency (CEAR Document #407):** *"The Agency requested additional information on [the VFPA's] assessment methodology in AIR #2 Rationale for Effects Characterization.* *In addition, the Panel will determine whether it requires additional information or clarification with respect to this information to inform its sufficiency review."*	**Addressed in Response to IR10-13:** The VFPA's response to IR10-13, as requested by the Review Panel, provides additional information concerning the rationale for the effects assessment conclusions.	**Information Requests** Response to Sufficiency Information Request #13 (IR10-13)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
	route of incoming traffic, and then re-establish fishing position and gear – this accomplished under threat of harm to person and vessel, in addition to the associated anxiety and bother. The term "temporary displacement" does not completely describe the required action. Requested a complete assessment of potential impacts to Pacheedaht's ability to access their preferred Current Use locations.				

Table 19: Underwater Noise – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Pach-19.1	Concerned that vessel noise is likely to have negative effects on marine resources that are culturally important to Pacheedaht, including fish and marine mammals.	22-Sep-2014, Letter to the CEA Agency (CEAR Document #124)	The VFPA has reviewed this letter and provides the following additional information.	**Addressed in MSA Sections 8.1 and 8.2:** Potential effects, including effects of underwater noise, from marine shipping associated with the Project on marine fish and marine mammals are assessed in MSA Sections 8.1 and 8.2, respectively. Potential effects of vessel wake-generated waves on marine fish and fish habitat were characterised as negligible, because only 2% of coastline in the LAA is within the wake-related zone of influence, and because wake-generated wave heights at shorelines are predicted to be well within the range of natural wave conditions. Fish and fish habitat are already adapted to the natural conditions; therefore, any wake-related influences would not be distinguishable from existing conditions. Similarly, potential effects of underwater noise were also considered to be negligible because noise associated with Project-associated marine vessel activity and future cumulative shipping activities would not exceed injury thresholds for fish species or the Pacific salmon species behavioural threshold. Further, while noise-induced behavioural changes are possible for Pacific herring, potential effects would be localised to within 20 m of a container ship and of short duration (as the ship passes by) and are therefore not anticipated to affect the integrity of populations within the LAA. Potential effects on marine mammals related to Project-associated vessel transit activities include behavioural disturbance and acoustic masking due to changes to the acoustic environment and physical disturbance from vessel strikes. These effects are expected to be not significant for marine mammals. Incremental marine shipping associated with the Project is not anticipated to have an adverse effect on either southern resident killer whales or North Pacific humpback whale critical habitat features when needed for life functions, or on the survival or recovery of southern resident killer whales, North Pacific humpback whales, or Steller sea lions. Cumulative effects are expected to be not significant for seals, sea lions, baleen whales, and toothed whales, other than southern resident killer whales. The VFPA has assumed that past activities and projects, including those described in the recovery strategy issued by DFO, have had a significant adverse effect on southern resident killer whales. As such, Project-associated vessel activity, in combination with existing and future vessel activity, is expected to continue to result in a significant cumulative effect to southern resident killer whales. The assessment of Current Use (MSA Section 9.5) considers the cultural aspects of potential effects to marine fish and marine mammals. **Additional response provided by the VFPA:** In 2014, the VFPA-led ECHO Program was developed as a collaborative initiative aimed at better understanding and managing the impact of shipping activities on at-risk whales throughout the southern coast of B.C. The VFPA-led ECHO Program engages and involves key regional interested parties to maximise program success and help ensure that mitigation and management measures developed through the program are informed by social, cultural, economic, and environmental sustainability interests. The ECHO Program is guided by the advice and input of an advisory working group, and supported by a federal government advisory committee and associated technical committees. Through engagement and consultation with stakeholders, the ECHO Program has initiated or supported short-term projects, scientific studies, and educational initiatives to fill knowledge gaps necessary to inform the development of credible, science-based threat reduction solutions and management options to reduce cumulative effects of shipping to at-risk whales in the region.	**MSA** 8.1 Marine Fish and Fish Habitat 8.1.6 Potential Interactions and Effects 8.1.6.1 Negligible Effects 8.2 Marine Mammals 8.2.6 Potential Interactions and Effects 8.2.6.1 Negligible Effects 8.2.6.2 Potential Effect #1 – Behavioural Effects Due to Underwater Noise 8.2.7.1. Mitigation Measures – Acoustic Disturbance 8.2.8.1 Residual Effect #1 - Behavioural Effects Due to Underwater Noise 8.2.8.4 Summary of Residual Effects and Significance 8.2.9 Cumulative Effect #1 – Behavioural Effects Due to Underwater Noise 8.2.9.2 Mitigation Measures for Cumulative Effects 8.2.9.3 Assessment of Residual Cumulative Effects and Significance Determination 9.5 Current Use of Lands and Resources for Traditional Purposes and Aboriginal and Treaty Rights 9.5.5.1 Negligible Effects of Vessel Transit on Current Use

Table 20: Visual Resources – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
Pach-20.1	Stated that the visual impacts of increased marine traffic associated with RBT2 will decrease the enjoyment of Pacheedaht members at many of the TUOS sites shown on the Pacheedaht RBT2 Maps.	23-Sep-2015, Pacheedaht Traditional Use and Occupancy Study	**23-Sep-2015:** Recorded comment for consideration by Project team. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included Section 9.5 detailing the assessment of potential impacts to Indigenous groups' ability to exercise asserted or established Aboriginal and treaty rights as a result of Project-associated shipping.	Addressed in MSA Section 9.5.5.1: While existing cumulative effects to traditional use are acknowledged, Project-associated shipping is not expected to measurably affect the existing quality of Current Use experience within the MSA through changes to light, noise, or air emissions, increased statistical risk to safety on the water, or further erosion to sites of importance that help to define cultural landscapes. The effect of RBT2-associated vessel transit on the quality of Current Use experience is therefore considered negligible based on these environmental factors. Measurable effects on the quality of Current Use experience (i.e., cultural practices) linked to effects on access to preferred Current Use locations due to Project-associated increases in ship pass bys are discussed in MSA Section 9.5.5.2.	**MSA** 9.5.5.1 Negligible Effects of Vessel Transit on Current Use

APPENDIX IR10-01-C23

DITIDAHT FIRST NATION: ISSUES, VIEWS, AND CONCERNS RELATED TO THE PROPOSED PROJECT AND MARINE SHIPPING ASSOCIATED WITH THE PROJECT

Table 1: Air Quality – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
DFN-1.1	Concerned that marine shipping could potentially affect air quality, in particular, the air contaminants associated the shipping activities and the effect changes to air quality or air pollutants will have on: • Marine life and fish within the Swiftsure Bank area and surrounding waters; and • Ditidaht fishers in carrying out their fishing activities or travelling throughout their traditional territory.	16-Jun-2015, Letter from Chief / 22-Jun-2015, Letter from JFK Law, Legal Counsel for Ditidaht First Nation (same letter) 31-Jul-2015, Letter 24-Aug-2015, Preliminary Issues and Concerns Regarding Port Metro Vancouver's Roberts Bank Terminal 2 Project	**24-Aug-2015, Letter from the Vancouver Fraser Port Authority (VFPA):** *"The assessment of the potential effects of marine shipping associate with the Project will meet the direction provided by the Canadian Environmental Assessment Agency [(CEA Agency)] in the* Updated Guidelines *issued April 17, 2015, and as such it will include potential impacts on the components of the environment which Ditidaht First Nation have identified in the Preliminary Issues and Concerns, namely fish and fish habitat, marine mammals, marine vegetation and air quality. The Preliminary Issues and Concerns document identifies potential impacts to Ditidaht First Nation, including the ability to access traditional harvesting grounds, the quality of experience and ability to carry out traditional and spiritual practices and the health and wellbeing of community members. We very much welcome the opportunity to discuss such potential impacts of increased marine shipping with Ditidaht First Nation."* **09-Nov-2015, Letter from the VFPA:** Provided a copy of the Marine Shipping Addendum (MSA), which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in MSA Section 9.1.5.1:** As noted in MSA Section 9.1.5.1, due to the full implementation of the North American Emission Control Area in 2015, estimated NO_2, SO_2, and $PM_{2.5}$ concentrations are expected to decline from existing conditions to future conditions with marine shipping associated with the Project. Therefore, airborne concentrations for contaminants of potential concern from the increase in emissions from marine shipping associated with the Project are expected to remain below the ambient air quality standards and objectives identified in MSA Table 9.1-9. This analysis and conclusion applies to both Indigenous and non-Indigenous individuals and communities. There is some potential for deposition of particulates (and therefore contaminants), from an increase in air emissions due to marine shipping associated with the Project, into habitats of marine edible resources. However, existing levels of contaminants in edible marine resources within the marine shipping area are below thresholds for concern to human health (see MSA Section 9.1.4.3) and low incremental emissions of contaminants of potential concern and particulate matter are expected. Therefore, the uptake of contaminants in shellfish and finfish from an increase in marine shipping associated with the Project is expected to be negligible. As such, adverse health effects from human consumption of these resources are not expected as a result of an increase in marine shipping associated with the Project. This analysis and conclusion applies to both Indigenous and non-Indigenous individuals and communities. As noted in the VFPA's response to IR5-38 as requested by the Review Panel, potential health effects to marine mammals from air pollution in the local assessment area (LAA) due to the incremental contribution of marine shipping associated with the Project are not anticipated; therefore, this potential effect was determined to be negligible in MSA Section 8.2.6.1. The response further provides information on the existing potential effects of inhaled pollutants on marine mammals and how the implementation of the North American Emission Control Area (ECA) may result in a reduction of these potential effects to marine mammals in the LAA.	**MSA (CEAR Document #316)** 9.1.5.1 Negligible Effects **Information Requests** Response to Sufficiency Information Request #38 (IR5-38 of CEAR Document #1159)

Table 2: Marine Birds – Valued Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
DFN-2.1	Concerned that marine shipping could potentially affect migratory birds particularly in the vicinity of Swiftsure Bank, including their habitat, feeding grounds, breeding grounds and migration patterns.	16-Jun-2015, Letter from Chief / Letter from JFK Law, Legal Counsel for Ditidaht First Nation (same letter) 31-Jul-2015, Letter 24-Aug-2015, Preliminary Issues and Concerns Regarding Port Metro Vancouver's Roberts Bank Terminal 2 Project	**24-Aug-2015, Letter from the VFPA:** *"The assessment of the potential effects of marine shipping associated with the Project will meet the direction provided by the Canadian Environmental Assessment Agency in the* Updated Guidelines *issued April 17, 2015, and as such it will include potential impacts on the components of the environment which Ditidaht First Nation have identified in the Preliminary Issues and Concerns, namely fish and fish habitat, marine mammals, marine vegetation and air quality. The Preliminary Issues and Concerns document identifies potential impacts to Ditidaht First Nation, including the ability to access traditional harvesting grounds, the quality of experience and ability to carry out traditional and spiritual practices and the health and wellbeing of community members. We very much welcome the opportunity to discuss such potential impacts of increased marine shipping with Ditidaht First Nation."* **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in MSA Appendix 5-B (#29):** Potential effects of marine shipping associated with the Project on marine birds are assessed in MSA Section 8.3. Potential effects of vessel wake-generated waves on marine birds were characterised as negligible, because wake-generated wave heights are predicted to be well within the range of natural wave conditions. Birds and bird habitat are already adapted to the natural wave conditions; therefore, any wake-related influences would not be distinguishable from existing conditions. Potential effects from vessel-related auditory and visual disturbance, which would be localised and of short duration (as the ship passes by), are considered to be negligible, as birds have habituated to existing conditions. Project-associated vessel activity is not expected to have a measurable effect on bird populations. Collisions with ships resulting in bird mortality are anticipated to result in a residual effect of loss of productivity, although there are no known reports of such mortalities from vessels transiting shipping lanes within the marine shipping area. This effect, therefore, is not widespread and collisions with vessels are most likely infrequent and, if they occur, are expected to be limited to a small proportion of the population. When considering cumulative effects of increased vessel activity in the marine shipping area, including marine vessel traffic associated with the Project in combination with other existing and future projects and activities, individual mortalities are likely to increase. However, the loss of productivity would not compromise long-term population integrity, and the residual effect is expected to be not significant and unlikely to occur. Cumulative effects are also unlikely to occur. **Addressed in Response to IR9-02:** The VFPA's forthcoming response to IR9-02, as requested by the Review Panel, will further discuss mitigation measures related to artificial light for migratory and non-migratory birds and avian species.	**MSA** Appendix 5-B Aboriginal Issues and Interests 8.3 Marine Birds 8.3.6 Potential Interactions and Effects **Information Requests** Response to Sufficiency Information Request #02 (IR9-02)

Table 3: Coastal Geomorphology – Intermediate Component

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
DFN-3.1	Requested clarification of how and when effects of the environment including changes with respect to storm intensity, wave conditions, storm surges, and sea level rise may have impacts on marine shipping associated with the Project, and when.	28-Oct-2016, Letter to Panel (CEAR Document #636)	The VFPA has reviewed this letter and provides the following additional information.	**Additional information provided by the VFPA:** Implications of storm intensity and sea level rise are described in relation to the proposed terminal in the Environmental Impact Statement (EIS, CEAR Document #181); they are not directly discussed as part of the marine shipping area. Predictions regarding waves from ship wake are, however, addressed in MSA Section 7.2. Potential changes to the wave environment from ship wake (from Project-associated vessels) was assessed for a representative container vessel with approximately 9,000 to 9,500 twenty-foot equivalent units capacity in MSA Section 7.2. In addition to the study of a representative vessel, a sensitivity analysis of other vessel types with differing hulls was also conducted (see MSA Appendix 7.2-B). The analysis of wake height varied by a little over 10 cm in response to the vessel hull type, compared to the representative vessel. Coastal geomorphic conditions are not expected to change from wake-generated waves as vessel wake is a small component of the existing wave climate, which is influenced by wind-generated waves and ocean swell. **Addressed in Response to IR2-11:** Provides discussion of storm intensity, surges, and sea level rise assumptions related to the EIS. **Addressed in Responses to IR7-13 to IR7-23:** The VFPA's responses to IR7-13 to -23 provide further information and discussion of the wake environment and potential effects of the project and marine shipping associated with the project.	**MSA** 7.2 Wave Environment **Information Requests** Response to Sufficiency Information Request #11 (IR2-11 of CEAR Document #961) Responses to Sufficiency Information Requests #13 to #23 (IR7-13 to IR7-23 of CEAR Document #1049)
DFN-3.2	Concerned that marine shipping could potentially affect marine sediment patterns and any related changes to fish or marine animal habitat or marine vegetation.	16-Jun-2015, Letter from Chief / 22-Jun-2015, Letter from JFK Law, Legal Counsel for Ditidaht First Nation (same letter) 31-Jul-2015, Letter 24-Aug-2015, Preliminary Issues and Concerns Regarding Port Metro Vancouver's Roberts Bank Terminal 2 Project	**24-Aug-2015, Letter from the VFPA:** *"The assessment of the potential effects of marine shipping associate with the Project will meet the direction provided by the Canadian Environmental Assessment Agency in the* Updated Guidelines *issued April 17, 2015, and as such it will include potential impacts on the components of the environment which Ditidaht First Nation have identified in the Preliminary Issues and Concerns, namely fish and fish habitat, marine mammals, marine vegetation and air quality. The Preliminary Issues and Concerns document identifies potential impacts to Ditidaht First Nation, including the ability to access traditional harvesting grounds, the quality of experience and ability to carry out traditional and spiritual practices and the health and wellbeing of community members. We very much welcome the opportunity to discuss such potential impacts of increased marine shipping with Ditidaht First Nation."* **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in MSA Section 7.3.1:** As physical disturbances of the seabed, such as those proposed during Project construction, are not associated with marine shipping activities, routine marine shipping associated with the Project is not expected to adversely affect marine sediment or water quality, and therefore no potential interactions were identified.	**MSA** 7.3.1 Water Quality

Table 4: Effects Assessment Methods (including Cumulative Effects)

#	Interest / Concern Raised	Date(s) and Method(s) Raised	Response	Additional Information	Document(s) and Section(s) providing Additional Information
DFN-4.1	Requested a cumulative effects assessment. Requested that Ditidaht First Nation have the opportunity to identify relevant projects that should be incorporated into a cumulative effects assessment. Requested that the VFPA take into account in its MSA the cumulative effects from increased shipping traffic in the region. Stated that in terms of projects that should be incorporated into the cumulative effects assessment for the Project, it is important that the following are included: • All existing marine shipping activities and other vessel traffic through Ditidaht traditional territory; • All marine shipping activities and vessel traffic related to the proposed Trans Mountain Pipeline Expansion project; and • All marine shipping activities and vessel traffic related to the WesPac Tilbury LNG terminal. Concerned that the Project, combined with the proposed Trans Mountain Pipeline Expansion and the proposed WesPac Tilbury LNG terminal, will cause significant increases in shipping traffic.	16-Jun-2015, Letter from Chief / 22-Jun-2015, Letter from JFK Law, Legal Counsel for Ditidaht First Nation (same letter) 29-Jun-2015, Email 31-Jul-2015, Letter 24-Aug-2015, Preliminary Issues and Concerns Regarding Port Metro Vancouver's Roberts Bank Terminal 2 Project 28-Aug-2015, Email 15-Dec-2015, Letter to the CEA Agency (CEAR Document #355)	**20-Aug-2015, Email from the VFPA:** Asked Ditidaht to identify relevant projects for inclusion into the cumulative effects assessment for the marine shipping assessment. **09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses. **12-May-2016, Letter from the CEA Agency (CEAR Document #406):** *"The Agency requested additional information on cumulative effects in AIR #6 Additional Projects to be Considered and AIR #7 Reasonably Foreseeable Projects and Activities.* *The Agency is aware of Ditidaht's concerns related to the WesPac Tilburt [*sic*] Project and will be sending a letter on this topic to Ditidaht shortly."*	**Addressed in EIS Appendix 7.2-B (#39):** The list of certain and reasonably foreseeable projects and activities that have the potential to interact cumulatively with the Project-related effects is in EIS Table 8-8. This list includes all projects with the potential for a cumulative interaction with the Project. The CEA Agency is the appropriate authority to address questions related to the *Canadian Environmental Assessment Act (CEAA), 2012* and designated projects. **Addressed in MSA Appendix 5-B (#24):** The assessment of potential effects of marine shipping associated with the Project incorporates the existing vessel traffic within the marine shipping area (defined in MSA Section 4.0), including Ditidaht traditional territory. The list of certain and reasonably foreseeable projects and activities considered in the cumulative effects assessment is included in MSA Appendix 6-A. Note: The proposed Trans Mountain Pipeline Expansion project was included in the list. **Addressed in Response to IR4-09:** In the VFPA's response to IR4-09, updated project status and vessel movement information is provided as available for the projects listed in the EIS and MSA (north of Segment B), plus other new projects considered to be certain or reasonably foreseeable (as of July 1, 2017). As part of this update, WesPac Tilbury Marine Jetty Project vessel projections are updated. **Additional information provided by the VFPA:** Transport Canada's letter to the Review Panel dated April 7, 2017 (CEAR Document #954), as well as, letter to the Review Panel dated December 20, 2017 (CEAR Document #1133) provides additional information on the Government of Canada's Oceans Protection Plan which includes information on the cumulative effects of marine shipping.	**EIS** Appendix 7.2-B Aboriginal Groups Issues and Interests Table **MSA** 4.0 Activity Description 4.1.1.1 Existing Marine Traffic Activity, Table 4-2 Appendix 5-B Aboriginal Issues and Interests 6.0 Effects Assessment Approach Appendix 6-A Certain and Reasonably Foreseeable Projects and Associated Activities Considered in the Marine Shipping Cumulative Effects Assessments **Information Requests** Response to Sufficiency Information Request #09 (IR4-09 of CEAR Document #1051) **From Transport Canada to the Review Panel re: Overview of the Government of Canada's Oceans Protection Plan (CEAR Documents #954 and #1133)**
DFN-4.2	Requested that the VFPA confirm how it plans to assess the Project's cumulative effects and the potential to adversely affect Ditidaht's Aboriginal rights, title, and culture. Expressed interest in how cumulative effects are considered in the marine shipping area, and how other projects are considered.	16-Jun-2015, Letter from Chief / 22-Jun-2015, Letter from JFK Law, Legal Counsel for Ditidaht First Nation (same letter) 08-Sep-2015, Meeting	**09-Nov-2015, Letter from the VFPA:** Provided a copy of the MSA, which included MSA Appendix 5-B that summarised Indigenous issues and interests and provided the VFPA's responses.	**Addressed in MSA Appendix 5-B (#23):** The approach to the cumulative effects assessment is provided in MSA Section 6.0. Each intermediate component (IC) and valued component (VC) assessment section considers cumulative changes and cumulative effects to which the Project contributes. This entails consideration of residual effects of routine marine shipping associated with the Project, if any such effects are predicted, in combination with effects of other projects and activities that have been or will be carried out. The assessment of current use of land and resources for traditional purposes (Current Use, MSA Section 9.5) describes how Current Use activities have been affected by other projects and activities that have been carried out. As residual effects to Current Use as a result of marine shipping associated with the	**MSA** Appendix 5-B Aboriginal Issues and Interests 6.0 Effects Assessment Approach 6.7 Cumulative Effects Assessment 7.1 through 9.4 (All IC and VC assessments) 9.5 Current Use of Lands and Resources for Traditional Purposes, and Aboriginal and Treaty Rights
